Characteristics.—*Curare* produces muscular paralysis, probably through its action on the nerve endings in the muscles, without affecting either the muscle substance or the nerve substance, and without impairing sensation and consciousness. It is thus in many ways the opposite, in its action, of *Nux vomica*, though it is said to have the juice of a *Strychnos* in its composition. It causes death by paralysis of the respiratory muscles. Reflex action is diminished or abolished (opp. *Nux*), and this is one great indication for its employment in homśopathic practice. A cure of pseudo-hypertrophic paralysis by the 200th has been recorded. A condition resembling catalepsy has been induced by it; immobility with fixed gaze on waking. Fetidity characterises many of the secretions and discharges. Two cases of diabetes in middle-aged men have been cured by Burkhardt with *Cur*. 4. It is suited to scrofulous children; producing scrofulous eruptions on skin, eczema, especially of face and behind ears; also liver-spots, yellow-brown. It favours the formation of corns. Debility short of paralysis indicates it; debility of the aged, and nervous

debility from loss of fluids. Its relation to hydrophobia and *tetanus* is probably antipathic. It causes a sensation as if the brain were full of fluid. Piercing, lancinating pains. Throbbing pains. Weakness; heaviness; numbness; numbness with tingling. < By movement; walking; ascending. < Dampness, cold air, cold weather, cold wind, change of weather. < 2 a.m. and 2-3 p.m. Many symptoms appear on right side.

Relations.—In cases of poisoning artificial respiration must be resorted to. *Bromine* and *Chlorine* antidote its effects. If the poisoning is due to a punctured wound, rubbing in tobacco or salt will neutralise it. It is an *antidote to:* Strychnia and to the poison of rabies. *Compatible:* After Arn. (paralysis from injury) after Bell. (paralysis after epistaxis). *Follows well* in debility of the aged: Bar. c. *Compare:* Nux v.; Aran. d. (fever < in damp weather; Ferr. (hammering pains in head). Crotal (blows in region of cerebellum). In yellow-brown spots on skin (Sep., Lyc., Nux, Sul.).

SYMPTOMS.

1. Mind.—Inability to think or study; forgetful; stupid; sleepy; indolent.—Indecision.—Excited, hurried feeling.—Depressed; desire to be alone.

2. Head.—Instant giddiness; falling in swoon while standing or walking.—Dizzy when looking at near objects or at water.—Head confused, great weight in vertex.—Nervous headache; lancinating, piercing pains all over head compelling to lie down and stretch; head drawn backward with stiffness of neck; painful oscillation of brain, as if it were full of fluid; neuralgic pain starting in front and radiating to neck and face; violent blows in region of cerebellum.—Darting through temples, < r.—Headache from base of brain up, < from mastication.—Headache: despairing of power of thought; < vigorous movement, or stooping.—Shattered, torn feeling on coughing, side of head must be held.—Sharp sticking over r. eye extending backwards over l. side of head.—Head beats like a hammer, with vomiting of bile.—Rush of blood to head.

3. Eyes.—Heavy eyes lids can hardly be kept open; ptosis (r.).—Eyes haggard, sunken.—Red, hot sensitive to light.—Feel as if full of sticks.—Black spots before vision, esp. < from reading.

4. Ears.—Different noises as of whistling, or crying of animals; ringing in r. ear.—Lancinating pains starting from ears and reaching down legs, compelling to lie down.—Otitis interna, driving crazy, purulent discharge.

5. Nose.—Nasal catarrh.—Ozćna; fetid lumps of pus.

6. Face.—Paralysis of muscles of expression.—Red face, head beats like a hammer; after fever; with cough.—Aching r. side of face.—Facial and buccal paralysis; in some cases with difficulty of swallowing.

8. Mouth.—Tongue and mouth drawn to r.—Tongue coated.—On waking tongue yellowish at base, papillć raised, light pink anteriorly, bitter or bloody taste, yellow-white.—Mouth dry.

11. Stomach.—Thirst and great hunger with fever.—Sudden hunger almost to faintness.—Great thirst esp. evening and night.—Craves acids.—Aversion to bread.—> After first mouthful of food.—Chill after eating.—Hiccough frequent and annoying.—Nausea in morning; after eating.—Vomits green bile all night; so weak can hardly stand.—Empty, gone feeling in stomach.—Sharp rheumatic pain in pit of stomach, followed by nausea.—Shooting in stomach.—Pyrosis, pain and distension after eating ever so little.

12. Abdomen.—Weary ache from throat to l. hip.—Bowels feel sore and bruised.—Pain in groin low down with heaviness in limbs while walking.—Neuralgic pain in hypogastrium with pressure in vagina.

13. Stool and Anus.—Diarrhśa with constant urging; fetid, thin fćces, excessive pain in piles.—Extreme watery diarrhśa.

14. Urinary Organs.—Clear and frequent urine, with digging, crampy pain in kidneys; shooting in stomach; dry mouth; great thirst, esp. evenings and night; sugar in urine; great emaciation; (acute diabetes).—Urine copious, urgent; bladder feels distended.

16. Female Sexual Organs.—Menses seven days too early, griping in r. ovary, bearing-down, dragging, tired, in all pelvic organs, severe (causing faintness) in lumbo-sacral spine, running down thighs, flow scanty, very dark, lasting three days instead of five.—Ulcerations of os uteri (scirrhus), ichorous, corroding discharge; bearing-down pains in womb; shocks, sharp shooting stitches, quivering.—Ulcerations, smarting in vulva and thighs; shooting and digging pains in womb.—Indolence, night sweats, repugnance to sexual intercourse (vaginitis).—During menses: colic, headache, pains in kidneys, malaise, hypochondriasis.—Leucorrhśa, thick, purulent, offensive, in clots.

17. Respiratory Organs.—Dyspnśa, stitching pains r. side.—Dyspnśa from weakness of motor nerves as in phthisis or emphysema.—Paralysis of respiration.—Dyspnśa < ascending.—Short, hacking cough, always dry, with soreness of chest walls, < damp weather, or laughing; spasmodic, shakes whole body, = vomiting, is often followed by vomiting; = headache, red face.—Cough always troublesome in morning.—Cough < breathing cold air; laughing; moving; eating.—Burning heat in throat with sensation of distension.—Severe pains in lungs,

esp. l.; sharp, piercing pain through chest, always much < in damp weather; dyspnśa, chronic cough.

18. Chest.—Chest sore, can hardly bear pressure of stethoscope.

19. Heart.—Precordial anguish, with palpitation and stinging pains in heart.

20. Neck and Back.—Stiffness in neck, head drawn back.—Stiffness of muscles of r. neck and shoulder.—Dull, tired ache in shoulders and across back; numb, tired pains up and down spine and in head.—Chills running up back and all over body.

21. Limbs.—Paralysis of extremities burning with heat and chills.—Aching in all the limbs and body.—Numbness and tingling.

22. Upper Limbs.—Complete paralysis of r. deltoid.—Pain and numbness l. side of chest and l. arm.—Leaden heaviness in arm increasing difficulty in playing piano.—In evening, arms and hands swollen, more painful and heavy.—Great weakness, esp. of wrists and hands.

23. Lower Limbs.—Legs tremble and give way in walking.—Sciatica with great stiffness.—Corns.

25. Skin.—Body blue, and yet fever.—Itching with hunger.—Eczema.—Liver-spots.

26. Sleep.—Drowsy; cannot keep awake.—Nights restless, always desiring to put feet out of bed, esp. towards morning.—Cannot sleep late enough to obtain a good night's rest; dreams of fire and the business of day; < from lying long in bed, must get up as her feet and back ache.

27. Fever.—Chill; creeping up back; from stomach, on abdomen, and spreading all over; without thirst.—Heat < at night and in open air.—Sweat with every exertion.—Sweat, cold and bloody, esp. at nights.

Cyclamen.

Cyclamen Europæum. Sow-bread. N. O. Primulaceæ. Tincture of the root gathered in spring.

Clinical.—Anæmia. Bones, pain in. Chlorosis. Climacteric sufferings. Coryza. Diplopia. Dyspepsia. Enteralgia. *Eyes, affections of*. Headache. Heel, pain in. *Hiccough*. Menstruation, disorders of. Mental derangement. Pregnancy, sickness of; disorders of. Prostatitis. Rheumatism. Strabismus. *Thirst, absence of*. Urethritis. Vertigo. Weaning, complaints after. Writer's-spasm.

Characteristics.—*Cyclamen* has a traditional reputation as a remedy for affections of the uterus and appendages. The later provings have demonstrated the correctness of this. It is in many ways analogous to *Pulsatilla*, from which it differs mainly in having no > from open air; and in not having thirstlessness as so frequent an accompaniment of other conditions.

It is suited to the phlegmatic temperament; blonde leucophlegmatic subjects with chlorotic conditions; disinclined for labour and easily fatigued; special senses enfeebled or their functions suspended. Debility, torpidity of mind and body. Dulness of senses; flickering before the eyes; squint, especially in connection with menstrual irregularities or fevers; after convulsions, convergent squint; left eye drawn inwards. Amblyopia, diplopia, hemiopia. Many digestive disturbances; saliva has a salty taste, which is communicated to all food eaten. After eating but little, satiety, aversion to food, with nausea in palate and thirst. Desire for lemonade. Aversion to bread, butter, meat, fat, beer, and ordinary food; craving for inedible things; for sardines. Frequent vomiting in morning. Hiccough is very marked. Hiccough during pregnancy. Prostatic troubles, with stitches and pressure, urging to stool and micturition. Menstruation too early, with some relief of melancholy mood and heaviness of feet. Scanty or suppressed menstruation, with headache and vertigo. During pregnancy: hiccough; loathing and nausea in mouth and throat; complaints after weaning. Pressing, drawing, or tearing pains at parts where bones lie near surface. Chilliness. Itching leaving a numb sensation. Chilblains; itching and pricking, < at night in bed. Eidherr, of Vienna, has given the best account of this remedy (*Allg. Hom. Zeit*., liv. 7, translated *H. R*., viii. 558). Hahnemann proved it on males only, eliciting as leading symptoms: "Stupor, sluggish memory, *vertigo*, dull, pressing headache, obscured sight, dilated pupils, drawing pains in neck and teeth; nausea, eructation, disgust for food, hiccough following soon after dinner; stitching, pinching pains in abdomen; flatulence and pressure to urinate. Oppression of chest, pressing pain in chest, drawing and stitching pain in back. Sawing pressure, drawing and stitching in extremities; prostration and itching. Moroseness, sleepiness, lassitude, troubled, heavy dreams; chilliness of whole body alternating with heat, thirstlessness, disinclination for work or conversation, great dejection and melancholy; at times joyous sensations with lively phantasies." The Vienna provings corroborated these, but, including both sexes, also elicited symptoms in the female sexual sphere: Menstruation more copious; more frequent; too early, with severe abdominal pains. Accompanied with labour-like pains; flow excessive, black and lumpy. Recommencement of menses after protracted cessation (clinical). Eidherr's clinical experience illustrates in a remarkable way *Cyclamen's* sphere of action. His cases include: 4 of chlorosis; 9 of retarded and scanty menstruation; 18 of complications with vertigo and headache accompanying scanty menses; 2 of diplopia; 1 of strabismus. In numbers of cases *Cycl*. developed ocular symptoms in the patients, in 15x and 3x. In one instance a higher potency of the same remedy antidoted this effect. He found the remedy especially suited to blonde leuco-phlegmatic subjects. (But one of the cured was a Jewess and was presumably not a blonde.) It will be noticed that the

"sleepiness, moroseness, and lassitude," and also the vertigo noted by Hahnemann, are prominent in many of Eidherr's cases. Josepha K., 24, blonde, pale delicate skin, pale lips and gums, had menstruated normally till 22, when she got wet at a picnic just as menstruation was starting. It stopped at once and did not reappear till ten months later, after vigorous use of all kinds of domestic remedies. Now the periods were accompanied by terrible abdominal, labour-like pains, lasting eleven hours. Menses recurred every two or four months, always with the pains, starting from sacrum, extending along both sides of abdomen to pelvis. They were periodical, every one, two, or five minutes, during which time there was no flow; the blood appearing after these attacks was somewhat watery. Other symptoms were: Eyelids slightly œdematous; pressing pain in forehead; vertigo frequently changing into syncope; chilliness of whole body; disturbed, unrefreshing sleep interspersed with terrible dreams; continued loathing for meat; longing for salt fish; frequent vomiting in morning. After partial relief from *Puls*., *Cyclamen* made a complete cure. The ocular symptoms which developed were remarkable. The vertigo and headache were untouched by *Puls*., but quickly subsided under *Cycl*. 15x. On their disappearance she saw fiery flames dancing before her eyes on awakening at night, and in the morning she saw everything double. And she had the hallucination as if two persons lay in her bed, and that the body of the other overlapped hers by half. *Cycl*. was discontinued and in two days her sight was normal. Anna F., 20, blonde, menstruated since her tenth year. In seventeenth year suffered from chlorosis; ever since, menstruation regular, but lasting only one-two days in a moderate degree. Is troubled also at other times by vertigo and pressing pain in forehead and temples, which attacks are ameliorated by footbaths with ashes. Appetite poor; little thirst; stool regular; sleeps too long; always sleepy; is of dejected mood, morose; all movements, as well as speech, languid; palpitation. *Puls*. made no change. *Cycl*. 3x quickly improved headache, vertigo, and spirits. After three days sight became obscured, and there was glimmering before eyes. A vivacious Jewess, 16, menstruated twice regularly after the first commencement in June, then went six weeks, and by the end of December the recurrence entirely ceased. She lost spirits, sought seclusion, was offended by very trifles; her usual work was distasteful to her, and she could not be prevailed upon to leave the house for a walk. She would sleep unusually long in the morning. The hitherto blooming girl had become pale, anæmic, with swollen eyelids; lips and gums pale; heart turbulent. She complained chiefly of great lassitude compelling her to rest frequently on going up stairs; palpitation without cause; she was apprehensive, had a feeling as if all the rooms were too small, and yet would not leave the house. All pastimes rejected; was only content when she could seclude herself and sit down and weep. During the forenoon often had pressing pains in forehead with vertigo; appetite poor; stool sluggish. March 14th *Cycl*. 15x was prescribed. After several weeks the headache and vertigo had become less severe and the attacks less frequent. April 19th the period set in, and with its flow headache and vertigo left her completely. May 15th, menstruation recurred rather copiously, and the patient was well. Two cases of pulmonary catarrh were cured,

both had pressing headache and vertigo and one scanty menses as well. The following case of *hemicrania* was cured: Theresa F., 37, had menstruated sparingly and irregularly (often at two or three months' intervals). For four years suffered from violent headache affecting right side of head and face; coming every 8-14 days, spells lasting 12-36 hours. During menstruation the attacks were extra severe. Patient was emaciated; skin, gums, and lips pale. Right eye closed owing to cramps in eyelids; when forcibly opened a stream of hot tears gushed out; otherwise the eye was normal. Under *Cycl*. 3 the symptoms diminished, but there appeared "glittering sparks before the eyes" and these remained after all symptoms of headache had gone. *Cycl*. was given persistently, the periods became regular and rather copious and the headaches entirely ceased. Another case (in a wet-nurse who had just weaned her baby) presented unceasing, violent, stitching pain in temporal region extending to vertex. Throbbing temporal arteries. *Bell*. diminished the pain, but vertigo came on. Under *Cycl*. 3x headache and vertigo disappeared altogether, but the patient *complained of her sight having 3 become so weak that she did not dare to walk alone*. This passed off when the medicine was discontinued and her headache did not recur. *Cycl*. 15x cured a boy of violent squinting. Six months before, he had a fall from a table; convulsions followed, and after the second attack the squinting came on. *Arnica* was given and the convulsions did not recur, but the squinting remained. *Cycl*. 15x was given, and after a few weeks the squint entirely disappeared. (Wurmb cured a case of squint in a coachman with *Cycl*.) Acute rheumatism with retrocession of menses was also cured by Eidherr. His last case was remarkable and important. Theresa P., 30, of short, robust stature, had never been ill till ten years previously. At that time, without apparent infection, an eruption appeared over her whole body with terrible itching. It was declared to be itch and was driven away with Sulphur ointment. With the receding of the eruption her eyesight waned so that she was soon unable to walk without a guide. She sees large objects only in outline and only then if in a strong light; in closed rooms she cannot discern anything. The pupils are dilated, but there are no other objective symptoms. She had never menstruated. She complains of congestions of the blood about every three or four weeks, accompanied by headache, a pressing vertigo, heaviness and frequent trembling of the lower extremities and of a pressure towards the parts. For several months she experienced an itching of the skin over the whole body, which becomes intolerable, especially during the time she should have her period. There is nothing to be seen, however, on the skin. In September *Sul*. 15x was given and quickly relieved the skin symptoms; but later (in the beginning of December) she sought relief for a violent headache and vertigo. *Cycl*. 3x lessened these by the fourth day. A week later she reported both symptoms gone; but now "fiery balls danced continually before her eyes." *Cycl*. 15x three times a day. Shortly after (December 27th) the fiery balls ceased to trouble her. Early in January the menses reappeared, with considerable abdominal pains, and the headache and vertigo had disappeared altogether. Thereafter menses appeared regularly and copiously. From Dr. Eidherr's account no improvement appears to have been effected in the power of vision. Dr. George Royal (of Des

Moines, Iowa) records another use of this drug. A medical man had suffered from soreness of the heel for over three months. The soreness seemed to be in the bone, and was < sitting or standing. Not so much noticed on walking. *Rhus, Kali bi*., and *Phos. ac*. had done no good. *Cycl*. 30 cured in a week. It also cured, in three days, a case almost identically similar. The only < here was on standing, *Cycl*. has cured migraine with scintillations after the failure of *Iris v*. In the case recorded the headache increased as the vision returned, the head seemed about to burst (*Kali bi*.) Itching, pricking < at night in bed. Many symptoms are < by rest, > on walking about. Sitting < menstrual flow. Drawing shoulders forward <, drawing them backward > twinges in back. Many symptoms are < at night. Open air <, cold water > headache. > From moistening diseased parts and from bathing. < From eating at night.

Relations.—Ferr. and Chi. resemble it in chlorosis; Crocus and Thuja in sensation of something alive in abdomen; Am. mur. (menses < at night); Iris v. and Kali bi. (migraine with scintillations; headache < as sight returns, Kali bi.); Coccus c. (leucorrhœa < sitting > walking; Cycl. menses < sitting > walking); Rhus t. (enteralgia); Gels. and Seneg. (diplopia), Arn. (falls); Baryt. c., Calc. c., Canth. (chilly and fever); Coccul. In speedy satiety, Lyc., Nux, Sep. In prostatitis and urethritis, Lith. c., Dig., Sel., Caust., Lyc., Apis; in squint, Alum.; sudden vanishing of sight with menses, Sep., Pul. (Pul. scanty, Cyc. profuse and dark); nausea in throat, Sep. Berb., pain in heels on standing. Desire for lemonade, Bell., Sabi. *Antidoted by:* Camph., Coff., Puls. (The modalities of Cycl. are in general opposite to those of Puls.; the menstrual flow of Cycl. is more profuse while at rest; with Puls. the opposite is the case).

SYMPTOMS.

1. Mind.—Taciturn, depressed, out of humour.—Sudden change of sadness and cheerfulness.—Weakness of memory.—Secret vexation and troubled conscience.—Ill-humour and slovenliness, with dislike to conversation, by fits.—Love of labour, alternately with indolence.—Memory alternately quick and weak.—Dulness and confusion of mind, with unfitness for every kind of labour.—Hallucination as if two persons lay in her bed, and that the body of the other overlapped hers by half.

2. Head.—Vertigo, when standing (when leaning against anything), as if the brain were moving.—Vertigo; < when exercising in the open air, > when sitting in a room.—Headache in the morning, when rising.—Numbing headache, with obscuration of the eyes.—Migraine with scintillations before the eyes; as vision returns, head seems about to burst.—Shootings in the brain on stooping.—Shootings in the temples (in the l. temple, the forehead, with dizziness).—Pricking itching in the scalp, which only changes its situation on the part being scratched (< in the evening and when at rest, > from motion).—Congestion of blood to the head; increased sensation of heat in the head.

3. Eyes.—Eyes dull and hollow.—Shootings in the eyes and the eyelids.—Swelling of the eyelids.—Itching of the eyelids.—Pupils dilated.—The eyes lie deep in the orbits, look dim, and are surrounded by blue rings.—Double vision; strabismus.—Burning in the eyes; < when reading.—Sight confused, as if looking through a cloud.—Glimmering and glittering before the sight.—Fiery flames dancing before eyes.

4. Ears.—Drawing in the ears.—Diminution of hearing, as if the ears were stopped.

5. Nose.—Diminution of smell.—Fluent coryza, with sneezing (morning).

7. Teeth.—Toothache, with dull tractions at night.—Shootings and piercings in the teeth.

8. Mouth.—Tongue loaded with a white coating.—Constant sensation of roughness and of mucus in the mouth.—Sensation of torpor in the upper lip, as if it were hardened.—Dryness of, the lips, without thirst.—Mouth and throat redder than usual.—Fine stitches on the surface of the tongue.—Burning on the tip of the tongue (evening).—In the evening, great dryness in the palate, with hunger and thirst.—The tonsils and palate are shrivelled and white.

9. Throat.—Dryness in the throat. Sensation of painful constriction in the throat.—Burning and scraping in throat.—Nausea in throat.

10. Appetite.—Putrid taste in the mouth.—Insipid taste of all food.—No thirst all day, but it occurs in evening as face and hands become warm.—Hunger and appetite rather weak, esp. in the morning and in the evening.—Speedy satiety, followed by disgust, on beginning to eat.—After eating but little, aversion to the rest of the food, with sensation of nausea in the throat.—Repugnance to butter (aversion to eat bread and butter), and cold food; less aversion to warm food.—Great inclination to sleep after a meal.

11. Stomach.—Frequent risings, empty or acid.—Risings, with hiccough, esp. after a meal.—Nausea, with inclination to vomit, and uneasiness in the region of the epigastrium, as after taking fat food, esp. after dinner and supper.—Nausea and fulness in the chest, with unusual hunger (morning).—Nausea caused by eating and drinking; could only drink lemonade without being nauseated.—Vomiting of mucus followed by sleep.—Vomiting of blood.—Water-brash, with nausea, esp. in the evening.

12. Abdomen.—Fulness and pressure at the pit of the stomach, as if it were overloaded.—Uneasiness in the abdomen, with nausea.—Painful sensibility of the abdomen, on the slightest touch.—Sudden attacks of griping, with pinching.—Stitches in the stomach, region of the liver, navel, abdomen.—Borborygmi in the abdomen, immediately after a meal.

13. Stool and Anus.—Evacuations hard and frequent.—Evacuations of the consistence of pap, with vomiting at night.—Pressure in the rectum.—Discharge of blood from the rectum.—Drawing pressure in the anus, and in the perineum, as from subcutaneous ulceration, when, walking or sitting.

14. Urinary Organs.—Frequent want to make water, with abundant emission of whitish urine.—Shootings in the urethra, when making water, followed by a sudden discharge of a dark red urine.

15. Male Sexual Organs.—The prepuce and corona glandis feel sore from slight rubbing.

16. Female Sexual Organs.—Catamenia too profuse and too frequent.—Before menstruation (at night) labour-like pains; the abdomen was bloated and swollen on the previous day; the menstrual blood is black and clotted.—Secretion from the swollen mammæ like milk.—Menses suppressed.

17. Respiratory Organs.—When reading aloud the voice is weak.—Scraping and dryness in the pharynx, causing a suffocative cough.

18. Chest.—In the evening, shortness of breath, as from weakness.—Fits of suffocation.—Pressure in the sternum.—Oppression of the chest, with difficulty of respiration.—Sensation of great weakness in the chest, as if there was not strength enough to breathe.—Lancinations, and acute pullings in the chest, with short and difficult respiration.

19. Heart.—Pressure on the heart, as from congestion of blood, with very sensible palpitations of the heart; stitches in the region of the heart.

20. Neck and Back.—Pains of excoriation in the nape of the neck.—Aching, with paralytic weakness, or traction in the nape of the neck and in the neck.—Shooting pains in the loins.—Dull stitches in the region of the kidney; worse when drawing along breath.

22. Upper Limbs.—Pressure, as by a hard body, on the arms, as far as the fingers, which hinders writing.—Tractive pains in the arms, and as far as the fingers.—Cramp-like, slow contraction of the right thumb and index; they have to be extended by force.—Pains in bones of forearms, bruise-like, < by touch, pressure, movement.—Pain, as after being struck, or pain of bruising in the arms.—Painful traction in the arms, and in the wrist.—Contraction of the fingers.—Red vesicles in the joints of the fingers, preceded by violent itching, ceasing after scratching.

23. Lower Limbs.—Cramp-like pains in the thighs.—Red spots in the thigh, as from a burn.—Frequent and violent itching in the calves of the legs, in the ankle-

bones and in the toes.—Pain of dislocation in the joints of the foot.—Sensation as if sprained in the l. foot.—Soreness of the heels when walking.—Pains of excoriation in the toes, when walking.—Deadness of the toes after walking.—Fetid sweat between the toes.

24. Generalities.—Pressive traction, or tearings, chiefly where the bones are covered by the skin.—Affections of the inner temples; want of appetite; nausea in the throat; hiccough; simple pressure in the muscles; tearing with drawing and pressure in the bones; pain as if paralyzed.—During movement, all the sufferings, except dejection, disappear; but numerous symptoms show themselves when in a sitting posture.—Great lassitude, esp. evening, with painful weariness and stiffness in the legs, and drawing pressure in thighs and knees.

25. Skin.—Gnawing itching in several parts of the skin, esp. when seated.—Darting and insupportable itching, in the evening in bed.

26. Sleep.—Great inclination to lie down, and to sleep.—Late sleep in the evening, with sensible pulsations in the brain.—Nightmare on falling asleep.—Unrefreshing sleep interfused with terrible dreams.

27. Fever.—Pulse double-beat.—Attacks of chilliness in the morning or evening.—During the evening, chill, great sensitiveness to cold air or to being uncovered.—Febrile shivering and cold, followed by heat, esp. in the face, with redness, augmented after a meal; afterwards anxiety, with heat in some parts, in the back of the hand, and in the nape of the neck, but not in the face.

Rosa Canina.

Dog-rose. N. O. Rosaceæ. Tincture of the hairy excrescence of insect origin called Cynosbati. Tincture of ripe fruits.

Clinical.—Bladder, affections of. Dysuria.

Characteristics.—Hips are used for making the very pleasant Confection of Roses used in general medicine as a basis for pills and electuaries. *Cynosbati* has been used in ancient times as a remedy in urinary difficulties. Burnett has confirmed this to some extent. A proving made by himself only evoked a somewhat increased flow of urine and a little heat in the urethra.

Cypripedium.

Lady's Slipper. N. O. Orchidaceæ. Tincture and infusions of fresh root gathered in autumn.

Clinical.—Brain affections. Chorea. Convulsions. Debility and sleeplessness.—Delirium tremens. Ecstasy. Epilepsy. Mental despondency. Nervous debility. Neuralgia. Post-influenzal debility. Sleeplessness. Spermatorrhœa. Stye.

Characteristics.—*Cypr*. has great repute as a "nervine" among eclectics, and in domestic practice. It ranks with Scutellaria and Valerian. A strong infusion causes exhilaration followed by calmness; and is much resorted to by women whose nerves are shattered by long illness, or excessive indulgence in green-tea or coffee (Hale). It is suited to nervous disorders from mental over-excitement, or reflex nervous excitement; to nervous weakness following influenza. It is indicated in the brain-hyperesthesia of children who wake in the night lively and full of play. Ecstasy, preliminary to incipient brain disorder. Epilepsy from reflex irritation. Jactitation and trembling; twitching of limbs.

Relations.—*Compare:* Ambra, Coca, Ign., Kali bro., Paull., Thea, Scutel., Valer., Zinc. In ecstasy, Coffea. *Antidote to:* Rhus poisoning.

SYMPTOMS.

1. Mind.—Irascibility and fitfulness; hysterical symptoms; sleeplessness; agitation.—Indifference.

2. Head.—Vertigo followed by heaviness and dragging of l. foot.

3. Eyes.—Stye on r. lower lid.

15. Male Sexual Organs.—Spermatorrhœa with great nervous prostration and dejection of spirits.

16. Female Sexual Organs.—Amenorrhœa, with hysteria.—Great nervous debility and despondency.—Irritability of vagina; hysterical symptoms, sleeplessness and agitation.

26. Sleep.—Sleeplessness: with desire to talk, a constant crowding of pleasant ideas; with restlessness of body; twitching of limbs; after miscarriage for several nights in succession.—Ecstasy; children awaken in night from sleep, "wide-awake," unnaturally playful, with no desire to go to sleep again (often a preliminary to some brain affection).

Damiana.

Turnera Aphrodisiaca.

Turnera aphrodisiaca. Damiana. N. O. Turneraceæ. Tincture of fresh plant.

Clinical.—Amenorrhœa. Dysmenorrhœa. Fatigue. Impotence. Leucorrhœa. Migraine. Prostate, affections of. Spermatorrhœa. Sterility. Urine, incontinence of.

Characteristics.—Hale has collected from old-school sources much experience respecting this drug, showing its power over the genito-urinary system. The herb *Damiana* (the local name of *Turn. a.*), has long been a domestic medicine in Mexico, where it is used to "invigorate the system." Indian hunters discovered that a decoction of it was a great invigorator after wearisome journeys; and they also found in it a cure for inability to exercise the reproductive functions in both sexes. Hale gives many cases illustrating the latter. Among the causes of the defect in the cured cases are injury to spine from a fall; sexual excess; syphilis or gonorrhœa, in the men; and amenorrhœa, dysmenorrhœa, and leucorrhœa in the women. Douglass (*Hahn Ad.*, xxxix. 660) reports three cases of incontinence of urine: Man, 63, for four years has had dribbling of urine day and night. *Turn.* 2x, in water, four times a day, cured in two months. Another use of Turn. is recorded (*H. R.* xii., 410) in severe migraine, "One or two doses given within an hour causes the headache to cease and induces sleep, from which the patient wakens free from headache and with good appetite." This is perhaps analogous to the power of *Turn.* to dispel fatigue.

Relations.—*Compare:* Impotence, injuries, over-exertion, fatigue, Bellis, Arn. Prostatic affections, Sabal., Solid. Migraine, Epipheg.

Daphne Indica.

Daphne odora. Sweet-scented Spurge Laurel. N. O. Thymelaceæ. Tincture of fresh bark.

Clinical.—Amaurosis. Amblyopia. Constipation. Cough. Eyes, affections of. Exostosis. Fever. Gastralgia. Gonorrhœal rheumatism. Gout. Leprosy. Mercurio-syphilis. Prostatorrhœa. Rheumatism. Splenitis. Sleeplessness. Toothache.

Characteristics.—*Daph. ind.* was proved by G. Bute. It is like its relative *D. mezereon* in producing affections of muscles, bones, and skin, hence its relation to syphilis and the anti-syphilitic remedies *Aur., Merc., Staph.* Its pains are erratic and electric-like. It is like *Jambos* in the craving for tobacco. The skin is clammy. Red

rash in spots on legs in evening. Itching. *Daphne oleoides* is credited by Hering with relieving leprosy. A peculiar symptom of *Daphne* is—tongue coated on one side only (*Rhus* has the same, only the *Rhus* coating is specified as white). Other symptoms are: Foul-smelling tongue. Ptyalism with hot saliva. Cold feeling on buttocks. Sudden stitch in region of spleen. Fetidity is a marked feature-breath, urine, sweat. The pains are apt to be sudden. They wander suddenly from extremities. Ball of right great toe swollen and very painful; the pain suddenly shoots into the body to region of heart, or some other part of body to abdomen. It is probable that a sensation of parts of the body being separated from one another is characteristic of *Daphne*. The symptoms of sensation as if the head were separated appeared in the proving (*see* 20); and Erastus E. Case has recorded the cure of a man, 45, obese, rheumatic, who presented these symptoms: "Swaying sensation in the head when walking. Constant sensation as if the head were separated from the body. Sensation as if the vertex were screwed up in a vice. While driving a horse, sensation as if the arias were detached from the body, yet they are under complete control of the will." The gastric symptoms are < from alcohol; prostatorrhœa < from tobacco. Most symptoms are < evening and night (which further marks its appropriateness in syphilis). < While moon is on the wane. Pains are < from warmth of bed. Cold air < wandering gout. < From touch and pressure. Lying down < gouty pains; backache. Stooping or bending < pains in spinal cord. Walking < rheumatic pains in thighs.

Relations.—*Antidoted by:* Bry., Dig., Rhus, Sil., Sep., Zn. *Antidote to:* Chrom. ac., Merc. *Compare:* Thuja (effects of suppressed gonorrhœa); Benz. ac. (fetid urine); Puls., Chi., Taxus (erratic pains); Verat. a. (lightning pains); Bapt. (limbs seem scattered about the bed); Ars. (body seems divided at waist). Dirca pal. belongs to the same family.

SYMPTOMS.

1. Mind.—Mental dejection.—Timidity.—Irritability, over-excitement, and trembling, during the pains.—Irascibility, absence of mind, and indecision.

2. Head.—Headache, provoked by all kinds of intellectual labour.—Pain behind the eyes, from one temple to the other.—Sensation of fulness in the head, as if cranium were going to burst, esp. on raising oneself in the bed.—Sensation, as if the head were too thick, with shootings in the temples.—Sensation as if the external parts of the brain were inflamed, and were striking painfully against the cranium.—Violent heat in the head, esp. in the vertex, and sometimes with a sensation as if the head were compressed.—Painful pulsation in the temples, and the gums, sometimes with pain like excoriation on being touched.—Exostosis in the cranium.—Tuberosities in the vertex, soft, as if there were water in them, with troublesome pains, esp. at night; the pains hinder sleep, and are < by the touch.—Hard swelling of the whole left side of the head, as if in the bone, with sensation of numbness, and acute, transient, shooting pain.

3. Eyes.—Scraping in the eyes.—Troublesome sensation round the eyes and eyelids, with dryness and heaviness of eyelids.—Painful feeling in the eyes, as if pressed into the head.—Painful sensation as if the eyes were pushed outwards from the head.—Violent pains in the eyeballs, in the evening, with great nervous excitement.—Con traction of the pupils.—Eyes inflamed, weak, dull, as it were swimming in tears.—Sensation as if a membrane were placed before the eyes.—Weak sight, with confusion of the letters when reading.—Diplopia.—Pupils very much contracted.

4. Ears.—Buzzing in the ears.—Roaring in the ears.

6. Face.—Heat and burning sensation in the cheeks, round the ears, and in the vertex, sometimes with constant inclination to yawn.—Sensation of swelling, of stiffness and of tension in the temporo-maxillary joint, with burning smarting in the skin.

7. Teeth.—Pulsation in the teeth and gums.—Acute drawing pains in all the teeth.—Toothache, with and without salivation.—Toothache with erections, or after coition.—Toothache with fits of shivering, or disposition to perspire.

8. Mouth.—Tongue loaded, on one side only.—Dryness of the tongue after sleep, as if it had been burned.—Fetor of the tongue.—Salivation; with toothache.—Hot saliva.—Craving to smoke tobacco.

11. Stomach.—Pyrosis and sour vomiting.—Vomiting with nausea, after breakfast.—Sensation of fulness and ebullition in the precordial region.—Aching in the stomach after drinking.—Frequent cramps in the stomach.—After each meal, burning pain and sensation of excoriation in the stomach, with frequent risings of flatus; the pains extend to the left hypochondrium and to the back.

12. Abdomen.—Shootings and pains in the region of the spleen.—Arthritic pains which pass rapidly from the limbs to the abdomen.—Pain in the abdomen, with shiverings.

13. Stool and Anus.—Contraction of the abdomen, and constipation.—Fæces scanty, and sanguineous towards the end.

14. Urinary Organs.—Frequent and abundant emission of urine.—Frequent wetting of the bed at night.—Urine turbid, thick, yellowish, like rotten eggs.—Urine of a reddish yellow colour.—Fetid urine.—Reddish sediment, which adheres to the side of the vessel.—Pain, as from excoriation in the urethra, when making water.

15. Male Sexual Organs.—Sweating of the scrotum.—Discharge of prostatic fluid, after making water.—Erections during the toothache.—Toothache after coition.

17. Respiratory Organs.—Voice weak.—Breath fetid.—Expectoration thin, slimy, and copious.—Sanguineous expectoration.—Cough, with vomiting, and yellowish frothy expectoration, mixed sometimes with streaks of blood; the cough fatigues and hinders sleep.

19. Heart.—Palpitation and starting of the heart, with inability to remain lying on the left side.—Acute pains in the region of the heart, with discouragement and trembling.—Suffocating fits at night, with sensation as if the glands of the neck were swollen, and the arteries stiff with blood.

20. Neck and Back.—Pain in the nape of the neck with headache.—Screwing pain from the ear to the shoulder.—Sensation as though the cervical glands were much swollen and the arteries excessively distended, with a feeling of suffocation, as if the head were separated from the body, at night.—Sharp pain beneath l. scapula.—Burning itching in the back.—Painful pulling along the spinal marrow, < by stooping.

22. Upper Limbs.—Phlyctenæ, excessive itching on the arms and hands.—Bone-ache, piercing pains in the bones and acute shooting pains in the fingers.

23. Lower Limbs.—Itching miliary eruption on the legs.—Rheumatic pains in the thighs and in the knees.—Cold in the knees and in the feet.—Pain as from contusion in the toes.—Painful swelling of the ball of the great toe, with pains which often pass rapidly into other parts of the body.

24. Generalities.—Shooting pains, as from blows, in different parts of the body, passing rapidly from one part to the other, < by cold air, and by taking brandy.—Rheumatic and arthritic pains as well in the muscles as in the bones (esp. after suppressed gonorrhœa).—Exostosis, with shooting, or with aching and dull pains.—Pain, resembling excoriation, in the exostosis.—The majority of symptoms exhibit themselves on the left side of the body, and are < chiefly by fresh air, also while the moon is waning, in the morning, or towards the evening, and esp. in bed.—Great lassitude and painful weariness in all the limbs.—Necessity to remain lying down.

26. Sleep.—Complete sleeplessness, caused, sometimes, by aching in the bones.—Inclination to sleep, with inability to accomplish it.—Dreams of fire; or of black cats, with nightmare.—Agitated, unrefreshing sleep.—Starts with fright, on going to sleep, accompanied by shivering, with viscid sweat.

27. Fever.—Fever, similar to typhus, with excessive shivering, followed by continued heat, by viscid sweat over the whole body, and complete loss of appetite.—Fever, with gastric and nervous suffering.—Clammy sweat, of a putrid smell.

Datura Arborea.

Brugmansia suaveolens. N. O. Solanaceæ. Tincture of the flowers.

Clinical.—Brain affections. Clairvoyance. Vertigo.

Characteristics.—The odour of the flowers left in the room two days caused the following remarkable symptoms: Sensation as if forehead were expanded and as if his ideas were floating outside his brain. Strange feeling of pleasant and easy comfort, and as if he scarcely touched earth with his feet, and had to gather ideas from afar, as if they were floating in the clouds. Involved in a most beautiful atmosphere, bright calm as the sunlight at noon. Sensible confusion of ideas across the cerebrum, with drawing, nervous irritation back to cerebellum and a spinal irritation or depletion of nervous circulation in medulla oblongata (whilst handling and cutting the flowers). The odour is also said to have caused spasms; and the juice instilled into the eye causes amaurosis according to Froriep.

Relations.—*Compare:* Stram.

Datura Ferox.

Chinese datura. N. O. Solanaceæ. Trituration of seeds. Tincture of unripe fruit.

Clinical.—Delirium. Mania.

Characteristics.—Poisoning with this drug causes raving madness. A girl who ate half an unripe fruit manifested the following: Completely out of her mind in a quarter of an hour, dizzy, sleepy; slept with eyes open; if disturbed, sprang up raving and uttered unintelligible words; *if one sang she began to dance in the Javanese fashion*. This symptom may prove a keynote in certain cases of mental alienation. Dryness of mouth was also noted in this case, as with *Bell*. and other Solanaceæ.

Datura Metel.

Indian Datura. N. O. Solanaceæ. Trituration of seeds.

Clinical.—Convulsions. Delirium. Epilepsy. Eye, affections of. Mania. Timidity.

Characteristics.—*Datur. metel* causes a soporose condition, and later delirium and spasms. The soporose state may be absent. Delirium may be vociferous, or merely garrulous. Patient usually manifests excessive timidity. Picks at real or imaginary objects. Performs ridiculous antics. Several movements appear due to perverted vision, and inability to judge distances. After the delirium, patient remembers

nothing of what has occurred. Extreme dilatation of pupils. Flickering before eyes with sensitiveness to light. Pulse and temperature undergo extremes of exaltation and depression.

Relations.—*Compare:* Other Solanaceæ.

Derris Pinnata.

N. O. Leguminosæ. (Cochin China.) Tincture of plant.

Clinical.—Asthma. Blepharospasm. Diarrhœa. Dysentery. Eyes, inflammation of. Locomotor ataxy. Mania. Ozæna. Smell, sense of, affected. Tic-douloureux.

Characteristics.—Dr. X. Roussel is the authority for this plant, and some of the symptoms are of a very peculiar nature. "He walks as if stepping on down." "He is afraid of killing some one with a knife." Both kinds of tic are noted—painful and convulsive. Sense of smell is exalted. "He perceives celestial odours;" also "intolerable smells, after frequent sneezing." Viscid urine, and viscid saliva. Electric shocks and cramps. Heat > toothache. Many symptoms, including diarrhœa, come on at night. < From touch.

Relations.—*Compare:* Anacard. (sense of smell); Sticta, &c. (levitation); Ign. (ball in throat, hysteria).

SYMPTOMS.

1. Mind.—Fancies he is sea-sick.—Suicidal.—Is afraid of killing some one with a knife.—Disposed to strike, and inveighs against his dearest friends.—Weeping and singing alternately; great flow of ideas.—Loss of memory.

2. Head.—Vertigo; is afraid of falling if he turns his head to r. or l.—Sensation as if needles and nails were being driven into head (6 p.m. at evening meal).—Painful lancinations l. side of head with vomiting of mucus and burning along œsophagus.—Scalp excessively painful; slightest touch < the pain.

3. Eyes.—Cannot raise lids or eyebrows.—Painful lancinations in both eyes, extending to bottom of orbits.—Swelling of l. caruncula lachrymalis with large ecchymosis of l. eye.—Vision dim; black points before eye.

4. Ears.—Swelling, redness and heat of auricle.—Hearing impaired or excessively acute.—Cracking in ears when swallowing.

5. Nose.—Tip of nose red.—Fluent coryza.—Sense of smell exalted; celestial odours.—Intolerable smells after frequent sneezing.

6. Face.—Face puffy.—Tic-douloureux and tic convulsive.—Burning in l. cheek.—Pain in whole lower jaw as if the teeth were being pulled out.

7. Teeth.—Teeth become loose; previously loose teeth become very painful.—Toothache at night, < by cold, > by heat.

8. Mouth.—Formication and trembling of tongue.—Painful, dry, cracked tongue.—Salivation with engorged submaxillary glands.—Copious salivation, with aphthæ, and thready, viscid mucus.

9. Throat.—Red swelling of tonsils, uvula and velum; tickling of uvula.—Sensation as of ball in œsophagus with cramps there.

11. Stomach.—Bad-smelling eructations.—Hiccough with deep anguish and burning in stomach.

12. Abdomen.—Sensation of swelling in liver and spleen.—Cramp-like pains; diarrhœa with anguish.—Fetid flatulence.—Griping, > lying on abdomen.

13. Stool and Anus.—Hæmorrhoids; constriction; formication.—Sensation of foreign body in anus.—Diarrhœa and weakness after vomiting.—Involuntary stools at night, white or yellowish.—Burning or sharp pains with bloody stools.

14. Urinary Organs.—Pains in kidneys; in bladder; injury; sometimes incontinence.—Gluey, fetid urine discharged *guttatim*.

16. Female Sexual Organs.—Swelling of uterus; weight behind uterus; feeling as if about to prolapse.—Leucorrhœa, with menstruation twice a month.—Cramp-like pains during menses.

17. Respiratory Organs.—Feeling of suffocation with fetid breath; must sit up in bed at night.—Cramp-like pains, and lancinations behind sternum.

19. Heart.—Violent palpitation; heart seems to be beating in water.

20. Neck and Back.—Violent pains in nape and neck with swelling.—Feeling as if a small stream of water was running from one ear to the other across nape of neck, causing terrible pain.

22. Upper Limbs.—Paralytic pains, commencing in entire l. upper extremity (also in r. less frequently).—Rheumatic pains from shoulder to finger-tips.—Cramp-like pains at insertion of deltoid > by pressure.

23. Lower Limbs.—Electric shocks in muscles of leg.—Intense sciatic pains.—Staggers; he walks as if stepping on down.

25. Skin.—Skin of abdomen painful.

26. Sleep.—Sleep after a meal.

Aranea Diadema.

The Cross Spider. N. O. Arachnida. Tincture.

Clinical.—Bones, affections of. Catalepsy. Chills. Dysmenorrhœa. Dyspepsia. Hæmorrhages. Hæmorrhagic diathesis. Headache. Hydrogenoid constitution. Intermittents. Malarial cachexia. Menstruation, irregularities of. Neuralgia. Punctured wounds. Scorbutic affections. Scurvy rickets. Spleen, affections of. Toothache.

Characteristics.—Grauvogl is our chief authority for the use of *Aranea*. It is one of the leading remedies for the hydrogenoid constitution as described by him, and for intermittent fevers and other intermittent affections. By hydrogenoid constitution he meant abnormal sensitiveness to damp and cold; and inability to live near fresh water, either rivers or lakes, or in damp, chilly places. This gives the < from bathing; from damp weather; damp localities, or habitations; < drawing in cold air. Chilliness followed by little or no fever. Chill and neuralgic attacks at the same hour every day, every other day, week, month, or regular period. Attacks are violent and sudden. Sensation of swelling in many parts, head, face, hands; of numbness; of coldness as if bones were made of ice. Hæmorrhages from many parts; from wounds. Punctured wounds. Exhaustion. Pains like electric currents. Great desire to lie down; many symptoms > lying down. Toothache < night after lying down. On lying down in bed and touching bed-clothes, whether linen or wool, has a chill. Many symptoms occur on the right side. Chill not > by external warmth; no sweat with fevers.

Relations.—*Compare:* Mygale, Theridion, Tarentula, Ipec., Nux v., Ars. (intermittents and bone affections); Cedron (intermittents of hot climates; Aran., of cold climates chiefly). *It antidotes:* Chi., Quinine, Merc. *Antidoted by:* Smoking tobacco.

SYMPTOMS.

1. Mind.—Despondent; longs for death.

2. Head.—Headache (in the forehead), relieved by smoking tobacco and going out into the open air.—Confusion and pressure in the head, mitigated by supporting the head.—Vertigo and flickering before eyes, before headache; when sitting up; must lie down.—Confusion of head; after retiring; evening when studying; with pressure

as if in bones of r. temple, > by pressure and sweating.—Headache > entirely in open air.—Headache, with burning eyes and heat of face.—Burning heat in forehead and face.

3. Eyes.—Glimmering and glittering before eyes; preceding headache.—Burning; stinging; shooting in eyes.

7. Teeth.—Painfulness of all the teeth as soon as he goes to bed in the evening.—Sharp sensation of cold in the teeth (incisive) every day at the same hour.—Sensitive, cold sensation in r. lower incisors, esp. on drawing in air; came on again next day at same hour.—Sudden violent pains in teeth of whole upper and lower jaw, at night, immediately after lying down.

8. Mouth.—Instantly a painful sensation, as though arising from several points, darted along the tongue, painfully affecting tongue, jaws, and head; the effect was instantaneous, like a shock from an electric battery.—Tongue seemed almost paralysed, utterance thick and heavy, and the pains at root of tongue and in lower jaw, esp. at joint, most excruciating.—Bitter taste, with coated tongue; relieved by smoking.

11. Stomach.—Thirst during the fever and during the greater part of the other sufferings.—Dejection and lassitude, with thirst.—Coryza, with thirst.—Eating causes headache and spasms.—Vomiting, with fever.—Epigastrium painful to pressure.

12. Abdomen.—Swelling of the spleen (after intermittent fever was suppressed by Quinine).—Enlarged spleen with chilliness.—Fulness and heaviness in the abdomen as from a stone, with sensation of sinking in the epigastrium.—Borborygmi in the abdomen, and heaviness in the thighs, every day at the same hour.—Colic, with shuddering towards evening.

13. Stool.—Diarrhœa; arms and legs as if asleep.—Stools watery, with great rumbling in bowels as if of fermentation.—Liquid, difficult evacuation, with colic, which is ameliorated by friction on the abdomen.

16. Female Sexual Organs.—Dysmenia, spasms commencing in stomach.—Catamenia too early, too frequent, too profuse, of too long duration.—Periods eight days too early, too strong, and too copious.—Metrorrhagia; bright-coloured blood.—Discharge of viscid mucus from the vagina.—Viscous leucorrhœa.

17. Respiratory Organs.—Hæmoptysis.—Violent hæmoptysis in anæmic and debilitated subjects.

22. Upper Limbs.—Numbness of parts supplied by ulnar nerve.—Dull, penetrating pains in the bones and in all parts of the body, esp. in the humerus and the forearm.—At night a sensation as if the hands and forearms were larger and heavier.—Sensation on the ring and little fingers as if they were asleep.

23. Lower Limbs.—Boring and digging in the r. tibia and os calcis, continuing on moving the foot, and disappearing by continuing the motion.—Ulcer on the l. heel.

24. Generalities.—Hæmorrhages from all the organs.—Neuralgic pains, most on r. side, > by hard pressure, < at menstrual period, esp. before, but still during whole cycle; < 12 at night, unbearable, driving her out of bed; < 3 to 8 p.m.; aggravations recurring like clockwork; menses every three weeks.—Great exhaustion and lassitude.—Desires to keep constantly moving when sitting.—Subsultus tendinum.—Catalepsy; periodic headache; < in damp weather.

26. Sleep.—As soon as he lies down at night a violent pain in all his teeth.—Restless sleep with frequent waking.—Restless; on awaking, some part of the body feels as if it were swollen.

27. Fever.—Before chill: cutting cramp in stomach; vomiting; backache.—Cold all the time, cannot get warm; chilly as if bones made of ice even in summer; < during rain.—Chilliness after being in water.—Chill with clock-like regularity; as clock strikes four daily.—Thirst, fever and sweat may be absent.—Chill every other day at precisely the same hour.—During chill: pains in head, stomach, knees.—Afterwards: vomiting.—During heat: headache (but less violent than during chill), with drowsiness.—After heat: vomiting and prostration; lies as if dead; stinging in eyes.—Sweat absent; sweat without thirst; sweat with thirst.

Dictamnus.

Fraxinella. Dictamnus fraxinella. N. O. Rutaceæ. Tincture of whole plant.

Clinical.—Constipation. Flatulence. Leucorrhœa. Metrorrhagia.

Characteristics.—The authorities for *Dictamnus* are Stoerck, and Noack and Trinks. The few symptoms recorded show relationship to Ruta.

SYMPTOMS.

13. Stool and Anus.—Frequent emission of copious, offensive flatus.—Itching in anus.—Increased stools.—Constipation.

14. Urinary Organs.—Greatly increased secretion of urine.

16. Female Sexual Organs.—Discharge of much tenacious mucus from uterus, at first brown, afterwards white; at last streaked with blood.—Increase of leucorrhœa with distressing tenesmus and painful erosion of genitals.—Profuse metrorrhagia for nine days (recurring after ten days, upon the continued use of the drug, and lasting several days with physical weakness).

27. Fever.—Profuse perspiration.

Digitalinum.

An active principle (glucoside) of Digitalis purpurea. C_5 H_8 0_2. (Schimiedeburg); C_{27} H_{45} O_{15} (Kosmann). Trituration.

Clinical.—Asthma. Diarrhœa. Emissions. Exophthalmus. Heart, affections of. Palpitation. Spermatorrhœa. Vertigo. Vision, hallucinations of.

Characteristics.—*Digilalinum* is a poison of very great activity. It produces a profound effect on muscular tissue, both voluntary and involuntary, more especially on the heart. It causes profound prostration, even to inability to move a muscle. Paralytic weakness; numbness; tremulousness of the limbs. Cold, clammy surface. Gooseflesh. The heart is slowed, or else its action is made rapid and feeble or "sensation as if the heart stood still." *Digitalis* has: Sensation as if the heart would stand still if he moved. According to Hale *Dgn*. is specially indicated in cases of "overburdened heart where it is *constantly labouring*." Irregular and intermittent action. A sinking, faint sensation is felt at the epigastrium, nausea and vomiting of yolk-of-egg matter, shivering, diarrhœa, the stools not being noted characteristically white as are those of the plant. Sensitiveness of eyes to light and nose to odours. Disorders of vision and hearing are very numerous. One prover noted "frontal headache, dazzlings, loss of appetite, sinking at epigastrium, intestinal flatulence, borborygmi, eructation, slight abdominal pains; urine abundant; great fatigue; painful heat in evening but no thirst." For a whole day pressure in supra-orbital region towards frontal sinus, and when walking a feeling as if the ground gave way under his feet. Sexual weakness is shown in: Deep sleep in which an emission occurs without waking him;" and "Sexual power diminished or quite abolished temporarily." *Dgn*. has cured the following case: Mrs.— had for over a year swelling of right hand and fingers, which she thought to be rheumatic. *Digitalis* has the symptom, "swelling of right hand and fingers," and this would have been given but only *Digitalin* was at hand. This was given in 4x. After the second dose the swelling began to subside, and in two or three days was completely gone. (*H. W*., xxvi. 552). The heart pains are < lying on left side. Many symptoms appear on waking in the morning; chilliness and fever in afternoon and evening. Confusion of the head is > walking in open air. Symptoms are > after dinner. Drinking = nausea, and vomiting. Pains in trunk < during rest.

Relations.—*Compare:* Digitalis, Conium, Gratiol., Tabac., Gelsem., Secale. See under DIGITALIS.

SYMPTOMS.

1. Mind.—Agitation.—Hallucinations.—Irritability.—Sometimes dejection, sometimes hilariousness.—Inability to fix attention; or to take in what is read.

2. Head.—Vertigo, with unsteady vision; inability to fix distant objects.—Objects seem to turn horizontally from l. to r.; > closing eyes.—Head thrown back.—Lancinating pain in head; hot and confused towards evening.—Forehead heavy, hot.—Headache in morning, worse in afternoon, and increasing in evening to a violent migraine.—A peculiar sensation of drawing, of raising up in occiput and vertex; afterwards a pressure in occiput.

3. Eyes.—Sensation as if the eyes were becoming larger and were starting from their orbits; exophthalmus.—Hallucinations of vision.—Muscæ volitantes, in evening upper part of visual field seemed shaded by a cloud.—Flickering and dazzling.—A large bright spot advancing, sometimes resembling a ring showing prismatic colours; < after exertion.—Circles floating before eyes.—All objects in a room seem to run together.—Yellow vision.—Halo round candle flame.

5. Nose.—Frequent sneezing and coryza; with pressing, throbbing pains in arms; nasal mucus streaked with blood in morning; smell lost.

6. Face.—Face hot, red, and feverish; or else very pale.—Constant jerking of upper lip of l. side.

7. Teeth.—Burrowing, sticking, pulsating pains in teeth; l. upper eye tooth; r. back lower teeth; l. and r. upper incisors.

8. Mouth.—Tongue large and smooth with a saburral coating.—Saliva rather thick, flows slowly from the mouth.—Bitter taste.

11. Stomach.—Violent sensation of hunger on waking.—Very great thirst, esp. for beer.—Drinking renews nausea and vomiting.—Nausea.—Violent vomiting; yellow like egg; white sourish mucus; with great sensitiveness of eyes to bright light and the nose to odours.—Faint, sinking sensation.—Feeling of fulness and nausea as if contents of stomach rose up in throat.—Pinching or contracting pain.—Stitches immediately after dinner.

12. Abdomen.—Abdomen retracted without colic.—Emission of much offensive flatus, in morning, immediately after rising, followed by copious pasty stools with violent griping.—Stitching lightning-like pains.—Violent labour-like pains from small of back into abdomen as if menses would appear.

13. Stool and Anus.—Urgent desire for stool.—Stools: diarrhœic; loose; or soft without being diarrhœic.—Constipation; stool like rabbit's.

14. Urinary Organs.—Urine increased; very abundant.—Decidedly diminished.—Falling off in urea and chlorides, increase in phosphoric and sulphuric acids.

15. Male Sexual Organs.—Activity greatly depressed and even abolished.—During deep sleep an emission which does not awaken him.

16. Female Sexual Organs.—Menstruation two days too early without usual premonitory pains.—Menstruation more profuse.

17. Respiratory Organs.—Symptoms of cold, hoarse so could hardly speak, with violent sticking pains in larynx.—Voice extinct.—Short hacking cough; whitish-yellow sputa.—Breath short; while walking; on waking.

18. Chest.—Rush of blood to chest.—Rheumatic pains; constriction; stitches.—Pains in the r. or l. side.—Rheumatic pains l. chest just below axilla only on motion.—Boring l. chest from scapula forward to precordial region < deep breathing.—Sticking in l. side between nipple and axilla, evening in bed, while lying on l. side.—Throbbing-sticking, pulsating pains.

19. Heart.—Sensation as though heart stood still for a moment while playing the piano.—Peculiar sensation in heart with anxiety, and trembling with standing still, in the evening while sitting.—Stitches corresponding to heart pulsations.—Palpitation with dull sticking in heart while walking.—Violent palpitation in bed lying on l. side.—Action tumultuous, irregular.—Pulse: slow; irregular; intermittent; jerking; hurried.—Pulse not corresponding to heart's impulse, small, thready, nearly imperceptible, while heart is strong and hammering.

20. Neck and Back.—Neck stiff in morning (l.).—Violent pain in neck.—Violent pain between scapulæ like cramp with oppression of breathing.—Painful sensation as though scapulæ would be drawn together.

21. Limbs.—Limbs tremulous; weak; unsteady; heavy as if paralysed; pains < during rest.—Pains are sticking, pressive, pulsating.

22. Upper Limbs.—Pressure in shoulders.—Drawing pain in biceps muscle.—Pressure; throbbing, tearing in elbows (r. at 4 p.m.).—Pressing asunder in the fingers.—(Swelling of r. hand and fingers.)

23. Lower Limbs.—Cramp in thigh and calves.—Pains in knees; above r. knee.—Sprained pain in r. ankle.—On walking sensation as if the ground sank away

under the foot.—Numb sensation of l. foot obliging him to move it frequently.—Pressing asunder of toes of r. foot.

27. Fever.—Chilliness and shivering.—Feet and hands cold, palms moist.—Shivering over back, esp. sacral region.—Heat in nape rising up into head and extending over whole body.—Profuse sweat at night.—Cold sweat; after a cup of coffee.—Bathed in cold sweat.

Digitalis.

Digitalis purpurea. Fox-glove. N. O. Scrophulariaceć. Tincture from the leaves of the second year of the plant.

Clinical.—Amaurosis. Angina pectoris. Asthma. Bright's disease. Cyanosis. Delirium tremens. *Dropsy*. Fever. Gonorrhśa. Headache. *Heart, affections of*. Hydrocele. Hydrocephalus. Impotence. Jaundice. *Lungs, congestion of. Memory lost*. Meningitis. *Noises in head*. Paraphimosis. Prostate, enlarged. Ptyalism. Spermatorrhśa. Toothache. Urinary disorders. Vision, disorders of.

Characteristics.—There are three main symptoms in the Digitalis pathogenesis which should be borne in mind: (*1*) Slow, weak, irregular and intermittent pulse. (*2*) Enlarged, sore, painful liver. (*3*) White, pasty stools. Along with these is prostration from slight exertion. The mental condition is: anxious; low-spirited; tearful, wants to be alone; tries to escape if others force themselves on her. Anxiety as if conscience-troubled. "Anxious and concentrated sadness, with sleeplessness at night, owing to pains at the heart: for instance, from unhappy love, especially in women of brown complexions, firm and obstinate dispositions. In such cases far preferable to *Ignatia*" (Teste). Teste classes *Digit*. with *Bryonia* and *Ignatia*. The stomach symptoms (from portal engorgement) are nausea and vomiting; the mere sight or smell of food excites violent nausea, with clean tongue, thirst for water, absence of fever; the complaints may come either from excessive venery or from high living. In old men there are: enlarged prostate; impotence; lascivious thoughts. Malcolm Macfarlan (*H. P*., xiii. 490) reports *Digit*. having produced severe urethritis, phimosis, and strangury. He has cured with it many cases of gonorrhśa. Ballard cured a man of headache and dizziness originating probably in gonorrhśa suppressed several years before. He complained of feeling bad about the head after drinking, and this keynote symptom was elicited: "after drinking cold water the pain would seat itself in the forehead and extend down the nose." Delirium tremens in high livers, stomach and liver diseases with the mental state of the drug. Nausea < from smell of food; not > by vomiting. The food eaten comes up by mouthfuls, cannot expectorate without vomiting. Every shock, like bad news strikes her in the epigastrium. Deathly sinking in the epigastrium. The use of *Digitalis* as a remedy for pneumonia in the old school is well known. It has

proved a very dangerous remedy, but it has been used by homśopaths with very good effect in senile pneumonia (E. V. Ross., *H. P*., xvii. 177). Ross regards the indications as being: "Dry cough with mucous râles and no expectoration or only 'prune-juice' expectoration; cyanosis, cold extremities; feeble, intermittent pulse deathly nausea or gone sensation at epigastrium." Restlessness with great nervous weakness. Lassitude, mental and bodily. Faintness. Convulsions, with retraction of head, syncope, and collapse. Among the peculiar sensations of *Digit*. are: Sensation as if the heart would stand still if he moved, must hold the breath and keep still (*Gels*. has "must keep moving or the heart would stop.") As if the brain were loose; as if something fell forward in the head on stooping; as if the brain were made of fine glass and shattered at a blow; as if something were running out of urethra; as of a weight attached to stomach; as if the internal parts were grown together. As if the lungs were constricted and tied up in bundles. As if heart stood still; as if heart had torn itself loose and were swaying to and fro by a thin thread; as if the stomach would sink into abdomen. Terrible pain at root of nose after vomiting.

Discharged blood coagulates slowly or not at all. Distended veins in eyes, ears, lips, and tongue. Blue skin. *Digitalis* is suited to the climacteric period: sudden flushes of heat followed by great debility; least motion = palpitation. Nervous lymphatic constitutions. Children with very white complexions, light hair, scrofulous. Most symptoms are < at night or on waking in the morning. Symptoms are > when stomach is empty; < after meals; from cold diet; after drinking (anything); < from spirituous liquors. Motion < most symptoms and may = fatal collapse. < From being raised up in bed. < From touch or pressure. Great sensitiveness to cold air; cold weather; changes of weather; cold food; cold drinks; all of which <. Getting heated < cough. In a room, lachrymation is <. With fear of suffocation there is desire for open air, and the symptoms of catarrh are > in open air. < From music; sadness from music.

Relations.—*Antidoted by:* Vegetable acids, Vinegar, infusion of galls, Ether, Camphor, Serpentaria. *It antidotes:* Wine, Myrica cerif. (Jaundice). *Compatible:* Bell., Bry., Cham., Chi., Lyc., Nux, Op., Phos., Puls., Sep., Sul., Verat. *Incompatible:* Chin. (increases the anxiety); Spirit. nitros. dulcis. *Compare:* Acon. (anxiety), Ant. t. (deathly nausea), Apocy., Arsen., Bell., Bry., Camph., Chi., Con., Zn., Kalm., Lach. (sleep), Lobel., Lycopus, Cratćgus (weak heart), Nat. m., (frequent and intermittent pulse), Phos. (genital symptoms), Spi., Sul., Tabac. (deathly nausea), Verat. In gonorrhśa, Sul. (prepuce indurated; Dig., puffed, infiltrated with serum); paraphimosis, Coloc. Palpitation with diarrhśa, Ant. t. Act on base of brain, Lob., Tab. One hand cold, the other hot, Chi., Pul., Ip., Mosch. Fainting before stool, Sul. (after stool, Nux, Crot. t.). Food eaten comes up by mouthfuls, Fer., Pho. Every shock strikes in pit of stomach, Pho., Mez., Kali c., Calc. Cracking in head, Alo. Headache extending into nose, Diosc.

Causation.—High living. Sexual abuse, or sexual excess. Alcohol.

SYMPTOMS.

1. Mind.—Extreme anguish, esp. in the evening, with disposition to weep and great fear of the future.—Gloomy and peevish.—Indisposed to speak; inclination to lassitude.—Remorse.—Tearful moroseness; with sensation of internal uneasiness.—Indifference.—Great love of labour.—Weakness of memory.—Nocturnal delirium and agitation.—Sadness from music.

2. Head.—Dizziness.—Vertigo with trembling.—Dulness of the head, with limited power of thinking.—Jerking pressure in the head, esp. during intellectual labour.—Pressure in the forehead, from mental exertion.—Tension in the forehead on turning the eyes.—Tearing in temples and sides of the head.—Shootings in the temples and in the forehead, sometimes extending to the point of the nose, esp. after drinking anything cold.—Stitches in the temples (evening and night).—Itching in the brain, on one side of the head only.—Sensation on stooping, as if the brain were falling forwards.—Undulations in the brain, as if it contained water, with confusion in the head.—(Hydrocephalus; sensation as if waves or water were beating on the skull; < while standing, talking, shaking the head and bending the head backward, > when lying down or bending the head forward.).—Swelling of the head.—The head is constantly inclined backwards.—Sudden cracking in the head (during a siesta) with starting, as in a fright.

3. Eyes.—Aching in the eyes, greatly augmented by the touch.—Burning pain and pressure above the eyes, with confused sight.—Burning pain in the r. eyebrow.—Shootings in the eyes.—Inflammatory redness of the conjunctiva and of the eyelids, with swelling, and sensation as if sand were introduced into the eyes.—Blueness of the eyelids.—Inflammation of the meibomian glands.—Smarting lachrymation, increased by a bright light, and by cold air.—Agglutination of the eyelids, with copious secretion of mucus (in the morning).—Disposition of the eyes to turn sideways.—Pupils insensible and dilated.—Sight confused, as if directed through a mist.—Obscuration of the sight and complete blindness, as from amaurosis.—Opacity of the crystalline lens.—Painless obscuration of the lens.—Illusion of the sight.—Phantoms, visions, and the colours of the rainbow before the eyes.—Dark bodies, like flies, hover before the eyes.—Objects appear green or yellow.—Sparks before the eyes.—Diplopia.

4. Ears.—Hissing before the ears, like boiling water (with hardness of hearing).—Single stitches behind the ears.—Otalgia, with tensive and contractive pains in the ears.—Swelling of the parotids, and behind the ear.

5. Nose.—Pain above the root of the nose.—Coryza, with hoarseness.

6. Face.—Paleness of the face (bluish hue under the pale skin.).—Blue colour of the lips and eyelids.—Convulsions on one (l.) side of the face.—Cramp-like and drawing pains in the cheek-bones.—Swelling of the cheek, with pain on being

touched.—Eruptions, with gnawing itching in the cheeks and in the chin.—Pores of the face black and suppurating.—Bluish swelling of the lips.—Eruptions on the lips.—Dryness of the lips.

8, 9. Mouth and Throat.—Roughness, excoriation and scraping in the mouth and throat, with clammy taste.—Sweetish and fetid saliva.—Profuse flow of frothy saliva compelling to spit all the time.—Salivation with excoriation of the tongue, and of the gums.—Bluish tongue.—Swelling of the tongue.—Ulcer on the tongue.—Tongue loaded with white mucus (morning).—Stinging in throat between acts of swallowing.—Peculiar sensation in fauces as if walls of pharynx swollen, or as if they were constricted by swelling of tonsils.—Spasmodic constriction of throat.—Sore pain on swallowing.

10. Appetite.—Sweetish taste, esp. after smoking tobacco, sometimes with constant accumulation of saliva in the mouth.—Bitterness in the mouth.—Clammy taste.—Bitter taste of bread.—Want of appetite, sometimes even with a clean tongue.—Continuous thirst, with dry lips.—Thirst esp. for acid drinks.—Gulping up of an acrid or tasteless fluid.—Great appetency for bitter things.—After a meal, pressure and inflation of the abdomen and of the stomach.

11. Stomach.—Sour eructation and regurgitations, sometimes after a meal.—Pyrosis.—Nausea, with inclination to vomit, moral dejection and inquietude.—Convulsive retchings.—Vomitings and nausea, with fulness and pressure on the epigastrium.—Vomiting in the morning (of the ingesta; of a green liquid), or at night.—Vomiting of mucus, of food, or bile, with excessive nausea.—Nausea in the morning, on waking.—Nausea and vomiting during a meal.—Vomiting of food on expectorating.—Sensation or retraction in the stomach.—Burning in the stomach, extending up to the śsophagus.—Pressure, burning pain, and heaviness in the stomach and in the epigastrium.—Nausea, as if he would die with it; continuous, and not relieved by vomiting.—Sensation of weakness in the stomach, as if life would be extinguished, esp. immediately after a meal.—Deathly sinking in the stomach-pit.—Cramp-like pains in the stomach, sometimes with nausea and vomiting, mitigated by eructations.—Shootings in the pit of the stomach, extending to the sides and the back.—Fulness in the pit of the stomach.

12. Abdomen.—Contractive tense pain in the hypochondria.—Sensibility, and pressive pains, in the region of the liver.—Twisting, and cramp-like pinching, in the intestines.—Shooting and tearing colic, with inclination to vomit, esp. during movement and expiration.—Inflation of the abdomen (ascites).—Dropsical swelling of the abdomen.—Cuttings, as from a chill, or a diarrhŕa.—Cramp-like tension in the groins.—Sufferings from flatulency.

13. Stool and Anus.—Fćces white, like chalk, or the colour of ashes.—Diarrhśa of excrement mixed with mucus, preceded by shiverings and cutting

pains.—Dysenteric evacuations.—Involuntary stools.—Retention of stool; prolonged constipation.—Watery diarrhśa; with much thirst.

14. Urinary Organs.—Retention of urine.—Urgent and almost futile, inclination to make water, with discharge of hot, burning, and very scanty urine.—Pressure on the bladder, with the sensation as if it were too full, continuing after micturition.—Frequent emission of small quantities of water-coloured urine.—While in a recumbent position the urine can be retained for a longer time.—Difficult urination, as from contraction of the urethra.—Wetting the bed at night.—Urinary flux.—Diminution of the secretion of urine, sometimes alternating with abundant emission.—Incisive pains in the urethra, before and after the urinary discharge.—Involuntary emission of urine.—Urine of a deep colour, brownish or reddish.—Nausea before and after urination.—On making water, burning sensation and constriction in the; urethra.—Inflammation of the neck of the bladder.—Prostate enlarged.

15, 16. Sexual Organs.—Hydrocele (l.); scrotum looks like a bladder filled with water.—Testes; bruise-like pain in; swelling of.—Gonorrhśa; phimosis; with burning, and dropsy of prepuce.—Desire strongly excited, frequent erections and pollutions.—Dropsical swelling of genitals.—(Nymphomania.—Menorrhagia.)

17. Respiratory Organs.—Hoarseness (in the morning after a night sweat).—Hollow, spasmodic cough, from roughness and scraping in the throat; expectoration only in the evening, of yellow jelly-like mucus, tasting sweet.—Hoarseness and coryza in the morning.—Much phlegm in the larynx, which is detached by a slight cough.—Cough, after a meal, with vomiting of food.—Dry cough, with pains in the shoulders and arms.—Cough, with expectoration of matter resembling starch.—Smarting in the chest on coughing.—Cough worse at midnight and during the morning hours.—The cough is caused by talking, walking, drinking anything cold; when bending the body forward.—Troublesome choking sensation with cough; mostly at night, and on physical exertion.—Dry, cramp-like cough, excited by prolonged conversation.—Sanguineous expectoration on coughing (small quantities of dark-blood).

18. Chest.—Sensation of soreness in the chest.—Respiration painfully restricted, esp. at night, when lying down, or in the day, when walking, or seated.—In the morning, suffocating constriction of the chest, forcing the patient to rise up in the bed.—Asthmatic sufferings as from hydrothorax.—Pressure on the chest from keeping the body bent.—Tension in the chest, with necessity to breathe deeply.—Contractive pain in the chest, when sitting with the body bent.—Smarting in the chest.—Sensation of weakness in the chest, proceeding from the stomach.—Congestion in the chest.—Shuddering at the mammć.

19. Heart.—Acceleration of the movements of the heart, with palpitations that can be heard (with slow pulse), anguish, and contraction in the sternum.—Very slow

pulse.—On rising up in bed pulse becomes much more frequent and irregular.—Irregular and intermittent pulse.—Dull uneasiness in various parts of heart region, with sensation of weakness in forearm.—Feeling of slight confusion of heart, esp. on moving, with painful sensation of weakness in wrist and forearms.—Sudden sensation as though heart stood still, with great anxiety and necessity for holding breath, after dinner; must keep perfectly still.—Peculiar sensation as though heart standing still; single, violent, slow heart-beats, with sudden violent heat in occiput, and transient unconsciousness (the whole lasting only a moment).—Shifting pains in heart.—Oppression, must breathe deeper.—Heart's action has lost its force; beats more frequent, intermittent, irregular.—Palpitation easily excited on going up slight ascent.—Heart seems to dilate slowly; palpitation at each movement of body; slight uneasiness at heart, cold sweats.—Constant pain or anguish at heart, with palpitation, < by exercise or mental emotion; at times < without apparent cause, when perfectly at rest; paroxysms accompanied by sinking sensation, face purple; fainting, believes she is dying; dizziness ringing in ears; sharp pain in l. shoulder and l. arm, tingling in arm and fingers; paroxysms come sometimes at night, with suffocation, wakes up in anguish; terrifying dreams.—Heart so weak that even sitting up in bed has caused fatal syncope.—Attacks of angina brought on by any slight careless movement, esp. of arms in an upward direction; inexpressible anxiety with fainting; for a moment heart seems to stand still, and then several rapid and violent pulsations occur, with sensation as if heart had torn itself loose and were swaying to and fro by a thin thread.—Cyanosis.—Frightful stitches in region of heart, coming on every fifteen minutes, lasting only five or six seconds each time.

20. Neck and Back.—Stiffness and tension of the muscles of the neck and of the nape of the neck.—Drawing pains in the back and in the loins, as after a chill.—Bruise-like pains in the loins on blowing the nose.

22. Upper Limbs.—Paralytic pullings, and tearings in the arms.—Heaviness or paralytic weakness of the l. arm.—Sharp pain in l. shoulder and arm, tingling in arm and fingers; with heart affection.—Nocturnal swelling of the r. hand and of the fingers.—Coldness of the hands.—Tearings in the joints of the fingers.—Sudden and paralytic stiffness in the fingers.—Torpor and disposition to numbness of the fingers.

23. Lower Limbs.—Pain in the hip-joint.—Great stiffness in the legs after being seated, which abates when walking.—Want of energy, and paralytic weakness in the legs.—Swelling in the knee, like steatoma.—Incisive pains in the thigh, and burning sensation in the calf of the leg, on crossing the legs.—Tension in the ham.—Coldness of the feet.—Swelling in the feet, by day only (diminished at night).

24. Generalities.—Burning shootings and tearings, esp. in the limbs.—Penetrating pains, and painful weariness in the joints, as after great fatigue.—Engorgement of

the glands.—Tense and painful swellings, esp. of the limbs.—Convulsions.—Epileptic fits.—Dropsical swellings of internal and external parts.—Emaciation.—Great dejection and nervous weakness.—Throbbing in every part of the body, < by pressure.—Gouty nodosities.—Pricking pain in the muscles of the upper and lower extremities.—Fits of excessive weakness esp. after breakfast and dinner.—Sudden prostration of strength, as if about to faint, with general perspiration.

25. Skin.—Gnawing itching, which changes, if the skin be not scratched, into a burning and insupportable pricking.—Dry, and heat of skin.—Desquamation of the skin from the whole body.—Jaundice.—Bluish skin (cyanosis), particularly at the eyelids, lips, tongue, and nails.—Dropsy.—Elastic white swelling of the whole body.—General paleness of the skin.

26. Sleep.—Continuous sleepiness during the day (lethargy).—Uneasy, unrefreshing sleep.—Drowsiness in the day, and somnolency interrupted by fits of convulsive vomiting.—At night, half-asleep with agitation.—Nocturnal sleep, interrupted by anxious dreams, with starts (as if one were failing from a height or into water).—Uneasy sleep at night on account of constant desire to urinate.—Feeling of great emptiness of the stomach frequently, previous to falling asleep.

27. Fever.—Chilliness with heat and redness of face.—Coldness of the body, often with cold sweat, esp. on the forehead or one side of the body only.—Coldness in the hands and in the feet (with cold perspiration).—Heat of one hand and coldness of the other.—Frequent and sudden flushes of heat, followed by weakness.—Copious nocturnal perspiration, preceded sometimes by shivering and shuddering, with internal heat (beginning with coldness of the extremities, from them extending over the whole body), during the day.—Perspiration generally at night; cold and clammy.—Perspiration after the chill, no heat intervening.—Pulse small, weak, and excessively slow (esp. when at rest, every other beat intermits), but accelerated by the slightest movement.—Pulse irregular; intermitting.

Digitoxinum.

Digitoxine. "Crystallised Digitaline" (of Nativelle). (Neither a glucoside, nor an alkaloid) C_{31} H_{33} O_7. (The most active principle of Digitalis). Trituration.

Clinical.—Phlegmon. Suppuration. Vision, disordered Vomiting.

Characteristics.—*Digitoxin* has been proved by Kopfe, who took a single dose of 2 millegrammes at 10 a.m. It began to take effect in an hour-faintness, nausea, and slight vertigo, which increased till he was obliged to hurry home at 1 o'clock to avoid vomiting in the street. But he was too weak to walk, and had to take a

carriage. He went to bed immediately and remained in bed three days and part of the fourth. The pulse had remained regular and at the usual rate, 80 to 84, but at 2 o'clock was 58 and intermitting. Excessive nausea was constant and prevented sleep at night. Vomiting of dark greenish masses of mucus gave instant relief, which, however, only lasted a short time. The pulse went down to 42, intermitting after every two beats, the heart-beats and intermission being plainly felt in the chest. The limbs refused service in spite of the greatest exertion of will power. Sight became weak, faces of friends were indistinguishable, and he only knew them by their voices. Objects ran together without outlines, so that he could only distinguish some very dark or bright, or large or small images in the field of vision. Therewith all objects, especially all bright ones, seemed in a slightly yellow light. (This yellow vision was very persistent, lasting eight days; it may prove a keynote for this preparation of *Digitalis*.) The nausea continued more distressing and was aggravated by drinking champagne, aerated waters, and ordinary water. The second night was very restless with partial sleep, interrupted four times in an hour by confused, anxious dreams and frightful phantasies. In the evening of third day he was able, with effort, to eat a little, and did not vomit. On the fourth day he was up a little and felt better, was able to eat a little meat and drink as much water as he wished. On the fifth day he was able to walk out a little, leaning on the arm of another. During the three succeeding days the symptoms gradually disappeared. With sound sleep and extraordinary appetite, physical strength and normal vision returned.

In some experiments made on dogs it was noted that subcutaneous injections were invariably followed with phlegmonous inflammation proceeding to suppuration.

Relations.—*Compare:* Digitalis (< from drinking is marked in both); Digitalinum; Cina and Santonine in yellow vision.

SYMPTOMS.

2. Head.—Slight vertigo, with nausea and faintness.

3. Eyes.—Weak sight: features of friends seemed to swim and become indistinct.—All objects in room run together without any outlines, could only distinguish some very dark or bright, or large or small images in the field of vision. Therewith all objects, esp. all bright ones, seemed in a slightly yellow light. (This appeared on the first day, was in no way diminished on third and fifth days, and did not pass away till the eighth.)

6. Face.—Paleness and collapsed appearance of face.

11. Stomach.—Aversion to every kind of food.—Faintness, nausea, and discomfort.—Constantly increasing discomfort and tormenting nausea, ending in vomiting a large quantity of dark greenish masses of mucus. Relief was immediate,

but lasted only a quarter of an hour, giving place to the most excessive nauseous sensation. An hour later vomiting was renewed violently, bilious-coloured masses of mucus, accompanied, preceded, and followed by retchings. Slow, intermittent pulse.—In evening attempted to take a glass of iced champagne, but the nausea increased rapidly and in a few minutes vomited a large quantity of a watery, slimy substance slightly coloured with bile, much retching followed.—Carbonated waters and ordinary drinking-water always aggravated the nausea.—Third day able to drink a little.—Sixth day extraordinary appetite.

18. Chest.—Oppression and anxiety in chest; heart-beats and intermissions plainly felt.

19. Heart.—Pulse at first normal and regular, became later markedly slow, intermittent, dicrotic, and then tricrotic.—Pulse very easily excited by the slightest excitement or physical exertion.

24. Generalities.—Faintness; rapid loss of power.—Prostration; limbs refuse their service; cannot rise from bed without assistance.—(Phlegmonous inflammation going on to suppuration.)

26. Sleep.—Not a moment's rest on account of distressing nausea and weakness.—Second night restless, with partial sleep, which was interrupted by confused, anxious dreams and frightful fantasies.—Sleep sound fourth night.

Dioscorea.

Dioscorea villosa. Wild yam. N. O. Dioscoreaceæ. Tincture of fresh root, or trituration of resinoid, Dioscorein.

Clinical.—*Abdomen, distended*. Acne. Angina pectoris. Biliousness. *Cholerine*. Chorea. Colds. *Colic*. Constipation. Cough. Cramps. Diarrhœa. Dysentery. Dysmenorrhœa. Dyspepsia. Enteralgia. Flatulence. Gall-bladder, affections of. Gastralgia. Hæmorrhoids. Headache. *Knee, pain in. Legs, pain in. Liver, disorders of*. Lumbago. *Mind, affections of*. Neuralgia. Paronychia. Parotitis. Pregnancy, pyrosis of. Renal colic. Rheumatism. Sciatica. *Side, pain in*. Spinal irritation. Spleen, pain in. *Smell, disordered*. Spermatorrhœa. Tea, effects of. Toothache. Whitlow.

Characteristics.—Burt, who made a heroic proving of this remedy, says: "The grand sphere for the use of *Dioscorea* is among neuroses of the bowels and stomach; where the cœliac and umbilical plexuses are in a state of great hyperæsthesia, the pain and spasm being unbearable." Hale considers as characteristic: "A constant pain, aggravated at regular intervals by paroxysms of

intense suffering." Any kind of colic or neuralgia with these characteristics may indicate *Dioscor*., which stands in the highest rank among stomach and abdominal remedies, with important actions in many other spheres. *Dioscorea* causes pain in the bowels; spasmodic; twisting; writhing; drawing; lancinating; pulsating; burning. Pains radiate upwards and downwards. Frequent sharp, darting pains from one part to another. Pains spread, especially from abdomen to distant parts. Great faintness at stomach. Morning diarrhœa. Pains < at meals; > moving about; cannot sit still. Seminal emissions (passive) with weakness of knees. According to Cushing's proving the primary effect of *Diosc*. was to cause strong-smelling perspiration of the genitals; constant excitement with strong and frequent erections day and night; amorous dreams with emissions. Afterwards came relaxed genitals, absence of desire, and emissions without erections. In the female sphere it has frequently cured dysmenorrhœa, uterine colic, and after-pains; also gastric disorders during pregnancy and the menses. J. B. Bell has pointed out how closely the throat symptoms of *Dios*. resemble the initial stage of a cold when it has attacked the fauces and before it has spread to the nose or chest. *Peculiar sensations* are: As if top of head was lifted off. As if temples were in a vice. As if head tied with a band (also neck). As if sticks, &c., in eyes; as if hot air streamed out of them. As if tongue burnt. As if a stone were in stomach. In small spot in abdomen sensation as if drawn forcibly upward and backward to spine. *Diosc*. resembles *Coloc*. in colicky pains, but differs in the Conditions: whilst *Coloc*. has > bending double and < by motion, *Diosc*. has > by stretching out and by moving about. Some of the symptoms of *Diosc*. are <, others are > by touch and pressure. Many symptoms appear, or are < in early morning from 2 a.m. onwards; on awaking; 8 a.m. (cough). Symptoms generally > in open air. Pains are remittent and paroxysmal. It is one of the first remedies in whitlow; and in biliary and renal colic. Suited to persons of feeble digestive powers, old or young, with flatulence after meals, in stomach or bowels, unattended with liver or bowel derangement, who from some excess in eating, or from fasting, or from some error in diet, as eating old cheese, or uncooked fruit, pastry, &c., especially if they are great tea-drinkers, may be suddenly seized with violent colic.

Relations.—*Compare:* Bism., Bry., Nux (stomach); Cham., Coloc., Ip., Kali bi., Pod., Rhus, Rum., Stan., Sul. (abdomen and stool); Æsc., Alo., Collin., Nux (hæmorrhoids); *Sarsap*. (urinary symptoms); Calc. c., Can. i., Gels., Calad., Agn. c., Nux, Phos. (sexual organs); Act. r., Æsc., Alo., Bry., Nux (headache); Sil. (whitlow). Ver., Caps. (pain in ears on coughing). Tamus belongs to the same N. O. Ver. relieved pain in r. temple.

Causation.—Tea-drinking. Excess in eating. Fasting. Errors in diet. Onanism.

SYMPTOMS.

1. Mind.—Calls things by wrong names; writes down r. arm or leg when he means l.—Aversion to company.—Irritable; feels cross and troubled.—Great depression of spirits.

2. Head.—Vertigo and dizziness; goes to r. while walking; inclined to fall backward.—Faintness < sitting up in bed; numbness < lying down.—Vertigo from onanism.—Vertigo with heat in head; with sharp pains in r. side of forehead extending to ears; a remittent pain < by pressure.—Fulness in head speedily followed by spasmodic pains in abdomen.—Head feels as if tied with a band.—Headache in vertex and down to both shoulders.—Dull pain in head and temples.—Pain in forehead, extending into nose, with nausea and coryza.—Pain as if lifted up in forehead and temples.—Digging, cutting pain in the temples; in occiput; over eye.

3. Eyes.—Eyes weak, sore, and smarting; (r. <); seems as if hot air streamed out, evening.—Agglutination of the lids mornings.—Sharp pain from r. eye to occiput.—Feeling as of a round or large smooth substance, or as if dust, sticks, or lashes in eye.—Lachrymation, hot tears, eyes fill in open air, smarting, wants to keep lids closed.

4. Ears.—Dull, pressing pains in front of both ears.—Sharp pain in front and behind the ears.—Small balls of wax drop out of r. ear almost daily.—Both ears feel suddenly stopped up and are sore to touch.—Pains in ears, < blowing nose or coughing (8 a.m.).—Itching in internal ears (< r.).

5. Nose.—Irritation of nasal passages with much sneezing; dry, or watery discharge.—Discharge of bright-red blood from l. nostril; followed by a dark clot; while sitting writing.—Soreness of the nostrils.—Frequent or constant bad smell in the nose; like bilious-fever patients; any bad smell remains in nose a long time.

6. Face.—Dull, grinding, drawing, digging, or sharp darting pains at angle of l. lower jaw.—Spasmodic closing of jaws, biting tongue when neither eating nor drinking.—Little pimples with black heads.—Lips dry; commissures sore.

8. Mouth.—Heavy brown coating on the tongue mornings.—Sides of tongue sore as if burnt.—Tip of tongue sore.—Mouth very dry, bitter, and clammy in the morning (on waking 4 a.m.).—Mouth dry, but full of sticky mucus; no thirst.—Soreness of gums and roof of mouth.—Saliva runs out while asleep.

9. Throat.—Irritation, burning, and smarting in throat and fauces.—Fauces rough, dry; frequent inclination to swallow; but it causes nausea and shudderings.—Belching gas, but throat so dry it prevents escape of gas.—Constricted feeling as from something tight about neck; makes breathing

difficult.—Itching in l. tonsil.—Stitches in tonsil up to ear.—Constricted feeling.—Soreness and sharp aching pain in both parotid glands.

11. Stomach.—Sour or bitter eructations.—Belching of large quantities of tasteless wind momentarily relieving the distress at the stomach.—Nausea.—After eating: nausea, faintness, distress, burning at stomach; dull, heavy pain > by belching; tastes food eaten; > of symptoms.—Faint, uneasy feeling at stomach.—Headache < after dinner.—Constant distress at stomach, with frequent sharp pains; had to unfasten the clothing.—Distressing pain at epigastrium relieved by raising sour, bitter wind.—Burning at the stomach.—Sharp, cramping pain in pit of stomach, followed by raising, belching, and gulping enormous quantities of tasteless wind, followed by hiccough and discharge of flatulence from the bowels.—Sharp, cutting pains in epigastrium.—Faintness at epigastrium.

12. Abdomen.—Sharp pain in l. hypochondrium.—Dull, heavy, grinding pain in region of liver, worse evenings.—Cutting pain in region of liver; (r. lobe).—Hard, dull pain in region of gall bladder.—Constant distress in the umbilical and hypogastric regions, with severe cutting, colic-like pains every few minutes in stomach and small intestines.—Griping, cramping pains in the umbilical region.—Rumbling in the bowels, and passing large quantities of flatulence.—Flatulence after meals; wind colic, but with little or no hepatic derangement.—Discharges of offensive flatus.—Twisting and sharp cutting pains in the bowels.—Bowels sore and tender on pressure.—Pain in inguinal regions extending to the testicles.

13. Stool and Anus.—Itching in the rectum.—Hæmorrhoidal tumours as large as red cherries, with pain and distress in anus.—After stool: prolapsus ani; weak, faint feeling in abdomen; colic.—Frequent urgent desire for stool.—Very offensive flatulence.—Diarrhœa early in morning, driving out of bed.—Just before and during a stool, severe pain in sacral region and bowels, of a writhing drawing character; the pains radiate upwards and downwards, until the whole body and extremities become involved in spasm.—Very profuse, thin, yellow stool in the morning; followed by a very weak, faint feeling, without relieving pain in bowels.—Loose stools with much straining.—Stools slimy; dark-coloured; bilious; very offensive; light mushy.—During pregnancy, alternate constipation and relaxation.

14. Urinary Organs.—Writhing, with dry and crampy pains, with passing of renal calculus (r.).—Spasmodic stricture of urethra, with pain about navel > by pressure; pressure on rectum, paroxysmal colic.

15. Male Sexual Organs.—Constant excitement of genital organs, with frequent erections.—Genitals cold and relaxed.—Strong-smelling perspiration on scrotum and pubes.—Diminished sexual desire.—Emission of semen during sleep.

16. Female Sexual Organs.—Dysmenorrhœa; spasmodic uterine colic; pains suddenly fly to distant parts.—After-pains.—False pains.—Cramps in fingers and toes alternating with uterine pains.

17. Respiratory Organs.—Hacking cough from irritation and tickling low down in the throat.—Sharp cutting pain from l. axilla to nipple and down side deep in lung.—Cough with pain in region of umbilicus and temples, brown tongue, weak knees.—Dull, aching, or sharp cutting pains in both lungs, from front to back, or *vice versâ*.

19. Heart.—Sharp pain in region of heart, arrests breathing; < lying l. side.

20. Neck and Back.—Dull pain in back of neck; stiff.—Back lame in morning.—Back in region of liver so lame it is almost impossible to turn in bed; > by motion.—Severe backache.—Sharp deep pain in lower portion of l. scapula, followed by sharp pain through centre of r. lung.—Itching over r. scapula.—Drawing pains in sacrum: in sacro-iliac joint.—Spinal hyperæsthesia.—Spinal cord feels bruised all the way up and down.—Sharp pains in the back.

22. Upper Limbs.—Pain in l. shoulder.—Grinding in elbows.—Hard aching pains in bones of forearm, and in wrist and hands.—Numbness of l. hand.—Panaritium, early stage; pain, pricking, sharp, agonising.—Paronychia.

23. Lower Limbs.—Hard, dull, or tearing pains in the hip.—Pain in r. leg from point of exit of sciatic nerve, felt only when moving the limb, or when sitting up.—Knees lame, weak, and painful; trembling.—Hard, dull, or sharp pains in leg.—Ankles weak and painful.

24. Generalities.—Restless, trembling, faint feeling.—Languid, tired feeling.—Rheumatic pains < night and early morning.—Chorea; with seminal emissions.—Itching of various parts of the body and limbs.

25. Skin.—Panaritium, early when pains are sharp and agonising, or when pricking is felt; nails brittle.—Little pimples with black heads.

26. Sleep.—Many symptoms are < after sleep: bitter mouth; pains in bowels; hard beating of heart.—Restless after 2 a.m.; must move, yet it hurts, he is so sore.—First sleep late; wakes early.

Diphtherinum.

A nosode. Trituration of diphtheric membrane. Dilutions of diphtheria toxin.

Clinical.—Croup. Diphtheria. Diphtheritic paralysis. Myelitis.

Characteristics.—The well-known features of the disease of which this nosode is a product must be the guide to its use. It should be more efficacious in the potencies against diphtheria, both as prophylactic and cure, than the serum injections. In all probability it will be found useful in the paralysis of diphtheria and other like kinds of spinal affection. It needs clinical development and a proving in the potencies.

Dirca Palustris.

Leatherwood. Moosewood. Wicopy. N. O. Thymelaceæ. Tincture of inner bark of branches.

Clinical.—Colic. Constipation. Cough. Debility. Diarrhœa. Dyspepsia. Eyes, affections of. Flatulence. Headache. Heart, affections of. Neuralgia. Rheumatism.

Characteristics.—*Dirca* belongs to the same family as *Daphne Indica* and *Mezereum*, and is the only American member of the family. Its symptoms show its relationship to the other two, but it has not been used extensively in practice. It produces much vital depression; neuralgic pains in the head, trunk, and extremities, many of the pains proceeding from without inward. Digestion is disordered, there is weight at the stomach, and a peculiar white tongue, the coating being moist and even. Rumbling of flatulence. Colic > by bending forward, diarrhœa and tenesmus, later constipation. Oppression and pains in the chest, sweetish expectoration, and excitability of the heart's action from the slightest motion. Hot and restless at night; cannot sleep; dreams of dead bodies. Motion < most symptoms; walking < vertigo and pain in bowels. Colic is > by bending forward; headache > by pressure. Pains in the bowels are > by stool.

Relations.—*Compare:* Can. i. (time passes slowly); Ant. c. (tongue); Lyc. (constipation and flatulence); Bry., Puls., Abies. n., &c. (weight at stomach); Stan. (sweet expectoration).

SYMPTOMS.

1. Mind.—Time seemed to pass slowly.—Absent-minded.

2. Head.—Vertigo on walking; seems as if he would fall to l.—Pains all through the head, vertex, and occiput, extending down into spine.—Sensation as if lobes of

cerebrum were drawn forward towards frontal sinuses.—Headache in temples extending inwards; > by hard pressure.—Headache, throbbing, and beating in l. half of head, < by coughing or moving.—Pain high up in occiput extending inwards.—Awoke with pain low down in occiput, much < on raising or accidentally moving head in morning; < towards noon, and went up over vertex to forehead, and there had a strong congestive headache, with throbbing of carotids, lasting till evening and gradually disappearing.—Scalp feels dry and tight.

3. Eyes.—Eyes sore; and painful to touch.—Sensation as if brows corrugated; and as if brain were also drawn down.—Lids heavy.—Much photophobia; on waking and continuing all day; esp. from gaslight.

6. Face.—Face red, full, and bloated in morning.

8. Mouth.—Tongue coated smoothly and evenly white.—Smooth, dirty, white coat.—Sour taste.

9. Throat.—Throat red, raw; acrid feeling; hurts to swallow food or liquids.

11. Stomach.—No thirst.—Empty eructations.—Uneasy feeling as if a lump or weight in stomach.

12. Abdomen.—Several lancinations in l. hypochondrium with tympanites.—Burning below umbilicus.—Rumbling in bowels.—Colic > bending forward; and > by stool, but smarting in anus remains.—Burning and uncomfortable sensation in bowels.—Pain in bowels on walking, also painful on pressure.—Dull ache low down in pelvis; bearing down, not > by sitting or lying, but > when headache >.

13. Stool and Anus.—Throbbing, stitching pains in anus.—Soreness and smarting, < after stool.—Tenesmus and straining.—Diarrhœic stools; sudden, gushing, watery; thin, yellowish fæcal.—Constipation; urgent desire, but passes only frothy mucus.—Dry, sticky feces.

14. Urinary Organs.—Pain and soreness in region of bladder.

16. Female Sexual Organs.—Uterus seems too low, and as if it would prolapse during stool.—Menses two days too early; less copious and prolonged than usual.

17. Respiratory Organs.—Stinging pains in larynx from without inwards; very sharp pricking pain and sensation of suffocation.—Cough < morning.—Raising sweetish-tasting mucus quite offensive.—Great dyspnœa from exertion; from walking up a slight elevation.—Sharp pain in r. thorax running down into abdomen and up into l. shoulder.

19. Heart.—Excitability of heart's action from least motion.—Palpitation on going up slight elevation.—Pulse suddenly becomes weak and irregular.

20. Back.—Heavy pain across back and through loins; in region of kidneys.

22. Upper Limbs.—Dull, neuralgic pain in both shoulders, cannot keep them still.

23. Lower Limbs.—Muscles of thighs sore and stiff.—Neuralgic pains in legs.

26. Sleep.—Sleepy but unable to sleep.—Dreams of dead bodies.

Dolichos.

Dolichos pruriens. Mucuna pruriens. Cowhage. Cow-itch. N. O. Leguminosæ. Trituration or tincture of whole pod.

Clinical.—Cough. Dentition. Gums, neuralgia of. Herpes zoster. Jaundice. *Jaundice, irritation of.* Jaw, pain in. Neuralgia. Pruritus. Sore throat.

Characteristics.—The most characteristic symptoms of *Dolichos* are—a general intense itching without eruption, < by scratching; and a pain in the throat on right side below angle of jaw as if a splinter were embedded vertically in it. It is mainly a right-side medicine, and hence its relation to the liver. It corresponds to exalted nervous sensibility, as in dentition. Gums intensely sensitive; seem to itch. Kraft has recorded (*N. A. J. H.*, 1890, p. 20) a striking cure with *Dolichos* 1,200 (Kent) of a woman who had symptoms of jaundice, white stools, and desperate itching, preventing sleep at night. There was, in addition, enormous distension of abdomen with continuous rattling of wind, intolerance of anything tight round neck or body; intense restlessness, unable to sit still a minute. The symptoms of *Dol.* are < at night. Warmth < itching at night. Cold water burns on the itching skin. Colic from getting feet wet.

Relations.—Aconite *antidotes* it, and in "cases of dentition with fever Aconite should be given before Dolichos to prevent convulsions" (Hering). Dolichos *follows* Rhus in herpes. *Compare:* Bell. (dentition); Arg. n., Hep., Nit. ac. (throat).

SYMPTOMS.

3. Eyes.—Eyes yellow.

8. Mouth.—Gums (upper) irritated, tumid, excessively painful; can scarcely take food or drink in the mouth.—Pain in the gums prevents sleep.—Soreness and

tenderness of gums in teething children.—Gums swollen; neuralgic pains in them; < at night.

9. Throat.—Painful sensation of the throat below the angle of the lower jaw on r. side; it was as if a splinter three-quarters of an inch in length was imbedded vertically in that spot; pain < by swallowing.

12. Abdomen.—Bloated, swollen abdomen (with constipation).—Worms.—Swelling of the liver.

13. Stool.—Constipation during teething or pregnancy.—White stools.

17. Respiratory Organs.—Cough most troublesome about bed-time and for awhile after going to bed.—Cough, with wheezing and dyspnœa.

18. Chest.—Sharp pain through upper portion of both lungs.

24. Generalities.—Neuralgic pains following herpes zoster.—Twitching of the muscles.—Clonic spasms of the extremities, with loss of consciousness; eyes motionless; eyelids open.

25. Skin.—Intolerable itching all over the body; < at night, preventing sleep; scratching < the itching; there is nothing perceptible on the skin.—Jaundice, with itching of the skin.—Dry, tettery eruptions on arms and legs, resembling zona.—Pain under l. axilla for three days, when an herpetic eruption breaks out on axilla of affected side, spreading in rings forward to sternum and backward to spine with burning and smarting.

Doryphora.

Doryphora decemlineata. The Colorado Beetle. Potato Bug. N. O. Coleoptera. Tincture prepared by covering the crushed live beetles with alcohol.

Clinical.—Diarrhœa. Diphtheria. Dysentery. Erysipelas. Fevers. Gastric affections. Gleet. Gonorrhœa. Myxœdema. Parotitis. Spleen, pain in. Typhoid. Ulceration. Urethritis.

Characteristics.—*Doryphora* in its general effects bears a strong resemblance to *Cantharis*. An extensive proving has been made, and to this have been added the effects of poisoning from handling the insects, and from inhaling the vapour when they have been burned or scalded. Like *Canth., Doryph*. produces burning in mouth, throat, gullet, stomach, abdomen, rectum, and urinary passages; strangury, urethritis, and itching burning and inflammation of glans penis. It has been

successfully used in urethritis in children under ten, provoked by local irritation. A feeling of weight or heaviness is common. Fainting, weakness, prostration, collapse; great trembling of extremities. Prostration after typhoid and diphtheria has been cured. The weakness is < by talking. Local application causes ulceration. The blood will not coagulate; blood globules disorganised; enormous swelling of whole body; swelling of feet with burning; elastic swelling of whole body which will not pit on pressure (suggesting its applicability in myxœdema). The symptoms are < by motion; < from smoking; < in warm room; > in open air; pressure < (pain in kidneys).

Relations.—The local effect *is antidoted by:* Earth; other antidotes are: Vinegar and other vegetable acids, Stramon. *Compare:* Agar., Ailanth., Apis, Bellad., Canth., Crotal., Laches., and with the Solanaceæ generally, as the beetle partakes of the properties of the plants it infests. In non-coagulation of the blood, Sanguisuga.

SYMPTOMS.

1. Mind.—Stupor; with muttering and loud rumbling in bowels.—Delirium; talkative; red, bloated face, protruding eyes.—Irritability.

3. Eyes.—Eyes red, sore; protruding; pupils much dilated; sight much impaired.

6. Face.—Face bloated and red, giving appearance of a confirmed drunkard.

8. Mouth.—Dark brown coating on tongue.—Offensive taste.—Violent heat in mouth; severe pain across kidneys; face red and bloated; constipation and retention of urine.—(Parotitis.)

9. Throat.—Dry feeling in throat with desire to swallow.—Throat raw and constricted.—Burning in throat and down œsophagus, with stomachache and cough.

11. Stomach.—Loss of appetite, great thirst.—Craving for something sour; symptoms < by smoking.—Nausea and vomiting; vomits dark, grumous acrid matter; of dirty brown fluid with diarrhœa.

12. Abdomen.—Pain in spleen.—Rumbling in bowels (with stupor).—Pain in bowels, < by eating and drinking and by deep inspiration.—Abdomen feels heavy; sore and tender; burning.

13. Stool and Rectum.—Morning diarrhœa, with pain in abdomen and burning in rectum.—Bloody, slimy stools.—Heaviness; intense pain in rectum.

14. Urinary Organs.—Retention of urine.—Dysuria, with burning, stinging pain.

15. Male Sexual Organs.—Itching and burning of glans penis, which is swollen and bluish red; urethra inflamed, with excruciating pain, esp. when urinating.

18. Chest.—Soreness and oppression of chest with sore throat.

20. Back.—Pain in lumbar region.

21. Limbs.—Great trembling in extremities; in r. arm and leg.

25. Skin.—An abraded surface on the wrist of one engaged in picking the bugs became painful, a deep sloughing ulcer developed, and the bones were laid bare.

26. Sleep.—Tossing about all night.—Sleepless till 12, then restless sleep with terrifying dreams.—While sleeping, wild dreams, screams as if in great distress.

27. Fever.—Skin alternately cold, clammy, and hot with fever.—Coldness of hands and feet.—High fever during night, restless and sleepless.—Violent fever 8 a.m. to 2 p.m.—Of children who inhaled vapour from a kettle in which some beetles had been placed, one died and the other recovered after a serious illness resembling typhoid fever.

Drosera.

Drosera rotundifolia. Round-leaved Sundew. N. O. Droseraceæ. Tincture of active fresh plant.

Clinical.—Amblyopia. Asthma. Bronchitis. Catarrh. *Consumption. Cough*. Coxalgia. Epilepsy. Hæmorrhage. Headache. Laryngitis. Measles. Nausea. Phthisis. Sciatica. Vomiting. *Whooping-cough*.

Characteristics.—The chief feature of the *Drosera* effects is a spasmodic cough resembling whooping-cough, in which affection it is one of the leading remedies, as it is also in the spasmodic cough of phthisis. The characteristic cough is: Frequent spells of barking cough; < evening and after midnight; patient holds his side; vomits if he cannot get up phlegm; every effort to raise a little phlegm ends in retching and vomiting; there may be bloody stools. Teste, who places *Drosera* in his *Zincum* group of medicines, mentions that it grows in damp prairies, along the border of marshes, and is avoided by animals. Barrich states that when eaten by sheep it gives them a cough which is fatal to them. Curiously enough, it was recommended by German physicians of the eighteenth century as a panacea for hoarseness, chest affections, and even for phthisis. Serrand, of Paris (translated *H. R.*, vi. 153) maintains that Drosera has an important *rôle* in the prophylaxis of tubercle. He refers to the fact that sheep eating *Drosera* leaves acquire a nocturnal

cough and die, and that the pleuræ of cats to which Drosera had been administered were found studded with tubercles. The indications calling for it in the premonitory stage are: pallor, weakness, loss of appetite, dry cough, emaciation. Three laryngoscopic indications are: (*1*) Anæmia and pallor of larynx; (*2*) vocal cords not sufficiently approximated from functional impairment of crico-arytenoid muscles; (*3*) redness and swelling of mucous membrane covering and between the arytenoid cartilages. Dr. Serrand commends *Dros*. in cases of declared phthisis as well. He gives it in the low attenuations. Buchmann of Alvensleben agrees with Hahnemann that *Dros*. in high attenuation should not be repeated. He cured himself of a bronchial catarrh which used to attack him every spring and fall, characterised by a *violent tickling cough*, which almost drove him to distraction at night, with *Dros*. 1x. and Ø. A single dose as soon as the tickling in the larynx commenced sufficed to allay it at once and allowed him to rest, and it was only repeated when the tickling returned. Among the characteristics of *Drosera* are: Spasmodic and constricting pains in abdomen; larynx; throat; chest; hypochondria. Crawling in larynx; feeling as if a soft substance were lodged in larynx, as a feather. Difficult swallowing of solids. Voice fails. Stitching pains in chest and all parts; lancinations in brain. Stitches from left loin into penis; itching stitches in glans. Hæmorrhages of bright red blood, from nose; mouth (bloody saliva); with vomit; with stool; expectoration. Gnawing stinging pains in joints and long bones. *Dros*. has many pains about the hip-joints and has cured sciatica with the following characters: "Pressing pains, < from pressure, from stooping, from lying on painful part, > after rising from bed." Eruption like measles; prickling burning itching; < undressing; > by scratching; bleeding, burning ulcers, cutting pains. Epileptic attacks: with rigidity; with twitching of limbs; after attack, hæmoptysis and sleep. Symptoms are < towards evening and after midnight. < By warmth; by warm drinks; > in open air. Many symptoms are < at rest and when lying in bed. Supporting the part > pains in head and chest. Stooping <; walking >; singing and talking <. Motion of eye < head pains. Motion > stitching in chest and joints, and shivering. < From acids.

Relations.—*Antidoted by:* Camph. *Complementary:* Nux. *Compatible:* Calc c., Puls., Verat., Gnaph. *Compare:* Bell., Coral., Cup., Hyo., Ip., Sambuc., Meph., Op., Coc. cact. In inability to expectorate Caust., Sep., Arn., Kali c. Teste considers Meny. the closest analogue.

SYMPTOMS.

1. Mind.—Mental dejection, caused by ideas of imaginary enmity.—Anxiety, esp. (in the evening) in solitude, with fear of ghosts.—Great mistrust.—Restlessness, which does not allow prolonged attention to the same object.—Inquietude respecting the future.—Discouragement.—Inclination to drown oneself.—Pertinacity in executing resolutions.—The least thing puts the sufferer beside himself.

2. Head.—Painful perplexity of the head, as after loud speaking.—Vertigo on walking in the open air, which occasions falling (to the l.).—Pressive pains in the head, esp. in the forehead and in the cheek-bones, sometimes with nausea and dizziness.—Pressing headache (temples), with stupefaction and nausea (morning); worse when stooping and from heart; better from motion and in the cold air.—Beating and hammering in the forehead from the inside outwards.—Pains, as of excoriation in the scalp.

3. Eyes.—Shootings in the eyes towards the outside, esp. on stooping.—Suspension of the sight, or confusion and paleness of the letters while reading.—Gauze before the eyes.—Presbyopia and weakness of the eyes.—Contraction of the pupils.—Dazzling by candle-light and daylight.

4. Ears.—Shootings and squeezing in the ears, esp. on swallowing.—Hardness of hearing, with buzzing and roaring in the ears.—Humming and drumming in the ears.

5. Nose.—Bleeding at the nose, esp. in the evening.—Discharge of blood on blowing the nose.—Black pores on the nose.—Constant dryness of the nose.—Great sensibility to acid smells.—Fluent coryza with sneezing.

6. Face.—Paleness of the face, with cheeks hollow, and eyes sunken.—Small pustules here and there on face, with fine stitching sensation < when touched.—Burning and pricking sensation in the skin of the cheeks, below the eyes.—Lips cracked and constantly dry.—Pressure in the cheek-bones towards the outside, aggravated by pressure and contact.—Black pores in the chin.

8. Mouth.—Shooting pains in teeth, after taking hot drinks.—Ulcers on tongue.—Bleeding of the mouth.—Ulceration of velum palati.

9. Throat.—Rough, scraping dryness deep in fauces, and in region of soft palate, inducing short and hacking cough, with yellow mucous expectoration, hoarse deep voice, oppression in chest as if breath could not be expelled when coughing or talking.—Shootings in the throat, after eating anything salt.—Stinging in the throat during deglutition.—Difficulty in swallowing solid food, as from contraction of the throat.—Sensation of dryness in the throat.—Sensation in the throat, as if crumbs of bread had been stopped in it.—Hawking of yellowish or greenish mucus.

10. Appetite.—Thirst, esp. in the morning (during the hot stage of the fever and not during the cold stage).—Insipidity of food.—Aversion to pork.—Bitter taste of food and esp. of bread.

11. Stomach.—Bitter risings.—Frequent hiccough.—Water-brash.—Vomiting at night, and after dinner.—Vomiting of bile, in the morning.—Vomiting of blood.—Nausea after eating fat food.—Vomiting of slimy matter and of food during

the cough.—Shootings and beatings in the pit of the stomach.—Clawing sensation in the pit of the stomach.

12. Abdomen.—Pains in the hypochondria, on coughing and on being touched (he has to press on them with the hand when he coughs).—Colic after taking acids.

13. Stool and Anus.—Frequent evacuations of sanguineous mucus, with cutting pains; after the stool, pain in abdomen and small of the back.

14. Urinary Organs.—Frequent want to make water, with scanty emission, often drop by drop.—Emission of urine at night.—Brownish urine of a strong smell.—Watery, inodorous urine (with fetid stool of white mucus).

16. Female Sexual Organs.—Catamenia suppressed.—Catamenia retarded.—Leucorrhœa, with pains like those of childbirth, spasmodic pains in the abdomen.

17. Respiratory Organs.—Tingling in the larynx, which excites a slight cough, and shootings extending to the throat.—Sensation, as if there were a soft body, such as a feather, in the larynx.—Sensation of dryness, or roughness, and of scraping in the bottom of the gullet, with inclination to cough.—Hoarseness, and very low voice.—Oppressed breathing when talking; mostly while sitting.—Sensation of oppression in the chest, as if the voice and breath were retarded when speaking and coughing.—Fine stitches in larynx extending down to r. side of œsophagus.—Cough without much sound.—Cough as soon as the head touches the pillow.—Accumulation of slimy matter, alternately hard and soft, yellowish, greyish or greenish.—Cough and hoarseness.—Cough, proceeding from the depth of the chest, with pains in the hypochondria and in the chest, mitigated by pressing the hand upon them.—Cough at night, and in the evening, immediately after lying down.—Dry, spasmodic cough, with retching.—Fatiguing cough like whooping-cough (attacks, every one to three hours, with barking or dull-sounding coughs, choking the breathing, caused by tickling or dryness of the throat; yellow and bitter expectoration; has to swallow this mucus down) with bluish face, wheezing respiration, attacks of suffocation, bleeding from the nose and mouth, and anxiety.—The cough is excited by laughter, weeping and mental emotions; after having had the measles; aggravation after lying down, and still more increased after midnight; when at rest; when lying in bed; from heat; from drinking; from singing.—Vomiting of food during the cough, and afterwards.—Cough, with fetid breath.—Singing, tobacco-smoke, and drinking, excites the cough.—Cough, with expectoration of a bright red blood, or of blackish clots.—Cough, in the morning, with bitter and nauseous expectoration.—Cough, with expectoration of purulent matter, and shootings in the lower part of the chest.—Greenish expectoration.—Laryngeal and tracheal phthisis.

18. Chest.—Restricted respiration on speaking, as if the throat were contracted, chiefly when seated.—Oppression of the chest, as if something stopped the voice on coughing or on speaking, or, as if the breath could not be expelled.—Tightness of the chest on coughing.—Pains in the chest on coughing and on sneezing; he has to press his chest with the hand.—Pains, as from subcutaneous ulceration in the sternum, on pressing upon it.—Black pores on the chest and shoulder.

20. Neck and Back.—Stiffness at the nape of the neck, with pains during movement.—Bruise-like pains in the back, particularly early in the morning.

22. Upper Limbs.—Twitchings in r. shoulder, only when at rest.—Pains, as from a bruise, in the joints of the arms and of the hands.—Cramp and stiffening of the fingers, on grasping an object.—Nocturnal pains in the bones of the arm, going off during motion in the day.

23. Lower Limbs.—Paralytic pains in the coxo-femoral joint, and in the thighs, on walking, which occasion limping.—Incisive shootings in the legs.—Violent stitch in the os ischium, on rising from a seat.—Tearings in the joints of the foot, as if they were dislocated, only when walking.—Stiffness in the joints of the feet.—Cold sweat in the feet, which are constantly cold.

24. Generalities.—Rapid emaciation (with acute laryngitis).—Gnawing shootings in the cavities of the bones of the arms and of the legs, exceedingly violent, with violent shootings in the joints, during repose, rather than during movement.—Shooting and painful pressure in the muscles (of the limbs), mitigated in no position.—Pains as from a bruise, excessively distressing sensitiveness, paralytic weakness in all the limbs.—All the limbs feel sore, as from too hard a bed.—Weakness in the whole body, with cheeks and eyes hollow.—Epileptic convulsions, with sleep and spitting of blood, after the fit.—The majority of the sufferings appear at night and in the morning, as well as in a warm atmosphere, and during repose.—Gnawing-stinging in the long bones; worse during rest.

25. Skin.—Violent itching while undressing; when scratching, the skin readily peels off.—Black pores on chest and shoulder.

26. Sleep.—Snoring during sleep, and when lying on the back.—Frequent starts with fright, during sleep.—Nocturnal waking, on the breaking out of perspiration.—Frequent waking with perspiration, or as if too wakeful.—Sleep at noon and in the evening at sunset.

27. Fever.—Shuddering over the whole body, with heat of the face, icy coldness of the hands and absence of thirst, or shiverings with coldness and paleness of the hands, the feet, and the face.—In the morning hours, coldness of one side (l.) of the face, while the other side (r.) is hot.—Chilliness and chill while at rest, finds it everywhere too cold, even in bed.—Chilliness during the day, heat during the

night.—Heat almost exclusively in the face and on the head.—Warm perspiration at night, esp. after midnight and during the morning hours, mostly in the face.—Heat, with headache and convulsive cough.—(Intermittent) fever, with nausea, and inclination to vomit, and other gastric sufferings, or with sore throat.

Duboisinum.

Duboisia myoporoides. Corkwood Tree. (Queensland.) N. O. Solanaceæ. Tincture and solution of alkaloid prepared from extract of the leaves.

Clinical.—Delirium. Drowsiness. Eyes: dilated pupils. Locomotor ataxy. Mouth, dryness of. Paralysis. Presbyopia. Throat, dryness of. Vertigo. Vision, disorders of.

Characteristics.—*Duboisia* belongs to the same order as *Belladonna*, and its alkaloid, *Sulphate of duboisia*, has been used as a substitute for *Atropine*. Its application to the eye has caused marked constitutional symptoms of fever, delirium, stupor, and dry mouth. A symptom which may prove a keynote is "a red spot floating in the field of vision." Guided by this, C. H. Helfrich cured a case of hyperæmia of optic nerve with Duboisin 3 (*N. A. J. H.*, xiii. 267). Dryness of mucous membranes is very characteristic. Cool feeling in the eyes. Sensation as if stepping on empty space. Feeling of largeness in eyes, in tongue. Inability to stand with the eyes shut gives it a place in locomotor ataxy. It has also been proved.

Relations.—*Antidoted by:* Coffee; lemon-juice. *Compare:* Bell., Atrop., Dulc., Stram., &c. Anhalonium (coloured vision).

SYMPTOMS.

1. Mind.—Excitable; tries to get off the sofa.—Stupor; though if questioned replies, but with difficulty.—Picks at surrounding objects; slight drawings up of arms; very rest less.—Carphology; glances suspiciously under bed-clothes and behind back; left to himself upsets room in a few moments—towels, brushes, shoes placed on bed, and boots on dressing-table; throughout air of fun and humour; on recovery remembers nothing of what he had done.—Busy delirium; plucks at collar of night-dress; gazes intently at foot of bedstead where no one is, reaches out toward imaginary person or object.—Unable to concentrate thoughts on any subject; absent-minded thoughts wander from subject to subject; forgets what he started with thoughts silly, nonsensical.—Unable to express herself.

2. Head.—Dizziness; strange feeling in head, with nausea and darkly flushed face; the "strange" feeling lasted longer than the faintness and drowsiness ensued.—Headache.—Head feels light; vertigo on rising up or walking; great inclination to fall backward, esp. on going up stairs; almost impossible to stand

with eyes shut.—Head heavy, dizzy.—Dull pain through upper part of eyeballs and forehead like sick-headache.

3. Eyes.—Pupils widely dilated.—Eyes feel cool.—Sharp pain in upper eyeball.—Eyes feel tired.—Things seemed elevated; every time he looked up from his book a dull pain flies through upper part of eyeballs and forehead like sick-headache; eyes felt large and protruding.—Faces repeated in all directions.—Countenances of bystanders appear to have hollow cheeks; walls to have great hollows excavated in them.—Hallucinations of vision: suddenly sits on ground imagining a chair ready for him; drops a glass in mid-air instead of placing it on the table; grasps in the air above his head for his watch which had been taken from him.—Imagined it was quite dark when it was a bright summer afternoon.—Cannot make out print within two feet, and it shows several colours-blue, orange, and reddish-brown, as does the ink when writing; pupils nearly normal; a + 20 glass makes reading at normal distance possible, but eyes feel strained in using it.—Appearance of a red spot in field of vision moving with the eye.—Hyperæmia of optic nerve; optic disc very red, small vessels visible, large vessels much enlarged and tortuous; accommodation paralysed; outline of disc indistinct; arteries diminished.—Fluttering sensation in eyeball.—Twitching of orbicularis palpebrarum.—Eyes for the most part kept closed, but opened occasionally (in a prover).

4. Ears.—Ringing in ears (esp. r.), comes on suddenly.

5. Nose.—Nose very dry and stopped up.

6. Face.—Face deep red.—Lips very dry.

8. Mouth.—Tongue appears to swell; becomes too large for mouth, impeding speech.—Tongue feels "flat"; cannot articulate distinctly.—Excessive dryness in mouth and throat, can scarcely speak for it.

9. Throat.—Throat dry; red; capillaries varicose; no secretion of any kind visible; in consequence of the dryness the follicles are very prominent, and the conformation of spinal column plainly visible; an almost perfect picture of "pharyngea sicca"; epiglottis hyperæmic; laryngeal cavity engorged, dry, with here and there patches of mucus, viscid, semi-transparent. Next day larynx entirely dry, pharynx having isolated patches of adherent, yellowish-white mucus.—Constant desire to clear throat.—Great difficulty in swallowing, esp. empty swallowing.

11. Stomach.—Loss of appetite, nausea.—Deadly "gone" feeling, as if at greater curvature, not > by eating or drinking; pulse feeble and intermittent.

14. Urinary Organs.—Constant desire to pass water, with great difficulty in doing so.—No urine passed; bowels inactive; bathed in sweat.—Slight burning in urethra during micturition.

17. Respiratory Organs.—Hoarseness.—Hard, dry, hacking cough caused by tickling at about bifurcation of trachea; cough = feeling of soreness or rawness over whole of both lungs, esp. lower lobe l. and upper r.; cough not > or < by anything.—Respiration puffy and noisy.

19. Heart.—A rapid pulse.—Faintness.—Sense of oppression and longing to get rid of the medicine (immediately after the dose in a poisoning case); increased to agony.—Agony of breathlessness and sense of impending death.—Pulse rate falls on sitting up and increases on lying down.—Pulse irregular and intermittent.

20, 21. Back and Limbs.—L. leg powerless, r. leg rigid.—Arms frequently and involuntary jerked away from the sides.—Dorsal and lumbar muscles thrown into violent rhythmic contractions.—Loss of power in lower limbs; staggers as if drunk.—Going down stairs or kerb-stones is difficult, every step jolting his back "as if he had stepped down from the top of a house.".—Severe pressive pain in lumbar region in each side on waking, > on moving about.—Peculiar sensation in legs, then in thighs, arms, and other parts of the body, as if they were asleep.

24. Generalities.—Heaviness of limbs, esp. lower.—General weakness, disinclination to move.—Sense of lightness throughout body and head.—Unsteady gait, occasionally a feeling as if he had stepped on empty space, and would catch himself for fear of falling.—Staggered, had to concentrate his energy and look directly ahead, for on looking to one side there was disposition of falling to the other.—General trembling; unable to hold up head; hallucinations and nausea.

26. Sleep.—Stupor which is not sleep, he replies if questioned.—Sleepy.—Drowsiness and rambling.

27. Fever.—Complained of chilliness.—Temperature 100.5°.—Cold and chilly, wants to wear extra clothing, which makes him feel comfortable.—Bathed in sweat.

Dulcamara.

Solanum dulcamara. Woody Nightshade. Bitter-sweet. N. O. Solanaceć. (Not to be confounded with "Deadly Nightshade," Belladonna, nor with "Climbing Bitter-sweet," Celastrus.) Tincture prepared from fresh green stems and leaves, gathered just before flowering.

Clinical.—Adenitis. Angina faucium. Aphonia. *Bladder, affections of*. Blepharophthalmia. Catarrh. Cholera. Crusta lactea. *Diarrhśa*. Dropsy. Dysentery. Emaciation. Exostoses. Hćmorrhage. Hćmorrhoids. Hay-fever. Headache. Herpes. Influenza. *Irritation*. Lichen. *Lumbago*. Measles. Meningitis. *Myalgia*. Myelitis. *Nettle-rash*. Neuralgia. Ophthalmia. Paralyses. Pemphigus. *Rheumatism*. Scarlatina. Scrofula. Stammering. *Stiff-neck. Thirst*. Tibić, pains in. *Tongue, affections of*. Tonsillitis. Tumours. Typhoid. Urine, difficulty in passing; incontinence of. Warts. Whooping-cough.

Characteristics.—The leading indication for the homśopathic use of *Dulcamara* is found in its modality, "< from cold and damp." Any condition which has this feature may find its remedy in *Dulc*. Effects of lying on damp ground (*e.g*., paralysis); conditions which are < in cold, damp weather; or, from changes from hot to cold weather, especially if sudden. Phlegmatic, torpid, scrofulous patients, who are restless and irritable and who take cold on damp changes, are especially suited for *Dulc*. Sensitiveness to cold and damp runs through the Solanaceć, and is marked in *Bell*. and *Caps*., but it is supreme in *Dulc*. This feature among others renders them all good antidotes to *Mercurius. Baryta carb*, is the complement of *Dulc*. in "< from cold weather, especially in scrofulous children." In poisoning cases *Dulc*. produces: Hard, griping pains in bowels; unconsciousness; tetanic spasm; trismus; loud, rattling breathing; death. Paralyses are numerous: paralysis of tongue; of lungs; of heart (pneumogastric paralysis). (I once gave *Dulc*. 30, with complete relief to the pain, in a case of sarcoma of the bones at the base of the skull, in which there were stabbing pains in the front of the head, and partial paralysis of the tongue. It was the latter symptom which determined the choice of the remedy.) Paralysis of the bladder. Rheumatic paralyses. Paralysed part feels icy cold. One-sided spasms. Convulsions beginning in face. Trembling, especially of right arm. It cured: "Paralysis of vocal cords (aphonia) from sleeping over a damp cellar." McLaren cured with a single dose the following case, which was the result of a wetting: Facial paralysis (l.) following neuralgia, the eye having remained unclosed for eight months. Red rash with itching < in damp weather. After a slight aggravation improvement began in two weeks and continued steadily (*Med. Adv*., xviii. 214). *Dulc*. is a scrofulous remedy and has many scrofulous-looking eruptions: moist or dry, red, tettery eruptions, especially on face; furfuraceous; herpetic; urticaria; skin callous; warts, fleshy or large, smooth. Painless ulcers. (*Dulc*. 30 cured in two doses a rash like mosquito-stings appearing every month before the menses, < when warm; compelled to sit where it is cold.) It corresponds to results of repercussed eruptions. Offensive sweat; effects of sudden cooling whilst sweating. Dropsical affections. Catarrhal troubles. Dryness of mucous membranes strongly indicate it. *Dulc*. causes diarrhśa, and a characteristic form is when there is vomiting with the stool. It causes a mucous-like sediment in the urine and is particularly indicated when a muco-purulent urine is associated with general one-sided sensitiveness, especially of the abdomen. (*Amer. Hom*., xxi. 317), records the cure with six doses of *Dulc*. 200 of the following case: A prison-warder had difficulty with urine four years; frequent micturition, dribbling a few drops.

Stains linen yellow. < Afternoon; in damp cold weather. Some pain over left kidney and left iliac region; > after moving about or in warm weather. Sweats easily and often takes cold, when he suffers from sore-throat. Dislikes sweets.) Pains in many parts, as if from cold. Bruised feeling. Sensations: as of a board pressing against forehead; as if head were enlarged; as if hair stood on end; as if fire were darting out of eyes; as if worms were crawling up and down in abdomen; biting in rectum as from salt; as if lung moved in waves; as if arms were of wood; as of needles over whole body. Crawling, tickling itching of various parts; of tip of tongue. < Lying on back; > lying on side. < Stooping, > erect. < Bending diseased part backward. Most symptoms < at rest and > by motion. Most symptoms are < evening and night. Warmth > most symptoms, but < cough and nettle-rash. < Cold air; cold change of weather; damp weather; getting wet; using water. < From cold drinks; from ice-creams. Skin eruptions are sensitive to touch; pressure >. Small furuncles appear on places hurt by concussion.

Relations.—Dulc. *antidotes:* Cupr. and Merc. *Is antidoted by:* Camph., Cup., Ip., Kali c., Merc. *Follows well:* Bry., Calc. c., Lyc., Rhus t., Sep., Verat. *Incompatible:* Bell., Lach. *Complementary:* Baryta c. *Compare:* Acon., Ars., Cham., Helleb., Nit. ac., Puls., Staph., Sul. In faintness during stool, Crot. t., Ver. Effects of cold, moist winds, Ars., Calc., Nux m. (cold, *dry* winds, Aco., Bry.). Effects of exposure to wet, and > by motion, Rhus. Rheumatic paralysis, Rhus, Caust. Hasty speech and actions, Hep., Bell., Lach., Sul. Paralysis of lungs, Solania.

Causation.—Damp with cold. Wading. Washing. Injuries. Checked eruptions. Checked perspiration.

SYMPTOMS.

1. Mind.—Mental agitation.—Great impatience and restlessness.—Impatient desire for different things, which are rejected as soon as they are obtained.—Inclination to scold, without being angry.—Combative disposition, without anger.—Nocturnal delirium, with aggravation of pains.

2. Head.—Vertigo when rising from bed, with darkness before the eyes.—Giddiness early in the morning, > on getting up.—Giddiness so as to occasion failing, with trembling of the whole body, and general weakness.—Giddiness, with heat ascending to the face.—Dull pressure, as if a board were resting heavily on the forehead.—Pressive stunning pains in different parts of the head.—Piercing and burning pain in the forehead, with digging from the inside outwards, with the sensation as if the brain were enlarged; < in evening till midnight and when becoming cold; > when lying down.—Bursting pains extending from forehead to bridge of nose.—The headache is < by the slightest movement, and even by speaking.—Boring headache, from within to without, in the temples and forehead; < before midnight and when lying quiet; > when talking.—Sensation of

heaviness in the head.—Congestion in the head, with buzzing in the ears, and hardness of hearing.—Sensation in the occiput as if it were enlarged.—Stupefying headache; heaviness of the head.—Stupefying ache in occiput ascending from nape of neck.—Unpleasant sensation of chilliness in the cerebellum and over the back, with the sensation as if the hair were standing on end; returning everyday in the evening.—Thick crusts on the scalp, causing the hair to fall off.

3. Eyes.—Aching in the eyes, esp. when reading.—Sensation as if fire were issuing from the eyes when walking in the sun or in the room.—Inflammation of the eyes (ophthalmia from catching cold).—Itching of the eyelids in the cold air.—Ptosis.—Eyelids dry.—Sparks before the eyes.—Confused sight, as from incipient amaurosis, sees everything as through gauze.

4. Ears.—Otalgia, at night, with nausea.—Acute pullings, with shootings in the ears.

5. Nose.—Epistaxis of a very hot and bright red blood, with pressive pain above the nose.—Coryza; dry; with stoppage of the nose, < in cold air.

6. Face.—Paleness of the face, with circumscribed redness of the cheeks.—Eruptions and warts on the face.—Thick, brownish or yellowish, scabs on the face, on the forehead, on the temples, and on the chin.—Crusta lactea.—Moist tetter in the cheeks.—Twitching of the lips in the cold air.—Paralysis of the lower jaw.—Swelling of the sub-maxillary glands.—Redness of the face.—Distortion of the mouth; it is drawn to one side.

8. Mouth.—Salivation; saliva tenacious, soap-like.—Dryness of the tongue and roughness, with much thirst and increased flow of saliva.—Tongue loaded with thick mucus.—Swelling of the tongue, hindering speech and impeding breathing.—Stammering from time to time as if drunk; indistinct articulation, though he tried constantly to speak.—Pimples and ulcers in the mouth.—Gums loosened and fungous.—Paralysis of the tongue, and obstructed speaking, esp. after taking cold.—Itching, crawling on the tip of the tongue.

9. Throat.—Sore throat, as if from elongation of the uvula, with pressive pain.—Burning heat in the palate.—Sore throat, as after a chill.—Continual hawking up of very tough saliva, with much rawness in the fauces.

10. Appetite.—Sickly and saponaceous taste in the mouth.—Bitterness in the mouth.—Burning thirst for cold drinks, generally with dryness of the tongue, joined to a more abundant secretion of saliva.—Hunger after the fever-heat.—Hunger, with repugnance to all food.—Distension of the abdomen and epigastrium after eating moderately.—Nausea, with vomiting of viscid phlegm.—Vomiting of (white) tenacious mucus (morning).

11. Stomach.—Aching in the stomach, extending to the chest.—Cramp-like contraction in the stomach, so as to suspend respiration.—Retraction of the epigastrium, with burning pain.—Sensation of inflation in the pit of the stomach, with disagreeable sensation of emptiness in the abdomen.—Retraction of the pit of the stomach, with burning pain.

12. Abdomen.—Pains in the umbilical region.—Shooting, pinchings, and cuttings in the umbilical region, esp. at night.—Pinchings, gnawing, and sensation as if a worm were wriggling in the abdomen.—Pain in the abdomen as from the effects of cold.—Inflammatory congestion and induration of the inguinal glands, with drawing and tensive pains.—Swelling of the inguinal glands.—Dropsy of the abdomen.

13. Stool and Anus.—Constipation.—Difficult, dry, infrequent stool.—Diarrhśa, as after a chill, with cuttings, or with vomitings, risings, and thirst.—Diarrhśa of greenish (white) or brownish mucus.—Slimy diarrhśa, with faintness.—Chronic, bloody diarrhśa, with biting at the anus.—Sanguineous diarrhśa, with itching in the anus, and prolapsus of the rectum.—Nocturnal watery diarrhśa, with colic, particularly in the summer; also when the weather suddenly becomes cool—with prolapsus recti.

14. Urinary Organs.—Retention of urine.—Scanty and fetid urine.—Clear and viscid urine, or troubled, with sediment-like mucus.—Red, burning urine.—Involuntary discharge of urine, as from paralysis of the bladder.—Difficult (painful) urination, water issuing drop by drop.—Thickening of the bladder.—Discharge of mucus from the urethra.—Stricture of the urethra.—Turbid and whitish urine.

15. Male Sexual Organs.—Tetters on the genitals.

16. Female Sexual Organs.—Catamenia retarded, and too abundant; blood watery, thin.—Tettery eruption of the labia.—Miliary eruption before the catamenia.—Suppressed menstruation from cold.—Tetters on the breast in nursing women.—Suppression of milk from a cold.

17. Respiratory Organs.—Oppressed breathing, from a cold; from accumulation of mucus.—Catarrh and hoarseness, as from having taken cold.—Cough, with hoarseness.—Moist cough.—Cough, with expectoration of bright red blood.—Cough, similar to whooping-cough, excited by taking a deep inspiration, with profuse secretion of mucus in the larynx and trachea; during each attack easy expectoration of tasteless mucus, which is often streaked with blood.

18. Chest.—Great oppression of the chest, esp. when breathing.—Dull shooting, as from blows in and upon the sides of the chest.—Troublesome undulating pain in the l. side of the chest.—(Impending paralysis of lung.)

19. Heart.—Strong palpitation of the heart, at night, perceptible externally.

20. Neck and Back.—Stiffness at the nape of the neck.—Stiffness of the neck from a cold.—Engorgement and induration of the glands of the nape, and of the neck.—Violent pains in the lumbar region, above the hips, digging, shooting, or drawing, chiefly at night during repose.—Lameness of the small of the back, from a cold.—Shooting pullings in the loins, shoulders, and arms.

22. Upper Limbs.—Paralysis of the arms, with icy coldness (esp. during rest), as from apoplexy.—Paralytic pain in the arms, as from a bruise, chiefly during repose.—Tettery eruption, and warts, on the hands.—Perspiration in the palms of the hands.

23. Lower Limbs.—Tractions and tearings in the legs, esp. in the thighs.—Tetters on the knee.—Puffing and swelling of the leg as far as the knee.—Burning sensation in the feet, and in the toes.—Erysipelatous desquamation and itching in the feet.—Tingling in the feet, as from formication.

24. Generalities.—Tearing, shooting, or drawing pains in the limbs.—Sufferings, as from a chill in various parts.—Rheumatic pains and other complaints, from a cold.—Aggravation of sufferings, chiefly in the evening or at night, and during repose; > by movement.—Pains, with coldness of the body.—Immoderate secretion and excretion of mucous membranes and glands, the activity of the skin being suppressed.—Swelling and induration of the glands.—Emaciation.—Dropsical swelling of the whole body, limbs, and face.—Rapid swelling of the whole body.—Weakness and painful weariness of the whole body.—Semilateral convulsions, with loss of speech.—Paralytic affections of the limbs (of different single parts).—Great lassitude.

25. Skin.—Dryness and heat of the skin.—Miliary nettle-rash, with fever.—Tetters of different kinds, such as humid, scaly, pale tetters, oozing after having been scratched; reddish tetters, with red areola, bleeding after having been scratched; tetters with red edges, painfully sensitive to the touch, and to cold water; small, round, yellowish-brown tetters, bleeding after having been scratched; dry, furfuraceous tetters.—Tettery scabs over the whole body.—Tettery eruptions, with swelling of the glands.—Warts.—Tetters in the joints.—Eruption of itching pustules, which pass into suppuration, and become covered with a scab, esp. in the lower limbs and the hinder part of the body.—Red spots, as if caused by flea-bites.

26. Sleep.—Great inclination to sleep during the day.—Nocturnal sleep, agitated, restless, in consequence of heat and startings in the body, esp. after midnight.—Waking very early.—Cannot sleep because of impossibility of remaining in a position long enough.—Frightful dreams.—Visions in the morning on waking.

27. Fever.—In the evening, frequent shiverings and coldness, not even relieved by the heat of the fire.—Cold during the pains.—At first, febrile shivering, then burning heat with stunning pain in the head, face red, burning heat in the palate, and insatiable thirst for cold drinks.—Dry, burning heat over the whole body.—Heat and burning in the back.—Dry heat and burning sensation in the skin, with delirium and thirst.—Heat with delirium without thirst.—Fever, with aggravation in the evening.—Pulse small, hard, and tight, esp. at night.—General sweat, esp. at night.—Fetid sweat, with discharge of much urine.—Fetid perspiration, at night and in the morning, over the whole body; during the day, more on the back, in the armpits and hands.—Perspiration suppressed and entirely wanting.

Echinacea Angustifolia.

(Echinacea angustifolia is the Western species of E.; not to be confounded *with E. purpurea*, or Black Sampson, the Eastern species.) N. O. Compositć, allied to Rudbeckia. Tincture of whole fresh plant.

Clinical.—Appendicitis. Bites of rabid animals. Blood-poisoning. Carbuncles. *Diphtheria. Enteric Fever. Gangrene*. Poisoned wounds. *Pyćmia*. Rhus-poisoning. *Scarlatina. Septiccmia*. Snake-bites. Struma. Syphilis. Typhoid. Ulcers. Vaccination, effects of.

Characteristics.—*Echinacea angustifolia* has long been prized by eclectics in low typhoid conditions, diphtheria, malignant scarlatina, carbuncles and boils, and as a remedy in snake-bites. A remarkable case of vaccinal poisoning is recorded (*H. R.*, x. 527) in a man, 45, cured mainly by *Echin*. in 20-drop doses. The symptoms were: vitality ebbed; he became so weak he could not sit up; hair fell out; an eruption of psoriasis appeared on extremities extending to body. The disease advanced rapidly; the nails fell off. Left iritis supervened, and then keratitis of the right eye. Under *Kali iod*., and phospho-albumen as a food, the hair ceased to fall off, but other symptoms became rapidly worse. *Echin*. was now given, and slowly the disease was arrested; then gradual improvement and ultimate cure ensued. The report does not mention if the sight of the left eye was recovered. Homśopathists have generally followed the eclectics in using substantial doses. Fortunately we are now much better placed to understand *Echin*., thanks to an extensive proving undertaken by J. C. Fahnestock, with additional symptoms contributed by T. C. Duncan (*H. R.*, xiv. 337, 386). With one exception the provers were males. The first symptom noticed was a biting, tingling sensation on the tongue, lips, and fauces (compare *Acon*.) with a sense of fear and pain about the heart. Febrile symptoms, full head, flushed face and accelerated pulse followed. Languor was experienced by many provers, and neuralgic, sharp, darting, shifting pains. Catarrh of the digestive add respiratory tracts. Griping pains, offensive flatus and loose yellowish stool. Drowsiness was a very marked feature. The symptoms were < after eating; in evening; after physical or mental exertion; > by lying down, and by rest. In two provers there was found a diminution of red blood corpuscles after the proving. There is much chilliness (coldness of right leg), and sensitiveness to cold, < from exposure to cold air. Pains in abdomen come and go suddenly, and are > by bending double.

Relations.—The closest analogue of Ech. a. is Baptisia. In snake-bites it *compares* with Lobelia purpurascens; in boils with Anthracin., &c. Head feels enlarged, Arg. n., Bapt., Bovist., Glon., Nux mosch., Nux v. Cases of Rhus-poisoning have been cured with Ech. a. *Compare also:* the vulnerary Compositć, Arnica, Calendula and Bellis.

SYMPTOMS.

1. Mind.—Dulness in head, with cross, irritable feeling.—So nervous could not study.—Confused feeling of the brain.—Felt depressed and much out of sorts.—Felt a mental depression in afternoons.—Sense of fear with pain about heart and accelerated pulse.—Senses seemed to be numbed.—Drowsy, could not read.—Drowsy condition with yawning.—Becomes angry when corrected, does not wish to be contradicted.—General depression, with weakness.—General dulness and drowsiness.—General dulness, unable to apply the mind.—Does not wish to think or study.

2. Head.—Vertigo when changing position of head.—Dull headache, felt as if brain was too large, with every beat of heart.—Dull pain in brain, full feeling.—Dull frontal headache, esp. over l. eye, which was relieved in open air.—Severe headache in vertex, > by rest in bed.—Dull headache above eyes.—Dull, throbbing headache, worse through temples.—Head feels too large.—Dull headache, < in evening.—Dull headache, worse in r. temple, with sharp pain.—Full feeling in temples.—Sudden pain in l. temple.—Sudden pain in l. head above coronal suture.—Brain weary, felt most in l. hemisphere.—Dull pain in occiput.—Chilly sensation in l. occiput.—Dull headache, with dizziness.—Constant dull pressing pain in both temples.—Shooting pains through temples.—Dull occipital headache.—Constant dull pain in temples, > at rest and by pressure.—Head feels as big as a windmill, with mental depression.

3. Eyes.—Eyes ache when reading.—Tires me dreadfully to hold a book and read.—Eyes pain on looking at an object and will fill with tears, > by closing them.—Sleepy sensation in eyes, but cannot sleep.—Eyes feel brighter than natural.—Pains back of r. eye.—Sense of heat in eyes when closing them.—Dull pain in both eyes.—Lachrymation from cold air.—Sharp pains in eyes and temples.

4. Ears.—Shooting pain in r. ear.

5. Nose.—Stuffiness of nostrils, with mucus in nares and pharynx.—Full feeling in nose as if it would close up.—Full feeling of nose, obliged to blow nose, but it does not >.—Nostrils sore.—Mucous discharge from r. nostril.—Rawness of r. nostril, sensitive to cold, which causes a flow of mucus.—Bleeding from r. nostril.—R. nostril sore, when picking causes hćmorrhage.—Headache over eyes, with sneezing.

6. Face.—Paleness of face when head aches.—Face flushed.—Fine eruptions on forehead and cheeks.—Neuralgic pain in l. upper branch of fifth nerve.—Vomiting with pale face.—Biting tingling on lips.

7. Teeth.—Darting pains in the teeth, worse on r. side.—Neuralgic pains in superior and inferior maxilla.—Dull aching of the teeth.

8. Mouth.—White coating of tongue in the mornings, with white frothy mucus in mouth.—Slight burning of tongue.—Biting tingling sensation of tongue, lips, and fauces.—Whitish coat of tongue, with red edges.—Accumulation of sticky, white mucus.—Burning of the tongue, with increased saliva.—Dry sensation in back part of mouth.—Burning peppery taste when taking remedy.—Bad taste in the mouth in the morning.—A metallic taste.—Dryness of the mouth.

9. Throat.—Accumulation of mucus in throat.—Mucus in throat, with raw sensation.—Biting tingling in fauces.—After vomiting of sour mucus, throat burns.—Soreness of throat, worse on l. side.

10. Appetite.—Loss of appetite.—Desire for cold water.—Nausea, could not eat.

11. Stomach.—Nausea before going to bed, which was always > lying down.—After eating, stomach and abdomen fill with gas.—After eating, belching, which tastes of food eaten.—Nausea, with eructation of gas.—Stomach distended with gas, not > by belching.—Belching of tasteless gas.—Sour eructation.—Sour eructation, which caused burning of throat.—Sense of something large and hard in stomach.—Belching of gas and at same time passing flatus.—Sour stomach, "heartburn," with belching of gas.—Relaxed feeling of the stomach.—Pain in stomach, going down through bowels, followed by diarrhśa.—Dull pain in stomach.

12. Abdomen.—Pain in r. hypochondrium.—Full feeling in abdomen, with borborygmus.—Pain about umbilicus, > by bending double.—Pain in abdomen, sharp cutting, coming and going suddenly.—Pain in l. iliac fossa.

13. Stool.—Griping pains followed by passing offensive flatus, or a loose yellowish stool, which always produced great exhaustion.—Diarrhśa following pain in stomach, going through bowels.

14. Urinary Organs.—Desire for frequent urination.—Involuntary urination "in spite of myself.".—Sense of heat while passing urine.—Pain and burning on urination.—Urine increased.—Urine pale and copious.—Urine scanty and dark in colour.

15. Male Sexual Organs.—Soreness in perineum.—Pain across perineum.—Perineum seems stretched.—Pain in r. spermatic cord.—Testicles drawn up and sore.—Pain in meatus while urinating.

16. Female Sexual Organs.—Mucus from vagina in evening.—Pain in r. iliac region, which seems deep, lasting but a short time.

17. Respiratory Organs.—Irritation of larynx.—Voice husky.—Constant clearing of mucus from throat.—Mucus comes in throat while in bed, must cough to clear throat.

18. Chest.—Full feeling in upper part of lungs.—Pain in region of diaphragm.—Pain in r. lung.—Pain in pectoral muscles.—Sore feeling in the chest.—Feels like lump in chest.—Feeling of a lump under sternum.—Sharp burning pain under sternum.

19. Heart.—Slight pain over heart.—Stitching pain in l. chest (apex of heart).—Rapid beating of heart.—Heart's action increased.—Pulse 80, full and strong, later decreased and again increased.—Heart's action decreased.—Anxiety about the heart.

20. Neck and Back.—Pain in back of neck.—Pain in small of back over kidneys.—Dull pain in small of back.—Pain in lumbar region, < from stooping.

21. Limbs.—General weakness of limbs.—Pain between shoulders, which extends to axilla and down the arms.

22. Upper Limbs.—Pain in l. shoulder, > by rest and warmth.—Pain in r. shoulder, going down to fingers.—Sharp pain in l. arm, going down to fingers, with loss of muscular power.—Sharp pain in l. elbow.—Cold hands.—Pain in r. thumb.—Pain in wrists and fingers.

23. Lower Limbs.—Pain in r. thigh.—Pain in back of l. knee.—Sharp shooting pain in legs.—Extremities cold.—Chilliness in r. leg.—L. hip and knee pains.—Pain in r. leg.—Cold feet.

24. Generalities.—Exhausted, tired feeling.—Muscular weakness.—Felt as if I had been sick for a long time.—General aching all over, with exhaustion.—After proving found a diminution of red corpuscles.—Pains and sickness of stomach > by lying down.

25. Skin.—Intense itching and burning of skin on neck.—Little papules on skin, with redness, feeling like nettles; this occurred on the fifth day of the proving.—Skin dry.—Small red pimples on neck and face.—(Boils.)

26. Sleep.—General languor, sleepy.—Sleep disturbed, wakes often.—Sleep full of dreams.—Dreams about exciting things all night.—Dreams of dead relations.

27. Fever.—Chills up the back.—General chilliness with nausea.—Cold flashes all over the back.—Temperature raised a degree, with flushed face and fulness of head, accelerated full pulse.—Sweat chiefly on upper part of body.

Echinacea Purpurea.

Echinacea purpurea. Black Sampson. (Eastern States of America.) N. O. Compositæ. Tincture of fresh root.

Clinical.—Diphtheria. Putrid fevers.

Characteristics.—I mention this plant, which is a popular remedy in the Eastern States, because it has been used in place of *Ech. Ang*. It has probably a very similar action, and the root causes the same pungent sensation on lips and tongue as the tincture of *Ech. Ang*. It well deserves a proving. The black root has been taken as a "signature" of the remedy in cases of low fevers where a black tongue was observed.

Elæis Guineensis.

Elæis guineensis. Aouara. Avoira. N. O. Palmæ (yields Palm Oil). Triturations of the fruit.

Clinical.—Diarrhœa. Elephantiasis arabum. Gastric affections. Headache. Leprosy. Scleriasis. Scleroderma. Sight, defective. Skin, affections of. Sore throat.

Characteristics.—Proved by Mure, it produced lancinations, burning, bruised and throbbing pains. Notable symptoms of leprosy and of scleroderma appear in the provings: anæsthesia; swelling and hardening of skin. Among other symptoms are: sensation as if a peg stuck in false ribs. Swelling of parts. The greatest number of symptoms appeared on the lower extremities and skin. < From cold drinks (colic); from descending stairs (lancinations); from breathing. > Rest.

Relations.—*Compare:* Anacard., Rhus t.

SYMPTOMS.

1. Mind.—Merry mood.—Disobedient.

3. Eyes.—Swelling of eyes.—Sight weak; confused vision by candle-light.—He makes letters much too large.—Unable to look steadily at an object.

8. Mouth.—Burning in tongue; has to stop eating.—Bad odour from mouth.

9. Throat.—Lancinations in throat when swallowing; stinging when swallowing saliva.

11. Stomach.—Foul eructations.—Vomiting of a cake immediately after eating it.

12. Abdomen.—Colic after a cold drink.—Pain with bruised sensation in abdomen.

13. Stool.—Frequent diarrhœa.—Black stools.

14. Urine.—White urine.

17. Respiratory Organs.—Breathing embarrassed.—Pricking in larynx on breathing.—Cough with lancination in sides.—Pain in middle of chest as if pricked by needles.—Lancinations every five minutes in r. chest.

20. Neck.—Constrictive pains round neck as if from tight string.—Throbbing in nape.

22. Upper Limbs.—Swelling of l. arm.—Beating in l. arm.—Insensibility of hand to fire-heat when approached to fire, but an hour after he feels it badly.

23. Lower Limbs.—Staggering gait.—Weakness of legs.—Swelling of r. leg.—Sharp pain lower part of l. leg as if a pen-knife were stuck in.—Throbbing in calves.—Hammering in tibia, nape of neck, and r. foot.—Soreness of soles of feet when walking and when touched.

24. Generalities.—Lancinations in various parts, esp. when going downstairs.

25. Skin.—Skin seems thicker.—On each side of epigastrium skin seems thickened, with pain in last false ribs as if a peg were stuck in them.—Swelling, roughness, and itching of skin of l. leg.—Small vesicles appear on swollen r. leg; and l. arm; and on other parts without swelling.—Itching all over, preventing sleep.

Elaps.

Elaps corallinus. Brazilian Coral Snake. N. O. Elapidæ. Poison pressed from the venom-sac of the living snake and triturated with sugar of milk. Higgins used the gall of the snake, *Fel Elapidis Corallini*.

Clinical.—Amaurosis. Axilla, itching in. Cancer. Deafness. Ear, affections of. *Ear, wax in*. Epistaxis. Hæmorrhages. Headache. Hemiplegia. Knee, pain in. Metrorrhagia. Naso-pharyngitis. Nose, stuffed. Ozæna. Phthisis. Pneumonia. Threat, ulcerated.

Characteristics.—*Elaps* is distinguished from the other serpent venoms by the pre-eminent blackness of its discharges and hæmorrhages; black ear-wax.

Characteristic symptoms are: Fruit and cold drinks lie like ice on stomach and cause a cold feeling in chest. Sensation as if all the blood were collected in head. E. V. Moffat has found *Elaps* 6 almost a specific in chronic naso-pharyngeal catarrh, with greenish crusts and subjective disagreeable odour. Rumbling in ears as of thunder. Sensation in brain as if shaken. Sensation as if food turned like a corkscrew on swallowing; as if intestines were twisted by a cord and strung together in a knot. Pains in the longs (especially right) are very marked: "Sensation within chest and at sternum, as if pleuræ were pulled off and the lungs violently drawn apart." Sensation as if a heavy load, iron bar, or weight on parts. Fluids roll audibly into stomach. The glands and skin of axilla are affected. (I cured with *Elap*. 200 a very old-standing case of irritating rash in axilla (right) with recurrent suppuration of axillary glands,) Periodicity is marked. Rest >, exertion <; but walking > epistaxis, pain in stomach and lungs. Lying on abdomen > pain in stomach. Many symptoms are < at night. (Sudden deafness at night with roaring and cracking in ears.) Dreams of dead persons. Warmth of bed <. Great sensitiveness to cold: draught, wind, wet weather <. Horror of rain. Touch <.

Relations.—*Antidoted by:* Radiated heat, Alcohol, Arsen. *Compare:* Arsen., Carb. v., Crotal., Lach., Mur. ac., Nit. ac., Rhus t.; (red spot before sight) Duboisia; (effects of cold, wet weather) Dulc.

SYMPTOMS.

1. Mind.—Absence of mind.—Depression of spirits; desire for solitude.—Fear of being left alone, as if something horrible might happen.—Apprehensive of some fatal disease.—Angry about one's self, and does not wish to be spoken to.

2. Head.—Vertigo; falls forward.—Pain in the cerebellum, r. side.—Fulness in head, as if all the blood were collected in it; fears apoplexy; with cold hands.—Severe stitching pains in forehead, with heaviness of head; occasionally pain intermits, 8-10 days, thundering in l. ear, deafness, lachrymation.—Violent pain in vertex (afternoon), as if the brain were shaking, with nausea, which prevents her from keeping the head quiet.—Congestion of blood to the head on stooping.—Stinging headache, with sleeplessness.—Weight in the forehead; pain in the forehead.—Lancinating headache, first in l. side of the head, extending to r. side.—Headache in occiput after mental exertion.

3. Eyes.—Stye on l. eye, with lancination.—Red eyelids.—Tickling and red streaks of the sclerotica.—Large red, fiery spots before the eyes; red bar before the eyes, when opening them.—Dryness and burning in both eyes on waking; bloated around the eyes in the morning.—Eyes red and inflamed; blear-eyed.—Glassy look.—When closing the eyes everything looks (dirty) red; dotted with black points.—Violent itching in the l. eye.—Aversion to light; desire to close the eyes; everything seems white even at night; grey veil before eyes; on stooping rush of blood to head with

vertigo and pain at root of nose; can scarcely distinguish light from dark.—Amaurosis.

4. Ears.—Buzzing in r. ear.—Crackling in ears on swallowing.—Itching in the ears.—Cerumen black and hardened.—Illusions of hearing; hears whistling and ringing; imagines he hears some one talk.—Discharge of a serous fluid or greenish-yellow liquid from (l.) ear (in the morning).—Offensive otorrhœa with eruptions.—Crusty eruptions on ear and cheek.—Discharge of blood from the ear.—Sudden deafness at night with constant roaring and cracking.—Hearing of both ears impaired; otalgia of r.

5. Nose.—Bad smell (like putrid herring pickle) from the nose.—Stoppage of the nostrils (high up, with dull aching in forehead); coryza from the least current of air.—White and watery mucus is discharged from the nose.—Epistaxis: sudden, profuse, while walking; after a blow.—Blood black, copious, in steady stream.

6. Face.—Dark complexion.—Lancinations from root of nose to ear.—Redness and swelling of r. cheek, with chilliness all over the body.—Redness, heat, and formication in r. cheek.—Swelling of face, extending to r. side of the nose.—Red blotches on bloated face.

8. Mouth.—Tongue black or dark red.—Tongue swollen and whitish in morning.—Pricking at tip of tongue.

9. Throat.—Naso-pharyngeal catarrh, greenish crusts, subjective disagreeable odour.—Dull pain from nares to ears; < by swallowing; posterior wall of pharynx dry, fissured, covered with crusts.—The beverage is arrested in œsophagus, as from a spasmodic contraction.—Constriction in pharynx with pressure in the throat.—Ulceration of throat, < l. side, difficult swallowing of liquids; recurring from exposure to wind or rain.

11. Stomach.—Vomiting of green bile, followed by diarrhœa.—Acidity of the stomach, with nausea and faint feeling; sour eructations.—Violent thirst; cold feeling in the chest after drinking.—Hunger, with violent headache if not satisfied at once.—Vomiting of mucus, with fainting.—Fruit and cold drinks feel like ice in the stomach.—Burning in stomach.—Weight in stomach, with nausea, after eating.—Sudden pains in stomach, as if she must sink down; < while sitting, > on walking about.

12. Abdomen.—Lancinations from both groins to symphysis pubis.—Colic, with urging to stool.—The intestines feel twisted, as if by a cord, and strung together in a knot, with strangulating sensation.—Sensation as if the blood in the abdomen were flowing backward.

13. Stool and Anus.—Diarrhœa, blackish, frothy, yellowish, watery, with mucus and rumbling; bile; bloody mucus.—Discharge of black, liquid blood from the bowels and at stool, with colic and sensation as if the bowels were twisted.—Prolapsus ani.—Constriction of the sphincter, after bloody stool.—Crawling at anus as if from worms.

14. Urinary Organs.—Red urine, with cloudy sediment.—Thick urine, with red sediment.—Suppression of urine; strangury.—Discharge of mucus from urethra.

15. Male Sexual Organs.—Impotence.—Weight and swelling of the testes.—Discharge of prostatic fluid.—The skin of the prepuce is thick and inflamed.

16. Female Sexual Organs.—Discharge of black blood between the menses.—Menses every two or three weeks; flow profuse, dark.—Weight at the uterus; at the vagina, after an hysteric attack.—Itching in the vagina; formication at the vulva.—Sensation as of something burst in womb, followed by continuous stream of dark-coloured blood on attempting to urinate.

17. Respiratory Organs.—Dry cough, which ends in raising black blood.—Taste of blood in the mouth, before coughing.—Constant cough, with frightful pains throughout lungs as if they were torn out (< r. apex).—Stitches in the upper part of each lung; better when walking.—Oppressed breathing in the evening; < on going up stairs.

18. Chest.—Feeling as of heavy load on chest.—Constriction of the chest.—Coldness in chest after drinking.—Sensation in chest and at sternum as if pleuræ were pulled off and the lungs violently torn apart.—Stitches in l. chest; worse when breathing.—Pleuritic pain r. side, felt in axilla.—Cannot lean to r. side on account of a very painful pulling in r. lung.—Sensitiveness of r. side.

19. Heart.—Spitting of black blood, with painful tearing, as if proceeding from the heart.—Palpitation of the heart, with anxiety and trembling of the hands.

20. Neck and Back.—Stiffness in the r. side of neck.—Lancinations in l. side of neck.—Painful pressure at nape of neck.—Lancinations in the whole spinal marrow, from occiput to sacrum.—Pressure between the shoulders.—Coldness in back.—Pain in the back, with chilliness, cold feet, and strangury.

22. Upper Limbs.—Itching under axilla, with tetter.—Inflamed and suppurating glands in axilla.—The arms and hands are swollen, bluish, covered with red spots; also r. leg and foot.—Crampy constriction at bend of elbow, extending to hand, as if one had carried a heavy weight.—Pricking in the l. upper arm.—Hot rash on r. wrist.—The r. hand feels as if paralysed.—The tips of the fingers peel off.

23. Lower Limbs.—Cramps in the calves.—Icy coldness of r. leg.—Rheumatic pains in l. leg.—Sensation of spraining and stiffness in knee-joint.—The l. foot is swollen and blue, with red spots.—Pricking under toenails.

25. Skin.—Red pimples at the tips of the fingers.—The tips of the fingers peel off.—Little pimples, followed by desquamation.—Yellow spots on the hands and fingers.—Red tetter from the corner of the r. nostril to the cheek.

26. Sleep.—Sleeplessness from lancinating headache.—Dreams of business, of dead persons.

27. Fever.—Sensitive to cold.—The arm shudders when dipping the hand into water.—Coldness in the back.—Dry heat, at midnight; cannot endure any cover.—With the fever, oppression of breathing.—Flushes of heat in evening, with, redness and heat of face and ears.—Chill at, noon, without thirst, followed by dry heat in afternoon, without perspiration.—Cold perspiration all over.

Elaterium.

Ecballium elaterium. Momordica elaterium. Squirting Cucumber. N. O. Cucurbitaceæ. Tincture of unripe fruit. Trituration of Elaterinum, C_{20} H_{28} O_5.

Clinical.—Abscesses. Bilious fever. Bladder, affections of. Boils. Cholera. Colic. Cramps. Diarrhœa. Dropsy. Dysentery. Erysipelas. Intermittent fever. Jaundice. Measles. Nettle-rash. Neuralgia. Rheumatism. Sciatica. Scurvy. Vomiting. Yawning.

Characteristics.—The "signature" of *Elat*. is too obvious to be missed: Profuse watery stools, coming out with a gush, which is the main characteristic of the drug, is plainly typified in the explosion by means of which the ripe fruit scatters its seeds. *Elat*. has been used with good effect in scurvy of which gushing diarrhœa is a marked symptom. Beriberi, also a scurvy disease, has been greatly helped by *Elat*. according to Cooper. Dull olive green discharges; and frothy stools are also characteristic. Many cases of cholera, cholerine, and infantile diarrhœa are met by *Elat*.; also the jaundice of the new-born with bilious stools. The property of *Elat*. to cause draining of the tissues of their watery contents has been used to cause the absorption of dropsical fluids. Minute doses will often effect this. Gaping and yawning are well marked, and when present with fever before the chill or before the chill of cholera, *Elater*. is indicated. The yawning lasts all through the chill. Elat. promotes the opening of abscesses and boils. Sensations as if a splinter in left eye; as if posterior nares and upper part of œsophagus were enlarged. Effects of damp weather or standing on damp ground; < by damp.

Relations.—*Compare:* Bry. and Coloc. (sciatica); Verat. (neuralgia); Colch., Crot. t., Verat. (choleraic affections); Sec. (olive-green diarrhœa); Canth. (dysenteric diarrhœa with painful micturition); Apis, Hep., Ign., Rhus t. (urticaria during intermittent fever).

SYMPTOMS.

1. Mind.—Depression of spirits.—Irresistible propensity to wander from home.

9. Throat.—A feeling as if the posterior nares and upper part of the œsophagus were enlarged.

11. Stomach.—Nausea; vomiting of a watery substance, or of greenish, bilious matter, with great weakness.

12. Abdomen.—Cutting, griping pains in the bowels.

13. Stool and Anus.—Copious liquid stools.—Discharges from the bowels of frothy water; coming out with a gash.—Squirting diarrhœa.—Dull olive-green discharges.—Bleeding of hæmorrhoidal tumors.

23. Lower Limbs.—Shooting, also dull aching pains in the course of l. sciatic nerve to the instep and toes.

26. Sleep.—Incessant gaping.

27. Fever.—Chilliness, with continual gaping, as if an attack of intermittent fever were approaching.—Before the chill, gaping.—During the chin, pain in the head and limbs.—Fever, with violent tearing pains throughout the head; increased pains in the bowels and extremities; pains shooting to the tips of the fingers and toes, and then shooting back into the body.—Perspiration relieves all the symptoms.—If the intermittent fever is suppressed, urticaria break out all over the body.

Electricitas.

Electricity. The effects of atmospheric electricity and static electricity. Attenuations are made from sugar of milk saturated with the current.

Clinical.—Chorea. Headache. Hysteria. Paralysis. Rheumatism.

Characteristics.—Caspari is the authority for the symptoms caused by electricity, but every one knows the powerful effect exercised on some persons by the approach of a thunderstorm, and the influence of an electric current. Nervous

tremors; anxiety; fear; restlessness, anxiety, and anguish; violent headaches; palpitation; swelling of parts, are among the most prominent symptoms. Dr. Seward (*Med. Adv.*, xxvi. 150) has related a number of cases in which the injudicious use of electric baths brought on phthisis. In another case the chest and arms became stiff and paralysed. A young married woman, who had general and local (uterine) electric treatment, complained after it of feeling very heavy, as if she weighed a ton. One patient, after a bath, said his chest and shoulders "felt like marble." He became phthisical and died. The paralysis caused by electricity was in several cases quickly relieved by *Morph. acet.*, both in the solution and in the potencies.

Relations.—*Antidoted by:* Morph. acet. I have found Phosphorus the best antidote to the effects of storms. Electricity antidotes Mercury. *Compare:* Galvanismus and Magnetismus.

SYMPTOMS.

1. Mind.—Tears, sometimes with timidity.—Sighs, sometimes with tears; the patient cries aloud.—Restlessness, anxiety, anguish, sometimes more particularly in the chest; internal anguish; violent agitation; timidity; fear on the approach of a storm.—Ill-humour.—Involuntary laughter.—Furor.—Loss of consciousness; insensibility; foolish actions; haggard eyes.—Errors in the appreciation of time; loss of memory.

2. Head.—Giddiness, esp. on stooping.—Confusion of head.—Dulness.—Embarrassment in the head.—Vertigo.—Cephalalgia.—Pains in the head, sometimes drawing.—Bruise-like pain in occiput.—Crushing pressure in forehead, as from a stone.—Shootings in r. side of head, or from vertex to the temple, and r. side of forehead; tearings in the occiput, from the nape of the neck to the forehead.—Painful cramps in the head.—Disagreeable shaking, most frequently from behind.—Violent pulsations (beatings), or else heat throughout the head.—Murmuring throughout the top of the head.—Dartings in the head, as from pins.—Tingling in the teguments of the head.—Ebullition under the scalp.—Sensation of cold in the vertex.—Sensation of torpor in a part of r. side of head.—Darting itching on the head and legs.—Scurf on the scalp.—The growth of the hair much promoted.

3. Eyes.—Aching in the eyes, as from dryness.—Gnawing sensation in l. eye, or else violent drawing pains, extending to forehead.—Sensation as if the eyes were much sunken.—Sensation as if something were passing out of the eye.—Redness of the vessels of the conjunctiva, as far as the cornea; of the edges of l. eyelid, at the exterior angle.—Inflammation of the eyes.—Swelling of edges of eyelids, at the external angle.—Considerable lachrymation.—Lachrymation, esp. of r. eye.—Wandering and haggard looks.—Contraction of pupils, which were abnormally dilated.—Clouded vision.—Everything appears pale.—Blindness.—Sight

improved (curative symptom).—Little black spots before r. eye.—Objects all appear yellow to the sight.—A dark room appears to be illuminated.

4. Ears.—Pains in the ear.—Drawing pains from the jaws to the ears.—Lancinations in r. ear, proceeding from the neck.—Pulsations in the ear.—Redness and heat of the ear.—Swelling of the interior of the ear.—Suppuration, and a small pustule in the auditory duct.—Vesicles full of acrid serum behind the ear.—Augmented secretion of wax.—Murmuring, sometimes with a sensation as if a flock of wool were before the ears.

5. Nose.—Tingling in the nose, or else with pressure outwardly.—Epistaxis.—Loss of smell.—Sneezing.—Augmented secretion of nasal mucus.—Discharge, on blowing the nose, of a liquid like milk; aggravation of preexisting coryza.

6. Face.—Colour, bright red.—Expression of alarm on the face.—Increase of sweat on the face.—Violent drawing pain above l. eyebrow.—Contraction of the muscles of the face, esp. of the mouth.—Swelling of the face.—Scabby eruption on the face, on the arms, and over the body.—Large blisters on the cheeks.—Lips cracked; the upper lip puffed out.—Eruption about the mouth and on the chin.

7. Teeth.—Tearing pains in upper teeth, proceeding from the head.—Pain as of subcutaneous ulceration in places once occupied by molar teeth.—Quick dartings in a hollow molar tooth.—Quick growth of the teeth in children.—Drawings in the gums, proceeding from r. ear.

8. Mouth.—Increase of excoriation already existing in the interior of the mouth.—Pain of excoriation, and excoriation in the interior of r. cheek.—Great dryness of the mouth.—Augmented secretion of saliva.—Foam at the mouth.—Sensitiveness of the tongue, esp. at the point, which is also red.—Papillæ very prominent.—Dry tongue, charged with a yellow coating.—Swelling, thickness of the tongue.—Vesicles on the tongue, with pain of excoriation.—Dumbness, inability to utter a sound.—On the palate, vesicles with desquamation of the epidermis.

9. Throat.—Constant tickling in the throat.—Pressure on swallowing.—Difficult deglutition.—Inflammation of the gullet.

10. Appetite.—Sour taste.—Increase of appetite.—Great inclination to eat between meals.—Thirst during febrile shivering.—Pyrosis.—Abundant accumulation of water in the mouth.—Loathing.—Nausea, sometimes after a meal, with a more abundant accumulation of saliva.—Retching, with inflammation of throat, and cough.—Vomiting, and inflammation of the throat.—Vomiting of blood.

11. Stomach.—Fulness of the stomach, after eating the least thing.

12. Abdomen.—Spasmodic tension and contraction in the abdomen.—Aching in the abdomen.—Colic.—Cutting pains on the approach of a storm, or else with diarrhœa.—Dartings from l. to r. side.—Shivering in the abdomen, or else burning, sometimes with tension.—Inflation of the abdomen, borborygmi in the abdomen, sometimes with fermentation.

13. Stool and Anus.—Fruitless inclination.—The stools are at first facilitated, and afterwards restricted.—Stools frequent and liquid, of a blackish yellow, and of a fetid smell.—Diarrhœa, sometimes entirely liquid, hot.—Tenesmus and cutting pains.—Diarrhœa with colic, or else at the approach of a storm.—During the diarrhœa, retraction of the testicles.—After the diarrhœa, constriction in anus, with dry stools.—Heat in the whole body.—Violent pressure in the rectum (during the stools).—Burning in anus.—Hæmorrhoidal flux.

14. Urinary Organs.—Sensation as though the bladder were going to burst.—Augmented secretion of urine.—Very frequent emission of urine.—Involuntary emission of urine.—Urine, in the morning, an orange-yellow; during the day, like water in which meat has been washed.—Urine thick, deep-coloured.—Red like blood, abundantly charged with mucus.—Discharge of blood with the urine.—White sediment.

16. Female Sexual Organs.—Appearance of the catamenia (in the electric bath).—Copious menses, sometimes with pressure in the rectum.—Blood of the catamenia, black and thick.—Leucorrhœa, at first serous, afterwards thick, in pieces of the size of a hazel-nut.

17. Respiratory Organs.—Roughness of the larynx.—Cough, with much tickling in throat, or else with pressure in forehead from within outwards.—Short irritable cough.—Spitting of blood.—Feeble and faint respiration.—Respiration arrested.—Dyspnœa.—Respiration accelerated.—Asthma, sometimes lasting for life, with palpitation of the heart, and disposition to syncope; oppression of the chest.

18. Chest.—Constriction of the chest.—Pains in the chest; sensation of coldness in the l. side.—Chest and shoulders feel like marble.

19. Heart.—Palpitation of the heart, sometimes esp. at the approach of a storm, or else with a disposition to fall in syncope.—Palpitation of the heart with fever, or with headache, or else with restlessness and vivid redness of the face.—Painful and rapid lancinating pain proceeding from the heart across the chest.

20. Neck and Back.—Difficulty in moving the neck.—Tingling in a muscle shortened by suppuration.—Dartings in an enlarged gland of the neck.—Tingling in the vertebral column.—Furunculi on the back, and nape of the neck.—Drawing pains across the shoulder-blades, as by a thread.—Burning in the shoulder.

22. Upper Limbs.—Tearings in r. shoulder, which disappear in the heat of the bed.—Excruciating pains in arms (and legs).—Intense pains at night.—Startings, or else tearings, in articulations of arms and hands.—Paralysis of the arms, one being much swollen.—Scabby ulcer in the arms (and on the legs).—Violent starting in the upper part of the arms.—Drawing pain in the radius of r. forearm.—Violent tearing in hand.—Trembling of the hands.—Sensation of paralysis in the articulation, on the slightest movement.—Prominence of the veins.—Swelling of the hand, sometimes red, or itching.—Red smooth spot on the hand.—Whitish, itching place in the palm of r. hand.—Tension or drawing pain in the fingers.—Sensation of torpor at the ends of the fingers.—Vesicles full of a greenish liquid, sanguineous at the articulation of the finger which has received the shock.

23. Lower Limbs.—Heaviness of the legs.—Lassitude of the thighs on going up an ascent.—Sensation as though the flesh were detached from the bones.—Red itching place on r. thigh.—Sensation of heat over the whole thigh.—Trembling of the knees.—Tearings in the knees.—Dartings, or tension, or else tingling, extending to the foot.—Pain as of a wound in the knees and great toe.—Red place, with pain of excoriation, or else, a red and itching protuberance in the knee.—In the tibia, sensation of turning round, or else lassitude.—Red spot on the skin.—Burning in the feet, sometimes reaching to the knees, esp. at night; great internal heat, internal coldness, extended by a cool summer wind to the abdomen.—Sensation of fatigue, with trembling in the feet.—Sensation of swelling, of numbness, and torpor; rotative sensation in the soles of the feet.—Sensation as if a large ring were round the malleoli.—Itching of foot, or else red and itching vesicles on foot.

24. Generalities.—Pains in the limbs; grievous pains; pains in old wounds, or in enfeebled bodies, from a change of temperature.—Draggings in all the limbs, as far as the ends of the fingers and toes; nocturnal shootings, in parts which are paralysed, or else in those which have been electrified; shaking of the whole body, commencing in the maxillary bones; tingling in the parts electrified; violent burning in those which touch the chain.—General depression and weariness, sometimes with giddiness or with drowsiness; lassitude and stiffness of the limbs; general depression after a meal; uneasiness during a storm.—General relaxation of the powers, sometimes with moral depression and headache; relaxation of the nerves and muscles; diminution of the weight of the body; weakness of the parts shaken.—Syncope, and tendency to fall down.—Stiffness of the limbs; paralysis of some of the limbs, esp. of the inferior extremities.—Trembling of the limbs, chiefly of those which have been shaken; general trembling.—Springing up of the tendons.—Convulsions of the limbs.—Painful spasms along the back.—St. Vitus' dance.—Epileptic fits hastened and aggravated.

25. Skin.—Itching, or else tingling over the whole body (violent pains and swelling of one of the feet which had been frozen twelve years before).—Eruption of small nodosities on the spots touched by the sparks; eruption like miliary or measles;

white vesicles; itch-like eruption at the joints; of carbuncles, which proceed to suppuration.—The skin becomes black; wheals on the skin.

26. Sleep.—Yawning and stretching, sometimes with shuddering over the whole body.—Great drowsiness.—Profound sleep.—Sleeplessness, sometimes with tossing.—Sleeplessness for two months.—Dreams confused and disquieting.

27. Fever.—Shuddering over whole body, every morning, with yawning.—Coldness of l. side.—Fever: at first general shivering, afterwards heat, transient and dry; frequent alternations of shivering and heat, with inflammation of the throat; heat mingled with shivering; shivering, with much sweat; painful cramps in head and along back; fever in the evening.—Augmentation of natural heat; internal heat of the parts which have sustained the electric shock; blood much over-heated; heat, with cephalalgia, or else with anxiety (at night), or else with strong and quick pulse; heat of whole body, with shivering brought on by motion; heat of the parts struck by the electric spark; intermittent pulse, lively, quick and strong; circulation of the blood accelerated; prominence of the veins of the hands.—Increased perspiration; excessive nocturnal sweat, in gouty persons, without mitigation; copious sweat during sleep, with anxiety during a storm.

Ephedra Vulgaris.

E. vulgaris. N. O. Gnetaceć. Tincture of branches and flowers.

Clinical.—Exophthalmic goître. Headache.

Characteristics.—*Ephedra* has been proved in Russia by Dr. B. H. Mouravow (*Universal Homśopathic Annual*, p. 56). It produced symptoms when twenty drops of a strong alcoholic extract were taken five times a day; fifteen drops four times a day having been taken without apparent effect. Extreme apathy was produced, stiff-neck, and backward pulling of whole body on turning the head. There was also starting of the eyes from the orbits as if pushed out. This suggested exophthalmic goître to Mouravow, who considered that the drug acted on the ganglions of the sympathetic nerve, and caused congestion of the spinal cord.

Relations.—*Compare:* Ferr., Iod., Lycopus v., Spong., Thyroid. (exophthalmos).

SYMPTOMS.

1. Mind.—Extreme apathy.

2. Head.—Violent headache, nausea, general weakness; slow pulse.—L. side hemicrania with numbness of entire l. arm.

3. Eyes.—Heavy eyes, starting from their orbits, as if pushed out, pain in the eye (after second dose on third day. On fifth day exophthalmos was increased).

12. Abdomen.—Dull pain in region of spleen.

14. Urinary Organs.—From early morning great fatigue, retention of the urine (fourth day).

19. Heart.—Abatement of pulse (from 68 to 62 in one case), notwith standing increased rapidity of action of heart.—Strong heart-beat with weakening of pulse; respiration accelerated.

20. Neck and Back.—Stiffness of neck (with exophthalmos).—Stiffness of neck and backward pulling of all the body on turning head and a dull pain in region of spleen.

21. Limbs.—Towards evening heaviness in all the limbs.

22. Upper Limbs.—Numbness of entire l. arm, with l.—side hemicrania.

24. Generalities.—General weakness; from early morning great fatigue.

26. Sleep.—Longing for sleep.

Epigea Repens.

Trailing Arbutus. N. O. Ericaceæ. Tincture of fresh leaves.

Clinical.—Calculi, urinary. Dysuria. Gravel. Strangury.

Characteristics.—Hale mentions *Epigea* as having been a popular remedy in renal calculi throughout the United States ever since the settlement. "It has been successful in removing dysuria and strangury as well as urinary tenesmus." Hale once gave to a patient who had a bloody muco-purulent sediment in the urine with intense dysuria, ten drops of the tincture six times a day. A copious deposit of fine brown sand was observed and all symptoms were relieved.

Relations.—*Botan.:* Arbutus, Uva ursi. *Compare also:* Mitchella, Chimaphila, Cannabis, Calc. ren., Urtica urens, Uric acid.

Epihysterinum.

Epiphysterin. A nosode.

Clinical.—Fibroma. Menorrhagia. Metrorrhagia.

Characteristics.—This is one of Dr. Burnett's nosodes, used by him in cases of hæmorrhage and obtained, as I conclude, from a case of hæmorrhage in a patient suffering from fibrous tumour, possibly with malignant elements. At any rate, I have found it of great value in controlling uterine hæmorrhage, whether connected with fibrous growth or not. I have used it in the 30th upwards, giving one or two doses weekly.

Relations.—*Compare:* The cancer nosodes; in fibrous tumours and uterine hæmorrhages, Thlaspi b. p., Fraxin., Hydrastis and its alkaloids.

Epilobium Palustre.

Epilobium lineare. Willow Herb. N. O. Onagraceæ.

Clinical.—Dysphagia. Fever. Larynx, affections of. Ptyalism. Throat, sore.

Characteristics.—*Epil. p*. was proved by Dr. J. S. Wright, a tincture of the root being used. Symptoms of filling up of throat, inability to swallow, fever and headache were produced. A boy poisoned with the flowers of *Epil. hirsutum* had strong epileptiform convulsions in rapid succession.

SYMPTOMS.

2. Head.—Headache with fever.

6. Face.—Face red.

8. Mouth.—Ptyalism.—Dull and sleepy but could not sleep, the saliva would choke him.

9. Throat.—In morning throat began filling up; at noon could not swallow water; larynx sore to pressure with hard lumps on each side externally.

13. Stools.—Three loose stools on eighth day; none the day after.

14. Urine.—Urine red.

27. Fever.—Hard chill began 11 a.m., lasted an hour; high fever came on with aching all over and severe headache; this lasted all night; could not sleep.

Epiphegus.

Epiphegus Virginiana. Beech Drops. Cancer-root. N. O. Orobanchaceć. (A slender branching herb without leaves, of a dull purple or yellow-brown colour growing as a parasite on the roots of beech-trees.—*H. R.*, iv. 10.) Tincture of whole fresh plant in full flower.

Clinical.—Cancer. Diarrhśa. Gonorrhśa. *Headache*. Palpitation. Salivation.

Characteristics.—The Orobanche family to which *Epiphegus* belongs is nearest to the Scrophulariaceć in botanical features. In addition to the name of "*cancer-root*" it is also called "*clap-root*" and "*flux-plant*," showing the virtues with which it is popularly accredited. Its homśopathic use has been almost exclusively confined to the treatment of headaches of the neurasthenic type, brought on by any extra exertion, relieved by a good sleep. The pain is pressing from within outward. A very characteristic symptom is: "Constantly wants to spit, saliva viscid;" when this symptom occurs in connection with a headache *Epiphegus* will almost certainly cure. It is said to have entered into the composition of "Martin's Cancer powder," and has been used by eclectics as a local application in obstinate ulcers and aphthć. Symptoms take the direction: Right to left; right upper, left lower. Right temple more affected than left. It has been used mostly in the 3x potency. It has been proved by Dr. Ralf Morden. Dr. S. A. Jones has been chiefly instrumental in defining its place in therapeutics. I have cured with it many cases of headache, some of them desperately severe. The conditions are: < from working in open air; from rising up in bed; > from a good sleep.

Relations.—It is allied to the Scrophulariaceć. *Compare:* Phos. in., > from sleep (Lach., Sulph., and Nat. mur. have the opposite— < from sleep—in the most marked degree); Fagus.

Causation.—Physical or nervous over-strain. Any unusual exertion or excitement, as going on a visit, or doing a day's shopping.

SYMPTOMS.

1. Mind.—Makes wrong letters or words in writing.—Fears death from palpitation of heart.—Fears injury to her health from the drug.

2. Head.—Pain in temples; mostly in r.; in forehead; pressing from without inward; piercing pains; fulness; pain coming on suddenly; scalp feels tight during headache.

3. Eyes.—Smarting.—Could not read because the words seemed to be blurred.

8. Mouth.—Saliva viscid.—Almost constant desire to spit.—Sticky viscid taste in mouth.—Bitter taste.

11. Stomach.—Nausea.

13. Stool.—Stool passed with difficulty though fćces soft.

19. Heart.—Palpitation which makes her feel very weak.

22. Upper Limbs.—Pain in l. shoulder.

23. Lower Limbs.—Pain in l. knee.

24. Generalities.—Languid feeling.

Equisetum.

Equisetum hyemale. Scouring Rush. A rush growing in damp soil in Europe and America. N. O. Equisetaceæ. Tincture of fresh plant chopped and pounded to a pulp.

Clinical.—Cystitis. Dropsy. Enuresis. General paralysis. Gleet. Gonorrhœa. Gravel. Hæmaturia. Urine, retention of.

Characteristics.—The chief effects of *Equisetum* are found in the urinary organs. Pain in the kidneys (especially right), in the bladder and urinary passages. Constant desire to urinate, and passes large quantities of clear, light-coloured urine without relief. Pain in bladder as from distension. Retention and dysuria; especially in women during pregnancy and after confinement. Enuresis. Wets bed at night; when he dreams he always sees a crowd of people. *Equis*. has: Severe dull pain which does not lessen after urination; irritation of the bladder, especially in women. *Linaria* has enuresis, with frequent painful urging to urinate, causing the patient to rise at night (Farrington). It relieved loss of control over bladder and rectum in a case of general paralysis. Carcinoma uteri is said to have been cured by it. Pain in sacro-iliac joints. < From pressure or contact; moving; sitting. Eating > pain in temples; lying on back > pain in back: continued motion > pains in back and knees.

Relations.—*Compare:* Apis, Cannabis, Canthar., Fer. phos., Puls.; Canth. comes closest; there is less bleeding, tenesmus, scalding, and fibrinous flakes than with Canthar., but more mucus.

SYMPTOMS.

1. Mind.—Very irritable and easily fatigued.

2. Head.—Severe headache with intense pain in upper part of eyes or roof of orbit.—Headache with heat of face without redness.—Constrictive feeling across forehead.—Sticking, darting pains changing locality.—Constriction of whole scalp, as if drawn tightly over whole skull; continual desire to wrinkle up forehead.—Skin over frontal bone very tight, with feeling of skin continuing to contract.

3. Eyes.—Severe pain in roof of r. orbit.—Sharp pain in outer angle of r. eye.

4. Ears.—Dull, transient pain and stiff feeling behind l. mastoid.—Confused feeling in ears.—Confusion of sounds; confused noises; fearful rumbling.

6. Face.—Face flushed, feeling of heat.—As if blood pressed into face.—Heat and burning without redness.

9. Throat.—Sharp sticking in throat.

11. Stomach.—Excessive hunger; appetite greatly increased throughout the proving.

12. Abdomen.—Distended feeling.—Dull, heavy pains in either side of lower abdomen and bladder, with frequent desire to urinate; the desire to urinate, which is constant, is not > by urinating.—Slight pain in bowels with desire for stool, not urgent, early in morning; three stools during the morning, quite thin; during the whole day frequent inclination for stool with slight pain in bowels; no diarrhœa.—Severe pain in lower abdomen with passage of fetid flatus.—Sharp pain in hypogastrium with sticking-like pains in anus (11 a.m.).—Sharp pains on either side of hypogastrium; extending to middle line.

13. Stool and Anus.—Smarting in anus during and after stool.—Stool with great flatulence.—Stool with aching in anus and feeling as if rectum would protrude, followed by smarting in anus and a feeling as if some fæces still remained.

14. Urinary Organs.—Slight pain in r. kidney, then in l., extending down l. side of sacrum.—Dull pain in r. kidney, with urgent desire to urinate; had urinated only a few minutes before and now passed four ounces of clear light-coloured urine.—Pain in bladder as from distension.—Severe dull pain in bladder not > by urinating; continued some days after taking the drug, and caused him to fear inflammation of the bladder.—Tenderness in region of bladder, and r. side of lower abdomen, extending upward from groin; same but less marked l. side.—Pain and tenderness in bladder region with soreness of testicles, extending up spermatic cords.—Excessive burning in urethra while urinating.—Sharp, cutting pain in

urethra.—Pricking in urethra a short distance back from meatus.—Biting itching in meatus < scratching.—Great desire to urinate but only a small quantity passes.—Urgent desire to urinate with prickling and soreness of meatus from contact and pressure.—Obliged to rise several times at night to urinate.—Profuse urination, with burning in urethra and sharp pain at root of penis.—Later passes smaller quantities and darker.—Passed small amount but felt as if he had not urinated for hours; the amount grew less each time but the desire increased.—Urine cloudy.—Great excess of mucus on standing.—Enuresis, nocturnal and diurnal.

15. Male Sexual Organs.—Violent erections; in the afternoon.—Soreness of testicles and cords; < l.

18, 19. Chest and Heart.—Sharp stitch in l. breast one inch to l. and over nipple.—Sharp pain in region of heart < by inspiration.

20. Back.—Pains in back esp. while sitting, > lying on back and walking.—Heavy sensation like a lump in r. lumbar region.—Severe rheumatic pains in region of sacro-lumbar joint, and through l. hip-joint extending down outer side of l. leg, ending in front three inches above knee.

22. Upper Limbs.—Pain in upper part of shoulders and in region of vertebra prominens, < by least motion or contact.—Pain in r. shoulder to middle of upper arm.—Pain in l. shoulder with shivering over body and great heat of head.

23. Lower Limbs.—Pain in r. hip-joint and near knee-joint.—Knees very weak on least exertion.—Dull, heavy pain under l. patella.—On awakening, sharp pain inner side of l. knee, > after moving about a short time.

26. Sleep.—Very sleepy, eyelids heavy.—Sleep much disturbed by tiresome dreams of many persons, places, and things.

27. Fever.—Creeping chills beginning below and creeping up back.

Erechthites.

Erechthites hieracifolia. Senecio hieracifolia. Fireweed. N. O. Compositæ. Tincture of whole fresh plant.

Clinical.—Diarrhœa. Gonorrhœa. Hæmorrhages. Metrorrhagia. Orchitis.

Characteristics.—Belonging to the Compositæ, and closely allied to *Erigeron* and the Groundsel family (*Senecio*), "Fireweed" (so called because it grows abundantly in clearings which have been burnt out) has been used empirically in hæmorrhages,

especially metrorrhagia, and as a local application in skin affections, herpes, eczema, psoriasis, and indolent ulcers. A short proving has shown an action over the circulatory apparatus, producing flushes of heat which suddenly give way to coldness. Another marked feature is increased appetite; and also increased feeling of strength and desire for exercise. According to Hale, "Oil of Fireweed" is also extracted from *Erigeron*, and is said by chemists to be identical with turpentine. All three cause active and passive hæmorrhages, the former being the primary and the latter the secondary action. *Erech*. is indicated in hæmorrhages of bright red blood from nose, mouth, bowels, kidneys, uterus, and lungs. These are attended with excitement of the circulation. It is also indicated in passive hæmorrhages of dark fluid blood. Hale also commends it in gonorrhœa and orchitis.

Relations.—*Compare:* Senecio, Erigeron, Hamam., Millefol., Calc., Canth., Tereb., Puls., Clematis.

SYMPTOMS.

2. Head.—Giddiness with nausea.—Dull frontal headache.—Throbbing of temporal arteries, with flushes of heat running across the back from one shoulder to the other.—The sensation of heat suddenly gives way to that of coldness.

9. Throat.—Sore throat; legs feel stiff and painful, aching across small of back.

11. Stomach.—Enormous appetite.—Feeling in stomach as if it would be dissolved, after drinking cold water.—Eructations and heart-burn after eating warm bread and coffee (cured).

12, 13. Abdomen and Stool.—Griping followed by three copious discharges of semi-solid, yellow fæcal matter.

14. Urinary Organs.—Increased flow of urine.—Slight burning at meatus during micturition.

15. Male Sexual Organs.—Towards morning prolonged erection with dreams of nudity.—(Gonorrhœa with scanty discharges and great pain.—Orchitis from suppressed discharge.)

16. Female Sexual Organs.—Metrorrhagia.—Premature and profuse menses.

20. Neck.—Stitches on middle of back.

23. Lower Limbs.—Cold feeling in back of legs.—Legs feel stiff.

26. Sleep.—Dreams of nudity and shame.

Ergotinum.

Ergotin. The alkaloid of Secale cornutum, Ergot of rye. Trituration.

Clinical.—Anal incontinence. Gangrene. Hæmorrhages. Heart, paralysis of. Sphincters, paralysis of.

Characteristics.—*Ergotin* is best known by its physiological use as a hæmostatic in uterine and pulmonary hæmorrhages. It acts by causing contraction of the arterioles, and its effect is produced most promptly when it is administered by subcutaneous injection. Its homœopathic uses are in the main identical with those of *Secale*, but *Ergotin* will sometimes succeed when *Secale* fails. Koeck, of Munich, has recorded a case in point (*H. Monatsblätter*, Sept., 1898). *Secale*, like *Phosph*., has "wide-open anus" in its symptomatology. Koeck's patient had suffered from diarrhœa since the Franco-German war, and latterly had lost all power of retention. It was for this that the doctor was consulted. The rectum had lost all sensation, so that the patient had no warning and was never clean. The odour may be imagined. Old-school treatment had failed to relieve him. He was about to be pensioned by his employers, and had thoughts of suicide. *Secale* 3x ameliorated slightly; the 2x had the same result. "Remembering Kafka's advice to use the alkaloid when the indicated drug did not seem to act, he prescribed *Ergotin* 2x." After taking this for four days the patient regained control. Démange (*La Semaine Méd*., January, 1886) records the case of a young lady suffering from typhoid fever and threatened with heart paralysis. Stimulating injections of ether and of rum, and frictions completely failed to rally her. Cyanosis increased rapidly and threatened the trunk. Fainting spells occurred in rapid succession, pulse filiform. *Ergotin* was then injected and the pulse rose, and the symptoms of collapse disappeared. (Most of the symptoms of this patient may be found under *Secale*.)

Erigeron.

Erigeron Canadense. Canada Flea-bane. N. O. Compositæ. Tincture from the fresh plant when in bloom.

Clinical.—Black eye. Bruises. Cough. Dysuria. Gleet. Gonorrhœa. Hæmatocele. Hæmorrhages. Hæmorrhoids. Placenta prævia. Proctalgia. Spermatorrhœa. Wounds.

Characteristics.—*Erigeron* is chiefly known as a remedy for hæmorrhages and congestions in pretty well all parts of the body. Its characteristic hæmorrhages are bright red. The Indians use it as an application to wounds. It compares as a vulnerary with *Arnica*. It has been proved by Burt and others. The throat and genito-urinary organs are specifically affected. Sensation as if something had

lodged in upper part of œsophagus. Pains in umbilical region were very prominent. Feeling as if anus had been torn. Urination is painful or suppressed; sharp stinging pains in region of left kidney. Gonorrhœa and gleet have been cured by *Erig*. Wilmot Moore has given it with success in three cases of placenta prævia. He gave the 1x trituration (of what part of the plant is not mentioned) on the tongue. Rest >; every movement < flow; = bloody lochia to return. Rainy weather < all symptoms.

Relations.—It is related to Senec., Erech., botanically and in effects. *Compare:* Ipec., Ham., Arn., Canth., Copaiv., Sabi., Tereb.

SYMPTOMS.

1. Mind.—Great despondency.

2. Head.—Congestion of the head, red face, nose-bleed; febrile action.—Awakened with dull headache [forehead and r. eye]; with aching distress in all the large joints.—Dull frontal headache with smarting in eyes.

3. Eyes.—Smarting of eyes, all afternoon and evening.—Slight agglutination of lids in morning.

4. Ears.—Loud singing in r. ear.

5. Nose.—Epistaxis of bright-red blood.—Increased secretion of mucus all forenoon.

8. Mouth.—Bad taste in mouth.

9. Throat.—Increased secretion of mucus in nostrils all forenoon, with a feeling of roughness of pharynx and sensation as if something had lodged in the upper part of the œsophagus that caused frequent inclination to swallow.—Rough feeling in pharynx in morning.

11. Stomach.—Violent retching and burning in the stomach, with vomiting of blood.—Eructations of air.—Sharp cutting pains in epigastric region every few minutes followed by dull pains.

12. Abdomen.—Frequent distress in umbilicus with hard, aching distress in whole dorsal region.—Frequent dull pain in umbilical region, with a feeling in anus as if it had been torn.—Constant dull pain in r. umbilicus; twice the pains were severe and cutting (first day, second day pain was in l. umbilicus).—Rheumatic pains in abdominal muscles.—Sudden pain in hypogastrium, followed by mushy stool (7 p.m. first day, 8 p.m. third day).—Dull pain in l. hypogastrium and umbilicus.—Dull pain in hypogastrium followed by dark-coloured, hard, lumpy stool.

13. Stool and Anus.—Natural stool, followed by severe neuralgia in anus with tenesmus.—Stools small, streaked with blood; tormina; burning in the bowels and rectum; hard lumps of fæces mixed with the discharges.—Mushy stools.—Hæmorrhage from the bowels.—Hæmorrhoids; bleeding; with hard, lumpy stools; burning in the margin of anus; it feels as if torn.

14. Urinary Organs.—Urination painful or suppressed.—Dysuria of teething children; frequent desire; crying when urinating; urine profuse, of very strong odour; external parts (female) inflamed or irritated, with considerable mucous discharge.

15. Male Sexual Organs.—Sticky sweat on genitals.—Pain in r. lumbar region passing down to testicle.—Gonorrhœa and gleet.

16. Female Sexual Organs.—Metrorrhagia, with violent irritation of rectum and bladder; after abortion, with diarrhœa and dysuria; with prolapsus uteri.—Very profuse flow of bright-red blood; every movement of patient increases the flow; pallor and weakness.—Leucorrhœa profuse, with spasmodic pains, and irritation of the bladder and rectum.—Bloody lochia return after the least motion; > during rest.

17. Respiratory Organs.—Cough; bloody expectoration; incipient phthisis.

19. Heart.—Palpitation.

20. Back.—Dull aching distress in whole dorsal region.—Dull pains in lumbar and sacral regions.—Severe sticking, stabbing pain in region of l. kidney; passing to r. kidney.

21. Limbs.—Aching dulness in all the joints and limbs.

24. Generalities.—Excessive languor in morning; all day with great depression; no ambition to move in afternoon and evening.

26. Sleep.—Frequent disposition to yawn in afternoon and evening.

Eriodictyon Glutinosum.

Eriodictyon Californicum. Yerba Santa. N. O. Hydrophyllaceć. Tincture of whole plant.

Clinical.—Asthma. Bronchitis. Catarrh. Influenza. Phthisis.

Characteristics.—*Eriodyct.*, says Allen, "has a strong terebenthine taste, and abounds in a resinous matter which sometimes exudes so copiously that, in drying, the specimens stick firmly together and to the paper." "Yerba Santa" (holy plant) is

a popular expectorant remedy in Mexico and California. By homśopaths it has been chiefly used in phthisical conditions, especially bronchial phthisis. Asthmatic breathing with accumulation of mucus; the asthma being relieved when the mucus is got rid of. Wasting, night-sweats, intolerance of food. Phthisis the result of frequent bronchial catarrhs. Coryza and catarrh. J. Perry Seward gave it with great success in two cases of cough remaining after influenza (*Amer. Hom*., xxiv. 248). G. M. Payne's proving brought out marked preference for the right lung. Foul mouth in the morning on rising. Most symptoms < in afternoon. Nausea < on running. Symptoms come at intervals; or on any sudden changes of position.

Relations.—*Compare:* Balsam of Peru, Pix liquida, Stannum; (afternoon aggravation) Lycop.; Grindelia, Phos., Hep., Rumex, Caust., Dros.

SYMPTOMS.

2. Head.—Dizziness and sense of intoxication.—Aching at base of cranium, 8 a.m.—Sensation of pressure outwards on all sides of head, greatest at cerebellum upwards.—Intense, dull, heavy pain in back of head and over eyes.—Burning in occiput; heavy pain as if occiput was being pressed out.

4. Ears.—Sharp pain in r. ear at intervals; or on suddenly changing position of head to r. or l.—Shooting pains, after changing to just below external ear, removed to just above and back of it at intervals of one or two minutes.

5. Nose.—Sneezing.—Catarrh, yellowish-green.—Coryza permanent; with more or less dizziness.

8. Mouth.—Foul mouth on rising in the morning.

9. Throat.—Burning sensation in fauces and throat.

11. Stomach.—Great appetite.—Deathly sickness; < by running.

15. Male Sexual Organs.—Sore, dragging, tender feeling of testicles (< l.); could not bear any pressure, and dreaded to move because of its tenderness; > by gentle support, felt in after part of day.—Slight fluttering at intervals at bottom of testicles.

17. Respiratory Organs.—Wheezing voice, 5 p.m.—Asthmatic symptoms; with coryza and mucous secretions.—Dull pain in r. lung, front.—Sharp pain in r. lung in front, near nipple, occurring at short intervals or on sudden changes of position.

27. Fever.—Slight fever, cheeks flushed and burning.

Erodium.

Erodium cicutarium. Hemlock Stork's Bill. N. O. Geraniaceæ. Decoction (half ounce of the herb to six ounces of water). Tincture of fresh plant.

Clinical.—Hæmorrhages. Uterine polypus.

Characteristics.—*Erodium* is a popular hæmostatic remedy in Russia, and is especially used for metrorrhagia and menorrhagia. Komorowitch cured with it numbers of cases in which *Ergot* and *Hydrastis* had failed. One was a case of cervical polypus. After three days' use of the decoction the polypus was found lying free in the vagina. Compare *Geran. m*.

Eryngium Aquaticum.

Button Snake-root. N. O. Umbelliferæ. Tincture of fresh root.

Clinical.—Anus, prolapse of. Conjunctivitis. Constipation. Cough. Diarrhœa. Dropsy. Gleet. Gonorrhœa. Hæmorrhoids. Influenza. Laryngitis. Leucorrhœa. Renal colic. Sclerotitis. Sexual weakness. Strabismus. Spermatorrhœa. Urine, incontinence of. Wounds.

Characteristics.—*Eryngium* acts on the mucous membranes, producing thick yellow mucous discharges from eyes, ears, nose, mouth, bowels, urethra, and vagina. Hæmorrhages from stomach and bowels. It is a vulnerary, antidoting the effect of blows. It causes headaches; expanding sensation in forehead; dull, dragging pain in occiput, neck, and shoulders. Seminal and prostatic weakness. I. J. Whitfield has cured three cases of renal colic with calculi (two left side, the other not stated) with *Eryng. a*. W. K. Leonard reports the following case: A young Methodist minister, apparently healthy, was just over his twelfth attack of renal colic. The attacks had recurred at intervals of two to four weeks and lasted from one to three days, and they were so weakening as to keep him incapacitated in the intervals. He had had old-school treatment, including Morphine and Quinine, with no benefit. *Eryng. a*. Ø, five drops three times a day, put an end to the trouble. The attacks had been attended with severe nervous chills, and it was for these that the Quinine had been prescribed. *Eryng*. has a cough with a sense of constriction. (Hale found it useful in epidemic influenza when there was raw smarting burning in throat and larynx, with constant irritating cough and expectoration of yellow mucus.) Loss of energy and nervous erethism. Most symptoms occur on left side, and extend or move from part to part. Motion < all symptoms. Bending head forward < head symptoms; turning eyes = pain in them. < From mental exertion. Heat >.

Relations.—Eryngium compares with the other Umbelliferæ: with Æthus. in inability to concentrate thoughts; with Conium as a vulnerary; in discharge of prostatic fluid from slight causes. *Compare:* In pollutions, Chi., Gels., Phos. In urinary and urethral affections, Cannab. sat., Canthar., Dioscorea, Ocim. can. In constipation and rectal symptoms, Nit. ac. In influenza, Gelsem., Sticta.

SYMPTOMS.

1. Mind.—Thoughts confused; cannot concentrate them on any subject; the effort = heavy full pain if persisted in.

2. Head.—Vertigo.—Expanding sensation in frontal region above eyes, < stooping; causing dimness of sight.—Sharp, shooting pain over l. eye; when sitting in stooping posture, leaves eye, passes into neck and along muscles of shoulder, and beneath scapula.—Shooting in coronary region and in r. side of face from eyes to teeth in morning.—Dull dragging pain in occiput, neck, and shoulders; when less severe in head, is worse in shoulder.—Scalp sore, combing hair = pain.

3. Eyes.—Burning; sensitive to light.—Effects of exposure to strong light: squinting; sclerotitis; watery or, purulent discharges.—Purulent inflammation of l. eye; purulent, sticking discharge causing gumming of lids; conjunctiva granular and rough.—Muscles of eyes feel stiff, pain on moving them quickly.

4. Ears.—Bruised tearing pain; as if ears being torn off.—Inflammation of Eustachian tube; l. ear swollen in and out, tender to pressure, constant aching, bleeding readily, thick white, bloody, foul-smelling pus.—Continued singing and ringing, with creaking sound in l. ear.

5. Nose.—Profuse thick yellow mucous discharge.

8. Mouth.—Thick, tenacious, disagreeable mucus in mouth.

9. Throat.—Smarting raw pain along l. side of throat; dry tongue.—Intense redness; slight swelling without pain; profuse secretion of thick whitish mucus.

11. Stomach.—Partial anorexia.—Nausea followed by acrid eructations.—Hollowness or emptiness in stomach with heavy dragging pain.—Spitting up of bright arterial blood, mixed with black clots, with burning in epigastrium after a blow on stomach.—Burning in stomach or œsophagus after taking the drug.

12. Abdomen.—Severe colicky or cramping pains in small intestines.—Severe pain in l. groin and testicle.

13. Stool and Anus.—Mucous diarrhœa of children.—Constipation.—Stools dark leaden colour, dry, and very hard; tenesmus at stool with a sensation of cutting as they pass through anus.—Hæmorrhoids and prolapsus ani.

14. Urinary Organs.—Frequent desire to urinate; stinging burning pain in urethra, behind glans, during urination.—Must urinate every five minutes; urine dropping away all the time and burning like fire.—Renal colic.

15. Male Sexual Organs.—Desire suppressed, then excited with lewd dreams and pollutions.—Discharge of prostatic fluid from slightest causes.—Spermatorrhœa from onanism and excessive indulgence.—Emissions at night with erections; followed by great lassitude and depression; partial impotence.—Emissions without erections, day and night, followed by great lassitude; after injury to testicles.—Gonorrhœa with painful erections.—Gleet.

16. Female Sexual Organs.—Leucorrhœa.

17. Respiratory Organs.—Chronic laryngitis; short, hacking cough.—Cough with sensation of constriction in throat.—Oppression of chest, feeling of fulness, inability to take a long breath.

Eryngium Maritimum.

Sea Holly. N. O. Umbelliferæ. Tincture of whole plant, including root.

Clinical.—Cough. Debility. Fever. Herpes. Sexual weakness. Skin eruption.

Characteristics.—The maritime *Eryngium* (the beautiful plant growing on sand-hills by the sea, with holly-like leaves of a pale blue colour with metallic lustre, in general appearance much more resembling a thistle than an umbellifer) has been proved by one prover only, E. B. Ivatts, but the symptoms show considerable resemblance to those of *Eryng. aquat*. Pains in the eyes, groins, larynx, nape of neck, sinking at epigastrium, and weakness of the male sexual organs appear in both. But the *Eryng. m*. has its symptoms more prominently on the right side. Compare also *Phelland. aquat., Conium*, and other Umbellifers.

SYMPTOMS.

1. Mind.—Light and unusually cheerful; on awaking in the morning so merry commences to sing in bed (usually heavy and drowsy).

3. Eyes.—Pain at back of r. eye, l. eye feeling weak.—Inclination to close eyes to shut out moving objects.

9. Throat.—Great dryness of throat, larynx, and lips.

11. Stomach.—Loss of appetite.—Sinking feeling at pit of stomach.

12. Abdomen.—All viscera seemed prostrated and as heavy as lead.—Dull continuous pain in bowels.—Pain in one spot in r. groin.

14. Urinary Organs.—Increased flow of urine; very red; thick on standing.

15. Male Sexual Organs.—Insensibility of corona glandis; absence of desire (secondary action); power of erection quite gone.

17. Respiratory Organs.—Voice low; larynx feels weak.—Occasional stomach cough during the day, sending a spasmodic pain to the head.—Occasional darting pains through lungs to back.

20. Neck and Back.—Pain at nape compelling the support of head on hand or against something.—Occasional shooting pains under left scapula.

22. Upper Limbs.—Veins of hands at back appear contracted and depressed so as to be hardly visible, though generally full and prominent.

23. Lower Limbs.—Sore, pain in muscles inside r. thigh just above knee.

24. Generalities.—Circulation deadened, or as if stagnated; still great determination of blood to surface.

25. Skin.—Patch of eruption half the size of palm of hand came out in cluster where pain had been the day previous, like fine pin-heads, points feeling rough to fingers; died away next day leaving red areola.

27. Fever.—Chills commencing at nape, going down shoulders and back.—Chills predominate, little fever heat.

Erythrinus.

A kind of Red Mullet. South America. N. O. Erythrininæ. Tincture of the fish.

Clinical.—Pityriasis rubra. Syphilis.

Characteristics.—Dr. Burnett is the authority for this medicine. He bases his use of it on an account of its effects on some sailors who ate the fish. They came out with a peculiar red rash which became chronic, and which the doctors took for a form of syphilis. Dr. Burnett cured with it a case of pityriasis rubra appearing in a

large patch on the chest, and benefited other cases. He believes this form of skin affection to be a manifestation of syphilis in the second generation, the father of the patient he cured having had syphilis. *Aurum muriaticum* is the complementary remedy.

Coca.

Erythroxylon coca. N. O. Lineæ (suborder Erythroxyleæ). Tincture of leaves. Solution or trituration of the alkaloid, Cocaine.

Clinical.—Angina pectoris. Asthma. Constipation, chronic. Cough. Deafness. Debility. Fever. Heart disease. Hæmorrhoids. Mountain-sickness, or Veta. Rheumatism. Scrofula. Scurvy. Voice, weakness of.

Characteristics.—*Coca* has been used for centuries by natives of West South America as an intoxicant; and also as a remedy for "Veta," the condition induced in persons on coming to live in high tablelands:—faintness, throbbing heart and head, dysentery, &c. It is like tea and coffee in arresting tissue-change, and enabling those who take it to undergo unusual fatigues. Like *China* it produces ringing in the ears and deafness and also fever. The alkaloid *Cocaine* is the well-known local anæsthetic. A characteristic symptom of *Cocaine* poisoning is a sensation as if small foreign bodies were under the skin, generally like grains of sand; or else as of a worm under the skin. This is undoubtedly *the* keynote symptom of *Coca*. It is known as "Magnan's Symptom," named after the eminent neurologist who first described it. His description is "a sensation as if foreign bodies were under the skin, generally small round substances like grains of sand." Korkasoff reports a case of multiple neuritis in which this symptom was present. The patient was a woman who was being treated for a uterine affection by means of vaginal tampons containing *Cocaine*. A discontinuance of these caused the disappearance of the symptom. Cooper cured a case of chronic rheumatism in an aged woman who had this symptom, with the fraction of a grain of *Cocaine* given in single doses at long intervals. Dr. J. W. Springthorpe described (*H. W.*, February, 1896) a variety of this symptom experienced by himself, and recorded in a paper entitled "The Confessions of a Cocainist." He called it "Hunting the Cocaine bug." "You imagine," he says, "that in your skin are worms, or similar things, moving along. If you touch them with wool, and especially with absorbent wool, they run away and disappear, only to peep cautiously out of some corner to see if there is any danger. These worms are projected only on the Cocainist's own person or clothing. He sees them on his linen, in his skin, creeping along his penholder, but not on other people or things, and not on clothes brought clean from the laundry." In a case reported in *Lancet*, June, 1886, a man who had a 4 per cent. solution of *Cocaine* applied to a tooth, swallowed twenty to thirty drops of the solution. Half an hour after, he was seized with: (*1*) Feeling of faintness and giddiness; (*2*) next, an attack of

palpitation with a sense of flushing, especially up the back. There was marked diminution of smell; great difficulty in producing vomiting; a scarlatina-like rash over the body, especially about the neck; dimness of vision; relaxation of sphincters and weakness of extremities; the mind remained clear, but the pulse was fast, weak and intermittent. A striking case was recorded in the *British Medical Journal* of December 13, 1890: "At a meeting of the Paris Académie de Médecine on December 2nd, M. Hallopeau presented a communication, in which, after distinguishing two forms of cocaine poisoning-namely, the acute, in which the symptoms are produced immediately after a dose and speedily pass off, and the chronic, in which they are due to the prolonged use of the drug─he related a case which in his opinion showed that the poisonous effects, while coming on acutely, might last for a considerable time. On March 7, 1890, a man had about eight milligrammes of hydrochlorate of cocaine injected into his gum as a preliminary to the extraction of a tooth. Toxic symptoms at once supervened. There was intense precordial oppression, with thready pulse, extreme excitement and loquacity; the patient walked about the room, hitting out at random with his fists and crying out that he was dying. In ten minutes he became quiet and the tooth was extracted, after which he was able to walk home, arriving there however, in a state of extreme prostration. Then ensued a train of nervous symptoms, such as continual headache, intractable sleeplessness, bad taste in the mouth, with occasional attacks of excitement accompanied by giddiness, faintness, and a sense of impending death. All brain work was impossible; the patient could not do the simplest sum in arithmetic, and was in a state of profound depression. A sense of formication and numbness in the hands and forearms was almost incessant. This condition lasted four months, and it was two months after the injection before the least improvement was observed, and then progress towards recovery was very slow. M. Hallopeau thinks the symptoms indicate a poisonous action of cocaine on the nervous centres, and especially the brain. As it is impossible to suppose that so small a quantity of the drug should have remained in the circulation, he is driven to conclude either that it was stored up in the cells of certain nervous centres or that it produced in them persistent lesions." Homœopaths have no such difficulty in understanding the prolonged effect of a single dose. Among other effects observed from its use in dentistry are "mental depression and drowsiness," and "intense oppression in chest; dilatation of pupils; acceleration of pulse and breathing, and mental excitement." W. J. Guernsey quotes in *H. P.*, November, 1888, from *Med. Register*, August 11, 1888, the experience of J. E. Shadle, who applied pledgets of a 4 per cent. solution of *Cocaine* to the nasal cavities of a man of 35, preparatory to operation. On each occasion he complained of a "cold, 'gone,' relaxed feeling about the external genitals, and a sensation *as if the penis were absent*. Towards the end of treatment he noticed a permanent weakness of the sexual organs, and finally seminal losses and impotence set in and continued until the *Cocaine* was entirely withheld." Compare this with the experiences of R. K. Ghosch (*H. R.*, vi. 15, 49) with Coca Ø (which he finds, in drop doses, act better in such cases than in the potencies) in palpitation and dyspnœa on ascending, when arising from nervous

causes, especially self-abuse; in complaints from self-abuse generally; excessive secretion of urine with or without sugar; enuresis nocturna; nymphomania after childbirth, during menses, from irritation of eczema or other affections of the vulva; in satyriasis. The homœopathicity of *Coca* in enuresis is shown by its effect in relaxing the sphincters in one of the cases named above. There are some characteristic headaches of *Coca*. In general "headaches of high altitudes" may be taken as a strong indication. *Coca* has also a "tight" headache, as if a rubber band were stretched across the forehead. After the invigorating effects, the sense of lightness and ability to climb a mountain without fatigue, have passed off, or when the intoxication has been carried to a further degree, a sense of heaviness, numbness, and drowsiness succeeds, with a disinclination to move. There is extreme weariness, and especially weakness of the legs. A peculiar symptom is: Sensation as if œsophagus would be rent by force of rising flatus. *Coca* suits persons who are wearing out under mental and physical strain; bashful, timid people; old people; short-breathed people; effects of dissipation; weakly, nervous, fat or plethoric people; children with marasmus. Effects of cold; cough from cold air; rheumatism from slightest cold. Symptoms < climbing, walking or sitting; < cold air.

Relations.—*Compare:* Arsen. (effects of climbing); Stram. likes company and light; Coca likes solitude and darkness; Paullinia, Scutel., Cypr., Valer., Can. ind., tea, coffee, tobacco. Gundlach discovered the best *antidote* to be Gels.

SYMPTOMS.

1. Mind.—Melancholy.—Hypochondriasis.—Mental depression with drowsiness.—Bashfulness.—Prefers solitude and darkness.—Muddled feeling in brain.—Loss of energy.—Great mental excitement.

2. Head.—Vertigo and fainting.—Tension over forehead as from a rubber band.—Headache just over eyebrows; not constant; < raising head or turning eyes up.—Shocks in head; dull, full feeling in occiput with vertigo, < lying down, the only possible position is on the face.—Occiput painful, tender to touch; pains < on coughing.—Headache with chilliness; with dryness in throat; > after eating; > at sunset.

3. Eyes.—Intolerance of light with dilated pupils.—Dark cloud before eyes; eyes deeply reddened until bloody tears gushed out.—White, dark, and fiery spots before eyes; flickering or flashing.—Indistinct vision soon followed by headache and nausea.—Aching pain behind eyes causing feeling as if squinting inwards.

4. Ears.—Ringing, buzzing, and humming in ears; with fever.

5. Nose.—Epistaxis passing from r. to l.—Sense of smell greatly diminished.

8. Mouth.—Mouth dry, esp. on waking.

9. Throat.—Uvula feels swollen; swallowing difficult.—Dryness early in morning.

11. Stomach.—Retards hunger and thirst.—Loss of appetite esp. for solid food.—Craves spirits and tobacco.—Ailments from salt food.—Flatus rises with such force, it seems as if œsophagus would be rent by it.—Empty feeling or full feeling in stomach.—Confirmed dyspepsia, esp. in hypochondriacs.

12. Abdomen.—Pressure and tension in hypochondria after meals.—Flatulence.—Violent bellyache, with tympanitic distension.

13. Stool and Anus.—Flatus from bowels, smells like burnt gunpowder.—Dysentery.—Constipation from inactivity of rectum; stools dry; like walnuts.—Piles painful on walking or sitting.—Sphincters relaxed.

14. Urinary Organs.—Fine stitches in female urethra before urinating.—Frequent desire, with increased flow.—Disturbed frequently at night.—Nocturnal enuresis.—Film on urine.—Urine smells like sweat.—Yellowish red flocculent deposits; oily scum on surface.

15. Male Sexual Organs.—Sensation as if penis were absent.—Coldness, "gone" sensation, relaxation of external parts.—Emissions.—Nervous prostration from sexual excess.—Spermatorrhœa and partial impotence.—Satyriasis.

16. Female Sexual Organs.—Menses flow in gushes awakening her from sound sleep.—Nymphomania, during menses; and after parturition.

17. Respiratory Organs.—Weak voice.—Phthisis laryngea, when from irritability of pharynx stomach will retain no food.—Rapid breathings.—Painful shortness of breath; at night.—Short breath in athletes, or in those taking alcohol or tobacco in excess.—Hæmoptysis.—On coughing, pain in occiput.—Cough from cold air or fast walking.—Expectoration of small lumps like boiled starch, immediately after rising in morning.

18. Chest.—Sudden attack of cramp in chest; became cold and unable to continue the ascent.—Intense oppression in chest.—Rush of blood to chest with slight headache.—Emphysema.

19. Heart.—Palpitation with flushing.—Violent and audible palpitation; angina pectoris; from climbing or over-exertion.—Pulse greatly accelerated, intermittent.—Pulse extremely slow and intermittent, loses one beat in four.

21. Limbs.—Feeling of internal cold with numbness of hands and feet.—Weakness of extremities.

25. Skin.—Scarlatina-like rash over body, esp. the neck.

26. Sleep.—Inclination to sleep, but can find no rest.—Great drowsiness.

27. Fever.—Sense of flushing, esp. up the back (With palpitation). Chilliness and headache in afternoon.—At night heat and sleeplessness, with throbbing in arteries.—Flushes of heat on the back and burning in abdomen.—Extreme weariness accompanies the fever.—Night sweats.

Eserinum.

Eserine. Physostigmine. The alkaloid of Physostigma venenosum, Calabar Bean. C_{15} H_{21} N_3 O_2. Trituration or solution.

Clinical.—Blepharospasm. Ciliary spasm. Glaucoma. Headache. Pupil, contracted. Salivation. Sweat, excessive.

Characteristics.—*Eserine* is best known as used by oculists to procure contraction of the pupils in glaucoma. It has been used by Fenoch of Berlin (*H. R.*, iv. 127) in a case of chorea in a child of nine. Half a millegramme of *Eser. sulph*. was injected into the right upper arm, and the following proving was the result: In fifteen minutes the child cried out loudly, vomited profusely, and complained of violent headache. Soon the face and upper part of the body became covered with profuse sweat. Half an hour later the flow of saliva was increased. The heart-beats sank to 64, radial artery contracted, pulse small and thready. After repeated vomitings signs of cardiac weakness increased in spite of remedies, whilst sweat and saliva decreased, and in one half-hour had disappeared. A moderate contraction of the pupil took place, reaction slow. The child lay apathetic on the bed, pale and collapsed. Antidotes were administered, and the child was well next morning. A remark of Mittendorf that "spasm of the accommodation is also produced artificially by *Eserin*." led R. B. Leach (*Med. Adv.*, xix. 262) to prescribe successfully the 6x trituration in cases of ciliary spasm, and of astigmatism due to irregular action of the ciliary muscles. *Eserin*. has also produced blepharospasm. A solution of one grain to the drachm (mixed in mistake for a grain to the ounce) was instilled into the eye of a lady of 60 suffering from cataract. Sweating and lachrymation followed, and, as these passed off, in a quarter of an hour "clonic spasm of the eyelids" set in, "the upper lid failing down on the lower every few seconds." Spasmodic feeling in lips and the same sensation under jaw of left side followed. Feeling of tremor and spasm, without retinal movement, followed in an hour. Pupils contracted to small point.

Relations.—*Compare:* Physostigma, Pilocarpine.

SYMPTOMS.

1. Mind.—Child cried out loudly.—Apathetic.

2. Head.—Violent headache with repeated vomiting.

3. Eyes.—Moderate contraction of pupils; reaction slow, by shading the eyes they did not enlarge; on exposure to strong light they contracted slightly, but returned to their normal size.—Spasm of accommodation; ciliary spasm.—Pain and irritation of eyes on continued reading.—Blepharospasm.

6. Face.—Face pale.

8. Mouth.—Saliva, first increased, later arrested.

11. Stomach.—Vomited profusely and complained of headache.—Repeated vomiting with signs of cardiac weakness.

19. Heart.—After repeated vomiting signs of cardiac weakness increased.—Heart-beats sank to 64; radial artery contracted; pulse small and thready.

24. Generalities.—The child lay apathetic on the bed, pale and collapsed.

27. Fever.—Face and upper part of the body covered with profuse perspiration.

Etherum.

Ethyl oxide. Ethylic Ether, sometimes called Sulphuric Ether. $(C_2H_5)_2O$ (Alcohol is C_2H_6O).

Clinical.—Bronchitis. Catalepsy. Convulsions. Cough. Delirium tremens. Hiccough. Mania. Meningitis. Nausea. Vomiting.

Characteristics.—*Ether* is the well-known anæsthetic, and the effects are those observed in patients under the action of its vapour, administered for the purpose of operation, in habitual ether drinkers (of whom there are numbers in Ireland), and on some who have voluntarily experimented with the drug upon themselves. Closely allied to alcohol, it possesses very similar intoxicating properties, produces visions frequently pleasurable, hallucination, and, in some instances, a persistent maniacal condition. Convulsions, spasms, and a cataleptic state have also been observed. Bronchitis is a not uncommon after-result of ether anæsthesia, and for this *Belladonna* has been observed to be the best antidote. Chilliness is complained of by many. Macfarlan reports the cure of a woman of 60, who had been confined to bed for weeks with severe neuralgia of the head, raised welts on scalp like ridges accompanying the pain. *Ether* 200 cured quickly.

SYMPTOMS.

1. Mind.—Exhilaration; furious excitement; flushed face.—Pleasant dreams of rapid flight through the air, gorgeous visions and unearthly music.—Frightful dreams; fancied he heard the ringing of his own funeral bell.—Low-spirited, fearful of some disease, desponding (lasting some months).—Complete loss of consciousness.

2. Head.—Muzziness; dizziness; headache with partial blindness follow ether anæsthesia.—Meningitis.—Temporal arteries enlarged; beat violently.—Head drops to one side or is thrown back.—Severe neuralgia of head with raised welts on scalp.

3. Eyes.—Eyes suffused; lids closed; conjunctivæ injected.—Pupils dilated.—Dim vision as if mist or thin cloud before eyes.

4. Ears.—Sounds indistinct; seem far off, yet resound violently in the ears.

6. Face.—Face flushed.

8. Mouth.—Mouth often open.—Salivation; slight frothing at mouth.—Pronunciation difficult and indistinct.

11. Stomach.—Hiccough persistent.—Nausea.—Vomiting.

17. Respiratory Organs.—Violent cough from stinging or heat in bronchia.—Expectoration of blood.—Breathing quickened; stertorous.—Congestion of lungs and brain.—Extreme coldness of the chest, wants it covered.—Tightness; irritation and pain.

19. Heart.—Excitement and invigoration of heart's action.—Pulse full and bounding.

23. Lower Limbs.—Paralysis of lower extremities.

Ethylum Nitricum.

Nitric Ether. $C_2 H_5 NO_3$ (not to be confounded with nitrous ether, $C_2 H_5 NO_2$, which is the principal ingredient in Sweet Spirit of Nitre).

Clinical.—Heart, hypertrophy of. Vertigo.

Characteristics.—This is one of the anæsthetics experimented on by J. Y. Simpson and later by B. W. Richardson. It has produced a few definite symptoms.

Relations.—*Compare:* Glon., Amyl. nit.

SYMPTOMS.

2. Head.—A tendency to pitch forward.—Sense of fulness in vessels of brain.—Much headache and giddiness for some time after its employment.

6. Face.—Extreme suffusion of face.

19. Heart.–Excessive over-action of the heart.—Rapid and painful respiration.

Eucalyptus.

Eucalyptus globulus. Blue Gum. Fever-tree. N. O. Myrtaceć. Tincture of fresh leaves. Essential oil, Eucalyptol.

Clinical.—Aneurism. Aortitis. Asthma. Bladder, affections of. Bronchitis. Diarrhśa. Dysentery. Dyspepsia. Dysuria. Fistulć. Gonorrhśa. Gout. Intermittent fever. Kidney, diseases of. Quinine cachexia. Rheumatism. Spleen, affections of. Strychnine poisoning. Syphilis. Tumours. Typhoid. Urethra, stricture of. Urethral caruncle. Varicose ulcers. Worms.

Characteristics.—The gum-tree is a native of Australia and is transplanted to marshy districts in mild climates on account of its capability of absorbing water and its alleged power of destroying malarial poisons. It has been familiarised to everybody during the influenza epidemic as a prophylactic and disinfectant. The provings show that it causes most of the ordinary influenzal symptoms. It is therefore homśopathic to the disorder. It produces coryza, headache of a dull, congestive character, sore-throat, indigestion, with excessive development of fetid gas, and fever. Slow digestion is the characteristic. The fever may be of the relapsing or intermittent type. It has also proved useful in convalescence from intermittents. It produces odorous sweat. C. E. Fischer has cured with it many cases of dysentery. Certain vascular conditions come within its sphere: a distinct beating in the stomach region, accompanying a sense of goneness; one prover referred this to the abdominal aorta. Vascular tumours of the female urethra have been cured by it; also glandular enlargements and nodular swellings over joints. It has cured a tumour, the size of a filbert, with stabbing pains below left nipple. *Eucal*. has been largely used for bronchitis and bronchial asthma. Dr. Arthur Dalzell (*H. W*., xxv. 106) relates two striking cases of bronchial asthma promptly relieved with five-drop doses of Oil of Eucalyptus given in a tablespoonful of water. The dose was given last thing at night. It also relieved the dyspnśa in a case of mitral insufficiency. Burning pains and sensations predominate; pricking, stabbing, sharp aching are common. Periodicity is marked. Most pains occur at night. It has an intoxicating effect and produces desire for exercise.

Relations.—It *compares* with Ant. crud. in action on mucous membranes; Ant. t. in bronchial asthma and bronchorrhśa; Arsen. and Chi. in intermittents. Silica in fistulous ulcers; Tereb. in urinary symptoms. *It follows:* Ars. in relapsing fevers. A cup of coffee relieves the effects. Phytolacca removed tumour of right breast. *Compare also* the "Red Gum," Angophora lanceolata. It is said to be an *antidote to* Strychnine poisoning. (Monfrida Musmecin found a decoction of Eucalyptus leaves formed with a solution of a strychnine salt a flocculent precipitate devoid of bitter taste. Animals dosed with the two drugs together survived when the quantity of strychnine was such that given alone it would have been lethal. Even when the Eucalyptus decoction was given after strychnine convulsions had developed the symptoms became greatly modified.).

SYMPTOMS.

1. Mind.—Exhilaration, desire to move about, feeling of increased buoyancy and strength.—Intoxication followed by depression.

2. Head.—Full feeling in head; congestive headache; in plethoric subjects, followed by fever.—Headache in anćmic persons; relieves pain and causes sleep.

3. Eyes.—Eyes hot, burning, smarting; catarrhal and Gonorrhśal ophthalmia.—Lids heavy.

5. Nose.—Stiffness of nose; tightness across bridge as if profuse epistaxis would come on.—Stuffed-up sensation.—Coryza: thin, watery; chronic catarrh, purulent and fetid.

6. Face.—Flushed, congested face.

8. Mouth.—Relaxed aphthous condition.—Excessive secretion of saliva.—Slightly burning taste extending into throat and śsophagus with thirst.

9. Throat.—Burning in throat; feeling of fulness and soreness on swallowing.—Constant sensation of phlegm in throat, with expectoration of slightly thick white frothy mucus, not profuse.

11. Stomach.—Increased appetite; tormenting thirst.—Burning, strong-smelling eructations.—Burning in stomach.—Fulness, pressure, and weight, as if he had eaten too much.—Faintness and goneness; with a distinct sensation of beating synchronous with the pulse (abdominal aorta).—Slow digestion; eructations and bloating.—Difficult and painful digestion.—Spleen becomes hard, resistent, contracted.

12. Abdomen.—Burning in epigastrium and umbilical regions.—Uncomfortable, uneasy feeling in umbilical region extending through bowels; skirmishing, aching

pains in upper portions of bowels; sensation as if he would have diarrhśa.—Sharp aching in hypogastrium after dinner.—Gastro-intestinal derangements with sleeplessness and restlessness.—Condition of mucous membrane favouring worms.—Flatulent distension.

13. Stool and Rectum.—Sharp aching in lower bowels; thin, watery yellow diarrhśa on rising in morning.—Chronic diarrhśa, mucous and bloody.—Dysentery, with heat in rectum, tenesmus, discharge of mucus, great prostration; hćmorrhages.—Typhoid diarrhśa.—Fetor of stools and flatus.

14. Urinary Organs.—(Chronic desquamative nephritis; granular kidney; pyelonephritis; hydronephrosis.).—Catarrh of bladder; sensation as if it had lost its expulsive force.—Burning and tenesmus on urinating.—Spasmodic stricture.—Diuresis; incontinence; increased urea.—Urine smells of violets.

15. Male Sexual Organs.—Increased sexual appetite.—Subacute and chronic gonorrhśa.—Recent chancres.

16. Female Sexual Organs.—Vascular tumours of urethra.—Ulcer round orifice of urethra.—Leucorrhśa of acrid, fetid mucus.—Swellings in different parts of body; one below nipple in r. side, size of filbert, with stabbing, darting pains.

17. Respiratory Organs.—Bronchitis in old and feeble persons.—Bronchorrhśa.—Breathing quickened.—Asthma in debilitated, anćmic subjects, with terrible dyspnśa, the heart sympathising strongly.—Moist asthma in bronchitic subjects; it relieves cough and aids in expulsion of thick mucus.—Expectoration: white, thick, frothy mucus.

19. Heart.—Painful palpitation.—Palpitation of heart.—Sudden flushing of face with much flatulence in women at climacteric.—Strong beating of abdominal aorta.—Aneurisms pressing on vagus nerve.

21. Limbs.—Many nodular swellings over metarcarpal and metatarsal joints.—In both upper and lower extremities pricking sensations were first noticed, followed by a painful aching in both arms and legs, together with a sense of fulness in the veins, and a stiff, weary sensation as if too weary to move.

25. Skin.—Eruptions of an herpetic character, glandular enlargement, and development of foul and indolent ulcers.

Eugenia Jambos.

Eugenia vulgaris. Malabar Plum-tree. Rose-apple. N. O. Myrtaceæ. A tree native to the tropics, never without flower or fruit. Tincture of fresh seeds.

Clinical.—Acne rosacea. Catarrhal fever. Catarrhs. Comedones. Constipation. Coryza. Cough. Diarrhœa. Diplopia. Hernia. Hiccough. Impotence. Influenza. Otitis. Pimples. Throat, sore.

Characteristics.—Like *Eucalyptus, Eugenia* causes a condition of drunkenness. It makes the prover very talkative but indolent. The most characteristic symptom of the proving is: "> after urination." Sudden great change in him after micturition. Everything seems more beautiful and bright, sky and trees more joyous and clear; but after a quarter of an hour everything became gloomy again. There are many symptoms relating to the eyes and vision: whirling in head while sitting; houses at a distance seem to turn bottom upwards. Darkness and double vision; on looking intently double vision disappears. Whirling before right eye as if it would become dark; eye becomes inflamed. It seems as though fire came out of eyes, and tears ran out in streams in evening and night. < By sun; causes eyes to fill with water. < By closing eyes; it makes the burning worse, prevents sleeping at night. Nausea > by smoking. Pain in small of back and calves. Aching in sacrum and knees. Sticking pain in back as if something were sticking in spine, > by bending back. Among the peculiar sensations are: Headache as if a heavy board were lying on right side. Sensation as of cramp in orifice of stomach; as if a ten-pound weight were hanging on rectum, and as if everything below would fall out. An old wound from a thrust became painful again. Rheumatic pain wanders from place to place with catarrh. Open air: much exhaustion, yawning whilst walking in morning. Cold water does not > burning in eyes. Skin disease is < during catamenia.

Relations.—*Compare:* Eucalypt. (a myrtaceous tree) in catarrhal conditions; Lauroc. and drugs containing Hydrocyanic acid; Puls. (fugitive rheumatic pains). *Antidoted by: Coffee*; by smoking tobacco.

SYMPTOMS.

1. Mind.—Continued state, like intoxication, with great loquacity and indolence.—Disposition to isolation.—The patient is uncomfortable wherever he may be; desires to lie down when seated, and to rise up when lying down.—Sudden great change in him after micturition; everything seems more beautiful and bright; after quarter of an hour everything gloomy again.

2. Head.—Vertigo, during which all objects seem to be reversed.—Fits of megrim in the evening, and rolling and burning pain in the head, with forcing towards the eyes, lachrymation, nausea and vomiting, during which the pains are aggravated.—Pains in the head at night, with burning pain in the eyes, violent thirst,

and copious discharge of urine.—Cramp-like, pressive pains in the head.—Neuralgia in forehead over eye.—Headache as from a sticking from all sides at once, or as if everything was drawn together from within, recurring like a slow pulsation.

3. Eyes.—Lachrymation, with burning and gnawing pains.—Burning pain in the eyes in the afternoon.—Suddenly biting in the eyes as from pepper.—Needle-like stitches id inner canthus r. eye.—Violent internal itching in eyes and nose, evening.—Darkness before eyes, everything seems double; > looking intently.—Whirling before r. eye.—Eyes took sleepy and drunken.

6, 8. Face and Mouth.—Pimples on the face, with painful sensibility of their circumferences.—Abundant accumulation of frothy and viscid saliva in the mouth, esp. before a meal; and when talking.

9. Throat.—At night, burning in eyes, violent thirst from dryness low down in throat, so that he did not feel the drink, which also did not > the dryness.—Pain in small spot in region of l. corner of hyoid bone.—Inflamed throat (in catarrhal fever).

10. Appetite.—Appetite increased.—Agreeable taste of tobacco, when smoking, of food, and of drink.—Great thirst.—Great desire to smoke tobacco.

11, 12. Stomach and Abdomen.—Cramp in orifice of stomach, causing nausea.—Nausea rising up from end of œsophagus.—Flatulence rumbling in bowels.—Drawing about navel.—Inguinal hernia from a fall.

13. Stool and Anus.—Loose evacuations, followed by vomiting.—Scanty evacuation of excrement, of the consistence of pap, and sandy.—Urging to stool and colic.—Evacuations scanty, spurting, and fetid, with burning pain in the abdomen.—Constipation.—Scanty, hard stool, after much pressing, followed by spasmodic closure of anus.—Tenesmus.

14. Urinary Organs.—Deep-coloured urine.—After making water, shuddering; or sudden increase of brightness and of light before the eyes.

15. Male Sexual Organs.—Impotence.—Emission of semen too slow, or entirely wanting during coition.—After coition, perspiration and thirst.

18. Chest.—Moist cough, without expectoration in the evening and at night.—Expectoration of yellowish sanguineous mucus.

21. Limbs.—Desquamation and suppuration of the skin round the nail of the thumb.—Hot hands.—Cramp-like and paralytic pains in the tibia and in the heels.—Nocturnal cramps in the sole of the foot.

24. Generalities.—Sufferings occur esp. in the evening and at night.—An old wound from a thrust became painful again.—Rheumatic pain wanders from place to place with catarrh.

26. Sleep.—Profound stupefying sleep, even at noon, with confused dreams.

27. Fever.—Shiverings run over him after micturition.—Coldness, as if the body were naked.—Perspiration in the morning, with burning thirst.—Hot hands.—Fever; heat before midnight, with little thirst and much sweat; during fever for several hours in morning, pain in back, > bending inward.

Euonyminum.

A concentrated extract, so-called active principle, from the bark of Euonymus Americana, E. atropurpurea and other American species of Euonymus.

Clinical.—Albuminuria. Bright's disease. Cholera. Diarrhśa. Dropsy. Dysentery. Gall-stones. Indigestion. Liver, affections of.

Characteristics.—*Euonymin* is largely used by eclectics in cases of constipation, indigestion, and torpid liver. It has not been proved, but Hale quotes from Coe the following account of its effects: "In very large doses, it proves a drastic cathartic, its operation being attended with a death-like nausea, excessive tormina and cold sweats. The dejections from the bowels are profuse, violent, and accompanied by much flatus." This clearly outlines the sphere of the remedy, which does not seem to differ much from that of the *Euonymus Europća*. Lutze records (*Med. Adv.*, xxiv. 227) a case of albuminuria of pregnancy with dropsy cured with the 1x; and also a case of albuminuria and dropsy in a young man of seventeen. This patient had had eczema, and was cured by Lutze with *Arsen*. 200 Later he got a chill from standing in the water fishing. He suffered from malaise, and finally dropsy developed. After a week of treatment the condition was as follows: Indifferent, drowsy, sleeping most of the day and night; sometimes with heavy breathing. Anasarca general, chiefly in face and extremities. Pulse full, slow, 50 to 60. Occasionally dull frontal or occipital headache, face sallow, sclerotics yellow; temperature 102° to 103°. Urine scanty, 1,017 (later 1,009), containing large quantities of albumen, epithelial casts and granular debris, no bile or chlorides. Stool greyish. He had no pains or subjective symptoms. There were all the evidences of a fully-developed case of acute Bright's disease. He was given *Euonymus* 1x, 2 grains in half a tumbler of water, a spoonful every hour. In three days there was evident improvement. The treatment was continued for a month, when he was nearly well, the cure being completed with *Puls., Calc., Sulph*. at long intervals.

Euonymus Atropurpurea.

Wahoo. Burning Bush. N. O. Celastraceæ. Tincture of fresh bark and root.

Clinical.—Albuminuria. Bilious fever. Biliousness. Cholera morbus. Gall-stones. Levitation. Liver, affections of. Vertigo.

Characteristics.—*Euon. atro*., like *Euonimin* and *Euon. Europ*., is a favourite liver-remedy among eclectics. It has not been proved, but clinical experience shows that its action is very like that of its botanical relatives. A lady who tasted the juice of the bark related her experience to Hale: "I felt immediately a sick weakening feeling all through the nervous system; dull, heavy pain through upper portion of head, together with enlarged blurred feeling, and I seemed so drawn up from the floor, that it seemed difficult to place my foot down when walking with sufficient firmness to stand up; a tipping-over sensation when sitting and walking; a deathly sickness at stomach, with perspiration and heat in face, in alternation with chills in the back, and back part of the arms." Some of the symptoms returned next day, but were dissipated by vinegar, which must be looked upon its antidote.

Relations.—*Compare:* Sticta pul., Phos. ac., &c., in levitation.

Euonymus Europæa.

Spindle-tree. N. O. Celastraceæ. Trituration of dried seeds; tincture of fresh seeds.

Clinical.—Cholera. Convulsions. Diarrhœa. Gall-stones. Headaches. Liver disorders.

Characteristics.—The *Celastraceæ*, to which order *Euonymus* belongs, are closely related to the Rhamnaceæ which include the well-known purgative *Cascara sagrada*. A case of poisoning with the seeds of *Euon. eur*. (Allen) recalls the effects of *Euonymin*: "A man, forty-three, took eighteen seeds one morning, and as many the following evening. He was seized with frightful abdominal pain, profuse diarrhœa, eventually bloody. He was not seen till the evening, when he was in a state of profound collapse, with involuntary evacuations of blood and mucus. On lifting him up tetanic convulsions were induced which immediately preceded death." *Euon*. has been used successfully in cases of engorgement of the liver, "biliousness," headache, coated tongue, bad taste, constipation, passive constipation with hæmorrhoids; also with severe pain in back like lumbago. In diarrhœa the stool is generally very profuse; variable in colour. In gastric derangements with albuminuria; headache; weakness; vertigo and obscuration of sight. *Euon. eur*. has been proved. Cutting, sticking and drawing pains

predominate. The left side is more affected than the right. Cutting pains in the malar bones; in the tongue. Cutting in the penis extends up to the bladder. The pains compel lying down, and are then relieved or reappear in other parts. Violent shivering chill over whole body. Pains in chest, head and abdomen are < after eating. Tingling in the skin which provokes scratching is followed by a burning sensation. Eruption of small dry pustules.

Relations.—*Compare:* Podoph., Rhamnus, Iris, Euon. atrop.

SYMPTOMS.

1. Mind.—Morose; peevish; fretful.—Disinclined for work.—Vanishing of thoughts on exerting the mind when reflecting about anything (or reading) and ill-humour thereat.—Absence of mind.

2. Head.—Whirling vertigo (with mistiness of the sight, in forepart of head) when seated.—Violent and frequent lancinations in the head.—Sensation, as if a nail were driven into the side of the crown of the head.—Stupefying pressure above the arch of the eyebrows, which seems to compress the eyeballs.—Headache, with shivering.—Tension in the teguments of the forehead, which are convulsively contracted.—Headache after a meal.

3. Eyes.—Obscuration of the sight, as though the gaze were directed through a cloud, and black spots before the sight.

4. Ears.—Buzzing in the ears.

6. Face.—Tearing in the (l.) side of the face.—Incisive lancinations and paralytic pain in the cheek-bone.

8. Mouth.—Tearing pains in the teeth (r.).—Cutting in the tongue; in muscle under tongue.

11. Stomach.—Nausea, vomiting, and diarrhœa.—Violent shootings in region of epigastrium.

12. Abdomen.—Cuttings and constriction in the abdomen, as if the abdomen would be cut off below the ribs.—The abdominal sufferings are < after a meal.

13. Stool.—Profuse diarrhœa; eventually bloody.—Involuntary evacuations of bloody mucus.

15. Male Sexual Organs.—Cutting in penis; seeming to extend to bladder; not hindering micturition.

17. Respiratory Organs.—Sighing.

18, 19. Chest and Heart.—Want to breathe deeply, provoked by an impediment, and a sensation of fulness, in the chest.—Drawing, jerking, and stunning shooting, in region of nipples.—The whole chest is, as it were, compressed.—Pain, as from excoriation, and as from a bruise in the chest.—Incisive lancinations below the ribs, on r. side.—Small, dry pimples on the chest.—The sufferings of the chest are < after a meal.—Anxiety at heart; like an internal pressure; affecting the spirits.

20. Back.—Tingling in l. side of back.—Shootings in the l. side of back, near the dorsal spine.—Small papulæ on the back.—Acute pullings, with digging in the shoulders.—A stitch like an electric shock in the small of the back, and extending upward in a zigzag along the spine and the scapular region; frequently repeated.

22. Upper Limbs.—Frightful tearing in l. shoulder at the point where the arm joins the scapula.—Tearing in shoulders.— Paralytic pains in fingers.

23. Lower Limbs.—Paralytic tractions and shootings in region of hips (around the pelvis).—Paralytic pain in knees (after sitting), which hinders walking, and impedes standing upright.

24. Generalities.—Shooting, drawing pains.—The sufferings compel lying down, and are then mitigated, or, at least, change their situation.—The pains in the chest, head, and abdomen are < chiefly after dinner.

25. Skin.—Tingling in the skin, which provokes scratching followed by a burning sensation.—Eruption of small dry pustules.

27. Fever.—Shivering and shuddering over the whole body.

Eupatorium Aromaticum.

E. urticifolium (Rafinesque). Deerwort boneset. White Snake-root. (In low woods from Massachusetts to Louisiana. Flowers are white and aromatic.) N. O. Compositæ. Tincture of root.

Clinical.—Ague. Aphthæ. Gravel. Neurasthenia.

Characteristics.—*E. aromat*., when chewed, produces in the mouth a warm, aromatic, pungent sensation, and is regarded as a "warm, stimulating tonic." Hale quotes eclectic authorities as commending this plant in "aphthous stomatitis" in women and children; also for burning in the stomach with "nursing sore mouth," before and after confinement. Some commend it as a "nervine," like *Scutellaria* and *Cypripedium* for "restlessness and morbid watchfulness, morbid irritability of the nervous system, tremors, jactitations, chorea, and

hysteria." It is doubly indicated where nervous erethism and aphthous disease are combined. Locally it is useful as a wash for the mouth. Like *E. purpur*. it has also been used for gravel.; and the Indians use it as a cure for ague. In a case of sore mouth in a man, 57, recorded by P. S. Duff, *Eup. aromat*. Ø caused soon "a general aggravation, like a cold or catarrh; annoyed by pain in left shoulder, posterior scapular region; pulse 94 unnatural; tight in left bronchia; felt ill, dull, and oppressed." (*H. R*., xi. 129.)

Eupatorium Perfoliatum.

Eupatorium perfoliatum. Boneset. Thoroughwort. N. O. Compositæ. Tincture of whole plant.

Clinical.—Anus, herpes of. Back, pain in. Bilious fever. *Bones, pains in*. Cough. *Dengue*. Diarrhœa. Fractures. Gout. Hiccough. Hoarseness. Indigestion. *Influenza. Intermittent fever*. Jaundice. *Liver, soreness of.* Measles. Mouth, cracks of. Ophthalmia. *Relapsing fever*. Remittent fever. Rheumatism. Ringworm. Spotted fever. Syphilitic pains. Thirst. Wounds.

Characteristics.—*Eupat. perfol*. is an old-world remedy, having been recommended by Dioscorides for ill-conditioned ulcers, dysentery, stings of reptiles, chronic fevers, obstructed liver. The leading characteristic for its homœopathic use is the distressing bone-pains it causes, such as are found in connection with malarial fevers and influenza. Soreness will be found running throughout the proving: headache with soreness internally, parietal protuberances sore; with pain and soreness in eyeballs; cough with extreme soreness down trachea, soreness of chest, aching in limbs throughout the body. A characteristic cough of *Eup. perf*. has > by getting on hands and knees. W. P. Defriez reports a case in point: Every winter for several years the patient had been annoyed by a dry, hacking cough, with paroxysms lasting some time, only relieved by getting on hands and knees. *Eupat. Perfol*. cured. The chills of *Eu. perf*. begin in the small of the back, with aching in the limbs as though every bone in the body were being broken; high fever with increased aching, followed by sweat scanty or profuse; sweat > all pains except headache, which is <. Periodicity is marked. There may be a double periodicity: Chill morning one day, evening the next. The liver is strongly affected by *Eup. perfol*.; bilious vomiting and diarrhœa; bilious sick-headaches; cough arising from irritation of liver. Catarrhal symptoms are prominent. Nocturnal loose cough. Hoarseness with aching soreness of trachea. Hoarse, rough cough with scraping in bronchia. Cough with soreness, compelling the patient to hold his chest with his hands. Stiffness and general soreness. Cannot twist body either while standing, sitting, or lying. Cannot lie in bed on account of a feeling as if every bone was bruised, causing despair, moaning, and crying out. Bone-pains of all descriptions appear under *Eupat. perf*. Sleepiness and yawning. Sensation as if

falling to left. Pain and extreme tenderness of left glutei muscles. Hale describes the fever of *E. perfol*. as follows: "The *chill* is nearly always in the *morning*, and is preceded for several hours by *thirst*, soreness and aching of the bones. The thirst continues during the chill and heat. The chill is attended by nausea, vomiting of bile, intense aching and soreness in the flesh of the extremities, and often all over the body. These symptoms continue during the heat, especially the vomiting, which is often painful and incessant. The *heat* is apt to be prolonged until evening or into the night, and may be followed or not by *sweat* (with chilliness). If no sweating occurs the apyrexia is short and attended by chilliness, nausea, thirst, and debility, showing that the febrile action never altogether subsides, giving a true type of *Remittent fever*—a fever in which *Boneset* is often our best remedy, especially if occurring in summer and autumn, and is attended by very severe bilious symptoms." Lying on back < cough. Kneeling with face towards pillow > cough. Rising up > headache. Eating = violent distressing pains which are only relieved by vomiting. There is intense thirst, but drinking cold water = shuddering and vomiting of bile. Chilliness predominates, wants to be covered; > in house, < in open air; < after being in ice-house. I have found *Eup. perf*. most useful in influenza.

Relations.—Bryonia is the closest analogue; but Bryonia has free sweat, and the pains make the patient keep still. Eup. perfol.—has scanty sweat, and its pains cause restlessness. *Compare also:* Arn., Caps., Chel., Symph., Podoph., and Lycop.; nausea from smell of food, Colch. *Compatible:* Nat. mur. and Sepia, which also follow well.

SYMPTOMS.

1. Mind.—Feels at night as if going out of his mind.—Moaning; anxiety; despondency.—Very restless; cannot keep still, though wishes to.

2. Head.—Early in morning whirling around in brain as if he had been whirled in cool screen: repeated after a short cessation.—Headache with a sensation of soreness internally; > in the house; < when first going into the open air; > by conversation.—Headache and nausea every other morning, when awaking.—Pain in occiput after lying, with sense of weight; must aid with hand in lifting head.—Beating pain in forehead and occiput, after rising.—Soreness and pulsation on the back part of the head.—Heat on the top of the head.—Violent headache, comes on before the chill rid lasts through all the stages, and is worst during the sweat.

3. Eyes.—Painful soreness of eyeballs.—Great aversion to light.—Painful soreness of lids.

5. Nose.—Coryza, with sneezing; aching in every bone.

8. Mouth.—Paleness of the mucous membrane of the mouth.—Tongue covered with white fur.—Soreness of the corners of the mouth.

11. Stomach.—Nausea from smell of food or cooking.—Indigestion from alcohol, of old people.—Thirst for cold water.—Thirst for large draughts of cold water before and during chill.—Vomiting immediately after drinking, and preceded by thirst.—Nausea and vomiting of food.—Vomiting after every draught.—Vomiting of bile, with trembling and great nausea, causing great prostration.—Tight clothing is oppressive.

12. Abdomen.—Soreness in region of liver; on moving or coughing.—Colicky pains in upper abdomen, with headache and other pains.—Abdomen full and tympanitic.

13. Stool and Anus.—Constipation, with catarrh.—Morning diarrhœa.—Purging stools, with smarting and heat in anus.

14. Urinary Organs.—Dark-coloured, clear urine.—Dark-brown, scanty urine, depositing a whitish, clay-like sediment.—Itching of the mons veneris.

17. Respiratory Organs.—Hoarseness.—Hoarseness < mornings; soreness in trachea and bronchia.—Cough with soreness and heat in bronchia; flushed face, and tearful eyes.—Hacking cough in the evening.—Cough from a cold, < 2 to 4 am.; excited by tickling in chest, causing tightness of chest; cough < lying on back, > kneeling with face towards pillow; scanty expectoration; painful fulness in head on coughing or blowing nose; lowness of spirits.—Hectic cough, from suppressed intermittent fever.—Difficulty of breathing, attended with perspiration, anxious countenance, sleeplessness.—Soreness in chest; < from inspiration.—Inability to lie on the l. side.—Sharp pain through r. chest on deep inspiration; feels at night as if going out of his mind; disturbed breathing frightens him.

19. Heart.—Pressure as if heart was in too small a space.—Pain, soreness, and heaviness behind sternum and in cardiac region; < by least motion or turning body around.

20. Neck and Back.—Beating pain in nape and occiput; better after rising.—Aching pain in the back, as from a bruise.—Weakness in small of back.—Trembling in back during fever.

21. Limbs.—Aching in bones with soreness of the flesh.—Intense soreness and aching in limbs, as if bruised or beaten.—Wrists pain as if broken or dislocated.—Heat in the hands, sometimes with perspiration.—Dropsical swelling of both feet and ankles.—Heat in the soles of the feet, in the morning.

25. Skin.—Jaundice.

26. Sleep.—Stretching and yawning; yawning before chill; sleepiness with difficult breathing.—Has to lie with head high.—Headache on awaking.

27. Fever.—Thirst a long time before the chill, which continues during the chill and heat.—At the conclusion of the chill, vomiting of bile, or after every draught.—Pain in the bones (as if broken) all over, before the commencement of the chill.—Headache, backache, and thirst during the chill.—During the chill and heat, throbbing headache.—The chill is induced or hastened by taking a drink of cold water.—Distressing pain in the scrobiculus cordis, throughout the chill and heat.—Aching pains, with moaning during the cold stage.—Coldness during nocturnal perspiration.—Chilliness throughout the night and morning; trembling and nausea from least motion; intense aching and soreness in back and limbs; more shivering than the degree of coldness warrants.—The intermittent fever paroxysm generally commences in the morning.—Fever commences in morning; attended with painfulness, trembling, weakness, and soreness; but little or no perspiration.—Great weakness and prostration during the fever.—Headache and trembling during the heat.—Vomiting of bile at the close of the hot stage.—Vomiting of bile after the chill.—The fever goes off by perspiration and sleep. During the apyrexia, loose cough.—When there is perspiration it relieves all the symptoms except the headache.

Eupatorium Purpureum.

Joe Pye Weed. Trumpet Weed. Gravel root. Queen of the Meadow. N. O. Compositæ. Tincture of the root.

Clinical.—Albuminuria. Calculi. Cystitis. Diabetes. Dropsy. Enuresis. Gravel. Headache. Home-sickness. Hysteria. Impotence. Indigestion. *Intermittent fever*. Renal colic. Rheumatism. Sciatica. Strangury. Throat, sore. Urine, retention of. Vomiting.

Characteristics.—The fever symptoms of *E. purpureum* resemble those of *E. perfoliatum*, but *E. purpur*. has many more symptoms in the urinary and sexual regions. The general soreness is less marked with *purpureum*. Both have chills beginning in the back, those of *purpureum* (as also the pains) run upwards, and with them there is much shaking and comparatively little coldness. Bone pains, nausea, and vomiting accompany fever. Sweat is slight. Restless, tossing, moaning, unable to lie down. The common name, "gravel root," indicates the traditional use of the drug, and in the hands of eclectics it has done good work in cases of irritable bladder, diabetes insipidus, incontinence of urine and calculous affections. Hale mentions that impotency has been cured in the male, and sterility and uterine atony

in the female. It is similar in action to *Cimicif.* and *Helonias* here. *E. purpur*. has been well proved by a Mrs. Dresser, and she experienced a feeling of home-sickness even when living in her own house. Motion <; changing position ever so little = chilliness down back. Symptoms are < left side, and there is sensation as if falling to left side, as with *E. Perfol*. Cystitis in pregnant women from riding over rough roads. Distressing dyspnœa from dropsy.

Relations.—*Compare:* Apocy. (dropsy); Apis., Can. sat., Canth., Copaib., Ferr., Hydrct., Mitch., Senec., Vespa (renal symptoms). Caps., Phos. ac. in home-sickness. E. perf., Colch. (nausea at smell of food).

SYMPTOMS.

1. Mind.—The mind is encompassed by various delusions.—Sighing.—Home-sickness, although in her own house.—Great fear of sickness.—Depressed and sleepy.—Hysterical, low-spirited state.

2. Head.—Head feels light and dizzy, as though flying round and round; cannot get rid of sensation as if falling to l. side; the whole body seems to participate, < morning, disappearing at noon.—Illusions of sight and hearing, with vertigo.—Much headache and constriction over frontal region; with chill.—Dizzy, with deep, dull aching pains through l. temporal region.—Sick headache; dull hammering, stitching, or boring l. side; pressing from r. to l.; beginning morning, increasing during afternoon and evening; < in cold air; > while walking slowly in fresh air.—Violent headache; before chill; during morning; with fever.—Sore scalp with itching.—Sweat, principally about head, esp. profuse on forehead.

3. Eyes.—Staring.—Red and swollen (with headache).—Lachrymation.

4. Ears.—Ears feel full.—Illusions of hearing.—Crackling < on swallowing.

6. Face.—Face flushed.—Lips blue.

8. Mouth.—Tongue furred, brown along centre.—Tongue, prickling and stinging in tip; on back.—Numbness of tongue.—Saliva abundant.

9. Throat.—Choking fulness, must swallow often.—Burning, as if had swallowed some hot substance; most at back of throat.—< Swallowing.—Pain l. side of throat, causing pain on swallowing; before chill.—Fluttering in throat pit.

11. Stomach.—Thirst: before chill; none during; with fever; with dropsy.—Desire for warm drinks.—Much wind in stomach; eructations almost constant.—Nausea at smell or sight of food or cooking.—Great nausea but no vomiting with chill; vomiting with fever; with sick headache.—Swelling and fulness, mostly l. side.—Griping, crampy pain.

12. Abdomen.—Rumbling, rolling, and twisting pain in bowels.—Severe colic after voiding urine.—Pain and soreness of abdomen, much < l. side.—Hypogastric region swollen and hot.

13. Stool and Rectum.—Bilious diarrhœa.—Pressure and weight on rectum.

14. Urinary Organs.—Dull deep pains in kidneys; also cutting.—Intense smarting and burning in bladder and urethra.—Deep dull aching in bladder.—Uneasiness in bladder while suffering from severe cold.—Increased mucus; large deposit of lithates.—Enuresis.—Constant urging; passes a few drops at a time.—Strangury from uterine displacement.—Dysuria in a pregnant woman after riding over rough road and taking cold.—Vesical irritability in women.—Nephritis.—Diabetes insipidus.

15. Male Sexual Organs.—Impotency from exhaustion or abuse.

16. Female Sexual Organs.—Tense cutting pain two inches above l. ovary.—Smart, quick jerking motion in l. ovary.—Heavy pressure during day, directly above l. ovary.—Sterility from ovarian atony.—Uterine leucorrhœa caused by exhaustion and chronic metritis.—Leucorrhœa abundant, leaving no stain.—External genitals feel as though wet (a delusion).—Inflammation of meatus urinarius.—Numbness < in groin.—Threatened abortion.—Habitual abortion at third or fourth month.—Inefficient labour-pains.

17. Respiratory Organs.—Coryza; hoarseness; hacking cough, evening; cough, with soreness and heat in bronchi.—Sighing every few minutes.—Strong desire to inflate the lungs, which she continued to do from time to time without noticing particularly that she was doing so.—Grating sensation in Chest at every deep inspiration.

19. Heart.—Violent palpitation; fluttering in heart and throat.—Pulse accelerated and full.

20. Neck and Back.—Cutting pain in neck running from l. shoulder to occiput.—Between shoulder-blades chilly feeling.—Cutting pains; labour-like pains.—Pains running upward; from sacrum into kidneys; from l. side of back and hip.—Chill begins in lower dorsal region and runs up back.—Distressing pain in lumbar region before chill.

21. Limbs.—Tired, weak uneasiness in limbs, with numbness and gnawing pains.—Rheumatic pains shifting from place to place, always from below upward.—Pains in arms and legs before chill; during fever limbs cold.—Neuralgia of r. shoulder or r. knee, passing over to l.—Soreness of bones, aching of limbs as if bones were broken, pains come and go suddenly; very restless, but not > by motion.

22. Upper Limbs.—Arms perspire most; hands cold, finger-nails blue.

23. Lower Limbs.—Gnawing in hip-bone.—Numbness of legs after or with severe bone pains.—Severe shooting pains in l. sciatic nerve, producing a palsied sensation, esp. after motion; legs feel tired, esp. l.—Feet feel as if she had walked a long journey; it seems as though her heels were crowding through her boots.

26. Sleep.—Yawning, gaping, and sighing.—Sleepy and depressed.—Sleep restless and mind disturbed, frightful dreams.

27. Fever.—Chilly down back when changing position ever so little.—Chill begins in small of back and spreads over body; violent shivering with comparatively little coldness; bone pains; thirst in chill and heat; nails blue.—Skin hot and dry with fever; hot to touch in face.—Fever protracted, with bone pains, nausea, and vomiting, followed by slight sweat, mostly about forehead and head.—Sweat: principally about forehead; chills when attempting to change position.

Euphorbia Amygdaloides.

Wood Spurge. N. O. Euphorbiaceæ. Tincture of plant.

Clinical.—Antrum, pain in. Anus, spasm of; prolapse of. Debility. Diarrhœa. Dysentery. Hæmorrhoids. Skin, eruptions of. Smell, illusion of. Spleen, affections of. Throat, soreness of.

Characteristics.—*Euphorb. amyg*. has the same general characteristics as *Euphorbium*, producing irritation and burning sensations of the intestinal tract, with vomiting and diarrhœa and skin affections. *Peculiar symptoms* are: An illusion of smell, "odour of mice", and seething sensation in the head and thigh. Rheumatic pains come on when heated. Cold water relieves burning in back of throat (burning < from cold water *Caps*.). Symptoms go from right to left. Malaise; tired weak feeling during and after walking. Restlessness all night, turning about half awake and half asleep. Many symptoms are < evening; < walking; > after eating. For comparisons see under *Euphorbium*.

SYMPTOMS.

2. Head.—Seething sensation backwards and forwards in head, extending down back and going off during sleep.

5. Nose.—Strong odour of mice in nose.

6. Face.—Burning pain in l. antrum, extending upwards to floor of orbit and into head.

9. Throat.—Burning in back of throat, > by cold water, > by breakfast; followed by heat all over chest and in stomach.—Stinging and peppery sensation back of throat.

11. Stomach.—Nausea; < moving about indoors; > sitting still; > by supper.

12. Abdomen.—Severe stitches in liver; when walking up hill.—Tightness in region of spleen.—Stitch in region of spleen.—Sensation as if a long worm writhing in region of transverse colon or duodenum.—Throbbing in groins.

13. Stool and Anus.—Stool difficult from painful spasm of anus, which was continued after the evacuation; fæces small, lumpy, slimy; with prolapsus, though there had been no straining.—Slight prolapsus after the stool.—Offensive diarrhœic stool, preceded by griping and followed by prolapsus.—Diarrhœa returns at lengthened intervals.—Feeling of action of the liver, followed soon by griping and passing of offensive flatus, then offensive diarrhœa, after which the feeling of the liver passes off, followed by slight prolapse rendering sitting uneasy, going off gradually.—Dark brown, watery, mucous stool, sometimes mixed with solid fæces, sometimes offensive, sometimes with blood, mostly in afternoon from 4 to 10 p.m. If it lasts two or three days there is prolapsus returning very gradually; if replaced within half an hour the bowel generally prolapses again; if the diarrhœa lasts longer external piles appear, not returning with the prolapsus.

14. Urinary Organs.—Urine hot during micturition.

17. Respiratory Organs.—Hoarseness.—Heat in chest; radiating from stomach.—Feeling as if lungs remained partly inflated.

19. Heart.—Slight throbbing in region of heart.

20. Back.—Peculiar seething sensation in region of spine, sometimes extending from occiput to loins.

22. Upper Limbs.—Rheumatic pains in r. arm just above olecranon, on becoming warm and perspiring.—Rheumatic pains in elbows and elbow joints.

23. Lower Limbs.—Seething sensation in lymphatics of r. leg, at times, from foot to groin, as if circulation were felt; afterwards to a less extent in l. leg; chiefly felt from foot to knee, only when sitting, < in evening.—Sudden sharp pain about middle of r. tibia, which was tender to touch.

25. Skin.—Pimple just under lobe of r. ear.—Hard white itching vesicular pimples on r. internal malleolus and foot.

27. Fever.—Chill 11 p.m., increased to violent rigor when undressing; lasted till next morning, and was not followed by heat or sweat.

Euphorbia Corollata.

Large Flowering Spurge. N. O. Euphorbiaceæ. Tincture and triturations of the root.

Clinical.—Cholera. Cholera infantum. Cholerine. Diarrhœa. Gastritis. Sea-sickness.

Characteristics.—*E. Corol*. produces gastro-enteric disturbances like other Euphorbias, but with peculiarities especially in the sequence and character of the vomit: (*1*) deadly nausea, (*2*) sudden and powerful vomiting of food in stomach, (*3*) throws up large quantities of water mixed with mucus, (*4*) then of clear fluid like rice-water, (*5*) copious watery evacuations of the bowels. These symptoms are accompanied by great anxiety, deadly prostration, and cold sweat. Attacks recur after short intermissions.

SYMPTOMS.

1. Mind.—Great anxiety.—Wants to die.

11. Stomach.—Sudden deathly nausea and prostration, without previous pain.—Sudden powerful vomiting of food, then quantities of water mixed with mucus, then clear rice-water-like fluid; followed almost immediately by diarrhœa.—Inflammation of stomach and bowels.

12, 13. Abdomen and Stool.—Great commotion in bowels, followed immediately by copious watery evacuations.

19. Heart.—Pulse soft; sinks to 40.

24. Generalities.—Death-like faintness and exhaustion.—Felt like an attack of sea-sickness.—Symptoms pass away in a short time.

27. Fever.—Cool skin covered with beaded sweat.—Cold hands, feet, and nose.—Diaphoresis.

Euphorbia Cyparissias.

Cypress Spurge. N. O. Euphorbiaceæ. Tincture of fresh plant.

Clinical.—Erysipelas. Miliaria. Vesicles.

Characteristics.—The effects of *E. cyparis*. have been observed on persons pulling the plants and getting the juice on hands and face. It acts as an intense irritant of the skin, and produces at the same time a feeling of chilliness.

SYMPTOMS.

6. Face.—R. cheek much inflamed, covered sparsely with fine vesicles filled with a thick white lymph; erysipelatous inflammation most marked in molar region, livid or dark red, leaving skin rough.

22. Upper Limbs.—R. wrist somewhat inflamed and abundantly covered with miliary eruptions.

27. Fever.—Frequent sensations of chilliness which induced her to put a shawl about her shoulders though in midsummer.

Euphorbia Heterodoxa.

Alveloz. N. O. Euphorbiacæ. A soft resin, insoluble in alcohol or water. Trituration.

Clinical.—Cancer.

Characteristics.—The resin has been used allopathically as an external application in cases of cancer, and has produced the most terrible pains. Conversely in homœopathic attenuations it has been found to alleviate the *burning pains of cancer*, which is the keynote for its employment. Compare *Euphorbium*.

Euphorbia Hypericifolia.

Large Spotted Spurge. N. O. Euphorbiaceæ. Tincture of whole plant.

Clinical.—Constipation. Headache.

Characteristics.—Dr. True took infusion and tincture of *Eu. hyper*. and obtained these symptoms from both: Headache in fore part of head, pain centering at crown, with heat above the eyes and fulness and oppression at epigastrium; followed by languor and drowsiness. Constipation.

Euphorbia Ipecacuanhæ.

Ipecacuan Spurge. N. O. Euphorbiaceæ. Powdered root.

Clinical.—Gastritis. Vomiting.

Characteristics.—*E. ipecac*. is a more active emetic than *Ipecacuanha*.

SYMPTOMS.

11. Stomach.—Active and long-continued vomiting with a sense of heat, vertigo, indistinct vision, and prostration.

Euphorbia Lathyris.

Caper Spurge. N. O. Euphorbiaceæ. The symptoms are the effects of poisoning by seeds. A tincture of the whole plant is made.

Clinical.—Cholera. Diarrhœa. Dysentery.

Characteristics.—The chief symptoms of *E. lath*. are: Retching and vomiting and bloody stools with brilliant eyes, flushed face; the abdomen is drawn inward. The whole body is stiff and icy cold. Uneasiness.

SYMPTOMS.

3. Eyes.—Brilliant eyes.—Staring look.—Pupils dilated with wide-open eyes.

6. Face.—Deadly pale.—Glowing hot cheeks.

11. Stomach.—Retching and vomiting.—Sudden violent vomiting with bloody stools.

12. Abdomen.—Abdomen drawn inward.

13. Stools.—Copious, frequent; violent purgation.—Bloody stools.

19. Heart.—Pulse small, irregular.

27. Fever.—Pallor and coldness of surface.—Skin burning hot; glowing hot cheeks.

Euphorbia Peplus.

Petty Spurge. N. O. Euphorbiaceæ. Effect of juice and local application of leaves.

Clinical.—Ecthyma. Erysipelas. Sore throat.

Characteristics.—The application of the juice and leaves sets up intense and painful inflammation, erysipelatous, phlegmonous, pustular, with intense burning pain. In one of the cases observed, a boy applied the juice of the stein to an inflamed gum. In another, a boy applied the leaves as a poultice to a black eye. Burnett produced a sore throat in himself by chewing the herb; and he cured with the 3x a case of simple sore throat with swelling and painful swallowing.

SYMPTOMS.

6. Face.—After a week, phlegmonous erysipelas under l. eye, spreading downwards and forwards.—Five or six pustules are on forehead, one on each ala nasi, one on root of nose, one on l. elbow, burning pain in all.—Lower half of nose red, swollen, inflamed, shiny.—Lips parched, slightly swollen, covered with a crop of small pustules; another large pustule appears on upper lip midway between mouth and nose.

8. Mouth.—Mouth so much inflamed the doctor thought it due to mercurial remedies.—In several days pain intolerable, compelling cries and indescribable agitation, patient unable to sleep or drink.

9. Throat.—Sore throat; throat swollen with painful swallowing.

20. Neck.—More pustules developed l. side of neck, becoming hard boils, and slowly going away without breaking.

Euphorbia Pilulifera.

E. pilulifera. N. O. Euphorbiaceæ. Tincture.

Clinical.—Asthma. Gonorrhœa. Leucorrhœa. Sunstroke. Traumatism.

Characteristics.—In the *Medical Press* of May 3, 1893, Dr. George Foy gives an account of this medicine. Gray in 1817 mentions it as a remedy for syphilis and for venomous bites. Marsset, of Paris, experimented with the aqueous extract on guinea-pigs. None of the irritant effects common to most Euphorbias were produced, but a powerful action on the heart-first an alarmingly quick pulse and then a sudden chill. It has been used by old-school practitioners in asthma, hay asthma, and bronchitis, chiefly in considerable doses. In the *Universal Homœopathic Annual*, p. 57, Dr. Cartier gives this account: "*Euphorbia Pilulifera* has given excellent results in cases of acrid leucorrhœa, aggravated by the least motion, especially useful for pale, delicate, and sensitive women (*Jacaranda*). In gonorrhea, when there are intense pains at each micturition, burning pains which oblige the patient to sit down or to keep quiet; violent desire to pass water (*Cannabis, Cantharis*). Humid asthma with prostration and restlessness. Hæmorrhages caused by sunstroke or traumatism."

Euphorbium.

Euphorbium officinarum. Gum Euphorbium. The resinous exudation or juice of Euphorbia resinifera. exported from Morocco. Euphorbia resinifera is a cactus-like plant of the Euphorbiaceæ.

Clinical.—Bone, diseases of. Cancer. Cataract. Coccygodynia. Cough. Crusta lactea. Erysipelas. Eyes, inflammation of. Gangrene. Hay-fever. Headache. Heartburn. Influenza. Peritonitis. Sciatica. Syphilis. Teeth, affections of. Toothache. Ulcers. Vision, disorders of. Warts. Writer's cramp.

Characteristics.—*Gum euphorbium* is one of the remedies of Hahnemann's chronic diseases. It is the principal member of the group of Euphorbian drugs, and should be studied with *Croton tiglium* and *Ricinus*. Like these it produces gastro-intestinal irritation and all degrees of irritation of the skin. It also affects the eyes, teeth, and bones. Burning pains in the bones is an indication, and along with *Euphorb. heterodoxa* it is a remedy for the pains of cancer. (In a desperate case of sarcoma of the pelvic bones under my care nothing gave greater relief to the pains than repeated doses of *Euphorb*. 6.) Painfulness of the coccyx. Caries. Old torpid ulcers. Hartmann says *Euphorb*. often affords excellent service in gangrene of internal parts, "especially when consequent on inflammation of the stomach or bowels, &c., and the temperature of the body is continually diminishing, a great degree of torpor being present and the affected parts without sensation." Gangrene of old persons. Erysipelas bullosa. Burning, which characterises the Euphorbias generally, is well marked in this. Among the peculiar sensations are: Sensation, as if teeth were being screwed together. Jerking in tooth as if it would be torn out. Taste as if mouth were lined with rancid grease. Burning in throat as from a hot coal. As if flames were rushing out of mouth and throat.

Feeling in middle of chest as if hot food had been swallowed. As if left lobe of lung were adhering. (Münninghoff records a case in which the patient had two violent attacks of night cough. They occurred as soon as she touched the bed in lying down, and continued as long as she remained in it. Accompanying symptoms were: Pain in right temple, cold feet, and pain in heel. After failure of many remedies *Euphorb. off.* Ø, one drop in a glass of water, to be sipped occasionally, gave instant relief; but she had to continue the remedy or the cough returned.) Sudden starting up in bed as from an electric shock. As if a thin cord lay under the skin. Prostration is present as with the other Euphorbias; but *Euphorbium* has, in addition, periodic cramp, writer's cramp, and convulsions with loss of consciousness. Most symptoms are < at night and in the morning. Rest <, motion >. Paralytic weakness in joints < on beginning to move. Painfulness of coccyx, < on rising from sitting. Heat <; cool applications >. Touch <.

Relations.—*Antidoted by:* Camph., Op., large quantities of lemon-juice. *It antidotes:* Ars., Nux v. *It follows:* Graphit., Lach., Puls., Sep., Sul. *Compare:* Colch., Elat., Ant. t., Verat.; also the Euphorbiacious plants—Acalyph., Crot. tig., Jatroph. c., Mancin., Mercurialis, Ricinus, Yucca fil., and the various Euphorbias.

SYMPTOMS.

1. Mind.—Anxious apprehensions.—Seriousness and taciturnity.—Earnest quietness, reflective; seeks quiet, though with inclination to work.

2. Head.—Turning vertigo, which causes falling sidelong.—Vertigo when standing or walking in the open air.—Pressive, shooting headache.—Pain, as from a bruise in occiput; < in morning; when lying; from heat; > by motion and cooling the head.—Screwed-in sensation in whole brain.

3. Eyes.—Inflammation of the eyes, with itching and dryness of the eyelids, and of the canthi.—Chronic inflammation of the eyes.—Smarting lachrymation, and nocturnal agglutination of the eyelids.—Copious secretion of mucus in the canthi.—Opacity of the cornea.—Clouded vision.—Myopia.—Diplopia; seeing a person walk before him he imagines he sees the same man walking after him.

4. Ears.—Otalgia in the open air.

5. Nose.—A suffocating itching in the nose, extending to the brain, with abundant flow of mucus from the posterior nares.—Frequent sneezing.

6. Face.—Erysipelatous swelling of the cheek, with eruption of yellowish vesicles (full of yellowish humour), and piercing and digging pain.—Red, inflamed, painful swelling of the face, with yellowish blisters secreting a thick yellow fluid.—Pale (white œdema-like) swelling of the cheek.—Burning pain in the face.

7. Teeth.—Pressive, shooting toothache, or with piercing pain, aggravated by contact or mastication, or else at the beginning of a meal, with shivering and pain in the head, and in the cheek-bones.—Brittleness of the teeth.

8. Mouth.—Dryness of the mouth, without thirst.—Salivation with shuddering, inclination to vomit, and pinchings in the stomach.—Saltness of the saliva.

9. Throat.—Burning pain from the throat (as from a hot coal) to the stomach, accompanied by heat (as if a flame were rushing out), anxiety, trembling, and water-brash.

11. Stomach.—Sickly, rancid, bitter taste.—Strong thirst for cold drinks.—Empty risings.—Hiccough.—Water-brash, with heat, anxiety, and trembling.—Vomiting (with diarrhœa).—Pain, as from a bruise, in the stomach.—Relaxation and flaccidity of the stomach, with retraction of the abdomen.—Contractive cramps in the stomach.—Pinchings, and sensation of clawing in the stomach.—Burning pain in the stomach and in the epigastrium.—Inflammation of the stomach.

12. Abdomen.—Constrictive pains in the abdomen.—Spasmodic colic, flatulent, with pains as if the tissue were being separated, or of pressure upwards, generally > by supporting the head on the knee and the elbow.—Sensation of emptiness in the abdomen as after an emetic (morning).—Burning pain in the abdomen.—Tearing in the groins, such as follows dislocation.

13. Stool and Anus.—Hard stool to pass.—Urgency to evacuate, with itching in the rectum (stool like glue).—Liquid diarrhœa, with tenesmus.—Stool first thin, then knotty.—Sensation of burning in the anus, and pain as from excoriation in the abdomen.

14. Urinary Organs.—Urgency to make water, with difficult discharge, scanty and drop by drop.—White sediment in the urine.—Itching stitch in the external portion of the urethra between the acts of urinating.—Flow of blood from the urethra.

15. Male Sexual Organs.—Tearing lancinations in the glans penis.—Voluptuous itching in the prepuce.—Tearing in the testes.—Burning pain in the scrotum.—Constant erections, without sexual desire.—Discharge of prostatic fluid from a relaxed penis.

17. Respiratory Organs.—Dry, hollow cough, excited by a burning tickling in the trachea and the chest.—Dry cough, day and night, as from oppression, with frequent expectoration in the morning.—Attacks of violent cough commencing as soon as patient touches the pillow and continuing as long as she remains in bed.

18. Chest.—Difficult respiration and short breath, with tensive pain in the muscles of the chest.—Oppression of breathing, as if the chest were not wide enough, with

tension in the pectoral muscles, esp. when turning the body to the r. side.—Sensation of spasmodic distension in the chest.—Sensation as if one of the lobes of the liver were adherent.—Sensation as if the l. lobe of the lung were adhering.—Aching in the muscles of the chest.—Pressive lancination on the sternum.—Lancination in the l. side of the chest, during repose, mitigated by movement.—Warm feeling in the middle of the chest, as if hot food had been swallowed.—Burning pain in the chest.

20. Neck and Back.—Sweat in the neck.—Cramp-like pain in the dorsal spine, in the morning, in bed, when lying; on the back.

22. Upper Limbs.—Paralytic tension in the joint of the shoulder, during repose, > by walking.—Scarlet streaks on the front-arm, itching when touched.—Cramp-like tractions in the hand, after writing.

23. Lower Limbs.—Pains of dislocation in the hips.—Burning pain at night in the thigh bones.—Great weakness of the legs.—Cramp-like contraction of the toes.—Cold perspiration of the legs in the morning.—Sore pain in (r.) heel when walking in the open air.—The feet go to sleep frequently when sitting.

24. Generalities.—Tearing or pressive, or shooting pains in the limbs, esp. during repose, mitigated by movement.—Rheumatic pains < when at rest.—Shooting and tensive pains in the muscles.—Burning pains in different parts of the body, esp. in the internal organs.—Cancer pains.—Paralytic weakness in the joints, with difficulty in rising from a seat, or when beginning to move.—Great relaxation and lassitude.—The majority of the symptoms are < during repose, by a sitting posture, and by the touch.—Burning in the bones.—Caries.

25. Skin.—Gnawing and burning itching, which provokes almost constant scratching.—Streaks of a purple-red on the skin.—Furunculi.—Indolent ulcers.—(Sphacelus?).—Cold gangrene.—Blood-boils.—Warts.

26. Sleep.—Drowsiness during the day, accompanied by frequent yawnings.—Drowsiness after dinner.—Comatose somnolency during the day.—Difficulty in sleeping in the evening, with trembling and starts.—Frequent waking.—Sleeps with his arms extended over his head.

27. Fever.—Shuddering and want of vital heat, esp. in affections of the internal organs.—Shivering at the commencement of a meal and when walking in the open (not cold) air.—Shuddering and shivering, with coldness in the hands and heat of the cheeks, without thirst.—Perspiration in the morning, with heat, without thirst.

Euphrasia.

Euphrasia officinalis. Eye-bright. N. O. Scrophulariaceæ. Tincture of whole plant.

Clinical.—Blepharitis. *Cataract. Cold*. Colic. *Condylomata*. Conjunctivitis. Cough. *Eyes, affections of*. Glandular swellings. Granular lids. Influenza. Iritis. Lachrymation. Lips, stiffness of. *Measles*. Nasal catarrh. Nose, cancer of. Parotitis. Phlyctenulæ. Pimples. Ptosis. Prolapsus ani. Prostate gland, affections of. Scrofula. Staphyloma. Sycosis.

Characteristics.—According to Grauvogl, the "signature" of a black spot in the corolla which looks like the pupil," marked *Euphrasia* as an eye medicine to the ancients, and homœopathic experiments have fully confirmed its old-time reputation. Eye-symptoms appear in great variety, and the irritation extends to the skin around the eye, and to the nose, producing nasal catarrh and affections of the external nose. Hering mentions "flat cancer on right side of nose" as having come within its curative range. The catarrhal effect is prolonged into the chest, producing hoarseness and cough with profuse expectoration, "Vomiting from hawking mucus," and "vomiting breakfast on clearing throat of offensive phlegm," have been cured by *Euphras*. Cough after the disappearance of hæmorrhoids. In the digestive track there are: Colic, hæmorrhoids, and condylomata at anus. Sensations: as if dust or sand in eyes; as if a hair hung over eyes; as if upper lip were made of wood; stiffness of left cheek; of tongue. Ames, of Rockland, Ohio, has recorded the case of an old man, of 79, to whom he gave *Euphras*. 3x for lachrymation and sneezing, with the result that it relieved him, in addition, of a prostatic trouble he had had for some years, compelling him to rise frequently in the night to urinate. This led Ames to give *Euphr*. in other cases of prostatic trouble, with good results. As an eye-lotion *Euphr*. has great value, I have seen corneal opacities removed by its prolonged use. Among the noteworthy symptoms of *Euphras*. is "frequent yawning when walking in the open air." There is drowsiness without being able to sleep; frequent waking in the night as from fright. Lying down < coryza; > cough. Walking = stitches and itching in female sexual organs; walking in open air = yawning. < After sleep. Most symptoms are < during night and in the morning; cough > at night. > In bed; > getting out of bed. Cold air and wind = lachrymation. < From touch.

Relations.—*Antidoted by:* Camph., Puls. *Compatible:* Acon., Calc. c., Con., Nux., Phos., Puls., Rhus., Sil., Sul. *Compare:* Æthus., Cepa (tears *bland*; of Euphr., *corrosive*), Apis, Arg. n., Ars., Hep., Kali bi., Kali iod., Merc., Merc. cor., Puls.; Grat., Dig., Tabac. (*Botan*.)

SYMPTOMS.

1. Mind.—Taciturnity, and repugnance to conversation; abstraction of mind.—Hypochondriacal indifference.—Indolence.—Melancholy.

2. Head.—Confusion, and pain as from a bruise in the head (with coryza), in the evening, augmented by lying down.—Pressive headache, with photophobia, and heat, chiefly in the forehead; with sensation as if the head would burst.—Shootings in the temples and in the forehead.—Beating in the head, perceptible on the outside.

3. Eyes.—Aching in the eyes.—Gnawing sensation in the eyes.—Inflammatory redness of the eyes.—Inflammation and redness of the eye from being wounded.—Inflammation of the cornea.—Obscuration of and pellicle over cornea (after mechanical injuries).—Bluish obscuration of cornea.—Inflammation and ulceration of the edges of the eyelids, with headache.—Scars from ulcers and specks in the cornea.—Abundant flow of corrosive tears, so as to prevent seeing, esp. when exposed to the wind.—Swelling and agglutination of the eyelids.—Swelling of the lower eyelid.—Smarting in the eyes, as from sand.—Lancinations in the eyes (ball), excited by too bright a light.—Eruption of small miliary pimples round the eyes.—Copious secretion of mucus, sometimes sanguineous, from the eyes and eyelids.—Dryness and pressure in the eyes.—Compression in the eyelids.—Contraction in the eyes and eyelids, which occasions winking.—The light seems obscure and vacillating.—Photophobia, esp. in daylight and in the sunshine.

4. Ears.—Otalgia, with piercing pains in the region of the tympanum.

5. Nose.—Purulent pimples on the alæ nasi.—Excoriation and painful sensibility of the nostrils.—Epistaxis.—Fluent coryza, by day; obstruction of the nose, at night.—Violent fluent coryza, with abundant secretion of mucus (from the anterior and posterior nares), excessive confusion in the head, corrosive tears in the eyes, and photophobia.—Profuse fluent coryza, with cough and expectoration in the morning.

6. Face.—Stiffness of the cheeks when speaking and during mastication, with sensation of heat and burning pains.—Redness of the face.—Miliary eruption on the face, with sensation of burning and redness, on wetting the face.—Lip stiff, as if made of wood.—Shootings in the lower jaw and chin.

7. Teeth.—Shooting pains in lower teeth.—Copious bleeding of gums.

8. Mouth.—Stammering, and frequent interruptions in the speech.—Speech difficult, in consequence of a paralytic stiffness of the tongue, and of the cheeks.—Sensation of clucking, which mounts into the throat.

11. Stomach.—Mawkish taste.—Nausea and bitterness in the mouth after smoking.—Risings, with taste of food.—Hiccough.

12. Abdomen.—Pinchings in abdomen by short fits.—Pressive squeezing and burning across abdomen.—Colic, alternately with affections of eyes.

13. Stool and Anus.—Evacuations hard and scanty.—Pressure in anus while sitting; hæmorrhoids.—Old flat condylomata at anus with severe burning; < at night.

14. Urinary Organs.—Frequent and copious emission of clear urine.

15. Male Sexual Organs.—Spasmodic retraction of the genital parts (with pressure above the ossa pubis), in the evening in bed.—Lancination and voluptuous itching in the glans, and in the prepuce.—Condyloma.—Retraction and tingling of the testes.—Sycotic excrescence, itching, stinging, with sore and burning pain when touched.

16. Female Sexual Organs.—Menses at the regular period, but they last only one hour.

17, 18. Respiratory Organs and Chest.—Difficulty of breathing, shortness of breath.—Stitches under the sternum, esp. during an inspiration.—Cough only during the day, with mucus in the chest, which cannot be detached; mucus frequently blood-streaked, thin; expectoration only in the morning.—Cough loose during the day, dry at night.—Cough, esp. by day, with difficult expectoration.—Cough, with suspension of respiration.—Cough in the morning, with copious expectoration of mucus, and fluent coryza.—Difficulty of respiration, even when seated.

20. Back.—Cramp-like, pressive pains in the back.

22. Upper Limbs.—Numbness in the arms and hands.—Cramp-like pressive pains in the hands, and the fingers.—Fits of (painless) swelling in the joints of the hand, or of the fingers on moving them.—Cramp pain in the metacarpus.—Torpor of the fingers.

23. Lower Limbs.—Shootings in the legs during repose.—Stitches in the hip and knee-joints when walking.—Tension, as from contraction of the tendons in the ham, and the tendo Achillis, on walking.—Sensation of heaviness and cramp-like pain in the calves of the legs, after remaining long standing.—Succussions (shocks, like electric shocks), which ascend along the thigh, followed by paralytic torpor of that part.—Cracking in the outer ankle of l. foot, when stepping.

24. Generalities.—Cramp-like pains over the whole body.—Pricking in the extremities, as from a gnat, with sensation of torpor.—Crawling as of a fly in one or the other limb, from below upwards in a straight line, with numbness of the

part.—Aggravation of symptoms in the evening.—Great drowsiness in the day, as from fatigue of the eyes.—Violent lancinations in different parts, which prevent sleep.—Shooting, itching stitches (the whole night).

25. Skin.—Consequences of blows, bruises, and contusions.—Condylomata, itching when walking, burning when touched.

26. Sleep.—Yawning, when walking in the open air.—Frequent waking (as from fright) at and after 3 a.m., lasting till 6 a.m., when he falls in a stupor, from which he wakens with many complaints.—Frightful dreams, with frequent waking and starting with fright.

27. Fever.—Chill in the forenoon.—Chilliness predominating.—Copious nocturnal sweat.

Eupionum.

On distilling wood tar a volatile oil is obtained, which separates into a lighter and heavier oil; the heavier oil is Kreasote, the lighter is Eupion. C_5 H_{12}.

Clinical.—Amenorrhœa. Cough. Cramps. Dreams. Epistaxis. Glandular swellings. Groins, pain in. Hæmorrhages. Headache. Leucorrhœa. Menorrhagia. Neuralgia. Night-sweats. Phthisis. Pruritus. Toothache. Tumours. Vicarious menstruation.

Characteristics.—The effects of *Eupion*., which was proved by Wahle in Rome, who also proved *Paraffin*, bear a close resemblance to those of *Kreasote*, but are by no means identical with them. A large number of the symptoms centre in the female sexual organs, some of them being very characteristic. Menstruation is too early and too copious, the flow being thin and fluid. During the time there is great irritability, headache, and chilliness; painless pulsation in the head, wabbling sensation in upper part of body; everything becomes dark to her. Nose-bleed occurs when menstrual flow intermits. Cutting in abdomen ceases when flow comes on. Yellow leucorrhœa follows, colouring linen yellow. Leucorrhœa with severe backache; has to lean against something to give relief; when the backache ceases the discharge gushes out. Pulsations all over body while sitting quietly. Hæmorrhages occur from nose and bowels. Sticking pains in head and other parts. Weak eyes and obscured vision. Pressing in ears as if wind were blown in with force and for a long time. Teeth stick together when jaws are closed; in morning sensation as if teeth were embedded in some soft matter. Tongue covered with raised nodules. Pain in inguinal region. Many painful glandular swellings in groins. Spasmodic, periodic pain an inch up rectum. Palpitation with slow pulse. Nodules appear on inner side of right cheek, left side of neck, and left forearm. Sensations: of dislocation of joints; as if muscles torn from bones; as if skin and muscles were

too short. Cramps in the calves when accompanying uterine or chest complaints. Soles of feet numb as if walking on needles; sticking in heels. Coldness of whole right side of body. Colliquative perspiration. Perspires from least exertion; when eating; all night (with tuberculosis). Most symptoms are < morning; many appear in evening and night. Cough returning every winter. Blowing nose <. Coughing and sneezing < pains in abdomen. Hot drink < toothache. Rest > headache and pains in abdomen; < other symptoms. Bending backwards > backache. Bending forward > pain in abdomen.

Relations.—*Compare:* Kreasote, and the Carbons; Graphites antidoted effect on eyelids; Laches. (pain ceases when discharges appear).

SYMPTOMS.

1. Mind.—Cheerful, joyous disposition.—Irritable, angers easily.—Great weakness of memory.

2. Head.—Vertigo; everything becomes black before eyes, when turning upper part of body from r. to l.; everything turns round when she sits up in bed.—Dulness of the head as if too full.—Painful pulsations in forehead, > lying down.—On l. superior part of forehead, a pain as if a cyst would form.—Burning pains in forehead, with pressing down of lids and moisture in eyes as from tears.—Heat at vertex; sensation as if hairs were pulled, with headache; lachrymation and drawing on muscles of neck.—Stitches radiating from vertex down limbs and into abdomen and genitals, producing painful sensation of squeezing together.—Sticking pains from occiput along cervical muscles to back of chest and in middle of chest with every breath; sticking in l. shoulder-blade.—Some painful spots on head as if small furuncles would form.

3. Eyes.—Eyes weak as if she had cried.—Sensation as if something hung down over eyes, must wipe them continually.—Pressure above eyes as if the globes would be pushed out.—Burning, pressive pains in eye with copious lachrymation.—Swelling of r. upper lid on waking in morning, < during walk in fresh air; lower lid also swells up and then the l. (*Graphites* 6 quickly removed this).—Lachrymation < in fresh air, > in room.—Everything appears pale, as if a thin veil were before eyes.

4. Ears.—Pressing in ears as if the wind was blown forcibly into them for a long time, the external parts being equally affected.—Shooting and tearing in l. ear, extending to external temporal region.

5. Nose.—L. nostril cracked and the crack bleeds.—Sneezing; each time he blows his nose the sneezing reappears.—Sneezing with fluent coryza in morning.—Bleeding; blood thin and fluid; when blowing nose.—Menstrual flow

intermits and bleeding from nose occurs.—Soreness in upper nose on drawing air through nostrils in evening.

6. Face.—On lower portion of inner side of r. cheek a hard nodule size of a pea.—Upper lip fissured and painful as if raw.—Lips and throat always dry, yet without thirst.—Lips painful as if sore.

7. Teeth.—The teeth stick together when the jaws are closed.—In the morning, sensation as if the teeth were embedded deeply in some soft matter, without pain; > by eating.—Teeth painful as if loose, gums swollen, scorbutic; < by hot soup.—Toothache like numbness in carious molars, coming on immediately on lying down, > on rising and moving about.—Grumbling in front teeth; sensation as if gums swollen and teeth (which are firm) would drop out.—Tearing in all teeth in morning on rising; tearing extends to temples; to forehead; to nose.—Gums swollen.—Painful jerking-tearing in gums.

8. Mouth.—Whole tongue red, covered with raised pimples like herring roe.—Tip of tongue dry, back covered with thin dirty white coating.—Anterior part of tongue rough like a grater.—Insensible feeling in mouth as if scalded by fat.—Pappy and sticky in mouth early in morning.—Taste sour after eating; putrid.

9. Throat.—In morning much white bad-tasting mucus in throat, expectorated after slight paroxysms of coughing.—Sensation of mucus in throat without being able to expectorate.—Sensation of dryness on uvula.

11. Stomach.—Eructations: tasting of food.—Vomiting of food.—Nausea: till 3 a.m.; on becoming erect; with much thirst and copious Menstruation, and trembling through all limbs; lancinating pains under r. breast.—Vomiturition emanating from lower abdomen; dark green tasteless mucus.—Bloatedness and sensation of fulness of stomach, with internal chilliness in evening.—Region of stomach feels internally sore and distended; pains under both short ribs.

12. Abdomen.—Frequent borborygmus.—Passing flatus > pains.—Pains < by coughing, sneezing, blowing nose.—In muscles of l. side of abdomen, from pelvic bones obliquely downwards, a painful tension like what she formerly felt during pregnancy.—Contracting pain and twisting > by bending over; one day before menstruation.—Cutting pains during menstruation, when the pains cease discharge is always copious; blood red and very thin.—In l. side of abdomen, immediately over crista ilii, when walking, raising arm, or coughing, a severe pain nearly taking breath away; she feels nothing when at rest; after a few hours pains move low down into abdomen and then pass off.—In l. anterior crest of ilium stitches when walking.—Squeezing, pressing pain in l. groin when quiet.

13. Stool and Rectum.—Spasmodic pains a few inches up into rectum, radiating up and down, extending into labia, with such severity she cannot sit down, > after

sleep, but backache and nausea come on.—Spasmodic periodically returning pains one inch up rectum, extending to vagina and producing there a spasmodic, contracting pain.—Drawing and tearing in rectum, < during (natural) stool.—Itching after natural stool.—Ineffectual inclination and straining.—Tenesmus; > when blood is passed; this weakens her.—Three or four times daily, bloody stools.—Hard, dry stools, with great straining.—Dark blood in painless stools.—Constipation: stool every three or four days, with great straining and prolapsus uteri.

14. Urinary Organs.—Frequent inclination, scanty discharge; worse when standing than sitting.—Frequent and copious; lemon colour; chestnut brown before menses.—Hot urine passed without pain.

16. Female Sexual Organs.—During urination some pain between labia.—Burning, stinging, itching and swelling between labia, momentarily > by rubbing, afterwards burning and <; after washing with cold water genitals feel stiff and numb, with sensation of soreness and rawness.—Pruritus pudendi; < evening; with raw pain in sternum unendurable when touched.—Discharge of blood between periods with backache.—Eight days after period, leucorrhœa staining linen yellow in spots size of sixpence; lassitude; emaciation; stitching in soles of feet when walking; trembling all over (as if a jelly) when at rest.—When backache ceases leucorrhœa gushes out abruptly, with sticking pains in forehead.—Copious leucorrhœa, running from her, remits evening, returns morning.—Menses a few days too soon, without the leucorrhœa which usually precedes them.—Menses too soon; too copious; a flooding; bruised sensation in chest; when breathing, stitches in middle of chest and in heart; taking away breath pains decrease the third day.—Copious, thin, fluid menstrual discharge with severe backache, painless pulsating in head, pressing towards forehead, with full sensation.—During menstruation painful twisting deep in abdomen extending to rectum, intermitting and returning; as soon as the pains cease the flooding sets in again.—Menses stopped twenty-four hours; returned and continued twenty-four hours, with sensation as if whole upper part of body from short ribs to head were wabbling; she has slightly the same soaring sensation in her feet.—On third day courses cease and she suffers from severe headache and chilliness; fourth day flow returns copiously for a few hours and headache and chilliness cease.—On menses ceasing abruptly, nausea, salivation, and irritability come on, ceasing completely when flow returned.—Scanty menses, the usual drawing abdominal pains to genitals did not appear.—In a case of suppressed menses Eupion 9 caused severe cutting abdominal pains emanating from sacrum, as if something would press out of genital parts; pains passed and returned at intervals; after twenty-four hours she was well, and the courses appeared without any trouble.

17. Respiratory Organs.—Sensation below larynx as if something was sticking there, with short, dry, hacking cough.—Smarting in a spot size of bean, on internal r. side of larynx.—Crawling in upper bronchi causing dry cough.—Tickling r. side larynx causing continual cough; paroxysms causing short breath which ceases after

expectoration of tasteless white mucus.—Rough, scraping, metallic, dry cough, as if he had eaten rancid fat and taken brandy afterwards.—Hard, suffocating, dry cough with stitches in chest; returning every winter.—Cough partly dry, partly loose, with thick yellow, greenish or grey, sometimes foul-tasting expectoration; great lassitude and thirst.—Cough > by warm drinks; by sitting up in bed; with breaking out of perspiration.

18. Chest.—Heaviness, oppression, stitches, and tickling in chest.—Stitches and pressure in sternum.—Mammæ increase in size, with pressive pains in them, as if something painful were drawn through them with oppression.—Stitches under r. mamma, in the skin; < by lying, breathing, or walking; beginning 7 p.m. and lasting till midnight, followed by stitches close under heart, and with malaise and hot rising from stomach.

19. Heart.—Palpitation with slow pulse; believes her heart must be heard some distance away.—Four hours before menses appear severe palpitations, ceasing when the flow begins.

20. Neck and Back.—Pulsating and burning node on muscles of neck, l. side, two inches below mastoid process, preventing turning neck.—Backache one day before menses, > bending backward, lasts all the first day.—Backache alternating with leucorrhœa.—Backache during menses, > by leaning up against something.—Stiffness and horripilations between shoulders.—Pressive heaviness in lumbar vertebræ.—Pains in back extend to pelvis; when she stoops she can hardly rise again; sacrum pains as if broken.

21. Limbs.—Lassitude with yawning sleepiness.—Tearing in extremities and restlessness in legs preventing sleep.

22. Upper Limbs.—Trembling; paralytic pain, crampy pain in r. arm.—As if muscles beaten off bone (axillary side of r. arm).—Paralysing stitches in r. deltoid.—Stitching pains in elbows radiating to fingers.—In centre of r. palm, severe stitch radiating to elbow, and leaving sensation of numbness in ring and little fingers.—Hands go to sleep easily.—Dislocation pains in joints of r. hand.—Heads of bones of fingers feel too large.

23. Lower Limbs.—In both thighs a tensive pain as if skin and muscles were too short.—From upper end of r. hip painful drawing to middle of thigh, where it ends with a stitch.—Sensation at back of thigh as if muscles were torn from bones, < by ascending, stooping, sitting, and by touch.—Paralytic, dislocation pain in r. knee.—Stitches in either knee.—Cramps in calves.—Sensation of warmth in l. anterior leg, upper part (as from hot vapour); burning in calves.—In morning stitching, burning, and twitching, beginning in the calves, going to the toes, most severe in the heels; in evening the pains lessen in the calves but stitches continue to shoot back and forth in the heels, gradually ceasing after an hour.—Dislocation pain

in joints of r. foot.—Soles of feet numb as if she walked on needles.—Stitches in middle of sole first day of menses.—Drawing stitching in r. heel running up to calf.

24. Generalities.—R. cheek cold, tip of tongue cold, whole r. side of body cold.

25. Skin.—Nodule on l. forearm.—Itching biting in skin; in genitals penetrating whole body; < night; > during motion.

26. Sleep.—Yawning with chilliness and shivering.—Sleepiness towards noon.—Dreams of disgusting things; of naked persons; anxious dreams; of her child falling into the water.—Frightful dreams, the same dream repeated.—Dreams that she is pursued by oxen; of falling into an abyss.—Wakes bathed in perspiration.

27. Fever.—Chilliness with headache; with stitching;> by warm drink.—Dry heat towards noon.—Sweat of foul odour on least exertion.—Colliquative sweating on least exertion; when eating; all night.—Copious night-sweat towards morning.

Fagopyrum.

Fagopyrum esculentum. Polygonum fagopyrum. Buckwheat. N. O. Polygonaceæ. Tincture of the whole mature plant.

Clinical.—Arteries, throbbing of. Diarrhœa. Eczema. Eyes, affections of. Genitals, offensive sweat of. Granular lids. Hands, sweat of. Headache. Heart, affections of. Heartburn. Intertrigo. Itching eruptions. Liver, affections of. Mumps. Nausea. Nose, soreness of; crusts in. Ophthalmia. Palpitation. Pruritus pudendi. Rheumatism. Styes. Taste, altered. Throat, sore.

Characteristics.—*Fagopyrum* has had an extensive proving, and though there is little clinical experience with the drug on record, some features are sufficiently well marked to justify their being classed as characteristics. One of the most marked symptoms is a visible pulsation of the carotids and other arteries. Offensiveness distinguishes many excretions. Headaches involving eyes, root of nose, and back of neck; hot head; < bending head forward, > bending head backward. Headache with tired neck. Itching is general; scalp, eyes, margins of lids; ears; nose. The nose is sore and has crusts in it. Lips dry and cracked. Many symptoms of sore throat. Rheumatic symptoms are > by motion. Heat and restlessness after retiring. Perspiration, often offensive. The symptoms are < in afternoon from 3 to 6; < 11 p.m.; < after retiring; < from warmth; < from motion; > by cold applications; from cold air; > from pressure. Berridge has recorded two cases in which *Fago*. was of service. In one it removed the following symptoms after aggravating the pain in the shoulder: On waking, dull, bruised pain in top of left shoulder, rather posteriorly, extending up neck, < on moving the part, going off after breakfast and returning later in the day; constipation; nausea a little before 11 a.m., afterwards dull pain in left temple, feeling of heat all over. In the other case it permanently removed (after a week's aggravation), sinking in the stomach about 6 or 7 p.m., and temporarily removed a chronic diarrhœa about 6 or 7 a.m. The diarrhœa was increased later and was met by *Laches*. Hale mentions that there is a popular belief that indulgence in buckwheat cakes is a prolific cause of skin eruptions. He has found it curative in cases of eczema, erythema, and intertrigo.

Relations.—*Compare:* Rhus (> by motion); Senega (> bending head back); Lyc. (hours of aggravation 3 to 6 p.m.); Puls.; Polygonum. Coffee relieves stomach symptoms.

SYMPTOMS.

1. Mind.—Exceedingly happy.—Depressed; cross; irritable.—Inability to fix attention.

2. Head.—Dull headache.—Head hot and neck tired; dull pain all through head in evening.—Bursting headache; pressure from within outwards; feeling as if eyes were pressed out from behind.—Headache on waking; > by eating; < after retiring in evening; > bending head back; > walking in open air.—Itching of scalp < sitting still in warm room.—Sharp, thread-like pains of scalp.

3. Eyes.—Eyes swollen, red, hot, itching; as if sand in eyes.—Meibomian glands of l. lower lid inflamed; itching in margins.—Lachrymation, < by reading.—Aching deep in eyeballs.—Feeling as if eyeballs were being pushed out and at the same time held back by cords.

4. Ears.—Heat, itching and neuralgic pains in external ears.—Itching along Eustachian tubes.

5. Nose.—Soreness of nose.—Nose red and sore externally.—Septum deeply cracked.—Fluent coryza.—Crusts in nostrils.

6. Face.—Face flushed.—Soreness of l. malar bone, also of temporal region.—Lips dry and cracked; longitudinal crack on upper lip.

7, 8. Teeth and Mouth.—Soreness of teeth in closing them; < by cold water.—Gums sore and bleed easily.—Swelling in roof of mouth.—Bad taste in mouth in morning.—Taste of ingesta after dinner with eructations.

9. Throat.—Thick mucus collects in throat on rising.—Throat sore, dry, raw, inflamed, aching; feeling as if a lump in œsophagus; painful on swallowing.—Tonsils swollen; badly-smelling cheesy mass coughed up.—Throbbing of carotids.—Parotid and submaxillary glands swollen, sore, and painful.

11. Stomach.—During the day occasional eructations of scalding, acid, watery substance, so hot as almost to cause strangulation.—Nausea > by eating.—Uneasy, empty feeling in stomach.—Bruised, sore feeling in stomach.

12. Abdomen.—Pain in region of liver on stooping, and a bruised, sore feeling at 10 a.m.; < lying on r. side.—Sharp sticking through liver from before backward.—Abdomen distended with flatulence; tympanitic; < by pressure of clothes.—Soreness in hypogastrium; sharp pains through hypogastric region extending into l. inguinal region.

13. Stool and Rectum.—Burning in rectum after stool; creeping; urging; tenesmus.—Diarrhœa with tenesmus; stools watery or pappy; with flatulence; very offensive.

14. Urinary Organs.—Cutting in urethra.—Difficulty in voiding last drops of urine; several drops pass after he thinks lie has finished.

15. Male Sexual Organs.—Profuse, offensive sweat of genital organs.

16. Female Sexual Organs.—Pains in r. ovary; on walking in afternoon.—Pruritus, > by cold water.—Leucorrhœa staining yellow.—Mamma less painful than usual before period.

17. Respiratory Organs.—Breath very offensive.—Touching the neck occasions a cough with a smarting sensation extending to the ear and throat, under lobe of r. ear.

18. Chest.—Heavy feeling, bruised pains and stitches in chest.—After retiring, severe sticking through breast from nipple backward, > by pressure.—Sharp, stitch-like needle prick in r. breast on inspiration.—Twinges of pain up and down l. breast, outer side.

19. Heart.—Pain around heart;> lying on back; extending to l. shoulder and arm.—Throbbing of heart and all arteries, even those of lips, comes on after retiring; sour perspiration breaks out.—Palpitation with oppression.—Pulse irregular and intermittent.

20. Neck and Back.—Stiffness of neck and soreness of all neck muscles.—Neck tired; as if unable to support head.—Dull pain in back of neck, at base of occiput, > bending head backwards.—Stitching pains in region of r. kidney.

22. Upper Limbs.—Pain in shoulder every morning, greatly < by getting chilly.—From 5 to 6 p.m. pain in l. axilla extending down biceps muscle and also into pectorals.—Numbing pain in l. axilla extending down arms.—Pain in hands as if in bones; < touching cold table; visible throbbing of arteries.

23. Lower Limbs.—Pain from hips up to small of back; also down to feet.—Numbness from knees down.—Feet numb and pricking, esp. toes.—Pain in l. os calcis.

25. Skin.—General and excessive itching, with or without eruption, most marked on pubes, pudenda, whiskers and hairy portions of body generally; < in afternoon, 5 to 7.

26. Sleep.—Constant desire to yawn and stretch, 5 to 6 p.m.—Restless night; wakes 5 a.m. and sleeps again; many dreams.

27. Fever.—Chills along back in afternoon.—Heat 4 to 6, soon perspiring.—Heat and restlessness after retiring.—Face, head, and hands burn in afternoon.—Hands and feet alternately hot and cold.—Cold, clammy sweat at night; very

profuse.—Sweat of hands, though cold.—Soles of feet moist; disagreeable odour in axillæ.

Fagus.

Fagus sylvatica. Beech. N. O. Cupuliferæ. Trituration of the nuts.

Clinical.—Epilepsy. Headache. Hydrophobia. Vertigo.

Characteristics.—Our knowledge of this remedy is derived from the ill effects of eating the nuts; among which are dread of liquids and salivation. It is this which has suggested its use in hydrophobia. In addition, trembling, convulsions with periodic spasms, stiffness and coldness have been observed, pointing to the same kind of nerve irritation as is caused by the poison of rabies. Swelling of the mouth and headache were noted in one case. In some instances death has resulted from the effects of the nuts.

Relations.—*Compare:* Epiphegus (which grows on the beech and partakes of its properties) in headache and salivation.

SYMPTOMS.

1. Mind.—Intoxication.—Dread of water.—Terrified; apprehensive of death.—Gloomy and torpid.

2. Head.—Dizziness and stupefaction lasting all night; reeling.—Intoxication.—Headache; lasting several hours; dull; frontal.—Swelling of mouth, and headache.

8. Mouth.—Salivation; mouth flowing with froth and saliva.—Swelling of mouth, and headache.

11. Stomach.—Mouth flowing with froth and saliva; intolerable thirst; entreating for drink, but as soon as any liquid was brought he seemed to shudder as after eating unripe grapes; soon after eating the nuts had been seized with gloominess, torpor, and dread of liquids; urine fiery red, depositing copious turbid white sediment.—A few hours before death vomited a porracious bile. (This patient, a boy, had not been bitten by a rabid animal.).—Nausea.

18. Chest.—Seized with pleurisy, soon became delirious, and died in convulsions on eleventh day.

27. Fever.—Ardent fever.—Skin burning violently.

Fel Tauri.

Ox Gaul. Bilis Bovina. N. O. Ruminantia. Impissated gall triturated with sugar of milk; or lower dilutions may be made with water.

Clinical.—Asthma. Constipation. Diarrhśa. Gall-stones. Headache. Indigestion. Rheumatism.

Characteristics.—*Ox gall* is a remedy of very ancient use. It is used in the old-school mostly as a purgative; for preventing putrefactive changes in the intestines, and for increasing peristalsis. It is sometimes given along with *Opium* to prevent the constipating effect of that drug. In the stomach bile is a foreign body, precipitating pepsin and causing irritation of the stomach. It does not aid the digestion either of albumen or of farinaceous substances. *Fel. t*. has been proved homśopathically by Buchner, and has produced a few characteristic symptoms: disordered digestion, diarrhśa, headache, pains in joints, and cramps. It removed a tendency to sleep after eating. Several symptoms were noticed in nape of neck.

Relations.—*Compare:* Cholesterinum, Merc. dulc.

SYMPTOMS.

1. Mind.—Peevish, irritable mood.—Greatly inclined to all kinds of business; unpleasant impressions did not affect him.

2. Head.—Confusion.—Violent headache in morning, on pressure upon r. temple, extending on to occiput and nape of neck.

8. Mouth.—Tongue white.

11, 12. Stomach and Abdomen.—Increased thirst.—Odourless and tasteless eructations.—Gurgling in stomach and epigastric region.—Rumblings and motions in abdomen.—Violent peristaltic movements.

13. Stool and Anus.—Stool thin with urging and sensation of warmth in anus.—Stool thin, pasty, followed by pressing although with crumbling fćces.

14. Urinary Organs.—Urging.—Urine offensive.

15. Male Sexual Organs.—Scrotum itching and afterwards becomes moist.

18. Chest.—Anxiety in chest.—Constriction; on waking at 3 a.m. cannot sleep again for tightness of breath and cannot remain lying; it seems as though something in throat prevented free passage of the air; > by deep inspiration and sitting upright.

20. Neck.—Tension in nape.

21. Limbs.—Some tearings in l. shoulder-joint, extending up to nape of neck.—Cramp in r. toe.

26. Sleep.—Sound sleep in morning with some perspiration.—No inclination to sleep after eating, as he was accustomed to do.

Ferrum.

Iron. Fe. (A. W. 56). Including also symptoms of the acetate and the carbonate. Triturations of the pure metal and of the carbonate; solution of the acetate. The Protoxalate is also a useful preparation in the crude and in trituration. "Hensel's Tonicum," a liquid, is another serviceable form.

Clinical.—Anćmia. Aphonia. Asthma. *Biliousness*. Catalepsy. Chlorosis. Chorea. *Consumption* (Fe. acet.). Cough. Cramps. Debility. *Diarrhśa*. Enuresis diurna. Fever, intermittent. *Goître*, exophthalmic. Gonorrhśa. Hćmorrhages. Heart, affections of; palpitation of. Hectic. Hydrocephalus. *Kidneys, affections of*. Lienteria. *Menstruation, disorders of*. Neuralgia. Paralysis of viscera. Pregnancy, disorders of. Rectum, prolapsus of. Rheumatism. Shoulder, affections of. Spasms. Syphilis. Toothache. Urine, incontinence of. Vertigo.

Characteristics.—*Ferrum*, the Mars of the alchemists, is one of the prominent constituents of the animal body, being present in considerable quantity in the blood. It is present in many articles of daily food, and when given in excess to men or animals its first effect is to increase the amount of iron in the blood, stimulate the appetite, augment the heart's beats and the bodily vigour. The secondary effects, which ensue sooner or later if the administration of iron is continued, are those which give the indications for homśopathic prescribing. Hahnemann (*Mat. Med. Pur*.) describes the effects of iron on persons who habitually drink chalybeate waters: "In such localities there are few persons who can resist the noxious influence of the continued use of such waters and remain quite well, each being affected according to his peculiar nature. There we find more than anywhere else chronic affections of great gravity and peculiar character, even when the regimen is otherwise faultless. Weakness, almost amounting to paralysis of the whole body and of single parts, some kinds of violent limb pains, abdominal affections of various sorts, vomiting of food by day or by night, phthisical pulmonary ailments, often with blood spitting, deficient vital warmth, suppression of the menses, miscarriages, impotence in both sexes, sterility, jaundice, and many other rare cachexias are common occurrences."

The digestive disorders set up by Iron are marked and peculiar, and among them is intolerance of eggs. The occurrence of this symptom in a patient about forty-five, who had had repeated attacks of articular rheumatism, led Kunkel to cure his case after he bad been dosed for three weeks with salicylate of soda by the allopaths. The only other distinctive feature was constant.< of pain after midnight. The obvious advantages derived in many cases of anćmia from the use of Iron in its crude forms has led to very grave abuses in old-school practice. That Iron is what may be called a "nutritive" remedy in certain defective blood conditions, having an organopathic relation to the blood, I have no doubt. In the anćmia of cancer and syphilis it is often of great service as an accessory, and need not interfere with more specific remedies. But it is not suited to all cases of anćmia and chlorosis, or even to a majority of them, and should never be given without discrimination and careful watching. But apart from its organopathic sphere, *Ferrum* has a strictly homśopathic use in anćmia in which the highest potencies are curative. For excess of Iron will cause anćmia, and at times will aggravate it when present. The type of anćmia caused by Iron and suited for its homśopathic use is commonly seen in young persons subject to irregular distributions of blood. The cheeks are flushed as if in blooming health; but in spite of bloom in appearances there is pallor of lips and mucous membranes, great fatigue and breathlessness, and any motion will set up the symptoms. Delicate girls, fearfully constipated, with low spirits. Chlorosis with erethism. Mucous membranes abnormally pale. Feet swell. The irregular distribution of blood in chlorotics recalls another set of symptoms which indicate Ferrum: hćmorrhages of many kinds, from over-fulness of blood-vessels from vaso-motor paralysis, or else from delicacy of the vessels themselves. Throbbing pains, the blood-vessels all over the body throb violently. Feet swell. Fulness of blood-vessels accompanies neuralgia, which is brought on by washing in cold water, especially after being over-heated. Hammering headache. The pulse of *Ferrum* is full and *yielding*; (that of *Acon*. is full and *bounding*).
With *Ferrum* there is excessive irritability, both of the mind and of the tissues. It is like *Arsen*. and *Chin*. in this, as in many other symptoms, and it is an antidote to both. It is one of the best remedies for over-dosing with quinine, and hence the favourite old-school combination of "Quinine and Iron" is so far a wise one. Cramps are well marked in the pathogenesis; irritability of the bladder causing incontinence of urine when standing; irritability of the bowels, causing diarrhśa *whilst* eating. This symptom is peculiar to *Ferrum*, the diarrhśa coming on when the patient begins to eat. Many remedies have it immediately after eating. < From eating eggs. There is also gastralgia, heavy pressure in region of stomach; a feeling as if something rolled into the throat and closed it like a valve; frequent spells of nausea, periodic vomiting (especially at twelve midnight). The liver and spleen are affected. Walls of abdomen are sore. Pain in os tincć on lying down; feeling of dryness in vagina. *Ferrum* is a remedy that should be given carefully in hćmorrhagic phthisis, as it may aggravate. The acetate, iodide, and phosphate are better than the metal in such cases, unless the similarity is very close. Rheumatic symptoms, especially of left shoulder and deltoid. Paralytic

weakness. Restlessness. Tremor. Most symptoms are < by motion, especially sudden motion. Vertigo on suddenly rising; when crossing a bridge over water; vertigo as if balancing to and fro, as when on water. Neuralgia is > moving slowly about. In fact "> moving about slowly" is a keynote condition of many *Ferrum* cases. Rest < cramps. Lying down < pain in face; asthma; = pain in os tincć; > cough (*H. W.*, xxxi. 57). Descending stairs < headache. Walking slowly > palpitation; pain in arms; in hip-joint. The chief time of aggravation is night, and especially midnight, and also in early morning. The symptoms generally are < in cold weather, and > in warm air; but there is a good deal of contradictoriness in this respect, showing the irritability of *Ferrum* to all influences: uncovering chest > asthma and constriction, but too light covering < pain in shoulder. Over-heating = neuralgia, and so does washing in cold water. There is dread of open air, but open air > headache. The chlorosis of *Ferrum* is < in winter.

Relations.—Ferrum compares with Graphites (which contains iron), Manganum, and the other metals. Teste puts it at the head of a group comprising Plumb., Phos., Carb. an., Puls., Zinc., Secal., Mag. mur., Chi., Bar. c. *It is antidoted by:* Ars., Chi., Hep., Ip., Puls. *It antidotes:* Ars., Chi., Iod., Merc., Hydrocy. ac., tea and alcoholic drinks. *It is complementary to:* Alumina, Chi. *Compatible:* Aco., Arn., Bell., Chi., Con., Lyc., Merc., Phos., Verat. *Incompatible:* Thea, beer. *Compare:* Borax (vertigo on descending); Mang. (cough > lying down); Anac., Spo. (cough > after eating), Ars., Chi. (intermittent fever); Phos. (cholerine); Selen., Thuj. (bad effects of tea). Graph. (flushes of heat); Rhus (> from motion); Oleand. (lienteria); Caust. (paralyses).

SYMPTOMS.

1. Mind.—Anxiety, with throbbing in the epigastrium.—Anxiety as after committing a crime.—Peevish, passionate, and disputative.—Irritable; little noises drive to despair.—Gaiety, alternating with sadness, every other day.

2. Head.—Confusion and heaviness in the head.—Vertigo, which causes falling forwards, as from the motion of a carriage, esp. on moving, stooping, &c.—Dizziness and turning vertigo, on looking at running water; with sickness at the stomach in walking; with the sensation as if the head would constantly incline to r. side.—Pressive pain in the head, esp. in the fresh air.—Painful confusion in the head, above the root of the nose, esp. in the evening.—Pulling from the nape of the neck to the head, with shootings and buzzing.—Periodical hammering and pulsative headache, which oblige the patient to lie down, every two or three weeks.—Congestion in the head; enlarged veins, sensitiveness of the head to the touch; worse after midnight and towards morning; returning periodically.—Pain in the back part of the head when coughing.—Pain in the scalp, as if it were galled.—Profuse falling off of the hair, with pain when it is touched.

3. Eyes.—Eyes cloudy, dull, and watery, with blue rings around them, esp. after slight fatigue (in writing).—Eyes red, with burning pain.—Swelling and redness of the eyelids, with a sty, suppurating on the upper lid.

4. Ears.—Buzzing in the ears, mitigated by supporting the head on a table.

5. Nose.—Epistaxis, chiefly from one nostril and in the evening.—Constant accumulation of clots of blood in the nose.

6. Face.—Face earth-coloured, or pale and wan, with sunken eyes.—Fiery redness of the face; the veins are enlarged.—Yellow or bluish spots on the face.—Small red spots on the cheek, which is pale.—Puffing of the face round the eyes.—Lips pale.

9. Throat.—Pressive pain in the throat, on swallowing.—Spitting of blood.—Constrictive sensation in the throat; feeling as if something rolled into throat and closed it like a valve.

10. Appetite.—Sweetish taste, like that of blood.—Bitter taste of food.—Want of appetite, esp. in the morning, alternating with bulimy.—Dislike to food and acids.—Longing for acids.—Meat lies heavy on the stomach.—Insatiable thirst, or absence of thirst.—Solid food appears too dry.—After every meal, risings and regurgitation of food, even of that which has been eaten with good appetite.—Vomiting after taking acids.—Pressure on the stomach and on the abdomen, always following eating and drinking.—Beer affects the head, or causes vomiting.—Cannot eat or drink anything hot.

11. Stomach.—Nausea, with inclination to vomit, during a meal.—Vomiting of food, esp. at night, or immediately after a meal, even after eating only fresh eggs.—Sour vomiting and acid rising.—Everything vomited tastes sour and is acrid.—Bitter risings after eating fat things.—Pressure on the stomach, esp. after eating meat, or even after taking the least food or drink.—Cramp-like pain in the stomach.—Pressive cramps in the stomach, on every occasion of eating or drinking.

12. Abdomen.—Inflation and hardness of the abdomen.—Liver enlarged, sensitive.—Spleen large, sore.—Cramps in spleen region.—Cramp-like pains in the abdomen.—Cramps in the abdominal muscles, as if the abdomen were contracted, esp. during physical exertion, and on stooping, so that he can only straighten himself slowly.—Flatulent colic at night (violent rumbling in the abdomen).—Painful heaviness in the hypogastrium on walking.—Painful weight of the abdominal viscera in walking, as if they would fall down.—The bowels feel sore as if bruised, when touching them or when coughing.

13. Stool and Anus.—Watery and corrosive diarrhśa, sometimes accompanied by cramp-like pains in the abdomen, the back, and the anus.—Watery diarrhśa with burning at the anus.—Discharge of blood and mucus at every stool.—Painless

diarrhśa (involuntary during a meal).—Undigested fćces.—Slimy fćces.—Ascarides in the rectum discharged with the slimy stool.—Costive: stools hard and difficult, followed by backache.—Constipation from intestinal atony; with hot urine.—Contractive spasms in rectum.—Itching at the anus from ascarides at night (children).—Protrusion of large varices at the anus.—Blind and fluent hćmorrhoids.

14. Urinary Organs.—Pains in bladder.—Involuntary urination by night; also by day.—Constant desire to urinate, with pain in liver, chest, and kidneys.—Urine blood-red, contains blood corpuscles.—Albuminuria.—Hot urine.

15. Male Sexual Organs.—Increase of sexual desire, with frequent erections and pollutions.—Impotence.—Nocturnal emissions.—Flow of mucus from the urethra.

16. Female Sexual Organs.—Metrorrhagia, with over-excitement of the sanguineous system.—Face fiery red, and copious flow of blood, at one time liquid, at another black and coagulated, accompanied by pains in the sacral region and abdomen, similar to those of child-birth.—Catamenia feeble and of a pale blood.—Suppression of the catamenia.—During coition, smarting and pain, like that of excoriation in the vagina, with want of enjoyment.—Swellings and indurations of the vagina.—Prolapse of vagina; pain in os tincć on lying down.—Before the catamenia, shooting pains in the head, with tingling in the ears.—Abortion.—Milky and corrosive leucorrhśa.—Sterility.

17. Respiratory Organs.—Hot breath.—Oppressed, short breathing.—Hoarseness and roughness in the throat.—Tickling in the trachea, which greatly excites coughing.—Cough, only on moving and walking.—Cough > on lying down.—Purulent expectoration from the cough.—Spasmodic cough, esp. in the morning, with expectoration of tenacious and transparent mucus, ceasing immediately after a meal; or dry, spasmodic cough, commencing after a meal, with vomiting of food.—Sensation of dryness in the chest.—Cough worse in the evening, till midnight.—Fetid, greenish expectoration, with streaks of blood, esp. at night, or in the morning.—Cough after a meal, with vomiting of food.—On coughing, pains in the occiput, or shootings, and pains as of a bruise in the chest.

18. Chest.—Difficulty of respiration, with almost imperceptible rising of the chest, and great dilation of the nostrils during expiration.—Difficulty of respiration, esp. at night, or in the evening, as if commencing in the epigastrium, < during repose, and > by intellectual or physical occupation.—Fulness and tightness of the chest.—Asthma (after midnight) compelling one to sit up.—Asthma most violent when lying, or when sitting still without doing anything; > by walking and talking.—When sitting still, loud breathing as if asleep.—Fits of suffocation, in bed in the evening, with burning pain in the throat and the upper part of the body, and coldness in the extremities.—Constrictive oppression of the chest.—Constrictive spasms in the chest, < by walking or movement.—Stitches and soreness in the

chest.—Tensive lancinations in the chest, extending to the shoulder-blades.—Congestion in the chest.

19. Heart.—Palpitation: < from least motion; > walking slowly; in onanists; after loss of fluids.—Venous murmurs.—Hypertrophy.

20. Neck and Back.—Stiffness of the muscles of the neck, with pain during movement.—Swelling of the glands of the neck.—Tearing (paralytic) between the shoulder-blades at night, into the upper arm (l.); he cannot raise the arm; slow movement improves it gradually.—Shootings in the shoulder-blades on moving the arms.

22. Upper Limbs.—Shootings and tearings in the joint of the shoulder, and in the arm, or pullings, paralytic weakness, and heaviness.—Cracking in the shoulder-joint.—Nightly tearing and stinging in the arms.—Uneasiness in the arms.—Swelling and desquamation of the skin of the hands.—Cramps and numbness in the fingers.

23. Lower Limbs.—Tearings, with violent lancination, from the coxo-femoral joint to the tibia, < in evening in bed, and during repose.—Paralytic weakness and numbness in the thighs.—Weakness in the knees, so that they yield, with uneasiness of the feet.—Varices on the legs.—Stiffness, traction and heaviness in the legs.—Swelling of the knees and of the joints of the feet.—Swelling of the feet, with drawing pain, esp. on beginning to walk.—Cramps in the calves of the legs, the soles of the feet, and the toes.—The toes are contracted.

24. Generalities.—Violent pains, tearings and shootings, esp. at night, which compel movement of the parts affected.—Varices.—Contraction of the limbs.—Cramps in the limbs (during the day).—Dropsical swellings, with shooting pains.—Ebullition of blood and hćmorrhage.—The majority of the symptoms show themselves at night, are aggravated by a sitting posture, and mitigated by gentle movement.—Great lassitude and general weakness (almost paralytic), produced even by speech, often alternating with anxious trembling of the whole body; she is so weak that she must lie down.—Emaciation.—After walking in the open air, sickly feeling of fatigue, to the extent of losing consciousness, with obscuration of the eyes, and buzzing in the head.—Restlessness of the limbs.—Great need to lie down.—Cracking in the joints.

25. Skin.—Burning sensation in different parts of the skin, with pain as from excoriation on being touched.—Paleness of the skin over the whole body.—Dirty, earth-coloured skin.—Dropsy.

26. Sleep.—Excessive drowsy fatigue, with agitated sleep, at night, anxious tossing, numerous dreams, and difficulty in going to sleep again after waking.—Vivid dreams.—Can only lie on her back at night.—The child does not sleep, disturbed by the itching caused by the ascarides.—Sleep retarded in the evening.—Anxious

tossing about in bed (after midnight).—Eyes half open during sleep.—Inability to sleep when lying on the side.

27. Fever.—Frequent shiverings of short duration.—Shiverings in the evening with a feeling of cold when in bed, all night.—Shiverings with violent thirst, preceded or accompanied by headache.—Chill with thirst and red, hot face.—Dry heat, with urgent inclination to throw off all covering.—Pulse full and hard.—Ebullition of blood in the day, with heat in the evening, esp. in the hands.—Fever, with congestion in the head, puffing round the eyes, swelling of the veins, vomiting of food, short respiration and paralytic weakness.—Copious perspiration, excited by the least movement during sleep.—Nocturnal perspiration of a strong smell.—Cold perspiration, with anxiety during the spasms.—Colliquative, clammy sweat.—Profuse and long-continued perspiration, during the day when moving, and at night, and in the morning hours in bed.

Ferrum Arsenicicum.

Arseniate of Iron. Triferric diarsenate. Fe_3 $_2As$ O_4.

Clinical.—Anæmia. Bright's disease. Chlorosis. Liver, enlargement of. Spleen, enlargement of.

Characteristics.—Hale was the first to use *Fe. ars*., giving the 2x with promptly curative result to an anæmic girl who had been given *Iron* and *Arsenic* separately, under old-school treatment, in vain. P. C. Majumdar (*Ind. Hom. Rev*., v. 104) has put it to excellent use in cases of enlarged liver and spleen with fever. When there is no fever *Fe. iod*. is better. These are his indications for *Fe. ars*.: Enlarged spleen with high fever of a continued type; during fever the face is flushed and sweaty, but during the intermission the face is pallid. Disinclination to work, even to leave his bed; constipation, or, sometimes, colliquative diarrhœa, the stools consisting of undigested matter and mucus, no thirst during any stage of the fever; heat intense and prolonged with slight burning of the whole body, emaciation, and debility. Majumdar reports these two cases: (*1*) A robust, healthy man, 25, went into a very malarious district of Bengal and had his first attack of fever. He was given large doses of *Quinine* which suppressed the paroxysms for a time, but they continually recurred. After four years he returned home a changed man: pale, jaundiced, emaciated; abdomen filled with enlarged and indurated liver and spleen, slightly tender to pressure. These organs left no room for his food. He had obstinate constipation; high fever generally appearing in afternoon, no chill or thirst, but copious sweat without much relief to fever. *Fe. ars*. 6, twice daily, made an improvement in three days. It was continued for a month and a half with occasional stoppages, and in six months he was completely restored to health. (*2*) A boy, 15, suffered from fever and enlarged spleen. The liver was not enlarged. Voracious

appetite, but no digestion, undigested diarrhœic stools. Continued fever, 102° to 104°, burning of body. Some thirst. Great emaciation. *Fe. ars*. 6 night and morning. He was cured perfectly in a year. *Fe. ars*. has been used with benefit in cases of albuminuria.

Relations.—*Compare:* Fe. i., Fer., Ars., Calc. ars., Chi.

Ferrum Iodatum.

Iodide of Iron. Fe I_2. Trituration of freshly prepared crystals. Solution.

Clinical.—Albuminuria. Alcohol, effects of. Amenorrhœa. Breast, tumour of. Bronchorrhœa. Cancer. Catarrh. Coryza. Diabetes. Dyspepsia. Exophthalmic goître. Eyes, scrofulous inflammation of. Glands, enlargements of. Gonorrhœa. Heartburn. Kidneys, affections of. Leucorrhœa. Liver, enlarged. Nose, scrofulous inflammation of. Ovarian dropsy. Periostitis. Plethora. Pneumonia. Scoliosis. Scrofula. Spleen, enlarged. Tuberculosis. Uterus, prolapse of. Writer's cramp.

Characteristics.—The *Iodide of Iron* has had an independent proving. It corresponds more particularly to scrofulous affections, glandular enlargements, and tumours. A number of peculiar symptoms were felt in rectum and anus: As if anus were compressed; as if worms were in anus; as if something twisted round about in a circle; as if a cord were drawn connecting navel and anus; as if a screw were boring in anus. *Fe. i*. has a symptom somewhat like the *Ferrum* symptom: "as if something rolled into throat and closed it like a valve." With *Fe. i*. it is, "food seems to push up to throat as if it had not been swallowed." Lancinating or cutting pains are noted in eyes, ears, and root of nose to occiput. Sensation as if lying in a cramped position. P. C. Majumdar (*Ind. Hom. Rev*., v. 104) has used *Fe. i*. with success in cases of enlarged liver and spleen when unaccompanied by fever. (When fever is present *Fe. ars*. is the better remedy.) The leading symptoms are: "Feels as if she had eaten too much, a sort of upward pressure. Stuffed feeling in abdomen as if she could not lean forward; costiveness." These are very common symptoms in cases of enlarged spleen. "Sweet-smelling urine" appears to be a leading symptom of *Fe. i*. Berridge removed with it this train of symptoms: "Morning catarrh, hot and restless in bed, sweet smell of urine" (*H. P*., vi. 208). Motion and walking <. Most symptoms are < at night, and in the morning. Warmth <; open air >. Touch <. Suited to scrofulous or mercurial diathesis; to subjects of relaxed fibre (phthisis in third stage; bronchorrhœa, pneumonia).

Relations.—*Compare:* Alum. (anæmia, leucorrhœa, prolapsus uteri); Alumen (swollen vagina, prolapsus uteri); Cauloph. (prolapsus uteri and leucorrhœa from atony; fitful, crampy pains); Helon. (pruritus, prolapse, leucorrhœa, albuminuria); Hydrast. (debility and atony; tenacious, profuse leucorrhœa; palpitation); Graph.

(chlorosis, leucorrhœa profuse, hot, watery); Iod. (red face, irritability; corroding leucorrhœa, marked): Kali bich. (stringy, albuminous leucorrhœa; stringy expectoration). Thyroidin (Palpitation; exophthalmic goître). Fe. bro. (leucorrhœa, prolapsus uteri). Fe. ars. (enlarged liver and spleen).

SYMPTOMS.

2. Head.—Headache, a confused sensation with heaviness, < in warm room; by smoking; wearing hat; reading; writing; motion; > in open air; sitting or standing in a draught.—Sharp pain from below eye up through head to vertex.—Cutting from bridge of nose through the occiput.

3. Eyes.—Purulent inflammation and photophobia; glands swollen.—Exophthalmos after suppressed menses.—Trachoma.—Painful lancinations in eyes and ears.

4. Ears.—Roaring in ears.

5. Nose.—Nose stopped; freer towards noon.—Thick nose of scrofula.—Nose swollen with ulcers and crusts inside.—Profuse discharge of mucus from nose and frequent expectoration of mucus from larynx and trachea.—A chronic nasal catarrh becomes worse; discharge usually in mornings now lasts all day; blowing gives no relief discharge thick, yellow or green.

8. Mouth.—Taste: metallic bitter; flat, insipid; inky; pasty sharp, biting; bad in morning; of peppermint.—Tongue, thick yellow coat.—Burning of tongue and mouth; mucous membrane of mouth and throat uniform red, or dotted with fine dense bright red papular eruption.—Burning pain and prickling and swelling of mucous membrane.—Dryness of mouth and throat.

9. Throat.—Violent tickling and scraping in throat, with sensation as though he would suffocate; hawking of mucus and cough.—Rattling of mucus.—Food seems to push up to throat as if it had not been swallowed.

11. Stomach.—No appetite; no relish for smoking.—Great thirst.—Sour and bitter rising from stomach.—Rising up in throat of greasy, acrid, stinging taste.—Eructations, nausea, and vomiting.

12. Abdomen.—Tenderness at epigastrium; at same time pinching in back, over spine, directly behind epigastrium.—Fulness even after a little food, as if she had eaten too much, a sort of upward pressure; stuffed feeling as if she could not lean forward.—Stomach full of wind, every breath gives pain as from a weight in epigastrium.—On rising, or at night, when turning in bed, heart beats violently; with pains in epigastrium or lower end of sternum.—Dull pain under short ribs.—Abdomen swollen; bloated after food or drink; pushed up; food soon satisfies.—Rumbling with slight colic before stool.—Abdomen, when pressed, feels

like a rubber ball.—Feeling as of a cord drawn connecting anus and navel, with cutting pain on straightening up from bent position.—Abdominal walls numb; if pinched feel sore long after.—Inguinal pain extending across hypogastrium, sides feels stiff as after a strain.—Feeling in sides, low down, as of needles pricking her; < raising arms and walking; inguinal region sore on walking.—Stitches in r. groin when walking.

13. Stool and Anus.—Bowels not moved for a week, then stools loose; may have two movements: first costive, second sudden and loose (thin, light yellow), preceded by griping.—Small, hard stool, with sticking and pain as from constriction in anus on passage of fæces through it; stool hard.—Feeling in rectum and esp. in anus as if compressed; constriction, as if worms were in it; stool easy and painless.—Peculiar feeling in rectum and anus as if something twisted and turned about in a circle, and something like drops of water flowed down, and as if a screw were boring upward and downward.—Urging to stool with much pain in abdomen (drawings from above navel down r. side), followed by small, yellowish-brown, somewhat hard stool, in the morning.—Frequent ineffectual urging.

14. Urinary Organs.—Pain in both kidneys, esp. l.—A feeling in fossa navicularis as if water remained in it and could not be forced out any farther, in the morning.—Urine dark-coloured, depositing thick white sediment; urine scalds.—Frequent and profuse emission of light-coloured urine, having a sweetish smell, and slight milky sediment.—Albuminuria with œdema; in hard drinkers.

15. Male Sexual Organs.—Erections at night, with violent pain and burning in urethra; unable to urinate; tenesmus in neck of bladder.—Prickling itching in urethra, esp. fore part, with frequent urging to urinate, but very little flow.—Crawling tickling in urethra and rectum.

16. Female Sexual Organs.—Hysterical attacks; great debility; leucorrhœa, anorexia; finally dropsy of r. ovary; menses scanty, preceded by pain in r. breast and followed by profuse leucorrhœa; three weeks after beginning treatment, sudden loss of consciousness and discharge of two quarts of yellowish fluid from vagina, after which swelling subsided and health was entirely restored.—Constant bearing-down as if something was coming away; when sitting feels as if pushing something up.—Retroversio uteri; sensation of pressure and protrusion of rectum on standing.—Prolapse; inversion; antiversion.—Amenorrhœa.—Itching, soreness, and swelling of vulva and vagina.—Leucorrhœa like boiled starch; when bowels move the discharge is stringy.

17. Respiratory Organs.—Shortness of breath; obliged to take a deep breath, with sensation of oppression of chest, and a pressure beneath sternum.—Short, hacking cough, with yellowish-white, rather thick expectoration and at times pain in chest.—Expectoration of greyish-white, rather tenacious mucus drawn out in threads.—Hæmoptysis.

18. Chest.—Sudden sharp sticking pain extending from l. nipple outward to arm; < by pressure; frequently returned during afternoon and evening.—Scirrhous tumour near r. nipple, small and painless at first, increasing with sharp, lancinating pains from breast to axilla, sensitive to touch (cured).

19. Heart.—Running up stairs causes violent palpitation and pain on top of head.—Heart-beat so violent, it awoke her from sleep, throbbing all over.—Heart beats quickly and seems to force the blood violently through whole body.—Blood-vessels throb all over, even when quiet.

20. Neck and Back.—Sides of neck sore when touched or on moving.—Small of back as if broken; felt only at night; as if lying in a cramped position.—Dull pain in back on each side about six inches above kidneys, extending through chest.—Painful sensation in back and kidneys and lower portion of spine, starting from lumbar vertebræ.

21. Limbs.—Weakness and bruised sensation in all the limbs, with aversion to moving about.—Periostitis of fingers and toes.—Painful drawing in tendons and back of r. hand and l. foot.

22. Upper Limbs.—Rheumatic, bruised, paralysed feeling in r. upper arm and shoulder.—R. arm weary and as if paralysed, has to stop writing in evening.

23. Lower Limbs.—Rheumatic pain extending upward from back of l. foot to pelvis in evening.—R. tibia painful.

25. Skin.—Short-lasting eruptions like urticaria, eczema, and lichen.

26. Sleep.—Sleep restless; frequent waking; many dreams of long past events; easy erections.—Frequent waking with excessive urging to stool and pain on micturition.—Dreams of thieves and fighting with them.—Dreams that he has grown very large, thirty feet high, and everything about is small and insignificant; the bedstead was too small and short frequent starting in sleep, and waking with a feeling as though paralysed.

27. Fever.—Coldness in a warm room about noon heat 3 to 4 p.m.

Ferrum Magneticum.

Sesquioxide of Iron. Loadstone. A black oxide of iron. FeO Fe_2 O_3.

Clinical.—Amaurosis. Diarrhœa. Flatulence. Ganglion. Rheumatism. Vision, disorders of. Warts. Whitlow.

Characteristics.—Caspari is the authority for *Fer. magnet*. It produces paralytic weaknesses like the other Iron preparations, of which this is the most peculiar: "After perspiring during a moderate walk, weakness and lassitude, which seem to proceed from the abdomen." As with *Ferrum*, there is < during a meal; flatulency, grumblings, movements in abdomen; with urgent diarrhœa after a meal. The abdominal sufferings are felt more on the left side. Very abundant and frequent emission of fetid wind. Many rectal and urinary symptoms are recorded. The appearance of warts may indicate that *Fer. magn*. is related to the sycotic constitution.

Teste, who puts *Fer. magn*. in the *Arnica* group along with *Ledum, Croton, Rhus* and *Spig*., has had some experience with it. It relieved (after *Spig*.) an old man suffering from chronic rheumatism of the nape of the neck, with irritable disposition. Also a case of compound capsular cataract in a gouty patient. A third patient had rheumatism of both thighs, coming on after violent exercise. This patient was treated in two attacks. In the first attack he received *Arn*. first, and then *Fe. mag*. In the second, *Fe. mag*. was given at once and the effect was speedy and marked. The fourth patient had a very unpleasant experience with the medicine. He suffered from a mercurial neurosis, and was very sensitive to medicines. One of the symptoms which led to its being given was a painful contraction of the posterior cervical muscles, against which no remedy Teste had tried had produced any effect. *Fe. mag*., four globules in a tumbler of water, two tablespoonfuls every day, was the prescription. The first tablespoonful, which was taken in the morning, seemed to produce a sensible improvement; but a quarter of an hour after the second dose, which was taken at 4 p.m., the sight became dim; a halo of fire, red and violet, was seen first in front of the right, and afterwards in front of the left eye; soon after, this halo, which formed a circular zigzag-shaped line, became narrower and narrower and finally produced such a complete blindness, that the patient assured Teste he was unable to distinguish night from daylight. This lasted one hour and did not pass off entirely till after a meal. Much more distressing phenomena followed: Towards 8 p.m. the pain in the nape, which first was seated on the left side, passed to the right, invading the whole extent of the trapezoid muscle, where it became literally frightful. "For two days and nights the patient, who was a brave and strong man, and whom I had seen bear the most painful surgical operations without uttering a sound, suffered to such an extent that he uttered heartrending cries." *Camph., Puls*., and *Bry*. failed to relieve, the first rather aggravated. *Rhus t*. effected some relief. But it did not prevent the recurrence, for eight days in succession, of the visual phenomena, though with less intensity than the first time, at irregular intervals, generally 6 or 7 a.m., and sometimes even at night in perfect darkness.

Relations.—*Compare:* Fer., Elect., Galv., Magn. arct., Magn. aust.

SYMPTOMS.

1. Mind.—Indecision, and long reflection before undertaking anything.—Indolence, slowness of movement.—Air of importance, and self-sufficiency.—Irascibility.

2. Head.—Pulsative headache, by fits.—Circumscribed headache, esp. in the morning, generally on r. side.—Headache on stooping, on moving the arms, and on going up stairs.—Headache, suddenly attacking the eyes and the nose, as if the patient were going to weep, or to sneeze.—Itching in the scalp.—Eruption of small painful pimples on the scalp.—Small scabs on the head.—Falling off of the hair.

3. Eyes.—Darkness before the r. eye, which causes it to wink.—Variegated areola round a light.—Halo of fine, red or violet, contracts till vision entirely disappears, cannot tell day from night; lasts an hour; vision fully restored only after a meal; repeated at irregular intervals eight days in succession.—Pressive pain on the eyelid, which impedes the sight.—Swelling of the lower lid, which makes the eye appear smaller.—Pricking itching in the canthi.—Painful sensibility of the lachrymal caruncula, with profuse lachrymation.

4. Ears.—Pullings in the ears and the pharynx, during deglutition.—Itching, wringing, and cold lancinations, in the auditory duct.—Tingling in the ears.

5. Nose.—Sneezing, with stoppage of one nostril, and catarrh.

6. Face.—Face dejected, with general heat, followed by redness of the face.—Heat of the face.—Itching and tingling in the face and on the lips.—Eruptions on the forehead, in the eyebrows, at the root of the nose, on the cheeks, the lips, and the chin.

7. Teeth.—Bleeding of the gums, when slightly pressed upon.—Teeth easily set on edge.—Painful sensibility of the teeth during mastication.

8. Mouth.—Accumulation of water and saliva in the mouth.—Itching sensation in the posterior part of the palate.

9. Throat.—Bitter and rancid taste in the pharynx, on hawking.—Sensation as if mucus were adhering to the uvula.—Lancinations in the throat.—Pressure in the œsophagus, as if too much had been swallowed at one time.

11. Stomach.—During a meal, flatulency, movements, and grumbling in the abdomen.—After a meal, taciturnity, lassitude, heat, expulsion of flatus, pains in the region of the stomach, with anguish, pains in the epigastrium, esp. on breathing, urgent want to evacuate, and diarrhœa.—Abortive risings.—Nausea.

12. Abdomen.—Uneasiness in the abdomen.—The abdominal sufferings are felt more particularly on l. side.—Rolling, grumbling, borborygmi, and whistling in the

abdomen, with expulsion of flatulency, and urgent want to evacuate, and to make water; the movements in the abdomen are accompanied by pullings along the legs, as far as the toes.—The flatulency seems all to proceed from one place, in l. side of abdomen.—Very abundant, and frequent emission of fetid wind.

13. Stool and Anus.—Urgent want to evacuate, with expulsion of flatus only.—Loose evacuations, with much flatulency, and sometimes with excrements of a fetid smell, physical depression, and paleness of face.—On expelling the flatus there escapes a small liquid evacuation.—Itching and shooting in the anus.—Tingling and itching in the rectum.

14. Urinary Organs.—Urine red and copious, which becomes the colour of clay after having stood some time.—Itching and lancination in the scrotum, and in the extremity of the glans.—Increase of sexual desire, with and without erection; or absence of all sexual desire, yet without impotence.

17. Respiratory Organs.—Frequent hawking of mucus.—Dry cough after dinner, proceeding from an irritation in the trachea, as if one had swallowed dust.

18, 19. Chest and Heart.—Tearing and lancination in the l. side of the chest, when breathing.—Sensation of emptiness in the chest.—On drawing up the chest, and throwing back the r. arm, the heart beats violently and with repeated throbs.

20. Neck.—In the morning, pain in the nape of the neck, as if from having lain in an inconvenient position.

22. Upper Limbs.—Cramp-like or paralytic pullings, or jerking pullings in the forearms, and in the hands.—Pain, as from dislocation in the wrist.—Paralytic pulling in the r. arm.—Prickings, esp. in the phalanges, and in the ends of the fingers.—Spots, like ephelides, in the arms, and in the fingers.—Small warts on the back of the hands, and on the wrist.—Pulsation at the end of the thumb.—Whitlow.—Dryness and tension in the hands.

23. Lower Limbs.—Tensive pressure in the hip-joint, on drawing back the leg, at night and in the morning; the pain is dispersed by lying on that part, but returns when the position is changed.—Acute lancinations in the knee.—In the morning, spasms, and contraction in the calf of the leg.—Painful stiffness on the internal surface of the knee, esp. on bending it, after extending the leg, and only while walking in the open air.—In the evening, in bed, sharp pains in a small place on the foot, with great sensitiveness to the touch, or to the bending of the foot upwards.—Ganglion of the foot.—Tingling and pricking in the heels.—Starting in the soles of the feet.—The little toe is painful, as if it were violently compressed.

24. Generalities.—Pains and itchings, some of which reappear at intervals of four weeks.—After a walk, thirst, perspiration, lassitude, paleness.—Prickings,

lancinations, tingling, and itching in different parts.—Paralytic weakness, difficulty of movement, and relaxation of the muscles.—Excessive lassitude.—Trembling in the legs and arms.—After perspiring, during a moderate walk, weakness and lassitude, which seem to proceed from the abdomen, with a trembling in the knees and hands.—Fatigue on taking the slightest exercise.

25. Skin.—Itching and tingling in different parts, esp. in the evening, mitigated by scratching, but appearing in other parts.—Red spots, sometimes of a bright red, or bluish red; some disappear on being pressed.—Small warts (on the hands).

26. Sleep.—Violent and noisy yawnings, with accumulation of water in the mouth.—Drowsiness, with prompt sleep on lying down, or even when seated.—Absurd dreams at night, and awaking towards three o'clock in the morning, with perspiration and heat.—Dreams immediately after lying down, waking with a start; coldness which causes trembling.—Inclination to remain in bed in the morning.—After rising, weakness in the knees.—Sleep, not refreshing, with pressure on the eyes, confusion in the head, flaccidity in the skin and face, and lassitude in the arms.

27. Fever.—Shivering and cold, in the side opposite to that on which the patient has lain.—After a walk, heat with weakness, proceeding from the stomach, trembling, vertigo, paleness, want to lie down.—Heat, as if a catarrh were developing itself, with lassitude and down-cast eyes.—Internal heat, with perspiration and slow pulse, after washing the body.—Pulse slow and small.—Perspiration on the slightest exercise.—Sweat in the morning, esp. on the body, and on the occiput.—Sweat of an acid smell, as in measles.

Ferrum Muriaticum.

Ferrum Chloratum. Ferrous Chloride or Dichloride. $Fe Cl_2, 4H_2O$. (Crystals.) Tincture, consisting of 25 parts of crystals to 225 parts of alcohol.

Clinical.—*Anæmia*. Angina tonsillaris. Constipation. Cramps. Diabetes. *Diarrhœa*. Disparunia. Dyspepsia. Dysentery. Hæmorrhages. Headache. Marasmus. Neuralgia. *Pleurisy*. Rickets. Rheumatism. Scrofula. Spleen, enlargement of. Typhoid fever. *Vomiting. Worms*.

Characteristics.—*Fer. mur*. is the liquid preparation of Iron which, under the name of "Steel Drops," has been most used in old-school practice in the treatment of anæmia. Our knowledge of its properties is derived mainly from over-dosings, with a few provings, and clinical observations. *Fer. mur*. is mainly a right-side medicine, causing neuralgia and headache of the right side of face and head, and rheumatism of right shoulder. On the other hand it affects the spleen, causing pain

in the left hypochondrium. Like other Iron preparations, it affects the blood, causing hæmorrhages of all kinds. On venesection the blood is remarkably black and thick, so that it can with difficulty be made to flow. Weakness, restlessness, and nervousness. Poisonous doses have caused convulsions. Vascular and nervous irritability after hæmorrhages; < from eating, and especially from eggs. Spasmodic cough, > by eating. Most symptoms are < by motion; < during the night and in the morning. Pressure <. Effects of mechanical injury. Cold and heat alternate; cold, anxious sweat, with muscular cramp; strong-smelling night-sweat.

Relations.—*Compare:* Chi.; Nat. m.; Sang. (shoulders); Fe. picric. (prostate gland); other preparations of Iron.

SYMPTOMS.

1. Mind.—Loquacity.—Depression.

2. Head.—Vertigo with enlargement of spleen.—Severe neuralgic pains in r. temple and r. side of face.—Headache, with ascarides.—Pain in back of head on coughing.

3. Eyes.—Eyes injected.—Bright redness of margins of lids.

6. Face.—Paleness of face, red spots on pale cheeks.—Flushes.—Face swollen and livid.

8. Mouth.—Insipid flat taste.—Dry mouth.—Solid food tastes dry and insipid.—Tongue very much coated.—Tongue swollen and protruded, with ropy mucus from mouth.—Palate and interior of mouth burnt and parboiled-looking.

9. Throat.—Extremely severe sense of burning and constriction in the throat.—Angina tonsillaris.

11. Stomach.—Anorexia; in morning.—Unquenchable thirst or thirstlessness.—Longing for acids.—Aversion to meat or anything sour.—Sour belching, esp. after solid food.—Bilious eructations after fat food.—Vomiting after eating; after eating eggs.—Stomach somewhat distended.—Hand riveted to region of stomach, as the principal seat of the pain.

12. Abdomen.—Severe pain in l. hypochondrium; at times at night.—Spleen enlarged and sensitive to pressure.—Spasmodic constriction of abdominal muscles, as if abdomen were constricted, esp. when stooping, so that he can only straighten himself slowly.—Great pain along whole length of colon, < by pressure and any movement of body.—Hypogastrium swollen and very sensitive, esp. above pubes.—Piercing pains in hypogastrium.

13. Stool and Anus.—Diarrhœa, with pains in limbs.—Chronic diarrhœa, with loss of appetite and rapid emaciation.—Diarrhœa, with intestinal catarrh in typhoid

fevers, also fetid, debilitating discharges.—Dysenteric diarrhœa, with considerable pain, tenesmus, stools of blood and membraneous shreds.—Stools dark, inky, copious.—Obstinate constipation.—Dry cough, ending in retching; itching of nose and anus, enuresis, headache, neuralgia, nervousness; ascarides.—Ascarides, coincident with bleeding piles.

14. Urinary Organs.—Diabetes mellitus.—Chronic affections of bladder.—Hæmaturia, hæmorrhage from urethra or kidneys.—Habitual discharge of phosphates in urine. Enuresis.—Almost complete retention.—Scanty urine.—Deposit of bright red crystals.

15. Male Sexual Organs.—Enlarged prostate gland.

16. Female Sexual Organs.—During coition, soreness and cutting pain in vagina; want of pleasurable sensation.—Metrorrhagia; dysmenia; leucorrhœa.

17. Respiratory Organs.—Breathing stertorous; suffocation impending, inspiration esp. difficult.—In morning, spasmodic cough with expectoration of transparent tough mucus, at once > by eating small quantities of food.—Dry cough, ending in retching.—When coughing: pain in occiput; bruised pain in chest; stitches in chest.—Pleuritic, stitching pains in chest, fever, severe cough with scanty expectoration, exudation within pleura; great weakness and emaciation.

19. Heart.—Heart affections with hectic; quick, superficial breathing cough; involuntary sighing; dyspnœa from slight exertion; painful drawing and expansion about apex; tumultuous fluttering heart-beat; small, threadlike pulse; at times double or intermitting.—Chlorosis; muscular debility; weak circulation.

21. Limbs.—Weakness, compelling to lie down.—Sudden cramps and distortion of limbs.

22. Upper Limbs.—Paralytic tearing in shoulder-joint, arm, clavicle, and muscles, making it impossible to lift arm; > by gentle motion.—Slight drawing pain in shoulder, followed by tearing, stitching pains extending to elbows; paralytic lameness of upper arm; pain < from least motion; < at night, driving him out of bed; slightly > by walking about; no swelling.—Acute inflammatory rheumatism of r. shoulder-joint, pain deep in socket, preventing motion.—Mechanical injury to shoulder-joint, with rheumatic lameness.

23. Lower Limbs.—Cramp in calves, esp. at night in bed.—Large, deep ulcer in l. calf, centre black and hard.—Œdematous feet, drawing, tearing pains, esp. on beginning to walk; after metrorrhagia.

25. Skin.—Phagedenic ulcers.

Ferrum Pernitricum.

Pernitrate of Iron. Fe_2 $_6NO_3$. Dilutions of the Ferri Pernitratis Liquor of B. P.

Clinical.—Diarrhœa. Eyes, affections of. Glands, affections of. Lienteria.

Characteristics.—*Fer. pernit*. has been used by old-school practitioners with good effect in the diarrhœas of India; in lienteria the diarrhœa of phthisis; diarrhœa in feeble and nervous females also in scrofulous children with enlarged glands and obstinate ophthalmia. Though there are no provings of the remedy it is plain that these are specific effects. Cooper, who has given much attention to the Iron preparations, give as a characteristic, "Cough, with florid complexion." In cases presenting marked features of *Ferrum* and *Nit. ac., Fe. Pernit*. should render good service.

Ferrum Phosphoricum.

Ferrum Phosphoricum Album. Ferric Phosphate. Ferroso-ferric Phosphate. White Phosphate of Iron (Schüssler's). This is said to be a true ferric phosphate, Fe_2 $(PO_4)_2$ as contrasted with the ordinary phosphate of iron, which is a ferrous-hydric phosphate, Fe HPO.

Clinical.—*Anus, prolapse of. Bladder, paralysis of*. Bronchitis. Colic. Cough. Croup. Cystitis. *Debility*. Delirium tremens. Diabetes. Diarrhœa. Dyspepsia. Dysentery. *Ear, affections of. Erysipelas*. Fever. *Frost-bite*. Gastritis. Gonorrhœa. Hæmatemesis. Hæmoptysis. Hæmorrhages. *Hands, swelling of*. Heart, palpitation of. Inflammation. Injuries. Intermittent fever. *Kidneys, Bright's disease of*. Measles. Mumps. Nævus. Neuralgia. *Nose, bleeding of*. Phthisis hæmorrhagica. Pleurisy. Pneumonia. Raynaud's disease. Rheumatism. Sprains. Styes. Tarsal cysts. *Urine, incontinence of. Veins, varicose*. Vomiting. Whooping-cough.

Characteristics.—The preparation of *Ferrum Phos*., which plays such an important part in the therapy of Schüssler, has so far overshadowed the ordinary "Phosphate of Iron" in homœopathic practice, that I have retained the simple designation, "Ferrum Phosphoricum," for this preparation as less likely to create confusion. The ordinary phosphate, which has been proved separately, I shall describe next as *Ferrum Phosphoricum Hydricum*. Our chief knowledge of *Fer. Phos*. is from Schüssler's work and the clinical experience of those who have used it on his indications. But it has also been proved under Dr. John L. Moffat (*C. D. P.*).

In Schüssler's therapy *Fer. Phos*. takes the place filled by *Acon., Bell., Gels., Verat. viride, Arnica*, and other remedies which correspond to disturbed states of circulation, irritation, and relaxation of tissue. "Painless irritability of fibre" is

Cooper's keynote as exemplified in diurnal enuresis. It also retains the leading features of the other Iron preparations: anæmia, hæmorrhages, and disorders of the veins. Inflammation, induration and enlargement of blood-vessels; great physical and mental lassitude; indisposed to physical exertion; nervousness, prostration, rheumatic paralysis. Acute inflammatory rheumatisms. The right shoulder is affected as in *Fer. mur*. The right-sideness of *Fe. p*. is as marked as that of the other *Ferrum* preparations. Nimier and Parenteau have cured several cases of right-supraorbital neuralgia with morning aggravation with *Fe. p*. 6x. The morning aggravation appears to be the distinctive indication. Nash says the hæmorrhages are bright red, but occur, not in the plethoric subjects of *Acon*., but rather in pale, anæmic subjects liable to sudden local congestions. Cooper cured with *Fe. p*. a case of phthisis in a patient "of the transparent-skin type, the hæmoglobin shining through." Schüssler's own account of *Fer. phos*., taken from the final edition of his work, translated by L. H. Tafel, is as follows: "Iron and its salts possess the property of attracting Oxygen. The iron contained in the blood corpuscles takes up the inhaled oxygen, thereby supplying with it all the tissues of the organism. The sulphur contained in the blood corpuscles and in other cells, in the form of sulphate of potassa, assists in transferring oxygen to all the cells containing iron and the sulphate of potassa. [*1*] When the molecules of iron contained in the muscle-cells have suffered a disturbance in their motion through some foreign irritation, then the cells affected grow flaccid. If this affection takes place in the annular fibres of the blood-vessels, these are dilated; and as a consequence the blood contained in them is augmented. Such a state is called hyperæmia from irritation; such a hyperæmia forms the first stage of inflammation. But when the cells affected have been brought back to the normal state by the therapeutic effect of iron (*Phosphate of Iron*) then the cells are enabled to cast off the causative agents of this hyperæmia, which are then received by the lymphatics in order that they may be eliminated from the organism. [*2*] When the muscular cells of the intestinal villi have lost molecules of iron, then these villi become unable to perform their functions: diarrhœa ensues. [*3*] When the muscular cells of the intestinal walls have lost molecules of iron, then the peristaltic motion of the intestinal canal is retarded, resulting in an inertia with respect to the evacuation of the fæces."

From the above Schüssler deduces the following indications for Iron: "When the muscular cells which have grown flaccid through loss of iron receive a compensation for their loss, the normal tensional relation is restored; the annular fibres of the blood-vessels are shortened to their proper measure, the capacity of these vessels again becomes normal, and the hyperæmia disappears, and in consequence the inflammatory fever ceases. *Iron* will cure:

1. The first stage of all inflammations.

2. Pains caused by hyperæmia.

3. Hæmorrhages caused by hyperæmia.

4. Fresh wounds, contusions, sprains, &c., as it removes the hyperæmia.

The pains which correspond to iron are increased by motion, but relieved by cold. In the muscle-cells iron is found in the form of a phosphate; we should therefore in therapeutics use *Ferrum phosphoricum*." Schüssler generally used the 12x trituration. As an instance of hyperæmia of a low order may be mentioned a case of Raynaud's disease of the fingers and toes, in which amputation seemed inevitable. Halbert effected a complete cure with *Fe. p.* 6x trit. *Fe. p.* is suited to the leuco-phlegmatic temperament; to young persons with varicose veins. Pains go from below upward. Great emaciation. Takes cold easily. Results of checked perspiration on a warm summer day (peritonitis): Open air < cough; and there is sensitiveness to cold air. Warm drinks <, cold and cold drinks > toothache. Aversion to meat and milk. While eating at table, chill. < By eating. < From meat, herring, coffee, cake. < From tea. Rest >, motion <; gentle motion > pain in upper arms and shoulders. < At night, and 4 to 6 a.m. Sensitive to touch and every jar.

Relations.—*Compare:* Acon. (more bounding pulse than Fe. p.); Gels. (more flowing pulse); Caustic. and Puls. (cough with spurting of urine). *Compatible:* Kali mur. (croup, pneumonia, palpitation, typhus) Kali p. (colic, threatened gangrene); Calc. sul. (hip-joint disease) Calc. p. (chlorosis, hæmorrhoids); Calc. fl. (hæmorrhoids); Nat. sul. (diabetes); Ant. t. (capillary bronchitis). According to Cooper Fe. phos. *antidoted* "violent disuria, night and day," caused by Stront. bro.

Causation.—Checked perspiration on a warm summer's day. Mechanical injuries.

SYMPTOMS.

1. Mind.—Very talkative and hilarious; unnatural excitement.—Delirium tremens.—Physical and mental depression.—Unable to concentrate thoughts.—Memory impaired: for names, facts, &c.; irritated at his own mental sluggishness.—Drowsiness; with rush of thoughts, suddenly changing from pleasant to unpleasant.—(Sows eat up their young; a transient mania depending on hyperæmia of the brain.)

2. Head.—Dizziness; feeling as if head was being suddenly pushed forward.—Everything swims around him; his muscles seemed so weak he could hardly move about.—General dull headache < 5 p.m.—Hammering pain in forehead and temples, fears apoplexy; < r., formerly < l.—Supra-orbital neuralgia of r. side, with a morning aggravation.—Frontal headache, followed and relieved by nose-bleed.—Scarcely endurable, dull, heavy pain at vertex during menses, which are profuse.—Top of head sensitive to cold air, noise, and any jar; on stooping sharp pain through head, from back to front; at times a feeling as if head were being pushed forward, with danger of falling. Pinching in l. temporal region from within outwards.—Blind headache, with bearing-down in uterus, and ovarian pains.—Headache: with hot, red face and vomiting of food; with nervousness at

night; with general soreness of scalp, cannot bear to have hair touched.—Rush of blood to head, with vertigo.—Violent throbbing up to occiput.

3. Eyes.—On stooping cannot see; seems as if all blood ran into eyes.—Blinding headache.—Hemianopsia (r.).—Conjunctivitis and photophobia.—Heaviness of lids, esp. r.—Traumatic conjunctivitis.—Dry and rough feeling of lining of lids, congestion of eye (*Alumina* relieved).—Styes on lower lids (l.), then upper.—Tarsal cysts.

4. Ears.—Hard of hearing; ringing and buzzing.—Painful red swelling of parotids.

5. Nose.—Nose-bleed of bright blood, in children.—Nose-bleed relieving headache.—Erysipelas, with ulceration just inside tip (l.).

6. Face.—Face earthy, pale, sallow.—Heat, with redness.—Hot cheeks, with toothache.—Neuralgia in face (r.).—Acne in chin and forehead.

8. Mouth.—Toothache always appearing after eating food; < by warm drinks, > by cold.—Complaints during dentition, with fever.

9. Throat.—On waking, throat feels swollen and stiff, swelling painful, < empty swallowing.—Feeling of lump (r.) on swallowing.—Inflammation of palate, tonsils, and pharynx, with dryness, redness, and pain.—Membrane on r. tonsil, spreading to l.

11. Stomach.—Poor appetite, with attacks of sickness.—Great thirst for much water.—Vomiting at irregular times, sometimes awaking her out of sleep.—Green vomit.—Hæmatemesis.—Vomiting with the pains.—Weight and fulness in stomach; with fulness in forehead.—Pain in stomach < after eating, and by pressure.

12. Abdomen.—Distension in hypochondria and region of stomach.—Feeling of a layer of hard substance in abdomen; later of hardness in spots.—Intolerance of clothes touching abdomen and chest; throws them off at night.—Colic before stool.—Hernia: inflamed and incarcerated.

13. Stool and Anus.—Chronic diarrhœa; yellow, watery (with pneumonia).—Lienteria from relaxation of intestinal muscles.—Dark green stools, odourless.—Hot flatus.—Dysentery with violent fever; fever continues < from pressure on stomach; no tenesmus.—Summer diarrhœa, stools green, watery, or hashed, mixed with mucus, scanty, straining at stool; also retching, child rolls its head and moans, eyes half open.—Stools pure blood; bloody mucus or slime; < midnight to morning.—Green and hard stools expelled with much effort.—Habitual constipation; piles; disposition to prolapse.

14. Urinary Organs.—Frequent desire to urinate, urgent, with pain in neck of bladder and end of penis; must urinate immediately, which > the pain; < during the day; < standing.—Enuresis nocturna from weakness of sphincter.—Enuresis diurna from irritability of trigone, > lying down.—Urine spurts out with every cough.—Complaints before urinating.—Urine smells like *café au lait*.—Hæmorrhage from bladder or urethra.

15. Male Sexual Organs.—Seminal emissions.—Sexual instinct completely in abeyance.—Dull aching in r. testicle.—Gonorrhœa, inflammatory stage.

16. Female Sexual Organs.—Bearing-down in uterus, with constant dull pain in either ovarian region.—Vaginismus.—Pain in vagina during coition; cannot bear examination.—Dryness of vagina.—Dysmenia, with accelerated pulse and red face.—Menses pale first half of period.—Menses every three weeks, profuse, with pressure in abdomen and small of back.—During profuse menses, pain on top of head.—During pregnancy: cough with ejection of urine; headache during third month.

17. Respiratory Organs.—Laryngitis, with hoarseness from overstraining voice.—Hoarse; raises greenish mucus in biggish lumps.—Much mucus in throat and rattling in chest.—Pleuritic stitch with a deep inspiration, or cough.—Acute, short, spasmodic, and very painful cough.—Suddenly a loose cough, painless indoors, but painful in open air.—Tormenting cough when bending over or touching larynx.—Cough: causes spurting of urine; < in open air; < touching larynx; < at night.—Whooping-cough, with retching and vomiting.—Hæmoptysis; after concussion or fall.

19. Heart.—Dull, aching pain at heart; sometimes extending to back, l. of spine.—Palpitation with full pulse (less bounding than *Acon*., less flowing than *Gels*.).

20. Neck and Back.—Crick in neck or back.

21. Limbs.—Rheumatism attacking one joint after another; joints puffy, but little red; high fever; < slightest motion.—Rheumatism of wrist and knee.

22. Upper Limbs.—Violent drawing, tearing pain r. shoulder and upper arm, < violent motion of arm, > gentle motion, so that patient hardly kept it still at all; somewhat sensitive; deadness in r. hand.—Acute rheumatism of r. deltoid; unable to wear cloak.—In r. shoulder-joint acute rheumatism; red, swollen; very sensitive.—Swelling of elbow from sprain.—Rheumatism in wrist.—Wrists ache with loss of power to grasp.—Palms of hands hot, with children.—Nodule on dorsum of l. little finger.—Contracted fingers from acute rheumatism.

23. Lower Limbs.—Pain and soreness in hip.—Pains in knees spreading to other joints, finally to shoulders and upper thorax (after *Ferr. Phos*. it went downwards from joint to joint, to knees, and then passed off).—While walking constrictive pain in anterior aspect of shins, lower third, as if he had been walking very hard and fast (which was not so), < l.—Ankle, outer side, pale red; foot greatly swollen and sensitive; toe feels as if burning.—Steady, terrible pain all over foot and ankle, extorting cries, shooting pains around ankle and up inside of leg.—An acute, very painful sugillation on dorsum of foot.

25. Skin.—Capillary congestion, with burning of skin, < from severe exercise or in a warm room.—Measles.—Erysipelas.—Acne.

26. Sleep.—Drowsiness, with rush of thoughts.—Eyes half open in sleep.—Restless at night.—Restless sleep with anxious dreams; great depression in morning.—Sleepless from severity of pains.—Dreams of quarelling; suddenly changes to happy conversation with another person.

Ferrum Phosphoricum Hydricum.

Ferrous hydrophosphate. $FeH PO_4$, mixed with an uncertain amount of Ferric phosphate. Trituration.

Clinical.—Conjunctivitis. Writer's cramp.

Characteristics.—This salt has been proved by Dr. J. C. Morgan. The symptoms resemble those of *Ferr. phos. alb*. and the other *Ferrum* preparations. Malaise; feeling as if he had not had sufficient sleep; aching in occipito-cervical region; sensitiveness to cool air and desire for warmth. Right side most affected. Symptoms < bending forward.

SYMPTOMS.

1. Mind.—Intolerance; annoyed by obstacles.

2. Head.—Dull r.—sided headache.—Every concussion (as coughing or hard smacking of lips) is felt as a dull, painful sensation at base of skull.

3. Eyes.—Painful smarting in edges of r. eyelids.

4. Ears.—Sticking in r. ear as from large-pointed stick on going to bed.

11. Stomach.—Irritating rising, greasy flavour.—At 9.30 p.m., sitting at table, bent forward reading, most intense heartburn, with rising so irritating as to cause cough.

20. Neck and Back.—Aching in sacro-iliac symphysis when walking, > by pressure.

26. Sleep.—Drowsy, eyes feel it much, feeling extends upward into head; soon after, he was compelled to lie down and take a nap.

27. Fever.—Heat and dryness of face and palms while sitting.

Ferrum Picricum.

Picrate of iron. $C_6 H_2 (NO_2)_3 OFe$. Trituration. Tincture.

Clinical.—Albuminuria. Corns. Deafness. Ears, diseases of. Fatigue. Jaundice. Liver, disorders of. Lupoid warts. Lupus. Nose-bleed. Prostate, diseases of. Rheumatic arthritis. Rodent ulcer. Tinnitus. Voice, loss of. Warts.

Characteristics.—This is an unproved medicine, but Dr. Cooper, who introduced it, has given the leading indications for its use, and these are so clear that it has taken a definite position in the materia medica. It is a liver medicine, and is particularly suited to persons with dark hair and eyes, and bilious-looking patients. A dirty appearance about the joints indicates it; the stain being due to bile pigments. It has cured many cases of warts and corns, as I have repeatedly verified. Dr. Cooper has reported a case of lupoid wart cured by it. Dr. Cooper was led to give *Fe. pic*. in cases of warts by a symptom produced in a patient (to whom he was giving it for deafness), "sensation as if a wart were growing on the thumb." He considers it specially indicated for warts on the hand, when they are multiple. Cooper has observed that warts, especially old pedunculated warts, frequently accompany chronic deafness. Referring to the effects of fatigue, Cooper describes it as the failure of an organ under exertion which would not ordinarily strain it—*e.g*., failure of the voice in public speakers. The condition of the ear in the deafness which calls for *Fe. Pic*. is one of "diffused vasculitis." *Pic. ac*. is also of use in the effects of fatigue, but in this case it is *unusual* fatigue that sets up the noises, &c., and the deafness is nervous deafness and unconnected with changes in the blood-vessels to which *Fe. Pic*. is homœopathic. *Pic. ac*., again, suits blondes, *Fe. Pic*. dark-haired, plethoric people. Burnett has cured with it rheumatic arthritis in a dark-haired subject. P. C. Majumdar (*Ind. Hom. Rev*., October, 1899) cured a student, suffering from anæmia and malarious fever off and on for a year, who had these symptoms among others: Impaired hearing of both ears, buzzing, hissing, vertigo, indigestion, headache, and tired feeling after bodily or mental exertion. He considers *Fe. Pic*. suited to the results of malarious fever, sexual excesses, and loss of blood. Pullar has cured with it a case of albuminuria. *Fe. Pic*. is apt to aggravate if given too low. The symptoms it causes, or cures, I have arranged below in schema form. Dr. Mende considers *Fe. pic*. almost specific in nose-bleed. It has a specific action on the prostate gland. Dudley Wright has confirmed Cooper's observation here; it will frequently control senile

hypertrophy. < From fatigue is a leading indication: overpowering effects of fatigue.

Relations.—*Compare:* Pic. ac., Nit. ac., Thuja., Amm. pic., Calc. pic., and the Ferrum preparations.

Causation.—Fatigue.

SYMPTOMS.

2. Head.—Giddiness with disturbance of cerebral circulation, pain in occiput, inability to walk.

4. Ears.—Diffused vasculitis; with liver symptoms.—(Deafness in young people cutting wisdom teeth.)

6. Face.—Lupoid wart on face.

12. Abdomen.—Liver sensitive, some icterus.

13. Stool and Anus.—Constipation.

15. Male Sexual Organs.—Prostate gland enlarged.

20. Neck and Back.—Pain in r. side of neck and down r. arm.

25. Skin.—Warts: multiple; pedunculated.—Corns.—Jaundice.—Dirty looking skin about joints.—Sensation as if a wart were growing on thumb.

26. Sleep.—Restless sleep with unpleasant (often erotic) dreams.

Ferrum Pyrophosphoricum.

Ferri pyrophosphas. Pyrophosphate of Iron. A scale preparation containing 55 per cent. of Pyrophosphate of Iron ($Fe_2 P_2 O_7$) combined with Citrate of Soda. Solutions and triturations.

Clinical.—*Brain, congestion of. Headache*. Tarsal cysts.

Characteristics.—This preparation has not been proved, but it has been used clinically in low attenuations in cases of brain congestion and congestive headache, following great losses of blood. If *Fe. ph*. fails to remove tarsal cysts, Cooper says give *Fe. pyroph*.

Ferrum Sulphuricum.

Sulphate of Iron. Ferrous Sulphate. Iron or Green Vitriol. Copperas. Fe SO_4, $7H_2O$. Trituration of the pure crystals.

Clinical.—Aphthæ. Bulimy. Cardialgia. Chorea. Constipation. Diarrhœa. Eczema. Gall-bladder, pain in. Gastritis. Gonorrhœa. Hæmorrhages. Headache. Helminthiasis. Menorrhagia. Nettlerash. Scrofula. Spasms. Toothache. Worms.

Characteristics.—*Ferr. sul*. has the leading features of the other Ferrums, but many of the *Sulphur* characters appear, in the modalities especially. There is < from warmth or warm room (toothache); > from cold air or from ice (toothache) or from fresh air. It is like *Sulph*. also in acidity and eructations of food in particles. Other noteworthy symptoms are: Passive hæmorrhages. Pain in gall-bladder. Pallor or flushing. Sensation as if all the blood were rushing into head and face. Sensation of fermentation or purring in stomach. Feeling of general heat and disposition to sweat, with sensation in skin of back as if he wore a stout woollen shirt. Muscular pains or contractions. Local atony; disposition to congestions; nettlerash; aphthæ; eczema, with sluggish liver.

Relations.—*Compare:* Phos. (regurgitation of food in particles); Cina (worms). Bapt. (pain in region of gall bladder).

SYMPTOMS.

2. Head.—Severe vertigo; with diarrhœa.—Pressing throbbing headache, < in forehead, with ringing in ears, sensation of blood rushing into head and face; face scarlet, glowing; > in fresh open air; < warm room.

4. Ears.—Pain apparently in walls of meatus auditorius externus.

7, 8. Teeth and Mouth.—Violent tearing toothache; teeth all sound; > from cold air or application of ice on cheek; headache.—Very troublesome soreness of soft palate.

9. Throat.—Taste of salt, with smarting in throat.

11. Stomach.—Bulimia, cannot be satisfied, thirst not marked.—Loss of appetite; aversion to meat.—Eructation of flatus and food with acidity.—Sickness, with vomiting.—Sensation of fermentation, or of a noise or movement like purring of a cat in region of stomach.—Cardialgia.—Gastritis, with pain after eating, and regurgitation of food by mouthfuls.

12. Abdomen.—Pain in region of gall-bladder.—Colicky pains, with flatulence and diarrhœa.

13. Stool and Rectum.—Watery, reddish-brown, odourless, painless diarrhœa, with great paleness of skin, emaciation, vertigo, œdema of scrotum and lower limbs, bulimy without thirst, venous murmurs.—Constipation.—Helminthiasis; tape worms; ascarides.

14. Urinary Organs.—Great weakness accompanying Bright's disease.—Bloody urine, with albuminuria.

15. Male Sexual Organs.—Œdema of scrotum and lower limbs.—Secondary gonorrhœa.

16. Female Sexual Organs.—Menstruation copious, five to six days' duration, with colic before and during the time; headache frequently between periods; pressing throbbing, esp. in forehead, with ringing in ear, rush of blood, scarlet glowing face > in fresh air, < in warm room; often accompanied by toothache.—Metrorrhagia; leucorrhœa.

20. Back.—Pain shooting down r. side of back.

21. Limbs.—Limbs very painful, esp. feet and calves, where the pain is distracting.—Contractions in arms, hands, and feet.

22. Upper Limbs.—Rheumatism and semi-paralysed condition of r. arm and shoulder.—Arms bent at elbows, and fingers drawn towards forearm by flexure of wrist.—Hands yield to forcible extension, but immediately return to same condition.

23. Lower Limbs.—Paralysis of lower limbs.—Knees slightly flexed, toes drawn upwards rigidly.—Pain in sole of left foot in middle of thick fleshy anterior part, and at same time an aching pain through lower part of leg.

Ferrum Tartaricum.

Tartrate of Iron.

Clinical.—Cardialgia. Headache.

Characteristics.—Berridge has recorded these two symptoms caused by a 15-grain dose: (*1*) Uninterrupted sensation as if an immense load were on entire upper portion of head, causing a gloomy apprehensiveness of congestive apoplexy (lasted three days, removed by a dose of *Nux* 1). (*2*) Heat from or heat at cardiac orifice of stomach lasting 12 hours; unaffected by food or drink.

Ferula Glauca.

Ferula Neapolitana. Bounafa. N. O. Umbelliferæ. Tincture of plant.

Clinical.—Aphthæ. Diarrhœa. Digestion, slow. Hæmorrhoids. Nymphomania. Pruritus vulvæ.

Characteristics.—*Ferula* has been proved, but I am not aware of any clinical experience with it. Heat and burning are produced in most parts, and sensations of coldness in others. Stiffness and constriction were also prominent. Violent sexual excitement in women. A cough was complained of, < in damp or cold weather.

Relations.—*Compare:* Other Umbelliferæ; tongue as if burnt, Sang. c.

SYMPTOMS.

1. Mind.—Aversion to society; to work.—Sadness; inclination to weep.—Impatience; anger.

2. Head.—Burning in head.—Icy coldness in occiput during day.—Lancinations, pricking, pulling pains in occiput.

3. Eyes.—Burning, pricking, itching of eyelids.

5. Nose.—Redness of nose; sensitive to touch.—Scabs in nose, with smarting and itching.

8. Mouth.—Aphthæ; heat in mouth; sensation in tongue as if burnt.

9. Throat.—Scratching, burning, lancinations; difficulty of swallowing.

11. Stomach.—Decreased appetite; urgent thirst.—Bitter eructations.—Spitting up of bile.—Slow digestion, with bitter eructations.—Heat and cutting pains in stomach; < after eating.

12. Abdomen.—Lancinating, pulling in r. hypochondrium.—Inflation and tension of abdomen.—Colic before and during stool.—Constant burning in abdomen.—Heat and weight in hypogastrium.

13. Stool and Anus.—Hæmorrhoids, with itching, burning, lancinating, and prickings at anus.—Diarrhœa day and night, but worse by day; stools light-yellow and watery, with smarting and burning at anus.

14. Urinary Organs.—Diminished urine.

16. Female Sexual Organs.—Menses several days early, more profuse, thin or thick, with heat and itching of vulva.—Violent sexual excitement (in females only).

17. Respiratory Organs.—Difficult breathing.—Fetid breath.—Cough dry or loose, < in damp or cold weather, with thick yellow expectoration.

19. Heart.—Constriction and heat at heart; beats stronger.

20. Neck.—Stiff-neck.—Pricking and lancinating at nape.

22. Upper Limbs.—Stiffness of arms; difficulty in bending them.

23. Lower Limbs.—Numbness of thighs.—Cold feeling along sciatic nerves; felt soon after rising up.—Lancination along nerves of thighs and legs.

25. Skin.—Redness and subcutaneous swelling.—Small red pimples and incessant itching.—Red pimples with white tips in beard and whiskers.—Pricking and violent itching in many parts, < at night.

26. Sleep.—Sleepy in day; sleepless; restless; starting from sleep at night.

Ficus Religiosa.

Pakur. (India.) N. O. Moraceæ. Tincture (Juice of fresh leaves mixed with equal parts of alcohol).

Clinical.—Hæmorrhages. Menorrhagia. Metrorrhagia.

Characteristics.—We owe this remedy to Dr. Sarat Chandra Ghose, of Midnapore, who made the first proving and thereby discovered its power to cause and cure hæmorrhages of many kinds. Dr. Ghose kindly sent me a supply of the remedy, and I have had very satisfactory results with the 1x potency in controlling menorrhagia. The provers were Dr. Ghose himself, his wife, and a dog. As the experiments are quite remarkable I will give them in detail. The dog, which was perfectly strong and healthy, received 40 drops of the tincture one morning. No result followed that day, and the dose was repeated next morning, and the animal commenced and continued to vomit blood of a bright red colour. It kept very quiet and was unwilling to move. After three doses of five drops of the tincture given in quick succession, the vomiting ceased. It is remarkable that the same treatment (minute doses of the same remedy) was effectual in arresting the effects of the drug in the other two provings. Mrs. G. took the tincture in 20-drop doses repeatedly throughout two days. On the third day dysentery and menorrhagia set in simultaneously. The blood was bright red. Other symptoms were: Headache; very

weak and restless; sight dim; burning at the top of the head. The face became yellowish; breathing difficult. She became sad and melancholy. With the profuse discharge of bright red blood there were bearing-down pains in lower abdomen. Dr. G. took 40 drops in one dose. The result was: Frequent desire to pass water, which gradually became bloody, and contained much blood. Then inclination to cough, causing him to spit blood. Slight headache; giddiness and nausea. Sight dim. Very weak and restless. The tincture was taken three drops every two hours, and after the third dose the symptoms vanished. Dr. Ghose relates some striking cases cured with the remedy—dysentery, hæmatemesis, hæmorrhage of typhoid, bleeding piles, and epistaxis.

Relations.—*Compare:* Acalypha, Ipec., Arn., Phos., Sanguisuga, Cactus, Ferrum, &c.

SYMPTOMS.

1. Mind.—Quiet and disinclined to move.—Sad and melancholy.

2. Head.—Nausea, vertigo, and slight headache.—Headache (with hæmorrhages).—Burning at vertex.

3. Eyes.—Sight dim.

5. Nose.—Epistaxis.

6. Face.—Face became yellow.

11. Stomach.—Vomiting of bright red blood.

12. Abdomen.—Bearing-down pains in lower part of abdomen.

13. Stool and Anus.—Dysentery, with menorrhagia.—Dysentery, blood bright red.

14. Urinary Organs.—Frequent desire to micturate.—Urine contains much blood.

16. Female Sexual Organs.—Menorrhagia, bright red blood, bearing-down pains in lower abdomen.

17. Respiratory Organs.—Difficulty of breathing.—Inclination to cough, causing him to spit blood.

24. Generalities.—Very weak and restless.

Filix Mas.

Male Fern. N. O. Filices. Tincture of fresh root, or fresh root grated.

Clinical.—Abdomen, bloated. Abortion. Blindness. Sterility. Tapeworm.

Characteristics.—Male fern has been recognised as a vermifuge from the time of Galen, and Dioscorides credits it with the power of causing sterility and abortion. A fragmentary proving in Allen's Appendix records a case in which 15 to 20 drops of the tincture given three times a day to a woman suffering from bloated abdomen with more or less pain caused diminution of the bloating, but also: Severe prolapse of vagina, pain and tenesmus of bladder with copious and frequent emission of urine with intense pain. *Filix* was discontinued and then *Chimaphila* relieved. The symptoms did not return afterwards, except after much walking and standing. Hering says the best time to give the drug for expulsion of tapeworm is in the summer when the fresh root can be obtained. If an ounce of the grated root is given in the forenoon, usually the tapeworm comes away in the afternoon. Among the leading symptoms are: Pale face with blue rings round eyes; gnawing, boring pains in abdomen, < after sweet things. Blindness has been caused in a number of cases from atrophy of the optic nerve. C. S. Spencer records this effect from taking capsules each containing ten minims of the oil of male fern for tapeworm: "A feeling of nausea; abdomen became painfully distended with colicky pains. Menses returned after only one week's absence, and continued profusely for three weeks. Very sick after taking her food. The worm was got rid of and the capsules stopped when these symptoms passed away.

Teste has used it successfully in a case of violent dyspnœa without cough, with stitches in region of heart and obscure symptoms of pericarditis. The patient was a young lady of lymphatico-nervous temperament, and was much weakened by long sickness.

Relations.—*Compare:* Areca, Granat., Kousso and Cuc. pep. sem. (tape-worm); Gels., Carb. s., Ben. din. (vision). Teste places Filix mas in his Ipecac. group along with Nux vom., Ant. crud., Ant. tart., &c.

SYMPTOMS.

1. Mind.—Irritable and cross.—Confusion, stupor, coma.

2. Head.—Vertigo.

3. Eyes.—Blindness; first mydriasis and amaurosis with normal fundus; eight days later, atrophy of optic nerve.—Immobility of pupil.—After violent vomiting and diarrhœa, soporific condition lasting thirty hours; awakening, her l. eye was blind, and r. eye had lost some of its acuteness of vision. Being kept in the dark,

perception of light by l. eye returned after forty-eight hours and recovery took place.

5. Nose.—Itching of nose.

6. Face.—Pale face; blue rings round eyes.

11. Stomach.—Nausea.—Sick after taking food.

12. Abdomen.—Bloating of abdomen.—Gnawing and boring in bowels, < eating sweet things.—Great pain in abdomen, with diarrhœa and constant vomiting.

13. Stool and Rectum.—Ineffectual urging to stool.—Pappy stools.—Violent vomiting and diarrhœa.—Worm symptoms, esp. with constipation.—Worm colic.

16. Female Sexual Organs.—Menstruation stimulated.—Menses returned after nearly one week's absence, continued profusely for three weeks.—Prolapse of vagina; with pains and tenesmus of bladder and copious frequent emission of urine with internal pains (relieved by *Chimaph*.).—Abortion.—Sterility.

24. Generalities.—Great feeling of weakness, trembling, cramp-like feelings in hands and feet.—Somnolent, with spasmodic symptoms, ending in death.

26. Sleep.—Soporific condition.

27. Fever.—Violent rigor, fever, great pain in abdomen with diarrhœa and constant vomiting.

Fluoricum Acidum.

Hydrofluoric acid. H F. Made by distilling pure fluorspar (Calcium fluoride) in a state of fine powder with sulphuric acid. Solution.

Clinical.—*Abscess*. Alcoholism. Alopecia. Apoplexy. *Bone, affections of*. Brain, atrophy of. *Cicatrix*. Coccygodynia. Decubitus. Dropsies. *Eyes, affections of. Fistula*. Gleet. *Goître*. Gonorrhœa. *Hæmorrhoids. Hair, falling out. Hands, perspiring*. Headache. Hydrocele. Liver, induration of. *Locomotor ataxy*. Nævus. *Nose, inflammation of*. Nymphomania. Otorrhœa. Peritonitis. *Perspiration. Pityriasis*. Satyriasis. Splenalgia. Suppuration. *Syphilis*. Teeth, defective. Toothache. *Tongue, ulceration of*. Varicosis. *Veins, diseased*. Whitlow.

Characteristics.—*Fluoric acid* acts on the lower tissues of the body much like *Silica*, which it follows and precedes well. It is useful after the abuse of *Silica*.

The modalities of the two are different; *Fluor. ac*. having > from cold applications. It acts on the bones, especially the long bones, causing caries and necrosis, and favours the expulsion of the necrosed part. Fistulæ, rectal, dental, and lachrymal come within its sphere. Old cicatrices become redder and itch. Small red spots here and there, < by warmth, > in cool place. Red blotches on body which tend to desquamate. Nails grow rapidly. Teeth are deficient in enamel; black, rough, unsightly-looking. Increased sensitiveness of vision and hearing. According to Guernsey *Fluor. ac*. affects the right ear; left teeth; left hypochondrium; left side of abdomen; right side and nape of neck; right side of back. T. F. Allen has recorded an experience (*N. A. J. H*., 1886, p. 288) showing the applicability of *Fl. ac*. in whitlow. A lady spilled some of the acid on her hand and though treated at once with turpentine a few spots escaped on one hand, and these soon gave her great pain, intensely pulsating. The pulsations involved the tip of the thumb especially, though this had not been touched by the acid. It was not red like the spots touched by the acid but was sore to touch, and when pressed there was a sensation as of a splinter under the nail and in the cellular tissue. This lasted some days. The whole hand was swollen and hot, > in cool, open air. In a workman whose hand was exposed to the fumes of the acid there was intense throbbing pains especially in the thumb; suppuration occurred later and was very slow to heal. According to McLachlan, the left hand is affected rather than the right and the pus tends to point on the dorsum of the finger. > From cold washing distinguishes it from *Silic. Fl. ac*. is also distinguished from *Sil*. by the general > from walking in the open air. "A constant, irresistible desire to walk in the open air; it does not fatigue," is characteristics of *Fl. ac*. Hunger predominates. There is < from wine like *Zinc*.; but also < from red wine, which is peculiar to *Fluor. ac*. Abdominal symptoms > by tightening clothes (*Nat. mur*.─opp. *Lach., Hep*.). *Peculiar symptoms* are: Increased ability to exercise his muscles without fatigue. Is less affected by excessive heat in summer or cold in winter. Sensation as of a cold wind blowing under lids, even in warm room; as of air passing down from shoulder-joint to fingers. Numbness of limbs even when not lain on. Motion <. Bending backward, and bending head back >. Cold drinks < toothache; washing with cold water >. Warm drink < diarrhœa. Symptoms seem to go from below upward. Suited to complaints of old age, and premature old age; weakly constitutions, sallow skin, emaciation.

Relations.─*Compatible:* after Arsen. in ascites from gin-drinker's liver after Kali c. in hip disease; after Phos. ac. in diabetes. *Compare:* Coca (fatigue); Coffea (toothache); Citr. ac. and Sep. (aversion to one's family); Oxal. ac. (diarrhœa < from coffee); Rhus t. and Ruta (coccygodynia); Silic. (fistula, onychia, bone diseases, coccygodynia); Brom., Iod., Spongia and Kali c. (goître); Staph. (teeth). *Followed well by:* Sulph., Nit. ac.

SYMPTOMS.

1. Mind.─Uncommon buoyancy of mind; fears nothing and is self-satisfied.─Disposition to be exceedingly anxious, causing perspiration.─Aversion

to his own family.—Sensation as if danger menaced him.—Forgetfulness of dates and of his common employment.

2. Head.—Vertigo with sickness of the stomach.—Congestion of blood to the head (forehead).—Dulness (towards night) in the occiput.—Dulness and pressure in occiput.—Sensation of numbness in the forehead.—Heaviness above the eyes, with nausea, < on motion.—Compressing pain in the temples.—Headache > by profuse flow of urine.—Severe pressing pain in temples, from within outward.—Pain along the sutures.—Caries of the temporal bones.—Sensation of weakness, like numbness in the head (and hands).—Itching of the head.—Falling off of the hair; the new hair is dry and breaks off.—Baldness.

3. Eyes.—Violent itching in the canthi.—Burning in the eyes.—Pressure, as if it were behind r. eyeball.—Fistula lachrymalis.—Sensation of sand in the eyes, or as if a fresh wind was blowing on them.

4. Ears.—Intolerable itching in both ears.—Singing in ears.—Hardness of hearing > bending head back.

5. Nose.—Red, swollen, inflamed nose.—Obstruction of the nose.—Fluent coryza.

6. Face.—Heat in the face; desire to wash it with cold water.—Perspiration, esp. in the face.—Crusta lactea, dry, scaly, itches very much.—Tubercles in skin of forehead and face, suppurating; syphilis infantum.

8. Mouth.—The teeth feel warm (l. upper jaw).—Fistula (near the r. eye-tooth) with great sensitiveness of the upper jaw to the touch.—Sensation of roughness (lower incisor teeth).—Toothache < from cold drink; or > until water becomes warm in mouth.—Rapid caries of teeth.—Acrid, foul taste from the roots of the teeth.—Increased flow of saliva.—Increased flow of saliva (with sneezing; with pricking of the tongue.).—In the morning the mouth and teeth are full of mucus.—The posterior nares feel expanded during a walk.—Tongue deeply and widely fissured in all directions, with a large, deep phagedenic-looking ulcer in the centre.

9. Throat.—Throat peculiarly sensitive to cold, slightest exposure resulting in inflammation, with increase of pain and impeded deglutition.—Constriction in the throat with difficult deglutition; in the morning hawking up of much phlegm which is mixed with blood.

11. Stomach.—Hunger predominates.—Thirst, craves refreshing drinks.—Aversion to coffee.—Eructation and discharge of flatulency.—Frequent eructations.—Nausea, eructations, and lassitude.—Sickness of the stomach, with general heat.—Fulness and pressure in epigastrium.—Pressure from weight in the stomach, between

meals.—Heat in the stomach before the meal.—Bilious vomiting after slight errors in diet, with increased alvine discharges, preceded by tormina.

12. Abdomen.—Frequent passages of flatus and belchings, which relieve.—Great tension and dropsical swelling of the abdomen.—Pinching in the region of the spleen (extending to the hips), 11 a.m.—Pressing pain in the region of the spleen and l. arm.—Sensation of emptiness in the region of the navel, with desire to draw a deep breath; > by bandaging and eating.

13. Stool and Anus.—Soft small stools in the morning after drinking coffee, and again in the evening, with protrusion of the hæmorrhoids.—Watery stools in the morning after rising.—Frequent passages of flatus and eructations (with constriction of the anus).—Stool pappy, yellowish-brown, fetid, with tenesmus and prolapsus ani.—Protrusion of the anus during an evacuation.—Constipation; stools infrequent and hard.—Itching within and around the anus, in the perineum (evening).

14. Urinary Organs.—Free discharge of light-coloured urine, affording relief.—Very frequent discharge of light-coloured urine (thirst increased).—Whitish purple-coloured sediment in the urine.—Intolerable burning in the urethra during and after urination.

15. Male Sexual Organs.—Increased sexual desire (in old men) with violent erections all night.—Sensation of fulness in both spermatic cords.—Highly excessive enjoyment and pleasure during coition.—Seminal discharge tardy but free, and without bad after-feeling.

16. Female Sexual Organs.—Menstruation too early and too copious; the discharge is thick and coagulated.—Acrid leucorrhœa; itching.

17. Respiratory Organs.—Itching in the larynx, which causes him to hawk and to swallow.—Short frequent cough, mostly dry, white, frothy sputa.—Itching under the ribs (l.).—Difficult respiration (afternoon and evening).—During respiration wheezing (hydrothorax).

18. Chest.—Oppression of chest, > bending backwards.—Nipples itching, sore, cracked.—Itching, redness, swelling of (r.) nipple.—Itching on l. breast and r. side of nose.

19. Heart.—In the heart sensation of soreness, jerking.

20. Neck and Back.—Rigidity in the nape of the neck.—Pain (headache) from the nape of the neck extending through the centre of the head to the forehead.—Bruised pain in the os sacrum and loins, > by stretching, bending backwards, and by pressure.

22. Upper Limbs.—Pain in r. shoulder-joint.—Pain in r. shoulder-joint, extending toward fingers, with sensation as if air were passing down.—Trembling in the biceps and triceps of r. arm.—Slight lameness in r. arm (has some difficulty in writing).—Rheumatic pains in l. arm from shoulder to elbow, with lameness.—The l. forearm and hand asleep (in the morning).—Numbness and lameness in l. forearm and hand (morning).—Pain in l. index finger; the whole finger is painful internally.—Weakness and numbness of the hands and head.—Constant redness of the hands, esp. the palms of the hands.—Acute prickings, as with needles, in the fingers.—Thumbs and fingers inflamed, with acute throbbing pains.—Sensation of a splinter under nail.—The nails grow more rapidly.—Brittleness of the nails.—Panaritium; also simple onychia.

23. Lower Limbs.—Œdematous swelling up to the abdomen.—Varicose veins.—Acute stitches in r. hip-bone.—Lameness in l. hip.—Pain in r. knee-joint.—The l. leg falls easily asleep.—Burning stitches under the soles of the feet (in the morning).—Feet hot and burn.—Soreness between the toes.—Soreness of all his corns.

24. Generalities.—Lassitude.—Loss of strength.—Limbs go to sleep, although he does not lie on them.—Increased ability to exercise his muscles without fatigue, regardless of the most excessive heat in summer or cold in winter.—Violent jerking, burning pains, confined to a small spot.

25. Skin.—Old cicatrices become red around the edges, covered or surrounded by itching vesicles, or they itch violently.—Burning pains on small spots of the skin.—Itching of the skin (in the month of March).—Elevated red blotches.—Red, round, elevated blood vesicles, resembling little flesh-warts.—Varicose veins on the (l.) leg.—Caries and necrosis.—Ulcerations, esp. after the abuse of Silica.

26. Sleep.—Sleeplessness without inclination to sleep; a short sleep suffices and refreshes him.—Drowsy and sleepy in the early evening.—Dreams toward morning.

27. Fever.—General heat with nausea.—General heat with nausea from the least movement, with inclination to uncover oneself and to wash oneself with cold water.—Perspiration, clammy, acid, disagreeably smelling, principally on the upper part of the body, esp. on moving in the afternoon and evening, with itching.—The perspiration favours soreness of the skin and decubitus.—Less susceptible to the summer heat.

Formica.

Formica rufa. The Ant. N. O. Hymenoptera. Tincture from crushed live ants. Contains formic acid (HCO, OH).

Clinical.—Apoplexy. Brain, affections of. Bruises. Chorea. Cough. Diarrhœa. Dislocations. Dropsies. Eyes, affections of. Facial paralysis. Foot-sweat, checked, consequence of. Gout. Hair, falling out. Headaches. Nodes. Overlifting, complaints from. Paralysis. Rheumatism. Sight, affections of. Spine, affections of. Spleen, pain in. Throat, sore.

Characteristics.—*Formica* causes many rheumatic and gouty pains; the pains appear suddenly, and dart from place to place: left, then right; right, then left. The spinal cord is affected, paralyses and spasms occurring. Sensation as if brain too heavy and large. Sensation as if a bubble burst in forehead. It is of use "in all kinds of apoplectic diseases. It strengthens the brain" (Hering). Cooper has given the 3x with success in cases of weakness of lower extremities. J. W. Thomson (*H. P.*, xvi. 32) reports the case of a gentleman, aged 84, who had severe neuralgic pains between posterior of right ear and centre of occiput. From this he apparently recovered. Eighteen months later he returned with a steady, sore, and burning pain in same region; swollen and tender around, but especially behind, right ear. He could only sleep in one comfortable position, which he could not describe, but only knew when he found it; and he must be covered up warmly behind right ear and between that and occiput and neck—all right side. Better from taking right hand and rubbing gently behind right ear. *Sweat afforded no relief*; the whole head seemed to sympathise with the distress; he had dribbling of urine. *Formica rufa* was given, six doses, one before each meal. On the second day, towards evening, he felt worse, and on the third day there were twinges and spasms of severe pain in addition to the sore pain which he had before experienced. These gradually got better, and on the fourth day even the soreness was much better. The main thing, however, was that he felt mentally better; said his mind and head felt stronger, and from feeling depressed he had become cheerful, and life did not seem the burden it had for some time past. Hering gives as an indication for *Formic acid*: "Burning pain, burning from washing; renewed burning from cold washing." Symptoms are > after midnight. Motion <; also sitting. Hot irons > pain in neck. > By rubbing; by combing hair. Cold water application < (headache; burning pains). Great liability to take cold; consequences of cold and wet; cold bathing; damp weather. Clammy skin; disagreeable sweat during night; sweat without relief.

Relations.—*Compatible:* After Cham. *Compare:* Ars., Bry., Dulc. (rheumatism); Urt. u. (nettle-rash; gout; rheumatism. Nettles contain Formic acid); Frag. v. (lack of mammary secretion); Tromb. (diarrhœa); Caps. (burning pains < by cold water).

Causation.—Checked foot-sweat.

SYMPTOMS.

1. Mind.—Want of memory; in evening.—Indisposed, morose, fearful, apprehensive.—Exhilarated after pain in vertex abated.—Mind unusually excited.—Remarkable and unexpected activity of mind during the day, with absence of usual dulness and sleepiness.

2. Head.—Vertigo; all things seem to move to and fro, and reeling of body; pain in l. supra-orbital region when going to bed, with dizziness; blackness before eyes, > by sitting down.—Fulness; stupid feeling, with sensation of stiffness in neck.—Dulness; pressure on both sides between temples and ears.—Fore part of head aches with the cough.—Sensation like a bubble bursting in forehead, running around l. side of head.—Headache in l. forehead and temple back to occiput, with cutting extending into ear.—Headache with cracking in l. ear, followed by pain in l. temple, then in vertex with nausea and abatement of pain in forehead.—Pain on top of head, shifting from epigastrium.—In morning, headache in posterior, upper and inner part of head; < drinking coffee; each time during and after washing with cold water.—Pain from neck up to back of head.—Sensation running up into head from body like lightning.—Headache, < sitting up in bed; > after combing hair.—Itching of scalp.—Hair ceases failing out.—Contusions of head.

3. Eyes.—Pain in l. supra-orbital and l. temporal region, the seat of pain being tender to touch; pain and aching over l. eye; objects appear as if seen through a mist; blackness before eyes, must sit down for a few moments.—Pain in eye when awakes, > by washing.—Dim sight.—Flickering before eyes.—Nebula; leucoma; pterygium.—Maculæ and ulcers on cornea.—Rheumatic ophthalmia.—Spasmodic twitching of upper eyelid (r).

4. Ears.—Ringing buzzing in ears.—Cracking in l. ear with headache.—Deafness.—External sensitiveness of r. ear and temple.

6. Face.—Entire l. side of face and cheek feel as if paralysed.

9. Throat.—Sore throat in morning, with much mucus.—Sore throat < l. side.

11. Stomach.—Pain in neck when hawking and gargling; when eating and drinking, esp. when closing jaws.—After drinking tea copious sweat.—Nausea and vomiting; with diarrhœa; in evening; with cough.—Burning pain in stomach, with oppression and weight.—Constant pressure at cardiac end of stomach, and a burning pain there.

12. Abdomen.—Dull pain in region of spleen.—Sensation across abdomen as if bruised below navel, also tired feeling in back.—Flatulence.—Hardening of mesenteric glands.

13. Stool and Anus.—Diarrhœa after meals, or only during day, not at night; or day and night, or before midnight.—Diarrhœa with tenesmus; pain in bowels before stool.—Loose diarrhœic stool, with feeling as if more was to pass.—White stools.—Constipation and sensation of constriction in sphincter.—Pressure in rectum, < evening and in bed.—Painful desire in anus and rectum for stool, which, however, will not pass.—Tape-worm.

14. Urinary Organs.—Paralysis of bladder.—Double the quantity of urine, even at night; increased for two or three days.—Urine like saffron; bright yellow; no sediment; passed frequently.

15. Male Sexual Organs.—Long-lasting erections after urinating in morning.—Seminal emissions.—Scanty ejaculation with incomplete erection.

16. Female Sexual Organs.—Menses scanty and pale, with bearing-down pains in back third day; fourth day darker; crampy pain through hip-joint and pelvis.—Menses appear eight days too soon.—Lack of milk with nursing women.

17. Respiratory Organs.—Hoarseness with sore throat.—Small piece of phlegm in throat, which cannot be brought up by coughing.—Cough tedious and long lasting; < at night and from motion; with an aching in forehead and a constrictive pain in chest.—Violent attacks of cough, with vomiting, day and night.

18, 19. Chest and Heart.—Pleuritic pains.—Uneasy pain in region of heart.—Fluttering palpitation.—Violent penetrating pain in region of r. nipple.—Violent prickling pressing stitches in region of l. nipple, later on l. side of back, but more violent; still later the same sensation on other parts of the body.

20. Neck and Back.—Soreness in neck and up into head.—Severe, pain l. side of neck while chewing.—Stiffness l. side of neck extending down l. arm; < by least motion; turn, or twist; > by application of a hot iron.—Severe pain across sacrum and dorsum of each hand.—Affection of spinal cord.

21. Limbs.—Sensation as if muscles were strained and being torn from attachment.—Rheumatism appearing suddenly, mostly in joints, with restlessness; patients desire motion, although it < pains; > by pressure; sweat without relief; < r. side.—Stiffness and contraction of joints.

22. Upper Limbs.—Itching in armpits in morning.—Pain from neck down l. arm; in evening to r.; could scarcely move her arm.—Severe pain above r. elbow.

23. Lower Limbs.—Severe pain through pelvis as if from one acetabulum to the other.—Bruised pain in hips at night, causing him to change from side to side.—Chronic gout.—Checked foot-sweat (chorea from).

26. Sleep.—All night dry throat, woke her out of sleep.—Disagreeable sweat during night, awoke with clammy skin.—Could get to sleep if she could get the right position.—Wakes early, and feels she has had sufficient sleep.—On awaking: headache; vomiting with headache; pain in eyes; stitches in ears.

Fragaria Vesca.

Strawberry. N. O. Rosaceć. Tincture of the ripe fruit. Infusion of the root.

Clinical.—Anasarca. Biliousness. Chilblains. Convulsions. Erysipelas. Gonorrhśa. Psilosis (or Sprue). Tapeworm. *Tongue, strawberry*; swollen. Urticaria. Weaning.

Characteristics.—It is well known that many persons are unable, to eat strawberries, and the poisonous effects resulting from them on those who are sensitive to their action have been utilised in homśopathy. Faintness; suffocation like apoplexy; convulsions and death have resulted; general anasarca, and especially swollen tongue. The well-known "strawberry tongue" is an indication for its use. Dr. Burnett gives it as "pippy tongue." An infusion of the root is used for drying up the breasts in women who wish to wean their children; it diminishes the size of the breasts and dries up the milk. Profuse viscid sweat has been observed. Lippe mentions: "Tapeworm. Pain in chilblains in hot weather." In old physic *Fragaria vesca* (in decoctions of leaves, root, or fruit ripe or unripe, or combinations of these) had a very large place assigned to it. It is commended by W. Salmon as a wash for sore-mouth; as a hćmostatic arresting the menses and stopping "bloody-flux;" swelling of the spleen; many forms of skin eruption and for "clearing the complexion." In two instances I have known indulgence in strawberries to revive symptoms of gonorrhśa in men who thought themselves cured. A number of cases of sprue or psilosis have been cured by a diet of strawberries *ad libitum* (*H. W.*, xxxiv. 440).

Relations.—*Compare:* Hydrocy. ac., Apis, Arsen., Cratćg.

SYMPTOMS.

6. Face.—Face reddish blue.—Livid countenance.

8. Mouth.—Tongue swollen so that it hung from the mouth.—Pippy or strawberry tongue.

11, 12. Stomach and Abdomen.—Vomiting followed by relief.—Stomach and abdomen distended.—Violent colic.

15. Male Sexual Organs.—Gonorrhśal discharge lighted up after long cessation.

16. Female Sexual Organs.—Breasts diminished in size and milk dried up (root).

17. Respiratory Organs.—Attacks of suffocation like apoplexy.

19. Heart.—Small intermittent pulse.—Failure of the heart's action and prolonged, leaving the patient weak and languid. (Death occurred later.)

20. Neck.—Neck very much distended with fine veins.

24. Generalities.—Swelling of the whole body.—Swelling of the whole body with faintness.—Complete prostration.—Convulsions.

25. Skin.—Petechial eruption.—Erysipelatous eruption.—Urticaria-like eruption.

27. Fever.—Profuse viscous sweat.

Franciscea Uniflora.

Brazilian Manaca-root. N. O. Scrophulariaceæ. Closely allied to Brunfelsia. Tincture of fresh root. An alkaloid, Franciscein, is also used.

Clinical.—Headache. Pericarditis. Rheumatism. Syphilis.

Characteristics.—*Franciscea u*. is a Brazilian remedy of great local repute as an anti-syphilitic and anti-rheumatic. It is called "vegetable mercury." In large doses it is a poison, causing violent purgation and emesis. Many cases of acute, sub-acute, and chronic cases of rheumatism have been reported cured with the tincture by homœopaths; also pericarditis complicating rheumatism. Hansen gives these symptoms as characteristic, though I do not know of any proving: "Intense headache like a band around the head, pain in occiput, neck and spine, lancinating, sticking; terrible aching all over, with great heat, followed by profuse sweat, which > all symptoms."

Franzensbad.

The alkaline-saline springs of Franzensbad, near Eger, in Bohemia. (Franzens-quelle, Salz-quelle, Wiesen-quelle.)

Clinical.—Chlorosis. Constipation. Debility. Diarrhœa. Dyspepsia. Nervous derangement.

Characteristics.—The Franzensbad waters are resorted to for their tonic effect, especially in chronic derangement of the digestion, obstinate constipation and

inertia of the lower bowel, anæmia following passive hæmorrhages, chlorosis, and nervous disturbances caused by debility. The waters of each of the three principal springs—Franzens-quelle (F.), Salz-quelle (S.), and Wiesen-quelle (W.).—have been proved by Dr. Watzke. Sodium sulphate is by far the most predominant ingredient in each, the chloride and carbonate of soda coming next. The waters are also highly charged with carbonic acid gas. Great sense of weakness, physical and mental, was produced by all. Under F. there was increased sensitiveness to cold. Contractive sensations were noticed, as: Contractive pain in whole forehead; sensation of contraction of skin of forehead between eyebrows. Many symptoms of disordered stomach and bowels occurred, and some peculiar symptoms in the penis and generative organs. Sensitiveness of the surface generally.

Relations.—*Compare:* Nat. sul.; Kali iod. (diffused sensitiveness).

SYMPTOMS.

1. Mind.—Great ill-humour.

2. Head.—Contractive pain in whole of forehead.—Occiput near vertex warm to touch.—Sensitiveness of whole head and eyeball, < by reflecting long on a subject, not < by stooping, shaking head, or walking.

3. Eyes.—Sensation of great dryness and hardness of lids.

5. Nose.—Fluent coryza in moving after rising, with constant tickling in l. nostril, lachrymation of l. eye and frequent sneezing.

8. Mouth.—Tongue coated white.—Dryness of palate and throat.—Earthy or burnt taste in mouth.

9. Throat.—Constriction in throat; > after supper; with nausea.

11. Stomach.—Appetite diminished.—Repeated, empty violent eructations.

12. Abdomen.—Aching, distension, and marked sensitiveness of the whole abdomen.—Stitches in region of gall-bladder.—Gurgling; painless rumbling; colic; slight griping, followed by diarrhœa.—Painful drawing in groin on micturition.

13. Stool and Anus.—Contractive, at times jerking pain in anus nearly whole forenoon.—Constant empty urging to stool.—Semi-fluid evacuations; after eating; preceded and followed or not by pain.—Constipation.

14. Urinary Organs.—Distressing (slow) drawing through the whole urethra.—Stitches in orifice of urethra; followed by unpleasant itching.—Frequent micturition.

15. Male Sexual Organs.—Erection without sexual desire; desire diminished.—Sensitiveness, at times painful drawing in penis; frequently returns, is apparently seated in mucous membrane of urethra (S.).—Violent tickling in prepuce and glans.

17. Respiratory Organs.—Voice rough and deep; hoarseness.—Dry, tickling cough, frequently repeated, caused by tickling in soft palate (S).

18. Chest.—Sensitiveness, external painfulness; constriction in chest.

20. Back.—Severe long-lasting pain in back and loins; a disagreeable sensation of heaviness and pressure, towards morning, while lying in bed, only > after rising; < by motion; by turning to one side.—Pinching beneath r. scapula.

25. Skin.—Sticking itching in various places.

26. Sleep.—Frequent waking with unusually vivid and remembered dreams.

Fraxinus Americana.

White Ash. N. O. Oleaceæ. Tincture of the bark.

Clinical.—*Uterus, affections of; prolapse of*. Uterus, tumours of.

Characteristics.—*Fraxinus* has had a fragmentary proving, but the chief clinical authority for its use is Dr. Burnett, who regards it as a uterine tonic in all heavy states of the uterus with prolapse, bearing-down, and relaxed ligaments. He calls it "the medicinal pessary." I have repeatedly verified his indications. It is an organ-remedy of the first rank. It is also indicated in uterine tumours, especially fibroids, with bearing-down sensations.

Relations.—*Compare:* Sepia, Lil. t., Nat. hyperchlor., Secale, Hydrast.

SYMPTOMS.

2. Head.—Headache with vertigo followed by fever.—Throbbing pain in back of head and neck.

6. Face.—Fever sores on lips.

13. Stool.—Bowels constipated.

14. Urinary Organs.—Urine scanty and brown.

16. Female Sexual Organs.—Uterine prolapse.—(Bearing-down pains.—Painfulness and heaviness of uterus.—Fibroid tumours.)

21. Limbs.—Cramp in feet after midnight, lasting three nights after the fever.

26. Sleep.—Wakefulness first part of night; last part dreamed that two rough men came into the house; in putting them out I was cut with a knife; I called for police, and that awoke me; I was breathing quick, with a fearful feeling.

27. Fever.—Cold creeping and hot flushes.—Fever two days after the medicine was stopped.

Fucus Vesiculosus.

Sea Kelp. N. O. Algæ. Tincture and trituration of the dried plant.

Clinical.—Corpulence. Dyspepsia. Goître.

Characteristics.—*Fucus* is a tissue-remedy of great power and must be compared with Iodine, of which it contains a large proportion. The symptoms have been obtained from patients taking the medicine for the reduction of obesity. The rapidity of digestion is increased and flatulency diminished. Goître has been cured with it in teaspoonful doses of the tincture given two or three times a day.

SYMPTOMS.

2. Head.—Intolerable headache; forehead felt as if compressed by an iron ring.

11. Stomach.—Stomach acts with more rapidity, and the hour of repast is more impatiently looked for.—The act of digestion is no longer accompanied by flushings of the face, fulness, weight in epigastric region and fits of heat towards head.

12. Abdomen.—Flatulency diminished and then disappears.

13. Stool.—Obstinate constipation.

17. Respiratory Organs.—Sense of suffocation, esp. during menses.

Gadus Morrhua.

Cod. N. O. Gadidæ. Trituration of first cervical vertebra of the fish.

Clinical.—Asthma. Bladder, affections of. Bone affections. Cough. Hands hot. Phthisis.

Characteristics.—Petroz is our authority for this medicine. Like *Ol. jec. asel., Gadus* has a powerful action on the respiratory apparatus. It is like *Lycopod*. in producing flapping of the alæ nasi. It also affects the bones and causes troublesome heat of the hands. Hopelessness and desire for death are prominent.

Relations.—*Compare:* Ol. jec. asel., Calc. c., Calc. phos., Conchiol.

SYMPTOMS.

1. Mind.—Deep melancholy, paroxysms of helplessness, for forty-eight hours, during which the desire for death is hardly controlled.—Intellectual faculties torpid; absence of ideas.

2. Head.—Headache in the night accompanied by fever.

3, 4. Eye and Ear.—Marked diminution of strength of hearing and sight.—A noise (tic-tac) is felt in r. ear, and pain if a noise from exterior becomes predominant.

5. Nose.—Oscillation of wings of nose, accompanying very frequent breathing as after exercise, at the time of waking and during the whole day.

6. Face.—Altered countenance.

8. Mouth.—Teeth sensitive and set on edge.—Dry mouth.

9. Throat.—Waking in night on account of severe contraction in the throat.—Constriction of fauces, wheezing cough, with white frothy expectoration.

11. Stomach.—Loss of appetite.

12. Abdomen.—Abdomen much distended.—Sensation of burning heat in whole hypogastrium.—While pains are felt in the chest, sharp pains in r. side of abdomen, in the groin, and in the kidneys.

13. Stools.—Soft stools, diarrhœa.

14. Urinary Organs.—Sensation of swelling and fulness in bladder; stitches in bladder; almost impossible to urinate.

17. Respiratory Organs.—Voice weak, exertion required to articulate distinctly; words do not come when wanted.—Light cough with expectoration of foamy sputa.—Fits of wheezing cough with pain deep in chest.—Very frequent breathing, with oscillation of wings of nose, as after exercise, at time of waking and during the whole day.—Breath short, laborious; as if air passages were closed.—Rush of blood to chest, without palpitation.—Violent pains in chest with orgasm.—Lumps seem adherent to parietes.—Sharp pains, burning shootings, 2 p.m.—Sharp pains running through chest; not < by walking, though renewed on first movement.—Very sharp pains in both lungs, esp. l., evening.—Contused pain in chest walls; brought on by coughing, deep inspiration, or motion.—A few fits of coughing caused a sensation of painful ruffling of the lungs, which seemed to change place and be contused.

20. Back.—Sharp, lancinating pain in dorsal vertebræ.—Constrictive pains in sides of trunk.—Pains in lower back and sacrum.

22. Upper Limbs.—Nails become soft.

23. Lower Limbs.—Pain above l. hip.—Slight lancinating pain in l. knee, which bends involuntarily when standing.—Tearing pain in r. buttock and thigh.—Bruised sensation in femur from head of bone to patella.

27. Fever.—Very severe coldness from hip down to feet.—Hands excessively hot and dry.—Dry heat in palms; intolerable in evening.—Fever without chill.

Galega.

Galega officinalis. Goat's Rue. N. O. Leguminosæ. Aqueous extract, Infusion, or Tincture of whole fresh plant.

Clinical.—Backache. Debility. Kidney ache. Lactation.

Characteristics.—*Galega*, as its name implies, has an ancient reputation as a milk-gland stimulant. The *Galegæ* are nearly related to Glycyrrhiza, the well-known source of liquorice. Carron de la Carrière (*H. W.*, xxvii. 79) tested its action on the milk glands of nursing women and found it rapidly increased the quantity and quality of the milk and increased the woman's appetite. Dorretta (*H. W.*, xxix. 177) gave *Galega* (he calls it "*Galega vera*," but doubtless it is Goat's-rue), in liquid extract of the leaves, for a common form of backache, which he located in the kidneys, though it is unaccompanied by any sign of kidney disease. The medicine he says is also a most excellent reconstructive in cases of anæmia and impaired nutrition.

Relations.—*Compare:* Agnus. c., Calc. c.; in kidney-ache, Santal.

Galium.

Galium aparine. Cleavers. Goose-grass. N. O. Galiaceæ (considered by some a sub-order of Rubiaceæ). Tincture and infusion of fresh plant. Extract. Poultices.

Clinical.—Bladder, irritability of. Calculus. *Cancer*. Gravel. Psoriasis. Ulcers.

Characteristics.—*Galium* has had no proving, but it is a popular remedy for cancer given internally and used externally; and also for scrofulous swellings and ulcers. It is further used as a diuretic and as a solvent for gravel and stone. It has cured a case of nodulated tumour of the tongue diagnosed to be cancer (*see* Hale); and a case of psoriasis of the hand (left) has been reported cured. Substantial doses were given in each case, and in the latter poultices of the herb were used as well.

Gallicum Acidum.

Gallic Acid. C_7 H_6 O_5. Trituration.

Clinical.—Asthma. Constipation. Debility. Delirium. Hćmorrhages. Phthisis. Urticaria.

Characteristics.—*Gallic acid* is the well-known astringent, derivative of *Tannic acid*, obtained from galls or oak-apples. It is used in old-school practice as a local application to arrest hćmorrhages. A case is recorded (*H. W*., xxviii. 502) in which the application of an ointment containing Gallic acid, or the insertion of a tannin suppository for piles, caused an attack resembling hay-asthma, with an eruption of urticaria. The experience was repeated several times before the cause was found out. This is sufficient to show that *Gall. ac*. is truly homśopathic to pulmonary cases, in which it has been largely used by the old school as well as the new. In pulmonary hćmorrhage, and in the excessive expectoration and the night-sweats of phthisis it has been found of especial service. Marcy, of New York, has recorded the case of a young lady who had a cavity in the left lung, with copious purulent expectoration, night-sweats, evening fever, pulse 130. Under the prolonged use of *Gall. ac*. 1x she recovered her normal health except that the left lung remained dull and she had great shortness of breath on the slightest exertion. Her flesh, strength, and general appearance were as when she was in perfect health. Bayles says it rapidly cheeks secretions, gives general tone to the stomach, increases appetite and removes constipation. This last must be a homśopathic effect. *Gall. ac*. is used in popular practice to check excessive menstruation. Prominent symptoms in the proving are: Weakness with irritability. Excessive dryness of mouth and throat. Sense of contraction of anus. Jerking of limbs. Itching of skin.

Relations.—*Compare:* Quercus, Tannin., Bacil., Ars. iod., Phos., &c. Phos. relieved pain in right lung.

SYMPTOMS.

1. Mind.—Wild delirium at night; very restless; jumps out of bed; sweats profusely; afraid to be alone; insists on constantly being watched; is exceedingly rude and abuses every one, even his best friends; jealous of his nurse and curses every one who speaks to her (a patient taking massive doses for aneurism).

3. Eyes.—Photophobia and burning itching of lids.

5. Nose.—Discharge thick and stringy.—Nose-bleed.

8, 9. Mouth and Throat.—Gums sore l. side around decayed tooth.—Dryness of mouth, fauces, and throat; with bad taste in deep sleep and dreams at night.—Increased roughness and secretion of phlegm in throat.

11, 12. Stomach and Abdomen.—Appetite lessened; with astringent taste in mouth at noon.—Slight nausea.—Stool later than usual leaving smarting, aching, faint, sick, hungry, and gnawing sensation in bowels, extending to stomach, with nausea lasting most of afternoon.—Gnawing, faint sick sensation in bowels and extending upward to stomach, with an astringent sensation in same.

13. Stool and Anus.—Sensation of contraction of anus, requiring a greater effort for expulsion at stool, which comes at length in bulk as if accumulated there.—Stool delayed.—Smarting, esp. in rectum.

14. Urinary Organs.—Urine increased.—Some red sediment. (Hay-asthma.)

17, 18. Respiratory Organs and Chest.—Pain in r. lung, lessened on lying down 9 p.m., not so severe in morning; < by coughing, yawning and full inspiration.—(Cavity in l. apex; purulent expectoration.).—Some aching middle and upper part of lungs, more in l., extending through muscles of neck and r. shoulder and down upper part of spine, < moving and turning head, morning.

21. Limbs.—Jerking of limbs.

25. Skin.—Itching in various parts.—Urticaria.

Galvanismus.

Galvanism. ("Z" signifies zinc, "s" silver, and "c" the copper pole.) Attenuations are made by triturating sugar of milk which has been subjected to the influence of either pole.

Clinical.—Asthma. Brain-fag. Diarrhœa. Epilepsy. Fever. Hæmorrhoids. Hydrocephalus. Paralysis. Rheumatism. Salivation. Tetanus. Tongue, affections of. Toothache. Vision, illusions of.

Characteristics.—Caspari is the authority for this medicine. The most prominent symptoms are muscular contractions; shuddering, shivering, cold-water sensations on skin or else burning. Disorders of sight and hearing with confusion of the head and headache. There is also putrid smell before nose. Many sensations appear in the tongue, and there is salivation. Catamenia copious. Farrington gives "benumbed feeling at the back of the head in brain-fag, the positive pole being applied to the cervical region, the negative to the vertex."

Relations.—*Compare:* Kali bro., Gels., Electricitas, Magnet. p. arct., Magnet. p. aust.

SYMPTOMS.

1. Mind.—Sobbing; peevishness.—Inquietude; oppression.—Anxiety.—Anguish, with oppression of the chest, and rattling respiration.—Ill-humour; vexation; obstinacy.—Dulness of mind; incapacity for labour.—Rambling thoughts.—Zoomagnetic symptoms.—Unusual vivacity and activity of mind, without force of will, with loss of command, almost entire, over the motions of the limbs.

2. Head.—Head confused to an excessive and painful degree; perplexity and giddiness in the head.—Vertigo: with confusion of the head, and lights before the eyes; with deafness; with alternation of heat and cold.—Cephalalgia; violent pains in the direction of the ears.—Sensation as in coryza, in the head and nose.—Pressive headache.—Congestion in the head.—Noise in the head, like bellowing, or boiling.—Chronic hydrocephalus.

3. Eyes.—Sharp pains in the eyes.—Aching of the eyes.—Pulsation in the eyes.—Jerking of the eyelids.—Inflammation of the eyes.—Redness of the eyes, esp. of the conjunctiva.—Swelling of the eyes.—Stye.—Lachrymation.—Difficulty in moving the eyelids (ameliorated).—Convulsions of the eyes.—Pupils contracted.—Weakness of sight.—Amaurosis.—Objects appear to be twisted.—Objects seem enlarged.—Objects appear: to quiver; more clear; brighter; bluish, or of a deep blue (z).—Blue colour seems to be greenish, yellow, or red.—Red, to be green, blue, or slightly reddish, according to the pole which is

used.—The earth and air appear to be white as snow.—Before the eyes, lightnings; a globe of light; scintillations; reddish light.

4. Ears.—Violent pains in the ears.—Pulsations.—Sensation as if little balls circulated in them.—Incisive pains, as if galvanic rays were passing through them (s).—Redness of the galvanised ear.—Inflammation and suppuration of the exterior of the ear.—Absence of ear wax; discharge, at first serous, afterwards like pus, by the ear which is deaf (s.).—Ulcers in the ears, sometimes with sanious discharge.—Discharge of blood.—Deafness; whistling in the ears, sometimes with tinkling; noise as in swallowing (s).—Sound of bells; sound of wind instruments; murmuring; uproar; detonation, like the report of a pistol.

5. Nose.—Severe aching in the nose (s).—Incisive and darting pains.—Tickling (s).—Sensation of coldness.—Excoriation of the mucous membrane.—Epistaxis.—Putrid smell before the nose (s).—Great inclination to sneeze (s).—Coryza.

6, 7. Face and Teeth.—Redness of the face, as in erysipelas.—Swelling of the face.—Swelled cheek, with toothache.—Convulsions of the lips and of the muscles of the face.—Burning on the skin, under the eyes.—Lancination in a rheumatic swelling of the cheek, as in a wound.—Toothache, sometimes with swelling of the cheek.—Pain in a hollow tooth, with salivation.

8. Mouth.—Augmented secretion of saliva; salivation during the toothache; the saliva has an alkaline taste (c); abundant secretion of clear saliva, which leaves an acid taste in the mouth; saliva flows from the throat in a stream.—Caustic sensation on the tongue (c); coldness (s); heat (z); painful lancinations; pulsation; sensation as if coal were on the tongue, a tumour, or a boil, or else as though a hole had been pierced in it; blunted sensitiveness of the tongue; heaviness, with difficult speech; convulsive contractions.

9. Throat.—Pains in the throat; heat; swelling of the amygdalæ.—Painful sensation in swallowing.—Abundant expectoration of mucus.—Cramp of the gullet.

11. Stomach.—Acidulated taste in the mouth; acid (z); metallic (z).—Frequently, diminution of appetite, much thirst; sometimes with burning heat of the body.—Risings, with cutting and pinching pains in the abdomen; nausea; vomiting, sometimes of a grass-green liquid (c); violent vomiting.

12. Abdomen.—Tension in the pit of the stomach.—Colic (bellyache).—Dull colic.—Pinching and cutting pains in the abdomen, as from flatus, with risings, emission of wind, and diarrhœa.—Borborygmi in the abdomen.

13. Stool and Anus.—Urgent inclination to evacuate, with sensation of increased peristaltic movement, and evacuation of abnormal stools (z, on the tongue; s, in the

anus).—Stool promoted, in constipation.—Copious evacuation, at an unusual time.—Two evacuations during the night; diarrhœa, sometimes with violent vomiting.—After the diarrhœa, lassitude like that caused by bodily fatigue, and profound sleep.—In the rectum, pulsation and movement (z).—In the anus, contractions.—Hæmorrhoidal symptoms; increase of hæmorrhoidal flux.

14. Urinary Organs.—Great heat in the bladder (z).—Violent pains in the neck of the bladder.—Augmented secretion of urine.—Turbid urine, with thick and reddish sediment; increased emission in gonorrhœa.

15. Male Sexual Organs.—Erections, sometimes very strong, and without lascivious ideas.

16. Female Sexual Organs.—Catamenia copious; the menses appear each time the patient is galvanised.—Suppressed catamenia quickly reappear, but nevertheless fail to appear at the following period.

17. Respiratory Organs.—Spasmodic movements in the larynx, which ascend and descend.—Painful irritation in the throat.—Cough, dry; humid; with patients who have tubercles the nodosites speedily soften and break, and the fatiguing cough disappears.—Difficult respiration; asthma (c) respiration deep, slow, rattling.—Respiration impeded by each shock.

18. Chest.—Great oppression of the chest, with great anguish, and palpitation of the heart.—Pulse accelerated, intermittent, or rather full.—Accumulation of saliva.—Tightness in the pit of the stomach, and abundant secretion of a red and hot urine.—Violent pains in the chest.—Pressure in the chest.—Palpitations of the heart.

20, 21. Neck, Back, and Limbs.—Nape and neck stiff, as from rheumatism.—In the shoulder, stiffness and difficulty of movement.—Burning and pulsation, with dragging pains extending to the fingers.—In the arm, draggings and tension (c); heat (z); coldness (c); tetanic stiffness, with difficulty of movement and lassitude.—In the hand, itching, sometimes in a swelling on the hand, which soon becomes painful and suppurates.—Burning, as from hot coals.—Fingers, almost always benumbed.—Heat in the fingers (z); coldness (s); incisive and piercing pains (s).—Sensation as though the finger were wrapped up, as when inflamed and swollen; itching eruption in the articulations.—On the legs, re-appearance of an itch-like re-percussed eruption.—Trembling of the muscles in the thighs, and the calves of the legs, during sleep (c).—Painful sensation commencing in the toes, and extending into the abdomen.

24. Generalities.—Painful tension throughout the body; many electric shocks in the body during the night; slight shocks like shivering.—Tetanus; recurrence of epilepsy cured a long time previously.—The epileptic attacks, which occurred at night, now take place in the daytime.—Contraction of the flexor muscles (z), of the

extensor muscles (c), starting of the tendons.—Disposition to tremble.—Valetudinary condition; lassitude, sometimes with drowsiness, or else following diarrhœa; fainting; asphyxia.—Great sensibility of the galvanised part.—Congestion of the parts touched.

25. Skin.—Scarlet redness of the legs, of the arms, of the chest, and of the neck, with miliary eruption (c).—Inflammation and swelling of the galvanised part.—Miliary scarlatina, over the whole body, except the face; the margins of the ulcers become more inflamed; the parts (galvanised) where have been blisters, become painful, brown, swelled, or else discharge much corrosive serum.

26. Sleep.—Drowsiness.—Sleeplessness, sometimes complete; disturbed sleep.—During sleep frequent smiling.—Uneasy awakening.—Dreams of chewing something which seems to have an agreeable flavour; vivid dreams; dreams in which the sleeper appears to fly.

27. Fever.—Sensation of coldness in the body (c); coldness of the arm (c); sudden sensation as of being sprinkled with cold water.—Shuddering, with febrile shivering, in hysterical patients; quaking shivering.—Febrile movements; alternation of heat and shivering; sometimes with shivering, headache, burning in the throat, and difficult respiration (c).—Heat augmented: in the arm; along the nerve of a paralysed part; throughout the body; flying heat, or else as intense and burning throughout the body (c).—Burning on the skin (under the eyes, or else in the shoulder and the hand) as if from contact with live coals (c).—Pulse: full, hard, and strong (z); rapid, and full; rapid, small, contracted (c); irregular (c).—General perspiration.—Copious sweat, which is acidulated (c).

Gambogia.

Gamboge. Gummi Gutti. N. O. Guttiferæ. Tincture of the resinous gum obtained from a tree (*Garcinia morella*) native to China.

Clinical.—*Anus, affections of*. Backache. Blow, effects of. Coccygodynia. Colic. Diarrhœa. Eyes, inflammation of. Lienteria. Throat, sore. Typhlitis.

Characteristics.—The chief reputation of *Gamboge* among homœopaths is as a remedy for diarrhœa. "Profuse watery diarrhœa, particularly with old people," is characteristic. Stool preceded by excessive cutting about navel; stool expelled all at once after considerable urging; and is followed by a feeling of great relief. Stools: yellow (the colour of the drug); green; bloody; lienteric. Burning in anus after stool; anus sore and excoriated. Frightful vomiting and purging, with fainting. But this action by no means exhausts the range of *Gamb*.; it has a number of symptoms in the eyes and throat; and also rheumatic symptoms. Pain in small of back, as if

bruised or sprained. Pain in sacrum, resulting from a blow, was cured in one case of mine. Gnawing in coccyx. Burning pains are prominent. Burning in the liver. (Like many other yellow, bile-like drugs, *Gamb*. acts markedly on the liver.) Most symptoms are > by motion; cough > sitting up; > in open air; < towards evening or at night. There is periodicity in the symptoms. General soreness over the body.

Relations.—*Antidoted by:* Camph., Coff., Coloc., Kali c., Op. *Compare:* Aloe, Podo., Puls. (cough > sitting up; > open air); Apocy. c. (stool expelled all once; but Gamb. has cutting before and > after stool); Crot. t. (Crot. has stool in one gush, but Gamb. is not < from least food or drink like Crot.).

SYMPTOMS.

1. Mind.—Cheerful, talkative, feeling of case, great lightness of all his motions.

2. Head.—Vertigo during rest or motion, in morning on rising.—Pain in the vertex, as if bruised, in the forenoon; > in open air.—Heaviness in the head, with drowsiness and pain in the back.—Heat rises to the head, with perspiration.

3. Eyes.—Itching of the inner canthi, with discharge of acrid, corrosive tears after rubbing; > in open air.—Nightly agglutination of the lids; burning in the morning.—Violent itching of the eyes in the evening.—Burning of the eyes, > by walking in the open air.—Violent burning of the eyes and photophobia, in evening or afternoon, > from walking in the open air, but returning in the morning.

4. Ears.—Lancination in the ears.

5. Nose.—Sneezing (in daytime).—Violent chronic sneezing.—Ulceration of r. nostril, with burning pain.—Dryness of r. nostril.—Much mucus in the nose, smelling like pus.

8. Mouth.—Feeling of coldness in the points of the incisors.—Dry mouth.—Burning of the anterior half, or only of the tip of the tongue, which feels hard.

9. Throat.—Violent stinging in r. side of throat.—Stinging in the r. side of the throat during and between the acts of deglutition.—Sore pain in the throat, which is felt when even touching the outer side of the neck.—Roughness and burning in throat, causing constant hawking.—The throat feels swollen.

11. Stomach.—Bitter taste in the mouth.—Nausea, with accumulation of water in the mouth and gulping up of sour water.—Nausea proceeding from the stomach.—Violent empty eructations.—Frightful vomiting and purging, with fainting.—Dartings in the stomach, causing one to start.—Acute darting, stitching pains in the stomach.—Gnawing in the stomach.—Aversion to food.—Violent thirst in the evening.—Ulcerative pain in the stomach, passing off after eating.

12. Abdomen.—Empty feeling in the stomach and abdomen.—Inflation and tension in the abdomen.—Inflation and tension of the abdomen, with pinching in the umbilical region.—Gnawing in a small spot below the umbilicus.—Pinching in the abdomen and groins.—In the groins sticking, tension.—Burning in the region of the liver.—Rumbling in the bowels.

13. Stool and Anus.—Frequent emission of flatulence; esp. evening and night.—Diarrhœa, with burning pain and tenesmus of the rectum, prolapsus ani, and constant pinching around the umbilicus, sometimes attended with discharge of mucus.—Watery diarrhœa, with colic and tenesmus.—Fæcal diarrhœa, stools evacuated with great force.—Yellow and green diarrhœic stool, mixed with mucus, preceded by excessive cutting around the umbilicus.—Hard, insufficient stool, with violent urging, pressing, and protrusion of the rectum.—Hard stool, succeeded by burning at the anus.

14. Urinary Organs.—Infrequent urination.—Emission of a few drops at a time, then intermitting, and finally returning, with burning at the orifice.

16. Female Sexual Organs.—Leucorrhœa.—Menses too early and too profuse.

17. Respiratory Organs.—Sensation of soreness in every part of the chest.—Pressure in the middle of the chest.—Stitches going from both sides of the chest towards each other.—Repeated extremely painful stitches in the sternum.

20. Back.—Pain in the small of the back, as if bruised or as if sprained.—Gnawing in the os coccygis.

22. Upper Limbs.—Stitch on the top of r. shoulder.—Stinging and numb feeling in the ball of r. thumb.

23. Lower Limbs.—Cramp in the calf, with contraction of the toes.—Heaviness and languor of the feet.

24. Generalities.—Itching and formication in various parts.—Pains, as if bruised.—Tearing in the shoulders.—Burning sensation in various parts.—Burning-stinging pain.—Increased heat, with anxiety.—Gnawing.

25. Skin.—Intolerable itching and formication in various parts.—After scratching, burning and ulcerative pain.—Itching blisters on both hands, first pale, then red.

26. Sleep.—Drowsiness the whole day.—Sleepiness, great inclination to sleep.—Anxious, vexatious dreams.

27. Fever.—Chill, proceeding from the back, with coldness of the whole body from evening till morning.—Chilliness is accompanied by empty eructations, yawning, thirst, pain in the small of the back, biting as of ants over the whole body (by

night), excessive stitches in the ears.─Increased warmth, with anxiety and perspiration.─Night-sweat all over. Violent thirst in the evening.

Gastein.

The hot springs of Wildbad Gastein in Salzburg, Austria, contain Sodium Sulphate predominantly, but also Silicic Acid, Potassium Sulphate and Carbonate, Lithium Chloride, Magnesium Carbonate, Ferrum Carbonate, Aluminium Phosphate, and traces of Calcium Fluoride, Strontium, Arsenicum, Titanic Acid, Rubidium, Cæsium; also free Carbonic Acid. *Lapis albus* is a kind of gneiss found in the spring. It is a Silico-fluoride of Calcium. Dilutions.

Clinical.─Amenorrhœa. Apoplexy. Calculi. Callosities. Cold, easily taken. Constipation. Debility. Diarrhœa. Gout. Hæmorrhoids. Membranous dysmenorrhœa. Paralysis. Rheumatism. Scars. Sexual weakness. Typhlitis. Varicose ulcers.

Characteristics.─The effects of the baths are thus described by Constantin James: "General unpleasant sensation. Instead of expanding [as would be expected in a warm bath] the skin is drawn up upon itself as if by a tight astringent. There is slight dyspnœa; the abdominal walls draw together; the testicles rise to the inguinal rings. Soon an unusual warmth, accompanied by shocks and tremors, spreads throughout all the limbs. The pulse becomes hard and vibrating; the face becomes suffused; there is humming in the ears. It is now time to leave the bath; to stay longer is attended with danger. . . . After the seventh to the fourteenth bath the thermal influence tends to concentrate itself entirely on the nervous system. Thus it seems to the patient that an increase of vitality spreads through his whole being; he feels more active than before; the longest walks cause hardly any fatigue, and that is promptly repaired by sleep. But this influence is particularly predominant in the sexual system; it shows itself in phlegmatic patients in an increase of force and tone, causing the disappearance of involuntary losses of semen. In energetic or irritable temperaments it will provoke erotic dreams and unwonted excitement, like cantharides; in such cases the waters are aphrodisiac."

Such is the general description of the effect of the baths. Among individual symptoms noted are: Diminished secretions. Activity of all the veins; excitement of the circulation. Weakness and weariness, with dragging sensation in the abdomen, as if it were too heavy. Exhaustion and inclination to sleep. Takes cold very easily (caused, then cured). Sensation of indescribable mental and physical comfort runs through all the fibres during the bath. Pulsation in the body, especially in the arms, with jumping in them. All symptoms < before a storm; or

during the Sirocco. Contractive sensations predominate. Scar tissues and callosities are affected.

Relations.—*Compare:* Lap. alb., Fluor. ac., Sil., Canthar., Phosph.

SYMPTOMS.

1. Mind.—Lively mind; vivid fantasies; conversational.

2. Head.—Vertigo, as if apoplexy impending; rush of blood to head.—Dizzy heaviness, as after a night's debauch; reeling forward; afterwards pressure in forehead, with nausea.—Dull headache in morning.

4. Ears.—Noises: rumbling, thundering, singing, bells, trumpets.

5. Nose.—Sensation of constriction in mucous membrane of nose.—Liability to take cold.

6. Face.—Expression becomes lively.—Colour fresh and clear.—Feeling of swelling in face, esp. nose.

7. Teeth.—On biting teeth together they feel as if coated with mucus.—The teeth, esp. the carious ones, become sensitive and painful.

8. Mouth.—Slimy saliva.—Dryness and contraction in mouth.—Much mucus in mouth and spitting.

9. Throat.—Great dryness in throat.

11. Stomach.—Rising from the stomach in the morning; was obliged to keep it down by swallowing.—Gastralgia and water-brash, continuing two months.—A feeling of contraction in stomach.

12. Abdomen.—Feeling of uncertainty in abdomen.—Most violent pain in region of cæcum, almost causing faintness.

13. Stool and Anus.—Bleeding hæmorrhoids.—Feeling of contraction in rectum.—Two violent stitches in left side of anus.—Diarrhœa, greenish and bloody.—Gall-stones passed.—Constipation and moving of flatulence in abdomen, with ineffectual desire in rectum.—Very hard stool.

14. Urinary Organs.—Passage of stones from kidneys and bladder.—Excessive amount of watery, cloudy, odourless urine.—Deposit: mealy, white, sand-like; brick-dust; slimy, purulent.

15. Male Sexual Organs.—Scrotum drawn up.—Increased desire.—Desire increased at first, disappears later, and coitus is not followed by emission.

16. Female Sexual Organs.—Passage of fibrous, membranous formation from uterus.—Menstruation suppressed.—Suppressed menstruation reappears.

17. Respiratory Organs.—Hoarseness.—Profuse expectoration, with unpleasant dryness of throat.

19. Heart.—Pressive pain in region of heart in evening.—Febrile, full, hard pulse.

21. Limbs.—Weakness and heaviness in limbs, with a sensation in arms as if compressed with iron band or forcibly drawn out.—Tightness in limbs.

22. Upper Limbs.—Veins of hands swollen.—Callous spot on palm of right hand becomes painful.—Feeling as of a splinter in first phalanx of ring-finger.

23. Lower Limbs.—Pains in l. hip extending to knee, most violent when rising, and making her scarcely able to walk without support.—Soles painful when stepping on them; a callous spot becomes painful.

25. Skin.—Skin becomes dry and red.—Skin becomes soft and velvety.—Old scars break out anew, and foreign bodies are thrown out.—Urticaria; hydroa; pustules; erysipelas; itch-like eruption.

26. Sleep.—Great drowsiness.—Confused dreams towards morning.—Dreams of sexual excitement.

27. Fever.—Slight creeping chills over back.—Warmth and turgescence increased.—Perspiration pungent, clammy, staining linen red (staining it yellow in patients).

Gaultheria.

Gaultheria procumbens. Wintergreen. N. O. Ericaceæ. Tincture of fresh leaves. Oil obtained from leaves. An evergreen trailing vine found in cool, damp woods. The oil contains methyl salicylate, and is one of the sources of Salicin.

Clinical.—Gastritis. Neuralgia. Pleurodynia. Rheumatism. Sciatica.

Characteristics.—Several cases of poisoning with the oil have been recorded in which symptoms of acute gastritis appeared: prolonged vomiting, set up afresh by

the least thing taken, as a cup of water; severe pain in epigastrium, slow, laborious breathing, insensibility and hot skin. Inhalation of *Ammonia* aroused the patients from stupor. B. F. Lang (*H. R.*, ix. 214, 340) has related his experience with material doses in—ciliary neuralgia; facial neuralgia; gastric, ovarian, uterine, and menstrual neuralgias; sciatica; and inflammatory rheumatism.

Relations.—*Compare:* Bry., Rhus, Salol., Nat. salicyl., Kalmia, Ledum.

SYMPTOMS.

1. Mind.—Very stupid soon.

4. Ears.—Marked dulness of hearing.

9. Throat.—Tongue dry, smooth, and slightly swollen; speech rather indistinct from the swelling.

11. Stomach.—Inordinate, uncontrollable appetite for food, notwithstanding irritability of stomach; everything taken, even cold water, is immediately rejected.—Very severe pain in epigastrium and inferior part of the hypochondria, greatly < by pressure of finger.

17. Respiratory Organs.—Pleurodynia with pain in anterior mediastinum.

Gelsemium.

Gelsemium sempervirens. G. Lucidum. G. Nitidum. Bignonia sempervirens. Yellow jessamine. N. O. Loganiaceć. Tincture of the bark of the root.

Clinical.—Amaurosis. Anterior crural neuralgia. Aphonia. Astigmatism. Bilious fever. *Brain, affections of.* Cerebro-spinal meningitis. Choroiditis. Colds. *Constipation*. Convulsions. Deafness. *Dengue fever*. Diarrhśa. *Diphtheria Dupuytren's contraction*. Dysentery. *Dysmenia*. Emotions, effects of. Epilepsy. *Eyes, affections of. Fever*. Fright. Gonorrhśa. Hay-fever. *Headache*. Heat, effects of. Heart, diseases of. Hydro-salpingitis. Hysteria. Influenza. Intermittent fever. Jaundice. Labour. Liver, affections of. Locomotor ataxia. Mania. Measles. *Meningitis. Menstruation, painful*; suppressed. Metrorrhagia. *Myalgia*. Neuralgia. Nystagmus. *Śsophagus, stricture of. Paralysis*. Paralysis agitans. Paraplegia. Pregnancy, albuminuria of. Ptosis. Puerperal convulsions. *Remittent fever*. Retina, detachment of. Rheumatism. Sexual excess, effects of. *Sleep, disordered*. Spasms. Sun-headache. Sunstroke. Teething. Tic-douloureux. Tobacco, effects of. *Tongue, affections of*. Toothache. *Tremors. Uterus, affections of. Vertigo. Voice, loss of*. Writer's cramp.

Characteristics.—*Gelsemium*, which belongs to the same order of plants as *Nux vomica* and *Curare*, is not only one of the most important additions to the materia medica for whose introduction we are mainly indebted to Hale, but it is also in the first rank of importance among the vegetable polychrests. A drug is of importance in homśopathy not so much by reason of the great number of the symptoms it causes, as by possessing a number of well-marked and clearly characterised symptoms which correspond to symptoms constantly met with in every-day practice. It was this which at once gave *Gelsem*. a place among the polychrests of homśopathy. Like its botanical relatives, *Gelsem*. is a great paralyser. It produces a general state of paresis, mental and bodily. The mind is sluggish; the whole muscular system is relaxed; the limbs feel so heavy he can hardly move them. This condition exists in the cases of typhoid that call for it; the lassitude is expressed by the patient; with *Mur. ac*. there is the lassitude, but the patient does not express it. The same paretic condition is shown in the eyelids, causing ptosis; in the eye muscles, causing diplopia; in the śsophagus, causing loss of swallowing power; in the anus, which remains open; in diarrhśa from depressing emotions or bad news; in relaxation of the genital organs. Functional paralyses of all descriptions. This is shown again in some features of the headaches. They are accompanied by blurring of the sight, and relieved by a copious discharge of watery urine from a paretic condition of the kidneys. Conversely there may be a desire to urinate during the night, and if the call is not immediately responded to a violent headache supervenes. Post-diphtheritic paralysis; debility after pollutions; great prostration from irritability of seminal vesicles. The mental prostration is typified in "funk," as before an examination, stage-fright, effects of anger, grief, bad news, and is accompanied by drooping eyelids. Alcoholic stimulants relieve all complaints where *Gels*. is useful. Hysterical dysphagia or aphonia, after emotions. Measles and eruptive disorders, with drowsy state, stiff used face, and even convulsions. Convulsions are no less marked in *Gels*. than paralyses. Erskine White (*H. W*., xxxii. 501) cured an infant born in convulsions three weeks after its mother had been terribly frightened by seeing her little brother nearly burnt to death. The only guiding symptom was "the child's chin *quivered incessantly*." In thirty seconds after the dose the quivering ceased; in three minutes the convulsions were at an end. White had to ride twelve miles over mountains to reach the patient after receiving the summons, so the convulsions must have lasted a considerable time. *Tremor* is a keynote of the remedy. *Gels*. is adapted to children and young people; to persons of a nervous, hysterical temperament; to irritable, sensitive, excitable people. The following provings related by Dr. George Logan, of Ottawa (*Med. Adv*., xxiii. 125) show the power *Gels*. has over the mental sphere. The subject of the first was Mrs. Logan, who describes her experience thus:-

"A few moments after taking the medicine there is an extreme feeling of restlessness—not able to be still for a second, keep turning and twisting all the time. This is succeeded by intense pain over the right eye, always the right; it seems as if my forehead would come right over my eyes and close them; my eyes feel as if they were turning into my head, roll up all the time. Then a strong inclination to

commit suicide. Want to throw myself from a height; invariably think of going to the window and dashing myself down—feel as if it would be a relief. This is succeeded by an inclination to weep, and I generally have a good cry, but before I cry and while the feeling lasts of wishing to throw myself from a height, I clench my hands, and nervous rigors or sensations run all over my body down to my fingers and toes; it seems as if I would lose my senses. Then a great dread of being alone seizes me, and I am afraid of what may happen; think I may lose all self-control. The pain still continues over the right eye, and often the back part of my head seems to have a spot about four inches square that is turning to ice. These feelings are followed by a strong inclination to talk or write, very great exhilaration, and a better opinion of my mental capacity—indeed it seems as if my memory was better, that I can recall almost anything I ever read; nearly always repeat long passages of something to myself that I have read years before. It appears to me that I can remember almost anything I love to recall. Now this is my invariable experience whenever I take *Gelsemium*—no matter whether in the 3rd or 1,000th potency—and I have been in the habit of using it for twenty years. I am writing this under the influence of the drug. I could not give the symptoms so accurately at any other time. As I am getting over the effects of the drug I have to urinate every few minutes. While suffering I like to have people in the room—have a perfect horror of being alone. I find *Cinchona* an antidote for most of the symptoms, but it leaves me much exhausted, thoroughly tired, and with a wish to be quiet."

Dr. Logan adds that he first gave the patient *Gels*. 2 for insomnia and headache. It produced the symptom "wishing to throw herself from a height" so markedly that he was alarmed lest she should carry it out. A year or two after, wishing to give the remedy again, he gave two pellets of the 30th—with the same result. He next prescribed the 1,000th, and the result of that was the proving now related. Here is the second case in Dr. Logan's words:—

" I gave Mr. Dorion, since Dr. Dorion, of St. Paul, five or six, drops of *Gelsemium* 1st for some ailment the nature of which I fail now to remember. Within a few hours after taking the *Gelsemium* I was sent for to see Mr. Dorion, who, I was told, was 'insane.' He was brandishing a sword in a threatening manner, and frightening all the occupants of the house. On my arrival at his room I found him in the position of 'shouldering arms' with his sword. I playfully admired his military appearance, and thus secured the dangerous weapon, very much to the relief of his fellow-boarders. It then occurred to me that the symptoms were produced by *Gelsemium*, and placing him in charge of one of the boarders, I returned to my office in order to procure the antidote, of which I was unaware at the time. I gave *Cinchona* 30 each half-hour, which, in the course of two or three hours brought him all right again." J. H. Nankivell drank two ounces of tincture of *Gelsem*. instead of a glass of sherry. He walked a few feet with assistance and in another minute his legs were paralysed. He dragged himself to the bedside with his arms, but they were unable to help him to bed, into which he had to be lifted. As

long as he lay quiet there was no trouble, but on the least exertion there were excessive tremors. Vomiting occurred during the next twenty-four hours. Temperature rose to 101.5° F. Heart's action very violent and intermittent (possibly an aggravation of existing disease). All the muscles of the eyes were affected, but of voluntary muscles those of the right side suffered most. Prolonged conversation involved paralysis of upper lip. There was somnolence; absence of mental excitement; and good appetite. The effects passed away in the order of occurrence, from below upwards; but after the arms had recovered, vision was not perfect for twenty-four hours. A patient of mine once took a drachm of the tincture for a headache. On going out he could not tell which side of the street he was on. He was near St. Paul's Cathedral and saw two cathedrals instead of one. The following case of poisoning was recorded by Dr. Edward Jepson (*Brit. Med. Jour*., Sept. 19, 1891, p. 644). Although *Gels*. was given with other drugs, and on the last occasion with one of its antidotes (quinine), which probably saved the patient's life, the symptoms are unmistakably those of *Gels*.:-

"About two months ago Miss W., aged about forty, an inmate of my house, was seized with very severe neuralgia about both temples. I gave her tincture of *Gelsemium* 10 minims, with a bismuth mixture to be taken every two or three hours. After taking this for about a day and obtaining no relief—but rather she grew worse, being, as is described, 'nearly mad with pain'—I gave her the full dose of the tincture of *Gelsemium*, according to Squire's *Companion of the Pharmacopśia*, 1882, and Whitla's *Materia Medica*, third edition, namely, 20 minims in a quinine mixture. This was taken every three hours, but with only moderate relief, three or four doses having been taken during the night. At about eight o'clock the following morning Miss W. was able to speak pretty well, and said she thought she was better. At about nine o'clock she was speechless and in the greatest distress of mind and body; there was total loss of power in the tongue; it could not be protruded, she could not articulate, and with very great difficulty could she swallow the brandy and water we forced upon her. There was alteration in vision; she could not distinguish us clearly, and the pupils were widely dilated. She had uncertain power over the muscles of the hand and arm, so that she could not write her name. All this time she was perfectly conscious, and nodded her head in answer to questions. She was greatly alarmed as to herself, and, as she informed us afterwards, she thought she was about to have a fit. Not knowing of any special antidote for *Gelsemium*, and seeing that there was no time to lose if we wanted to avert any increase of the paralysis, it fortunately came into my mind to give her a subcutaneous injection of *Strychnine*, using 1 minim of the liquor *Strychninć*, or 1-120th part of a grain. Ten minutes after this the change for the better was most marked; there was return of power in the tongue and in the hands, and an improvement in the vision. . . . I again injected a minim of the *Strychnine*, and with further improvement in the condition of the patient. After this she took food and stimulants, and all paralysis disappeared. The vision was not perfectly restored for some hours, the pupils being less dilated. She had some return of the neuralgia, and was very weak for a few days, but eventually she quite recovered, and has had altogether better health since

this event than she had prior to it." *Gelsem*. in the attenuations is a great neuralgic remedy. I have cured among other cases one of neuralgia of the anterior crural nerve. The paralysis of the tongue recalls another condition, trembling of the tongue, which is one indication for *Gels*. in typhoid, in which it is a leading remedy. The tongue is only thinly coated, and has not the dark streak of the *Bapt*. tongue. The *Gels*. face is flushed crimson, but not quite as *besotted* as that of *Bapt*. There is excessive weakness and trembling, but the consciousness is not so clouded. In coryza and hay fever *Gels*. has an important place. Early morning sneezing and streaming colds are a strong indication. The characteristic headache of *Gels*. begins in the occiput and spreads over the whole head, settling down over eyes. Dizziness and dim vision, and dizziness rising up from occiput and spreading over whole head, with depression, from heat of summer. Headache with stiff neck, < in morning; > urinating; preceded by blur before eyes, drowsiness with headache, difficulty in keeping eyes open, dull headache over eyes to vertex and occiput, with irregular action of eye-muscles. Neurotic symptoms in cigar-makers, impotence, palpitation. Many symptoms occur in connection with the sexual organs, male and female. [J. H. Allen (*H. P*., xiii. 244) cured a case of hydrosalpingitis, of gonorrhśal origin, with *Gels*. 1m. The symptoms were: Feeling of fulness and heaviness in uterine region, cramp-like pains during menses, sharp pains moving from uterus to back and hips. A languid aching in back and hips a day or so before menses; great weakness and loss of power in lower extremities; very little pain after menses began. Lump in throat which she cannot swallow. After menses, pains in back of head and spine. Pains running up back of neck, with a feeling of tightness in the brain; irritable, easily angered. Fever in afternoon, twitching of muscles. Menses last eight days; for first three days appear natural, but afterwards very light-coloured, like serum. The tumour, which was in the left side of abdomen, disappeared in three months, improvement having set in from the first.] Dysmenia; epileptiform convulsions at menstrual period; rigid os in labour; chill, beginning in hands; or feet; and running up back. There is < both before, during, and after menses. Itching of skin; eruption like measles. Sensations of lightness: of head, of body. Sensation as if the head were enlarged; as if there were a tape round the head; as if the skin were contracted in the middle of the forehead; sensation from throat up into left nostril like a stream of scalding water; sensation as if a lump were in śsophagus; load in stomach as if stomach were quite gone; as if the uterus were squeezed by a hand; as if he would die; as if the blood ceased to circulate as if the heart would stop unless he kept moving; as if a knife were thrust through from occiput to forehead; as if eyes were jumping out of head; as if a lump were in throat which could not be swallowed. The stools of *Gelsem*., whether loose or constipated, are mostly yellow, like the flower. The colour comes out also in the colour of the tongue, and bilious symptoms generally. Wants to lie down and rest. Wants to be held, that he may not shake. Motion < most symptoms; > muscular pains; > heart. Rising from seat = pain in heart. Shaking head > heaviness of head. Lifting arms = trembling of hands. Playing piano = tired sensation in arms. (J. G. Blackley pointed out the suitability of *Gels*. to writer's cramp and professional

paralyses. I have relieved with it cases of Dupuytren's contraction.) Great distress and apprehensive feeling at approach of a thunderstorm. Heat of sun or summer <. Hot applications > pain back of head. Must be covered in all stages of the paroxysm. Complaints from sudden change from hot or dry to damp air. Catarrh occurring in warm, moist, relaxing weather. < Damp weather; cold, damp atmosphere; > cold, open air; < from fog. Cold drinks are vomited immediately; warm or spirituous drinks can partially be swallowed. "> From stimulants" is a very general characteristic.

Relations.—*Antidoted by:* Atrop., Chi., Coff., Dig., Nux. mos. In cases of poisoning, artificial respiration and faradisation of respiratory muscles. Foy found Nitro-glycerine a perfect antidote in one case. Jephson antidoted his case with Strychnine. *It Antidotes:* Mag. phos. *It antagonises:* Atrop., Op. *Compatible:* Bap. (in typhoid, influenza); Ipec. (in dumb ague). *Compare:* Bell. (labour); Caulo., Caust. (complaints of women); Coccul., Con., Curare (paralysis); Fer. phos. (fever); Phos. (effect of thunderstorms); Ol. an., Verat. (headache): Borax (sense of falling). Bry. (typhoid; dreads movement, Gels. because he is so weak, Bry. because movement < pains); Hyper. (< from fog).

Causation.—Depressing emotions. Fright. Anger. Bad news. Sun. Heat. Damp weather, warm or cold. Thunderstorms. Alcohol. Self-abuse.

SYMPTOMS.

1. Mind.—Great irritability, does not wish to be spoken to.—Irritable, sensitive; desires to be let alone.—Incapacity to think or fix the attention.—Vivacity, carelessness, followed by depression of spirits.—Unconnected ideas; cannot follow an idea for any length of time; if he attempts to think consecutively he is attacked by a painful vacant feeling of the mind.—Loss of memory, with headache.—Unconsciousness.—Delirium in sleep; half-waking, with incoherent talk.—Acts as if crazy, brandishes a sword in a threatening manner.—Stupor, cannot open the eyes.—Dulness of the mental faculties.—Sensation of intoxication, with diarrhśa.—Cataleptic immobility, with dilated pupils, closed eyes, but conscious.—Confusion; when attempting to move, the muscles refuse to obey the will; head giddy.—Strong inclination to suicide.—Want to throw myself from a height. Invariably think of going to the window. This is succeeded by an inclination to weep, and I generally have a good cry, and while the desire to throw myself from a height lasts, I clench my hands and nervous rigors run all over my body down to fingers and toes. It seems as if I should lose my senses.—Dread of being alone; afraid of what may happen; think I may lose self-control. These feelings are followed by a strong inclination to talk or write, increased sense of mental capacity and memory.—Every exciting news causes diarrhśa; bad effects from fright and fear.—Cowardice.

2. Head.—Staggering as if intoxicated when trying to move; < from smoking.—Lightheaded and dizzy; < by sudden movement of the head, and walking.—Giddiness as if intoxicated, as if he should fall down.—Dizziness and blurred vision.—Giddiness with loss of sight, chilliness, accelerated pulse, dulness of vision, double vision.—Sensation of falling in children; child starts, grasps nurse or crib and screams out from fear of falling.—Intense pain over r. eye, as if forehead would come right over eyes and close them.—Sick headache, principally r. temple, beginning in the morning and increasing during day; < from motion and light; > after lying down; > by sleep or vomiting.—Neuralgic headache, beginning in upper cervical spine; vertebra prominens sensitive; numbness of occipital region; pains extend over head, causing a bursting pain in forehead and eyeballs; < at 10 a.m., when lying; with nausea, vomiting, cold sweat, cold feet.—Cerebro-spinal meningitis, stage of congestion; severe chill; dilated pupils; congestion of spine and brain.—Fulness in the head, with heat in the face and chilliness.—Great heaviness of the head, relieved by profuse micturition.—Pressure on vertex, so great as to extend into shoulders; head feels very heavy.—Pain as from a tape around the head.—Dull pain in the back part of the head after breakfast, worse when moving and stooping.—Back part of head seems to have a spot four inches square that is turning to ice.—Sensation as if the brain were bruised.—With the headache giddiness, faintness, pain in the neck, pulsation of the carotid arteries, pain in the limbs great drowsiness, sneezing, double vision, loss of sight.—Sensation of contraction of the skin in the middle of the forehead.—Itching on the head (face, neck, shoulders), preventing sleep.

3. Eyes.—Eyes feel bruised.—Yellow colour of the eyes.—Drooping of the eyelids; they are heavy; can hardly open them or keep them open.—Fulness and congestion of the eyelids; paralysis of the eyelids.—Double vision controllable by the strength of the will, or when looking sideways, not when looking straight forward.—Eyeballs oscillate laterally when using them.—Double vision, cannot tell which side of the street he is on.—Diplopia and dim vision during pregnancy.—Amaurosis from masturbation.—Smoky appearance before the eyes, with pain above them.—Detached retina.—Dimness of sight, and vertigo.—Cannot see anything (complete blindness).—Sudden blindness.—Pupils dilated.—Aversion to light; more to candle-light.—Thirst for light.—Confusion of sight; blindness; astigmatism.

4. Ears.—Sudden loss of hearing for a short time; rushing and roaring in ears.—Catarrhal deafness, with pain from throat into middle ear.—(Deafness and loss of speech from quinine.).—Earache from cold.

5. Nose.—Sneezing followed by tingling and fulness in the nose.—Early morning sneezing; streaming of water from nose.—Sneezing with fluent coryza; profuse watery discharge excoriates the nostrils.—Sensation of fulness at root of nose extending to neck and clavicles.

6. Face.—Heavy, dull expression of the countenance.—Heavy, besotted expression; flushed and hot to the touch.—Heat of the face with fulness in head and cold feet.—Lips dry, hot, and coated.—Paralysis of upper lips after prolonged conversation.—Yellow colour of the face.—Paleness and nausea.—Erythema of the face and neck.—The muscles of the face seem to be contracted, esp. around the mouth, making it difficult to speak.—Orbital neuralgia in distinct paroxysms, with contractions and twitching of the muscles on the affected side.—Stiffness of the jaws, the jaws are locked.—Lower jaw dropped.—Chin quivers incessantly.—Lower jaw began wagging sideways; had no control over it.

8. Mouth.—Saliva coloured yellow as from blood.—The tongue is coated yellowish-white with fetid breath.—Putrid taste and fetid breath.—Sticky, feverish feeling in the mouth.—Lips dry; coated with dark mucus.—Thick coating of the tongue (during the chill).—Tongue red, raw, painful, dry, inflamed in the middle.—Numbness of the tongue; feels so thick he can hardly speak; partial paralysis.

9. Throat.—Dryness and burning in throat.—Dry roughness in throat when coughing.—Dryness of throat with hoarseness.—Sensation of heat and constriction in throat.—Burning in the mouth extending to throat and stomach.—Spasmodic sensations and cramp-like pains in gullet.—Sensation as if a foreign body were lodged in the throat.—Difficult deglutition (paralytic dysphagia).—Swallowing causes shooting into the ear.—Diphtheria; local tingling of the parts during the fever; incipient paralysis.

11. Stomach.—Thirst (during the perspiration).—Increased appetite, easily satisfied with small quantities of food.—Sour eructations.—Nausea (with giddiness and headache).—Sensation of emptiness in the stomach.—Feeling of emptiness and weakness in the stomach and bowels.—Oppression and fulness in stomach; < from pressure of clothing.—Burning in the stomach extending to the mouth.

12. Abdomen.—Gnawing pain in the transverse colon.—Sudden spasmodic pains in upper part of abdomen, compelling him to cry, leaving a sensation of contraction.—Sensation of soreness in abdominal walls.—Tenderness in r. iliac region during typhus.—Rumbling in abdomen with discharge of wind above and below.—Periodic colic with diarrhśa (yellow discharges setting in in the evening.).—Acute catarrhal enteritis during damp weather.

13. Stool and Anus.—Frequent discharge of flatus.—The soft stool is passed with difficulty as if the sphincter ani resisted the passage by contraction.—Paralysis of the sphincter ani, with disposition to prolapsus ani.—Stools loose, colour of tea, dark yellow.—Stools yellow; fćcal; bilious; cream-coloured; clay-coloured; green.—Diarrhśa with intermittent fever.—Diarrhśa after sudden emotions, grief, fright, bad news; anticipation of any unusual ordeal.

14. Urinary Organs.—Frequent micturition (relieving the headache).—Copious discharge of clear, limpid urine, relieving the headache.—Incontinence from paralysis of the sphincter; in nervous children.—Tenesmus of the bladder.—Irritable neck of bladder (in hysterical women), calling for constant urination.

15. Male Sexual Organs.—Genitals cold and relaxed.—Involuntary emission of semen without an erection; also during stool.—Excitable sexual desire (spermatorrhśa).—Sexual power exhausted, slightest caress causes an emission.—Painful redness at the urethra.—(Secondary gonorrhśa.)

16. Female Sexual Organs.—Sensation of heaviness in the uterus.—Sensation as if uterus squeezed by a band.—Suppressed menstruation with convulsions (every evening).—Metrorrhagia; almost continuous flow without any pain; after ague suppressed by quinine.—Severe, sharp, labour-like pains extending to back and hips.—Dizziness and headache with amenorrhśa.—Ailments from masturbation with depression and languor.—Rigidity of the neck of the uterus.—Spasmodic or neuralgic dysmenorrhśa.—Vaginismus.—Leucorrhśa; white; in gushes; with backache.—Spasmodic labour-pains.—False labour-pains; rigid os.—Premature labour (abortion) (after fright).—During pregnancy, violent pains in the uterus, headache, drowsiness, double vision, obscuration of sight, giddiness, pulsation of the carotid arteries, small, slow pulse.—Cramps in the abdomen and legs during pregnancy; diplopia; drowsiness; loss of muscular power; convulsions.—Inefficient labour-pains or none at all; os widely dilated; complete atony.

17. Respiratory Organs.—Voice weak.—Paralysis of the glottis with difficult deglutition.—Spasm of the glottis, in evening, threatening suffocation.—Roughness of the throat, raw, as if ulcerated in the larynx.—Bronchitis.—Hoarseness with dryness of the throat.—Burning in the larynx, descending into the trachea.—Dry cough with soreness of the chest and fluent coryza.—Breathing frequent.

18. Chest.—Heaviness in middle of chest (afternoon).—Sensation of constriction in the lower thorax.—Extreme and alarming difficulty of breathing; extreme restlessness from threatened suffocation.—Stitches in the chest in region of heart.—Paralysis of the lungs.

19. Heart and Pulse.—Irregular beating of the heart; palpitation.—Feeling as if the heart would stop beating if she did not move about.—Stitches in the region of the heart.—Pain in the heart when rising from a seat.—Pulse frequent, soft, weak, almost imperceptible.

20. Neck and Back.—Pulsation of the carotid arteries (during pregnancy).—The muscles of the neck feel bruised.—Sensation of constriction in r. side of neck.—Pains in the neck and under l. shoulder-blade.—Pains in neck like those of cerebro-spinal congestion.—Myalgic pains in the neck, mostly in upper part of the sterno-cleido muscles, back of the parotid glands.—Pains from the spine to the head

and shoulders.—Congestion of spine; prostration; languor; muscles feel bruised, and do not obey the will.—Dull aching in lumbar and sacral regions; cannot walk, muscles will not obey.—Locomotor ataxia.—Paraplegia.

21. Limbs.—Trembling in all the limbs.—Deep-seated, dull aching in the muscles of the limbs and in the joints.—Neuralgic and rheumatic pains in the extremities.

22. Upper Limbs.—In the shoulders pain during the night.—Arms weak, numb.—Sensation as if r. elbow were sprained.—Pain in elbow (l.) from draught of air (at night).—Cramps in forearm on attempting to write.—Pain as if sprained in the r. wrist.—Trembling of the hands when lifting them up.—Coldness of the wrists and hands.—Hot dry hands, esp. the palms of the hands.—Spasmodic contraction of fingers.—Dupuytren's contraction.

23. Lower Limbs.—Unsteady gait.—Fatigue after slight exercise.—Loss of voluntary motion.—Violent lancinating pain in the thigh.—Obstinate sciatica; pains < at rest and particularly when beginning to walk; burning pains, < at night, compelling her to lie awake; pain in sole of foot when walking.—Deep-seated muscular pains in legs > by motion.—Anterior crural neuralgia.—Paroxysmal; shooting pains.—Violent lancinating pain in thigh.—Thighs sore to touch as a boil; pains all > when in a sweat.—Rheumatic pains during the night in the knees.—Sudden dislocation or slipping of the knee-pan (during breakfast).—The calves of the legs feel bruised, pain at night.—Cold feet.—Spasmodic contraction of the toes.

24. Generalities.—Hyperćsthesia.—Excessive irritability of mind and body.—Paralytic affections, muscles weak and will not obey the will.—Complete relaxation and prostration of the whole muscular system, with entire motor paralysis.—Trembling and weakness; listless and languid; easily fatigued.—Rheumatic pains (wandering) in the bones and joints (night).—Spasmodic contractive pains.—Sensation as if bruised.—Neuralgia; acute, sudden, darting pains; shooting, tearing along the tracks of the nerves; esp. if aggravated by changes in the weather.—Congestions, arterial or venous, with sluggish circulation.

25. Skin.—Papulous eruptions resembling measles, esp. on the face.—Itching on the head, face, neck, and shoulders.—Skin hot and dry.

26. Sleep.—Sleepiness and long-continued sleep.—As soon as he goes to sleep he is delirious.—Yawning.—Languid and drowsy, but cannot compose the mind for sleep.—Sleeplessness from nervous irritation.—Cannot go to sleep on account of violent itching on the head, face, neck, and shoulders.—Restless sleep; unpleasant dreams.—He wakens from sleep with headache or colic.—Night-terrors, from nose being stopped.—Dreamed of dying, and felt his eyes sinking into their sockets.

27. Fever.—Pulse slow, accelerated by motion.—Limbs cold with oppressed breathing.—Cold hands and feet.—In the evening, when entering a warm room, thirst, pain in the back and loins and in the lower part of the thighs.—Chilliness in upper part of body and back.—Chilliness every day at same hour.—Chilliness esp. in the morning.—Chilliness, languid aching in back and limbs, sense of fatigue, every afternoon, 4 to 5 o'clock.—Nervous chill, the skin is warm; wants to be held that he may not shake so much.—Chill with cold hands, feet, and headache.—Chills begin in the hands; chills running up the back, hands and feet cold.—Chilliness esp. along spine.—Chill with weak pulse.—Coldness of the feet as if they were in cold water, with heat in the head and face, and headache.—Chill followed by heat and later by perspiration.—Heat principally on the head and face.—Typhoid fever when so-called nervous symptoms predominate.—In eruptive and other fevers less restlessness than in Acon.; less violence and suddenness of aggravation than Bell.; languid asthenic fever.—Profuse perspiration relieving the pains.—Perspires freely from slight exertion.—Intermittent fevers.—Children's remittent fever.—Cerebro-spinal meningitis.—Measles.)

Genista.

Genista Tinctoria. Dyer's Greenweld. N. O. Leguminosæ. Tincture of whole plant.

Clinical.—Diarrhœa. Earache. Headache.

Characteristics.—*Genista* was proved by E. B. Cushing. Its principal effects are: Sharp piercing pains in the head and ear. Brain feels loose and sensitive. Sensitive feeling in brain, eye, and throat. Urgent desire for stool, which is expelled suddenly. A peculiar eruption of dark red confluent spots. < Rising; turning quickly; shaking head; walking. In the night, water-brash. > In open air; in cool rooms; by eating (headache).

Relations.—*Compare:* (Brain feels loose) Cic. v., Nat. s., Bar. c., Rhus.

SYMPTOMS.

2. Head.—Vertigo and headache on rising or shaking head, > after dinner.—Sensation as if brain were loose and very sensitive.—Frequent, sharp pain in r. temple from within outwards.—Piercing pain in l. temple.

3. Eyes.—Eyes sensitive to touch in forenoon.

4. Ears.—Once a sensation in l. ear, as though some sharp instrument were thrust into it (forenoon).

9. Throat.—Throat dry and sensitive.

11. Stomach.—Awakened several times in the night with water-brash.

13. Stool and Anus.—Desire for stool with violent sneezing as from snuff.—Urgent desire for stool, lasting only a short time, soon after the dose.—Stool soft and scanty.—Stool tinged with blood; the fæces though large were expelled like a wad from a pop-gun (forty minutes after third dose).

25. Skin.—Peculiar eruption, consisting of roundish, dark-red, confluent spots, scarcely elevated above the skin, which, itching very much, becomes scarlet-red, then pale, and disappears in twenty-four hours; it occurred on feet to knees, and hands to elbows.

Gentiana Cruciata.

Kreutz-Enzian. Cross-leaved Gentian. N. O. Gentianaceæ. Tincture of root.

Clinical.—Diarrhœa. Dyspepsia. Dysphagia. Hernia. Hoarseness. Stiff-neck. Stomach, affections of. Throat, sore.

Characteristics.—"*G. cruciata*," says the *Treasury of Botany*, "has been invested with imaginary virtues, because its leaves grow in the form of a cross; it has been recommended in hydrophobia." Its virtues are not all imaginary, and its reputation as a remedy for hydrophobia is partly justified in the provings. The proving of *Gent. cruc*. (by Watzke and ten others) developed a number of striking symptoms in the throat and digestive tract. Movings about in stomach and abdomen. Pressure in the stomach as if a stone was in it, with inclination to vomit. All the symptoms of right inguinal hernia occurred in one prover. A peculiar sense of apprehensiveness; faintness; uneasiness. One prover felt as if all the nerves were tense, so that walking was difficult. Creeping over the body as from fleas in the evening. The symptoms are < after eating. > From warm soup; from drinking fresh water; in open air.

Relations.—*Compare:* Gent. lut.; Lyc. (> from warm drink); Bry., Puls., Ab. n., &c. (pressure in stomach as from a stone); Kal. bi. (tenacious mucus in throat).

SYMPTOMS.

1. Mind.—Weeping mood, with disinclination to talk.—Very peculiar apprehensiveness, and acceleration and difficulty of breathing, swelling of the temporal veins and feeling of pressure in the temporal region; on reading, print seemed indistinct and as if covered with a veil.

2. Head.—Confusion and whirling.—Sensitiveness of whole head and whole brain after dinner, < by violent motion of head.—Swelling of temporal veins and feeling of pressure in temporal region.—Sudden stitch through l. temple.—Distressing tension, and at times transient jerking in region of vertex; tension soon became a very acute constant pressure, < by exerting eyes, or constant thought.

3. Eyes.—Sensation as though eyes were lying deep in orbit; piercing inward sensation in r. eye.—Print indistinct as if covered with a veil.

8. Mouth.—Two aphthous ulcers on margin of lower lip on either side of frenum.—Flow of saliva increased.

9. Throat.—Slight redness and distressing sensation of constriction within the throat, so that swallowing is very difficult; constantly obliged to hawk up tenacious and firmly adherent mucus.—Rawness and scraping, causing frequent hawking; with constriction on swallowing.—Intermittent, deep redness of fauces.—Stitches in tonsils.—Swallowing difficult; with an anxious constrictive sensation; slight redness of fauces.

11. Stomach.—Appetite increased; or lost.—Acid eructations; watery vomiting.—Great nausea, with inclination to lie down.—Vomiting, with some difficulty, a small quantity of mucus of an acid odour, intensely bitter, leaving a scraping and rawness in throat.—Movings about in stomach, and afterwards in abdomen, disappeared on walking.—Sensation in stomach and œsophagus as though he had swallowed a morsel of hot food followed by cold water; lasted the whole day, < by eating; > by drinking fresh water.—Burning; fulness; pressure in stomach.—Pressure in stomach as if a stone were in it, with inclination to vomit.—Sensation of pressing inward in pit of stomach.

12. Abdomen.—Sensitive, griping, sore sensation in umbilical region, < after dinner, > sitting and lying, < standing, walking, and after" smoking, obliging him to bend forward; therewith umbilicus seemed to be drawn inward.—Movings about in intestines with slight headache, followed by copious pasty evacuation.—Distension; fulness; tightness; constriction in abdomen.—Dragging in r. inguinal region with feeling of protrusion, > sitting or lying; on violent sneezing actual protrusion occurred, size of hazel-nut, very sensitive.

13. Stool and Anus.—Constant violent urging, followed by three watery evacuations.—Pasty diarrhœa.—Free pasty stools without the usual itching in anus.

16. Female Sexual Organs.—Menstruation three days earlier than usual, during which there was a headache as if head too full, with feeling of distension in the skull, > during rest and < by motion, preventing sleep for a long time.

17. Respiratory Organs.—Hoarseness; voice gave out in middle of speech.—Frequent attacks of hoarseness and sensitiveness of the throat.

20. Neck and Back.—Drawing and jerking along r. side of neck, extending to shoulder.—Drawing in cervical muscles, extending to ears, < by turning head, an uneasiness so that he could not remain long in one position.—Repeated drawings in cervical muscles.—Tension in lumbar region.

22. Upper Limbs.—Distressing drawing in r. shoulder lasting several minutes.

23. Lower Limbs.—Cramp-like pains in soles of feet.

Gentiana Lutea.

Yellow Gentian. N. O. Gentianaceæ. Tincture of root.

Clinical.—Anorexia. Biliousness. Colic. Debility. Diarrhœa.—Dyspepsia. Fever. Gout. Headache. Stomach, disorders of. Throat, constriction of.

Characteristics.—The Yellow Gentian is the source of the well-known "tonic" of allopathic practice. In the homœopathic provings (by Watzke, Buchner, and others) the chief symptoms have been noted in the alimentary sphere, and among them, "ravenous hunger," as, well as "diminished appetite." It has thus some claim to be a It positive tonic," as it may cause increased appetite in the healthy. It has: dry mouth; bitter or earthy taste; nausea; vomiting; colic; diarrhœa with yellow stools (it is the *yellow* Gentian); rheumatic pains; sensations of constriction are marked and common. Weakness, dull feeling, morose mood; febrile condition. The symptoms are < in the afternoon; after eating; on motion.

Relations.—*Compare:* Gent. c., Hydrast., Nux v., Epipheg. (thick saliva).

SYMPTOMS.

1. Mind.—Dull feeling of whole body and morose mood.—General dejection.

2. Head.—Head confused and dull while writing, or else with tension and pressure in the forehead.—Bewilderment and heat in the head, and heat in the cheeks.—Cloudiness, as after taking spirituous liquors.—Sensation of vertigo in the head.—Sensation of vacuity and bewilderment in the head, with dull pressure, from within outwardly, at the forehead.—Pressure: at the occiput; in the forehead, sometimes, simultaneously, in the eyes.—Full, as if enlarged.—Head feels as after intoxication.—Fulness and dull pressure, from above downwards, in the frontal region, like a violent pulsative cephalalgia.—Lancinations in the frontal region.

3. Eyes.—Pressure in eyeballs.—Frequent aching in the eyes; sensitiveness and pain in the eyes, followed by lancinations in the upper eyelid.—Redness of the conjunctiva.—Obscuration of the sight for some moments, so that objects immediately before the eyes cannot be distinguished; could not see the person with whom he was talking for a few moments.

5. Nose.—Irritation in nose, as in coryza, followed by a watery discharge.

8, 9. Mouth and Throat.—Dryness of the mouth and throat; saliva thicker than usual; roughness of the throat.—Taste intensely bitter.—Swelling, fine sticking in throat, mostly in posterior portion of palate.—Frequent hawking of mucus which is difficult to loosen.—Rawness in throat.—Earthy taste.

11. Stomach.—Risings, sometimes with borborygmi in the abdomen.—Acid risings, like vinegar, with hiccough; nausea, almost to vomiting, with watering of the eye; inclination to vomit, sometimes with uneasiness, yawning and slight vertigo, or else with tears which flow from the eyes.—Vomiting in weak subjects.—Sensation of emptiness in the stomach.—Ravenous hunger in evening.—Diminished appetite.—Nausea after simplest meal.—Aching, sometimes anxious, or else with tightness, or with nausea and inclination to vomit, followed by pressure at the anus.—Weight and aching at the stomach, with anguish, nausea, inclination to vomit, and respiration full and impeded.—Inflation and tension in the abdomen and in the stomach.—Feeling of constriction in the stomach.

12. Abdomen.—Uneasiness and pressure in l. hypochondrium.—Colic, with aching in region of stomach, and urgency to go to stool.—Painful sensitiveness of the whole abdomen, with tightness in the lower region, esp. in r. side and posteriorly, with pressure.—Umbilical region, sensitive to touch, with pressive pain.—Steady pressure in umbilicus like an inward drawing.—Pains, esp. below the navel, and principally when the part is touched.—On walking quickly, pain in the lower part of the abdomen, with pressure on the anus.—Aching in umbilical region, sometimes with tension.—Cutting pains, sometimes on awaking, at night, with beat and quickened respiration.—Cutting pains, from the pubic region to the colon transversum, from the touch, with painful sensitiveness of the abdomen; when lying on the back, with the legs retracted, the pains are more supportable.—Fixed drawing pain in the umbilical region, with heaviness and fulness of the head, and stoppage of the nose.—Inflation and tension of the abdomen, sometimes with heaviness and fulness, or else with painful sensitiveness to the touch.—Tightness of lower part of abdomen, < towards the evening, with shortness of breath.—Borborygmi in the abdomen, or else gurgling, as of bubbles which ascend.—Continual emission of wind above and below, without relief.—Painful and general sensitiveness of the teguments of the abdomen.

13. Stool and Anus.—Urgent inclination to evacuate, sometimes sudden, with abundant stools, followed by painful sensitiveness of the abdomen; pressure on the

anus while wanting to go to stool.—Dragging towards anus with tenesmus.—Sudden urging with copious evacuation.—Soft stools, immediately after rising.—Bilious diarrhœa (in afternoon).—Stool soft, yellow, preceded by colicky pains, which become so severe after the stool that they force the patient to bend double.

17. Respiratory Organs.—Hoarseness of the voice.—Frequent hawking without power to detach the mucus from the throat.

18. Chest.—Oppression of the chest; fulness in the chest, sometimes with pressure and difficulty of respiration.—Pressure on l. side near the throat.

20. Back.—Pain in the back and bowels, much< by motion, > by sitting.—Sensation of a cord, or pressure and weight round the loins.

22. Upper Limbs.—Rheumatic tension and dragging in the r. hand, with inflammatory redness of two articulations of the fingers, spasmodic symptoms, and pain of the part during movement.—(Gout in r. hand).

23. Lower Limbs.—Aching in the hips (and the loins), sometimes, esp. on leaning forward to look out of the window.—Tingling in the knees.—Pain, as of dislocation, in l. articulation.—Lancinations and tearing pains in the sole of l. foot, when walking.

26. Sleep.—Yawning.—Inclination to sleep, without power to go to sleep; sleep retarded; sleep impeded by colic, which obliges the patient to turn in bed, sometimes on one side and sometimes on the other, and which does not permit the least repose until two o'clock in the morning.—Uneasy sleep disturbed by abdominal symptoms and fever.

27. Fever.—Febrile shuddering, as from electric shocks, commencing at the back and traversing the posterior part of the body, followed by lassitude, depression, and tension in the limbs.—Increase of natural heat over head, cheeks, and whole body.—Heat originating in the lumbar vertebræ.—Pulse accelerated.

Gentiana Quinqueflora.

Five-flowered Gentian. Gall of the Earth. N. O. Gentianaceæ. Decoction of the herb. Tincture of fresh plant in flower (September, October).

Clinical.—Anorexia. Intermittent fever.

Characteristics.—This unproved Gentian has a great popular reputation in Ohio and other parts of the United States as an antiperiodic and tonic. Hale quotes Yelvington of Susquehanna (who says he learned its value from a tribe of Indians) as saying "he has succeeded in obstinate intermittents where Quinine and other anti-periodics had failed. He used the decoction of the herb. A fluid extract or the saturated tincture is a better form for administration in fever. It is a valuable tonic for old cases of dyspepsia and torpid liver." It is a pleasant bitter, and appears to be, like the other Gentians, a *positive* tonic. Dr. Yelvington also used it in cases of infantile fever and cholera infantum. "As a tonic in enfeebled patients and in chronic diseases," he says, "it is a remedy *par excellence*, appearing to exert an action over the organs of nutrition and assimilation, as well as being a stimulant to the excretory organs."

Geranium Maculatum.

Wild Cranesbill. N. O. Geraniaceæ. Tincture and triturations of root. Infusion of the plant.

Clinical.—Diarrhœa. Diplopia. Dysentery. Hæmorrhages. Leucorrhœa. Stool, ineffectual urging to. Throat, sore.

Characteristics.—There are two fragmentary provings of *Geran. mac*. one made with root preparations, one with infusion of the plant. The chief symptoms observed have been diplopia and other disorders of vision (these were observed by the prover of the decoction; the remaining symptoms resulted from the root preparation); and constant and ineffectual desire for stool. In the mother tinctures and lower attenuations it has been used successfully in cases of hæmorrhage from various parts—nose, stomach, lungs. Under the use of the drug the blood in hæmorrhages becomes darker, clots more easily, and is much less in quantity. The root contains both tannic and gallic acids. It has also been used for chronic diarrhœa and for leucorrhœa.

Relations.—*Compare:* Hamam., Hydrast., Hæmatoxylon, Ratan., Ficus relig., Erodium.

SYMPTOMS.

2. Head.—Giddiness, with diplopia, > closing eyes and lying down.—Slight pain in occiput, low down.

3. Eyes.—Fulness in the eyes.—In a few minutes became giddy and saw double; when he closed his eyes and lay down he felt comfortable, but could not open them without the recurrence of the symptoms.—Ptosis and dilated pupils.—Great

difficulty in walking with eyes open, though he could walk with them closed.—Fulness of the eyes.

8. Mouth.—Dryness of mouth, extending outward on the lips to the cuticle proper, followed by pain in l. side of forehead, and of head directly over l. ear.—Tip of tongue dry and burning.

13. Stool and Anus.—Constant desire to go to stool with inability to pass the least fæcal matter; after the effects passed off the bowels moved without pain.

Gettysburg.

The Salt of a Mineral Spring at Gettysburg, Pa., U.S.A. Trituration.

Clinical.—Bone, affections of. Hip disease. Potts'disease. Scrofula. Ulcers.

Characteristics.—*Magnesium sulphate* is the predominant ingredient of *Gettys*., but the water contains many salts of alkalis, and earths with a number of metals. *Lithium* is contained in it. Its action is very like that of *Silica* (which it contains). It is indicated in caries of vertebræ or hip; ulceration of joints, when the discharge excoriates. Scrofulous children.

Geum Rivale.

Water Avens. N. O. Rosaceæ. Tincture of the plant in flower.

Clinical.—Bladder, affections of. Penis, pains in.

Characteristics.—Hering is the authority for this medicine. Only one symptom has been recorded, but it is very definite. Tearing, jerking pains, which instantly unfit him for everything; seem to shoot from deep within the abdomen, below the umbilicus to the end of the urethra. As soon as he eats anything they return; then he is obliged to lie down. They are like electric shocks, excessively severe, and always occur twice in succession.

Ginseng.

Panax quinquefolium. (L.); Aralia quinquefolia (Grey). Schinseng. N. O. Araliaceæ. Trituration and tincture of the root.

Clinical.—Appendicitis. Debility. Headache. Lumbago. Rheumatism. Sciatica. Sexual excitement.

Characteristics.—The symptoms of the Chinese and the American Ginseng are taken together, as the two are probably identical. The name is said to signify "the resemblance of a man" or man's thigh. The root is forked like that of the mandrake. Fabulous prices are given for it in Manchuria, as much as £40 per pound being paid for certain qualities of it. The wild *Ginseng* of Siberia is said to be the best. The natives along the Ussuri river use it boiled for headaches, colds, fevers, stomach pains. In America it is a domestic remedy for the after-pains of labour. The shape of the root might indicate an action on the pelvis and lower limbs, and J. H. Henry (*H. R.*, xi. 493) says it acts on the lower part of the spinal marrow; is indicated by "bruised pains in small of back and thighs (on rising from bed), and great languor, with paralytic, rheumatic pains in lower limbs, arthritic swelling of the foot, which had been exerted a long time, violent pain in big toe." He mentions also "Nightly digging in right lower limb from hip to big toe, cramp, pains from right hip to toes; lancinating, tearing in right tarsal joint." He considers it specific in lumbago, sciatica and chronic rheumatism, with frequent desire to urinate, and sexual excitement. Lembke and others have proved it. It is an aromatic stimulant and removes feelings of fatigue, imparting a joyous sense of vigour and elasticity to the limbs, especially the upper limbs, and clearness of mind. The opposite condition of malaise is also produced. Yawning, and drowsiness. Drowsiness with headache. Feeling of extreme heat and intense coldness, longing to expose the body to cool air. The right side of the body is most affected. There is pain in right side. of hypogastrium, extending into groin. Dry mouth, tongue, and lips. Vertigo. The respiratory organs are affected as with *Aralia racem*. Mouth and throat are sensitive to the ordinary air of room; are < in free open air and from talking, > at dinner. Many symptoms are < in open air; at night bending or turning; descending stairs; sitting.

Relations.—Compare Aralia rac., Hedera, Coca. In "Drowsiness with headache": Brucea, Herac., Gels., Nat. sul., Nux mos., and Sul. In dry lips, Bry.

SYMPTOMS.

1. Mind.—Mood quiet and contented, with good courage.—Mind generally calm; but impatient impulses, fear of accidents.—Thinking difficult.—Memory weak.—Disposition to weep; anxious about the future.

2. Head.—Vertigo, cloudiness, confusion, giddiness, and heaviness of the head.—Vertigo on going down winding stairs.—While standing, the ground seems to waver.—Reflection difficult; tendency to forgetfulness.—Reeling sensation in occiput.—Reeling sensation in occiput, with grey spots before eyes.—Head seems at times enlarged and to sway to one side.—Pressure in longitudinal sinuses.—Drawing in r. side of frontal bone; in muscles of neck and loins.—Drawing in occiput; he involuntarily bends head backward.—Painful sensitiveness of the head.—Semilateral cephalalgia.—Lancinations from r. side of the forehead as far as the orbit, with heaviness of the eyelids, irrepressible inclination to sleep, heat of the head, and heaviness in the temples.—Sudden shock in occiput, followed by pain, as of a bruise.

3. Eyes.—Pressure on the eyes, which seems to force them inwards; the upper eyelids fall (esp. r.).—Great difficulty in opening the eyelids, which are heavy and painful; itching of the eyelids.—Biting and itching in margins of lids.—Unpleasant sensation of coldness on surface of eyeball.—Pupils alternately large and small.—Vision indistinct.—Sensation of fatigue when exposed to the light; objects appear double when looked at fixedly; in reading, the characters become confused.

6. Face.—Alternation of redness and paleness.—Burning erythematous redness on r. cheek, on the ala nasi, on the chin; following chapping of the parts, with itching and heat; afterwards an eruption of small miliaria, with tingling; after this, mealy tetters on the skin, with desquamation at the end of fifteen days.—Lips red, dry, rough, thick, cracked and bleeding, esp. the lower lip; < in open air and by talking.—Drawing in jaws and bones of face.

8. Mouth.—Tongue red and smarting with thirst; then white in the middle.—Tongue white, completely dry, with large glistening papillæ.—Mouth, lips, and teeth very dry; voice rough and scraping; swallowing of saliva very difficult on account of dryness; a swallow of water moistens only for a moment.—Dry sensation in palate, with accumulation of much saliva, which is swallowed without difficulty.—Green saliva.

11. Stomach.—Great appetite at a very unusual time; risings, empty, sometimes sour; nausea and inclination to vomit, with eructations which afford relief.—Pressure on the stomach, with inflation, dull borborygmi in the abdomen, tension and feeling of inflation, emission of wind, uneasiness and yawning.—Oppression, pressure of clothing intolerable.—Painful drawings in the stomach, as from hunger, following shiverings, with painful lancinations in the precordial region; violent colicky pains, which pervade the abdomen; swelling and pulsation of the stomach, anguish, inclination to vomit, and pain in l. side at the heart, following shiverings, which extends to the elbow.—Contractive pain in the stomach, with anguish, difficulty of respiration, drawing pains in the stomach, and lancinations in r. side, which stop respiration.

12. Abdomen.—Pain in r. side of lower region of abdomen, extending to the groins, with painful tingling extending to the foot and great toe, where very painful lancinations are felt.—Pains in the lower region of the abdomen, with violent aching in the groins, inflation, tension and pressure towards the lower region; colicky pains in the lower part of the abdomen, from the r. to l., ascending to the precordial region, with inflation of the abdomen, which is relieved by emission of wind.—Violent cutting pains from r. coxo-femoral region to abdomen, causing a writhing of the body.—Colic, which extends into the stomach, with pressure and pain when pressed externally; painful digging in r. side of abdomen extending to the groins and stomach, with cutting pains throughout the lower part of the abdomen; inclination to vomit, and pain as of excoriation in r. side, below the ribs, < by external pressure. Pains in the abdomen, as from a girdle, with digging and starting in r. hip.—Pain in r. side of lower abdominal region, from the hip to the ribs, with sharp pains from the precordial region; lancinations in r. side of the upper part of the abdomen, with inability to bear tight clothes, pains in the abdomen, borborygmi, emission of wind and lancinations, like thrusts of a knife in the region of the stomach.—Painful inflation of the abdomen, extending on r. side, below the ribs, with pains in the region of the heart, and eructations which give relief; tense painful abdomen; > by emission of flatus downwards; inflated abdomen, painful, with pain, as of a fracture, in the loins; bruise-like pain in the iliac region, < by pressure; general uneasiness, and pains which pervade the abdomen and the chest; pressure on the stomach, and constraint from the clothes over the parts.

13. Stool and Anus.—Evacuation difficult, without, however, being hard.—Hard stool, which is not emitted without efforts, which are followed by burning at the anus.—Slight sticking in rectum.—Tenesmus and lancinations in the rectum.—Four thin stools preceded by short violent pain, extending from within the pelvis to the thighs, as though one must sink to the ground.—Liquid stools in the evening, preceded by colic.

14. Urinary Organs.—Sticking and voluptuous twitching in navicular fossa.—Pruritus and burning in urethra, with frequent urging to urinate.—Yellowish lemon-coloured urine, depositing a red sediment.

15. Male Sexual Organs.—Great excitation of the genital organs.—Nocturnal erections without pollutions.—Painful erections while sitting at engrossing business.—Pressure in testicles.—Dreams vivid, lascivious, of which the recollection remains, always after taking the medicine.

17. Respiratory Organs.—Voice rough and hoarse.—Dry cough in paroxysms.—Short anxious respiration; or slow and deep with exertion.—Frequent deep inspiration, and tightness of chest as if he could not get enough air; > while walking.—Contractive pain across lower thorax.

18. Chest.—Aching and oppression in the chest, with great difficulty of respiration.—Oppression of the chest, with anxiety and lancinations in pit of stomach, and in lumbar region.—Prostration of strength, and lassitude in the limbs.

19. Heart.—Severe pain; dagger-like lancinations and stitches in præcordia.—Some violent beats while sitting, and followed by sensation of floundering of heart, with rapid, small, indistinct pulse.—Pulse very irregular.

20. Neck and Back.—Frequent cracking in upper cervical vertebræ on moving head.—Heaviness and stiffness in nape.—Drawings in cervical muscles.—Pulsation in vessels of r. side of neck.—Painful lassitude along back, with bruised feeling down to and in sacrum.—Stiffness in back.—Pressure in dorsal vertebræ.—Deep lancinations around loin &-Lancinations between the shoulder-blades, extending to r. shoulder, or else along the dorsal spine to the sacrum, esp. on standing upright, accompanied by difficulty of respiration.—Weight in nape of neck, with contusive pain along back of sacrum.

21. Limbs.—Much cracking in joints on moving.—Peculiar lightness, vigour, and flexibility of limbs in spite of much walking or a bad night.—Painful lassitude in limbs.—Bruised pain in limbs alternating in different parts.

22. Upper Limbs.—Pain in shoulders, with cracking in them.—Peculiar sensation of coldness and crawling in r. elbow and parietal eminence.—Violent compressing pain in muscles of lower l. forearm, as if a hoop were tight around them.—Object dropped from hands easily, hastiness in his movements.—On closing hands sensation as if they were swollen and the skin tight.—Contraction of the fingers of r. hand and stiffness in their joints.

23. Lower Limbs.—Retraction of muscles of r. leg; great weakness of r. leg.—Staggering gait.—Sticking in r. tibia.—Lancinating tearing in r. ankle joint.—Lancinations alternately in both great toes.—Painful stiffness of l. thigh, from the hip to knee.—Heaviness of the lower limbs, contraction of the muscles of l. leg, with bruise-like pain in the coxo-femoral articulation.—Difficulty in walking, tingling and stiffness from the thigh to the foot; pain in the knee, and violent incisive pain in the r. hip, which extends to the abdomen, and occasions writhing of the body.—Contusive pains in the thighs and loins, with great lassitude in the morning on rising, with rheumatic and paralytic pains in the lower limbs.—Nocturnal digging pain in r. leg, from the hip to the great toe, in which are experienced violent lancinations.—Violent lancinations in l. great toe, already suffering from arthritic swelling.—Alternate lancinations in one of the great toes.—Cramp-like pain, extending from r. hip, along the leg, to the points of the toes.—Lancinating tearing in the articulation of r. foot.

24. Generalities.—Painful lassitude of the extremities, superior and inferior.—Coldness, trembling, and numbness of the hands, with deadness of the

fingers.—Tendency of the symptoms to show themselves more particularly on r. side.—As during fever, uneasiness, with inclination to sleep; internal shivering, with heat externally, tingling in the fingers, yawning and stretching, trembling, shivering, thirst, dryness of the mouth, draggings in the stomach, and weakness of the legs, as after a severe illness.—Great sensitiveness to cold, and tendency to feel bruised all over.—After a walk, inability to obtain warmth.—Pulse natural.

25. Skin.—Itching pimples on the skin of the neck, and of the chest.—Itching below r. foot.

26. Sleep.—Much yawning and drowsiness.—Awakens with difficulty or else with a start.—Pleasant voluptuous very vivid dreams, constantly repeated every time he takes the drug.

27. Fever.—Coldness, numbness, trembling of hands, fingers white.—Chilliness through the back extending into arms.—Coldness pierces into interior of occiput.—Coldness in back extending into bones of back, cold hands, blue nails.—Coldness in spine.—A small glass of Malaga wine caused remarkable heat of body, esp. back, with distended veins.—Violent burning heat in tips of fingers.

Medorrhinum.

Glinicum. Nosode of Gonorrhœa. Attenuations of the Virus.

Clinical.—Asthma. Clonic spasms. Corns. Diabetes. Dysmenorrhœa. Epilepsy. Eyes, inflammation of. *Favus*. Gleet. *Gonorrhœa, suppressed. Gonorrhœal rheumatism*. Headache, neuralgic. Liver, abscess of. Masturbation. Ovaries, pains in. Pelvic cellulitis. Polypi. Priapism. Psoriasis palmaris. Ptosis. Renal colic. Rheumatism. Sciatica. Shoulder, pains in. Stricture. Urticaria. Warts.

Characteristics.—*Medorrh*. is one of the most important of the nosodes. The constitutional nature of the gonorrhœa poison has within recent years been recognised in the old school as well as the new. Noegerath of New York and Angus Macdonald in this country have pointed out a causal connection between post-partum pelvic cellulitis and latent gonorrhœa in the husband. Macdonald published several fatal cases. The effects of the poison, constitutional or acute, may be taken as data for homœopathic prescriptions; but the virus has had an extensive proving in the potencies, and the symptoms there recorded have been largely verified in practice. The nosodes may be used according to their indications in exactly the same way as other homœopathic remedies, and not merely for manifestations of the disease from which they are derived. At the same time, a knowledge of the origin of obscure disorders, especially if hereditary, will often give the clue to the remedy required. Deschere published a case in point: Miss X.,

23, had chronic blepharitis since eleven. Her suffering was intense. Light, especially gas-light, was intolerable, and this prevented her from going into society. She could not read in the evening, and in the morning the lids would be closed, and she suffered much on getting them separated. There was much discharge. Before coming under Deschere she had been under strict homœopathic treatment all the time. Deschere remembered treating her father for gonorrhœa before his marriage, and he suspected the taint had reappeared in this form. *Medorrh*. was given in high potency, single doses repeated as the effect of each wore off, and she was entirely cured. A case of favus which had resisted all the external applications that allopaths could devise, and which had such an appalling odour that the patient, a little boy, had to be isolated from the family, was traced by Skinner to the same hereditary cause and cured with *Medorrh*. 1m. Many cases of stunted growth and arrested development in children are due to latent gonorrhœa and syphilis, and unless this factor is discerned and taken into consideration in prescribing, no great good will be achieved. I have cured on this hypothesis extremely offensive body odours in children with *Medorrh*. One important point in distinguishing between the sycotic or gonorrhœal taint and that of syphilis is in the time aggravation, and consequently in the indications for this. *Syph*. has < from sunset to sunrise, as also have all the great anti-syphilitic remedies. *Medorrh*. has < from sunrise to sunset; always brighter in evening, < in early morning hours. With *Medorrh*. there is intense nervous sensibility, especially to touch of garment or a lock of hair by any one not *en rapport*. Sensibility is exalted almost to clairvoyance. As if in a dream. Starting at slightest sound. Tremor; spasms. There is a state of collapse and a desire to be fanned. Among the *Peculiar Sensations* are: As of sticks in eyes, lids, and inner, canthi; as if cold wind blowing in eyes; as if upper lid had a cartilage in it. As if something crawling in ear and nose. Lump in stomach. Tumour right side of abdomen. As if left lung collapsed or paralysed. As if an abscess between left pectoralis major and minor muscles. As if blood was boiling hot in veins. As if all bones were out of joint.—The pains seem to tighten the whole body, especially the thighs. There is scarcely a spot on the body that is not full of pain. Obstinate rheumatism. Sequelæ of acute rheumatism. D. C. McLaren relates in *Hahn. Advoc*. (quoted *Amer. Hom*., xxii. 408) a case which illustrates the power and sphere of this nosode. A young French Canadian of delicate constitution, after working in a factory all winter, began coughing in spring and running down in health. He returned home and came under McLaren's care in May. The cough persisted and prostration increased, in spite of carefully selected remedies, and the patient took to his bed. It was then observed by McLaren that the cough and general condition was > *from lying on the face*. This, coupled with a knowledge of there being a syphilitic taint in the boy's parentage, suggested *Medorrh*., which was given. The next day a profuse gonorrhœal discharge appeared, and the cough and all threatening symptoms promptly disappeared. Exposure to contagion had occurred several weeks before, but from lack of vitality the disease could not find its usual expression and was endangering the patient's life. Ernest Nyssens ("La Sycose de Hahnemann," *Jour.*

Belge d'Hom, vi. 244) quotes some important observations by old-school authorities on constitutional gonorrhœa. Wertheim in a case of gonorrhœal cystitis watched the entrance of the gonococcus into the blood stream. With the gonococcus taken from the blood of this patient he made cultures to the fifth generation. A youth who had never had venereal disease volunteered for inoculation with this. The subacute urethritis which resulted was so grave, and, in spite of all, became complicated so cruelly with cystitis, epididymitis, prostatitis, synovitis, and pleuro-pneumonia, that Wertheim asked whether the gonococcus did not redouble its virulence by passing into the blood. Louis Jullien and Louis Sibut (from whose paper Nyssens quotes the above) witnessed the following case in Saint Lazare hospital: Louisa M., 17, entered the hospital June 8th with urethro-vaginitis, and was treated with tampons (*tiges*) of Ichthyol dissolved in glycerine (1 to 5). The urethritis ran a normal course till July 6th, when this condition was reported: The patient has had sufferings in the abdomen for a week, but has made no complaint. However, they became so acute the previous night that an injection of Morphia was given. Rectal temperature 100.2. Tongue saburral. Right side abdominal pain. In spite of rigid contraction of the recti muscles there seemed to be a swelling deep down, but the observers were not certain it was not a swelling of the muscles themselves. Intestinal functions normal; rectum empty. An eruption of roseolous spots appeared on the body, abdomen, and chest, so exactly like those of typhoid that the possibility of this was discussed. There was also acute pain in muscle of right calf. This pain persisted the following day when the abdominal pains had disappeared. *July* 9.—Right knee painful, swollen. At same time synovitis of left wrist, dorsal aspect, the tendons attacked being the extensor proprius of thumb and index. Temperature normal. *July* 10.—Very few and slight traces of the eruption. Right arm the seat of acute lancinating pain, especially at the level of the deltoid "V," deep down near the bone at the insertion of the tendon (probably a hygroma). On examining the tendo Achillis, pain at the level of the left ankle, nothing to the right at the same level, but the pain is above all acute along the inner border of the right tibia, to five or six centimetres from the flat surface. This part is œdematous and painfully sensitive. Another painful spot in the abdomen is behind the right anterior superior iliac spine, and beside the navel (probably muscular). The urethral discharge contained abundant bacilli besides gonococci. Treatment by daily injection of one centigramme of *Merc. cor*. was commenced. The next day there was sharp fever, saburral tongue. The abdominal pains were frankly muscular. Trace of albumen in the urine. Next night there was delirium, and epistaxis in the morning. This case went on to recovery. Another case, also in a girl of seventeen, of phthisical history, and even complicated with syphilis, presented the same order of symptoms, along with epistaxis, hæmoptysis, albuminuria, endocarditis with suffocative attacks and violent palpitations, ending in permanent disablement. These cases may be regarded as provings of *Medorrh*. from the homœopathic stand-point.—The rheumatic symptoms are of extreme intensity, and *Medorrh*. will cure many cases where the symptoms correspond. I have cured many cases of dysmenia with it, following Burnett. Burnett cured

with *Medorrh*. 1m: (*1*) A patient who had fits at every menstrual period, the fits coming on in the early morning. (*2*) A man who had clonic spasms, the legs suddenly shot up from the bed. (*3*) A case of right wrist rheumatism. (*4*) Polypi having their origin in a chronic suppurating discharge. (He regards *Medorrh*. as "the mother of pus and catarrhs"). (*5*) Masturbation in children. (*6*) Albuminuria when the urine contains some mucus as well. (*7*) Sycotic asthma, < 2 to 4 a.m. (*8*) Psoriasis palmaris. Gilbert (*Trans. Amer. Inst*., 1895, quoted *H. R*., xi. 71) traces rickets to hereditary gonorrhœa; there are often in these cases glandular enlargements, and the patient is > at seaside. In such cases he gives *Medorrh*. (When there is syphilitic paresis and the patient is > in the mountains, he gives *Syph*.). In acute bowel troubles in rickety children he finds *Medorrh*. of great value.—Thomas Wildes (*H. P*., xii. 70) considers that favus and scald-head and ophthalmia tarsi simplex (margins scaly, scurfy, often angry red, falling of lashes) are due to suppressed gonorrhœa in one or both parents. The red, angry condition of skin may extend from face or scalp, down neck and back to perineum and genitals. (*1*) Girl, 11, had been treated by many physicians with salves and ointments to the general impairment of her health. Face mottled with a profusion of red scurfy sores, eyelids involved and nearly denuded of lashes; hairy scalp one diffuse mass of thick yellow scabs, from beneath which oozed a highly offensive mixture of ichor and sebum. Passing down neck, back, perineum and involving genitals and pubes was a *fiery red band* as broad as the child's hand, oozing a pale yellow serum which caused the clothing to stick to the body. Wildes told the mother he could cure the case, but it would certainly get worse the first three months. This was not objected to. *Medorrh*. c.m. (Swan) was given, one dose on the tongue. The external appearance grew rapidly worse, but appetite, sleep, and general health steadily improved, and in nine months she was completely well. (*2*) Child, 6, since infancy horribly disfigured with tinea capitis. Scalp a mass of dense scabs exuding fetid ichor, the only semblance of hair being a few distorted stumps ending in withered roots. One dose cured in a few months, and at the time of Wildes' writing patient was a healthy and extremely talented young lady and the possessor of a luxuriant head of chestnut hair. Wildes thinks that suppression of favus when derived from gonorrhœa in the father leads to hydrocephalus, capillary bronchitis, severe teething diarrhœas, cholera infantum, &c.; if derived from the grandfather, suppression leads to consumption and lingering diseases. *Fiery red rash* developing about the anus in babies a few days old; constipation with hard, dry stools; when the nurses say "baby's water scalds it terribly," the indications for *Medorrh*. are clear. Wildes regards the latent gonorrhœal taint as the true explanation of many of the disease-manifestations included by Hahnemann under Psora. Burnett in a way confirms this, as he traces gout to a sycotic origin. Wildes regards *Medorrh*. too dangerous a remedy to give in acute cases whether of gonorrhœa, rheumatism, or scarlatina, on account of the intensity of the aggravation it is liable to cause; though single doses are often useful when there is a tendency to sinking in dangerous cases of cholera infantum. Among other diseases Wildes traces to the same source are: Vascular meningitis in infants and

cerebro-spinal meningitis. In the former the efficacy of *Medorrh*. is doubtful, but in the latter it is very efficacious after *Act. r*. has allayed the first acute symptoms. In the convalescent stage *Lyc*. has been his chief remedy. He quotes from old-school authorities the following conditions traceable to latent gonorrhœa communicated from husband to wife: Ovarian tumours, oophoritis, salpingitis, metritis, parametritis, endometritis, and even peritonitis,—*Medorrh*. is the remedy in single doses, but it is rarely if ever to be given in the *acute stages* of a disease. In general motion <, rest >. Lying on face or stomach > cough. Stretching out <. Leaning head forward <. Leaning far back > constipation: can only pass stool so. (I cured with *Medorrh*. 200 a most aggravated case of constipation on this indication. The patient said he was obliged to lean far back on the seat or he could not get rid of the stool. He was passing urine containing long white mucous shreds. Many years before he had had gonorrhœa.) There is great sensitiveness to draught of air; takes cold easily. At the same time there is great desire to be fanned. < In the sun; by warmth of bed; entering a warm room (cough). Salt-water bathing > sore throat and cold in head. Damp weather > pain in limbs. Craving for ice. Chronic rheumatism of joints is < inland, > near sea. The early morning < (especially 3 to 4 a.m.) is a leading characteristic of *Medorrh*. and all sycotics.

Relations.—*Antidoted by:* Ipec. (dry cough); *Compatible:* Sulph. (especially when stool drives out of bed). *Compare:* Pic ac. (inability to walk right; priapism); Camph. and Sec. (collapse, skin cold yet throws off all covering); Verat. (collapse with cold sweat); Syph. (reverse aggravation—sunset to sunrise); as if in a dream, Ambr., Anac., Calc., Can. i., Con., Cup., Rhe., Stram., Val., Ver., Ziz. > By leaning back, Lac c. Fish-brine odour, Sanic.

SYMPTOMS.

1. Mind.—Forgetfulness: of names; later of words and initial letters.—Time moves too slowly.—Dazed feeling; a far-off sensation, as though things done to-day occurred a week ago.—Loses constantly the thread of her talk.—Seems to herself to make wrong statements, because she does not know what to say next, begins all right but does not know how to finish; weight on vertex, which seems to affect the mind.—Difficulty in concentrating his thoughts on abstract subjects.—Could not read or use mind at all from pain in head.—Thinks some one is behind her, hears whispering; sees faces that peer at her from behind bed and furniture.—One night saw large people in room; large rats running; felt a delicate hand smoothing her head from front to back.—Is sure she is going to die.—Sensation as if all life were unreal, like a dream.—Wild and desperate feeling, as of incipient insanity.—Cannot speak without crying.—Suicidal.—Is in a great hurry; when doing anything is in such a hurry that she gets fatigued.—Spirits in the depths, weighed down with heavy, solid gloom, > by torrents of tears.—Is always anticipating; feels most matters sensitively before they occur and generally correctly.—Dread of saying the wrong thing when she has headache.—Apprehensive.—Fear of the dark.—Feeling as

if he had committed the unpardonable sin and was going to hell.—Irritated at little things.—Very impatient.—Great selfishness.

2. Head.—Vertigo: when stooping; slightly > lying; < on movement.—Sensation of tightening in head causing intense vertigo.—Frontal headache: with nausea; feeling of a tight band across forehead, < leaning head forward; as if skin were drawn tight; with fluent coryza; with pressure back of eyes, as if they would be forced out; extending over brain to neck.—Brain seems weary; slightest sound annoys and fatigues her.—Wakes with headache over eyes and in temples; < from sunlight.—Pain in centre of brain; in evening sharp pain through temples; pains commence and cease suddenly.—Brain exceedingly tender and all mental work irksome.—Pain in l. parietal bone when the wind blows on it.—Pain circling through head and around crown.—Terrible pains all through head in every direction, with continuous and violent vomiting, followed by aching in sacrum and down backs of legs to feet.—Constant headache < while coughing; light (through the eyes) seems to hurt it.—Intense headache for three days, with inflammation of eye.—Intense cerebral suffering, causing continual rubbing of head in pillow, rolling from side to side.—Dull pain in cerebellum.—Intense burning pain in head, < in cerebellum.—Tensive pains in head as if she would go crazy; could not read or use mind.—Aching pain in base of brain, with swelling of cords of neck.—Head feels heavy and is drawn backwards.—Pain in back of head and in r. eye.—Hair lustreless, dry and crispy; electrical.—Intense itching of scalp; quantities of dandruff.

3. Eyes.—When eyes were shut, felt as if pulling out of head to one side or other; when open all things seemed to flicker.—A blur over things; numberless black, sometimes brown spots dancing over her book; sees objects double; things look very small; sees imaginary objects.—Neuralgic pain in eyeballs: when pressing eyelids together; < when rolling them.—Feeling of pain and irritation, and sensations of sticks in eyes, lids, and esp. inner canthi, redness and dryness of lids, congestion of sclerotics and sensation of a cool wind blowing in eyes, esp. inner canthi.—Ptosis of outer end of both upper lids, particularly L, requiring exertion to open them. Decided tendency to irritation of edges of lids.—Hardness of upper lid, as if it had a cartilage in it.—Swelling under eyes.

4. Ears.—Nearly total deafness of both ears, with very little noise; had to use a trumpet.—Partial or transient deafness; pulsation in ears.—Singular sensation of deafness from one ear to the other, as if a tube went through head, while yet there was an over-acuteness of hearing.—When whistling, the sound in ears is double, with peculiar vibration as when two persons whistle thirds.—Quick, darting pains in r. ear, from without inward; pains followed each other in quick succession.—Ringhole in l. ear sore and almost gathered.

5. Nose.—Intense itching in nose, internally near point, had to rub all the time.—Very great burning in both nostrils when breathing through them.—Coldness

of end of nose.—Entire loss of smell for several days.—Nose goes to sleep.—Epistaxis.—Nose inflamed, swollen.—Posterior nares obstructed, > by hawking thick, greyish mucus, followed by bloody mucus.—Soreness and crawling feeling, as of a centipede in l. nostril in morning.

6. Face.—Greenish, shining appearance of skin.—Blotches on skin.—Flushes of heat in face and neck.—Fever blisters near corner of r. upper lip, small but very sore.—Enormous fever sore on lower lip near l. commissure.—Sweat of face; on upper lip.—Neuralgia of r. upper and lower jaws, extending to temple.—Face covered with acne; dry herpes; freckles.—Tendency to stiffness in jaws and tongue.

7. Teeth.—Teeth have serrated edges, or are chalky and easily decay.—Sore teeth, particularly eye teeth; feel sore and soft.—Yellowness of teeth.

8. Mouth.—Taste: coppery on rising; disagreeable; bad in morning.—Tongue coated: brown and thick; thickly in morning, with bad taste: white at base, the rest red; white, with papillæ showing through.—Tongue blistered.—Small sores, pustules (canker sores) on edge, tip, and under tongue, very painful; also inside lips and in throat.—Foul breath in morning.—Dryness of mouth; feels burnt.—Blisters on inner surface of lips and cheeks, skin peeling off in patches.—Stringy mucus comes out of mouth during sleep.

9. Throat.—Throat: scraped; sore, stiff; dry; swallowing painful.—Back part of throat constantly filling with mucus from posterior nares.—Sore throat and cold in head > by salt-water bathing.

10. Appetite.—Appetite: ravenous, immediately after eating; lost.—Thirst enormous; for liquor.—Craves: salts; sweets; hard, green fruit; ice; sour things; oranges; ale.

11. Stomach.—Hiccough.—Nausea: with frontal headache; after drinking water; after dinner; always after eating; before eating.—Violent retching and vomiting for forty-eight hours; first glairy mucus, then frothy and watery, and lastly coffee-grounds; accompanied by intense headache, with great despondency and sensation of impending death; during paroxysm was continually praying.—Vomiting thick mucus and bile; black bile without nausea, tasting bitter and sour, with considerable mucus.—In pit of stomach: sensation of pins forcing through flesh; sick gnawing not > by eating; trembling; burning.—In stomach: feeling of lump after eating; cramps; clawing, < drawing up knees.—Intense pain in stomach and upper abdomen, with a sensation of tightness.—Sensation of sinking and agonising sickness at stomach, with a desire to tear something away.

12. Abdomen.—Terrible pains in liver, thought she would die, they were so acute.—Grasping pain in liver and spleen.—Intense agonising pain in solar plexus; surface cold; eructations tasting of sulphuretted hydrogen and, after eating, of

ingesta; applied r. hand to pit of stomach and l. to lumbar region.—Tensive pain in r. side of abdomen, as of a hard, biconvex body; with heat and gnawing aching pain, continued a short time; it was between spine of ilium and recti muscles.—Darting pain from centre of r. ovarian region to lower edge of liver.—Beating as of a pulse in abdomen vertically.—Cutting in r. lower abdomen running into r. spermatic cord; r. testis very tender.

13. Stool and Anus.—Bilious diarrhœa, verging on dysentery, with mucous stools.—Pains of most intense kind (threatening cramps) in upper abdomen (darting and tearing pains) coining on at stool; stool diarrhœic, thin and hot, but not copious; after stool, profound weakness and mild cramp in l. calf.—Profuse bloody discharges from rectum, sometimes in large clotted masses, followed by shivering.—Black stool.—White diarrhœa.—Stools tenacious, clay-like, sluggish, cannot be forced, from a sensation of prolapsus of rectum.—Can only pass stool by leaning very far back; very painful, as if there was a lump on posterior surface of sphincter; so painful as to cause tears.—Constriction and inertia of bowels with ball-like stools.—Child, æt. 15 months, brought on a pillow to clinic, apparently dead; eyes glassy, set; could not find pulse, but felt heart beat; running from anus greenish yellow, thin, horribly offensive stool.—Oozing of moisture from anus, fetid like fish brine.

14. Urinary Organs.—Intense renal colic; severe pain in ureters, with sensation as of passage of calculus; during kidney attack, great craving for, ice.—Dull pinching pain in region of supra-renal capsules at 11 a.m.; fingers cold at same time; great pressure in bladder, greater than amount of urine warrants; urine scanty and high coloured.—Pain in renal region, profuse urination >.—Urine: high coloured; strong-smelling; covered with thick, greasy pellicle; intensely yellow.—Slow flow; cutting across root of penis transversely just as last drops are voided; intermittent.—Diabetes.—After urination, syncope.

15. Male Sexual Organs.—Emissions during sleep: watery, causing no stiffness of linen; transparent, consistence of gum arabic mucilage, too thick to pour, and voided with difficulty; thick, with threads of white, opaque substance.—Impotence.—Intense and frequent erections day and night.—Pains along urethra while urinating, drawing burning.—(Suppressed gonorrhœa).

16. Female Sexual Organs.—Great sexual desire after menses in a single woman.—A great deal of pain in l. ovary, with a sensation as if a sac was distended and if pressed would burst; sensation as if something was pulling it down, causing it to be sore; pain when walking passed to l. groin, as if leg pushed something, with a great amount of heat.—Tense pains passing diagonally in r. ovary, followed by a bubbling sensation.—Intense, excruciating, neuralgic pains in whole pelvic region, extending downwards through ovarian region to uterus; cutting like knives, forcing tears and groans.—Distinct soreness and nervous pain in one spot in lower part of uterus on l. side, < walking or moving l. leg.—Profuse menses; dark clotted, stains

difficult to wash out; also bright blood, with faintness and some pain.—Intense menstrual colic, causing drawing up of knees, with terrible bearing-down, labour-like pains, with pressing of feet against support, as in Labour.—A burning pain in lower part of back and hips during menses.—After very profuse menses, neuralgia in paroxysms in head, with twitching and drawing in of limbs and cords of neck, which were like wires; pain in lower abdomen, with profuse yellowish leucorrhœa.—Itching of vagina and labia, thinking of it makes it <.—Small chancres on edge of r. labia (had no sexual intercourse for three years, never had venereal disease).—Short, shooting pains, passing outwards, chiefly in breasts.—Breasts as cold as ice to touch, esp. nipples (during menses), rest of body warm.—Large but not painful swelling of l. breast.—Breasts and nipples very tender to touch, also inflamed.—Soreness of nipples, a gummy secretion drying on orifice; when picked off nipple bleeds freely.

17. Respiratory Organs.—Hoarseness, esp. while reading, with occasional loss of voice.—Choking caused by a weakness or spasm of epiglottis, could not tell which; larynx stopped so that no air could enter, only > by lying on face and protruding tongue.—Dryness of glottis, very annoying, with pain during deglutition; great hoarseness.—Soreness in larynx, as if ulcerated.—Tenacious mucus in larynx.—Sensation of a lump in larynx; severe pain on deglutition.—Bronchial catarrh spreading into larynx, swelling of tonsils and glands of throat extended also into ears, causing transient deafness.—Great oppression of breathing every afternoon about 5 p.m.; sense of constriction.—Has to fill lungs, but no power to eject air.—Breath hot, feels so even when breathing through the nose.—Cough from tickling under upper part of sternum.—Incessant dry cough, < at night; wakes just as she is falling asleep; < from sweet things.—Terrible, painful cough, as if larynx would be torn to pieces and as if mucous membrane was torn off, with profuse discharge of viscid greyish mucus, mixed with blood.—Cough < on lying down, > lying on stomach.—Expectoration: yellow white, albuminous, or little green, bitter balls; ropy, difficult to raise; as if flecked with infinitesimal dark spots.

18. Chest.—Sharp pain in bottom of l. lung.—Chest sore to touch, at times burning extends over chest; cold seems to < it; a piece of ice seems to cool it for an instant, then it is hotter; lung feels as if beaten or bruised.—Singular sensation through chest, bounded by a line drawn across lower end of sternum and another about middle; as if there was a cavity extending from side to side, filled with burning air, which dilated in puffs in all directions and could be felt impinging on walls of cavity.—Pain in r. shoulder as though it came from l. straight through.—Constricted sensation at bottom of both lungs; dull, heavy pain at top of l. lung.—Coughing gives great pain in chest, as if it was painfully contracted.—Incipient consumption.—Pain and soreness through chest and mammæ.—Sensation of an abscess between pectoralis major and minor.—Great soreness to pressure of muscles of lower l. chest front and back, soreness when moving l. shoulder-blade.

19. Heart.—Palpitation after slight exertion.—With heat in chest, heart felt very hot, beat very fast and felt large, accompanied by a bursting sensation.—Feeling of a cavity where heart ought to be.—Pain in heart: acute, sharp, quick; dull; quick.—Intense pain in heart, seemed to radiate in different parts of l. side of chest; < from least movement.—Burning in heart, went through to back and down into l. arm.

20. Neck and Back.—Drawing in cords of neck, causing desire to throw head back.—Spasms of neck muscles, notably sterno-mastoid, drawing chin firmly down to breast.—Contractive pain from superior angles of scapulæ, passing to seventh dorsal vertebra, drawing shoulders back tight as if bones would be crushed; < moving shoulders, neck, or arms.—Intense burning heat, commencing in back of neck and extending gradually down spine, with a contractive stiffness extending into head and seeming to thicken the scalp.—Weak, stiff, aching back.—Heat in medulla and spine for a whole week.—Whole length of backbone sore to touch, also ribs of l. side.—Lumbago caused by straining or lifting.—Pain in back of hips, running around and down limbs.—Pain in sacrum and coccyx.

21. Limbs.—Almost entire loss of nervous force in legs and arms; exhausted by slightest effort.—Numb sensation in l. arm, hand, and leg; l. leg goes to sleep.—Eruption under and on toes and on hands and feet.

22. Upper Limbs.—Rheumatic pain in top of l. shoulder, < from motion; occasional little darts of pain if kept still.—Rheumatic pain in (r.) shoulder and arm.—Brown, itching eruption on l. shoulder.—Cold numbness outer side of arms just below elbow.—Cracking of joints, esp. elbows.—Much pain in l. arm; cannot hold a paper; veins become enlarged; < raising arm.—Trembling of arms and hands.—Burning of hands, wants them fanned and uncovered; always cold hands.—Backs of hands rough.—Small yellow spots on hands.—Transverse depression on nails, as if they were bent.—Consumptive incurvation of nails.

23. Lower Limbs.—Woke with sharp pain in l. hip, preventing stooping, walking difficult; like a stiff neck.—Legs heavy as lead; walking difficult, esp. up and down stairs.—Numbness, paralysed feeling, in l. leg from knee to hip.—Longs to stretch legs.—During heavy thunderstorm very sharp pains in knees start upwards; pains < by stretching.—Aching in legs with inability to keep them still in bed, < when giving up control of himself, as when trying to sleep (> after Lil. t.).—Trembling in legs from knees down (< l.), burning in feet.—Cramps in soles and calves at night.—Ankles turn easily when walking.—Sudden intense pain in l. ankle, back of joint, on going to bed, could not move limb or body without screaming; could find no position of comfort.—Burning in feet, wants them uncovered and fanned.—Cold feet with chills all over.—Œdema of feet followed and > by diarrhœa.—Soreness in ball of foot under toes.—Cold, sweating feet.—Old foot-sweats, < during winter for seven years.—Great toe covered with tettery scales.—Corns very tender.

24. Generalities.—Gangrene.—Trembling.—Spasms.—Epileptiform spasms, foaming at mouth.—Opisthotonos.—Risus sardonicus.—Collapse.

25. Skin.—Yellowness of skin.—Intense and incessant itching, fugitive, < towards night, sometimes confined to one side.—Itching (and pricking) all over, < back, vagina, labia, and < thinking of it.—Fiery red band passing down neck, back, and perineum, and involving genitals and pubes.—Fiery red rash about anus in babies; "the water scalds it terribly.".—Scald-head.—Tinea capitis, eyelids involved.—Copper-coloured spots (syphilitic) remaining after eruptions, thin yellow-brown and detach in scales, leaving skin clear and free.—Small pedunculated warts, with pin-heads, like small button mushrooms, on various parts of body and thigh.—Favus.—Fetid odour of body.

26. Sleep.—Sleepy, yawning, chilly.—Spasmodic yawning, cannot suppress it; followed by spasm of glottis.—Asleep, but hears everything, answers questions as if awake.—Bites tip of tongue in sleep.—Sleeps at night on her knees with face forced in pillow.—Can only sleep on back with hands over head; if she lies on either side, the contents of lower part of chest and abdomen seem to press on each other and cause discomfort.—Dreams: horrid; painful; exhausting; that she is drinking; of walking; of ghosts and dead people.—Wakeful; slept towards morning.—Great restlessness at night; sleepy but could not sleep.

27. Fever.—Creepy chills running down back and all over body in a zigzag course.—Chills: up and down back; several times a day.—Chilly 3 to 4 p.m.—Cold hands with coldness extending all over body.—Flashes of heat alternating with chills.—Coldness: r. hand, then l.; a slight flush of heat succeeded, then sensation of a foreign substance in r. eye, then in l.—Must be fanned all the time, throws clothes off, yet surface is cold; burning mostly subjective of hands and feet, wants them uncovered and fanned.—Fever: with or without thirst; with gushes of perspiration in face; followed by languor; with nervous restlessness from midnight to 3 a.m.; at 11 a.m. preceded by cold feet; fell asleep during fever; after fever, sweat on palms, feet and legs; with rapid pulse at night; in afternoon; and malaise.< 10 a.m. to 1 p.m.—Great tendency to sweat on exertion; sensitive to cold.—Profuse sweat about neck.—Night-sweats.

Glonoinum.

Nitro-glycerine. C_3 H_5 (NO_3) O_3. Dilutions with alcohol.

Clinical.—*Angina pectoris*. Aphasia. Apoplexy. *Brain, congestion of*. Bright's disease. Convulsions. Epilepsy. Epistaxis. Fright, effects of. *Goître. Headache*. Heart, affections of; palpitation of; jarring, effects of. Location, sense of, lost. Mania. Meningitis. Menses, suppression of. *Neuralgia*. Paralysis. Rheumatism.

Sciatica. Sea-sickness. Snow-headache. Sun-headache. *Sunstroke*. Toothache. Trauma.

Characteristics.—"Nitro-glycerine was discovered by Sobrero in 1847, but none could be obtained for physiological experiment until Morris Davis, a Philadelphia chemist, in the same year, after long and laborious trials, under direction of Hering, succeeded in producing the substance in sufficient quantities for proving." I quote this from the *Guiding Symptoms. Glon*. is one of the many monuments of Hering's therapeutic genius. It is to him that we owe the introduction of this notable remedy into the materia medica, and into medicine. The note of the action of *Glon*. is a tendency to sudden and violent irregularities of the circulation. It acts very quickly and very violently. The "signature" of this potent explosive may be said to be "bursting" and "expansion." Bursting, throbbing headaches; sensations of expanding in the head and elsewhere. Throbbing of carotids; violent action of heart; rush of blood to head; flushes of heat rising from chest to head, then throbbing pain in head. The characteristic *neuralgias* of *Glon*. are accompanied with much throbbing, and are often < at night, preventing sleep. Supra-orbital neuralgia, pulsating; retinal congestion from exposure to strong light. Facial neuralgia, extending through head. Cardiac neuralgia (angina pectoris) with radiating pains.

Guernsey, with his usual graphic terseness, says that *Glon*. is suited to "Troubles of the head in type-setters, and in men who work under a gas-light steadily, so that the heat falls on the head; bad results from sunstroke; *can't bear any heat about the head*; can't walk in the sun, must walk in the shade or carry an umbrella; can't bear heat from a stove; great vertigo on assuming an upright posture, from rising up in bed, rising from a seat, &c. Heat in the head; throbbing headache." The great sensitiveness to the least jar, which is a very marked feature of the *Glon*. headache, causes the patient to carry his head very carefully in order to avoid the chance of it. The headache is in the whole head and every part—forehead, vertex, occiput. Many pains appear in occiput and base of brain; gnawing in occiput; sore pain; pressure; severe pain in occiput, extending to eyes and temples; sensation as if something were moving in nerves from back of neck upward to head. The eyes may be fixed or protrude; aversion to bright light; black spots before sight. Face flushed or pale. Climacteric disturbances.

Fainting, sudden unconsciousness; convulsions, especially during labour. Nausea and vomiting of cerebral origin. Violent, stabbing, neuralgic pains, so violent as to make patient frantic, he wants to escape, to jump out of window. Bad effects of fear; horrible apprehension; fear of being poisoned. A characteristic mental condition is loss of sense of location: "well-known streets seem strange to him." Among the peculiar *sensations* are: Chin feels too long. Chest feels screwed together. Brain as if expanding; as if moving in waves; as if hanging with head downwards; as if something were pumped into vertex; as if everything were crowded out at forehead; as if warm water were running upwards from nape of

neck; as if the neck were gripped by a hand; as if some one were pulling eyes from within outward. Noise in left ear as if it came from heart. Lower lip feels swollen. As if heart would rise to throat. Pains are: Bursting; throbbing; pulsative; tearing; piercing; stabbing; gnawing. Burning between shoulders. Sitting or lying still, or walking in cold air > headache. Bending forward; bending head backward, and almost every movement < headache. Rest < pain in knee. Excessive heat and cold = hyperæmia of brain. Heat generally <; cold applications and cool air >; but cold water applied to head < head symptoms, even = spasms. < Damp weather. Bad effects of having hair cut; of exposure to sun or fire heat. All summer, headache < every day with the sun. < From wine. Pains from within outward; from front to back. Bad effect of too much riding or driving; sea-sickness; < from jarring. Pressure > headache. Cannot bear weight of hair; clothing seems too tight. *Suited to:* Florid, plethoric, sensitive women; nervous, sanguine, readily affected persons. Old scars break out again.

Relations.—*Antidoted by:* Acon., Camph., Coff., Nux v. *Compare:* Amyl nit.; Act. r. (waving in brain); Petrol. and Crotal. h. (loss of location); Bell. (cephalic cry but not as marked in Bell.; also Bell. has > bending head back, and > covering head; Glon. > uncovered); Apis, Hyo. (fears being poisoned); Gels. (inclination to jump out of window); Stram. Sang. (headache with the sun; ear sensitive to jar); Nit. ac. and Bell. (sensitiveness to jar); Melilot. (headache with crimson face) Lyc. and Phos. (burning between shoulders); Dig. and Diosc. (headache extending into nose); Sec. (fingers spread apart).

Causation.—Sun. Bright snow. Fire-heat. Fear or fright. Jarring. Injuries.

SYMPTOMS.

1. Mind.—Falling down, with loss of consciousness and alternate palpitation of the heart, and congestion of the head.—Fear; throat feels swollen, chest as if screwed together; apprehensive of approaching death; fears she has been poisoned.—Fear, as if something unpleasant would happen to him.—Unusually bright and loquacious, with great flow of ideas.—Confusion of ideas; cannot tell where he is; well-known streets seem strange; way home too long; forgets on which side of the street he lives.—Great mental agitation (with headache); frantic, attempts to run away; to jump out of window.—Cephalic cry.—The chin feels too long.

2. Head.—Vertigo; < from stooping or moving head; in open air.—Giddiness when the head is moved.—Heaviness in the head, principally in forehead.—Dull headache with warm perspiration on forehead.—Headache with accelerated pulse, red face, perspiration on the face; he becomes unconscious.—Headache < from the heat of the sun; > in the open air and from pressure.—Headache, throbbing, &c., during or in place of menses.—Fulness in the head, as if the brain was expanding itself, were moving in waves.—Fulness in the head; distinct feeling of the pulse in the head; throbbing without pain.—Sensation as if the blood were mounting to the

head.—Congestion of blood to the head (apoplexy).—Pulsation in the forehead, in the temples, on the vertex; when walking every step is felt in the neck, when moving the head.—Throbbing in the head; in forehead; in temples; in vertex; in occiput; < when moving; > when sitting still and lying and from pressure.—Throbbing in the temporal arteries, which were raised, and felt like cords.—Stitches in temples or r. side of forehead.—Sore and bruised feeling in the brain, worse when shaking the head.—Sensation of soreness through the whole head; is afraid to shake the head, as it seems that it would make the head drop to pieces.—The pain, heat, and fulness in the head ascend from the chest, neck, or back part of the head.—Severe pain in the occiput, extending to the eyes and temples.—Shaking < the headache, as well as stooping motion, ascending steps; external pressure >; walking in the open air, uncovering the head >.—Cracking sensation in the brain.—Skull seems too small, and as if the brain were attempting to burst the skull; violent action of the heart, and a distinct pulsation over the whole body.—Shocks in the brain synchronous with the pulse.—Undulating or wave-like motion in the brain.—Hemicrania; sees half light, half dark.—Gnawing in occiput.

3. Eyes.—Eyes dull, staring, sunken.—The white of the eye is red, the eyes protrude, look wild.—Eyes feel as if some one were pulling them from within outward.—Pressing, protruding pains in eyes.—In the eyeballs, stitches, twitchings, soreness, pressure.—Pupils dilated, eyes rolled upward.—Heat in the balls of the eyes, lids, and around the eyes.—Sparks, flashes before the eyes.—The letters appear smaller.—As if focus of r. eye were suddenly displaced; sees everything half light and half dark.—Black spots before, and obscuration of the eyes; with fainting.

4. Ears.—Sensation of fulness, in and around the ears.—Ears sensitive to jarring.—Deafness, ears feet as if stopped up.—Stitches in the ears, the ears feel as if closed.—Throbbing, piercing from within outward in r. ear.—Ringing, singing, or cracking in the ears.—Ringing in the ears, audible pulse.

5. Nose.—Pain at root of nose.—The headache extends into the nose.—Epistaxis on going out into the heat of the sun, face flushed, hot, red.

6. Face.—Paleness of the face with heat and congestion of blood to head and chest.—Pale during heat, sunstroke, congestions, &c.; flushed and hot with headache.—Heat in the face with pulsations in the head and palpitations of the heart.—Redness of the face, esp. upper part of it, with headache.—Redness of the face, which comes and goes.—Itching, esp. in the middle of the face.—Pain and stiffness of the articulation of the jaw.—Sensation as if the under lip were swollen.

7. Teeth.—Throbbing pain in all the teeth.—Pulsating toothache with headache.—Stabbing pains in gums r. side passing to l. without ceasing in r.; < from hot, > from cold applications.

8. Mouth.—Taste: bitter with nausea; aromatic; sweet; warm; leaves a fatty taste.—Tongue numb, as if burnt; prickling, stinging.—Tongue feels swelled and raw with spasmodic twitchings.—Tongue: milk-white without coating; coated heavily at back.—Difficulty in conversing from diminished power of tongue and confusion of ideas.—Tongue swollen with pricking in it, the tongue smarts.—Sensation of soreness and swelling on the roof of the mouth with pulsation.

9. Throat.—The soft palate feels contracted and dry.—Itching of the soft palate and throat.—In the throat tickling, heat, soreness.—Sensation as if the throat were swelling.

10. Appetite.—Appetite lost.—Wants cold water; also from dry parched feeling.—Increased desire to smoke.—Wine < all symptoms.

11. Stomach.—Nausea causing perspiration.—Nausea with and caused by the headache, with colic; congestion of blood to the head and chest, and pale face.—Nausea and vomiting in brain-congestions, or during sunstroke.—Faint feeling at pit of the stomach; also with throbbing.—Sensation of emptiness in the pit of the stomach.—Sensitiveness of the pit of the stomach, esp. on stooping.—Gnawing in the pit of the stomach.

12. Abdomen.—Colic, cutting pain principally below the navel, wakening one in the morning, before and after loose stools.—Gall-stone colic.—Rumbling in lower part of the abdomen, principally when lying on l. side.

13. Stool and Anus.—Diarrhœic stools with rumbling and discharges of flatus, beginning in the morning and lasting all day.—Diarrhœa; copious, loose, blackish, lumpy stools.—Morning diarrhœa with sharp burning; with rumbling.—After eating peaches diarrhœa evening and night.—Constipation and hæmorrhoids which itched and pained.—At an unaccustomed time, a hard and unusual stool; pinching in abdomen before and after it.—No stool.

14. Urinary Organs.—Increased secretion of pale (albuminous) urine; has to rise frequently during the night, and must pass large quantities of albuminous urine.—Tubal nephritis, with headache, brought on by walking in the sun; numbness in arms and hands alternating with intense tingling.

16. Female Sexual Organs.—Menstruation suppressed by *Glon*.—Instead of menses congestion to head; face pale; worse in warm room; fainting; throbbing.—During menstruation congestion of blood to head and chest; headache; fainting.—At climaxis, flushes of heat, pressure in head, nausea, loss of senses, vertigo, swelling of feet.—During pregnancy headache, congestions of blood to the head and chest.—Eclampsia; unconscious; face bright-red; puffed; pulse full, hard; urine copious and albuminous.

17. Respiratory Organs.—Inclination to deep respiration.—Desire to take a long, deep inspiration.—Sighing.

18. Chest.—Constriction of the chest.—Constriction and oppression of the chest.—Oppression of the chest alternating with headache.—Congestions to the chest.

19. Heart.—Palpitation of the heart with heat in the face, accelerated pulse and pulsation of the carotid arteries.—Violent action of the heart, distinct pulsation over the whole body.—Excessive perceptible palpitation of the heart.—In the heart sensation of fulness, heaviness, and heat, with laboured beating of the heart.—Pulse accelerated; rises and falls alternately; low and feeble in sunstroke.—Laborious action of the heart, oppression.—Sharp pains in heart.—Severe stitches from the heart, extending into the back.—Purring noise in region of heart when lying, pulse intermittent.

20. Neck and Back.—Tightness around the neck.—The neck feels weak and tired, cannot support the head.—Stiffness of the neck, clothing seems to be too tight.—On the neck sensation of fulness, tension, pulsation.—Burning heat between the shoulder-blades.—Hot sensations down back.—Pain in the whole spinal column, or heat and chilliness.

22. Upper Limbs.—In the arms restlessness, weakness, want of circulation.—Sensation of weakness and numbness in l. arm.—Feels the beating of all the pulses in the tips of the fingers, accompanied by trembling of the fingers.

23. Lower Limbs.—Weakness and numbness of l. thigh.—Weakness of the legs, the knees and ankles give way (during headache).—Limbs relaxed, motionless in sunstroke.—Acute pain in l. knee on moving, seems to be deep in joint without much heat or swelling; sudden twinges or pricks while at rest, is obliged to rise and straighten limb.—Jerking of limbs with loss of consciousness.—Restlessness in the limbs causes him to rise.—(Sciatica.).—Cold feet, with nausea, palpitation.

24. Generalities.—Fainting; with consciousness.—Great weakness and prostration.—Unconscious falling down.—Painless throbbing in the whole body.—Pulsations, tingling, thrills, and a peculiar sensation of warmth through the body, extending from above downward.—Convulsions (from congestions to the head); the fingers are spread apart and stretched out.—Seeming plethora, rapid deviations in distributions of blood.

26. Sleep.—Yawning with headache, congestion of blood to the head.—Sleepiness early in the evening.—He is difficult to waken.—Weakness as from loss of sleep.

27. Fever.—Pulse accelerated, irregular, intermitting, full and hard, small and rapid.—Chill: after getting heated; alternates with sweat; with vomiting; head as if

screwed up; intermittent fever.—Heat, esp. in face, ascending from pit of stomach to head.—Warmth general; flushes of heat; waves of heat upward.—Perspiration principally in the face, after sleeping.—Perspiration on forehead.—Profuse sweat, mostly on face and chest.—Perspiration relieves the nausea.

Gnaphalium.

Gnaphalium polycephalum. Sweet-scented Everlasting Flower. N. O. Compositæ. Tincture of fresh plant.

Clinical.—Anterior crural neuralgia. Cholera. Diarrhœa. Dysmenorrhœa. Gout. Lumbago. Prostate gland, irritation of. Rheumatism. *Sciatica*.

Characteristics.—*Gnaphal*. has been used mainly in affections of the sciatic nerve. But it has also an action on the abdominal organs, causing vomiting, colic, and diarrhœa, thus comparing with *Colocynth*. in both spheres. The special indication for its use in sciatica and lumbago is: Numbness alternating with the pain. The diarrhœa is watery and offensive; occurs in the morning and is repeated during the day. There is rumbling in the bowels, colicky pains, and the patient is cross and irritable, urine is scanty, appetite and taste are lost. There is also sexual excitement in mate provers, pain and irritation in the prostate gland. Dr. W. McGeorge (*Hahn. Month*., Oct., 1885, p. 606) tells us that among the negroes *Gnaph*. has a reputation for colds, fevers, and night-sweats. The last was caused in one of the provers. It cured one case of "chills"; and the periodicity appears in the intermittent neuralgia of the upper jaws. A very important observation made by McGeorge is on the value of *Gnaph*. in dysmenorrhœa. "Weight and fulness in the pelvis" are the only symptoms noted in the proving bearing directly on the malady. "Dysmenorrhœa when the menses are scanty and very painful the first day" is the clinical indication. McGeorge cured a very aggravated case of sciatica (left) in a man, resulting from a strain. The leg was cramped and drawn up; < in cold and damp weather. I have cured a number of cases in which there was alternation of numbness with the pain. Dr. George Shelton has recorded (*N. A. J. H*., Feb., 1888, p. 100) two cases. (*1*) A clergyman, 27, had sharp cutting pains, starting from inner side right thigh, just below Poupart's ligament, extending down course of anterior crural nerve to a point about its lower third. The pains were paroxysmal, came on when walking, occasionally when lying down; had had one or two attacks in the pulpit. In several instances the pain had extended down the right cord into the testicle and caused him to draw up the leg, flexing the thigh on the abdomen. (This condition was also present in Dr. McGeorge's case, and may possibly be a keynote.) A few doses of *Gnaph*. 1 cured him completely. (*2*) The second case occurred in a widow, 68, who had had severe pains in outer side of right thigh for six years, during part of which time she had been confined to bed. The pains were paroxysmal, cutting, tearing, extending down the course of the sciatic nerve. Attacks < at night, and

more frequent, causing her to roll about the bed and cry out with the pain. All the resources of allopathy had been in vain. *Rhus t., Coloc., Sulph*., gave no help. *Bell*. relieved slightly. *Gnaph*. 1 wrought gradual improvement, and in eight weeks the cure was complete. My cases were cured with *Gnaph*. 30. One was in a very gouty man, the alternation of numbness with pain being present. Sciatic pain is < on lying down; by motion; by stepping; > when sitting in a chair; > drawing up the limb. Headache > by washing in cold water. Fur on tongue removed by thorough washing with cold water.

Relations.—*Compare:* Coloc., Ipec., Merc., Puls., Lyc., Caulo., Xanthox.

SYMPTOMS.

1. Mind.—Very irritable for two or three days, after the diarrhœa (in three cases).

2. Head.—Giddy, esp. after rising from recumbent position.—Fulness about temples.—Dull, continuous pain in back of head, with shooting pain in eyeballs.—Full headache 3 to 4 p.m., or on waking, > by washing in cold water or bathing head with bay-rum.

6. Face.—Dull, heavy, bloated appearance.—Neuralgic pain of an intermittent form in both upper maxillary bones.

8. Mouth.—Flat, sweetish, sickening taste.—Tongue covered with long white fur, > by thorough washing with cold water.—Mouth feels parched and tastes badly.

11, 12. Stomach and Abdomen.—Flatus, windy eructations, nausea and hiccough.—Colicky pains in various parts, cæcum sensitive.—Borborygmus with emission of much flatus.

13. Stool and Anus.—Rumbling in bowels with stool before breakfast.—Looseness of bowels with passage of pale-coloured fæces.—Diarrhœic discharge in morning and during day; with irritable temper; pains in bowels in children.—Dark-coloured, liquid, offensive stool in morning, afterwards pain in bowels all day.—Vomiting and purging, like cholera morbus, in the night and all next day.

14. Urinary Organs.—Pains in kidneys with frequent slight pain in prostate gland.—Sensation of pain and fulness in bladder, even when just emptied.

15. Male Sexual Organs.—Increased sexual passion.—Irritation of prostate gland.

16. Female Sexual Organs.—Dysmenorrhœa, menses scanty and very painful first day.—Sensation of weight in pelvis.—Sensation of fulness in pelvis.

20. Neck and Back.—Numbness of lower part of back with lumbago.—Sensation of weight in pelvis.

22. Upper Limbs.—Feeling of weakness, as if incapable of raising the slightest weight.—Rheumatic pains in elbows and shoulders.

23. Lower Limbs.—Pains dull or darting or cutting from r. hip-joint posteriorly downward to foot; < lying down, from motion, by stepping, > sitting in a chair.—Intense pain along sciatic nerve.—Numbness occasionally taking the place of sciatic pains, making exercise very fatiguing.—Cramps in calves; in feet, at night in bed.—Gouty pains in big toes.

27. Fever.—Night-sweats.

Gossypium Herbaceum.

Cotton Plant. N. O. Malvaceæ. Tincture of fresh inner root bark, chopped and pounded to a pulp.

Clinical.—Abortion. Amenorrhœa. Dysmenorrhœa. Labia, abscess of. Ovaries, pains in. Pregnancy, vomiting of. Sterility. Tumour. Uterus, bearing down in.

Characteristics.—*Gossyp*. has been mainly used in affections of the female generative organs. It has been taken in the form of the extract to procure abortion. The symptoms of the external organs are strongly marked, and the ovaries are the seat of pains which come and go, and in the uterus are bearing-down pains. "Intermittent pains in the ovaries" is characteristic. The morning nausea and salivation indicate the remedy for morning sickness of pregnancy. The pains are of a stinging, drawing, tearing, and sometimes of a burning character, extending from one place to another, jumping from one place to another. Pains generally move from above downward. Pains are generally < by motion; > by rest. Sympathetic symptoms of stomach, heart, bowels, and nervous system arising from disturbance of uterine functions.

Relations.—*Compare:* Act. r., Apis, Asar., Bell., Bry., Lil. t., Puls., Sabi., Sec., Sep., Ustil.

SYMPTOMS.

2. Head.—Pain, first burning, then stinging, extending from both temporal bones to middle of frontal bone.—Drawing pain over eyes, with stinging pain in pupils.

5. Nose.—Nostrils swollen and inflamed.

9. Throat.—Tonsils swollen, r. <.

11. Stomach.—Nausea, with accumulation of saliva in mouth; inclination to vomit before breakfast.—Rotating pain in pit of stomach.—Anorexia, with uneasy, depressed feeling at scrobiculum cordis at time of menses.

14. Urinary Organs.—Frequent desire to urinate, with burning pains.

16. Female Sexual Organs.—Stinging pain in both ovarian regions, and at the same time drawing towards uterus, lasting about ten minutes at a time.—Soreness between thigh and vulva, with a watery secretion.—Soft-tumour between l. thigh and vulva, first as large as pea, increasing to size of pigeon's egg, secreting a watery fluid with needle-like sticking pain, < at night.—Swelling of l. labium, outer part, with intolerable itching; some swelling in r. labium.—Outer skin of both labia studded with innumerable, full, somewhat reddish granules.—Amenorrhœa.—Menses scanty and painful or painless; last twenty-four hours and then become very sparse and painful; too watery; nineteen days late.—Sterility from uterine torpor.—Morning vomiting, followed by faintness; unable to rise from bed; great distress, weakness, and prostration.

20. Back.—Pain in back.

22. Upper Limbs.—Heavy feeling in both hands, > hanging them down, < in warmth of bed.

26. Sleep.—Caused her to sleep a great part of the time.

Granatum.

Punica granatum. Pomegranate. N. O. Granateć. Homśopathic provings were made with a tincture or trituration of bark of root. An alkaloid, Pelletierine ($C_8 H_{13} NO$), discovered by Bertrand Pelletier is obtained from the rind of the fruit.

Clinical.—Ascarides. Gastralgia. Hernia, umbilical; inguinal. *Jaw, cracking in*. Leucorrhśa. Tapeworm. Toothache.

Characteristics.—Pomegranate is a well-known vermifuge especially used for the expulsion of tćnia. For this a decoction of the rind of the fruit is used, or else *Pelletierine* in the following manner. After a mild purge the previous night, in the morning 30 grammes of *Sulphate of Pelletierine* is administered in a solution containing 50 grammes of *Tannic acid*. This is followed by a glass of water in ten minutes, and a brisk purge in half an hour. The homśopathic provings bring out

many symptoms of helminthiasis as: Pale blue rings round eyes. Itching, crawling tickling of nose. Ravenous hunger; craving for sour or juicy things; fruit; coffee. Loss of appetite. Nausea; fermenting in abdomen; griping; dragging in inguinal region as if hernia would protrude. Itching and tickling in anus frequently during the day. Emaciation. Convulsive movements. Among the general symptoms are: Great weariness and exhaustion, scarcely able to keep upright. Trembling. Discomfort and nausea. Itching of the skin of various places, face and body, as if pimples would break out. Biting and itching in palms of hands. Yawning. Great sensitiveness. Swelling of navel; protrusions in inguinal rings. All symptoms are > after dinner. Pain in abdomen is > after drinking cold water.

Relations.—*Compare:* Ars., Chi., Iod., Cina, Teucr., Kousso., Cucurb.

SYMPTOMS.

1. Mind.—Great sensitiveness and impressibility.—Irritability and arrogance.—Penurious and quarrelsome humour.—Hypochondriacal scruples.—Melancholy, gloomy temper, dejection, and discouragement.—Stupefaction, and intellectual embarrassment.

2. Head.—Vertigo, esp. during intellectual labour, or in the morning on rising, and sometimes with obscuration of the eyes, or with nausea and aching in the stomach.—Sensation of emptiness in the head.—Stupefying pain and painful heaviness in the head, esp. in the forehead.—Pressure on the forehead and on the occiput.—Acute drawing pains, chiefly on r. side of head.—Shootings in forehead.—Pustules on forehead and temples, with pain as from excoriation, leaving small tubercles on drying.

3. Eyes.—Eyes hollow, and surrounded by a livid circle.—Itching and burning smarting in the canthi.—Dryness and smarting in the eyes.—Yellowish tint of the sclerotica.—Inflammation of the eyes, as in coryza.—Pupils dilated.—Convulsive movements of the eyelids.—Obscuration of the eyes.—Weak sight.

4. Ears.—Cramp-like squeezing, acute drawing pains and shootings in the ears.—Tinkling and buzzing in the ears.

5. Nose.—Burning heat and dryness of the nostrils, or an accumulation of tenacious mucus.—Crawling itching in the nose.—Coryza, alternately dry and fluent.

6. Face.—Complexion sickly, yellowish, and earth-coloured.—Burning heat in the face, sometimes transient.—Gnawing itching in the face, and esp. in the cheeks.—Swelling of the cheek, which is livid; burning heat, itching, tension, and crawling, as with chilblains.—Squeezing and acute drawing pains in the face, in the cheek-bones, and in the root of the nose, often on one side only.—Dryness of the lips and burning sensation in them.

7. Teeth.—Acute drawing pain, tension, and squeezing in the maxillary joints, and cracking of the joints during mastication.—Shooting pains in the teeth, even at night, in bed.—The teeth seem to be elongated.—Gums unfixed, and easily bleeding.

8. Mouth.—Excessive accumulation of saliva, sometimes of a sweetish taste, in the mouth.—Tongue moist and white.—Excessive spitting of mucus.

9. Throat.—Sensation of astriction in different parts of the mouth and of the gullet.—Contraction of the gullet.

10. Appetite.—Great variableness of taste; taste alternately acute and dull.—Appetite alternately diminished and increased.—Extraordinary hunger and voracity, even after a meal.—Great variableness of appetite; desire for different things, and esp. for coffee, for fruits, and for succulent and acid aliments.—Great thirst for water.—Liquid aliments, and potatoes cause nausea and eructations.

11. Stomach.—Frequent and noisy eructations.—Frequent nausea, sometimes with lassitude, flow of water in the mouth, pain in the abdomen and in the stomach, frequent want to evacuate without any result, shivering, sickly looks and ill-humour.—Vomiting, even at night, and sometimes with lassitude, trembling, perspiration, or vertigo.—Painful pressure, fulness, burning sensation, and anxiety in the precordial region.—Cramps in the stomach when fasting in the morning.

12. Abdomen.—Pains in the abdomen, frequent, and often prolonged, sometimes with nausea, flow of water in the mouth, shiverings, and prostration, or with vertigo.—Pains in the abdomen after every meal, or when fasting in the morning.—Pains in the abdomen, mitigated by external heat and by lying down, as well as by drinking cold water.—Pinchings, shootings, and rotatory sensation round the navel, and in the stomach.—Anxious sensation in the abdomen.—Painful inflation of the abdomen, sometimes with voracity.—Frequent production and evacuation of flatus.—Swelling of the navel, as if from umbilical hernia.—Fermentation in the abdomen.—Traction in the abdomen, as if preparatory to a stool.—Painful pressure and swelling in the groins, as if a hernia were about to appear.

13. Stool and Anus.—Several evacuations during the day.—Copious evacuations of a very deep colour.—Diarrhśa, with frequent evacuations, and evacuation of fćcal matter and mucus.—Before the loose evacuations, nausea and fermentation in abdomen; during the evacuations, burning heat in face and pressure in rectum; afterwards burning heat in rectum.—Tenesmus, with movements and fermentation in abdomen.—Prolapsus of rectum during the evacuations.—Insupportable itching and titillation of the rectum.—Burning itching in the anus, on the buttocks and perineum, on the scrotum, and on the hair-covered parts of the genital organs, and esp. on the thighs.—Shootings in anus and rectum.

14. Urinary Organs.—Incisive, shooting, and gnawing pains in the urethra.—Inflammation and swelling of the urethra.

15. Male Sexual Organs.—Mucus oozing from the urethra, as in a gonorrhśa, with burning traction in the cavernous parts, as far as the glans.—Excitement of sexual desire.

16. Female Sexual Organs.—Catamenia premature, and too copious, and accompanied by colic and pressure from the sacral region to the groins.—Yellowish leucorrhśa.

18. Chest.—Sensation of anxiety in the chest, and groaning.—Great oppression of the chest, with lassitude in the legs.—Pressure on the chest and across the sternum.—Rheumatic pains, shooting and drawing in the diaphragm.—Shootings in the chest, esp. when walking.—Tension and painful squeezing in the ribs.

19. Heart.—Palpitations of the heart, sometimes on the least movement.—Pains and cramp-like contractions in the muscles of the chest.

20. Back.—Frequent bruise-like pains, pains as from an oppressive weight between and on the shoulders, and the loins.

22. Upper Limbs.—Traction, rheumatic pains, crawling, and sensation of paralysis in the arms, with difficulty in raising them.—Rheumatic pains in the joints of the hands and fingers, as well as in the forearms.—Painful and paralytic stiffness in the fingers.—Swelling of the ball of the thumbs, with livid colour, burning heat, and marbled swelling of the veins.—Gnawing and insupportable itching in the palm and in the back of the hands.

23. Lower Limbs.—Sensation of stiffness in the hips, as in sciatica.—Acute drawing pain, paralytic pulling, heaviness, and shootings in the knee.—Pain, as from a sprain in the instep.—Painful corns on the feet.

24. Generalities.—Great lassitude and fatigue, esp. in the legs, sometimes with inability to remain standing, and want to lie down.—Drowsy lassitude, with headache, as if after a nocturnal debauch.—Great dejection and prostration, sometimes with burning heat in the hands.—Trembling of the limbs.—Relaxation and flaccidity of the muscles, esp. in the lower extremities.—Emaciation.

26. Sleep.—Yawning, sometimes convulsive, and frequent stretchings.—Agitated sleep, with frequent dreams, cries, and tossing.

27. Fever.—Partial and semi-lateral shudderings, sometimes with semilateral headache.—Dry, burning heat over the whole body, with inclination to throw off all

covering.—The shudderings and shiverings commonly take place in the morning; the heat manifests itself in the evening.—Sweats on the least movement.

Graphites.

Plumbago. Black Lead. An allotropic modification of carbon. (The finest specimens contain traces of iron, 0.04 to 0.6 per cent.; poor qualities as much as 4 per cent.) Trituration of prepared Black Lead from finest English drawing-pencils.

Clinical.—Acne. Amenorrhśa. *Anus, affections of*. Blepharitis. Breasts, indurated; cancer of. Cancer. *Catarrh. Chaps*. Chlorosis. Colic. *Constipation*. Deafness. Dropsy. Dysmenorrhśa. *Ears, affections of. Eczema*. Epistaxis. *Erysipelas*. *Eyes, affections of*. Face, erythema of. *Feet, affections of*. Fissures. Gastralgia. Glandular swellings. Gleet. *Gravel*. Hćmorrhoids. Headache. Herpes. *Hydrocele. Influenza*. Irritation. Lachrymal duct inflamed. Leucorrhśa. Lips, cracked. Liver, indurated. *Menstruation, disorders of*. Mentagra. *Nails, disorders of. Noises in head. Nose, affections of*. Nose-bleed. Obesity. Ovarian tumours. *Paralysis*. Parotitis. *Pityriasis*. Priapism. Pruritus vaginć. Psoriasis. Ptosis. *Rectum, affections of*. Rhus poisoning. Scar., inflamed. Scrofula. Seminal emissions. Skin, affections of. *Smell, disorders of*. Stomach, cramp in. Sycotic diathesis. *Syphilis*. Trichiasis. Tumours. Ulcers. *Urine, disordered*. Uterus, cancer of. Vaccination, effects of. Wens. Whooping-cough. Worms. Zona.

Characteristics.—The first idea of using this substance as a drug, says Hahnemann, is due to S. Weinhold, who was led to it by seeing workmen in a mirror-factory use it as a local application for tetters. Ruggieri followed him, using it both internally and locally. Hufeland relates the cure of a lady, 41, by the internal and external use of *Graph*., of an acne rosacea which had defied all other modes of treatment. Teste classes *Graph*. in the *Pulsatilla* group with *Silic., Calc., Hepar*, and *Phos*. He gives the following among other symptoms as common to *Puls., Silic*., and *Graph*.: "Anxious, changeable, wavering mood; aversion to work; vertigo with cloudiness; a sort of intoxication in the morning; sense of fulness or emptiness in the head; drowsiness in daytime; single, acute, deep shocks in right half of brain; flickering before eyes; suspension of visual power; photophobia; lachrymation in open air; foul smell before nostrils; amenorrhśa; swelling of right testicle; swelling of veins; wandering pains; pain in the parts not lain upon; heaviness in affected parts; rheumatism at nape of neck; sweat at night having odour of urine; drowsiness in daytime."

Hahnemann was quick to perceive that *Graph*. was much more than a mere remedy for skin affections. Like that other great skin remedy, *Sulphur, Graph*. proved to be a leading antipsoric. Hahnemann's provings and observations defined its powers

over skin affections. Its special characteristic is: "Eruptions oozing out a thick, honey-like fluid." Wherever such eruptions are found *Graph*. is in all probability the remedy. I have cured many cases, notably some occurring on the occiput, and behind the ears. It is no less frequently a remedy for the results of repelled eruptions of the kind. Nash records such a case: A child had been "relieved" of an eczema capitis under old-school treatment, whereupon entero-colitis set in, and became so alarming that it was pronounced "consumption of the bowels." Nash when called in found the child greatly emaciated, with little or no appetite, very restless, passing "*stools of brown fluid mixed with undigested substances, and of an intolerably fetid odour*." *Graph*. 6m (Jenichen) cured promptly. *Graph*. being one of the forms of Carbon, it is therefore related to *Carbo anim*., and *Carbo veg*.; and as it contains a small percentage of iron, it is also related to *Ferrum*.

Graph. causes slight erethism at first, then a weak, relaxed, condition; anćmia; chlorosis. The typical *Graphites* patient is "fat, chilly, and costive." Lymphatic glands are swollen. Like the skin, the mucous membranes are cracked and fissured, and have scanty secretions. Irregularities in the distribution of the blood occur, pallor of skin and mucous membranes. The circulation is at first excited, then follows loss of energy and consequent venous hyperćmia. Fainting readily occurs with great anxiety; motion is impaired and the tissues relaxed, but paralysis is not complete. A marked characteristic of *Graphites* is a rush of blood to head, with flushed face. I have cured two very severe cases of nose-bleed in elderly people where this symptom was present. In one case there had been flushing of head and neck for many months previous to the attack, and flushing preceded and accompanied each occurrence of the bleeding. In the other case the patient said the precursory flush seemed to come up from his toes. He had had his nostrils plugged, without avail, before I saw him. *Graphites*, in a high potency, cured promptly in both instances. Hahnemann gives the symptom on which I based the prescription as follows: "Bleeding of the nose at 10 p.m.; preceded in the afternoon by rush of blood to the head, and heat of face," There is also "rush of blood to head, with distension and flatulence."

Graphites is suited to persons who have a tendency to put on unhealthy fat. Defective animal heat from defective oxygenation; always cold, indoors or out. Chlorotics. Affections of glands, skin, and mucous membranes, especially at orifices. The *Graphites* condition is not sensitive and herein it differs from *Hepar*, which has extreme sensitiveness of affected parts. The tone of mind is sad and foreboding. The eyes, ears, and nose are affected, especially the integumentary parts. There is a very characteristic symptom in reference to the hearing: "hardness of hearing > when riding in a carriage." There is a sore throat like that of *Lachesis*; sensation of a lump, < on empty swallowing. It has also a "lump" sensation at the stomach. It resembles *Lachesis*, too, in its flushings; in gastralgia > by eating. Hurries to meals to relieve violent pain at epigastrium; especially to dinner and supper. Goullon cured two notable cases of cramps in the stomach with "improvement of the cramps by eating." There was also clean tongue. Milk agreed

well, especially hot milk. In one case roast meat agreed, but not boiled meat, and, still less, potatoes. In the morning there was a fishy taste, disappearing later in the day. Another cure by Goullon was of a young lady who was troubled with salivation, coming on any time; sometimes just before sitting down to dinner; oftenest when riding in a carriage, less often when riding in a train. She was prevented by it from seeing company, and was low-spirited. There was also habitual costiveness. *Graph*. 12 at first aggravated and then rapidly cured. Goullon understood the power of *Graphites*, perhaps, more completely than any other writer, and I will give another of his cures, as it illustrates several points in the drug's action. A well-grown, healthy-looking girl of fifteen had violent headache in right temple *every four* weeks; the pain was stinging. Glittering before the eyes frequently preceded and followed the attack, which recurred to the hour, and sometimes also on the following day. Drowsiness accompanied the attack, deep sleep, heat and redness of the head, followed by a chill. *Sep*. 6 relieved the headache, but the glitter remained. The heaviness of the eyelids led Goullon to *Graph*. (which causes ptosis). His choice was strengthened on learning that there had been no menstruation, and finally she "had a degree of hoarseness that indicated chronic hypertrophy of the tonsils. (A. Vogel claims this to be a sign of scrofula derived from syphilis.") *Graph*. 2x trit., in two-grain doses, was given six mornings in succession. The period for the headache passed without recurrence, and the sensation of lights completely disappeared (*H. R*., vi. 271). *Graphites* causes suffocative spells which arouse the patient from sleep, he must jump out of bed, < after midnight (*Lach*. < after sleep). There is a diarrhśa of thin, offensive, partly digested stools. Constipation is more common, the stools being in lumps coated with mucus, and with mucous shreds. Habitual costiveness and, in females, scanty menses form a keynote indication when found associated with other complaints, as headache, skin-affections, &c. Moist itching excoriation around anus and fissures. The male sexual organs are affected as well as the female: Uncontrollable sexual excitement, with violent erections. Priapism. (I have frequently seen this condition produced in patients taking *Graph*. for other things; and have frequently relieved priapism with *Graph*.) Impotence. In the female the breasts are affected. Pain under left breast at menstrual period, often waking patient in the night. Hysterical melancholia with occipital headache. Leucorrhśa profuse, in gushes, excoriating. It has many symptoms in common with *Sepia*, but *Graph*. affects the ovaries more markedly than the latter. There is a feeling as if the uterus would press out at the vagina. Stiffness of knees.

The *skin* of *Graphites* is rough, hard, and dry. Eczematous and herpetic eruptions predominate. Eruption on occiput exuding gluey humour; eczema of ears; moist eczema round anus. Pimples, acne. Wens. Gastro-intestinal affections alternating with acne and erythema of face, herpetic lesions or scrofulous hypochondriasis. Excoriations between toes. Syphilitic and "constitutional" ulcers. Recrudescence of scars. Cracks and fissures. Offensive discharges and secretions. Sweat: stains yellow; sour, offensive.

The senses are abnormally acute: music causes weeping; cannot tolerate the smell of flowers. Weak, exhaustion of whole body. Spasms; contractions of muscles; twitching of eyelids. Cataleptic condition. Sensitiveness of internal parts; numbness in various parts; drawing pain in whole body. Pain as if head were numb, or pithy, or made of wood. Pain as if constricted in occiput, extending to nape of neck, which pains as if broken. "Intense, heavy weight in occiput, as if head drawn back, must rest it, unable to read or think" (result of 2x and 3x, on three separate occasions in a patient of Dr. W. Epps. *Chi*. 1x. relieved in a few days—*Hom. Rev*., xl. 162). As if skin of forehead was drawn into folds. As if a skin were before ear. As if a hard body as large as an egg were behind ear. As of a cobweb over the face. As of a lump in stomach, with beating as of two hammers. As if intestines were torn; croaking as of a frog in abdomen. As if everything would be torn to pieces during menstruation. Bearing-down pains in various parts. Rest >; motion <. Riding in a carriage < many complaints; but > hardness of hearing. < Lying on left side. Cold drinks, cold air, damp, wet atmosphere, washing <. Warmth < tearing pain in teeth; warmth of bed < itching; > crampy pain in stomach; scrofulous affections of bones. Eating > cramps in stomach; hot drinks, especially hot milk, >. < In open air; in wind. Bathing after measles = paralysis of face. Getting feet wet = delayed menses. Attacks occur during summer and autumn. Ears feel stuffed at the full moon. Suffering parts emaciate. Overlifting easily. Hćmorrhages. (When giving *Graphit*. internally in cases of anal eruption I have found the external use of an ointment made with a drachm of the 3x trituration to an ounce of Cetacean ointment of great service. Hirsh, of Prague, has also used *Graph*. locally in cases of disease of the nails, with very good results.)

Relations.—*Antidoted by:* Acon., Arsen., Chi., Nux v. *Antidote to:* Arsen., Iod., Rhus t. *It follows:* Calc., Lyc., Puls., Sep., Sul. *Complementary:* Caust., Hep., Lyc. *Compare:* Petrol., Lach., Carb. v., Carb. a., Caust., Nit. ac., Rhus (erysipelas, left then right; Graph., right then left), Ant. c., Ratan., Pćon, Nit. ac., Sil. In priapism, Pic. ac. In affections of right ovary, Pallad., Op. Laughing and weeping alternately, Aur., Pul., Lyc., Stram., Alum. Hears better in ears, Nit. ac. Obesity, Calc. ars. Trichiasis, Borax. Erysipelas beginning on nose, Canth. Fat constitutions, Calc. Burning excoriating discharge from eyes, Ars. (but with Ars. there is spasmodic closing of lids); Sul. has margins of lids reddened; with Graph. they are paler than usual; Euphr. has thick, purulent discharge, Graph. has thin. Profuse salivation, Bism. Graph. is a chronic, or over-grown Puls. (but Puls. has <, and Graph. has > from milk).

Causation.—Grief. Fear. Overlifting.

SYMPTOMS.

1. Mind.—Dejection, sadness and profound melancholy with discouragement and much weeping.—Feels miserably unhappy.—Agitation, compression of the heart,

and anguish, as if at the point of death, or under the fear of some calamity, often with headache, vertigo, nausea, and perspiration.—Anxious agitation (with inclination to grief, anxiety about the future), sometimes when seated at work, or at night, with impulse to quit the bed.—Agitation and inquietude in the morning.—Much inclined to grieve and cry in evening, whilst in forenoon she had laughed about every trifle, contrary to her habit.—Weeping without cause.—Obliged to weep at music.—Timid disposition.—Irresoluteness with excessive cautiousness and hesitation.—Too great susceptibility to impressions.—Tendency to be frightened.—Irascibility.—Dread of labour.—Extreme hesitation; unable to make up her mind about anything.—Absence of mind.—Forgetfulness with misapplication of words in speaking or writing.

2. Head.—Fatigue in consequence of intellectual labour.—Sensation of numbness in the head.—Intoxication and vertigo, esp. in the morning on rising, or on awaking (the forehead is contracted, with nausea and vomiting); as well as in the evening, with want to lie down.—Confusion in the head.—Attacks of headache, sometimes semi-lateral, with nausea and acid vomiting.—Feeling of looseness of the whole brain.—Violent headache with eructations and nausea, during menstruation.—Periodical unilateral headache, with constipation and amenorrhśa.—Pain in the head as if the head were numb and pithy.—Violent headache in the morning, driving out a cold perspiration, and inducing syncope.—Headache from the motion of a carriage, as well as on moving the head, or during and after a meal.—Headache on the side which presses the pillow.—Tension and pressive constriction in the occiput, with stiffness at the nape of the neck.—Intense heavy weight, or dull pressure, in upper part of occiput, with a feeling as if the head were drawn back, obliging him to rest his head; unable to read or work while pain lasts.—Sensation of compression and contraction in the forehead.—Compressive pain in the vertex in the afternoon, with rotatory movement in the head.—Burning on the top of the head on a small spot.—Ebullition of blood, with beating and buzzing in the head.—Fulness in and congestions to the head, the menstruation being suppressed.—Tearing and pulling in the scalp, in the teeth, and in the glands of the neck.—Itching in the scalp.—Humid scabs on the head.—Humid, spreading, scurfy eruption on the top of the head, painful to the touch, as if from subcutaneous ulceration, and emitting a disgusting odour; extending down to sides of the head into the whiskers; after scratching, more sore and humid; later drying up to a white scurf.—Sweat on the head, while walking in the open air.—Smooth large wens on the hairy scalp; the hairy scalp is very hot, and itches very much, esp. when walking in the open air.—Abundant desquamation of the scalp.—Falling off of the hair, even on the sides of the head and the whiskers.—Rheumatic pains in the scalp, principally in the sides, extending to the teeth and cervical glands; < when walking and becoming cold in open air, > from warmth and while getting warm when walking.—Perspiration smelling acid or very offensive, colouring the linen yellow; on the head (as on the whole body) at night and during the day, from the least exercise; < even while talking, > when walking in the open air.—The hair turns grey.

3. Eyes.—Eyelids heavy and falling, as if paralysed.—Aching in the eyes and eyelids, as if sand had been introduced into them.—Shootings in the eyes.—Heat and burning sensation in the eyes, esp. by candle-light.—Inflammation of the eyes, with redness of the sclerotica, injection of the veins, swelling and abundant mucous secretion of the eyelids.—Hordeolum, with drawing pain.—Dry humour in the eyelids, and in the eyelashes.—Agglutination of the eyelids and lachrymation.—Pressure and stinging in the eyes, with lachrymation.—Agglutination of the eyes early in the morning.—Dry gum in the eyelashes.—Obscuration of the sight on stooping.—Myopia.—Confusion of characters on reading.—Sparkling before the eyes.—Photophobia, esp. by day, inflammation and red, swollen eyelids.—Intolerance to the light of day.

4. Ears.—Shootings and beatings in the ears.—Dryness of the internal ear.—Fetid smell and discharge of blood and of pus from the ears.—Scabs, tetters, running, and excoriation, behind the ears.—Hardness of hearing.—Hardness of hearing, > by the motion of a carriage.—Singing, tinkling buzzing, and rumbling like that of thunder in the ears.—Buzzing in the ears at night.—Sensation, as if air were enclosed in the Eustachian tube.—Sensation as if the (l.) ear were filled with water.—Sensation as if a skin were before the ear.—Whistling in the ears.—Cracking in the ears when moving the jaw.

5. Nose.—Swelling of the nose.—Sensation of tension in interior of nose.—Black pores on nose.—Dry scabs in nose.—Painful dryness of nose.—Nostrils, excoriated, cracked and ulcerated.—Fetid smell from nose.—Discharge of blood when the nose is blown.—Epistaxis, esp. in the evening and at night; preceded by rush of blood to head, and heat in the face.—Discharge of fetid pus from the nose.—Sense of smell sharpened (too sensitive, cannot bear the smell of flowers).—Stoppage, and troublesome dryness of nose.—Quotidian coryza, on being chilled.—Dry coryza, with headache and nausea, which compel the patient to lie down.—Flow of mucus from the nose, liquid, or yellowish, or thick, with putrid smell.—Fluent coryza, with catarrh (as soon as he becomes cold).

6. Face.—Pale yellow complexion, with livid circles under eyes.—Flushes of heat in face.—Erysipelatous inflammation and swelling of the face (burning and stinging; the erysipelas spreading in rays), with eruption of vesicles.—Erysipelas preceded by chills and heat alternating; beginning r. side of face, going to l.—Encysted tumour on the cheek.—Constant sensation, as if the face were covered with cobweb.—Semi-lateral paralysis, and distortion of the muscles of the face, with difficult articulation.—Drawing and tearing pains in the bones of the face.—Eruption on the face, in appearance as if the skin were raw.—Scabs and moist pimples on the face.—Ephelis.—Falling off of the beard.—Ulcers on the internal surface of the lips.—Fissures in the ulcerated lips.—Ulcerated corner of the mouth.—Lips cracked.—Scabby eruption on the chin and round the mouth.—Painful nodosities in the lower jaw.—Swelling and hardness of the submaxillary glands.

7. Teeth.—Toothache at night, or in the evening in bed, < by heat, and sometimes with heat of the face and swelling of the cheek.—Pains in the molars, on closing the jaws.—Lancinating and drawing toothache, esp. after drinking anything cold, and < by warmth.—Pain, as from excoriation, in teeth and gums, during and esp. after a meal.—Easy bleeding and swelling of the gums.—Fetid odour from the gums and mouth.—Discharge of black and sour blood from the teeth.

8. Mouth.—Dryness of the mouth in the morning.—Putrid and urine-like smell from the mouth, gums, and nose.—Pain, as from excoriation, vesicles and ulcers on the tongue.—Bitter taste in the mouth, the tongue being much coated.—Taste of rotten eggs in the morning, after rising.—Profuse salivation, and accumulation of mucus in the palate and throat.—Speech impeded by paralysis of the muscles.

9. Throat.—Almost constant soreness of the throat, on swallowing, generally lancinating, with feeling of strangulation.—Pain in the throat, even at night, as if there were a plug within it, or as if the food had stopped there.—Swelling of the tonsils, with pain when swallowing.—Cramps in the throat, with feeling of strangulation.—Roughness and scraping in the throat.

10. Appetite.—Bitter or acid taste, with sourness in the mouth and throat.—Great thirst in the morning, and after a meal.—Immoderate hunger (with acidity of the stomach).—Repugnance to cooked food, and to meat: also to anything saline or saccharine.—Weakness of digestion, with drowsiness, headache, pains in the stomach, fulness, and inflation of the abdomen, after a meal.—Hot things disagree with stomach.

11. Stomach.—Frequent and sometimes abortive risings.—Sour risings, with bitterness in the mouth.—Sour regurgitation of food.—Bitter and green regurgitations.—Frequent hiccough, esp. after a meal.—Nausea, esp. in the morning, or after every meal, with inclination to vomit.—Water-brash, at night.—Obstinate vomiting of food.—Vomiting after the slightest loathing, with great nausea and pinching in the abdomen.—Retching, with rising up of mucus.—Acid vomitings.—Colic, and pressure on the stomach, sometimes with vomiting, > by a recumbent position, and by the heat of the bed.—Cramp-like pains, or squeezing, as from claws in the stomach.—At night, pinching in the stomach, with digging in the chest.—Burning pain in the stomach, which compels eating.—Cramps in stomach > by eating.

12. Abdomen.—Tension, shootings, and beatings in the hypochondria.—Hepatic pains after breakfast, which render it necessary to lie down.—Fulness and heaviness, in abdomen.—Abdomen enlarged, tight, inflated. Inflation of the abdomen, with congestion of blood to the head, heaviness in the head, and vertigo.—Hardness in the abdomen.—Nocturnal, cramp-like pain in all the intestines, with deficient secretion of urine.—Incarceration and accumulation of flatus in the abdomen.—Expulsion of an excessive quantity of fetid flatus, preceded

by pinchings.—Rumbling in the abdomen.—Croaking, as of frogs in the abdomen.—Painful sensitiveness of the groins.—Painful swelling of the inguinal glands.—Erysipelatous inflammation, with large vesicles near the navel.—Pressive, stitching, boring pain in region of navel; extending into back and hypochondria; with habitual costiveness; < evening.

13. Stool and Anus.—Obstinate constipation, with hard fćces (the lumps being united by mucous threads), and hardness in the hepatic region.—Fćces hard, knotty, of too great a size, and scanty.—A quantity of white mucus is expelled with the stool.—Fćces too soft.—Stools of a putrid, sour smell (with burning at the rectum), or of sanguineous mucus.—Mucous diarrhśa.—Diarrhśa, with tightness of the abdomen.—Fćces of a very small size, like a worm.—Lumbrici and ascarides.—Tćnia.—Itching, sensation of excoriation, and swelling of the anus.—Large hćmorrhoidal excrescences in the anus, with pain as from excoriation, esp. after a stool.—Painful and burning cracks between the hćmorrhoidal tumours.—Prolapsus recti with the varices, as if the rectum were paralysed.

14. Urinary Organs.—Urgent, anxious, and painful want to make water, with emission drop by drop, with a stitch in the urethra, when emitting it.—Scanty secretion of a deep-coloured urine, soon becoming turbid, with white or reddish sediment.—Urine of an acrid sour smell.—Stream of water small, as if from contraction of the urethra.—During micturition pain in the os sacrum.—Involuntary emission of urine.—Nocturnal emission of urine.—Wetting the bed at night.—Pain in the coccyx when urinating.

15. Male Sexual Organs.—Tension and cramp-like pains in the genital parts, with troublesome voluptuous ideas.—Eruption of pimples on the prepuce, and on the penis.—Dropsical swelling of the prepuce and the scrotum.—Dropsical swelling of the testes.—Voluptuous excitation in the genital parts.—Indifference, or extreme excitement of sexual desire.—Violent erections.—Uncontrollable sexual excitement.—Priapism.—Absence of erections in the morning.—Emission of semen, almost involuntary, without erection.—During an embrace painful cramps in the calves.—After an embrace coldness of the legs, exhaustion, heat of the body, and perspiration.—Absence of emission of semen during coition.—Feeble enjoyment during coition.—Flatulent colic during the excitement in the genital parts.

16. Female Sexual Organs.—Great aversion to coitus.—Vesicles and pimples on the vulva.—Excoriation on the vulva and between the thighs.—Soreness of the vagina.—Painful swelling of the ovaries; < every time she takes cold or gets her feet wet.—Swelling and hardness of ovaries after menses.—Tearing, grinding, bursting in r. ovary, as if it would burst, before and during menses.—Tumour in r. iliac fossa; also l.—Pain in uterus when reaching high with arms.—Sensation of bearing down towards the genital parts.—Catamenia too slow, too scanty, and too pale.—The first menses delay.—Suppression of catamenia, with heaviness of the limbs and congestions of blood to the head.—Cutting pains on the appearance of

the catamenia.—During the catamenia, flow of blood from the anus, pains in the limbs, ulcers become worse, swelling of the cheeks or of the feet, catarrh, with hoarseness and coryza, toothache, or cramps and violent cuttings in the abdomen, headache, nausea, pain in the chest, and weakness.—Before and during the menstruation, fatiguing cough (morning and during the day.).—Leucorrhśa, white and liquid, like water, with tension of the abdomen, and weakness in the back.—Leucorrhśa, before and after the catamenia.—Leucorrhśic discharge occurs in gushes day or night.—Painful sensibility and excoriation of the breasts, with eruption of running phlyctenć.—Obstruction and induration of the mammary glands.—Hard cicatrices remaining after mammary abscess.

17. Respiratory Organs.—Sensitiveness of the larynx.—Catarrhal roughness and hoarseness, with sensation of excoriation, burning pain and scraping in the throat, coryza and obstruction in the chest.—Voice false (for singing).—Accumulation of slimy matter in the chest.—Cough, produced by roughness of the throat.—Cough at night, or in the evening in bed, excited by taking a full inspiration, with oppression of the chest.

18. Chest.—Difficulty of respiration and oppression on the chest.—Nocturnal attacks of suffocation, on going to sleep, or on walking in the open air.—Suffocative paroxysm at night, awakens him out of sleep, usually after midnight; must quickly jump out of bed, hold himself firmly to something, and quickly eats whatever is at hand, which gives relief; or hoarse cough (asthma).—Wheezing respiration.—Pain in the chest on ascending, on riding on horseback, on yawning, or on putting the hand on the chest.—Perspiration on the sternum every morning.—Swelling and induration of the mammary glands.—Soreness of the nipples, with small corrosive blisters.—Pressive, cramp-like pain in the chest.—Spasms in the chest.—Shootings in the chest on the least movement.

19. Heart.—Palpitation of the heart on the least movement.—(Constant emptiness and coldness about the heart and in chest, with sadness.).—Region of heart: constriction; pressure; stitches.—Sensation like electric shock from heart toward front of neck.—Strong pulsations of blood in whole body, but esp. about heart, < by every motion.—Throbbing in region of heart, in evening, after lying down, when lying on l. side so violent that the covering was moved thereby, with anxiety; disappearing on turning over.

20. Neck and Back.—Stiffness in the nape of the neck.—Violent pain in the nape of the neck and the shoulders, on stooping the head, and on raising the arms, like a tearing incision.—Blisters on the neck.—Swelling of the glands of the neck.—Tearing in the glands of the neck.—Bruising pains in the loins, or violent achings in the loins, like squeezing from claws, or from twisting the body.—Contractive pain in the back (between the shoulders).—Sensation of tingling in the back.—Formication in the back.

22. Upper Limbs.—Tearing and lancinating in the shoulders.—Sensation of contraction in the joint of the elbow, on extending the arms.—Cramp and tearing in the hands.—Emaciation of the hands.—Erysipelas, callosities, dry skin, and cracks in the hands.—Pain as from dislocation, in the joint of the thumb.—Swelling and inflexibility, stiffness and distortion of the fingers.—Granulated eruption and corrosive vesicles on the fingers.—Arthritic nodosities on the fingers.—Tettery excoriation between the fingers.—Thickness of the nails of the fingers.

23. Lower Limbs.—Heaviness, lassitude, and numbness of the legs in the open air.—Excoriation between the legs.—Arthritic tearing in the hip-joint, the feet, and the toes.—Numbness and stiffness of the thighs, and of the toes.—Restlessness in the legs.—Tetters on the thighs, on the hands, and on the tibia.—Sensation of contraction in the tendons of the ham, and in the tendo Achillis.—Tension in the varices, on extending the legs.—Stiffness and want of flexibility in the knee, which does not permit sitting squat.—Cramps and starting of the muscles in the calves of the legs.—Congestion in the legs and in the feet, when standing upright.—Ulcers in the legs.—Swelling of the legs and of the feet, with hardness and shooting pain.—Stiffness of the instep.—Shooting pain, like that of an ulcer, in the heel and in the soles of the feet, on rising from the sitting posture.—Cold feet, even in the evening in bed.—Feet burning.—Fetid sweat on the feet.—Contraction of the toes.—Swelling and distortion of the toes.—Sore pain of the corns.—Callous skin, corrosive vesicles and ulcers on the toes.—Ulceration on the borders of the big toe.—Tettery excoriation between the toes, with violent itching.—Thickness and deformity of the toe-nails.

24. Generalities.—Cramp-like pains, cramps and contraction in different parts.—Tension in some parts, as from contraction of the tendons.—Starting and distortion of the limbs.—Arthritic pullings and tearing in the limbs and joints, esp. in ulcerated parts.—Arthritic nodosities.—Tendency to strain the back.—Limbs become easily numbed.—Stiffness and complete inflexibility of the joints.—Hard swellings, with shooting pains.—Nocturnal pains, which are felt even during sleep.—The symptoms disappear after a walk in the open air.—Varices, with shootings, tension, and itching.—Swelling and hardness of the glands.—Pains during change of weather.—General uneasiness (sensation of debility), which extorts groans, without any distinct sensation of pain.—Strong pulsation in the whole body, and esp. in the heart, augmented by the least movement.—Pulling in the whole body, with urgent inclination to extend the limbs.—Sensation of trembling in the whole body, with jerking of the limbs.—Great emaciation.—Great tendency to take cold, and fear of the open air, and of currents of air.—General lassitude.—Rapid failure of strength.

25. Skin.—Obstinate dryness of the skin, and absence of perspiration.—Ephelides.—Red spots on the skin, like flea-bites.—Erysipelatous inflammations.—Vesicular erysipelas, like zona, on the abdomen and on the back.—Itching of the varices on the lower limbs.—Itching-stinging on the surface of

a mole.—Eruptions oozing out a thick honey-like fluid.—Tetters, and other humid or scabby eruptions, sometimes with secretion of corrosive serum, or with itching in the evening, and at night.—Eruption of pimples and nodules (principally under hair and on covered parts) which itch very much.—Swelling and induration of the glands.—Encysted tumours.—Corrosive nodules.—Excoriation of the skin (in the bends of the limbs, groins, neck, behind the ears), esp. in children.—Unhealthy skin, every injury tending to ulceration.—Proud flesh, and fetid pus, in ulcers, with tearing pains, burning, and shooting.—Scrofulous and syphilitic ulcers.—Burning pain in an old cicatrix.—Deformity and thickness of the nails.

26. Sleep.—Great drowsiness during the day, and early in the evening.—Difficulty in falling asleep.—Agitated sleep at night, with frequent waking.—Nocturnal sleep incomplete, as if only dozing.—Unable to fall asleep before midnight on account of a fixed idea.—Unrefreshing sleep at night, followed in the morning by a comatose sleep.—At night, profusion of ideas, sometimes troublesome.—Great agitation at night, with anxious and frightful dreams, oppression and choking.—During sleep, starts, with fright.—Dreams of death and of fire; dreams with meditations.—At night, discomforting ideas, anguish, heat, inquietude, startings, gastric sufferings, and many other affections.—Perspiration about the head, when falling asleep.—Bleeding from the nose at night.—Wakens at night from a suffocative attack.—Constant talking during sleep.—Wetting the bed at night while asleep.

27. Fever.—Pulse full and hard, but not accelerated.—Shiverings, morning and evening, with or without heat, and followed by perspiration.—Chill and chilliness, principally in the evening, after 4 p.m.—General dry heat, evening and night, preceded by a chill.—Heat when riding in a carriage.—Perspiration sour, colouring the linen yellow, of offensive smell.—Inability to perspire.—Perspiration, often very fetid, on the least movement, or on the least fatigue, even from speaking.—Nocturnal sweat, sometimes fetid.—Quotidian fever; shaking chill in the evening; an hour afterwards heat in the face, and cold in the feet, without any subsequent perspiration.

Gratiola.

Gratiola officinalis. Hedge Hyssop. "The Herb of Grace." N. O. Scrophulariaceæ (grows in moist places). Tincture of fresh plant before flowering.

Clinical.—Cholera. Coccygodynia. Constipation. Cramps. Diarrhœa. Dropsy. Eyes, affections of. Gastralgia. Gout. Hæmorrhoids. Headache. Hydrocephalus. Hypochondriasis. Hysteria. Mania. Masturbation. Mesenteric glands, affections of. Neuralgia. Nymphomania. Tetanus. Vision, disordered.

Characteristics.—Gratiola is one of the most important members of the great Scrophularian group—*Digit., Euphras., Tabac., Scroph*.—and should be carefully studied with these. A large proportion of the effects of *Gratiola* are expended on the gastro-intestinal tract. It is an inodorous plant, of bitter taste, and very poisonous, causing violent colic, diarrhœa, bloody stools, enteritis, jaundice, trembling of extremities, convulsions, cramps, excitement and disordered condition of the sexual powers, and death. Symptoms of a fully developed, rapid attack of Asiatic cholera are produced. On the other hand, the mind is strongly affected. Peevishness, ill-humour; irresolute; hysterical; cerebral affections without fever. It is useful in mental troubles from overweening pride. Teste considers *Gratiola* the *Chamom*. of chronic diseases. There is < during and after eating: vertigo during and after a meal. Hunger after a meal with feeling of emptiness. The diarrhœa is yellowish, gushing, watery, as though rushing from a hydrant. There is also vomiting of yellowish fluid. Summer diarrhœa from excessive drinking of water whether cold or hot. Soreness, burning or irritation of anus follows the stools. Two excellent cures with *Gratiola* have been recorded by C. W. Sonnenschmidt (*H. R*., xi. 547). (*1*) Mrs. C., 53, attacked in June with diarrhœa; yellow, watery, frothy stools gushing out with force. Severe cutting pains in abdomen; rumbling of flatulence. Occasional nausea and vomiting. *Coloc*. and *Ipec*. failed to relieve; then on close inquiry it was elicited that "a cold feeling in the abdomen" had been a feature throughout. *Grat. off*. 3, cured promptly. (*2*) A three-weeks' old infant was attacked with diarrhœa and colic. There were two or three passages in quick succession, and then an interval of an hour or two. Passages green or yellow, watery, *frothy*, expelled suddenly; nausea, vomiting, severe pain *before* stools, relieved after, for a short time. *Cham., Coloc., Verat*. failed and *Grat*. rapidly cured. It also removed in this case "redness around anus, and on one side an abrasion of half an inch in extent, which caused some oozing of blood." E. E. Case (*Med. Adv*., xxix. 343) cured a woman, æt. 50, of hæmorrhoids with the following symptoms: (*1*) Constipation, difficult stools. (*2*) External piles from any exertion and after stool. (*3*) Biting, stinging tension in tumours. (*4*) During stool, a sensation as if the rectal membrane was torn. (*5*) After stool, all the nerves of the pelvis seem in a high state of tension; the flesh on the perineum feels as if torn from the bone. [Compare "Wrenching pain in coccyx."] Sleepless before midnight; peevish; melancholy. *Grat*. 200 cured. Cooper has used it with great success in a case of gouty acidity with great constipation; and in the constipation of cancer. He regards it as "the vegetable antacid." It is said to have formed the basis for a once famous nostrum for gout, "Eau Médicinale." Indications are: Constant sinking but cannot eat; bitter taste. The affection of the solar plexus is very marked; cramps beginning at pit of stomach, and pains radiating therefrom; anxiety; gnawing; empty feeling; rolling about in epigastric region. Urine is diminished, reddish, turbid. Buvier, says Teste, saw four cases of nymphomania in females to whom herb-doctors had given injections of a decoction of freshly gathered *Gratiola*. Burnett considers it specific in female masturbation and nymphomania. A number of pains are experienced in the coccyx. Chilly;

shuddering on entering a warm room. Heat ascending to face, with redness and increased external warmth. Constant vaporous exhalation from body. Sensations: as if brain contracted; as if head grew smaller; as if brain would fall forward; as if sand in eyes; as if throat contracted; as if a stone rolling from side to side in stomach. The left side is more affected than the right. The head and eye symptoms are of the first importance. Rush of blood to head with vanishing of sight I consider a keynote. With *Grat*. 30. I cured this symptom in a patient: "Sometimes everything seems to assume a yellowish tint, and occasionally, when I have been taking notes, a rush of blood to my head seems to shut the book from my sight and for the moment I have been unable to follow the speaker by writing although I could by thought." Motion <; rest >. > In open air; < in warm room (some headaches, and vertigo have the opposite modality). Coffee = neuralgia.

Relations.—*Antidoted by:* Caust., Bell., Euphorb., Nux v. *It antidotes:* Iodum. *Compare:* Apis, Bell., Helleb., Cham., Nux v., Elat., Pod. Hunger after meals with feeling of emptiness, Lauro., Calc., Cascaril., Chi., Cin.; (emptiness after stool, Petrol.); vanishing of sight and headache, Gels.; botanical, Dig., Euphr., Scroph.

Causation.—Abuse of coffee.

SYMPTOMS.

1. Mind.—Serious, taciturn, absorbed in reverie.—Self-concentration.—Irresolute, want of perseverance.—Ill-humour, tired of life, apprehensive of the future; hysteria; hypochondriasis.—Loquacity and gaiety.

2. Head.—Whirling vertigo on shutting the eyes.—Vertigo when reading, and when seated, as if the head were waving backwards and forwards.—Headache, with nausea and drowsiness.—Intoxicated feeling during and after a meal.—Rush of blood to the head and feeling as if intoxicated in whole brain.—Violent rush of blood to head, with throbbing in forehead amounting to vertigo, with blackness before the eyes; < by motion, esp. riding, increasing even to loss of consciousness, only disappearing after several hours' sleep.—Pressive headache, esp. in the forehead and occiput.—Lancinating and pulsative headache.—Sensation of heaviness in the forehead, as if the brain would fall forward, with stoppage of the nose.—Sensation as if the head were shrinking from contraction of the brain.—Sudden attack; sudden vibration in the head, which suspends the senses of sight and hearing.—The headache is < when rising from a seat, during movement, and while walking in the open air.—The head is very sensitive to cold.—Heat in the head, on raising the head.—Tightness in the forehead with wrinkles in the skin.

3. Eyes.—Itching, quivering, and sensation of weakness in eyelids.—Itching of eyelashes.—The eyes feel dry and as if sand were in them.—Burning pain and pressure on the eyes.—Eyes watery and weak when reading.—Mist before eyes,

when reading or writing.—Myopia on reading.—Sees distant objects better than near ones.—While writing, or looking at light objects, sight suddenly vanishes; > by closing eyes, but constantly returns.—All objects seem white on opening the eyes, even green trees and turf.

4. Ears.—Tearing and shootings in ears.—Itching of the ears.

5. Nose.—Frequent sneezings, with shootings in l. side of the chest and of the hypochondria.—Stoppage of the nose.—Smarting-itching in l. nostril.—Pressure at upper part of nose.

6. Face.—Burning heat and redness of the face.—Tingling-burning in malar bones.—Sensation of tension in the face; it feels swollen.—Swelling of upper lip (every morning, with stinging).—Tearing on one side of face.—Painful crack in l. side of chin.

7. Teeth.—Nocturnal tearing or piercing in the molars.—Sensation of cold in the teeth.

8. Mouth.—Accumulation of much saliva in the mouth.—Accumulation of clear water in the mouth.—Mouth bitter or clammy.—Tongue rough, covered with mucus.—Fetid breath in the morning after waking.

9. Throat.—Pressure in throat, as from thick mucus.—Accumulation of mucus in throat.—Pain in throat obliging one to swallow constantly; the swallowing is difficult, as if the throat were contracted; < during empty deglutition.—Stinging in throat (l. side).—Tingling, roughness, and scraping in throat.—Phlegm in throat, with inability to throw it off.

10. Appetite.—Gnawing, as from hunger after eating.—Constant sinking at epigastrium, but cannot eat.—Hunger, sometimes with loathing and horror of all food.—Increased thirst.

11. Stomach.—Bitter or sweetish risings.—Ineffectual efforts to eructate, with pressure from stomach to throat, which suspends respiration.—Empty or cold feeling in stomach.—Hiccough.—Regurgitation of bitter water.—Constant nausea, with retching.—Nausea, with cold in the abdomen.—Vomiting, with stoppage of the nose.—Bilious vomiting, or vomiting of acid or bitter substances.—Uneasiness, and sensation of fulness in stomach.—Pressure on the stomach after a meal, with nausea.—Searching and digging in the stomach, with inclination to vomit.—Pressure on the epigastrium after a meal, as from a stone; which moves back and forth.—The sufferings of the stomach and of the epigastrium are often accompanied by nausea, or ineffectual efforts at eructation.—Paroxysms of inclination to vomit, > by eructations.—Rolling about in epigastrium.

12. Abdomen.—Shooting pains in the abdomen.—Beatings in l. hypochondrium (heating pain, burning).—Pressive pain in abdomen, with pinchings (in umbilical region), which force the patient to bend double (> by the emission of flatulence).—Inflation of the abdomen.—Flatulent and pressive colic, with nausea and disagreeable risings.—Rumbling, with nausea, eructation, and vertigo.—Feeling of coldness in abdomen, lasting half all hour.

13. Stool and Anus.—Urgent and fruitless want to evacuate.—Constipation.—Fæces, hard, scanty, and tenacious, expelled with great effort.—Nocturnal slimy diarrhœa, with tenesmus.—Diarrhœa: stools, watery yellow-green, succeeded by burning at the anus; green frothy, coming out with great force.—Stools with burning and protrusion of large stinging-burning tumours.—Passage of fæces without being conscious of it.—Discharge of ascarides.—Pain, as from excoriation in the rectum.—Burning pain in the rectum, during and after the evacuation.—Shootings, itching, smarting, and throbbing in the anus.—Blind hæmorrhoids.

14. Urinary Organs.—Diminished secretion of urine.—Scanty and reddish urine, which becomes turbid on standing, with cloudy sediment.—Burning in the urethra during and after micturition.

15. Male Sexual Organs.—Stitches in l. spermatic cord, ascending through the abdomen up to the chest.—Painful rigidity of the penis after pollutions.—Drawing pain in glans.

16. Female Sexual Organs.—Catamenia premature, too profuse, and of too long duration.—Masturbation.—Nymphomania.—Irritable condition of sexual organs, with congestions.—Shootings in r. breast, < on rising, during menses.

17. Respiratory Organs.—Dry cough, excited by a sensation of roughness in the chest, esp. in the morning or at night.—Nocturnal cough, with pain as from excoriation in the trachea, oppression of the chest and shivering.—Choking when ascending.

18. Chest.—Heat in the chest, then the head and hands, with redness of the face.—Pressure on the chest.—Shootings in the chest on breathing.—Pimples on the chest, which burn after having been scratched.

19. Heart.—Palpitation of the heart.—Violent palpitation, particularly immediately after a stool, and with oppression of the chest.

20. Neck and Back.—Sensation as if the neck were seized with the hands.—Darting from the l. scapula to the shoulder and mamma.—Sticking pain in lower dorsal vertebræ; in r. kidney.—Bruised pain in loins.—Painful cramps in coccyx.—Pressive or wrenching pain in coccyx after stool.

22. Upper Limbs.—Rheumatic pains in the shoulders, arms, fingers, particularly in elbow and wrist-joint.—Itching in the palm of the (r.) hand.

23. Lower Limbs.—Bruised pain in the thigh, after a short walk.—Lancinating tearing in tibia when sitting, disappearing when walking.—Smarting itching on tibia.—Shootings in legs and feet.

24. Generalities.—Tearing in the limbs.—Tetanus, with full consciousness while lying down after a meal, followed by a deep sleep with emission of semen; bruised feeling of the body, back and l. arm on waking.—The majority of symptoms appear at night, or when sitting, and after rising from a seat, or in the open air; contact > them.—Great languor and prostration.—Great loquacity and gaiety.

25. Skin.—Itching with burning after scratching.—Running and corrosive eruptions, which resemble scabies.

26. Sleep.—Irresistible drowsiness with yawning.—Great drowsiness, with frequent yawning and inclination to lie down, esp. in the afternoon.—Deep sleep, like stupor.

27. Fever.—Pulse small, intermittent.—Great tendency to chilliness.—Chilliness in a warm room, during sleep, after an evacuation; with the hair standing on end.—Heat ascending to the face, with redness and increased external warmth.—Constant vaporous exhalation from the body.

Grindelia.

Grindelia robusta and Grindelia squarrosa. N. O. Compositæ. The Grindeliæ are a genus of asteroid composites growing on the Pacific coast and inland on the mountains. The terminal heads of yellow flowers and the leaves are usually covered with a viscid balsamic secretion, from which they have been called "gum plants." A tincture is made of the leaves and unexpanded flowers. Bundy's proving of G. squarrosa was made with a tincture of the dried plant.

Clinical.—Asthma. Bites. Bronchitis. Cheyne-Stokes breathing. Conjunctivitis. Emphysema. Erythema. Eyes, pains in. Glaucoma. Heart, affections of. Iritis. Itching. Liver, pain in. Pruritus vulvæ. Pruritus vaginæ. Rhus-poisoning. Spleen, pain in. Ulcers.

Characteristics.—Following Hering I have not thought it necessary to separate the two *Grindelias* which have been used in homœopathy, but, as far as possible, I shall indicate the species used in any definite experience. Several species have been used in cases of asthma, bronchitis, *Rhus*-poisoning and heart and skin

affections. The only proving is by Dr. T. H Bundy, who took a teaspoonful of a tincture of the dried plant of *G. squarrosa* and in half an hour followed it by another, with the result that he produced some intensely severe pains in head and eyes (left then right), and symptoms in liver, spleen, nervous system and lungs, and altogether passed "the most terrible night of his life." The proving is remarkable for the number of peculiar symptoms induced. First there was "fulness in head as after a heavy dose of quinine." Then intense pain in left eye and right knee-joint exactly like acute rheumatism. The knee pain lasted only half an hour and then the third teaspoonful was taken. The eye-pain became most agonising, the pupil became widely dilated. It was two hours before the right eye became affected and then the misery was doubled. At this time unbearable pain in whole of liver and spleen came on, so severe it was impossible to lie still a moment, with intense soreness of the region affected like that of acute rheumatism. The eye pains were in the balls of the eyes running directly back into brain, much < by movement. There was a kind of paralysis of the vagus nerve: on falling asleep the respiratory movement would cease and would not be resumed until he waked up from the resulting suffocation. In the clinical experiences recorded it is the *Robusta* which is chiefly mentioned, though sometimes it is not specified which. One writer obtained excellent results from "*Grindelia*" in a number of cases of asthma and emphysema with dilated heart. H. W. Foster reported the cure of a case of asthma with *G. robusta* which shows that Dr. Bundy's proving of *G. squarrosa* is good for each drug. (Hering erroneously gives Bundy's proving under the heading "Grindelia robusta.") Dr. Foster's patient was awakened by asthmatic attacks, the room seeming too small. After getting quiet, just as he would commence to lose himself in sleep he would suddenly awaken again because he seemed to have forgotten to breathe. *Grind. r.* 30 relieved at once. Gatchell found a lotion of *Grindelia robusta* Ø. (one part to ten of water) a sovereign application in itching or painful erythematous eruptions. It is also useful for bites and stings of insects. It removed aversion to darkness in one patient, who wanted a light in the room all night. Symptoms are < by movement; < in the dark; < on failing asleep.

Relations.—*It antidotes:* Rhus. *Compare:* Amm. mur., Ant. t., Kali bi.; Lach. (< from sleep; left then right); Gels. (< from sleep). Gels. has waking up feeling the heart has stopped, must keep moving to keep it going; *Grind.* feels *respiration* has stopped; Stram. (fear of the dark). Op., Lach., Carb. an. (fears to go to sleep.) Dyspnœa on falling asleep: Am. c., Ant. t., Arum t., Badiag., Bry., Cadm. s., Carb. an., Carb. v., Graph., Lach., Nux m., Op., Ran. b., and both the Grindelias.

SYMPTOMS.

2. Head.—Terrible fulness in head, as though from quinine (S).

3. Eyes.—Conjunctiva injected, eyes look as in congestion of brain.—Pain in eyeballs running directly back to brain, < from moving eyes.—Pain in l. eye and r. knee like rheumatism; pain in knee did not last more than half an hour, but that in

the eye became more intense, pupil becoming dilated; two hours later r. eye became affected in the same way (S).—Purulent ophthalmia.—Iritis: traumatic; from cold; metastasis of rheumatism; the pain is intense, the fever high.

12. Abdomen.—Unbearable pain in region of liver and spleen, so severe he cannot lie still a moment; soreness like that of acute rheumatism in the same region (S).

16. Female Sexual Organs.—Pruritus of vagina and vulva, whether from leucorrhœa, or aphthæ, or of venous origin (R).

17. Respiratory Organs.—Fear of going to sleep on account of loss of breath which awakens him (S).—On falling asleep respiratory movement ceases, and is not resumed until awakened by suffocation resulting.—Humid asthma from catarrhal bronchitis.—Cardiac asthma.—Cough from reflex causes.—Much tenacious mucus difficult to detach.

25. Skin.—Epidermic rash like roseola, suffusing face, neck, and often the whole body, with severe burning and itching (R).—Irritable eruptions, papular or vesicular (R).—Ulcers of leg with fetid secretion, pain, much swollen purplish black skin (R).

Guaco.

Mikania guaco (a climbing composite of Tropical America). N. O. Compositć. Tincture or decoction of leaves.

Clinical.—Cholera. Diarrhśa. Hydrophobia. Leucorrhśa. Paralysis. Phosphaturia. Rheumatism. Spine, affections of. Tongue, paralysis of.

Characteristics.—Guaco has a local repute as a remedy for the bites of serpents, for hydrophobia, cholera, and cancer. In the homśopathic provings rice-water stools occurred; and difficulty of swallowing as in hydrophobia. One proving also showed an action on the bladder and urinary organs, producing excess of phosphates. A lady who took a decoction for four months steadily, was obliged to discontinue because it produced: Copious, corrosive, putrid leucorrhśa, causing great debility, tanning the inside of the thighs and staining linen yellow. She felt as if fire was running out of her. Terrible itching and smarting. Another prover had severe spinal and occipital pains; paresis of tongue and difficult deglutition. Burning and tearing in soles. Pains as if beaten. Pains extend to other parts, mostly from above downwards. < At night. Motion <.

Relations.—*Antidoted by:* Kre. and Sul. (leucorrhśa). *Compare:* Alum., Bell. (menstrual flow feels hot); Phos. ac. (phosphaturia). Leucorrhśa staining yellow, Carb. an., Kre., Nit. ac.

SYMPTOMS.

1. Mind.—An excited condition.

2. Head.—Severe aching in occiput which sometimes extends over upper half of back.—Headache and heat of head.

4. Ears.—Deafness.

8. Mouth.—Tongue heavy, difficult to move.

9. Throat.—Difficult deglutition.

12. Abdomen.—Pain and rumbling in bowels followed by watery stools.

13. Stool and Anus.—Awakened 4 a.m. with pain and sudden call to stool of dark brown fćcal matter, thin and watery. Slept till 6, when he had another stool, sudden, forcible, profuse, with appearance as of rice-water; some pain in back afterwards, with feeling of weakness and fatigue.—Congestion of hćmorrhoidal vessels.

14. Urinary Organs.—Unusual flow of urine with excess of phosphates; pain over region of bladder and weight and weariness through hips and loins.

16. Female Sexual Organs.—Leucorrhśa, copious, corrosive, debilitating; tanning thighs, staining linen yellow; felt as if fire running out of her; terrible itching < at night.

17. Respiratory Organs.—Constriction of larynx and trachea.

20. Neck and Back.—Burning in nape extending to shoulders.—Tearing stiffness, drawing-tearing extending to axilla.—Drawing-tearing in and between scapulć extending into forearm.—Frequent fine stitches, tearing and violent drawing pains along spine, < bending.—Aching and pressure forward in the lumbo-sacral region.—Weight and weariness through hips and loins.—Pain in sacrum and back with feeling of weakness and fatigue (after diarrhśa).

22. Upper Limbs.—Aching drawing and simple drawing pains in deltoid with a paralysed sensation extending to forearm.—Tearing and dislocation pains in shoulders extending to forearm.—Burning in shoulder-joint.—Tearing in elbows and fingers.

23. Lower Limbs.—Soreness and pains as if beaten about hip-joint.—Drawing in thigh.—Drawing and swollen feeling in calves.—Uneasiness and drawing in legs.—Tearing in ankle-joints.—Burning and tearing in sales.

Guaiacum.

Gum guaiacum. Guaiacum officinale. The gum-resin of Lignum sanctum or Lignum vitć, a large tree growing in W. Indies. N. O. Zygophyllaceć. Tincture of the gum-resin.

Clinical.—Abscess. Amenorrhśa. Aneurism. Bones, affections of. Bronchitis. Caries. Cholera infantum. Constipation. Contraction. Cough. Diarrhśa. Diphtheria. Dysmenorrhśa. Earache. Emaciation. Fever. Gout. Growing-pains. Headache, internal and external. Hernia. Membranous dysmenorrhśa, Mercury, effects of. Neuralgia. Osteomalachia. Otitis. Ovaries, inflammation of. Phthisis. Pleurisy. Pleurodynia. Rheumatism. Sciatica. Stomach, affections of. Syphilis. Throat, affections of. Tonsillitis. Toothache. Torticollis. Vomiting.

Characteristics.—*Guaiacum*, which is one of Hahnemann's antipsorics, is best known as a remedy in gout and rheumatism and as a diuretic, but latterly it has also taken a place in old-school therapeutics as a remedy for consumption. Homśopathic provings have developed and defined the sphere of its utility in all these respects and many more. It acts on mucous membranes, muscles, joints and bones, and causes contraction of tendons with resulting deformity. Gouty nodosities on joints. Verwey (*H. R.*, ix., 627) treated a lady who for several years had a frequently recurring gouty inflammation of the knees. *Guai*. 30 was given (after *Chi*. 30 had failed to relieve) without obvious benefit. *Guai*. 1 was now given and after a few hours the swelling broke and the pains quickly subsided. A short time after, the same patient accidentally injured the same knee. Under *Guai*. 1 the swelling soon broke and the pain was relieved. But an abscess formed at the same time on the upper thigh. The pain became unbearable and the patient's husband "begged for more of the drops that had twice before made the swelling break." It was again given and in six hours the abscess evacuated. On two later occasions Dr. Verwey saw *Guai*. act in the same way on scrofulous and gouty abscesses. This is probably analogous to its action in quinsy. In cases indicating *Guaiac*. the affected parts are very sensitive to touch, and there is < from heat. Rheumatism in syphilitic and mercurial patients. Acute tonsillitis, simple or rheumatic. Syphilitic sore throat. "Burning in the throat" is the keynote symptom of most cases of sore throat. It was first recommended by Brinton in the *Lancet* in 1857 for quinsy; was given in full doses and produced a crisis of sweat and profuse urination. Ozanam gave it in the 1st, 2nd, and 3rd centesimal dilutions and found that he got the curative effects without crisis, which was an unnecessary effect of the drug. *Guaic*., says Ozanam, seems to combine the properties of *Bell., Apis*, and *Bar. c*. It has the erythematous or inflammatory angina with bright redness of *Bell*.; the śdema of *Apis*; and the phlegmon with tendency to suppuration of tonsils of *Bar. c.* and *Apis* (*H. R.*, ii. 217). Proell records the cure of a case of secondary syphilis in a gentleman who had inflammation of the palate supervening on hard chancre. The isolated, sore, red spots threatened to extend deeper and perforate. *Merc. cor*. 3x, *Nit. ac*. 3, *Aur. mur*.

3, and *Mez*. 3 were given in succession, each for one or two weeks, without avail. The syphilitic inflammation continued to spread, the brain became affected as shown in confusion of thought, remarkable depression of spirits and weakness of memory. *Guaiac*. 3x was now given, and even on the next day improvement was noticable. In fourteen days the whole trouble had vanished, the mind was clear, cheerfulness and memory returned and remained (*H. R*., i. 109). The growing pains of children are relieved by it. The secretions of *Guaiac*. are very offensive. Burning sensations in mouth, throat, and stomach, stitches in chest going from front to back, or from below upward; in region of apex; < from motion and from deep inspiration: Sharp pain about mid-day under right breast to shoulder" was removed in a case of mine by *Guaiac*.

The mental state is one of weakness: weak memory and disinclination to labour. Sad and depressed. Fretful, obstinate, sharp stitches in brain. Sensation as if the brain were loose. Neuralgia of left side of head and face, extending to neck. External headache, with sensation as if blood-vessels were over-filled; extending to face and neck. Tearing pains in skull. Swellings and sensation of swelling in eyes and nose. Eyes feel protruded. Houghton cured with *Guaiac*. 3x a case of gouty inflammation of the meatus of the ear and tympanum after failure with *Fer. ph*. Concomitant rheumatic lameness and soreness led him to *Guaiac*. Heat, swelling and blotchiness of face. Prosopalgia every day from 6 p.m. to 4 a.m. Toothache when biting jaws together. "Violent hunger, afternoon and evening" shows its relation to the "sinking" sensations of *Sulphur* and the antipsorics. There is a desire for apples which > gastric symptoms; and aversion to milk and food generally. Flatulence is marked. There is nausea from sensation of phlegm in throat. "Every morning vomits a mass of watery phlegm with great exertion, followed by great exhaustion." There is morning diarrhśa with skin dry and chilliness. In cholera infantum the face is like that of an old person. In constipation the stool is hard, dry, crumbling, and very offensive. Some marked symptoms appear in the urinary organs: Continuous urging even after urination, with profuse fetid urine. Stitches in neck of bladder after ineffectual pressure to urinate. Cutting while urinating. Chilly crawls over mammć. There are many marked symptoms in the respiratory sphere. Violent, spasmodic, inflammatory affections of windpipe and larynx, with palpitation preventing motion, or calling for help, feels suffocating. Cough dry or with copious bloody or purulent expectoration of very offensive odour. Contractive pain between scapulć. Chilliness in back. Yawning and stretching > general ill-feeling. The least motion <. After a cold, has violent pains in limbs. Clothes feel damp. On walking in open air has perspiration on head. Cannot bear heat with pains in limbs. Periodicity is marked. Stomach affection returns every summer.

Relations.—*Antidoted by:* Nux. *Antidote to:* Caust., Rhus. *Compatible:* After Merc. (rheumatism, gout, and syphilis); after Sulph. (in cholera infantum); after Caust. (in torticollis). Compare Phos. ac. (growing pains); Act. r. (pleurodynia and tuberculosis); Bry. (chronic rheumatism when the joints are distorted; < motion; pleurisy in second stage of phthisis); Coloc. (contractions after rheumatism);

Caust. (Guaiac. is better than Caust., which it follows well, when either gout or rheumatism causes distortion of limbs < every attempt at motion; especially if there are gouty nodosities on joints); Araceć (late tuberculosis; pleuritic pains left apex); Kal. i., Mezer., Phytol., Rhodo., Stilling.

SYMPTOMS.

1. Mind.—Obstinacy.—Strong desire to criticise, and to despise everything.—Indolence and dread of movement.—Weakness of memory, and excessive forgetfulness, esp. of names.—Fixed look, and absence of ideas, esp. in the morning.

2. Head.—Pressive pain, extending from the base of the brain upwards, or traction and tearing in the sinciput and temples.—Violent lancinations in the brain, from the base upwards.—Tearing (rheumatic pains) in one side of the head only, as far as the cheek.—Pulsations, throbbings (and shootings) in the temples, with sensation as if the head were swollen, and the blood-vessels congested.—Sensation as if brain were detached and loose.—Pulsative throbbing in the outer parts of the head, with stitches in the temples; removed for a short time by external pressure and by walking, < by sitting and standing.—Lacerating in whole l. side of head.—Neuralgia l. side of head and face extending to neck.—Sweat chiefly on head and forehead (when walking in open air).—Tearing pains in skull.

3. Eyes.—Sensation of swelling, or actual swelling of the eyelids, with sensation as if the eyes were protruding, and as if the eyelids were too short.—Pupils dilated.—Amaurosis.—Pimples in the eyebrows; and round eyes.

4. Ears.—Tearing and squeezing in the ears.

5. Nose.—Pains in nasal bones.—Nose swollen.—Fluent coryza.

6. Face.—Redness and painful swelling of the face.—Shootings in the cheek-bones and in the muscles of the cheeks, as if knives were plunged in.—Neuralgia l. side of fac,. head and nape 6 p.m. to 4 a.m. daily.

7. Teeth.—Aching in the teeth, on closing them.—Pulling and tearing in the teeth, terminating in shootings.

9. Throat.—Burning pain in the throat.—Acute tonsillitis, r. tonsil much swollen, dark-red, constant aching pains, sharp stitches towards ear on swallowing.—Syphilitic sore throat.—Throat dry, cannot swallow without a drink.

10. Appetite.—Insipid taste, with want of appetite, and disgust for everything, accompanied by expectoration of mucus.—Empty risings.—Immoderate

hunger.—Nausea, excited by a sensation as if the throat were filled with slimy mucus.—Repugnance to milk.—After eating without appetite she gets sick.

11. Stomach.—Burning in stomach and abdomen.—Cramps and pains in stomach.—Every summer a severe stomach affection with vomiting of blood.—Anxious sensation of constriction in the region of the stomach, which impedes respiration.

12. Abdomen.—Pinching in the abdomen, as from incarceration of flatus.—Sensation of emptiness, with borborygmi, and rumbling in the abdomen.—Pain, as from hernia in the groins.—Twitchings of the muscles of the abdomen.

13. Stool.—Diarrhśa commencing in morning, skin dry; chilly.—Thin mucous stool.—Soft stool in pieces. Cholera infantum, emaciation; old-looking face.—Constipation.—Fćces hard, crumbling, and very offensive.

14. Urinary Organs.—Constant want to make water (even after urinating) with copious discharge of very fetid urine.—Incisive pains in the urethra, on making water.—Ineffectual want to urinate, with shootings in the neck of the bladder.

15. Male Sexual Organs.—Emissions without lascivious dreams.—Gonorrhśa-like discharge.

16. Female Sexual Organs.—Subacute and chronic ovaritis, esp. in rheumatic women.—Amenorrhśa.—Membranous dysmenorrhśa.

17. Respiratory Organs.—Dry cough with sensation in the epigastrium as if there were not sufficient air in it.—Dry cough, > by detaching a little mucus.—Cough, with expectoration of fetid pus.

18. Chest.—Shootings in the (l. side of the) chest, < by breathing; by moving head.—Stitches from middle of r. chest, ending in one below r. scapula.

19. Heart.—Palpitation.

20. Neck and Back.—Pressure on the vertebrć of the neck.—Stiffness in the nape of the neck.—Constant frequent stitches on l. side of nape, extending from scapulć to occiput, on motion, also on holding head still.—Stiffness along the back, on one (l.) side only, from the neck extending to the small of the back and sacrum, intolerable on slightest motion, or turning the part, not noticed on touch or during rest.—Tearing and shooting in one side of the back only.—Contractive pain between the shoulder-blades.—Corrosive itching in the back (by day).—Shiverings in the back in the afternoon.

22. Upper Limbs.—Weakness in the arms.—Tearing and shooting in the shoulder-blades, and in the forearms.—Sharp stitches in the top of r. shoulder.—Rheumatic pains in l. arm from shoulder to wrist.—Lancinating rheumatic pains from elbow to wrist (l.).—Rheumatic pains in l. wrist-joint.—Stitches in r. thumb.

23. Lower Limbs.—Pains in the bones of the thighs, pressive and tingling pains in the thighs, when seated.—Paralytic tension in the thighs, on walking.—Weakness in the thighs.—Pricking in the nates, as if sitting on needles.—Tearing, drawing lancinations in the leg, from r. tarsus to the knee.—Tension in thighs, esp. r., as if the muscles were too short, with languor when walking; < by contact, > when sitting.

24. Generalities.—Rheumatic pains in the joints.—Arthritic pains in the limbs, with shootings and tearings, and contraction of the parts affected.—The pains are provoked by the least movement, and are accompanied by heat in the parts affected.—Numbness of the limbs.—Painful weariness and weakness in the arms and thighs, with dread of movement.—Immovable stiffness of the contracted limbs.—Frequent inclination to yawn, and to stretch the limbs, proceeding from a general sensation of uneasiness.—The majority of symptoms show themselves, when sitting, as well as in the morning after rising, or in the evening before lying down.—Exostosis.—Consumption.

26. Sleep.—Great drowsiness in the afternoon.—Late sleeping and early waking.—Frequent waking with fright, sometimes on going to sleep.—Restless tossing during the night.—Nightmare, when lying on the back, waking with screams.—Feeling in the morning as though the sleep had been insufficient.

27. Fever.—Shivering, chilliness, and shuddering, even near a fire, principally in the afternoon and evening.—Shivering, without thirst, morning and evening.—Heat in the face, esp. in the evening.—Sweat in the morning.—Copious perspiration, esp. on the head, when walking in the open air.—Pulse accelerated; small, weak, soft.

Guarana.

Paullinia sorbilis. Brazilian Cocoa. N. O. Sapindaceæ. Alcoholic solution of dried paste made from seeds.

Clinical.—Alcohol, effects of. Coffee, effects of. Diarrhœa. Eyelids, twitching of. Headache.

Characteristics.—Guarana is a climbing shrub of Brazil, the seeds of which contain *Coffeine*, and are used by the natives for making a beverage. In medicine it has found its principal use in conditions of nervous exhaustion; sick headache in

those who have abused tea and coffee, the headache being followed by vomiting and excited by any error in diet or depression of mind. Throbbing, congestive headache after excessive use of liquor. Persistent twitching of eyelids is one of its indications. Diarrhœa.

Relations.—*Compare:* Agar. (twitching of eyelids); Ign., Nux in sick headache; Coff., Coca., Thea.

SYMPTOMS.

1. Mind.—Gaiety; extravagant behaviour.—Mental hyperæsthesia; intellectual excitement.

2. Head.—Sick headache in those who have abused tea and coffee, or in whom nervous headaches followed by vomiting are excited by any error in diet or depression of mind.—Throbbing, congestive headache after excessive use of alcohol.

3. Eyes.—Persistent twitching of eyelids.

13. Stool.—Profuse, green, odourless mucous stools.—Diarrhœa of phthisis.

14. Urinary Organs.—Spasm of bladder.

24. Generalities.—Restlessness, nervousness, weariness.—Neuralgia.—Reduced vital powers; grief; depression of spirits; loss of appetite.—Debility after prostrating diseases.—Paralysis.—Chlorosis.

25. Skin.—Urticaria.—Prurigo.

Guarea.

Guarea trichilioides. Red-wood. Ball-wood. N. O. Meliaceæ. Tincture and trituration of bark.

Clinical.—Apoplexy. Asthma millari. Bones, affections of. Chemosis. Dysphagia. Eyes, affections of. Hernia. Intermittent fever. Liver-spots. Lupus. Pterygium. Ptosis. Tongue, affections of. Tonsils, swollen. Vertigo. Whooping-cough.

Characteristics.—Petroz is the authority for this drug, which produces a number of symptoms in the eyes, and cases of chemosis and pterygium have been reported cured with it. R. K. Ghosh (*H. R.*, viii. 459) cured a number of cases of both. He found a lotion of *Guarea* Ø (gtt i. to one drachm) of great assistance. In the head

there is a sensation as if the brain were falling forward; and a sensation as of a blow on the head leaving numbness and diminished thinking power. The eye symptoms alternate with diminished hearing. A number of symptoms were experienced in the umbilicus and inguinal rings. Flow of blood between menses. Pains in periosteum. On the skin there were liver-spots, and an eruption with burning vesicles. Sleepy in open air. Aromatic-smelling sweat. Sensations of constriction are common. Sudden shocks of whole body. Bruised pains. Acids and cold water <; hot drinks, and wrapping warmly >. Sweat when eating or after. Bone pains < at night.

Relations.—Bov. (flow of blood between menses); Crotal. (as if had a blow on the head); Anac. (peg in ear); Gels. (vertigo, ptosis); Azadiracta indica (botan.) Apis (chemosis, asthma millari); Arn. (injuries); Phos. (steatoma) Ign. (nerves); Merc. and Silic. (bone-pains, suppuration).

SYMPTOMS.

1. Mind.—Anxiety.—Fear of losing reason.

2. Head.—Vertigo; when stooping; objects appear upside down.—Whirling dizziness.—Sensation as if the brain were falling forward.—Sensation as if from blow on the head, leaving a kind of numbness and diminished thinking power; as after apoplectic seizure.—Constriction, heaviness, shocks; in forehead.—Constriction, hammering in occiput.

3. Eyes.—Sickly look round eyes and within orbits.—Swelling beneath eyes.—Swelling of lachrymal gland.—Pain in eyes during fever.—Twitching of eyebrows.—Paralysis of lids.—Pressure on lids.—Lachrymation.—Inflammation of conjunctiva, which is swollen.—Pain in ball as after weeping.—Tearing pain in eyeballs; tension; forced-out feeling.—Pupils dilated.—Objects appear grey; during vertigo they appear upside down.—Eye symptoms alternate with diminution of hearing.

4. Ears.—Swelling of periosteum behind ears.—Sensation in ears as of a peg; of a worm; pushing-out feeling.—Roaring in ears.

5. Nose.—Coryza; with hardened secretion; with heat.—Nose stuffed; ineffectual desire to sneeze; constriction at root of nose.

6. Face.—Suppurating swellings on face.—Swelling of upper lip.

7, 8. Teeth and Mouth.—Pains in teeth accompanied by pain in zygoma, excited by draught of air, by pressure of tongue; < lying on painful side; by hot food; by walking.—Tongue coated during the fever.—Tongue coated greyish yellow;

swollen; paralysed; bleeding.—Tongue feels cold and dry.—Lancinations in tongue.—Mouth smells of cheese.—Taste, sweet.—Food tastes insipid.

9. Throat.—Tonsils swollen.—Œsophagus: raw pain; sensation of contraction and burning heat.—Swallowing difficult.

10. Appetite.—Canine hunger in evening; speedy satiety.—Aversion to milk, fish, and hot, greasy, cooked food.

11. Stomach.—Sour eructations with tension and pressure at stomach.—Inclination to vomit during fever.—Vomiting, sour; green.—Stomach: constriction in; bruised feeling in.

12. Abdomen.—Hardness at umbilicus.—Abdomen distended with lancination in groins and inguinal ring.—Bruised pain externally.

13. Stool and Anus.—Constriction of anus and rectum.—Urging to stool.—Constipation.

16. Female Sexual Organs.—Labour pains suppressed.—Lochia scanty.—Leucorrhœa after menses; fetid.—Flow of blood between menstrual periods.—Itching of pudenda.

17. Respiratory Organs.—Cough: dry barking; violent deep-seated; with expectoration.—The cough is accompanied by sweat, pain, soreness, tightness of chest; comes after a crying spell; on falling asleep; after getting chilled; is excited by itching in throat, by irritation in larynx.—Breathing, sobbing; difficult during chill.—Sensation of hollowness and dilatation of chest.—Respiratory symptoms < from putting hand to throat.

21. Limbs.—Jactitation of limbs.—Cracking in joints.—Nightly pains in bones.—Bruised pain in bones.—Caries.

24. Generalities.—Steatoma; hot swelling; swelling of affected parts.—Suppuration of glands.

25. Skin.—Yellow spots on temples.—Liver-spots on arms.—Eruptions behind ears.—Herpes.—Itching.—Lupus of ochre-red colour.

26. Sleep.—Sleepy in open air.—Dreams, anxious, melancholy, full of strife.

27. Fever.—Coldness followed by heat with sweat.—Heat of upper part of body, coldness of bones.—Sweat chiefly during and after eating.—Sweat aromatic.

Gambogia.

Gamboge. Gummi Gutti. N. O. Guttiferæ. Tincture of the resinous gum obtained from a tree (*Garcinia morella*) native to China.

Clinical.—*Anus, affections of*. Backache. Blow, effects of. Coccygodynia. Colic. Diarrhœa. Eyes, inflammation of. Lienteria. Throat, sore. Typhlitis.

Characteristics.—The chief reputation of *Gamboge* among homœopaths is as a remedy for diarrhœa. "Profuse watery diarrhœa, particularly with old people," is characteristic. Stool preceded by excessive cutting about navel; stool expelled all at once after considerable urging; and is followed by a feeling of great relief. Stools: yellow (the colour of the drug); green; bloody; lienteric. Burning in anus after stool; anus sore and excoriated. Frightful vomiting and purging, with fainting. But this action by no means exhausts the range of *Gamb*.; it has a number of symptoms in the eyes and throat; and also rheumatic symptoms. Pain in small of back, as if bruised or sprained. Pain in sacrum, resulting from a blow, was cured in one case of mine. Gnawing in coccyx. Burning pains are prominent. Burning in the liver. (Like many other yellow, bile-like drugs, *Gamb*. acts markedly on the liver.) Most symptoms are > by motion; cough > sitting up; > in open air; < towards evening or at night. There is periodicity in the symptoms. General soreness over the body.

Relations.—*Antidoted by:* Camph., Coff., Coloc., Kali c., Op. *Compare:* Aloe, Podo., Puls. (cough > sitting up; > open air); Apocy. c. (stool expelled all once; but Gamb. has cutting before and > after stool); Crot. t. (Crot. has stool in one gush, but Gamb. is not < from least food or drink like Crot.).

SYMPTOMS.

1. Mind.—Cheerful, talkative, feeling of case, great lightness of all his motions.

2. Head.—Vertigo during rest or motion, in morning on rising.—Pain in the vertex, as if bruised, in the forenoon; > in open air.—Heaviness in the head, with drowsiness and pain in the back.—Heat rises to the head, with perspiration.

3. Eyes.—Itching of the inner canthi, with discharge of acrid, corrosive tears after rubbing; > in open air.—Nightly agglutination of the lids; burning in the morning.—Violent itching of the eyes in the evening.—Burning of the eyes, > by walking in the open air.—Violent burning of the eyes and photophobia, in evening or afternoon, > from walking in the open air, but returning in the morning.

4. Ears.—Lancination in the ears.

5. Nose.—Sneezing (in daytime).—Violent chronic sneezing.—Ulceration of r. nostril, with burning pain.—Dryness of r. nostril.—Much mucus in the nose, smelling like pus.

8. Mouth.—Feeling of coldness in the points of the incisors.—Dry mouth.—Burning of the anterior half, or only of the tip of the tongue, which feels hard.

9. Throat.—Violent stinging in r. side of throat.—Stinging in the r. side of the throat during and between the acts of deglutition.—Sore pain in the throat, which is felt when even touching the outer side of the neck.—Roughness and burning in throat, causing constant hawking.—The throat feels swollen.

11. Stomach.—Bitter taste in the mouth.—Nausea, with accumulation of water in the mouth and gulping up of sour water.—Nausea proceeding from the stomach.—Violent empty eructations.—Frightful vomiting and purging, with fainting.—Dartings in the stomach, causing one to start.—Acute darting, stitching pains in the stomach.—Gnawing in the stomach.—Aversion to food.—Violent thirst in the evening.—Ulcerative pain in the stomach, passing off after eating.

12. Abdomen.—Empty feeling in the stomach and abdomen.—Inflation and tension in the abdomen.—Inflation and tension of the abdomen, with pinching in the umbilical region.—Gnawing in a small spot below the umbilicus.—Pinching in the abdomen and groins.—In the groins sticking, tension.—Burning in the region of the liver.—Rumbling in the bowels.

13. Stool and Anus.—Frequent emission of flatulence; esp. evening and night.—Diarrhœa, with burning pain and tenesmus of the rectum, prolapsus ani, and constant pinching around the umbilicus, sometimes attended with discharge of mucus.—Watery diarrhœa, with colic and tenesmus.—Fæcal diarrhœa, stools evacuated with great force.—Yellow and green diarrhœic stool, mixed with mucus, preceded by excessive cutting around the umbilicus.—Hard, insufficient stool, with violent urging, pressing, and protrusion of the rectum.—Hard stool, succeeded by burning at the anus.

14. Urinary Organs.—Infrequent urination.—Emission of a few drops at a time, then intermitting, and finally returning, with burning at the orifice.

16. Female Sexual Organs.—Leucorrhœa.—Menses too early and too profuse.

17. Respiratory Organs.—Sensation of soreness in every part of the chest.—Pressure in the middle of the chest.—Stitches going from both sides of the chest towards each other.—Repeated extremely painful stitches in the sternum.

20. Back.—Pain in the small of the back, as if bruised or as if sprained.—Gnawing in the os coccygis.

22. Upper Limbs.—Stitch on the top of r. shoulder.—Stinging and numb feeling in the ball of r. thumb.

23. Lower Limbs.—Cramp in the calf, with contraction of the toes.—Heaviness and languor of the feet.

24. Generalities.—Itching and formication in various parts.—Pains, as if bruised.—Tearing in the shoulders.—Burning sensation in various parts.—Burning-stinging pain.—Increased heat, with anxiety.—Gnawing.

25. Skin.—Intolerable itching and formication in various parts.—After scratching, burning and ulcerative pain.—Itching blisters on both hands, first pale, then red.

26. Sleep.—Drowsiness the whole day.—Sleepiness, great inclination to sleep.—Anxious, vexatious dreams.

27. Fever.—Chill, proceeding from the back, with coldness of the whole body from evening till morning.—Chilliness is accompanied by empty eructations, yawning, thirst, pain in the small of the back, biting as of ants over the whole body (by night), excessive stitches in the ears.—Increased warmth, with anxiety and perspiration.—Night-sweat all over. Violent thirst in the evening.

Gymnema Sylvestre.

Gymnema sylvestre. N. O. Asclepiadaceæ. Tincture of leaves.

Clinical.—Snake-bite. Taste, altered.

Characteristics.—This plant, which grows in the Deccan peninsula, Assam, and some parts of Africa, is a woody climber with long, slender branches. The powdered root has a reputation among the natives as a remedy for snake-bite. It is mentioned here an account of a single symptom observed from chewing one or two leaves, which had a bitterish, astringent, and slightly acid taste. Immediately after chewing them the sense of taste for sugar was lost, and also the taste for bitters, the effect lasting some hours. Everything else could be tasted, as the ginger in gingerbread but not the sweet. Quinine tasted like chalk.

Gymnocladus Canadensis.

Chicot. American Coffee-tree. N. O. Leguminosæ. Tincture of fresh pulp of the pods.

Clinical.—Erysipelas. Fever. Headache. Spleen, pain in. Throat, sore. Tongue, blue. Toothache. Whitlow.

Characteristics.—The most peculiar symptom of the *Gymnocl*. proving is a bluish-white coating of the tongue. Guided by this symptom C. T. Bingham cured a man of headache following influenza "a constant severe pain in front part of head, especially under eyebrows and upper part of nose." It had lasted over two weeks, never ceasing and at times intolerable. Bones of eye-sockets sore to touch. Tongue covered all over with bluish-white coat; does not enjoy food; is very weak. *Gym*. 2x cured. Full, tight headache appears in the proving, with sensation as if the eyes were pushed forward. The fulness takes actual shape in "erysipelatous swelling of face and head; hot face; it feels swollen; is compelled to rub the eyes." Full sensations and burning pains are very common. Toothache from slightest cold air or drink. Sore throat, dark livid redness of fauces and tonsils. There are a number of fever symptoms: Desire for heat, wants to be near the fire. Cold chills and pains in bowels. Perspiration in axillary regions and palms. Epidemic fevers of typhoid character have been cured by it. Violent pain in left forearm as if the bones were crushed. There is aversion to motion; easily fatigued; desire to lean the head on something. Walking <. Cold <, cold drinks and cold draughts <. > From rubbing eyes.

Relations.—*Compare:* Nux, Agar. Æthus., Bell., Cicut., Hyo., Laches., Lachn., Solan. n., Stram.

SYMPTOMS.

1. Mind.—Cannot think, comprehend, or study; forgets everything.—Indifference.

2. Head.—Dizzy with dimness of sight; nausea, belching.—Head feels full, tight as if bound up.—Intense frontal headache, eyes feel pushed forward.—Fulness and pressure in and over eyes, extending to vertex.—Intense headache with stitches in bowels; in umbilical region at times.—Catarrhal headache, premonitory stages; feeling of fulness in head, with throbbing in temples and forehead, with vertigo, heat of face, numbness and tired feeling.—Desire to lean the head on something.

3. Eyes.—Eyes feel pushed forward.—Burning heat and pain through eyes; sore in morning.—Desire to rub the eyes.—Sense of agglutination of l. eye; desire to rub or scratch it.—Violent throbbing pain over l. eye.

6. Face.—Sensations as if flies were crawling over r. side of face.—Erysipelatous swelling of face and head; face feels hot and swollen; is compelled to rub the eyes.—Pain as if bruised in l. malar bone.

7. Teeth.—Great sensibility of teeth; < l. side and in upper teeth; slightest draught of cold air induces it; cold drinks very painful.

8. Mouth.—Tongue coated bluish-white.—Burning, drawing, and scraping; burning in roof of mouth, extending to mouth and tonsils.

9. Throat.—Sore throat, dark, livid redness of fauces and tonsils.—R. tonsil inflamed, purple.—Stitching and shooting in throat.—Mucus in throat and frequent hawking.

11. Stomach.—Belching of sour water.—Nausea after eating with pain and fulness in stomach and belching.—Burning in œsophagus and stomach.—Circumscribed burning in stomach size of dollar.

12. Abdomen.—Pain in l. side as if spleen were swollen.—Soreness and tenderness of abdomen.—Stitches in bowels and umbilical region.

13. Stool and Anus.—Constipation with ineffectual desire.—Aching fulness in rectum after stool.

14. Urinary Organs.—Pressure on bladder and frequent desire to urinate; urine passed in small stream.

15. Male Sexual Organs.—Itching of glans and prepuce.

17. Respiratory Organs.—Smarting in larynx.—Tickling in throat in morning causing cough, increasing through day; cough dry, hard, and racking.—Pressure on chest and sternum.

22. Upper Limbs.—Violent pain in l. forearm, in radius, as if bones were crushed and broken.—Pulsation in l. index finger as if panaritium were forming.

Gunpowder.

Black Gunpowder. Carbon-Sulphur-Kali-Nitricum.

Clinical.—Abscesses. Acne. Bites. Blood-poisoning. Boils. Carbuncles. Cuts, poisoned. Ivy (Hedera) poisoning. Osteo-myelitis. Tonsillitis, septic. Vaccinosis. Worms.

Characteristics.—*Black Gunpowder* is a mixture and not a chemical compound. But for all that, it is a unit, and can be used as such in medicine. As it contains three potent remedies, two of them polychrests, there is little wonder at its medicinal powers. A fourth substance may have some share in its working, as a correspondent of *The Homśopathic World* writes that *Graphites* is used in its manufacture to give a coating to the grains. In its crude form it is an old-established remedy among the rank and file in the Army for gonorrhśa, syphilis, and blood disorders in general, especially boils. The London Police Force also know it as a boil remedy. "Get six-pennyworth of gunpowder from an oil store and take as much as would lie on a sixpence night and morning for four days, and then leave it off for the same time, and resume if necessary" is one prescription which has reached me for recurrent boils from the "Force." Canon Roland Upcher has related the experiences of Norfolk and Suffolk shepherds, who sprinkle gunpowder on their bread and cheese to cure and prevent infection when handling sheep affected with "rot." There is no proving of *Gunpowder*, but I made an experiment on myself with the 2x, as I have mentioned in my article on *Kali nitricum* in my *Dictionary of Materia Medica*. This resulted in a severe attack of herpes of right eyebrow and side of the nose, leaving permanent scars. I have used almost exclusively the 3x trituration, which I have prescribed in 4- , 6- , or 8-grain doses, three or four times a day, either in the form of powder or tablets. In August 1915 I put the recorded experiences into the form of a pamphlet, *Gunpowder as a War Remedy*, and since then many more experiences have seen the light, principally in the pages of *The Homśopathic World*. The indications for the remedy are broad and clear, so that no fine differentiating of symptoms is required. The list of diseases named under "Clinical" will be a sufficient guide, coupled with the broad indication "Blood-poisoning." *Gunp*. corresponds to suppuration in a great number of forms, many of them septic. I have not found it disagree with any other remedy, so that there need be no fear of alternating it with some other remedy if particularly indicated.

Canon Upcher has recently published cases of skin eruption mistaken for scabies by medical men, but actually produced by handling ivy, and quickly cured with *Gunp*. 3x. In some country districts a decoction of gunpowder is given to children for worms, lumbrici chiefly, and with much success.

Relations.—Canon Upcher finds that occasional doses of Hepar highly increase its effects. Calendula externally is also complementary. Thuja, Silica, Baryta carb. (septic tonsils) agree very well.

Causation.—Blood-poisoning.

Hæmatoxylon.

Hæmatoxylon campechianum. Logwood. (Central America.) N. O. Leguminosæ Cæsalpiniæ. Tincture of the heart-wood.

Clinical.—Angina pectoris. Colic. Diarrhœa. Dysmenorrhœa. Headache. Indigestion. Ptosis. Throat, sore.

Characteristics.—*Logwood* is the well-known dye of commerce. The tincture was proved by Jouve in 1839, and some very distinctive symptoms were produced. Constriction appears in many parts, culminating in the stomach and abdomen in colic and in the chest in symptoms very like many cases of angina pectoris. This is the most characteristic of all the symptoms of *Hæm*.: Sensation as if a bar lay transversely across from region of heart to right side, with acute pain in left upper portion of chest." This bar sensation has been frequently removed by *Hæm*.; and in a case of zona with agonising pain as if a bar lay across the chest, arresting the breathing, *Hæm*. did signal service for me. Disordered digestion accompanies and complicates most other conditions. Chilliness predominates, but the symptoms are > in open air. < At night; on stooping; by pressure; by touch. There is much general sensitiveness.

Relations.—*Antidoted by:* Camph. *Compare:* (in compressive pains) Cact., Lil. t., Coloc., Aur., Naja.

SYMPTOMS.

1. Mind.—Ill-humour; sadness; melancholy; vexation.—Inclination to repose; desire to weep.

2. Head.—Head heavy, painful, with difficulty in reflecting, and expressing one's ideas.—Vertigo, so as to occasion falling, and dulness of ideas.—Constriction in the forehead, and in the occiput, with burning heat in the head.—Headache at night, as from indigestion, with swelling of the stomach and abdomen, anxiety, inclination to vomit, sour risings of food.—Headache, esp. in the forehead, with inclination to vomit on stooping.—Pain in l. forehead, spreading over face and affecting l. teeth.

3. Eyes.—Eyes downcast and surrounded by a livid circle.—Painful pressure on the eyes, with sensation of constriction of the aperture of the eye-lids.—Redness of the conjunctiva, and of the lachrymal caruncula.—Redness of the eyes with blue margins.—Sensation as if sand were introduced into the eyes.—Heaviness of the eyelids, which compels them to close.—Heaviness in the eyes, and appearance as of a veil before the sight.—Pupils contracted, and sight confused.—Mist before the eyes; on reading, the letters vanish.—Amelioration of the symptoms of the sight in the open air.

4. Ears.—Violent pain in r. ear, extending to throat; throat feels contracted, with burning pain during deglutition.

6. Face.—Face pale, dejected, and changed, face discomposed.—Pain in the lower jaw, with stinging in the teeth and cheek.

9. Throat.—Sore throat, with difficulty of swallowing, sensation of contraction, inclination to swallow, salivation, and smarting.—Sensation of a foreign substance in the throat, with yawning and stretching.

11, 12. Stomach and Abdomen.—Painful swelling in the stomach, with pressure at the epigastrium, and risings of flatus.—Pain in the abdomen, with yawning, inclination to vomit, and stretchings.—Painful digging, which proceeds from the abdomen to the throat, and which causes a convulsive pain in the region of the heart, increased by the touch, and accompanied by oppression.—Attacks of tearing pains in the stomach and the abdomen, as if caused by poisonous substances.—Colic, with painful sensibility of the abdomen to the touch, inflation, tension and digging in the abdomen, borborygmi, soft fæces, with cuttings, lassitude in the limbs, palpitation of the heart, and uneasiness, with anguish.—Tympanitic distension of the abdomen and rising of air.—After the colic, general cold, with burning heat in the palms of the hands.—Colic, with pains in the loins, and nausea.

13. Stool and Anus.—Borborygmi, colic, and diarrhœa in morning.

14. Urinary Organs.—Urine red, scanty, and burning.

16. Female Sexual Organs.—Colic, as if the catamenia were going to appear, with slimy, whitish discharge from the vagina.

18. Chest.—Constriction, extending from the chest to the epigastrium, with smarting and burning pain, increased by the touch.—Sensation as if a bar lay transversely across, from region of heart to r. side, with acute pain in l. upper portion of chest.

19. Heart.—Convulsive pain in the region of the heart, increased by the touch, and accompanied by oppression.—Great soreness in the region of the heart, with anguish, redoubled throbbing, small pulse, burning in the hands, and shivering of the body.—Palpitations of the heart, with diminished perspiration of the feet.

20. Back.—Pain and chilliness between the shoulders.

21. Limbs.—The limbs are painful and languid.—Pain in l. shoulder, as if inflamed.—Suppression of the habitual sweat of the feet.

24. Generalities.–Painful sensibility of the limbs, with lassitude.—General uneasiness, with anxiety arising from the stomach, and colic.

26. Sleep.—Irresistible drowsiness.—Frequent yawning.

27. Fever.—Chilliness predominates, shuddering, goose-flesh.—Dry skin.

Hall.

The salt springs of Hall in Upper Austria, containing chlorides, iodides, bromides, and carbonates of the alkalies and alkaline earths and iron; but by far the largest ingredient is chloride of sodium. Dilutions.

Clinical.—Breast, affections of. Exophthalmic goître. Glands, enlarged. Goître.

Characteristics.—Provings have been made of this water, many of them on patients suffering from goître. Great weakness and exhausting night-sweats were produced and all the symptoms of cold in the head and chest. Many marked symptoms appeared in the mammary gland. Three different provers experienced them. A number of symptoms occur after sleep and some of them wake the prover in the night. One prover had a sensation as if her stomach would fall out, and as if her breasts would fall off. In many cases the pains are transient and acute, and return after a short interval.

Relations.—*Compare:* Nat. mur., Silica marit.; (stitches shooting out of nipple) Ol. an.

SYMPTOMS.

1. Mind.—Confusion of the senses.

2. Head.—Vertigo as if intoxicated.—Headache, esp. at first, sometimes increasing in severity and accompanied by vertigo, roaring in ears, sparks before eyes.—Drawing tearing in vertex towards r. temple.—Transient, painful tearings in occiput.

3. Eyes.—Heat, burning and violent watering of eyes, with feeling of catarrh in nose, as after smelling strong ammonia.

4. Ears.—Great difficulty of hearing.

5. Nose.—Frequent (violent) sneezing and feeling of commencing coryza.

6. Face.—Painful swelling of the lymphatic gland, size of pigeon's egg, r. side of face close to ear.

8. Mouth.—Accumulation of saliva.

9. Throat.—Frequent hawking with expectoration of mucus.—Burning and tickling; rawness as if tough mucus collected, difficult to loosen, with hoarseness; scraping.—Swelling of one of cervical glands (in a prover who had never had a swollen gland in her life before); in anterior portion of neck between hyoid bone and thyroid cartilage, size of walnut, painless, easily movable.—Goître gradually disappeared.

11. Stomach.—Regurgitation of bitter nauseous fluid from stomach.—Acidity, like heartburn.—Qualmish nausea: in evening; on going to bed; on awaking.—Vomiting.—Painful sensation of emptiness in stomach and hunger, although she had eaten much supper; the stomach felt painful and sick, as if it would fall out.—Violent gnawing, like hunger, in stomach extending downward into intestines.

12. Abdomen.—Cutting griping in abdomen, commencing near r. side of navel, extending outward, then following course of colon to rectum, involving a large circle about navel, followed by rumbling as if for stool, lasting an hour and returning at short intervals.—Transient painful sensation in r. flank.

13. Stool and Anus.—Thin, pasty evacuations, increasing to diarrhœa.—Unusually hard, difficult stool.

14. Urinary Organs.—Increased secretion of pale urine.

16. Female Sexual Organs.—Menstruation unusually profuse at first, at the right time.—Menstruation lasting only one day (usually three).—Menstruation appeared without any pain (very remarkable, as she had always been subject to pains in abdomen therewith. The cure was permanent).

17. Respiratory Organs.—Hoarse; piping voice, scarcely audible.—Cough in morning after rising.—Dry cough in evening with catarrh, which became loose in morning.—Cough hoarse, barking, very violent, dry, croupy or like the cough of laryngeal phthisis.—Remarkable dyspnœa, with palpitation on ascending a slight elevation, followed by the appearance of menstruation.

18. Chest.—Oppression of chest with difficult breathing.—Frequent waking from sleep on account of sticking in r. side of thorax.—A transient stitch in sternum, above pit of stomach, wakes her from sleep at night.—Two very violent stitches r. side, just below r. breast, during rest.—Her breasts, which were usually firm and full, became small and flabby.—Transient burning and sticking in l.

mamma.—Itching-sticking and burning superficially in l. nipple, temporarily > by rubbing, lasting 8 to 10 seconds, and returning after a short time.—Frequent stitches beneath l. breast.—Frequent transient stitches (very violent at times) in both breasts, with extreme sensitiveness, pressure of linen or bedclothes unendurable; sensation as if an ulcer forming deep in the breast; < by motion and touch; < at night, often waking her from sleep (lasted three weeks, and disappeared with the goître).—Violent stitches in substance of r. breast, piercing the nipple from within outward, wakens her at night.—Great painfulness and heaviness in both breasts, esp. on touch and motion, both feeling as though they would fall off.

19. Heart.—Palpitation.—Pulse greatly accelerated.

20. Back.—Pain like sprain, extending from r. lumbar region, across r. side of small of back into r. ischium.

21. Limbs.—Trembling of the limbs.

22. Upper Limbs.—Unable to exert r. arm without violent pain in axilla, where was found a gland, dark red, swollen, hot, very painful to touch, size of a walnut (it gathered and broke in five days).—Drawing tearing pain in l. humerus to elbow; lower end of l. elbow as if in periosteum while sitting still, followed by some violent stitches just below l. breast close to its margin.

23. Lower Limbs.—Violent sticking as with needles in r. heel (lasts a quarter of an hour, and returns after short pause).

25. Skin.—Boils: r. eyebrow; r. breast; l. breast; back of r. upper arm.—Burning pains in skin of dorsal surface of l. forearm on oblong spot with slight redness.

26. Sleep.—Night restless, with many dreams; unpleasant.

Hamamelis.

H. macrophylla. H. dioica. H. virginica. Witch-hazel. N. O. Hamamelidaceæ. (A shrub growing in all parts of U.S., in damp woods or along streams; flowers in autumn, flowers yellow, the seeds ripen the year following). Tincture of fresh bark of twigs and root. A resinoid, Hamamelin, is also prepared.

Clinical.—Abortion, threatened. *Ankles, weak. Black-eye. Bruises. Burns. Cancer.* Chilblains. *Consumption. Enteric fever. Gastric ulcer. Hæmatemesis. Hæmaturia. Hæmorrhages. Hæmorrhagic diathesis. Hæmorrhoids.* Leucorrhœa. Melæna. *Menstruation, disorders of; vicarious. Nipples, sore. Noises in the head.*

Nose, bleeding from. Ovaries, affections of. Pelvic hæmatocele. Phimosis. Phlegmasia alba dolens. Purpura. Rheumatism. Scapula, rheumatism of. *Scurvy. Small-pox. Testicles, inflamed. Ulcers. Uterus, affections of. Vagina, spasm of*. Varicocele. *Veins, varicose*. Wounds.

Characteristics.—The deep red colour of the tincture of *Hamamelis* may be taken as the signature of its therapeutic action. No remedy has a wider sphere of usefulness in cases of hæmorrhage and disordered blood-vessels. It has also a decided relation to the effects of mechanical injuries including burns of the first degree, and as a local application it takes rank with *Arnica* and *Calendula* in the homœopathic amamentarium. Hering, who learned its properties from Mr. Pond, of "Pond's Extract" fame (Pond was a patient of Hering's), made the first provings and introduced the remedy into homœopathy. He defines its position as being between *Acon*. and *Arn*. "Pond's Extract" is an aqueous distillate prepared from the leaves. A number of interesting superstitions are associated with the shrub; and shoots of it are used as "divining rods" for discovering water and metals. Hale has given a very full account of the remedy. Phlebitis; varicosis; hæmorrhoids; venous hæmorrhages—these are the conditions likely to require *Hamam*. The local application of *Hamam*. to a sprained knee has been known to set up inflammation in the veins of the part, and the provers who had varicose veins experienced in them increased sensitiveness and unusual sensations, and a number were cured. In congestion, inflammation, and bleeding of hæmorrhoidal vessels, *Ham*. has a great range of action; and like that other great pile remedy, *Æsculus h*., it has also a marked action in the throat. *Ham*. is called for in cases of "varicose angina," where the veins of the pharynx are large and blue. The hæmorrhages in which *Ham*. is indicated are mostly dark. They may occur from any orifice. Metrorrhagia, menorrhagia, vicarious menstruation and hæmorrhages between the periods are met by it. In this connection a case recorded by Dr. Ward (*Pacif. Coast J. of H*., November, 1899) is noteworthy. He cured a case of intermenstrual *pain*. Allen mentions in the provings an intermenstrual *flow*, and Dr. Ward acutely observes that if his patient has had the flow, the soreness so distinctly felt might not have been realised. "Intense soreness" is one of the notes of *Hamamelis*. The part from which the flow of blood proceeds feels sore and bruised. This distinguishes it from *Chi*. in passive hæmorrhages. It is a leading indication for it in cases of orchitis and ovarian affections; and also in phlebitis and varicose veins. In piles there is much bleeding and marked soreness of the part; the back feels as if it would break (*Æsc. h*. has little or no bleeding). There is taste of blood in the mouth. The headache of *Ham*. is chiefly in the temples, throbbing, hammering; especially over left eye. Hughes gave *Ham*. Ø to a young lady suffering from daily epistaxis and throbbing headache. The first dose was followed by a flushing of the face and most distressing throbbing-aching and sense of fulness in the head. The second dose brought back all the symptoms in the head, and a feeling as if it would burst. Some days later the 3x was given, and again the dilatation of the cerebral vessels occurred, though the symptoms were not so severe. The hæmorrhage of *Ham*. causes great exhaustion (out of proportion to the amount of loss), but there

is also a tired, aching feeling in the back and lower limbs, independently of hæmorrhages. Many rheumatic symptoms occur, and with them always the characteristic soreness. A woman, thirty-five, to whom I gave *Ham*. 1 for varicosis with great advantage, developed marked loss of appetite and these additional symptoms: "Pain all round lower abdomen, dreadful aching, rheumatic pain at top of left shoulder and under right shoulder-blade, also right side of chest under arm. Pains < during the day and when at rest, entirely absent during the night. Stupid feeling in head." This scapular pain bears on the experience of Dr. Koech, who cured with *Ham*. many cases of scapular rheumatism. He regards it as a specific in affections of the last five cervical nerves. There is a good deal of thirst in the *Ham*. pathogenesis, and Bree says (*H. P*., xii. 61) it will relieve the excessive thirst that most patients with heart troubles complain of. Motion and exertion in general <. < In open air; in rainy weather. Takes cold easily from every exposure, but especially to warm, moist air. Toothache < in warm room. < From touch.

Relations.—*Antidoted by:* Arn., Camph., Chi., Puls. (toothache). *Complementary to:* Ferrum in hæmorrhages. *Compare:* Arn., Calend. ("is better than either in hastening the absorption of intra-ocular hæmorrhage," Hering); Chloral, Secal. (purpura); Fl. ac., Lach., Secal., Puls., Nux, Æsc., Nit. ac. (in varicose veins and piles); Spo., Puls. (orchitis—Ham. has more soreness); Act. r. (abdominal soreness after labour; Ham. is an excellent external application); Bry. (vicarious menstruation); Nit. ac. (hæmorrhage in typhoid; Nit. ac. light, Ham. dark); Bell., Euphorb., Rhus, Tereb. (as an application in burns of first degree); Sanguisuga (hæmorrhages).

Causation.—Injuries.

SYMPTOMS.

1. Mind.—Forgetful.—No desire to study or work.—Depressed in mind; also after emissions, with regretful mind.—Irritable.

2. Head.—Vertigo when stooping.—Swimming sensation on rising.—Nausea and vertigo, with desire to lie down.—Stupor; headache; crowding fulness in head and neck, also in forehead.—Stupid feeling in head.—Feeling as if a bolt were passed from temple to temple, and tightly secured.—Fulness in forehead, with pressing in root of tongue.—Bursting headache on awaking, insupportable on bending downward.—Dulness and fulness in head all day.—Headache after an emission.—Hammering over l. eye, as if he would go out of his mind.

3. Eyes.—Eyes feel weak, but are less inflamed; painful weakness of the eyes.—Feeling as if both eyes would be forced out of head, > by pressing them with the fingers, but < a few moments afterwards.—Sore pain in eyes; eyes painful under slight pressure.—Swelling of eyeballs and lids, with bloodshot appearance of r.

eye.—Eyes inflamed; vessels greatly injected; caused by a foreign substance, as melted sugar; after operations; intense soreness.

4. Ears.—Deafness in r. ear, passes off by noon.—Bleeding at r. ear, also nose-bleed, which clears her head, relieving her.—Buzzing, ringing in ears.

5. Nose.—Over-sensitive smell.—Bad smell from the nose.—Sneezing spells, watery, excoriating, burning discharge.—Nose feels stopped up.—Epistaxis, flow passive, non-coagulable.—Epistaxis, with a feeling of tightness of the bridge of the nose, and crowding pressure in forehead between the eyes.—The nose-bleed clears her head and affords great relief.—Profuse epistaxis; flow venous; idiopathic or vicarious.

6. Face.—Burning in r. cheek.—Occasional shooting pains along r. superior maxillary to malar bone.—Muscles feel sore and stiff.—Lips: dry; sore; cracked.

7. Teeth.—Sharp, lancinating along the molar teeth, extending to the malar bone; also in temporal region.—Teeth ache, can scarcely sleep, yet not decayed.—Pains < in warm room.—Gums sore, painful, swollen; bleed easily; dark fluid.—Passive venous hæmorrhage after extraction of teeth.

8. Mouth.—Metallic taste; tongue coated white.—Scalding sensation on tongue.—Blisters on sides of tongue; canker spots near the tip.

9. Throat.—Severe stinging in uvula, as if it would break, when he coughs.—Dryness of the lips and fauces; tonsils and fauces congested, veins enlarged, varicose; must drink large quantities of water to assist deglutition.—Sore throat < r. side, r. tonsil more swollen; reddened.—Sore throat in those predisposed to fulness of the veins, < in warm, moist air.—Hawks considerably.

10. Appetite.—No appetite for breakfast; considerable thirst, > by small quantities of water.—Appetite good.—Very thirsty; in afternoon and evening; throat dry.—Averse to water, makes him sick to think of it.—Pork nauseates.

11. Stomach.—After eating: nausea, must keep quiet; eructations; hiccough.—Eructations after a meal, taste of the food.—Nausea, eructations and violent hiccough after pork, followed by burning in stomach and œsophagus; later, cramp pains in stomach and chest.—Nausea, vertigo, must lie still to prevent vomiting.—Nausea, headache in frontal bone on awaking.—Nausea and inclination to vomit after a meal.—Hæmatemesis, blood black; sensation of trembling in stomach, or fulness and gurgling in abdomen; feverish by spells; weak, cold, quick pulse, profuse sweat.—Heaviness at back of stomach; pain back of stomach, along the spinal column.—Violent throbbing in stomach.—Cramp in stomach after eating.

12. Abdomen.—Cramps in stomach and transverse colon two hours after a hearty dinner.—Flatulence.—Burning in the epigastrium and umbilicus.—Pain all round lower abdomen.

13. Stool and Anus.—Stools: costive; hard, coated with mucus.—Dysentery when the amount of blood is unusually large; dark, small clots, or patches through the mucus.—Large quantities of a tar-like blood (typhoid).—Piles: bleeding profusely; with burning soreness, fulness and weight; back as if it would break; urging to stool.—Itching at the anus.

14. Urinary Organs.—Increased desire to urinate.—Urine clear copious.—Scanty high-coloured urine.—Hæmaturia; passive congestion of the kidneys; dull pain in renal region.—Irritation of the urethra, followed by a discharge and ardor urinæ.

15. Male Sexual Organs.—Emissions at night, without being aware of it; headache, depression of mind.—Erections; great desire for an embrace.—Severe neuralgic pains in testicles suddenly shifting to bowels, causing nausea and faintness.—Pain running down the spermatic cords into the testes.—Profuse cold sweat on scrotum; capillary stasis.—Orchitis, intense soreness and swelling.—Varicocele.

16. Female Sexual Organs.—Dysmenorrhœa, with severe pains through the lumbar and hypogastric region and down the legs; fulness of the brain and bowels, with severe pain through the whole head, causing stupor, deep sleep; varicose veins.—Active uterine hæmorrhage blood bright red.—Metrorrhagia, passive flow, venous blood; anæmia.—Amenorrhœa, vicarious bleeding from nose or stomach; costive; varices on legs.—Leucorrhœa, great tenderness of vagina; flow bloody.—Vaginismus, intense soreness; prurigo of vulva.—Ovaritis after a blow; diffused agonised soreness over the whole abdomen; menses irregular; < at time of menses; retention of urine.—Phlegmasia alba dolens.—Sore nipples.

17. Respiratory Organs.—Hoarse on arising; awoke hoarse.—When lying, felt a smothering sensation.—Tickling cough, taste of blood on awaking.—Dry cough, severe stinging in the uvula, as if it would break.—Expectoration thick, yellowish or greenish grey, tasting putrid.

18. Chest.—Hæmoptysis, tickling cough, with taste of blood, or of sulphur; dull frontal headache; tightness of the chest; cannot lie down, because of difficult breathing from congestion; fulness in the head; mind calm.—Stitches in lower part of lungs.—Sensation of constriction across chest < by a long or deep breath.—Dull aching pain constantly in muscles of l. chest, < using arms, afternoon and evening.

19. Heart and Pulse.—Palpitation.—Pricking pain in region of heart and superficial veins of both arms.

20. Neck and Back.—Sore pain down the cervical vertebræ.—Dull pain, constantly under angle of l. scapula.—(Rheumatism of scapula.).—Tearing pains across small of back. with fulness of joints of legs.—Small of back feels as if it would break.

21. Limbs.—Tired feeling in arms and legs.—Great lassitude and weariness of the limbs and elsewhere.—Rheumatism, with great soreness of the muscles.

22. Upper Limbs.—Bruised feeling in upper arms and shoulder, < from motion.—Dreadful aching rheumatic pain at top of l. shoulder, and under r. scapula and r. side of chest under arms; < during day and at rest; entirely absent during night.—Stiffness in arms and shoulders.—Tenderness of r. biceps, < by pressure.—Stiffness of elbow-joint.—Rheumatic pain, constant aching in l. arm.—Lancinating in l. wrist-joint.—Violent pain in back of r. hand to shoulder-joint.—Hands chapped.—Thumb nail becomes sore, pus discharges after a slight knock.

23. Lower Limbs.—Sore pain in r. femur, muscles of thighs sore, as if bruised.—Soreness in femoral vessels to middle of thigh.—Weakness of knees, afternoon.—Forcing feeling in the varices; veins sensitive, dilated.

24. Generalities.—Takes cold easily from every exposure; but esp. to warm, moist air; subject to varicose veins.—Venous constitutions.—Prickling stinging: in veins, muscles, skin.—Phlebitis; prickling pains.

25. Skin and Tissues.—Chilblains always bluish.—Varicose veins and ulcers, with stinging or pricking.—Bruised soreness.—Purpura.

26. Sleep.—Restlessness at night.—Uneasy, restless morning sleep.—Emissions of semen during sleep.

27. Fever.—Chilly on going to bed; dreaded an attack of fever.—Cold creeps in the open air, chills run up the legs, head stopped up, dull pain over orbit.—Chilliness over back and hips, extending down the extremities.—Fever at night; hands hot, burning in the eyelids on closing them.—Sweats freely at night, after lying down.—Pulse accelerated; full.

Hecla.

Heclæ lava. The finer ash from Mount Hecla, falling in distant localities. Trituration.

Clinical.—Antrum of Highmore, tumour of. *Bones, affections of*. Breast, tumours of. Dentition, difficult. *Exostoses*. Glands, affections of. Jaws, tumours on. Milk,

deficient. Neuralgia. Osteitis deformans. Osteomalachia. Osteosarcoma. Periostitis. Rickets. Syphilis. Teeth, caries of. Toothache. Tumours. White swelling. Whitlow.

Characteristics.—I have chosen the single word *Hecla* in preference to *Heclæ lava*, as being simpler and more convenient. The ash and scoriæ of this volcano contain *Silica, Alumina, Lime, Magnesia*, with some *Oxide of Iron*. When travelling in Iceland, Garth Wilkinson noticed that the sheep in the vicinity of Hecla had immense exostoses on the jaws. Another effect noticed was the drying up of the milk both in sheep and cows. The finer ash which fell on pastures at a distance, was the most deleterious; the gross ash near the mountain was inert. In cows, post-mortem examination showed the intestines filled with ashes, hardened to a mass, and stomach coated over with a pitch-black membrane spotted with brown, and difficult to remove by washing; the jaw teeth were covered with a shining metallic crust. Several young horses died from lumps on the jaw-bones, so large as to cause dislocation. Sheep, when slaughtered, were found to be of bluish hue internally, and the intestines were friable. In many cases worms from two to three inches long, with pale grey bodies and brown heads, and a little thicker than a horse-hair, were found in the bronchia. In sheep the osseous and dental systems were much affected. The head-bones, and especially the jaw-bones, swelled and became so friable that when boiled they fell to pieces. The thigh, and especially the shin bones, swelled and bulged. The jaws were sometimes covered with large swellings, which spread and were looser of texture and darker in colour than the bone; these could be separated from the bone without injuring it; but in some fatal cases a hole going down to the marrow was discovered under the swelling. Garth Wilkinson adds to the above that he has used *Hecla* with excellent effect in toothache, gum abscess, swellings about the jaws and in difficult dentition. Clinical experience has shown the power of *Hecla* to arrest many forms of bone disease, including osteo-sarcoma, scrofulous and syphilitic osteitis and exostoses. The swellings amenable to it are painful and sensitive to touch; < from touch and pressure. The glands are affected almost as much as the bones: "induration and infiltration of cervical glands, studding neck like a row of pearls." The right side has been more predominantly affected. The subjoined schema is compiled mainly from cured symptoms.

Relations.—*Compare:* Conchiol., Silic., Calc., Slag, Phos., Stilling., Sulph., Kali iod, Amphisb., Symphyt., Ruta.

Causation.—Injury to bone.

SYMPTOMS.

2. Head.—Vertigo, everything goes up, down and sidewise.—Chronic headache.

5. Nose.—Destructive (syphilitic) ulceration of nasal bones.

6. Face.—Facial neuralgia or headache dependent on irritation of dental nerves or carious tooth.—Polypoid growth commencing in antrum of Highmore, deforming face, forcing eyeball upward and everting lid, obstructing nostrils; extending downward into mouth, impeding breathing and mastication; epistaxis; headache.

7. Teeth.—Toothache, esp. if teeth are very sensitive to pressure; with swelling about jaws.—Neuralgia, from carious tooth; in cavity from which tooth has been extracted.—Abscess; or enlargement of bone remaining after tooth extraction.—R. cuspid of upper jaw very sensitive to slight pressure on crown; swelling and indurated tumour as large as a pea under r. ala nasi, very sensitive to touch; conjunctivitis of r. eye.—Difficult dentition in scrofulous and rachitic children.

16. Female Sexual Organs.—Dries up the milk (sheep and cows).

18. Chest.—Myalgia, esp. of intercostal muscles.

20. Neck.—Induration and infiltration of cervical glands, studding neck like a row of pearls.

23. Lower Limbs.—Hip disease.—Exostoses of tibia; severe continuous pain incapitating from work.

Hedeoma.

Hedeoma pulegioides. American Pennyroyal (the British "Pennyroyal" is Mentha pulegium, also a Labiate). N. O. Labiatć. Tincture of whole fresh plant.

Clinical.—Amenorrhśa. Dysmenorrhśa. Leucorrhśa.

Characteristics.—Both the American and the British "Pennyroyals" have a popular reputation as "female regulators," which is by no means undeserved. Homśopaths have verified the relation of the drug to uterine ailments, and an observation by Dr. Toothaker of a case of poisoning affords valuable ground for homśopathic prescribing. Bearing-down pains were most marked, < by any movement, and accompanied by almost paralytic weakness of the legs. Nervous symptoms were very prominent, jerkings and twitchings. Weak, faint, > lying down; inability to sit up. Pains in abdomen < after eating or drinking. < By touch and pressure.

Relations.—*Compare:* Mentha pulegium, Sep., Sabi., Lil. t.

Veratrum *antidoted* some of its effects.

SYMPTOMS.

2. Head.—Dull, heavy feeling in head in morning, not continued through day.—Sore pain in l. temporal ridge, as of a cut or wound, lasting about six weeks.

9. Throat.—Sensation of something rising in throat, or as if her breast were coming up into her mouth.—Great difficulty in swallowing, it nearly took her breath away.

11. Stomach.—Nausea, a rising-up sensation from stomach, producing occasional retching.—Excessive retching, nausea and straining.

12. Abdomen.—Abdomen very sore and sensitive to touch and pressure.

13. Stool and Anus.—Obstinate constipation; painful evacuations every four or five days.

14. Urinary Organs.—Frequent urgent desire to pass water; passes very little; cutting, burning pains with tenesmus of sphincter urinarius.

16. Female Sexual Organs.—Excessive bearing-down pains with pressure outward towards vulva, from whole lower abdomen, accompanied by almost unendurable pains in back, drawing down from upper sacral spine, extending also to epigastrium and stomach; like veritable labour-pains; returning with regular periodicity if she remained at rest; greatly < by the least movement; she lay on the floor on a small mattress, and could not be removed, on account of the aggravation, until the following day; < by the least food or drink.—Leucorrhśa with itching and burning (commenced sixth day and lasted some weeks).

17. Respiratory Organs.—Shortness of breath as if from an asthmatic attack.—Frequent, periodical dyspnśa with oppression of thorax.

20. Back.—Unendurable pains in back, esp. in sacral spine near the upper vertebrć, dragging down from that point to uterus.—Excessive pains in back and head.

21. Limbs.—Semi-paralysis of limbs; could not stand or move, or bear the pain of movement.—Pain and coldness of limbs, esp. of feet.

24. Generalities.—Affected all her nerves; nervous twitchings and jerkings in all the fibres of the body, sensible in the pulse or wherever the observer's fingers touched the flesh.—Semi-paralysis.—Prostration following retching.—General soreness.

Hedera Helix.

Common Ivy. N. O. Araliaceæ. Tincture of young shoots.

Clinical.—Cataract. Hydrocephalus, chronic. Rhinorrhœa cerebro-spinalis. Rickets.

Characteristics.—Our knowledge of the therapeutic properties of *Ivy* we owe to Dr. Cooper, whose experience has shown it to have a relation to ricket and rickety conditions. The only published case (*H. W.*, xxxiv. 489) is, that of a girl of twenty, whom he cured of chronic hydrocephalus with a single dose, once repeated after eighteen months on a threatened return of the symptoms. The circumference of the patient's head, when she was brought to Cooper, was 27 1/2 inches, rendering her an object of wonder and ridicule to street arabs, and reacting on her disposition and nervous state. The condition had existed from childhood and was apparently growing much worse. There were two large œdematous swellings on the nape of the neck, one on either side and immediately below the occiput, evidently the result of intra-hydrocephalic pressure. One drop of *Hed. h.* Ø was placed on her tongue. Next morning clear fluid began dripping from the nostrils, a "cerebro-spinal rhinorrhœa" in fact. This continued three weeks, between twenty and thirty pocket-handkerchiefs being used in a day. Simultaneously the swellings began to diminish and had completely disappeared when the discharge ceased. Thirteen months later, when being measured for a hat, it was found that the size of the head was reduced to 25 inches, and no longer occasioned remark. When, later on, some symptoms of brain-pressure seemed to threaten a second dose of *Hed. h.* completely dispelled them. The disposition of the patient was completely changed; from being nervous, unhappy, and diffident, she became lively, cheerful, and active. In cases of rhinorrhœa cerebro-spinalis *Hed. h.* must be thought of. *Hed. h.* has been used as a sternutatory for "clearing the sight" from time out of mind, and Cooper tells me it has cured cases of cataract.

Relations.—*Compare:* Aral. r., Ginseng (botan.); Silic., Nat. m.

Hedysarum Ildefonsianum.

Hedysarum desmodium. Barba de Roy. Carapicho. Brazilian Burdock. N. O. Leguminosæ.

Clinical.—Gonorrhœa. Gonorrhœal ophthalmia. Penis, inflammation of.

Characteristics.—This plant is named by Mure, who gives a figure of it in his book and describes it thus: "The brownish ligneous stem of this plant is about three feet high; it is ramose, pubescent, especially above. Leaves alternate, pinnate, trifoliate; folioles oval and slightly tormentose, on a hairy, bistipulate petiole. The

flowers, which are small and seated on filiform unifloral peduncles, form loose, terminal spikes. Fruit oval, hairy, on bent peduncles, and attaching itself very intimately to clothes and to hairy skin of animals." I give this description in full because the species, according to Allen, is doubtful. The symptoms are not many but they are very definite, and knowing the value of Mure's observations in the case of *Ocim. can*. and other remedies I give them in full. The chief effect was inflammation of the penis and of the eyes, which should indicate it in some cases of gonorrhœal ophthalmia.

SYMPTOMS.

3. Eyes.—Pain and pricking in eyes.—Redness of sclerotica.—Smarting, with lachrymation.

12. Abdomen.—Painful tearing from loins to navel (better second day).

13. Stool.—Diarrhœa.—Constipation.

14. Urinary Organs.—Profuse urination.

15. Male Sexual Organs.—Sudden appearance of yellowish discharge from urethra.—Itching of penis.—Redness and smarting of penis.—Painful swelling of penis with erysipelatous inflammation.—Thin stream of urine in consequence of the glans being swollen.

21. Limbs.—Pain in upper and lower limbs.

22. Upper Limbs.—Fingers contract with pain.

26. Sleep.—No sleep for several nights running.

27. Fever.—Fever and rheumatic pains.

Helianthus.

Helianthus Annuus. Sunflower. N. O. Compositæ. Tincture of mature flower-heads. Tincture of ripe seeds.

Clinical.—Cold. Constipation. Epistaxis. Hæmorrhoids. Nasal obstruction. Spleen, affections of. Throat, sore. Urticaria. Vomiting. Wounds.

Characteristics.—Dr. Cessoles proved the expressed juice of the flowers; some observations have also been made on the effects of eating the seeds. In some parts of America the Indians use the seeds as an article of food. In the provers there were

marked effects on stomach, nausea, and vomiting. In one hæmorrhoids appeared, the stools were black and soft, and with them there was an emission of semen; and later the stools were hard and black and occurred every other day. The skin was affected also. Burnett regards *Helianth*. as a great spleen remedy. *Helianthus tuberosus* is the Jerusalem artichoke. I know many persons who cannot eat these on account of the excessive flatulence they produce. The symptoms of *Helianth*. were > after vomiting. Skin is < by external warmth. Hansen says it equals *Arnica* and *Calendula* (also yellow-flowered composites) as an application to wounds.

Relations.—*Compare:* Lept. (black stools); Arn., Calend., Hyperic. (wounds); Cean. (spleen).

SYMPTOMS.

2. Head.—Headache.

3. Eyes.—Slight redness on margin of l. upper lid, with smarting in inner canthus.—Eyes suffused.

5. Nose.—(In a rover who had a slight nasal obstruction causing constant passage of secretion through the posterior nares), after a short time epistaxis occurred, and the nostrils became free, and during the ensuing winter the secretions were healthy, and discharged through the natural passages.

6. Face.—Anxious countenance.—Face deeply flushed.

8. Mouth.—Sticking in upper back teeth.—Tongue and fauces very red and inclined to dryness.—Unusually hot taste when eating.—Difficulty in articulation.

9. Throat.—Stiffness and dryness of the throat.—Sensation of glowing in the throat and stomach immediately.—Severe burning in fauces, œsophagus, and epigastrium.

11. Stomach.—Thirst; nausea.—Vomiting, produced apparently by too powerful a dose of the medicine; this recurred frequently, though in slight degree, when Helian. was taken for an ordinary cold.—Symptoms increased in severity till she vomited freely when she felt rather better.

12. Abdomen.—(Spleen enlarged and painful.)

13. Stool and Anus.—Hæmorrhoids.—Stools: soft, black, with emission of semen; hard, black every second day.

17. Respiratory Organs.—Voice hoarse.—Cough, in forenoon, with gelatinous expectoration streaked with blood.—Breath rather difficult and hurried.

23. Lower Limbs.—Rheumatic pain in l. knee on descending stairs.

25. Skin.—Skin generally of scarlet redness and very hot.—Groups of red pimples inner side of knee with slight itching.—Many urticaria-like pimples, esp. inner side of forearm, afterwards on leg, afterwards itching in external warmth, in morning and night.—Small red tetter to r. of navel.—Tingling of skin.

Heliotropium.

Heliotropium peruvianum. Heliotrope. Cherry-pie. N. O. Boraginaceæ.
Tincture of whole fresh plant when in flower.

Clinical.—Clergyman's sore throat. Dysmenorrhœa, membranous. Hoarseness. Leucorrhœa. Uterus, misplacement of.

Characteristics.—*Heliotrope* has been slightly proved. Symptoms of pressure and tension were produced in many parts: pressure on the sternum impeding breathing; pressure on the head; on mons veneris; pain as if beaten in leg muscles. Cooper has used this remedy clinically and considers hoarseness and "thick voice" a great indication. He has cured with it clergyman's sore throat. It has also an action resembling that of *Natrum hyperchlorinosum* in uterine displacement, leucorrhœa, backache. With *Nat. hyper*. there is passive bearing down from heavy, water-logged condition of uterus. With *Heliot*. the bearing down is *active*. The effect of *Heliot*. given by Cooper to a lady who had been advised by several surgeons to have various organs either braced up surgically, or removed, was described by her as having made her "feel just as if braced up" six hours after taking the dose. It is especially indicated if there is also a tendency to loss of voice. It has cured membranous dysmenorrhœa. The head symptoms of the proving were > on walking in the open air. Other symptoms were < after resting; < on inspiration.

Relations.—*Compare:* Nat. hyperchl.; Borax (membranous dysmenorrhœa); Symphytum (bruised, pain in leg).

SYMPTOMS.

2. Head.—Headache in forehead, like a pressure and drawing pressing, > walking in open air.

3. Eyes.—Feeling of tension in l. inner canthus extending down into nasal bone, as if a swelling were there; eye seems drawn together and smaller.

11. Stomach.—Pressure in pit of stomach and internal surface of sternum, at times with fine sticking externally in the same place; esp. < on inspiration, and the epigastric region is sore to touch; most violent after eating and in evening.

16. Female Sexual Organs.—Pressure on mons veneris only when sitting.—(Membranous dysmenorrhœa; leucorrhœa; uterine displacements; with backache; esp. if subject to loss of voice.)

17. Respiratory Organs.—(Voice thick; clergyman's sore throat.).—Pressure and oppression of external parts of chest, without affecting breathing.

23. Lower Limbs.—Pain in outer part of leg above ankle, extending up the muscles, as if beaten, even when sitting.—Itching on tibia, with sensation as if there was an eruption.

Helix Tosta.

Toasted snail. N. O. Helicidć. Trituration.

Clinical.—Hćmoptysis. Phthisis.

Characteristics.—Snails have a traditional virtue in curing consumption, and homśopaths have put the remedy to the test by potentising it. W. H. Leonard (*Med. Adv*., xxii. 310) reports two cases cured with *Helix t.* c.m. (*1*) A gentleman had frequent attacks of hćmoptysis. Continuous hoarseness; dry, tickling cough; < at night, preventing sleep; dyspnśa, < ascending stairs. He had already had all the usual remedies. *Helix tost*. c.m., three powders given. There was no more hćmorrhage. A few weeks later a return was feared and a few more doses were given. Four months later the patient was greatly improved in health and remained well. (*2*) A lady of tubercular diathesis developed the disease after confinement. Several well-indicated remedies failed to check its progress. At length hćmorrhage set in. *Helix* was given as in the other case with prompt effect. Hćmorrhage ceased; cough and expectoration gradually improved, and in eight months the patient was well and remained so.

Helleborus Fœtidus.

Bear's foot. N. O. Ranunculaceæ. Tincture of the root.

Clinical.—Cholera. Hair, failing off. Nails, falling off. Scarlatina. Skin, peeling. Stiff-neck.

Characteristics.—The effects of *Hel. f.* have been observed on several persons. It is a violent narcotico-acrid poison, and in fatal poisoning cases death has taken place in convulsions. The vision is disordered; choleraic symptoms occur; skin, hair, and nails exfoliate. The anxiety is > after vomiting.

Relations.—*Compare:* Verat. alb. (copious liquid stools); Hell. n., Hell. v., Colch.

SYMPTOMS.

1. Mind.—Dreadful anxiety; > after vomiting.

3. Eyes.—Great difficulty in reading, in evening, by candle-light; the sensation is as when the light flickers from a draught of air; cannot follow the lines.

4. Ear.—Thumping pain below and behind l. ear.

8. Mouth.—Smarting at tip of tongue.—Painful sensation like aphthæ in mouth (inhaling fumes of triturated plant).—Taste of manure; tongue yellow in middle.—Excoriation of mouth and throat.

11, 12. Stomach and Abdomen.—Nausea and vomiting of food (taken an hour before with relish).—Constant inclination to vomit.—When pounding the plant it seems that the epigastrium with difficulty keeps time with the inflation of the chest on inspiration.—Frightful pain in pit of stomach.—Colic.

13. Stool and Anus.—Violent purging and vomiting with pain in stomach.—Abundant liquid stool during night; next day two liquid, whitish stools; again a liquid stool forty-eight hours later.

18. Chest.—Tightness of chest, can scarcely half draw his breath.

20. Neck.—Numbness in muscles of neck; sensibility to touch blunted it becomes stiff eighteen hours later.

24. Generalities.—Fatal convulsions.—Swooning.

25. Skin.—Skin of whole body peels, hair falls out, all the nails fall off.—Profuse discharge from ulcerated surface (from application).

26. Sleep.—Stirs a good deal in his sleep.

Helleborus Niger.

Black Hellebore. Christmas Rose. N. O. Ranunculaceć. Tincture of dry powdered root. Juice of fresh root mixed with equal parts of alcohol.

Clinical.—Albuminuria. Amenorrhśa. Aphthć. Apoplexy. Cholera. Concussion. Convulsions. Cystitis. *Depression of spirits*. Diarrhśa. *Dropsy*. Epilepsy. *Headache*. Hernia. Home-sickness. Hydrocele. *Hydrocephalus*. Kidneys, congestion of. Melancholia. *Meningitis*. Night-blindness. Puerperal convulsions. Scarlatina. Tetanus. Typhoid fever. Ulcers. Wounds.

Characteristics.—*Black Hellebore* was one of the drugs used to produce the "Helleborism of the ancients," the subject of Hahnemann's famous essay; but the drug most commonly employed was the *While Hellebore*, or *Veratrum album*, which belongs to another family, the Melanthaceć. "Black" hellebore receives its name from the external colour of its root; the root of *Ver. alb*. is extremely white. Teste quotes Hahnemann as saying: "I conclude from various observations that one of the first effects of *Black Hellebore* is a kind of stupor, a dulness of the *sensorium commune*, a condition where, with sight unimpaired, nothing is seen very fully, and the patient does not pay any attention to anything; with the hearing perfectly sound, nothing is heard distinctly; with perfectly constituted gustatory organs, everything seems to have lost its taste; where the mind is often or always without ideas; where the past is forgotten or little remembered; where nothing gives one any pleasure; where one's sleep is very light, and a really sound, refreshing sleep is not to be had; and where one desires to work without having the necessary strength or attention required for it." Teste groups Hell. n. in the *Chamomilla* class, with *Gratiola* and *Viola tric*., all of which cause "a particular derangement of the cerebral functions and even of the whole nervous system; a painful increase of the sentient action, followed by a considerable depression of the vital forces, and a certain disorder of the mental faculties." He cured with *Hell. n*. a case of epilepsy in a little girl five weeks old after the failure of *Cham*. *Cham*. was given to the nurse, *Hell. n*. directly to the patient. The history was this: The child, which was well formed, was constipated from the day of birth. The mother, twenty-eight, dark, robust, but of irritable temperament, laid the child's sickness to a fear she had had towards the end of her pregnancy. This may have been the case, but the lady had lost a boy in convulsions, precisely similar, the previous year. The little girl had every day five or six paroxysms, each lasting from one to three minutes, and almost always followed by sleep. There was sudden inability of the body, without any marked stiffness; head slightly thrown back; repeated oscillations of tongue from right to left, the tongue being slightly protruded from the mouth. Staring look, convulsive rolling upward of eyes when the paroxysms were very violent; a few acute cries followed by drowsiness, when the spasm was near its end. During the paroxysm the child remained so perfectly sensible that a slight shock, as the shutting of a door, arrested the paroxysms at

once, and then shortened them a good deal. *Hell. n*. cured in two or three days. From a purely nervous derangement of this kind, the action of *Hell. n*. goes on to actual inflammatory states of the brain and its meninges. The drowsiness so prominent in Teste's case is a leading note of the conditions of meningitis and fever to which the drug is homeopathic. Such a condition is found when effusion has taken place from the inflamed membranes, and here the ancient reputation of *Hell. n*. in dropsical conditions is confirmed. The forehead is wrinkled; there are automatic movements of one arm and leg, whilst the other is paralysed; the head rolls from side to side with screams; greedy drinking of water; chewing motion of jaws; urine scanty or entirely suppressed, sometimes with sediment like coffee grounds. This condition of urine is an indication for *Hell. n*. in many states, and a sign of the favourable action of the remedy is, as Nash points out, an increase in the amount of flow. In post-scarlatinal dropsy with these indications it is of great service. It has cured concussion of the brain resulting from a blow on the head after *Arn*. had failed. In this case one pupil was larger than the other; the patient was drowsy, answered questions slowly; one leg dragged on walking. In fever there is sooty appearance of nostrils; dry, yellow tongue with red edges; breath horribly offensive; drinks roll audibly into stomach; fever < 4 to 8 p.m.; face pale, almost cold; pulse faint, imperceptible; picks clothes and lips. Guernsey sums up the remedy thus: "In dropsical affections; dropsy of outer parts and of inner parts; parts which are usually white turn red; absence of thirst in all complaints; chilliness, heat, perspiration without thirst. Discharge of urine too scanty; urine with dark sediment like coffee grounds─top part is clear, but leaving this sediment. Nausea at the stomach; rumbling and rolling in the bowels; darting in the joints, also in the bones; heat with shuddering." In addition to the "absence of thirst" there is "drinks with avidity, bites spoon, but remains unconscious," and "Thirst with disgust for drink," as there is also "Hunger: child nurses greedily with disgust for food." Hunger, yet food is repulsive though it tastes natural. The hungry, nauseated, uneasy sensation at the epigastrium showing its profound action on the solar ganglion. Cooper, who has studied the Hellebores very closely, says that they produce the "sinking sensation" more intensely than any other drugs. The Winter Aconite (*Eranthis hyemalis*), a close ally of *Hell. n*., "acts on the solar plexus and works upwards, causing dyspnśa." He quotes (*H. W*., xxx. 210) from *Flora Historica* an interesting account of how French prisoners of war at Norman-cross were suffering from an epidemic of night-blindness (nyctalopia), when for lack of snuff they took to using powdered *Black Hellebore*, with the result that they were cured of their blindness in a few days. Among the dropsies cured may be mentioned hydrocele from suppressed eruptions. The old use of *Helleb*. as an application to ulcers seems to have depended on its property of draining the tissues. In the pathogenesis of *Hell. fśt*. is a symptom bearing on this profuse discharge from ulcerated surface." Cooper has cured ulcers with dropsical conditions with *Hell. n*. and *Hell. v*. given internally. The headaches of *Hell. n*. are stupefying; sensation as though contents of head were bulging at forehead and eyes; shocks pass through the brain like electricity; boring and shaking in forehead

and occiput; bruised pain; heat in brain. Pains in occiput and nape of neck I have frequently cured with *Hell. n.*; also headache which the patient can only describe as a "stupid headache." There is vomiting and purging as with the other Hellebores, the vomit is apt to be green and the stools jelly-like. The pulse is slow and feeble, the respiration is slow and the temperature low. Torpidity and apathy run through the remedy. In this it approaches *Opium*. Apoplexy followed by idiocy. The symptoms are < 4 to 8 p.m., and in the evening and night (sees spirits; rolls head; dry cough; night-blindness); < in cool air; from uncovering; > in warm air; by wrapping up. < From exertion from motion; from stooping; breathing easier when lying down lying perfectly quiet > pains in head. Touch <. < When thinking of ailment; > when mind is diverted.

Relations.—*Antidoted by:* Camph., Chi. *Compatible:* Zinc., Bell., Bry., Chi., Lyc., Nux v., Phos., Puls., Sul. *Compare:* Apis. (Apis has exquisite sensitiveness of abdomen; Hell. n. complete sensorial apathy; Hell. n. has puckering of face, dropping of jaw, and automatic action of limbs of one side; Apis has < from heat, Hell. n. > from heat); Apocy., Digit. (slow pulse); Kali bro., Lach.; Dig., Tereb. (breathes better lying down); Phos. ac. (sensorial depression, drowsiness, apathy; but Phos. ac. can be roused easily; muscles not completely relaxed, has not the dirty nostrils of Hell. n.). Opium (but the stupor of Op. is more profound; face dark, breathing stertorous); Zinc. (checked exanthemata; hydrocephalus; Zinc. has fidgety motion of feet); Lach. (coffee-ground sediment in urine; muscular weakness; jelly-like mucous diarrhśa accompanying dropsy); Pip. meth., Ox. ac. (> when mind diverted); Nat. m. (< from consolation).

Causation.—Checked exanthemata. Blows. Disappointed love.

SYMPTOMS.

1. Mind.—Melancholy taciturnity.—Excessive, and almost mortal anguish.—Home-sickness.—Hypochondriacal humour.—Tćdium vitć; envious seeing others happy.—Suicidal.—Indolence.—Sobbing lamentation.—Obstinate silence.—Irritable, < from consolation.—Suspicious.—Dulness of the internal senses.—Stupidity and want of reflection, with (thoughtless) fixedness of look on one single point, much moaning, and inability to think.—Weakness of the memory.—The mind seems to lose command over the body; the muscles refuse their office as soon as the attention is diverted (if the will is not strongly fixed upon their action; if he talks he lets fall what he holds in his hand).

2. Head.—Giddiness on stooping.—Stupefying headache, with coryza (4 to 8 p.m.); < from stooping, > at rest and in the open air.—Stupefying pain, and sensation of bruising in the head.—Pressive and numbing headache.—Pressive headache from outward to inward, with stupefaction and heaviness of the head; < on moving the head, from exertion; > in open air and from distraction of mind.—Inflammation of the brain, with stupefaction; heat and heaviness of the

head; < from thinking of the pain.—Hydrocephalus with stupefaction; stupor; boring with the head in the pillows; coldness of the body; < from stooping.—Painful heaviness, with burning pain in the head, coldness of the fingers, sensation of general shivering, and paleness of the face.—The headache is more bearable on keeping quiet, and endeavouring to sleep.—Bruised pain externally on vertex and occiput; esp. during the febrile chill; at every movement, esp. when stooping and going upstairs, the pain changes into a violent twitching in integuments of head > by external pressure.—Painful sensitiveness of the exterior of the head, and esp. at the occiput, as if it were bruised, on its being touched, and on moving the head.—Uninterrupted pressive pain in occiput extending toward nape of neck.—Headache extending from nape to vertex.—Jerking in the integuments of the head, during movement, when stooping, and when going up stairs.—Disposition to bury the head in the pillow, when sleeping.—Small swellings in the skin of the forehead, with bruise-like pain.—Moist scabs on the scalp.—Falling off of the hair (an the head and on the whole body), with pricking pain on the scalp, esp. on the occiput, with pale dropsical swelling of the face and body.

3. Eyes.—Pain in the eyes, as if a nail were driven into the orbital margins.—Pressive heaviness in the eyes, in a downward direction.—Pupils dilated (one pupil larger than the other) without inflammation.—Involuntary fixedness of look on one single point.—Twitching in the levatores palpebrarum and the cheeks, with heat in the face.—Night-blindness.—Photophobia by day.

4. Ears.—Shootings in the ears, day and night, with searching piercing.

6. Face.—Face pale, sometimes yellowish.—Pale and śdematous swelling of the face.—Forehead wrinkled.—White vesicles on the lips, which are swollen.—The upper lip is cracked.—Soreness of the corners of the mouth.—Dull aching pain in the cheek-bone.

7. Teeth.—Toothache at night, with shooting and tearing pains, < by cold and heat.

8. Mouth.—Troublesome dryness in the palate, with incisive and scraping pain during deglutition.—Constant accumulation of saliva in the mouth, and salivation, with excoriation of the commissures of the lips.—Vesicles and apthć in the mouth, and on the tongue.—Numbness and swelling of the tongue.—Pimple on the tip of the tongue, painfully stinging when touched.—Dry, white tongue (in the morning).—Bitter taste in the throat, < by eating.

9. Throat.—Scraping feeling on back of palate.—Tiresome dryness on palate and cutting and scraping pain on moving the parts in swallowing.—Aching, sore throat on swallowing; feels excoriated.

11. Stomach.—Nausea, sometimes with excessive hunger.—Speedy satiety, with repugnance as to rest of meal.—Has appetite, but on eating has no taste, and becomes suddenly nauseated, which ceases immediately after eating.—(Nausea of palate and throat.).—Nausea rising up from pit of stomach.—Nausea in whole abdomen, with frequent empty eructations.—Dislike to food, esp. meat, green vegetables, and saurkraut.—Green, blackish vomiting, with pains in the abdomen.—Heaviness, fulness, and inflation of the stomach.—Inflation of the epigastrium, with pain of ulceration, and impeded respiration.—Sensation of excessive uneasiness of the epigastrium.—Painful pressure on the epigastrium at every step.—Sensation of retraction in the pit of the stomach.—Painfulness of the stomach when coughing and walking.—Burning pain in the stomach.—Burning and scraping in the stomach.

12. Abdomen.—Pinchings in the abdomen.—Sensation of coldness in the abdomen.—Heaviness in the abdomen.—Dropsical swelling in the abdomen.—Clucking in the abdomen, esp. on breathing deeply, as if there were water in the intestines.—Rumbling and borborygmi in the abdomen.—In r. inguinal region single pressures ending in a stitch, a sensation as if a hernia would ensue.—Severe hard pressure on middle of os pubis.

13. Stool and Anus.—Tenesmus, with discharge of (white) gelatinous mucus, preceded by pinchings in the umbilical region.—Stools consisting of pure, tenacious, white mucus.—Stools like frog-spawn.—Diarrhśa, with pain in the abdomen, and nausea.—Watery and frequent evacuations.—Hard, scanty stool, during and immediately after which violent cutting, shooting in rectum, from below up, just as if it contracted tightly, and as if a body with cutting edges stuck there.—After an evacuation, burning hot smarting at the anus.—Feeling as if intestines had no power to evacuate fćces, during soft stool.—Involuntary stools.—Blenorrhśa of rectum with spasm of bladder.—Hćmorrhoids.

14. Urinary Organs.—Frequent want to make water, with scanty emission.—Scanty urine, with sediment like coffee grounds.—Feeble stream.—Deep-coloured urine.—A large quantity of pale, watery urine is emitted.

15. Male Sexual Organs.—Suppression of sexual desire, with flaccidity of the genital parts.

16. Female Sexual Organs.—Pain under l. nipple, pains all over her, forced her menses on; had to get up at night to pass water.—Suppression of menses.—Amenorrhśa: from disappointed love; from damp feet, and getting wet through.

17. Respiratory Organs.—Sighing respiration.—Breathes easier lying down.—Breathing difficult with anxiety, < every evening, must sit up.—Cough: dry, backing, < at night, with gagging; comes suddenly while smoking.—Suffocating

constriction in the throat and nose.—Short, dry cough, with painful tension in the l. hypochondrium.—Difficult respiration, as from hydrothorax.—Accelerated, or deep and slow respiration.

18. Chest.—Constriction of the throat, nose, and chest.—Heat in the chest.

19. Heart.—Palpitation of the heart.—Anxiousness about heart which prevents him resting anywhere.

20. Neck and Back.—Stiffness and painful sensibility of the neck and the nape of the neck during movement.—Swelling of the glands of the neck.—Contractive pain in the loins.—Gnawing and obtuse lancinations of the spine.—Pain, as from a bruise, between the shoulder-blades.

22. Upper Limbs.—Tearing in the bones of the arms and joints, and in the upper part of the fingers.—Jerking in the muscles of the arms.—Piercing and shooting in the hands and joints of the fingers.—Want of strength in the hands.—Spasmodic stiffness of the fingers.—Humid, painless vesicles between the fingers.—Ulceration around the nails.

23. Lower Limbs.—Violent lancinations, and burning pressure in the hips.—Pricking pain in the l. hip.—Want of stability in the legs, with yielding of the knees.—Stiffness and tension in the thighs and hams.—Obtuse and piercing lancinations in the joints of the knees, and of the feet.—Humid, painless vesicles between the toes.

24. Generalities.—Shooting and piercing pains in different parts, and esp. in the periosteum, < by fresh air, corporeal fatigue, eating and drinking.—Pullings and tearing in the limbs.—Shooting pains in the joints.—Sudden relaxation of all the muscles.—The muscles refuse to perform their office, unless sustained attention be paid to them; staggering gait; suffering objects to fall which are grasped by the hand.—Convulsive twitching of the muscles (during sleep).—Relief is found in the open air, and sensations are felt as when recovering from a long illness.—All things have a freshness about them.—Convulsions.—Cramps.—Syncope.—Dropsical swellings.—Falling off of the hair and nails.

25. Skin.—Paleness of the skin.—Miliary eruptions.—Leucophlegmatic swelling of the skin of the whole body; anasarca.—General desquamation of the skin.—The hair and nails fall off.

26. Sleep.—Stupor, sopor.—Sleepiness, with eyes half open, and pupils turned upwards.—Confused, anxious dreams, the remembrance of which is not retained.—Sleeplessness.—Tossing in the bed.

27. Fever.—Pulse, small, slow, almost imperceptible.—Shiverings, alternating with shooting pains in the limbs.—Chilliness predominates during the day, as long as he remains out of bed, with heat of the face and drowsiness.—Chill, with goose-flesh and pain in the joints.—The chill spreads from the arms.—Coldness of the whole body, and esp. of the extremities.—General shivering, with corrugated skin, and tenderness of the scalp when touched, and on moving the head; pullings and tearings in the limbs, lancinations in the joints, and absence of thirst.—In the evening, after lying down, burning heat throughout the body, and chiefly in the head, with internal shuddering and shivering, without thirst; dislike to liquids; when attempting to drink, very little can be taken at a time.—Nocturnal sweat, towards the morning.—After lying down in bed, the heat comes on immediately, generally accompanied by perspiration.—Heat followed by chill, with colic.—Cold, at times clammy perspiration.

Helleborus Orientalis.

Helleborus orientalis, Lam. N. O. Ranunculaceć. Tincture of root.

Clinical.—Diarrhśa. Indigestion. Salivation.

Characteristics.—This was proved by V. Schroff on Lederer, and produced symptoms like those of the other Hellebores. These are peculiar: Accumulation of water in the mouth with clean tongue. Bad taste, with clean tongue. Prostration, exhaustion, and disinclination to work; burning in stomach; diarrhśa. The symptoms were > by coffee.

SYMPTOMS.

2. Head.—Heaviness; fulness; headache.

8. Mouth.—Accumulation of water in mouth; with clean tongue.—Bad taste with clean tongue.

11. Stomach.—Loss of appetite.—Eructations.—Hiccough.—Nausea.—Burning, extending from stomach to lower portion of śsophagus.—Epigastric region: Feeling of fulness with inclination to vomit; slight burning, afterwards extending to intestines, followed by pressure in stomach.

12, 13. Abdomen and Stool.—Frequent rumbling along bowels, in morning on waking, soon followed by four liquid stools in succession.—Pain esp. in region of l. transverse colon.

14. Urinary Organs.—Urine more profuse and paler than usual.

19. Pulse.—Pulse more frequent, body warmer.—Pulse slowed.

Helleborus Viridis.

Green Hellebore. N. O. Ranunculaceæ. Tincture of root; of young shoots.

Clinical.—Colic. Diarrhœa. Epilepsy. Sore throat. Ulcers.

Characteristics.—This was also proved by Schroff. It produced roaring in the ears; itching in the nose; and prickling of the tongue; diarrhœa of liquid stools; a condition of sopor. Cooper has cured with it ulcers of the leg, near the ankle, after the failure of *Hell. n*. Also a case of epilepsy in a child, the concomitant symptoms being: "Head sweats before the fit; diarrhœa for four days sleepy."

SYMPTOMS.

4. Ears.—Ringing and roaring in the ears; with feeling of stoppage in both ears.

5. Nose.—Violent itching of nose with frequent violent sneezing (from application of extract to mucous membrane of nose).

8. Mouth.—Prickling on tongue > by frequent rinsing of mouth with water.—Burning in mouth.—At first profuse secretion of saliva and mucus in mouth, soon followed by dryness.—The taste was so intensely bitter and rancid, that she suffered for a long time from nausea and great inclination to vomit.

9. Throat.—Feeling of warmth in pharynx and stomach, gradually becoming a dull burning, not > by drinking much water.

11, 12. Stomach and Abdomen.—Frequent eructations, and gurgling in abdomen.—Digestion disturbed several days.—Abdomen somewhat sensitive and distended.

13. Stool.—Very profuse liquid stools.—Three liquid evacuations from bowels, at short intervals, with intense colic, the last stool accompanied by tenesmus, great nausea, with inclination to vomit, violent headache and thirst.

14. Urinary Organs.—Micturition frequent, painless, urine pale.

19. Pulse.—The pulse rose during the first hour several beats in frequency (apparently caused by the excessive nausea from the bad taste of the drug), and afterwards sank below the normal in one case; while in those who took doses of 2 to 4 grains enveloped in a vehicle, the pulse immediately sank several beats.

26. Sleep.—A condition bordering on sopor, lasting the whole night, and preventing refreshing sleep.—Night restless, sleep frequently interrupted.

27. Fever.—Sensation of heat at times over the whole body.

Heloderma.

Gila monster. Heloderma suspectum. N. O. Helodermidć of the Lacertilia. Trituration of sugar of milk saturated with the venom. Solution of the venom in alcohol.

Clinical.—Brain, base of, affected. Cerebro-spinal meningitis. Coldness. Headache. Heart failure. Locomotor ataxy. Neuralgia. Numbness. Paralysis. Paralysis agitans.

Characteristics.—The information we possess of the action of *Heloderma* is contained in vols. v. to xi. of *Hom. Recorder*, including some remarkable and important provings by Dr. R. Boocock. The name given to this remedy by the *Recorder* is *Heloderma horridum*, but as there is no little confusion between two species, I prefer to name the remedy *Heloderma* simply. The first notice of the remedy is in vol. v. p. 163, in letters from Dr. Charles D. Belden, who supplied Messrs. Boericke and Tafel with a living specimen and also poison obtained by himself. Dr. Belden calls his specimens "*H. horridum* OR *Suspectum*." Now Dr. Belden writes from Arizona, and the river Gila (pronounced "Hecla") from which the lizard takes its name "Gila Monster" is an Arizona river, and the Arizona lizard is *Heloderma suspectum*. Heloderma horridum, the "Crust lizard," which is also called "Gila monster," is a Mexican lizard and is generally regarded as harmless. At any rate it is agreed that there is one lizard that is poisonous, and that lizard is a *Heloderma*, and our remedy is the poison obtained therefrom. "An ugly, disagreeable-looking creature, the head long and blunt, eyes black and bead-like, tail half the length of the body, thick-set and club-like. The entire body cased in a thinly coated armour, marked curiously with yellow and black." It is sluggish and slow of movement when kept in the dark, but may develop great activity when brought into the sunlight. It is most tenacious of life, the only vulnerable part seems to be at the junction of the head with the spine, a blow on which will kill it. Of the bite of the reptile Belden says: "This animal does not bite frequently, but when it does it is understood that the result is a benumbing paralysis, like that of *paralysis agitans*, or to *locomotor ataxy*. There is no tetanic phase." The venom is alkaline in reaction. Numbers of cases of bites are on record. A dog bitten in the nose "uttered fearful howls, and when, after great difficulty, he was released, had symptoms like 'blind staggers,' began turning around in a circle, and died in twenty minutes." A young miner bitten in the leg, though in robust health at the time, at once began to lose flesh, became melancholy, and died in a few months like one in rapid consumption. *Helod*. has the reputation of being fatal to drinkers, and to affect the temperate less severely. This, says Belden, is borne out somewhat by the recovery of Mr. Vail, of Tucson, a man of temperate habits, after a bite, and the death, after lingering several months, of a man bitten whilst drunk. This lingering

nature of the action of the poison is markedly different from the snake poisons, which generally kill quickly if at all. An Indian woman bitten in the leg, survived, but the leg shrivelled, and she became a semi-idiot, though she lived over thirty years after. The writer of an article quoted by the *Recorder* from the New York *Sun*, relating her case, thus describes the effect: Where the person survives an hour or two after the bite, the agony is described as awful to witness. The poison goes through the human system with lightning rapidity, and causes unspeakable pain and excruciating agony from head to foot. Though paralysed, every muscle, bone, sinew, and nerve is keenly alive to intense pain. The sufferer's head seems as if it would split open. Very few persons bitten can speak after the first fifteen minutes, but unconsciousness seldom comes until a few minutes before death. Mr. Vail says his suffering was intense, the pain proceeding from the wounded part to the head and back. Immediately after receiving the wound, which was on his index finger, both wrist and finger were tightly bandaged. Two hours later the wound was cleansed and dressed and the bandages reapplied. For three days those intense pains would shoot towards the head and spine on loosening the bandages in the least degree. After three months the only perceptible result was a swollen tongue which seemed then unwilling to resume its proper size. The treatment he received was profuse sweating by administration of *Jaborandi*. Experiments on animals seemed to show that death occurred rather from heart failure than from respiratory failure. This much was known when Dr. Robert Boocock, of Flatbush, made his proving which has given the remedy a definite place in the homśopathic materia medica. The first experience was with a solution of the 6x trituration, one drachm in four ounces of alcohol. Of this he took three or four drops. He was seized with an internal coldness from the heart as if being frozen to death internally and had no way of warming himself. "Coldness from within outward." The coldness of this remedy is more intense than that of any other. "Arctic coldness," the prover called it. The coldness was at times followed by sensations of heat and burning. Dr. Boocock's observation of the cold sensations of *Helod*. was confirmed by a young clerk in the employment of Messrs. Boericke and Tafel, who took six doses of *Helod*. 6 out of bravado. The second night he awoke, and the impression that he was under the influence of *Helod*. flashed on his mind. He felt a cold sensation creeping down his body and legs, and was in a *very* cold clammy sweat. This lasted all the rest of the night and he could get no more sleep. It began to pass off by morning, and he felt no more of it. The constricting sensations of the serpent venoms were produced by *Helod*., also the numbness and darting pains and the sensitiveness to external pressure.─Many of the symptoms came on in the night waking the prover from sleep (like the "< from sleep" of *Laches*.). The tremors, spongy feeling of feet on walking, pains in back and limbs, beat out Belden's commendation of *Helod*. in locomotor ataxy and paralysis agitans. Dr. Boocock gave great relief with the medicine in a case of the latter; and E. E. Case effected great improvement in a case of locomotor ataxy in an auburn-haired woman, 55. She had the classical symptoms of the complaint and "tingling, creeping sensations in legs as if from insects, was < lying in bed at night; < from exposure; from touch.

Arms numb. Legs insensible to battery. Tongue dry and cracked. Swallowing difficult." Under *Helod*. 900, and later, 45m, after the appearance of an eruption, she recovered a fair degree of health and usefulness. C. E. Johnson reported to Dr. Boocock (*H. R*., ix. 141) the relief of a woman who had many of the symptoms of the proving (and had been pronounced incurable), complaining especially of the intense coldness. She received *Helod*. 200, and the coldness disappeared almost completely. Boocock cured a case of "blue hands," remaining long after diphtheritic paralysis; and he restored two patients apparently moribund. In one case the breathing was slow, "tongue cold and slate-coloured, breath cold." The other case was that of a woman, 65. In the act of dressing, strength suddenly left her, mouth fell open, tongue and breath cold, and she was apparently dying and felt so. There was intense pain at the back of the head." *Helod*. 200 was given, as in the other case, and she made a good recovery. The weakness Dr. Boocock experienced in the proving he compared to that of *Gels*., only *Gels*. did not dry up the mouth and secretions as *Helod*. did. The modalities noted were < from cold with desire for warmth. < After sleep; at night. > From stretching.

Relations.—*Compare:* Lach., Crotal, &c.; Camph. (coldness); Arg. n., Alumina (locomotor ataxy); Ant. t. and Merc. (paralysis agitans); Gels., Con., Hdrphb.

SYMPTOMS.

1. Mind.—No inclination for exertion in any way.—Unable to confine his mind to any object.—Difficulty in remembering the spelling of simple words.—In spite of very severe symptoms, not alarmed; passively indifferent.—Depressed, feels very blue.

2. Head.—Vertigo and weakness when moving quickly.—Dizziness, with inclination to fall backward.—Giddiness and cold pressure from within skull.—Sensation of heat in head; heat on vertex.—Headache over r. eyebrow.—Pressure in head and scalp; pressure in skull as if too full; mind clear all the same.—Soreness and stiffness in occiput, extending down neck; sore spot in various parts of head.—Intense pain over l. eyebrow, through eye to base of brain and down back.—Very violent headache over r. temporal bone, as if a tumour forming and pressing within skull, whole r. side affected, producing numbness down l. side of body.—Aching at base of brain.—Sharp, digging pains.—Benumbed feeling all over head.—Burning feeling in brain; head hot and full as if not room enough in skull.—Throbbing on top of head; head sore and bruised.—Sensation of band around head.—Cold band around head.—Sensation as if scalp was drawn tight over skull.—Bores head in pillow.—Awakened suddenly with a jerking in head.—Central part of frontal bone so queer as to awaken him.

3. Eyes.—Itching of eyelids; lachrymation.—Weight of eyelids, difficult to keep them open.—Sight improved; astigmatism removed.

4. Ears.—Pressure behind l. ear; pressure in ear from within outward.—Copious flow of wax (more l.).—Ears dry and scurfy.—Ringing in ear like night-bell.

5. Nose.—L. nostril sore; ulcerated.—Dry, itching scurfs in nostrils.—Severe attack of sneezing (a severe chill all down back).—Fluent discharge.

6. Face.—Sensation of heat in face.—Flushes of heat.—Cold, crawling feeling from temple down r. cheek; from r. upper jaw to cheek.—Sensation as if pricked with points of ice.—Sensation as if facial muscles were drawn tight over bones.—Stiffness of jaw.—Dryness of lips.

8. Mouth.—Soreness of mouth.—Very thirsty.—Tongue tender and dry.—Tongue swollen (lasting for three months after bite).

9. Throat.—Dryness; parched sensation in throat.—Tingling.—Soreness of throat and tenderness to outside touch.—Stinging, sore feeling in r. tonsil.

11. Stomach.—Acid burning in stomach.—Immoderate thirst.

12. Abdomen.—Gurgling in region of spleen.—Sharp shooting pain in bowels, more on l. side.—Pain across pubic bones, extending down into l. testicle.—Stitching pains in bowels (as if filled with pins).—Woke in night with very hard pain in bowels, l. hypogastric region.—Rumbling in bowels.—Feeling as if waist-band too tight.

13. Stool and Anus.—Loose, copious stool, lumpy, preceded by stitches in abdomen.—Stool loose, mushy, with considerable flatus.—Bowels torpid.—Stool soft, dark, difficult to expel.—Hćmorrhoids swollen, itch and bleed.

14. Urinary Organs.—Stitch-like pain in r. kidney while sitting; as if being drawn together; followed by prickling in fingers.—Bladder irritable, frequent urging to pass urine.—Dreamed of urinating in bed but did not; awoke and passed a large quantity very clear and bright.—Tenderness in urethra, with sensation of discharge.—Urine not as free as usual, muddy.—Intermittent flow, as if obstructed by calculus.—Urine, specific gravity, 1010; greenish yellow, fetid (like decaying fruit).

15. Male Sexual Organs.—Erection; but felt too tired for coition.—Coitus prolonged, with great enjoyment and large flow of semen.—Intensely cold penis and testicle; tip like a piece of ice; with gluey discharge.—Pain and enlargement of l. testicle.—Pain under pubes and along penis.

17. Respiratory Organs.—Slight, hacking cough, with pain in l. scapula.—Fulness in chest, requiring an effort to inflate the lungs.—Oppressed for breath from least exertion.

18. Chest.—Sharp stitch through r. nipple to inside of r. arm.—Cold feeling in r. lung.

19. Heart.—Pressure at heart.—Coldness at heart as if being frozen to death; cold from within outward.—Twitches about heart as if difficult for blood to get in or out.—Tingling around heart.—Trembling and coldness around heart.—Oppression around heart.—Beating of heart felt all over body.—Heart bounds as if it had not room, whole body vibrates.—Sticking pains, shooting from l. to r.—Stitches in heart.—Soreness in heart, more under l. nipple.—Pulse, 56-72; full and jerky.

20. Neck and Back.—Stiff neck; aching in bones of neck.—Painfulness of upper neck.—Coldness across scapulć.—Chill in back from base of brain to buttock.—Pain in back; intense pain in lumbar muscles awakening him (with stitches in intestines).—Aching in r. kidney; stitch pain in r. kidney.

22. Upper Limbs.—Numbness of r. arm and hand with trembling.—Tingling in arms and hands.—Tingling in palm of l. hand and along fingers.—Drawing in l. hand, followed by tingling and prickling.—Pains in hands, if holding anything for some time.—Trembling of hands.—Hands blue, cracked, and rough.

23. Lower Limbs.—Numb feeling around and down l. thigh.—Pain in l. thigh and calf as if bruised.—Numb feeling down r. leg.—Coldness extending from knee to calf.—Coldness of legs and feet.—Boring, sharp pain on tibia of r. leg.—Sensation of tight band around l. ankle.—Trembling of limbs.—Jerking of limbs.—Tingling and burning of feet as if recovering from being frozen.—Burning in feet, preventing sleep, had to put them out of bed.—Sensation as if walking on sponge or as if feet swollen.—Staggering gait.—Tendency to turn to the r. when walking.—When walking lifts feet higher than usual and puts down heel hard.

24. Generalities.—Startled easily.—Trembling, tired feeling; very weak and nervous.—Fainting.—Intense aching in bones and all parts of body.—Trembling of l. side; hands shaky.—Trembling can be controlled by effort of will.—Trembling along nerves, in limbs (mainly thighs and arms), when in bed, often strong enough to wake him.—Sometimes when quietly reading trembling will seize him shaking body so as to prevent reading (or writing); for a few seconds at a time.—The poison goes like lightning through the system, causing agony from head to foot.—Though paralysed, every muscle and bone is the seat of pain.—Pains proceed from part bitten to head and back.—Great emaciation and lingering death.—A condition like galloping consumption.—Limb affected shrivels.—All secretions dried up.—Stretching relieves pains in muscles and limbs.—Stitch pains going from l. to r.—Numb sensations.—Weak, giddy, making it difficult to stand.—"Blind staggers"; the animal bitten turns round in a circle and dies in twenty minutes.—Unable to balance myself.—Movement does not increase the pain.—Throbbing all over body.—Startled, trembling condition on slight noise.—Bone pains.—Great swelling of bitten limb; intense pain; gangrene.

25. Skin.—Itching of skin as from insects.—Skin of hands very rough, cracked.

26. Sleep.—Drowsiness, but inability to sleep.—Restless sleep; awakens at 3 a.m.—Vivid dream about giving a lecture in spite of feeling prostrate.—Dreamed of the lizard.—Dreamed of urinating in bed, but did not; awoke and passed a large quantity. (This dream with consequent free micturition was repeated two nights in succession.).—Dreams repeated the same night.—Awakened from sleep by jerking in head; trembling of limbs; pain in lumbar muscles.—Awakened by feeling a cold sensation creeping down body and legs; in a very cold, clammy sweat, lasting till morning.

27. Fever.—Internal coldness; as if being frozen from within outward.—Cold waves ascend from feet, or go downward from base of brain.—Severe chill ran down back.—Cold rings around body.—Sensitive to cold; shrinks from exposure.—Feeling of heat in head and face, some headache over r. eyebrow.—Hot flushes and burnings in head and along spine.—Feet very hot; heat throughout body; soon passing off, followed by arctic coldness.—Cold, clammy sweat.

Helonias.

Helonias dioica, Pursh; H. lutea, Ait.; Chamślirium luteum, Gray; C. Carolinianum, Willd.; Veratrum luteum, Linn.; Ophiostachys virginica, Delile. False Unicorn, Devil's Bit, Blazing Star. N. O. Melanthaceć. Tincture of the root. Triturations of the resinoid Helonin.

Clinical.—Albuminuria. Amenorrhśa. Anćmia. Breasts, affections of. Chlorosis. Debility. Diabetes. Dysmenorrhśa. Impotence. Kidneys, pains in. Leucorrhśa. Lochia, prolonged. Menopause. Menorrhagia. Metrorrhagia. Pruritus vulvć. Rheumatism. Splenalgia. Sterility. *Uterus, affections of.*

Characteristics.—*Helonias*, like *Aletris*, to which it is a botanical ally, and with which it has been often confounded (both have been called "Unicorn plant," or "Unicorn root," "Star Grass," and "Blazing Grass," or "Blazing Star"), is a uterine remedy of great power. It has an extensive range of action, as its provings show, but the organ predominantly affected is the uterus. It has been called with justice a "uterine tonic," and one of the keynote indications for its use is a "consciousness of the womb," and relaxation of uterine ligaments, misplacements, and prolapse have been removed by *Helon*. Marvin A. Custis (*Am. H.*, xi. 594) reports a case in point: "Mrs. L.—, 28, has two children, both living. Has prolapse of uterus, ulceration of cervix, dark, offensive leucorrhśa. Her system is worn out and her expression one of great distress. Is irritable, finds fault with every one, and cannot bear contradiction. Restless, wants to move around, as she feels better when mind and body are employed." There was severe backache and a sore and heavy feeling in

the womb; in fact, as she said, she was always "conscious of her womb." *Helon*. 30 every three hours for two days, and then every night, was prescribed, with a warm water injection night and morning. At the end of three weeks the leucorrhśa had almost ceased, the womb was in the first position, and she "forgets that she has such an organ." The mental symptoms of *Helon*. are very marked, and the extreme depression, gloom, and irritability of this case are characteristic of the remedy. One of the provers had a preliminary feeling of *wellness* before being plunged into a mental hell. It is specially suited to nervously run-down females, easily fatigued by any work, who complain of a tired backache, a *tired feeling* extending into the limbs. Some of this passes off after commencing to work. This looks rather like the *Rhus*: "< on commencing to work, > after working a little;" but it is not the same, for in the case of *Rhus* the relief comes from a limbering up of *stiff joints*. The backache is in the lumbar region, just over the kidneys, or else in the sacrum. The kidneys themselves, especially the right, are the seat of pain, and then the urine is generally scanty. S. A. Jones found *Helonin* turned an alkaline urine acid; increased the amount of urea; increased the amount of urine secreted. He considers this to be the result of a condition of debility, *venous paresis*, the result of previous arterial tonic contraction. *Helon*. produces irritation in mucous membranes; sore mouth; irritable stomach; burning and scalding when urinating; but the most intense effect is produced in the vaginal mucous membrane. L. L. Danforth treated Mrs. W., who had intense pruritus, vulvar and vaginal, for several weeks: "She could tear the flesh out" it was so intense. There was vulvo-vaginitis, the labia and adjoining skin being red and swollen, and covered with thin, white, curdy deposits. Further examination showed, pouring from a congested cervix, a thin albuminous leucorrhśa, evidently the cause of the pruritus. It coagulated on the vagina, forming small curds covering the mucous membrane of vagina and vulva. *Helon*. Ř on tablets speedily relieved. The relation of the remedy to the climacteric period is indicated in the provings by alternate sensations of heat and cold. "A sensation as if a cool wind streamed up the back of the legs along the gastrocnemii muscles to the popliteal space" was noticed by one prover who had before had a burning, or warm numbness, in the legs, most marked in the knees, "seeming to begin at the tendo Achillis of each leg, and very marked over the region of each gastrocnemius." "Every movement of the arms occasioned a chill, which seemed to radiate from the solar plexus all over the body." Burning sensations are common. A patient to whom I gave it in the 6th had "burning-sinking at the epigastrium" half an hour after each dose. Motion < almost all symptoms, but > numbness of the feet, and the profound debility. > By mental diversion. The chest is sensitive to the air; toothache is < in a warm room; and warm, moist air < toothache. Touch <: cannot bear the least pressure of the dress (on breasts, nipples, kidneys, &c.)

Relations.—Alet. and Lil. t. are closely allied botanically and medically with Helon. Helon. *antidotes* the prolapse of Lil. t. and the mental depression of Kali brom. In general it is a close analogue of Pulsat., in its local and general symptoms. *Compare also:* Sep.; Pic. ac. (tired aching and some burning in back and legs); Pallad. (tiredness; soreness; irritability); Plat. (indurated uterus); Nat. m.,

Agn., and Caust. (aversion to coitus); Eup. purp., Chi., Ferr., Hydrast., Senec.; Act. r. (uterine symptoms and gloom; Nat. hyperchlor. (sodden condition of uterus); Pip. meth. (> by diverting mind).

SYMPTOMS.

1. Mind.—Dull, inactive.—Always better when doing something, when the mind is engaged.—Desire to be let alone; conversation unpleasant.—Depressed mood.—Dull, gloomy.—Irritable; cannot endure the least contradiction or receive any suggestions in relation to any subject.—Fault-finding.

2. Head.—Pain in head is < by stooping, and attended by increased vertigo.—Fulness and pressure in the forehead or vertex; < or renewed when thinking thereof.—At 2.30 p.m. dull heat and pressure in vertex as if skull were too full.

6. Face.—Pale, earthy.—Sallow, having an expression of suffering.

8. Mouth.—Bitter, disagreeable taste, every morning, 5 a.m., on awaking; tongue and fauces dry.—Tongue white (diabetes).—Salivation of pregnant women and teething children.—Mouth gets sore; stomatitis materna.

10. Appetite.—Loss of appetite, eructations, fulness, cramp, and painful congestion of the stomach.—Appetite poor, food tasteless bilious sleepy during the day.

11. Stomach.—Cramp-like pain in the stomach.—Burning in stomach; burning and aching in spine; eructations.—Irritable stomach, with general dropsy.

12. Abdomen.—Pain in l. side, as if in spleen, which feels as if distended, causing a dull ache.—Motion and rumbling in abdomen, as if diarrhśa would come on; cramps in the stomach.—Colic-like pains in hypogastric region, off and on all day.—Burning in the lower third of abdomen.

13. Stool.—Stool loose, yellow in the morning; lumps of fćces in the evening.

14. Urinary Organs.—Constant aching, extreme tenderness of kidneys, esp. r.—Burning sensation at the kidneys; can trace their outlines by the burning.—Pain in the kidneys with albuminous urine.—Weariness, languor, weight in region of kidneys; mind dull, inactive; afternoon and evening.—Burning scalding when urinating; desire frequent and urging.—Strangury.—Involuntary discharge of urine after the bladder seemed to be emptied.—Urine profuse, clear, light-coloured; albuminous; diabetic.

15. Male Sexual Organs.—Sexual desire and power increased.—Erections unusually strong and frequent.—Impotence.

16. Female Sexual Organs.—Loss of sexual desire and power with or without sterility.—Profound melancholy, deep, undefined depression, with a sensation of soreness and weight in the womb; "a consciousness of a womb.".—Aching, dragging weakness in sacral region, with prolapsus; also at climaxis, with marked debility, profound mental gloom.—Prolapsus uteri and ulceration of the cervix; discharge constant, dark, badly smelling; flooding on lifting a weight, and on least exertion; face sallow, having an expression of suffering; great vaginal irritation; pain in small of back.—Excessive uterine hćmorrhage all through the proving; pain in back through the uterus.—Prolapsus uteri, leucorrhśa; the os protrudes externally.—Uterus low down, fundus tilted forwards; the finger passes with difficulty between the os and the rectum.—Menses too frequent and profuse in women who are feeble from loss of blood.—Flow passive: dark, coagulated, offensive.—Amenia, arising from or accompanied by disordered digestive apparatus and anćmia.—Leucorrhća, with atony and anćmia.—Threatened abortion from atonic conditions.—Women with prolapsus from atony, enervated by indolence and luxury; feel better when the attention is engaged, hence when doctor comes; worn out with hard work, do not care for sleep; so tired, and the strained muscles burn and ache so.—Scanty menstrual flow with heaviness, languor, drowsiness, and albuminous urine.—Profuse flooding, with serous leucorrhśa, much uterine and ovarian pain; climaxis.—Labia and pudendum hot, red, swollen, burning and itching terribly; epidermis every morning falls off in thin, transparent exfoliations.—Mucous surface of labia red, swollen, covered with a curdy deposit, like aphthć.—Threatened abortion; esp. in habitual abortion.—Albuminuria during pregnancy; great weakness, drowsiness.—Nipples sensitive, painful, breasts swollen; nipples tender, will not bear the pressure of ordinary dress.

18. Chest.—Chest sensitive to the air.—Aching, as if the front of chest had been compressed in a vice.

19. Heart.—Palpitation.

20. Back.—Burning and heat in dorsal region, mostly between the lower half of the scapulć; while sitting reading at night.—Back aches across the lumbar region; feels tired and weak; burning and tired aching in lumbar and sacral region on sitting down.—Pain about the upper part of sacrum and pelvis; < at night.—Pain in lower part of back, through to uterus; piercing, drawing.—Aching pain in sacrum, also down into each buttock.

23. Lower Limbs.—Severe pains in r. hip-joint, < during motion.—Numbness of feet > by motion, only felt when sitting still.

24. Generalities.—Tired, weary, drowsy.—Languor, unusually tired, yet knows no reason.—Debility (diphtheria).—Over-sensitiveness to air, < from uncovering; > in warm air.—Anćmia, atony, from prolonged hćmorrhage.—Dropsy from albuminuria, general debility, uterine atony or after uterine hćmorrhage.

25. Skin.—Face pale, earthy; sallow.—Epidermis (of labia) falls off thin, transparent exfoliation.

26. Sleep.—Drowsy, heavy.—Sleepy during the day.

27. Fever.—Chill, seemingly radiating from solar plexus all over body, caused by motion of arms.—Flushes of heat pass over him with every movement while in a room.

Hepar.

Hepar sulphuris calcareum. An impure Sulphide of Calcium prepared by burning in a crucible the white interior of oyster shells with pure flowers of sulphur. Trituration.

Clinical.—*Abscess. Amaurosis*. Angina pectoris. *Appetite, disordered*. Asthma. Axilla, abscess in. *Beard, eruptions of*. Blepharitis. *Boils*. Breast, affections of. *Bronchitis*. Bubo. *Burns. Carbuncle.* Caries. *Chilblains*. Chlorosis. *Cold*. Constipation. *Consumption*. Cornea, ulceration of; opacity of. *Cough. Croup*. Diaphragmitis. Diarrhœa. *Ear, affections of; polypus of. Eczema*. Emphysema. *Erysipelas. Eyes, affections of. Fester, tendency to. Glandular swellings*. Hæmoptysis. Hæmorrhoids. *Headache*. Hectic. Herpes preputialis. Hip-joint disease. Hoarseness. Jaundice. *Joints, affections of. Laryngitis*. Leucorrhœa. *Lips, swollen. Liver, affections of. Lungs, affections of. Lupus*. Marasmus. Menorrhagia. *Mouth, sore*. Nipples, sore. *Ovaries, affections of. Parametritis. Pleurisy. Pneumonia*. Pregnancy, sickness of. Pruritus mercurialis. *Pylorus, affections of*. Quinsy. Rhagades. Rheumatism. *Scarlatina*. Scrofula. *Skin, affections of*. Spinal irritation. *Stye. Suppuration*. Syphilis. *Tenesmus. Throat, sore. Urticaria. Wens. Whitlow. Whooping-cough*.

Characteristics.—"Liver of Sulphur" is a name which was given by the old chemists to several sulphur compounds whose Colour was supposed to resemble that of liver. Before Hahnemann's time *Hepar sulphuris calcareum*, Sulphuret of lime, was used as an external remedy for itch, rheumatism, gout, goître and scrofulous swellings. In 1794 Hahnemann proposed to use it internally to arrest mercurial salivation. A few years later it was tried (Teste thinks first by Dr. Busch of Strasburg) for asthma and pulmonary phthisis. That this was a happy inspiration Hahnemann's provings and clinical experience has thoroughly borne out.
The *Hepar* of Hahnemann is not identical with ordinary sulphuret of lime, being prepared with oyster shells, instead of ordinary lime, in a special way. Neither is it identical in composition or properties with *Calcium sulphate* (Gypsum) of Schüssler. Being a chemical combination of *Calcarea carb*. and *Sulph*. it has some of the properties of both, but is very different from either, and though it is useful to

compare them, *Hepar* must be studied as a separate entity. The one feature which more than any other characterises *Hepar* cases is *over-sensitiveness*. It runs throughout the remedy. "Any trouble occurring on the skin where there is a *great sensitiveness* to the *slightest touch*; patient can't bear to have even the clothes touch the part, or have it touched in any way. Exanthema, like nettle-rash, sore to the slightest touch. Skin hard to heal; inflammation of; sensitive soreness of," is Guernsey's admirable definition of this feature as it affects the skin and touch. But the sensitiveness is not confined to touch, there is excessive sensitiveness to the air; patient can't bear the least draught; and if a hand accidentally gets outside the bed-clothes it brings on an aggravation; sensitiveness to noise, to odours. The mind is no less "touchy" than the body. "*Dissatisfaction with oneself and others*; dreamy, atrabilious mood*, a sort of ferocious spleen, as though one could murder a man in cold blood* (even in persons who are generally of a merry and benevolent disposition)." This is from Teste, who says he has removed these symptoms with *Hepar*. Irritable and angry, feels inclined to kill any one who offends him. Another instance of the sensitiveness of *Hepar* is in relation to pain: the slightest pain causes fainting. There is also irritable heart. The sensitiveness to cold air is more to the *dry* cold air of *Acon*. and *Bry*. This distinguishes it from *Nat. sulph*. in asthma, which has < from damp cold (*Nat. sulph*. is Grauvogl's typical *hydrogenoid* remedy); and also fixes its applicability in croup. *Hepar* croup is accompanied with rather loose cough, with wheezing and rattling. Cough as if mucus would come up but it does not. The time of the *Hepar* croup is early morning (Acon. in evening). The least breath of cold air < the cough, or any uncovering. Another feature of *Hepar* is the sensation of a splinter or fish-bone in the throat. In quinsy with throbbing pain, where suppuration is imminent, *Hepar* is indicated. Throbbing, stabbing pains, with general rigor are characteristic. The relation of *Hepar* to the suppuration process is very marked. It meets the hectic condition generally and the process locally. I once cured with *Hep*. 6 a case of axillary abscess with a large collection of pus. The whole was absorbed without breaking. In an article published in *Minneap. Hom. Mag*., ii. 292, L. P. Foster distinguishes between *Hepar, Calc. sul*., and *Kali sul*., in their action on tissues. *Kali s*. acts on the epidermis; *Hepar* on lymphatic glandular system, skin and respiratory mucous membrane, *Calc. s*. acts much as *Hep*., only more deeply. *Hep*. acts on abscesses before they open, *Calc. s*. after. Foster cured a lady with *Calc. s*., high, of "several large ulcers in the gluteal region 3 in. in diameter and 3/4 in. deep, exposing the bone." The pain ceased immediately, and the cure was completed in two months. *Calc. s*. is suited to quinsy after it breaks, *Hep*. before. In this connection it may be well to speak of the relation of *Hep*. to *Mercurius*. Hahnemann's instinct led him to see in *Hepar* an antidote to mercurial poisoning, and it remains still the chief antidote, whether to the effects of massive doses or to over-action of the potencies. *Silic*. and *Merc*. are inimical, but if *Hepar* is given as an intermediary no unpleasant effects will occur. It follows *Merc*. when this ceases to help, or has aggravated, in rheumatism, quinsy, boils and suppurations. In a case of eczema pudendi in a young girl, 11, three

months after puberty, the parts red and itching, *Merc*. was given and the whole body became covered with the rash; *Hep*. was then given and removed all immediately. "Sweats day and night without relief." It antidotes the sensitiveness of *Merc*. to atmospheric conditions. In the old days of mercurialisation one of the chief things to be avoided by a patient under the "course" was exposure to chill. *Hepar* has this same sensitiveness to chill and liability to take cold from every exposure. Coryza, nose swollen and sore to the touch, especially inside the alæ. Boring at root of nose with catarrhal symptoms or headache is characteristic. Croupous inflammations of throat, respiratory organs, bowels and kidneys—the inner as well as the outer skin, in fact. The ulceration of the skin is peculiar. Guernsey thus describes it: "Ulcers with bloody pus; with sour-smelling pus; stinking pus; putrid ulcers; with redness around; with little pimples around—ten, twelve, or even as many as fifty may surround the large ulcer, and the ulcer sometimes spreads by the little pimples joining in. Painful; painful at the edge; suppurating; with pain as if sore; difficult to heal; inflamed; itching; looking like a lump of lead with a hole in it; cancerous ulcers." "Smelling like old cheese" is very characteristic of *Hep*. ulcers and discharges. The itching of *Hep*. is noteworthy; it occurs in connection with jaundice. It has cured cases of pruritus especially when of mercurial origin. In the respiratory organs there are suffocative attacks of breathing (in croup the child *chokes in its coughing spells* and there is much rattling). It meets many cases of asthma and whooping-cough. Respiration with mucous rattle; expiration in the morning, none in the evening; cough with expectoration during the day, none in the night (in croup no expectoration at night but only in the daytime—with the suffocative coughing spells; low, weak voice (Guernsey). There is a semi-paralytic condition of the rectum and bladder somewhat like that of *Alumina*. The stools are passed with great difficulty even when clay-like and soft. Fetid stools with a sour body-smell in children. Sour stools are also very marked in diarrhœa; and this maybe noted along with the desire of *Hepar* for acid things. Micturition is impeded; obliged to wait awhile before the urine passes, and then it flows slowly for many days. Never able to finish urinating; it seems as if some urine always remains behind in bladder. Urine drops vertically down. The urine is very acrid. There are complaints during micturition and after. Nocturnal emissions. Escape of prostatic fluid at any time, and at stool. Affections of the sexual organs occurring on the right side. *Hepar* is one of the great antipsorics. In his "Medicine of Experience" Hahnemann speaks of the itch-like eruptions caused by *Hepar* and its corrective properties in wool-worker's itch. It is suited to: The psoric, scrofulous, diathesis. Debilitated subjects. Great tendency to suppuration. Strumous, outrageously cross children. Torpid, lymphatic constitutions; persons with light hair and complexion, slow to act, muscles soft and flabby. Slow, torpid constitutions with lax fibre and light hair; great sensitiveness to slightest contact of ulcers, eruptions and parts affected. (These conditions differ from the *Sulph*. type: lean, stoop-shouldered; unclean-looking, aversion to warmth.) The symptoms are: < in the night; on awakening; when blowing the nose; from cold in general; in cold, dry weather; on single parts

of the body getting cold; from getting the skin rubbed off; on uncovering the head; from surgical injuries in general; from lying on the painful side; from daylight; from pressure from without; from abuse of Mercury; during sleep; when swallowing, particularly when swallowing food (parts are so tender); while urinating; in clear, fine weather; in dry weather; in the least wind. Symptoms are: > from wrapping up the head; from warmth in general; the, air being warm; in damp and wet weather; from wrapping up the body warmly; by eating (a comfortable feeling after eating is very characteristic). There is marked periodicity in *Hepar*: every day; every four weeks (attack of paralysis); every four months (scabby eruptions on head); every winter (whitlows); spring and autumn, bilious attacks. The bends of the elbows and popliteal spaces are affected by *Hep*. In eye affections patient likes to have them covered *lightly*. The following case was cured by *Hep*. after *Sul*. and *Calc*. had failed. Pustular ophthalmia of left eye, > keeping eye closely covered with some soft fabric, < mornings, > as day advanced. Pimples surround affected eye.

Relations.—*Antidoted by:* Acet. ac., Bell., Cham., Sil. *It antidotes:* Metals, and especially mercurial preparations, Nit. ac., Calc., Iod., Kali iod., Cod-liver-oil. It removes the weakening effects of Ether. *Compatible with:* Aco., Arn., Bell., Lach., Merc., Nit. ac., Sil., Spo., Zinc. *Complementary to:* Calend. in injuries. *Compare:* In > from warmth: Ars., Calc., Nux v., Nux mos., Pso., Sil., Mag. m. In aversion to be washed Ant. c., Clem., Rhus, Sep., Spi., Sul. In aversion to be touched Ant. c., Ant. t., Cin., Sil., Thu. In irritable heart: Cact., Pho. In suppuration: Sil., Luet. (succession of abscesses), Calc. s., Merc. Every little scratch suppurates: Merc., Cham., Sil., Lyc. Cries during cough: (Arn., before and after; Bell. after), Sharp splinter or fish-bone sensation: Arg. n., Nit. ac., Sil., Fl. ac., Merc., Alm. Hasty speech and actions: Bell. (hasty speech, hasty drinking), Lach., Dulc., Sul. Little pimples round eye: Euphras., Phos. Croup: Aco. (Hep. follows Aco.; Aco. is anxious, high fever, distressed breathing); Spo. (dry, hard cough; little or no expectoration; starts from sleep choking, < before midnight; Hep. < after); Bro., Iod. Constipation: Alm., Bry., Nux, Nat. c. Sour stools: Mag. c., Calc., Rhe. Pains = fainting: Cham., Val., Verat. Sensitiveness of ulcers, &c.: Lach. (absence of sensitiveness, Graph.). Teste puts Hep. in his Pulsatilla group with Sil., Calc., Graph., and Phos.

Causation.—Cold, dry winds. Injuries. Mercury. Suppressed eruptions.

SYMPTOMS.

1. Mind.—Sadness and desire to weep.—Anguish and extreme apprehension, esp. in evening, and sometimes suggesting suicide.—Ill-humour; dislike even to see friends.—Excessive irritability.—Vexation and passion, with hasty speech and excessive weakness of memory.—The slightest cause irritates him and makes him extremely vehement.—A sort of furious spleen as though one could murder a man

in cold blood.—Anger; would have no hesitation in killing a man who offended him, only he knows better.—Visions in the morning, in bed.

2. Head.—Vertigo on moving the head, as well as from the motion of a carriage, or in the evening, with nausea.—Sense of swashing in the head.—Vertigo, with loss of intellectual power, and obscuration of sight.—Headache in the morning, excited by the slightest shock (< from every contusion).—Headache at night, on moving the eyes; the forehead seems about to be torn asunder.—Pain in the head, as if a nail were driven into it.—Boring headache from without to within in r. temple; on one side of head; at root of nose, when waking from sleep; < by motion and stooping.—Pressure in the head, semi-lateral, as from a plug or dull nail, at night and when waking in the morning; < when moving the eyes and on stooping; > when rising and from binding the head up tight.—Pressure on the temples and on the vertex, with palpitation of the heart in the evening.—Tension above root of nose.—Aching in the forehead, like a boil, from midnight till morning.—Pain, as from ulceration, in the head, directly above the eyes, every evening, or else at night, in bed.—Shootings in the head, esp. after having been in the open air, and on stooping, or at night, as if the head were going to burst.—Piercing in the head, esp. at the root of the nose, every morning.—Falling off of the hair, with very sore, painful pimples and large bald spots on the scalp; sensitiveness of the scalp to contact, with burning and itching in the morning after rising (after abuse of Mercury).—Cold sweat on the head.—Cold, clammy perspiration, smelling sour, principally on the head and face, with aversion to be uncovered; < from least exercise and during night; > from warmth and rest.—Disposition to catch cold when uncovering the head.—Tuberosities on the head, with pain as of excoriation, on their being touched; > from covering the head warm and from perspiration.—Humid scabs on the head, feeling sore, of fetid smell; itching violently on rising in the morning and feeling sore on scratching.—The head is bent backward, with swelling below the larynx, with violent pulsation of the carotid arteries and rattling breathing (in croup).

3. Eyes.—Pain, as if the eyes were driven, or drawn back, into the head.—Painful and difficult movement of the eyes.—Heat, pressure and shootings in the eyes.—Throbbing in and about the eye.—Pressure in the eyes, as from a foreign body (sand).—Pain, as from ulceration, immediately above the eye, every evening.—Inflammation of the eyes and of the eyelids, sometimes erysipelatous, with pain as of a bruise, and of excoriation, on being touched.—Pimples above the eyes, and on the eyelids.—Specks and ulcers on the cornea.—Nocturnal lachrymation and agglutination of the eyelids.—Spasmodic closing of the eyelids (at night).—Eyes prominent.—Obscuration of the sight on reading.—Photophobia by day, and by candle-light.—The eyes ache from the bright light of day, when moving them.—Confusion of sight, in the evening, by candle-light, alternately with clearness of vision.—The objects appear to be red.

4. Ears.—Darting pain in the ears.—Shootings in the ears, on blowing the nose.—Detonation in the ear, when blowing the nose.—Heat, redness, and itching in the ears.—Itching of the external ear.—Discharge of pus from the ears, which is sometimes fetid.—Scabs behind and on the ears.—Hardness of hearing, with pulsations and buzzings in the ears, esp. in the evening in bed.—Increase of cerumen.

5. Nose.—Inflammation, redness, and swelling of the nose.—Pain, as of a bruise, and of excoriation in the nose, on its being touched.—Burning pain, as from ulceration and scabs in the nostrils.—Epistaxis, in the morning, and after singing.—Want of, or increased power of smell.—Coryza, chiefly on one side, with roughness in the throat, inflammatory swelling of the nose, fever, or painful weariness in all the limbs.

6. Face.—Face yellow, with blue circles round the eyes.—Face burning, and of a deep red.—Nocturnal heat of face.—Erysipelatous inflammation and swelling of the face and cheeks, with pricking tension, and eruption of vesicles.—Drawing and tearing pains, commencing from the cheeks, and extending to the ears and the temples.—Pains in the bones of the face, on the parts being touched.—Pimples on the forehead, which disappear in the open air.—Swelling of the lips, with tension and pains on touching them.—Eruption at the corners of the mouth.—Ulcer in the corner of the mouth.—Ulceration at the commissure of the lips.—The middle of the lower lip becomes chapped.—Blisters (boils) on the lips, chin, and neck, painful on being touched.—Eruption on the face, scurfy, very painful to the touch.—Vesicles on the chin.—Shootings in the articulation of the jaw, on opening the mouth.

7. Teeth.—Odontalgia, with starting and drawing pains, < by closing the teeth, by eating, and in a hot room.—Looseness of the teeth.—The hollow teeth feel too long.—Swelling and inflammation of the gums, which are painful when touched.—Ulcer on the gums and in the mouth, with a base resembling lard.—The gums and mouth bleed readily.

8. Mouth.—Accumulation of water in the mouth.—Salivation, hawking up of mucus.—The tip of the tongue is very painful and feels sore.—Speech hoarse and precipitate.

9. Throat.—Sore throat, as if there were a peg in it, or an internal tumour.—Painful scraping in the throat, with difficulty in speaking and in swallowing the saliva.—Hawking up of mucus.—Shootings in the throat, and even into the ears, as from splinters, on swallowing, coughing, breathing, and on turning the head.—Violent pressure on the throat, with danger of suffocation.—Deglutition impeded and almost impossible, without great efforts.—Dryness in the throat.—Swelling of the amygdalæ.

10. Appetite.—Loss of appetite.—Bitterness of the mouth and of food.—Earth-like and bitter taste in the throat, with natural taste of food.—Violent thirst.—Unusual hunger in the forenoon.—Bulimy.—Desire only for acids, wine, sour and strong-tasting substances, or highly seasoned things.—Dislike to fat.—Desire for wine.

11. Stomach.—Risings, with burning sensation in the throat.—Burning in the stomach.—Attacks of nausea, sometimes with cold and paleness.—Nausea, with inclination to vomit in the morning.—Acid, bilious, greenish, or mucous and sanguineous vomitings.—Frequent and easy derangement of the stomach.—Pressure at the stomach, even after eating very little.—Pressure in stomach, as if lead were in it.—Swelling in the region of the stomach, with pressive pains.—Pressure, inflation and sensation, as if there were Something weighing heavily on the epigastrium, with inability to continue seated, and to endure tight clothes.

12. Abdomen.—Shootings in the region of the spleen.—Splenetic stitches when walking.—Shootings in the hepatic region, esp. when walking.—Pain, from a bruise in the in the morning.—Cramps and contractive pains in the abdomen.—Sensation of violent clawing in the umbilical region, with nausea, anxiety, and heat of the cheeks.—Cutting pains.—Pain, as from ulceration in the abdomen.—Shootings in abdomen, esp. on l. side.—Swelling and suppuration of the inguinal glands (buboes).—(Rumbling in the abdomen.).—Incarceration and difficult emission of flatus, esp. in the morning.

13. Stool and Anus.—Constipation; hard and dry fæces.—Difficult emission of scanty and soft excrement, with urgent want, and tenesmus.—Diarrhœa of feculent matter with cutting pains.—Whitish diarrhœa, of an acidulous smell, esp. in children.—Dysenteric evacuations, greenish, or of a clay-colour, with evacuation of sanguineous mucus.—After the evacuation, pain, as of excoriation, and sanious discharge from the anus.—Hæmorrhage from rectum, with soft stool.—Burning at the rectum.—Protrusion of hæmorrhoidal pimples from the rectum.—Perspiration at the perineum.

14. Urinary Organs.—Urine slow and turbid, with whitish sediment.—The urine is passed slowly, with difficulty; drops out perpendicularly.—Abundant secretion of pale urine, with pressure on the bladder.—Acrid, corrosive (corroding the prepuce), or pale and watery, or deep-red, and hot urine.—Nocturnal emission of urine.—Wetting the bed (at night).—Emission of blood after urination.—Burning in the urethra during micturition.—Stitches in the urethra.—Redness and inflammation of the orifice of the urethra.—Discharge of mucus from the urethra.

15. Male Sexual Organs.—Weakness of the genital parts.—Itching of the penis (glans, frænulum).—Smarting, excoriation, and oozing, between the thigh and the scrotum.—Cancerous ulcer on the prepuce.—Painful, cramp-like, and tensive erections.—Absence of sexual desire and of erections.—Erections without energy,

during coition.—Excitement of the genital parts, as if for emission.—Flow of prostatic fluid, esp. after making water, and during a difficult evacuation.

16. Female Sexual Organs.—Excoriation of the vulva, and between the thighs.—Congestion of blood to the uterus.—Irritation of ovaries (l.); with swelling; and great sensitiveness.—Discharge of blood between the periods, with inflation of the abdomen.—Catamenia too long delayed, and diminished.—Leucorrhœa, with smarting at the vulva.—Cancerous ulcer on the breast, with stinging-burning of the edges, smelling like old cheese.—Itching nipples.

17. Respiratory Organs.—Hoarseness.—Pain and great sensitiveness (to cold) of the larynx, with weak and rough voice, emaciation, hectic fever, and sleeplessness.—Rattling breathing (during sleep).—Swelling below the larynx.—Roughness in the throat.—Croup, with swelling under the larynx.—Permanent pain in the larynx, < by pressure, speech, coughing, and breathing.—Weakness of the organs of speech, and of the chest, causing a hindrance to speak loud.—Cough, excited by irritation or pain in the larynx.—Titillation as from dust in the throat, inducing cough, which is deep, wheezing, with expectoration, only in the morning, of mucus, bloody, or like pus, generally tasting sour or sweet.—Cough, deep and dull, excited by difficulty of respiration.—Suffocating, violent cough, with retching.—Cough, similar to whooping-cough.—Cough after drinking.—Dry cough, in the evening, on taking cold in any part of the body, or when lying on the bed.—Cough worse from evening till midnight.—Cough caused by a limb getting cold; from eating or drinking anything cold; from cold air; when lying in bed; from talking, crying.—Attacks of dry, rough, and hollow cough, with anguish and suffocation, often ending in lachrymation.—Barking cough.—Cough, with spitting, of blood.—Cough, with abundant expectoration of mucus.—Ringing, and pain in the head during the cough, as if it were going to burst.—Sneezing after the cough.—Bronchitis.

18. Chest.—Anxious, hoarse, wheezing respiration, with danger of suffocation on lying down.—Soreness in the chest.—Attacks of suffocation, which force the patient to throw back the head.—Shortness of breath.—Weakness of the chest; cannot talk from weakness.—Tenacious mucus in the chest.—Spasmodic constriction of the chest.—Frequent want to breathe deeply, as after running.—Shootings in the chest on breathing and walking.—Pimples and furunculi on the chest, with lancinations, and pain as of excoriation on the part being touched.

19. Heart.—Violent palpitation of the heart, with fine stitches in the heart and l. half of chest.—Irritability of the heart.

20. Neck and Back.—Swellings on the neck, painful when touched.—Violent pulsation of the carotid arteries.—Burning, shooting pain in the region of the loins.—Pain, as from a bruise in the loins, extending to the thighs.—Shootings and pulling in the back, between the shoulder-blades and in the muscles of the

neck.—Stitches and rheumatic pains in the back.—Nocturnal tension in the back, on turning in bed.—Fetid sweat under the armpits.—Suppuration of the axillary glands.

22. Upper Limbs.—Pain, as from a bruise, in the bones of the arm (humeri).—Arthritic swelling of the hand, of the fingers, and of the joints of the fingers, with heat, redness, and pain, as of dislocation during movement.—Skin of the hands cracked, rough and dry.—Granulated eruption on the hands and on the wrists.—Nettle-rash on the hands and on the fingers.—Cold perspiration of the hands.—Tingling in the tips of the fingers.—Itching in the palms of the hands.—Steatoma at the point of the elbow.—Easy dislocation of the fingers.—Fingers dead.—Panaris.

23. Lower Limbs.—Pain in the buttocks on sitting down.—Furunculi on the buttocks.—Pain, as from a bruise, on the thighs.—Painful tension in the thighs, which prevents sleep.—Frequent sudden lassitude of the limbs, when walking.—The hip-joint feels sore, as if sprained when walking.—Pain as from bruises in the knee.—Prickings in both heels.—Tingling in the toes.—Burning, stinging pain in the toes.—Swelling of the knees.—Cramps in the calves of the legs, the soles of the feet, and the toes.—Feet burning.—Swelling of the feet, and in the ankle-bones, with difficulty of respiration.—Red, rheumatic swelling in the ankle-bones, with pain, which increases at night.—Cracks in the feet.—Shootings in the corns.

24. Generalities.—Tearing or paralytic pullings in the limbs, esp. in the morning on walking.—Weakness in all the limbs.—Pains, as from excoriation or bruising on various places, when they are touched.—Rheumatic pains in the limbs and shootings in the joints.—Arthritic swellings, with heat, redness, and pains as from dislocation.—Swelling, inflammation, and ulceration of the glands.—Appearance or aggravation of the pains at night, esp. during the chills.—Emaciation, sometimes with anguish, irritability, shiverings in the back, redness of the cheeks, sleeplessness, &c.—Physical depression and trembling after smoking tobacco, or on walking in the open air, with heat and anxiety.—Fainting fit, esp. in the evening, from moderate pains.

25. Skin.—Erysipelatous inflammations, even with swelling and vesicles.—Yellowish colour of the skin, esp. on the face, with yellowish colour of the sclerotica, and urine red like blood.—Jaundice, with much itching.—Burning itching in the body, with white vesicles after scratching.—Nettle-rash.—Eruption of pimples and tubercles, painful to the touch.—Unhealthy skin; every injury tends to suppuration and ulceration.—Promotes suppuration.—Cracks in the skin.—Putrid ulcers, smelling like old rotten cheese, and easily bleeding, with shootings, sensation of gnawing (esp. at night), or with burning and pulsative pains.—Cancerous ulcers.—Suppurations; esp. after previous inflammations.—Panaris.—Caries.

26. Sleep.—Strong desire to sleep, morning and evening, with convulsive yawning.—Unquiet sleep, with the head turned back.—Prolonged sleep with stupefaction, as in lethargy.—Sleeplessness, caused by a great flow of ideas.—Dreams of fire, sickness, danger, guns, &c.—At night, gastric sufferings, headache, agitation, starting of the limbs, and dry heat.—Starts at night, during sleep, as from want of air, with tears and great anguish.—Wakes at night with an erection and an urgent desire to urinate.—The side on which he lies at night becomes painfully sore; he must change his position.

27. Fever.—Pulse hard, full, accelerated; at times intermitting.—Shuddering and shivering, esp. in the open air.—Shiverings, with chattering of the teeth and coldness in the hands and feet, followed by heat and sweat, esp. on chest and forehead, with little thirst.—Chill in the evening, 6 or 7 p.m.—Chilliness and heat alternating during the day, with photophobia.—Chilliness at night; in bed aggravating all the symptoms.—Bitterness in the mouth, afterwards shivering with thirst; an hour after, heat with sleep, after which, vomiting and cephalalgia.—Dry heat at night.—Flushes of heat with sweat.—Burning, feverish heat, with redness of the face and violent thirst.—Strong disposition to perspire in the daytime, on the least effort, and on the least movement.—Profuse perspiration day and night.—Perspiration easily excited through the day, esp. from exertions of the mind.—Nocturnal sweat.—Sweat in the morning.—Night and morning sweat, with thirst.—Viscid acid sweat.—Cold, clammy, or sour or offensively smelling perspiration.—Intermittent fever; first chills, then thirst, and, an hour later, much heat, with interrupted sleep.

Hepatica.

Hepatica triloba. Liver-wort. N. O. Ranunculaceæ. Tincture of full-grown leaves.

Clinical.—Bronchitis. Catarrh. Dyspepsia. Epistaxis. Throat, sore.

Characteristics.—This is an old remedy which received its name from a fancied resemblance of its leaves to the shape of the liver. All our definite knowledge of it began with an experiment made by Dr. D. G. Kimball, who chewed the leaves every day for "a chronic irritation of the throat and lungs." A few symptoms were produced, and the symptoms he complained of were removed, notably: tickling irritation in throat and sensation about epiglottis as of particles of food remaining. Accumulation of viscid, tenacious phlegm, with frequent hawking. Lungs became much stronger and digestion more perfect. Hale, experiencing an attack of circumscribed pneumonia, with bloody expectoration; or else, profuse, yellow, creamy, exceedingly *sweet*, some pain and constriction in right chest, tickling in fauces < by eating; or from inhalation of dust; chewed the dry leaves, and in a few days was well. *Stan., Lyc., Phos., Sul*. had all failed to relieve. Wegge, of Copenhagen, according to Hansen, confirms its value in pharyngeal catarrh, with

profuse serous sputa and hoarseness. In the subjoined Schema I give both caused and cured symptoms.

Relations.—*Compare:* Stan., Cist., Caust., Pho., Sang., Rumex, Lach., Kali bi.

SYMPTOMS.

3. Eyes.—Eyes somewhat sensitive to light; itching and smarting; slightly agglutinated in morning.

5. Nose.—Bloody mucus frequently blown from l. nostril for three or four days in succession.—Soreness of end of nose at entrance of nostrils.

9. Throat.—Rough scraping, irritative and tickling sensation in throat and fauces disappears, also sensation about epiglottis and larynx as of particles of food remaining.—Accustomed accumulation of phlegm, sometimes thick, viscid, and tenacious, inducing frequent hawking and disposition to hawk disappears.—Pharyngeal catarrh, with profuse serous expectoration and hoarseness.—An exceeding, annoying irritation of fauces (with pneumonia), tickling, itching, scraping, almost constant; < by eating or inhalation of dust (cured).

11. Stomach.—Digestion more perfect.

17. Respiratory Organs.—The customary paroxysms of coughing, and somewhat abundant expectoration, mostly daily about midday, a portion of the expectoration being opaque, yellowish, of the consistence of cream, the rest mucous and frothy, disappear.—State of lungs and throat much better.—Bronchitis, with circumscribed pneumonia, sputa bloody and purulent; sputa profuse, yellow, creamy, and exceedingly sweet; some pain and constriction of r. chest; an exceedingly annoying irritation of fauces (cured).—Uncommonly free and easy expectoration.

Heracleum.

Heracleum sphondylium. "Branca ursina." N. O. Umbelliferæ. Tincture of whole plant.

Clinical.—Debility. Dyspepsia. Gout. Headache. Seborrhœa capitis. Skin, affections of. Spleen, pain in.

Characteristics.—*Heracl.* has been proved. It was found to exercise a pronounced action on the digestion, producing hunger, with inability to eat, nausea, vomiting; colic, diarrhœa, and pains in the spleen. It also affected the sexual organs and the

skin. A characteristic is "Headache with drowsiness; < on moving in open air; > tying up the head with a cloth." Exhaustion, indolence, and weakness were complained of.

Relations.—*Compare:* Con., Abies n., Cean.; in headache with drowsiness, Brucea, Ginseng, Gels., Nat. s., Nux mos., Sul.

SYMPTOMS.

1. Mind.—Prostration of strength, indolence, moral depression; fits of hypochondriasis.—Ill-humour, capriciousness.

2. Head.—Vertigo, on reading while seated.—Cephalalgia, esp. in the sinciput and occiput, with inclination to vomit, and drowsiness, esp. < on walking in open air; > by wrapping up the head.—Violent itching on the scalp, on scratching which, the fingers become greasy; much fatty perspiration on the head.

3. Eyes.—Lachrymation and fatigue of the eyes while reading.

5. Nose.—Frequent sneezing, with stitches in region of spleen.

9. Throat.—Pressure in the throat, as from mucus, which it is impossible to detach; accumulation of mucus, tickling roughness and scraping in the throat.

11. Stomach.—Bitter taste; sweet bitter risings, with regurgitation of bitter liquid; craving, with loathing and horror of all kinds of food; increased thirst; nausea; vomiting, bitter, bilious, with pains in the stomach, and much congestion in the head.—Pressure at the stomach, with nausea, or else in the scrobiculus, as from a stone (after a meal); the pains in the stomach are always accompanied by an inclination to vomit.

12. Abdomen.—Lancinating and pinching colics, which force the patient to writhe; pulsation and pains in region of spleen; flatus and colic, with nausea and disgusting risings.—Frequent sneezing, with lancination in the region of the spleen.

13. Stool and Anus.—Stools tardy, with pressure and pain in the anus.—Slimy, fetid stools.

15. Male Sexual Organs.—Drawing pain in the penis; shootings in the glans.—Itching and smarting in the scrotum; pollutions.

16. Female Sexual Organs.—Transient sticking in the labiæ.

17. Respiratory Organs.—Dry, hacking cough, with feeling of soreness in the chest and shooting pains.

18. Chest.—Oppression of the chest, with chilliness, or else with palpitation of the heart; difficulty of respiration on ascending a staircase.—Stitches in chest during inspiration; dry eruption on chest, burning after scratching.

21. Limbs.—Gouty tearing in the limbs.—Shooting and burning pains in the feet.

25. Skin.—Violent itching in the skin and moist itch-like eruption.

27. Fever.—Chilliness, with frequent yawning and inclination to sleep in afternoon.

Hippomanes.

"A normally white, usually dark olive green, soft, glutinous mucous substance, of a urinous odour, which floats in the allantois fluid, or is attached to the allantois membrane, of the mare or cow, chiefly during the last months of pregnancy" (Hering). Trituration of the dried substance taken from the tongue of a newly-born filly.

Clinical.—Chorea. Melancholia. Prostatitis. Wrist, paralysis of; rheumatism of.

Characteristics.—The clinical experience with this remedy has been so limited, that but few characteristic indications have been made out. These, however, are peculiar: Icy coldness in stomach. Violent pain in wrists. Paralysis of wrist in morning in bed. Weakness of hands and fingers so that he cannot hold anything. A case of chorea was cured on these last symptoms. There is weakness, restlessness, melancholy. The headache is > lying on painful side, < walking in sun. Chilliness, > from being covered. A peculiar sensation is as if the head would fall forward on walking; as of a plug in the throat; as if a swelling retarded the flow of the urine. There is desire to lie down, but no relief on doing so.

Relations.—*Antidoted by:* Coffee. Caust. relieved the paralysis of wrist. *Compare:* Anac. (plug sensation).

SYMPTOMS.

1. Mind.—Melancholy; a young man sits in the corner and does not want to have anything to do with the world.—Restlessness; must move from place to place.

2. Head.—Sensation of lightness in head.—Pressive pain in temples.—Headache, with giddiness, heat in head, sleepiness, yawning, thirst.—Violent headache; heaviness on vertex; when walking it feels as if head would fall forward.—Headache > when lying on painful side; < when walking in sun.—The

head feels so heavy that it falls forward if he raises himself.—The hair becomes nearly dry; falling off of hair.

3. Eyes.—The light of the candle looks blue.—Stitches in eyes (with headache).—Painfulness of eyes when moving them, with headache.

5. Nose.—Sensation of coldness when drawing the air in.—Bleeding of nose in morning.

6. Face.—Involuntary twitching of under lip.

8. Mouth.—Bitter taste in mouth.—Tongue coated white, with redness of tip.—Increased secretion of saliva, with headache or sore throat.

9. Throat.—Painfulness of l. tonsil.—Sensation of plug in throat (l. side).

10. Appetite.—Desire for acids, and aversion to sweet things.

11. Stomach.—Nausea, esp. in a draught of air.—Icy coldness in stomach.—Sensation of emptiness in stomach (and head).

13. Stool and Anus.—Soft stool, with vomiting; discharge of prostatic fluid after micturition.—Hard stool, in balls.—Spasmodic contraction of sphincter ani.

14. Urinary Organs.—Frequent discharge of watery urine.—Urine discharged in a small stream, with straining—it feels as if a swelling retarded it; prostatitis.—Drawing pain from anus through urethra.

15. Male Sexual Organs.—Sexual desire increased.—Prostatitis.—Drawing pain in testicles.

16. Female Sexual Organs.—Menstruation too early.

17. Respiratory Organs.—Larynx feels raw, as if air were too cold.—Tickling in throat when breathing.—Cough, barking, during sleep.

18. Chest.—Stitches in l. side of chest.

21. Limbs.—Heaviness in limbs.

22. Upper Limbs.—Left arm feels as if paralysed.—Violent pain in wrists.—Paralysis of wrist, every morning in bed.—Sensation in wrist as if sprained, esp. l.—Great weakness of hands and fingers, so that he cannot hold anything.—Formication on r. hand.

23. Lower Limbs.—Weakness, and as if sprained, in knees.—Weakness and sensation of dryness in foot joints and soles of feet.—Cramps in soles of feet, in evening.—Cold feet.

24. Generalities.—Great weakness of body and mind.—Great weakness and debility, with pale face.—Desire to lie down, with no relief on doing so.—Chorea.

25. Skin.—Itching as from flannel on skin, esp. on chest and between shoulders.

27. Fever.—Chill, beginning in back.—Chill, > being warmly covered in bed.—Heat in evening, with dull headache.

Hippozćninum.

Mallein, Glanderin, Farcin. The nosode of glanders or farcy. (The disease is called "Glanders" when the catarrhal symptoms are pronounced; "Farcy," when these are not noticeable, the skin being chiefly affected, with deposits in the lungs. Homśopathic preparations of both have been made. Those made from Farcy are distinguished by the letter "F.") Triturations of sugar of milk saturated with the virus.

Clinical.—Abscesses. Bed-sores. Boils. Bronchitis. Cancer. Carbuncles. Caries. Catarrh, chronic. Colds, chronic. Diphtheria. Elephantiasis. Erysipelas. Glanders. Glands, inflamed. Hip-disease. Liver, enlarged. Lupus excedens. Nasal cartilages, ulceration of. Śdema. Ozćna. Parotitis. Phlegmasia alba dolens. Phlegmon. Plague. Pustules. Putrid fever. Pyćmia. Scrofula. Small-pox, confluent. Syphilis. Tuberculosis. Ulcers. Whooping-cough.

Characteristics.—Of recent years *Mallein*, a toxin prepared from glanders, has taken an important place in veterinary practice of the old school as a test injection for deciding whether a horse suspected of glanders actually has the disease or not. If the horse reacts it is concluded there is glanders. In a number of cases in which animals have reacted to the first injections, a repetition of the "test" has failed to elicit reaction, thus proving that *Mallein* is curative as well as diagnostic (*H. W.*, xxxv. 149). The nosode has been used by homśopaths, at the suggestion of Garth Wilkinson, on the phenomena of the disease as guides, and in a large number of cases involving low forms of suppuration and catarrh, malignant ulcerations and swellings, abscesses and enlarged glands; and also in conditions similar in kind, but less in severity. I have used it with excellent effect in cases of inveterate nasal catarrh and of glandular enlargement. The nasal affection may go on to ozćna, ulceration of nasal cartilages and bones. Glanders in the horse affects the lungs no less than the upper respiratory tract, causing coughs and disseminated ulcerations and deposits throughout the lungs. It has cured papules and ulcerations in frontal

sinuses, pharynx, larynx, and trachća; hoarseness; old cases of bronchitis, especially in old persons where suffocation from excessive secretion seemed imminent. Bronchial asthma. Whooping-cough. A cough commencing at Christmas and lasting till June has been cured by it.

Relations.—*Compare:* Bacillin., Avi., Luet., Variol. The serpent poisons, Aurum, Cadm. s., Kali b., Hepar, Psorin.

SYMPTOMS.

2. Head.—Fainting turns with headache.—Inflammation of membranes of brain.—Purulent collections between bones of skull and dura mater.—Scattered abscesses in brain substance.—Tubercles may appear in periosteum of skull, in dura mater, in plexus choroides.—A diffused myelitis malleosa, attributable to infiltration.—Bones of skull and face (frontal most) necrosed.—Hair loses its glisten.

3. Eyes.—Eyes full of tears or slime.—Pupils dilated, with collapse.—Papules on choroid coat of eye.

4. Ears.—Tinkling sounds in ears.—Hoarse and deaf before fatal termination.—Inflammation of parotid gland.

5. Nose.—Swelling and redness of nose and adjacent parts, with severe pain.—Catarrh: nose inflamed with thick and tinged defluxion; tonsils swollen, fauces gorged.—Obstinate catarrh.—Discharge: often one-sided, albuminous, tough, viscous, discoloured, grey, greenish, even bloody and offensive; acrid, corroding.—Chronic ozćna.—Nose and mouth ulcerated.—Cartilages of nose become exposed and necrosed, septum, vomer, and palate bone disorganised.—Caries of nasal bones.—Checks the liability to catarrhal affection.

6. Face.—Maxillary gland swollen, like a distinct ball of sausage, firmly attached to the maxilla, uneven, rugged, tuberculated, mostly painless, burning only at times.—Submaxillary and sublingual glands swollen and painful at times, abscesses are formed which open externally.

7. Teeth and Gums.—Gums show a tendency to bleed.—Gums covered with a black, sooty deposit.

8. Mouth.—Act of speaking difficult.—Tongue dry, thickly covered with a black, sooty deposit.—Ulcers appear in mouth.—Buccal passages filled with tenacious lymph and mucus.—Odour of breath putrid.—Scrofulous swelling of l. parotid gland in a child.

9. Throat.—Ulcerations upon velum of palate.—Swollen tonsils closing posterior channels.—Upon mucous membrane of pharynx ecchymoses, redness, swelling, eruptions, and foul ulcers.

10, 11. Appetite and Stomach.—Thirst excessive, esp. with diarrhśa.—Gastro-intestinal catarrh; loss of appetite, indigestion, constipation; in later stage, diarrhśa.

12. Abdomen.—Liver greatly enlarged, often showing signs of fatty degeneration.—Hepatitis with gangrenous and ulcerative inflammation of gall-ducts.—Spleen enlarged, filled with blood; softened and liquefied, of a greyish or dark colour; wedge-shaped abscess in spleen.—Inguinal glands swollen.

13. Stool.—Colliquative diarrhśa with a general cachexia and exhaustion precede the fatal termination.—Constipation.

14. Urinary Organs.—Tubercles and abscesses in kidneys.—Albumen in urine, also leucine and tyrosine.

15. Male Sexual Organs.—Tubercles and abscesses: of glans penis; of testicles; in kidneys.

16. Female Sexual Organs.—Slimy discharge from vagina.—Uterine phlebitis.—Abortion.

17. Respiratory Organs.—Papules and ulcerations in frontal sinuses, pharynx, larynx, and trachea.—Hoarseness from the altered condition of larynx.—Bronchitis: in the worst forms; esp. in elderly persons; where suffocation from excessive secretion is imminent.—Noisy breathing; loud snoring respiration before fatal termination; breath fetid.—Cough and obstructed respiration, resulting from cicatricial contraction of mucous membrane of nose and larynx; had lasted eleven years; patient presented picture of decided cachexia.—Respiration at first partially impeded.—Cough commenced at Christmas and lasted till June.—Whooping-cough.—Patients cough severely and expectorate profusely, sputa usually bearing a strong resemblance to the discharge from the nostrils.—Tubercles, size of millet seed to a pea, of a grey, yellowish, or reddish colour.—Given in phthisis, it diminishes expectoration, abates constantly recurring aggravations of inflammation, and checks liability to catarrhal affections.—Lung disease of cattle (F.).

19. Pulse.—Pulse very frequent and small in volume, 110 to 120; in some cases retarded.

21. Limbs.—Obscure pain in limbs, most in muscles and joints.

22. Upper Limbs.—With sore finger, swelling of arm, phlegmonous and erysipelatous with pustules and ulcers.

23. Lower Limbs.—Hip-disease.—Psoas and lumbar abscesses (F.).—Old bad legs (ulcers).—Anasarca of lower limbs (F.).

24. Generalities.—Weakness, fatigue, general discomfort; they give up their business.—General prostration with considerable emaciation.—Tissues: Numerous ecchymoses in internal organs; inflammation of lymphatic vessels and swelling of glands; phlegmasia alba dolens.

25. Skin.—Erythema, erysipelatous or phlegmonous processes, abscesses, pustules, and ulcers are spread so extensively over surface of body that hardly any part remains free.—Malignant erysipelas, particularly if attended by large formations of pus, and destruction of parts.—Confluent small-pox.—Ulcers have no disposition to heal, livid appearance.

26. Sleep.—Insomnia and great restlessness.—Nocturnal delirium.

27. Fever.—Frequent chilliness.—Chills and fever in cases of abscesses and ulcers.—Skin becomes cool with collapse.—Fever when a series of abscesses follow in rapid succession.—Putrid fever.—Plague.—May be tried in scarlatina, where odour of breath is putrid, buccal passages filled with tenacious lymph and mucus, tonsils greatly swollen.

Hoang-Nan.

Strychnos gaultheriana, Pierre. (Tonquin). N. O. Loganiaceæ. Tincture of dried bark.

Clinical.—Albuminuria. Boils. Carbuncles. Eczema, pustular. Hydrophobia. Leprosy. Paralysis. Prurigo. Syphilis. Ulcers.

Characteristics.—*Hoang-nan* is a plant indigenous to Tonquin, where it has a great reputation as a remedy for leprosy, hydrophobia, snake-bites, and diseases of the skin. In an article by Sir Sherston Baker (*Brit. Med. Journ*., March 30, 1889-*H. W*., xxiv. 371), it is stated that the *medicine* called *Hoang-nan* is a powder, and contains l.5 parts *Alum*, l.5 parts *Realgar*, 2.5 *Hoang-nan*. But it is added that the last is the most important, and can be employed alone. The plant belong to the Strychnos family, and contains both *Strychnia* and *Brucea*, the latter in preponderating quantity. The red dust of the bark contains the most active properties. The native method of preparing the medicine is by moistening the mixture of the three powders with a little vinegar, and forming the paste into pills

of about a centimetre in diameter. When taken by a healthy person these pills produce: Fatigue, general indisposition, vertigo, tingling of the hands and feet, involuntary movements of jaw. When a person is bitten by a poisonous animal a dose of three or four grammes is administered in vinegar, and if none of these symptoms appear it is understood that the medicine is antagonised, and the dose is increased until some of the symptoms manifest themselves, when the poison is considered to be destroyed. The use of alcohol is forbidden whilst a patient is taking this medicine. Vinegar appears to modify its virulence. In animals poisoned with it tetanic convulsions always begin in the hind legs and spread all over the body. Brain, liver, kidneys, and lungs were found congested post mortem. In 1883 a proving of the drug was made by seven *persons (N. A. J. H*., March, 1886), and a few symptoms were produced. According to Hansen, prurigo, pustular eczema in parts well supplied with sebaceous glands (face, neck, genitals), boils, carbuncles, constitutional syphilis, cancer of the glands, and general malnutrition were also met by the remedy, the dose of which is 5 to 30 drops of the tincture three times a day.

Relations.—Compare. Nux v., Curare, Angustura, Brucea antidys., Hydrocotyle.

SYMPTOMS.

1. Mind.—Mental lassitude; indisposition to effort.

2. Head.—Vertigo; headache.

12, 13. Abdomen and Stool.—Colic and diarrhœa.

14. Urinary Organs.—Albuminuria (in four provers).—Mucous casts (two provers).

24. Generalities.—It improves nutrition generally, esp. in constitutional syphilis.—Tetanic convulsions beginning in legs and spreading over body.—Glandular affections.

25. Skin.—Malignant ulcers; pustular eczema; boils; carbuncles; leprosy.

Homarus.

Lobster. N. O. Crustaceć. Triturations of sugar of milk saturated with the digesting fluid of the lobster, a thick, reddish, offensive liquid contained in a sac situated at the back of the mouth.

Clinical.—Back, pains in. Bones, pains in. Coryza. Diaphragm, pain in. Dyspepsia. Eye, affections of. Flatulence. Granular throat. Headache. Liver, pains in. Śdema. Paralysis, nervous. Pruritus. Sleep, disordered. Spleen, pains in. Throat, sore. Wrist, pain in.

Characteristics.—The effects of lobster on some persons and under some conditions are well known. In order to thoroughly study the effect A. M. Cushing adopted the happy idea of proving the specific lobster poison, and the result has been a very valuable addition to our armamentarium (*H. R.*, iii. 98). *Homarus* is an agent of great activity, as the subjoined symptom list will show. Persons have been known to die after eating lobster and thereafter drinking milk. Cushing put a little of the poison into warm milk, and in ten minutes it was a hard mass. Papoid soon dissolved it, but pepsin took much longer. Cushing found that milk aggravated his symptoms during the proving. "< From milk" should be a strong indication for its use. The more prominent symptoms of the proving were: Sore throat, which was quite severe, felt dry, looked much inflamed with large blood-vessels, and appeared granulated headaches; deranged digestion; pains in back; sexual excitement disturbed sleep. Here is a peculiar symptom not unfrequently met with in dyspeptics: "At 3 p.m., ate a plain dinner, and at 7 drank a little milk; at 12 (midnight), after a few minutes' sleep awoke *with hurried desire for stool*, and was relieved by passing a large amount of wind. After much effort passed a large, long, tenacious stool." For patients who are awakened in the night by the necessity to pass wind, *Hom*. should be the remedy. Pains were sharp and sudden, compelling him to sit down. A curious sensation was: "Felt as though could not move; on moving no pain; felt better by moving." On this indication, with others, Cushing cured a case with *Hom*. 4x. The patient had headache, sore throat, loss of appetite, and when she awoke in the morning felt as if she could not move at all. On receiving *Hom*. there was a speedy restoration of keen appetite, both for food and work, and loss of headache and sore throat. Another cured case had the following symptoms: "No appetite; distress in stomach; restless sleep; *very tired in morning*." A case of frequent "bilious spells" was also cured in a man who had had *Nux* and *Dioscorea* with only temporary relief. The symptoms generally are < after sleep; in the morning on waking; at night; on drawing a long breath; from drinking milk. > From motion; from passing wind; after eating; from inhaling cold air. L. H. Hallock relates (*Med. Adv.*, xxii. 311) a personal experience. An hour after eating a small amount of lobster salad, general pruritus commenced, worse in lower extremities, especially the calves. The itching was of a biting, burning character, not > by rubbing or scratching, almost unendurable. It lasted

two hours in spite of bathing with hot and cold water, fresh and salt. No sooner had the itching abated than lips, nose, eyes began to swell, till the eyes were closed and lips almost completely inverted. Throat swollen and śdematous so that it was almost impossible to breathe; profuse salivation. Eight hours after the meal he had the appearance of a severe and protracted debauch. In twenty-four hours was as well as ever. Once subsequently he had a like experience after eating lobster.

Relations.—*Compare:* Sepia, Murex, Aster. r. Ast. fl.; in cold damp feet, Calc. c.; Lach. (< after sleep); Hydrast., Phytolacca, Pic. ac.; in < from milk, Calc. c., Chi., Con., Nit. ac., Sep. Sul., Mag. c. Ćthus.

Causation.—Milk, effects of.

SYMPTOMS.

1. Mind.—Frightened feeling.—Dull.—Nervous but with dread of moving.

2. Head.—Headache, in morning; sharp at times, mostly in temporal region, < l.—Dizziness.—Frontal pain; just above eyes, at times worse in l. temporal region; from over eyes to occiput, < l. side; sharp, over l. eye, had to scowl and rub the parts.—Pain: sharp, in temples (r.); in l. temple, and in occiput; in front part of l. temple.

3. Eyes.—Aching in eyes.—Aching in r. eye and above l. angle of r.—Aching in l. eye with soreness to touch.—Aching from l. side of r. eye to occiput.—Aching in l. eye when rising, later in r., as if something had been blown in the eye suddenly.—Smarting in eyes.—Aching pain in l. ball, not much affected by the light.—Lids stuck together in the morning.—Śdema of lids.—Profuse lachrymation.

4. Ears.—Frequent stabbing through lower lobe of l. ear, had to pinch it.

5. Nose.—Stinging in nasal passages.—Burning in nasal passages extending to throat after rising.—Sensation of mucus in l. nostril.—Nose stopped in morning.—Discharge from the nose; watery, from l. nostril.—Sneezed often.

8. Mouth.—Profuse salivation.

9. Throat.—Pain near l. ear; sharp, sudden, transient, in l. side of throat, occasionally extending to ear.—Smarting and redness of throat; < r. side; back of it looks as if covered with tough mucus, constant accumulation of mucus in fauces; next day throat sore and burning, looks mottled, vessels show plainly, sticky mucus in mouth and throat, smarting in throat, < l. side.—Throat dry and sore on waking; looked granulated, expectoration salt. Irritation; of l. side.—Sore and raw feeling; burning, posterior fauces grey and covered with membrane or tough mucus, vessels show plainly where there is no mucus or appearance of deposit.—Soreness: < l.

side, less on r. than posterior parts; > by cold air.—Smarting and inclination to cough > opening mouth wide and inhaling very cold air.—Pain in l. side of throat, ear, and neck, it seems to be in the muscles rather than the mucous membrane, > holding side of head with the hand.—Tingling; and inclination to cough, raised white mucus.—Burning in throat, r. side, and in śsophagus, stomach and bowels.—Śdema of throat so great he could hardly breathe.

11. Stomach.—Belching forth of tasteless wind in the morning.—Pain all the forenoon, with occasional hot flashes.—Sharp pain after a light breakfast.—Distress in stomach; on waking in the night, > in morning, returned in evening; before and after a light breakfast; after a plain dinner, followed by a little ice-cream; through to back, < near spine, several times during the day; around body at epigastric region before rising, extending down back to region of kidneys.—Burning in stomach.

12. Abdomen.—Pain: in diaphragm; in hypochondria; lower part of liver; liver and spleen; in liver and spleen during the day; in liver, < evening.—Sharp pain in region of liver (in morning); in l. lobe of liver; in region of liver, < drawing a long breath; under ends of l. floating ribs after retiring, appeared to be in the spleen.

13. Stool and Anus.—Frequent transient inclination to stool during the day.—Alternate diarrhśa and constipation, changing every three or four days.—After a few minutes' sleep awoke with hurried desire to pass stool, > by passing large amount of wind.—After much effort passed large, long tenacious stool (in night).

15. Male Sexual Organs.—Long-continued excitement every morning; and in night.

17, 18. Respiratory Organs and Chest.—Difficult breathing after retiring.—Sharp pain in back side of l. lung.—Pain: through chest; in sides, in r. lung; through centre of r. lung.—Pain in centre of l. lung after retiring, and around body at diaphragm; in centre of r. lung and through to scapula.—Burning distress at right of lower end of sternum; in both sides with difficult breathing.—Intense śdema of throat rendering breathing almost impossible.

19. Pulse.—Pulse full, rolling.

20. Back.—Aching: just below diaphragm; in centre of r. scapula in morning; inside of scapula, < r.—Sharp pain at superior spinous process of l. ilium.—Sharp pain, transient, sudden, in r. side near kidney, forcing him to sit down.

22. Upper Limbs.—Grinding pain just above elbows.—Pains: in arms and legs; in l. arm in afternoon; just above elbows,< r.—Pain just above r. elbow seemed to be in the bone, l. forearm and wrist.—Pain in l. wrist in afternoon.

23. Lower Limbs.—Pain in r. thigh and leg.—Pain: in legs < above knees; in bones of l. leg after going to bed; in knees; in l. ankle; in feet, with burning.—Lame pain in r. knee.—Knees weak; < r.; < afternoon.—Knees weak and trembling.—L. foot lame through metatarso-phalangeal joints at times.

24. Generalities.—Pain somewhere all day; in eyes and various parts of body and limbs after retiring.—Strange feeling all over, was not dizzy, but when trying to take hold of door-knob could not do it readily, but put my hand all around it and was frightened.—Felt sick, unable to move, > moving.—Dull feeling.—Nervous feeling; but dread of moving.—Restlessness.—Weakness; < walking.—> After eating; after dinner.

25. Skin.—Sore pimple on l. thigh, outside.—Itching: in various parts frequently day and night; of various parts before and after retiring, > scratching, but appearing in another place.—Itching sudden, < night, < in limbs; frequent sudden darting, on various parts, < legs.—General pruritus most on lower limbs, esp. calves, burning, biting, itching, not > by rubbing or scratching, lasted two hours in spite of hot and cold bathing; followed immediately on its subsidence with śdema of lips and throat.

26. Sleep.—Slept in a chair (unusual) after dinner.—Restless at night.—Sleepy after retiring, so that eyes ached, but could not sleep for a long time.—Sleepless for nearly two hours after retiring; restless, had headache, pain in back, stomach and bowels.—Woke at midnight, after a few minutes' sleep, with hurried desire for stool, > passing much wind, and after much effort passed a large, long, tenacious stool.—Every night go to sleep on retiring, and in five or ten minutes wake and lie awake one or two hours.—Wakefulness in the morning, but later in the proving it was both in the first and last part of the night.—Woke early and could not go to sleep on account of pains all over, < epigastric region, back, arms, and legs, legs lame and painful as from severe exercise and cold, expected to be very lame on rising, but felt nicely.—Woke two hours earlier than usual, with dull headache, burning all ever chest, seeming to be in the pleura, aching pain through lungs to scapula, aching in back part of shoulder, outside of upper portion of scapula, pain in hypochondria, extending down back, burning pain in legs and feet, mostly below knees, so that I could not go to sleep, feet so hot that I had to put them out of bed, then the pain extended to the thighs, the pain was so severe that I felt as if I trembled all over, but think I did not; I felt as if I could not move, but on moving there was no pain and I felt better by moving, could not sleep again.

27. Fever.—Chilliness all over so that I trembled.—Feet cold; and damp; afterwards burning.

Homeria.

Homeria collina. Cape Tulip. N. O. Iridaceæ. Tincture of bulbs.

Clinical.—Collapse. Constipation. Vomiting.

Characteristics.—*Homeria* is a violent narcotico-acrid poison very like *Colchicum* in its effects. A Malay woman, with her three grandchildren, æt. 12, 8, and 6, ate a small basinful of the bulbs with their supper (between 7 and 8 p.m.). About 1 a.m. the woman woke with severe nausea and vomiting, and found the children similarly affected. She tried to call for help, but found herself too weak to leave her bed, and when by five o'clock assistance arrived the eldest girl was found moribund and expired almost immediately. The boy of 8 died an hour later. The youngest child was found in collapse, almost insensible, cold extremities, pulse scarcely So and irregular, pupils much dilated. The grandmother's symptoms were similar, but lesser in degree, accompanied by constant efforts at vomiting. By using diffusible stimulants she and the child eventually recovered. Obstinate constipation prevailed.

Hura Brasiliensis.

Hura brasiliensis. Assacu. N. O. Euphorbiaceæ. Tincture of milky juice.

Clinical.—Blindness. Hysteria. Leprosy. Nares, affections of. Skin, affections of. Spine, pains in.

Characteristics.—The milky juice (called *Assacu* by the Brazilians) of *Hura* is as powerful as that of the better-known Euphorbians. A case of leprosy having been reported cured with *Assacu* led to its extensive use in this disease, though, as Mure (who proved it) says, without curing any others. Two of his provers had been affected with leprosy, but under homœopathic treatment they seemed to have got well. One of them during the proving had symptoms of compression of the spinal marrow with very great suffering. All the provers had symptoms of nervous excitement, twitching and irritability. The gastro-intestinal irritation of the other Euphorbians was marked in the provings. Clinical experience is needed to bring out the characteristics. Farrington gives these indications: Vesicles which are so tense that when pricked they eject their contents; sensation of a splinter under thumb-nails. The eruptions of *Hura*, he says, prefer the skin covering projecting portions of bone, or the malar bones. He compares it with Cantharis. Mure's provings were made with single doses of the 5th attenuation.

Relations.—*Compare:* Croton., Ricinus, Euphorb., Hura crepitans. *Antidoted by:* Camph., Opium.

SYMPTOMS.

1. Mind.—Excited and oppressed as if by some misfortune.—Causeless weeping followed by laughter.—Flow of sad thoughts; imagines she will lose some one dear to her; cries every moment, and for several days past imagines she is seeing the dead person before her eyes.—Exaggerated conscientiousness.—Irritable.—Indisposed to work.

2. Head.—Confusion.—Dizziness.—Rush of blood to the head.—Heaviness of the head.—Numbness of the head.—Skin of forehead feels drawn tight.—Painful lancinations through the head.—Constriction in back of head.

3. Eyes.—Prickling and burning in eyes; sensation as if sand in them.—Eyelids red.—Inflammation of the puncta.—Vision dim.—Blindness (from touching the eye with the milk).—Sparks and zigzags before the sight when walking.

4. Ears.—Pain behind and in (r.) ear.—Stoppage in ears.—Loud whizzing and whistling sound in ears.

5. Nose.—Redness of (l.) wing of nose.—Constriction; throbbing at root of nose.—Coryza; epistaxis.—Sense of smell very acute.

6. Face.—Face weary-looking as after a debauch; rings round eyes.—Face dull and dark-looking with paleness mottled with red.—Face scarlet and bloated.—Heat rising to face.—Swellings on upper part of r. cheek.—Lips red.—Small pimples inside lower lip.

7. Teeth.—Lancinations in teeth and gums; passing to ear.—Pimples on gums.

8. Mouth.—Tongue white; pain at tip.—Fleshy excrescence on inside of lips.—Clammy mouth; foul smell.—Taste: of copper; of blood; clammy; smoky.

9. Throat.—Irritation of throat with dryness.—Spitting of blood in morning.

11. Stomach.—Great hunger with pain in stomach; hunger satisfied immediately on eating.—Hunger sometimes immediately after a meal.—Qualmishness.—Stomachache; as from hunger.

12. Abdomen.—Frightful colic with diarrhœa and shivering.—Throbbing in l. side abdomen.—Twisting pain in l. side, or cutting all round pelvis, with very painful shooting; extorting cries.—Stitch in ileo-cæcal region < on movement.

13. Stool and Anus.—Constriction at anus.—Frequent ineffectual urging to stool.—Diarrhœa succeeded by great weakness of chest.—Stools: liquid, painless, flowing constantly; offensive, containing thread-worms.—Constipation; hard, difficult stools.

14. Urinary Organs.—Acute pain in r. kidney while walking, with great urging to urinate.—Urine: light green; clear; deposits a white sediment.

15. Male Sexual Organs.—Intolerable erections: amorous dreams with erections; lemon-coloured semen.—Weight in testicles when walking.

16. Female Sexual Organs.—Pain in uterus: as if compressed; as if a sharp instrument were thrust into it; followed by lancinations in vagina.—Leucorrhœa.—Menses: scanty; eight days too early; profuse, with leucorrhœa.

17. Respiratory Organs.—Dryness of glottis causing cough.—Considerable yellow, thick, frothy sputa.—Sputa: rusty-coloured; foul, bloody; like milk-chocolate.—Feeling of suffocation.—Sighs and yawns much.

18. Chest.—Nervous shivering all over chest.—Suffocative sensation, esp. when thinking of anything that has gone wrong.—Lancinations in chest preventing deep breathing.—Throbbings in chest.—Sensation of a small ball under r. breast.—Sharp pain shifting from shoulder to l. breast.—Stitches in breasts.—Throbbing in breasts.

19. Heart.—Constant pain at heart, sometimes very sharp, arresting breathing.

20. Neck and Back.—Stiff-neck (r. side); least motion is painfully felt in nape.—Dislocated and tearing pain in dorsal region; on sitting down.—Severe pains in lumbar region; weakness.—Excruciating pain in lumbo-sacral region, when trying to lift a weight.

21. Limbs.—Weariness of limbs.—Lancinations, throbbing, rheumatic pains, numbness in upper and lower limbs.—Dislocated pains in joints.

22. Upper Limbs.—Throbbing in finger-tips.—Pain as from splinter under thumb-nail.—Heat in nails; sensation as if part of nail had been torn off.

25. Skin.—Large pimples itching very much.—Pimples, painful to touch on l. cheek and eyebrows.—Small red pimples on r. cheek-bone, with smarting on r. cheek.—Cluster of pimples or vesicles on various parts.—Red vesicular pimples, the vesicles break on pressure and water squirts out with great force.—Small vesicular pimples, with itching, on ribs, arms, and all projecting portions of bones.—Itching on forehead; eyelids; chin; beard; back; legs; sleep disturbed by it.

26. Sleep.—Yawning and drowsiness.—Nightly restlessness.—Dreams: of travelling; of swimming; of yellow water; of corpses; of assassins.

27. Fever.—Feet and body generally constantly cold and damp.—Heat and transient perspiration.—Flushes of heat in face.—Cold sweat on face and all over body.

Hura Crepitans.

Sand-box. Monkey's dinner-bell. N. O. Euphorbiaceæ. Tincture of seeds.

Clinical.—Blindness. Diarrhœa. Sore-throat. Vomiting.

Characteristics.—"The curious, rounded, hard-shelled fruits are about the size of an orange, and have as many deep furrows as there are cells, each cell containing a single flattened seed. When the fruit is ripe and exposed to a dry atmosphere, it bursts with great force, accompanied by a loud, sharp crack like the report of a pistol, for which reason it is often called the Monkey's Dinner-bell. The seeds are emetic, in a green state violently purgative, but when dry, according to Lunan, they lose this property. An oil is extracted from them, and sometimes used as a purgative, about twenty drops of it being equal in action to a tablespoonful of castor oil. A venomous milky juice is abundant in all parts of the plant, and if it be applied to the eye causes almost immediate blindness." *The Treasury of Botany*, from which I quote the above, only recognises one species of *Hura, H. crepitans*. But Mure compares his *Hura* with *H. crepitans*. They are probably varieties of the same species, the properties of the milk of the two being the same. The observed effects of *H. crep*. were from eating the *seeds*. Burning in throat; vomiting and purging; suffocation; headache, were the main symptoms complained of.

Relations.—*Compare:*—*Hur. bras*., Ricinus, Croton.; Caps. (burning in throat not > by water). *Antidoted by:* Camph., Op.

SYMPTOMS.

2. Head.—The one who had eaten the shell with the seed was seized with violent vomiting *with headache*.

9. Throat.—It soon began to warm and scald his palate and throat.—Violent burning in throat.

11. Stomach.—If a person eats even a single kernel he is usually attacked with severe vomiting and purging within a very few minutes.—After a few hours, they experienced suffocation, nausea, violent burning in the throat, not > by water.—Those who ate the seed without the shell, only suffered from nausea and violent pain in stomach, vomiting once, and violent diarrhœa.

Hydrangea Arborescens.

Hydrangea arborescens. N. O. Hydrangeaceć (or Saxifragaceć). Tincture of fresh leaves and young shoots. Fluid extract.

Clinical.—Bladder, catarrh of; stone in. Diabetes. Gravel. Prostatic affections. Urine, incontinence of.

Characteristics.—Like some other members of the Saxifragaceć, *Hydrang*. has a traditional reputation as a "stone-breaking" remedy having been used in calculous diseases for many years. Dr. Nottingham, of Lansing, says (*Amer. Hom*. November 15, 1899) that in physiological doses it produces "giddiness, oppression of the chest, and acts as a cathartic, diuretic, sialogogue, and narcotic." He used it with brilliant results in the following case: Mr. B., 71, tall, slender, dark, was exceedingly irritable and frequently subject to violent paroxysms of anger. For many years he had been accustomed to make the most reckless use of drugs, and was always requesting his homśopathic doctor to give him "something stronger." For eight years he had suffered from vesical sphincter-irritation, with dribbling of urine, severe spasms of prostate, renal catarrh, yellow sand in urine, and even small calculi. After persistent use of best indicated remedies with no effect, the fluid extract of *Hydrang*. was given, a teaspoonful every three or four hours, and the symptoms disappeared in a remarkably short time. Cooper has also used this remedy (which, he says, is the thirstiest plant known) with good effect in diabetes, in cases presenting great thirst with abdominal symptoms and in enlarged prostate. It appears to act strongly on the neck of the bladder. Hansen adds that it is particularly useful for profuse deposits of white amorphous salts in the urine; and has arrested the tendency to formation of calculi; relieves distress from renal calculus, with soreness over region of kidneys and bloody urine.

Relations.—*Compare:*—Berb., Sabal. s., Solidago. v. a., Uva. ursi., Thlaspi b. p., Ocim. c.

Hydrastininum Muriaticum.

An alkaloid of Hydrastis canadensis. C_{11} H_{11} NO_2 HCl. Trituration of the crystals.

Clinical.—Fibroma. Metrorrhagia.

Characteristics.—The alkaloids of *Hydrastis* have been largely used in the old school as remedies for internal hæmorrhage. *Hydrastin*. was found to be inconvenient by reason of its irritant properties. *Hydrastinin*., a modification of *Hydrastin*., proved to he free from this drawback, and its use in fibroid tumours

has been advocated by Dr. Burford and others in the homœopathic school. A case of central uterine fibroid tumour under my care, about the size of a large orange, and pressing on the bladder, causing bladder symptoms, was quickly reduced in size with the disappearance of all troublesome symptoms by *Hydrastinin*. 3x.

Hydrastinum Muriaticum.

Muriate of Hydrastia. C_{21} H_{21} NO_6 NCl.

Clinical.—Cancer. *Mouth, ulcer of, Ozæna*. Ulcer.

Characteristics.—This is the first alkaloid of *Hydrastis* that was isolated. Hale commends it as excellent for local applications, in the strength of about ten grains to eight ounces, stronger or weaker according to sensitiveness, in cases of aphthous sore mouth, ulcers (malignant or simple), ozæna, and generally in cases for which *Hydrastis* is being given internally. The alkaloids of *Hydrastis* deserve separate proving. Old school practitioners have used this salt largely as an internal remedy in uterine hæmorrhage.

Hydrastis.

Hydrastis canadensis. Golden Seal. Orange-root. Yellow Puccoon. N. O. Ranunculaceć. Tincture of the fresh root.

Clinical.—Alcoholism. Asthma. *Cancer. Catarrh*. Chancroids. *Constipation. Corns. Dyspepsia*. Eczema impetiginoides. *Ears, affections of. Faintness*. Fistula. Gastric catarrh. Gonorrhśa. Hćmorrhoids. Jaundice. *Leucorrhśa. Lip, cancer of. Liver, affections of. Lumbago. Lupus*. Menorrhagia. Metrorrhagia. Mouth, sore. *Nails, affections of*. Nipples, sore. *Noises in the head*. Nursing-women, sore mouth of. *Ozćna*. Placenta, adherent. Post-nasal catarrh. *Rectum, affections of*. Sciatica. Seborrhśa. *Stomach, affections of*. Syphilis. Taste, disordered. *Throat, deafness. Throat, sore. Tongue, affections of*. Typhus. *Ulcers*. Uterus, affections of.

Characteristics.—The so-called root of *Hydrastis* from which the tincture is made is really a perennial underground stem, thick, knotty, and yellow. The yellow colour is very intense, and it has been used by Indians as a dye. The plant is the only specimen of its genus among the Ranunculaceć. It grows in shady woods, in rich soil, and damp meadows. The fruit is like a raspberry, and the plant is sometimes called *Ground Raspberry* in consequence. The medicinal properties of *Hydrast*. were known to the aborigines of America. The first mention of it in medical literature is by Rafinesque (*Medical Botany*, 1828). Hale quotes him as saying that it is "tonic, ophthalmic, detergent," and that "it is said to enter into compound remedies for cancer, acting as a detergent tonic, and the Cherokees are

supposed to use it in that disease." This is important as showing that the traditional reputation of the plant agrees with the results of later experience. For though by no means a specific in all cases of cancer, it is in cancer cases that *Hydrast*. has won its chief fame; and I think it may fairly be said that more cases of cancer have been cured with it than with any other single remedy. Thanks to the excellent provings that have been made by homśopaths and the careful observations of able practitioners, we are in a position to use the remedy with much greater precision than formerly. In very many cancer cases there is what has been termed a "pre-cancerous stage," a period of undefined ill-health without any discernible new growth. This stage is generally marked by symptoms of dyspepsia, and this frequently takes the *Hydrastis* type, which has been well described by A. C. Clifton. The facial expression is dull, heavy, sodden-looking; yellowish-white in colour. The tongue is large, flabby and slimy-looking; bluish-white under the fur (which is yellow, slimy, and sticky), and indented by the teeth. Eructations generally sour, at times putrid. Appetite bad, the power of digesting bread and vegetables especially weak and causing eructations. Weight at stomach, with fulness, empty aching "gone" feeling (this is a grand characteristic of *Hydrast*., and it is *constant*, not occurring at special times like that of *Sul*., &c.). < After a meal. The action of the bowels is either infrequent and constipated, or frequent with loose, soft, light-coloured stools. Clifton found this type of dyspepsia occur frequently in phthisical families, and often cured it; and even in cases of actual phthisis this type is not uncommon, the loss of appetite and "goneness" being especially prominent. In dyspepsia Clifton found the tincture and lower attenuations answer best; in catarrh of nose and fauces the higher were better. Catarrh of almost all mucous surfaces is caused by *Hydrastis*─nasal catarrh, pharyngeal, bronchial, gastric, duodenal, intestinal, urethral (gonorrhśa, gleet), vaginal. The characteristic catarrh is yellow (the leading colour of the drug) or white; tough and stringy. The action on the skin is no less marked. Garth Wilkinson found it externally and internally an excellent remedy in small-pox. Eczema impetiginoides, drying into crusts and burning like fire, has been cured with an application of one part *Hydras*. Ř to nine of glycerine. The burning was removed at once. (I once saw a woman, 60, who had been given *Hydrast*. Ř gtt. v. in water three times a day, after a week come out in a scarlet rash, raised and nodular, exceedingly irritable, especially at night. It was on every part of the body except the face, and was worst on buttocks and elbows. It remained out a week. The patient at the same time became very ill with sickness and general digestive disorder.) The skin may be jaundiced. There is excessive sweat, especially of armpits or genitals; offensive ulcers; chancroids; fissures. The female genital organs are very much affected: Metrorrhagia, leucorrhśa, pruritus vulvć, scirrhus of uterus; of breasts; sore mouth of nursing-women; sore nipples. Weiss gave a woman, 31, who had had adherent placenta in several confinements in succession, *Hydrast*. 3x three drops daily from the fourth month during her last three pregnancies, and each terminated without adherent placenta. Four other cases of habitual adherent placenta were successfully treated in the same way. There is

much backache of severe character in connection with many of the *Hydrast*. conditions. Sometimes it awakens patients in the night. Like many other "yellow" medicines, it has a marked action on the liver, causing jaundice and liver enlargement. Cases of cancer of the liver have been reported cured by it. Fulness, goneness, and constipation are the leading indications. The constipation of *Hydrast*. is a leading feature of the pathogenesis. There is torpor of the bowels; stools lumpy, covered with yellowish tough mucus; with the constipation continual pain in head, bad taste in mouth. *Hydrast*. has been a good deal used in bronchial catarrhs with the characteristic tenacious secretion. In one case an over-dose brought on a characteristic attack of asthma (*H. W*., xxxiv. 293). The dose was gtt xx of the liquid extract, and Miodowski, who reported the case, thought there was pulmonary śdema secondary to cardiac weakness induced by the drug. It is worthy of note that most remedies which powerfully act on the skin will also cause an asthmatic state. The symptoms generally are < at night. Skin symptoms are < from warmth; from washing, &c. The catarrhal symptoms are < from harsh, dry winds; out of doors. Rest >; motion <. There is < by touch; clothing feels uncomfortable about groins. Pressure > many symptoms.

Relations.—*Antidoted by:* Sul. (head symptoms and sciatic pains). *It antidotes:* Merc. and Chlorate of potass. *Compare:* Am. m., Ant. c., Kali. bi., and Puls. (mucous membranes); Alo., Collins., Sep., Sul. (lower bowel); Berb., Dig., Gels., Lyc., Pod., Merc. (gastro-duodenal catarrh, involving bile ducts); Nux v. (gastric catarrh of alcoholism); Merc. cor., Euphras. (nasal catarrh); Hepar (syphilitic ozćna, after abuse of mercury or iodide of potash); Ars., Bapt., Con., Condur., Kreas., Phytol. (cancer of breast); Chi. (intermittent); Strychn. (spinal cord); Chel. (cancer of breast; liver affections); Sang. (burnt sensation on tongue); Kali bi. (hair sensation); Ars., Aur. mur., Hydrocot., Ant. t., Bapt., Thuj.

SYMPTOMS.

1. Mind.—Forgetful; cannot remember what he is reading or talking about.—Irritable; disposed to be spiteful.—Gloomy, taciturn, disagreeable.—Moaning with occasional outcries from pain.—Depression; sure of death and desires it.

2. Head.—Feeling as if intoxicated; headache; weakness.—Dull, heavy frontal headache over eyes; catarrhal.—Sharp cutting in temples and over eyes; < over l.; > from pressing with the hand.—Dull frontal, headache, with dull pain in hypogastrium and small of back.—Severe frontal headache; as if brain being pressed against frontal bones.—Vertex headache every other day, commencing at 11 a.m., with nausea, retching and anguish.—Dull heavy pain in occiput (l.).—Aching in cerebellum, first r., later l. side.—Myalgic headache in integuments of scalp and muscles of neck.—Eczema on margin of hair in front; < coming from the cold into a warm room; oozes after washing.—(Seborrhśa sicca).

3. Eyes.—Profuse secretion of tears; smarting and burning of eyes and lids.—Lids agglutinated; blepharitis marginalis.—Opacity of the cornea.—Ophthalmia; catarrhal; scrofulous, with or without ulceration; thick mucous discharge.—Dark greenish-yellow conjunctiva.

4. Ears.—Roaring in the ears; like machinery.—Pain in r. ear; it disappeared and was followed immediately by fulness in forehead and pain over l. eye.—Sharp pain back of r. ear passing to shoulder.—Otorrhśa, thick mucous discharge (fetid).—Partial stoppage of Eustachian tube.—Throat deafness.

5. Nose.—Tickling, like a hair in r. nostril.—Constant discharge of thick white mucus; frontal headache.—Secretion runs more from posterior nares, thick and tenacious.—Coryza watery, excoriating; burning, smarting and rawness in nose (more r. nostril), discharge scanty in room, profuse out of doors; rawness in throat and chest.—Sneezing, with fulness over eyes, dull frontal headache, pain in r. breast and down arms.—Air feels cold in nose.—Nosebleed, l. nostril, with burning rawness; followed by itching.—Soreness of cartilaginous septum, bleeding when touched; inner edge of r. ala sore and thickened.—Ozćna, with bloody, purulent discharge.

6. Face.—Expression weary, dull, skin pale, or yellow-white.—Erysipelatous eruption following flushes of heat.—Aphthć on the lips.—(Epithelial cancer of lip.).—Tenacious mucus hangs in shreds from mouth.

8. Mouth.—Taste flat; peppery.—Tongue swollen, shows marks of teeth, coated white or with a yellow stripe.—Tongue as if burned or scalded, later a vesicle forms on the tip.—Excessive secretion of thick, tenacious mucus.—Stomatitis after mercury or chlorate of potash; nursing-women or weakly children; peppery taste; tongue as if burned or raw, with dark red appearance and raised papillć.—(Cancer of tongue.).—(Tumour in hard palate, painful to touch, hard, somewhat elastic, disposed to bleed and discharge offensive matter; climacteric.)

9. Throat.—Uvula sore and relaxed.—Throat dry; raw; sore; in morning on waking, felt most on coughing.—Hawking of yellow, tenacious mucus from posterior nares and fauces, rawness of fauces.—Ulcers in the throat, esp. after mercury.—(Cancerous ulcers on l. side of throat, inside.)

10, 11. Appetite and Stomach.—Indigestion from atony of the stomach, esp. in old people.—Bread or vegetables cause acidity, weakness, indigestion.—Eructations of sour fluid.—Vomits all she eats, except milk and water mixed.—(Cancer.).—Faintness at the stomach; sinking, gone feeling, with continued violent palpitation of the heart, preceded by dull aching pains.—Marasmus.—Acute, distressing cutting pains.—Chronic gastric catarrh; ulceration.—Carcinoma, with emaciation, goneness.

12. Abdomen.—Torpor of the liver, with pale, scanty stools.—Liver atrophied.—) Jaundice, with catarrh of stomach and duodenum.—Burning in region of navel, with "goneness," faintness in epigastrium.—Loud rumbling, with dull aching in hypogastrium and small of back; < moving.—Cutting, colicky pains, with heat and faintness; constipation; > after passing flatus.—Cutting in hypogastrium, extending to testicles, faintness after stool.—Sharp pain in the cćcal region.—Sharp pain in region of spleen, with dull pain and burning in stomach and bowels.—Dull dragging in groins, cutting pain extending into testicles.—Pains in the groins as if he had strained himself; clothing uncomfortable.—Griping pains with the stools.—Intestinal catarrh, followed by ulceration.

13. Stool and Anus.—Fetid flatus.—Stool (profuse) light coloured, soft, acrid; greenish.—Soft stool, followed by faintness.—Stool lumpy, covered with (yellow) mucus; constipation.—Torpidity, no desire for stool.—Obstinate constipation; with dull headache; sinking sensation; with "dyspeptic cough.".—Constipation aggravated by cathartic medicines.—During stool: smarting burning pains in rectum.—After stool: burning and smarting in rectum; long-lasting pain in rectum; hćmorrhoids and fainting; exhaustion.—Proctitis.—Hćmorrhoids; costive; even a light hćmorrhoidal flow exhausts.—Fistula ani.

14. Urinary Organs.—Dull aching in region of kidneys.—Urine smells decomposed; increased and of neutral reaction.—Catarrh of bladder, with thick, ropy mucous sediment in urine.—Dysuria; suppression; incontinence.

15. Male Sexual Organs.—Debility after spermatorrhśa.—Gonorrhśa, second stage, thick yellow discharge.—Gleet, debility; copious, painless discharge.—Dragging in r. groin to testicle; thence to l. testicle, thence to l. groin.

16. Female Sexual Organs.—Aching pains in small of back at climaxis; uterine affections with debility and digestive disorders.—Hot watery discharge from uterus.—Leucorrhśa: tenacious, ropy, thick yellow.—Ulceration of the os, cervix, and vagina; leucorrhśa; debility; prolapsus uteri.—Os uteri very tender.—Uterine hćmorrhage; menorrhagia and metrorrhagia, with fibroid tumours; at menopause.—Pruritus vulvć, with profuse leucorrhśa; sexual excitement.—Lancinating pain in breast extending up to shoulder and down arm.—(Cancer of breast, pains like knives thrust into part.).—Hard, irregular tumour of l. breast, nipple retracted, glands in axilla enlarged and painful, cachectic appearance.—Sore-mouth of nursing women.—Abraided, cracked and sore nipples of nursing women.

17. Respiratory Organs.—Scraping in larynx.—Dry, harsh (rattling) cough from tickling in larynx.—Laryngeal and bronchial catarrh.—Bronchitis of old, exhausted people; thick, yellow, tenacious, stringy sputa.—Phthisis; with goneness in stomach, emaciation, loss of appetite.

18. Chest.—Rawness in throat and chest.—Rawness, soreness, and burning in chest.—Asthma and śdema of lungs.—(Cancer of r. lung.)

19. Heart and Pulse.—Palpitation with faintness.—Palpitation, pain shooting from chest to l. shoulder with numbness of arm; irregular and at times laboured action; < lying either side; feeling of immediate suffocation on attempting to lie on l. side.—Heart agitated.—Violent long-continued palpitation in morning.—Pulse slow during the chill.

20. Neck and Back.—Muscles of neck feel sore.—Tired aching across small of back and in limbs; knees ache; > by walking about.

21. Limbs.—Limbs tired, ache, with coryza.—Shifting pains in r. arm and leg, then l. leg.—Irritable, indolent, or scrofulous ulcers on the legs.

22. Upper Limbs.—Pain from head to shoulders, with aching in both, more l.—Rheumatic pains in elbow, forearms, r. shoulder, and first finger of l. hand.

23. Lower Limbs.—Sharp shifting pain in l. limb, from middle of thigh down to middle of leg.—Pain from r. hip to knee, while walking.—Legs feel weak; knees weak; aching.—Aching in sole of l. foot; no relief from change of position.—Atonic ulcers on the legs.

24. Generalities.—Faintness, goneness.—Weakness, physical prostration.—Frequent sudden attacks of fainty spells, with profuse cold sweat all over.—Mucous membranes: secretions increased, tenacious, ropy; erosions.—Muscles greatly weakened; atony.—Small wounds bleed much.—Marasmus.—Scrofulous and cancerous cachexia.—Cancers hard, adherent, skin mottled, puckered; cutting like knives in mammć.—Pressure of hand relieves the head.—Clothing feels uncomfortable about the groins.

25. Skin.—Jaundice, dark greenish-yellow colour.—Skin dark purplish hue, with heat and tingling, < from motion.—Hot, dry skin, with fever.—Burning heat and itching in skin.—Hyperidrosis: excessive sweat of axillć and genitals; offensive.—Erysipelatoid rash on face, neck, palms, joints of fingers and wrist, with maddening burning heat, later skin exfoliates; pains < at night.—Nettlerash ("hives"), < from scratching, < at night.—Scarlet raised nodular eruption, excessively irritable, < at night, over whole body except face, most on backs of elbows and on buttocks, preceded by feeling of illness, vomiting and general digestive disorder; lasted a week.—Fissures round mucous outlets.—Infantile intertrigo.—Variola; all stages; itching tingling of the eruption; face swollen; throat raw; pustules dark; faintness and great prostration.

26. Sleep.—Awakened by backache and dull pains in navel and hypogastric region.—Dreams wearisome, restless sleep.—Difficulty in awaking.

27. Fever.—Chill morning or evening; chilliness, esp. in back or thighs, with aching; pulse slow.—Heat in flushes.—Great heat of whole body.—Constant dull burning pains all the evening.—Gastric, bilious or typhoid forms of fever, with gastric disturbances, jaundice and great debility following.

Hydrocotyle Asiatica.

Indian Pennywort (India and South Africa). N. O. Umbelliferæ. Tincture of whole fresh plant.

Clinical.—*Acne rosacea*. Constipation. *Elephantiasis arabum*. Favus. Gangrene after amputation. Gonorrhœa. Gout. *Ichthyosis*. Leprosy. Leucorrhœa. Liver, contraction of. *Lupus*. Neuralgia orbitalis. Skin, affections of. Syphilis. *Uterus, follicular inflammation of*. Vagina, pruritus of.

Characteristics.—*Hydrocot*. has been long known as an Indian remedy. Boileau was the first to use it as a remedy in leprosy. It has been tested pathogenetically and clinically, and its place has been fairly well defined. The skin and the female generative organs are the chief seats of the drug's action; though the liver, the nerves, and the mucous membranes are also powerfully acted upon. A great variety of skin affections have been cured with it; acne, eczema, pemphigus, lupus, copper-coloured eruption; papular eruption on face; intolerable itching in various places. Auduit (*H. R*., ix. 434) cured this case: Girl, 20, weak and sickly-looking, since childhood troubled with glandular swellings, for eight years had lupus exedens of nose. (Her mother had coppery eruption on face.) On right of nose was a button the size of a sixpence covered with a thick crust covering yellow pus mixed with blood. Margins irregular and livid. Five other buttons size of lentils near root of nose both sides. *Hydroc*. was given in 6, 3, Ø, and 18th potencies in succession, with intermissions, and completely cured in five months. Other indications are: Stomatitis, aphthous and syphilitic. Irritation of the neck of the bladder; increased secretion of urine. Heat and itching in vagina. Weight in uterus. Granular ulceration. *Hydrocotyle* acts on the male sexual organs also, causing weight in the "male uterus," the prostate gland. Gouty and rheumatic disorders. Affections of the trigeminus nerve. Bruised feeling in all the muscles. A patient of mine who was taking *Hydroc*. for eczema with advantage complained of persistent dreaming all the time he was asleep; and an unpleasant mouth on waking in the morning.

Relations.—*Compare:* Hydrast. (lupus); Fer. pic. (lupus); Hura (leprosy); Thlaspi b. p., Fraxinus (uterine affections); Mitchella, Eu. purp., Apis, Hydran. (irritation of neck of bladder).

SYMPTOMS.

1. Mind.—Gloomy thoughts.—Misanthropy.—Inclination for solitude.—Indifference.—Gaiety (reaction).—Loquacity (reaction).

2. Head.—Vertigo; with torpor.—Congestion of blood to the head; heaviness.—Painful drawing in almost all cranial nerves.—Neuralgic pain in external frontal nerve.—Intense pain with some swelling in posterior part of skull.—Occiput acutely sensitive, esp. to touch.—Constriction of back part of skull and integuments.

3. Eyes.—Eyes look unsteady.—Injection of palpebral conjunctiva.—Pricking in eyes.—Vision dim; dazzling.

4. Ears.—Pain in l. internal meatus auditorius.—Throbbing in r. ear; ringing in (l.), with stoppage.—Confused noise in l.; blowing sound.

5. Nose.—Swelling of nose.—Tickling; < l. nostril.—Feeling as before bleeding.—Stoppage of nose.—Coryza; dry.—Bleeding.—(Lupus exedens of nose).

6. Face.—Intoxicated expression.—Intermittent pain in l. cheek-bone.

8. Mouth.—Whitish spots on l. upper and under sides of tongue.—Impediment in speech.—Redness of velum palati, with pain on swallowing, < by food.—Hyperæmia of buccal mucous membrane.—Saliva increased.—Taste insipid or bitter; unpleasant in morning.

9. Throat.—Tonsils red.—Pricking in pharynx.—Disorder of constrictor muscles of pharynx.—Œsophagus dry and rough burning and pricking in œsophagus.

11. Stomach.—Loathing of food.—Anorexia then strong appetite.—Aversion to tobacco smoking.—Eructations frequent; acid.—Nausea.—Swelling of stomach.—Contraction; cramp-like pain.—Sensation as if gases collected into a ball.—Anxiety in region of stomach.—Heat in stomach region spreading out like a bar.

12. Abdomen.—Borborygmi in different parts.—Flatus.—Violent contractions of intestines.—Pain; every five minutes; < transverse colon.—Constriction.—Sensation as if all organs were in motion.—Pain in upper part of liver.—Obstruction in hepatic region.—Heat in hypogastrium.

13. Stool and Anus.—Weight in rectum.—Burning in anus.—Itching in anus.—Ineffectual desire for stool.—Stools dry, dark.—Stools increased.—Stools easier.

14. Urinary Organs.—Slight formication in kidney.—Irritation of neck of bladder.—Constriction of bladder.—Frequent desire to urinate.—Irritation of urethra.—Urine increased.—Urine becomes brown on cooling.—Urine turbid, without sediment.

15. Male Sexual Organs.—Drawing in spermatic cords, < l.—Scrotum relaxed.—Impotence.—Indifference to intercourse.—Feeling of weight in prostate gland.

16. Female Sexual Organs.—Vulva, vagina and cervix red.—Heat in bottom of vagina; pricking and itching at its orifice.—Leucorrhœa increased. Pain in ovarian region.—Weight in uterus.—Pain in whole uterus, esp. l. side.—Severe labour-like pain in uterus and appendages.

17, 18. Respiratory Organs and Chest.—Pricking in vicinity of glottis.—Dryness of windpipe; of ventricles of larynx.—Voice weak.—Speaking soon fatigues.—Irritation of air-passages.—Difficult expectoration of bronchial mucus.—Breath short.—Oppression of chest, which suddenly ceases and then returns at longer or shorter intervals.

19. Heart and Pulse.—Cardiac spasm.—Constriction of heart; with quiet and regular pulse, or with a few separate beats in certain arteries, or with hot flushes in different parts of the face.—Irregular beating of heart.—Pulse stronger and fuller.

20. Neck and Back.—Renewal of old rheumatic pains in l. rhomboid, < pressure.—Bruised pain in loins.—Obstruction in region of kidneys, with heaviness.

21. Limbs.—Contractions of forearms and legs.—Irresistible inclination to stretch.—Pain in all joints; < l.; pain in all muscles.—Sensation as if hot water ran through marrow of bones.

22. Upper Limbs.—Weariness in all muscles of shoulders.—Crampy numbness of r. forearm, hand, and fingers.—Pain in finger-joints.

23. Lower Limbs.—Gait unsteady.—Inability to stand.—Sharp pains in hips.—Weariness in muscles of thighs, with crampy movements in calves.

24. Generalities.—Bruised feeling in all muscles; on waking.—Wandering pains in muscles of chest and legs.—Drawings in several muscles.—Malaise.—Weariness (with depression, heaviness, and dulness); dull feeling throughout the system generally; and unfitness for everything.

25. Skin.—Spots almost circular, with raised scaly edges.—Yellowish spots on legs.—Erysipelatous redness.—Red points on eyelids, l. side of neck and both

hands.—Red spots, covered with whitish scales, on l. side of neck.—Lilac-coloured spot, shaped like an ear, on sole; the skin over it is depressed, and walking is painful.—Erythema on face, neck, back, chest, arms, and thighs; with much itching; with copious sweat.—Miliary eruptions on neck, back, and chest.—Sudamina on abdomen.—Papules on face.—Pustules on chest.—Pricking on different parts.—Itching in several places; itching at tip of nose (in one who had chilblain there every year).

26. Sleep.—Yawning and stretching.—Sleepiness; in the daytime.—Heavy, dreamless sleep.—Persistent dreaming all the time he was asleep; mouth in unpleasant state in morning.

27. Fever.—Shivering in afternoon.—Cold hands and feet, with general condition resembling precursory stage of fever, without alteration of pulse.—Sensation of coldness in forearm, hand, l. foot, and leg; > by rubbing, but returning when the rubbing ceased.—Febrile movements.—Heat: of skin; in bones of leg; in l. tibia; in face in flushes; in different parts of face in flushes, esp. temporal regions.—Profuse sweat.

Hydrocyanicum Acidum.

Prussic Acid. HCN. One measure of the dilute acid of B. P. to two measures of rectified spirit makes the 1st centesimal dilution; rectified spirit for all above.

Clinical.—*Angina pectoris. Asthma*. Cholera Asiatica. Colic (horses). Convulsions. Dyspepsia. Epilepsy. Hemiplegia. *Hiccough. Labour, convulsions in. Stings*. Stomach, catarrh of. Sunstroke. *Tetanus*. Uræmic convulsions. Whooping-cough.

Characteristics.—The pathogenesis of *Hcyan. ac*. is mainly composed of symptoms observed in poisoning cases and clinically verified, but it has also been proved by Joerg and his pupils. *Hcn*. is one of the deadliest and most rapidly acting of poisons. Hence its applicability in cases of critical intensity, such as the collapse stage of cholera, when it supervenes on sudden cessation of all discharges; convulsion during severe attacks of illness. It acts powerfully on the cœliac ganglia, causing intestinal cramps and colics. Convulsions and paralysis are the leading notes of the medicine's action. In the convulsions the body is stiffened and thrown back; cramp in nape of neck is very characteristic; breathing comes in paroxysms; jaws set; foaming at mouth; face flushed, bluish tint. A. H. Croucher cured a boy, 3 1/2, of convulsions. First attack occurred six months previously. His father's sister had died of epilepsy. Before the fits came on he could walk well, but could not afterwards. The fits occurred at intervals of about three weeks when a succession of them occurred, each lasting about five minutes, during two or three days. During the intervals between the fits he would generally scream. In the

morning on awaking, patient cried out, then convulsions occurred; body and limbs convulsed, eyelids twitched but remained open, eyeballs turned up and to right. Seemed quite unconscious. *Hcn*. 2x, one drop three times a day, increased afterwards to two drops and continued for a fortnight. No more convulsions, but three months later a rash developed all over him.—The characteristic blue tint of *Hcn*. is apparent after death in some poisoning cases: livid spots on limbs; nails violet. In one case there was a brilliant violent hue all over. The tetanic spasm of *Hcn*. is persistent and tonic, and has none of the reflex excitability of the *Nux* state. *Hcn*. acts most powerfully on the muscles of face, jaws, and back; the risus sardonicus is pronounced; lividity; frothing. It acts on the medulla and through the vagus nerve on heart and respiration. The breathing is irregular and gasping. The heart is greatly disturbed; blueness and coldness of surface; pulse feeble, imperceptible. The patient clutches at the heart as if in distress. The prostration of *Hcn*. is profound: drinks roll audibly into the stomach. It cured a boy of four of fever who had this symptom: "when swallowing a teaspoonful of liquid it sounds like water rolling into an empty barrel." Paralysis attacks first the lower, then the upper limbs. A dry tearing cough < at night is among the symptoms of *Hcn*.; and it relieves a similar cough often met with in consumptives. For it must not be imagined that the remedy is only of use in desperate cases of acute illness; it answers to its minute individual symptoms just as truly as does *Camph*., but it is only those who know the drug in the higher as well as the lower attenuations who will be able to profit by a knowledge of these. "Feels as if a cloud were going over his brain," is a symptom Cash removed with *Hcn*. in a case of sunstroke. There is much disturbance of the digestion, which is < after eating. The headache is < at night and the vertigo < in the open air. Coldness is a great feature with the remedy, marble coldness within and without. Blue tinge of the skin is also characteristic.

Relations.—The closest analogues are Camph., Lauro., and Amygd. *It is antidoted by:* Camph., Coff., Ipec., Nux, Op., Ver Compare; Camph. (cholera, coldness); Helod. (coldness); Cicut. (spinal cord; cramp in nape); Con. (paralysis spreading from below upward); Œnanth. (epilepsy); Lauro. (dry tickling cough; Lauro. has also a cough with jelly-like sputa dotted with bloody points); Lach.; Tabac. (asphyxia); Hell., Solania (paralysis of lungs and heart); Nux (tetanus, but of different type).

SYMPTOMS.

1. Mind.—Depression; discouragement.—Anguish and oppression; anguish in the pit of the stomach; fear of imaginary ills.—Very great irritability; sadness; peevish temper: incapacity for labour.—Inability to think; memory enfeebled; aversion to all mental fatigue.—Could not remain in middle of road when a vehicle approached even at a considerable distance; was forced, as it were, against his will, to stand aside without waiting for it to come nearer (after recovery from poisoning).

2. Head.—Head confused and weighty; giddiness with sinking of the body; giddiness, sometimes with a feeling as of intoxication.—Dulness of the senses, sometimes with apparent wavering of objects, and of a veil before the eyes, with difficulty to stand on rising from a stooping or sitting posture; symptoms < in the open air.—Vertigo, sometimes with staggering, the patient feels as though something moved in the air and drew him along with it, or else as if everything revolved about him.—Feels as if a cloud were going over his brain (cured in a case of sunstroke).—Cephalalgia with vertigo; stunning cephalalgia, dull pain in the forehead, beginning at the temples.—Head heavy and stupid.—Headache, only at night.—Pressive cephalalgia in the forehead, or else at the occiput to the l. towards the forehead.—Violent headache in sinciput and occiput, from vertex to forehead and orbits of the eyes; in the side of the head (r. or l.) esp. in vertex and forehead; at different parts of the head.—Tension in frontal region.—Shootings in the head, sometimes in one place, sometimes in another.

3. Eyes.—Eyes half open; reversed; protruding from the head; immoveable; difficulty to move the eyeballs.—Pupils dilated and immoveable; insensible to light.—Eyelids wide open, immoveable, as if paralysed; spasmodic quivering in the upper eyelids.—Dimness of sight; cloudiness and mist (gauze) before the eyes; amaurotic blindness.

4. Ears.—Aching in the interior of both ears; sometimes with roaring (buzzing) and ringing.—Hardness of hearing.

5. Nose.—Smarting in the upper part of nostrils.—Dilation of the alæ nasi, which have a bluish tint.—Dryness of the nose.

6. Face.—Puffing of the face; oval visage; visage wears a look of age; pale and bluish; complexion earthy and grey.—Expression of beatitude in the countenance.—Contortion of corners of mouth; trismus; frightful contraction of the facial muscles.

8. Mouth.—Dryness of mouth.—Augmented secretion of saliva.—Tongue coated, sometimes white, afterwards dark and dingy; contraction at the root; sensation of coldness on the tongue; burning at the tip of the tongue paralysis and stiffness of the tongue, which often protrudes from the mouth loss of speech.—Pains in the palate; inflammation of the palate.

9. Throat.—Spasms in the back part of the throat, and the œsophagus.—Scraping in the throat, and in the gullet painful scraping in the throat; heat in the throat and in the œsophagus burning in palate, throat, and œsophagus; inflammation of the throat, and of the œsophagus.

11. Stomach.—Taste: sweetish; fetid, acrid, and irritating; much gas in the mouth, with taste of prussic acid.—Anorexia, repugnance to food.—Adypsia, with heat

throughout the body; ardent thirst.—Loathing, inclination to vomit; vomiting of a black liquid.—Pains in stomach; sensation of coldness in stomach, sometimes with lancinations; pressure and squeezing in pit of stomach, with great oppression.—Fluids enter stomach with gurgling noise.—Great sinking at pit of stomach.—Spasmodic contractions in the stomach.—Heat and burning in stomach.—Inflammation of the stomach and intestines.—Pulsative pain in the precordial region.

12. Abdomen.—Coldness of the whole abdomen (with stitches), sometimes alternated with burning.—Rumbling and borborygmi in the abdomen; flabby inflation of the abdomen.

13. Stool and Anus.—Involuntary stools.—Involuntary stools, hiccough, and great prostration.—Sudden cessation of all discharges.—Cholera sicca.

14. Urinary Organs.—Retention of urine; frequent emission of urine; copious emission of an aqueous urine, pale or a pale yellow, depositing a turbid cloud.—Urine with sediment thick and reddish.—Involuntary emission of urine.—Burning in the urethra.

17. Respiratory Organs.—Painful scraping and burning in the larynx; inflammation of the larynx; sensation of swelling of the larynx; constriction of the throat; tickling in the larynx, sometimes lancinations and draggings; roughness and hoarseness of the voice.—Loud voice.—Frequent coughing, caused by smarting (pricking) in the larynx and trachea.—Hæmoptysis.—Respiration rattling, groaning, slow, very difficult, with mucous rale.—Difficulty of respiration by reason of the lancinations in the larynx.—Want to breathe deeply.—Respiration profound, frequent, and stertorous.—Anxious respiration.—Paralysis of the lungs.

18. Chest.—Oppression of the chest, asthma, sometimes painful.—Feeling of suffocation, with severe pains in the chest.—Great oppression and constriction of the chest.—Sharp pains in the chest.—Aching in r. side of chest.—Lancinations in the l. side, below inferior cartilage of sternum or thereabout, in the chest, on breathing deeply.

19. Heart.—Pains and pressure in the region of the heart.—Palpitations of the heart.—Irregular movements of the heart; feeble action of the heart.—(Angina pectoris; sudden outcry; long fainting spells; suffocation with torturing pains in chest; irregular, feeble heart-movements.)

24. Generalities.—Speedy failing and weakness of the limbs, esp. of the thighs; extreme weakness and weariness; nervous weakness.—Spasms; spasms at the back; spasms of face and jaws; convulsions.—Paralysis of inferior extremities, afterwards of the upper ones; loss of sensation, then stiffness of the parts; trembling and staggering, immobility, insensibility; stiffness of the body.—Cataleptic attacks;

great flexibility of the limbs; pulsations of the heart become slower, weaker, less appreciable, until lethargy supervenes; diminution of vital heat.—Muscles of back and face principally affected.—Activity of the senses stimulated; internal feeling of ease; gentle languor with sensation of agreeable weariness.—Dulness of the senses, and insensibility to external influences; disappearance of all pain; insensibility; loss of consciousness; wandering of the senses; shivering and lassitude.

25. Skin.—Itching in various places, esp. between the chin and lips.—Small red pustules on hip; burning itching vesicles on upper extremities, and neck.—Dryness of the skin.—General pallor with a bluish tint.—Varicose ulcers on legs.

26. Sleep.—Frequent yawning, sometimes with shuddering and spasm of the skin.—Drowsiness, sometimes uncontrollable, or else after a meal; heavy sleep in the morning; continued inclination to sleep; coma vigil; somnolency.—Wakefulness; to sleep is difficult, almost impossible; frequent awakening.—Lively dreams, without connection; anxious, disquieting dreams, dreams of death.

27. Fever.—Chilliness; frequent shudderings, esp. after midnight or in the morning; shivering, with yawning or with thirst.—Coldness of the limbs; sensation of cold internally and externally.—Coldness within and without.—Fever, shivering, afterwards burning heat; heat in the head, with coldness of the extremities, heat and sweat over the whole body, in the afternoon; general febrile agitation, with intense excitement; heat, at intervals, and irregular motion of the heart.—During the shivering, giddiness and vertigo; during the shudderings, mist before the sight.

Hydrophobinum.

Lyssin. The nosode of rabies. Trituration of sugar of milk saturated with the saliva of a rabid dog. Triturations might also be made of Pasteur's strongest virus.

Clinical.—Bubo. Clairvoyance. Convulsions. Corns, pains in. Diarrhśa. Dysentery. Fever. Hair, oiliness of. Headache. Hydrophobia. Hypersensitiveness. Landry's paralysis. Leucorrhśa. Lyssophobia. Mania. Nervousness. Neuralgia. Śsophagus, stricture of. Paralysis. Pregnancy, convulsions of; toothache of. Respiratory paralysis. Salivation. Satyriasis. Sciatica. Sunstroke. Tetanus. Ulcers. Uterus, prolapse of. Vaginismus. Wounds, too rapid healing of.

Characteristics.—Hering was the first (1833) to prove, and to suggest the employment of this nosode in medicine; and of late years it has become notorious through the experiments of Pasteur. Pasteur's method of administration is very different from that employed by homśopaths, but he is working on homśopathic

lines in seeking to neutralise a virus in the system by introducing a modification of the same virus. His experiments led him to produce the rabic poison in a highly intensified form in the spinal cords of rabbits. He then modified its intensity in different degrees by exposure to air for a longer or shorter period. Patients who come to the Institute are inoculated first with the least potent, and later with the most potent "vaccin," after which they are pronounced "cured." The "cure" is, however, extremely uncertain, as the degree of susceptibility to the poison is unknown in any case, and many hundreds of the patients subjected to the inoculations have died of the disease. Pasteur's first method was admitted to be too strong, and was soon modified; a number of patients having died from the inoculations. One of these cases I investigated, and the symptoms were sufficiently striking to deserve recording. The patient was Arthur Wilde, of Rotherham, aged 29, and I received the account from his mother, who nursed him through his illness. He had been bitten severely by a man suffering from hydrophobia, and was persuaded, much against his wish, to go to Pasteur. This he did a few days after the bite, returning on October 19, 1886, after undergoing the course. On Saturday, October 30, he complained of a pricking sensation below the ribs in the right side, in the part where the injections had been made. Pressure relieved the pain somewhat. That evening he vomited, and the vomiting continued, and he became very prostrate. On Monday the prostration was intense, vomiting continued; restless; skin cool, perspiring; quite conscious. The spots where the inoculations were made were dark and livid. Twitching occurred every few hours, sometimes more violently than others; most marked on the abdomen. From Monday through Tuesday he was making a peculiar loud noise, something like a waggoner driving horses, "bis" "whoo," though he had never had to do with horses. He seemed completely helpless. On Tuesday night vomiting ceased and he began to froth a great deal. Early on Wednesday morning he began to talk thick. His breathing, which had been peculiar all through─he would hold his breath for a long time when making the noise and then breathe rapidly for a few breaths─became very bad at 3 a.m. on Wednesday. He died shortly after 12, having been apparently conscious to the end though unable to speak for the last hour. The frothing had increased up to the time of his death and he seemed to choke with it. This case was paralleled by that of Goffi, an attendant at St. Thomas' Hospital, who was bitten by a cat and sent to Pasteur. On his return he was taken ill, and his case was at first diagnosed as Landry's paralysis, but finally proved (by experiments made with his spinal cord) to be "paralytic rabies," the result of inoculation. It was after the occurrence of these and similar "accidents" that the intensity of the "vaccins" was reduced. It would be well to have as an alternative preparation, *Hydrophobinum Pasteurianum*, obtained from Pasteur's vaccin, to meet conditions similar to these. The pathogenesis of *Hydrob*. is made up partly of symptoms observed in rabid animals and human patients, but chiefly of symptoms developed in the provings. The remedy has been pretty extensively used in practice, not only in cases of hydrophobia, but in many disorders in which the keynote symptoms have been present. These are: Exquisite sensitiveness to breath of air; to bright objects,

especially the surface of water; to sounds, and most of all to the sound of running water. Even the *thought* of it is enough to bring on an aggravation or a convulsion. Cases of dysentery with pain and tenesmus on hearing water running from a tap have been cured with *Hydrob*. Cannot bear heat of sun. Thirst, with inability to swallow. Copious viscid saliva. A great variety of mental disturbances occur. Rapid speech and impatience are very noticeable. The mental irritability is as great as that of the senses and dangerously violent temper is developed. The irritation is further shown in the sexual organs. Suffocating feelings were experienced by several persons. Sighing, and sighing respiration. The effects of bites of non-rabid dogs have been removed by this nosode. *Hydrob*. is a close analogue of many of the animal poisons, especially *Laches*., and I have no doubt when clinically developed it will prove to be equally important. Marked symptoms appear in every part of the body and mind. Many symptoms are < by stooping; by motion generally. Sensitive to any changed position. Bending head backward > pain in neck. Throws head back when sneezing. Heat of sun <, it is unbearable. Hot steam directed to bitten place > burning pain in it. > Turkish bath. Damp warm air oppressed him. Sensitive to least breath of air; air of agreeable temperature feels cold. Slightest draught < Cold air > headache. < From slightest touch; from riding in carriage. [In the Schema, the symptoms observed in cases of the disease are marked (R), those observed in Pasteur cases (P), the rest are the symptoms of the provings with some clinical additions.]

Relations.—The remedies most closely related to Hydrob. are those which have cured cases of the disease—Bell., Stram., Hyo., Fagus, Agave, Laches., Canth., and the animal poisons generally. Lachesis is a very close ally (< from sun; bluish discoloration of wounds; irritability; < warm, damp air; from touch and pressure; though the late evolution of the symptoms of Hdphb. contrasts with the lightning-like rapidity of snake-venom effects). *Compare also:* in ascending paralysis, Gels., Con.; in respiratory paralysis, Solania, Bell., Dulc.; in sexual excitement, Canth., Pic. ac., Graph.; in intolerance of sun, Gels., Glon., Nat., Lach., Apis; in effects of carriage-riding, Coccul.; desire to urinate on seeing running water, Canth., Sul.; convulsions from dazzling light, Stram.; consciousness of womb, Helon.; viscid saliva, Epipheg., Hydras.; hurried speech, Hyo.; in coldness, Helod. *It follows well:* Tabac. (headache); Arg. n. (uterine disease); Stram. (neuralgia). *Is followed well by:* Nat. m.

Causation.—Dog-bites.

SYMPTOMS.

1. Mind.—Loss of consciousness sometimes at an early stage, but not generally until a short time before death (R.).—Does not hear or see persons around him (R.).—Memory for single words much improved.—Thoughts of something terrible going to happen come into his mind against his will; feels impelled to do reckless things, such as throwing a child, which he carries in his arms, through the

window.—They appreciate the formidable character of the disease and speak frequently with a remarkably quick and sharp articulation of the impending fatal results (R.).—During the tranquil intervals, responded correctly to questions put to him, recognised those around him, and with a presentiment of impending death, begged them to pray for him and not leave him alone (R.).—Most commonly the mental faculties are in a superior state of excitement, shown by quick perception, amazing acuteness of understanding and rapidity with which they answer questions (R.).—It seems to her as if two entirely different trains of thought influenced her at the same time.—During convulsions, mental illusions and hallucinations; in intervals of consciousness mental faculties are retained (R.).—Imagine that they are abused, and energetically defend themselves against attacks and insults, which in reality are products of their own fancy (R.).—Fancies he is blown at by several persons, some of whom are not present (R.).—Thinks he is a dog or a bird, and runs up and down, chirping and twittering, until he falls down fainting (R.).—Strange notions and apprehensions during pregnancy.—Insane ideas enter his head; for instance, to throw a glass of water, which he is carrying in his hand, into some one's face, or to stab his flesh with the knife he is holding, and the like.—(Mania spermatica in stallions.).—Inclination to be rude and abusive, to bite and strike.—A strong and uncontrollable impulse to do certain acts; to spring at and bite any moving object that came within reach; dog (R.).—Lament with great anxiety their inability to relieve thirst which afflicts, and by various contrivances endeavour eagerly to drink (R.).—Break out of their stables furiously and run or jump over ditches and fences (sheep).—Not afraid of dogs, but dislikes to see them because their sight renews her fear (lyssophobia, after bite by non-rabid dog).—Exhilarated, felt as if he had received joyful intelligence.—Ill-humour.—Hypersensitiveness of all the senses.—On a watch held to scrobiculum he sees the hour and minute hands (R.).—He says he can see hands on dial plate of church clock (R.).—He could hear what was spoken in next room, and counted coppers in a room below him (R.).—Linen dipped in sugar water, put on pit of stomach, gives a sweet taste in mouth (R.).—Copper, if in his room, makes him restless and full of pains (R.).—Sometimes he would control inclination to stool by a strong effort of will, but effort caused much nervous irritation.—Attacks of nervous headache become awful and insupportable if he hears water run out of a hydrant.—When he hears water poured out, or if he hears it run, or if he sees it, he becomes very irritable, nervous; it causes desire for stool and other ailments.—The mere sight of a drinking vessel containing water is intolerable; they turn away their faces, shriek out loud, beckon anxiously with hands to have water removed, for voice and breath fail (R.).—Thinking of fluids of any kind, even of blood, brings on convulsions.

2. Head.—Peculiar lightness in head; lightness after nausea.—A slow vacillation or wavering of the head, from something being loose in upper part of head.—Rush of blood to head: while lying down; from chest upward, with toothache; during pregnancy; when rising.—Maddening outward pressing pain in forehead; he presses his head against the wall.—Beating, throbbing headache; most severe in r. temple and above r. eye; each bone feels shattered and sore; from temple to

temple.—Violent headache, most in temples and forehead, < during day and from stooping and stirring about.—Frequent pressure on vertex, as if a cast, which fitted top of head, was pressing it down.—Headaches from bites of dogs, rabid or not.—In rare cases serous effusion in opaque subarachnoid tissue and lateral ventricle, and also increased adherence of membranes of brain to convolutions (R.).—At noon slight headache, lasting all day.—Burning aching from l. side of occiput down neck.—Violent headache and backache.—Irritable headache, touching head makes it ache; very sensitive scalp.—Hair which is usually dry has become very oily.—Scalp feels contracted and pinched.

3. Eyes.—Sensitive to light.—Sight of water-agitation; renews idea of pain; causes convulsions (pregnancy).—False vision, dulness of sight, together with dilatation of pupils, sometimes actual blindness.—Vision much impaired or absent; lasts twelve hours.—Clairvoyance.—Pain in small spot over r. eyebrow, < writing.—Eyes are wild, rolling, staring and livid (R.).—Swelling of eyelids after bite of dogs (cured in sheep).—Extreme ulceration of eye, lids closed and puffed up by pus (in sheep).

4. Ears.—Conversation in vicinity of patient may throw him into a most violent agitation (R.).—Hearing water poured out in next room makes him very irritable and nervous.—Clairaudient.

5. Nose.—Strong odours may start spasms.—The greatest sensibility to smell of tobacco; tastes snuff while box is one foot distant.—Frequent sneezing, mostly early in morning or late in evening, as if a coryza would begin; also when looking at something bright, and from every little dust.

6. Face.—Both jaws feel stiff; tingling in cheek-bones.—Gnawing and crawling sensation in (r.) zygoma.—Facial muscles become variously contorted, countenance changes its aspect frequently.—Face sweat: with sensation of heat; with flushes.—The jawbones feel sore; aching in lower jaw.—Masseter muscles not affected by spasms.—Lower jaw stiff and painful; with inclination to yawn; with headache; imagines he cannot open his mouth.—Spasms with froth before mouth (R.).

7. Teeth.—Grinding of teeth.—Toothache and other complaints during pregnancy, with internal ebullition of blood from chest to head; head feels as if filled with air to bursting.

8. Mouth.—Difficult, incorrect speech (stricture of throat).—Tongue coated with foam (R.).—Pricking sensation under tongue.—Ranula returns periodically, with dryness of mouth, < in afternoon, soreness when chewing; with hćmorrhoids and constipation.—Feeling of coldness in mouth, like essence of peppermint.—Severe pain passing from mouth upward through head and down into neck.—Tough, short frothy phlegm in mouth (horse).—When vomiting ceased, frothing at the mouth began and was so excessive as nearly to choke him (P.).—Frothed at mouth,

attempted to spit out with much difficulty (before death).—Saliva more viscid, constant spitting, feeling of general malaise.—Entire mucous membrane of mouth and pharynx was of an equally distributed pink without any swelling.

9. Throat.—Slight redness of palate and throat, with spasm of śsophagus and difficult speech.—Sore throat, as after swallowing red pepper.—Cooling sensation in śsophagus.—Sore throat, constant desire to swallow; much saliva and feeling as if beaten.—Periodical spasm of śsophagus, continual painful inclination to swallow without being able to swallow anything; constriction is most severe when taking water into mouth, if he tried to swallow it forcibly, he had burning and stinging in the throat, cough and retching which forced fluid from his mouth; difficult speech.

10. Appetite.—Voracious appetite; swallowed wheat without chewing.—Excessive desire for salt.—Abnormal cravings during pregnancy.—Aversion to fat food and drink; there remains a long greasy aftertaste, < after mutton.—Warm drinks, such as milk, soups and wine, are more easily taken than water.—Inability to take solid food, or else it is consumed with greatest difficulty.

11. Stomach.—Nausea: with giddiness, headache and pale face after diarrhśa; food does not taste right; and loss of appetite in evening; 10 to 11 p.m.—Gagging when he forcibly attempts to swallow water, forces it out of his mouth.—Nausea and vomiting after diarrhśa.—Vomiting of food; of fluid while drinking, followed by faintness; of what was eaten at supper, at night in sleep.—Vomiting throughout three days, with prostration and restlessness; when vomiting ceased frothing began and nearly choked him (P.).—Great oppression in stomach, has to open her clothes.

12. Abdomen.—A pressing pain: in r. side, near last ribs, with breathing; in hypochondria, after quick walking.—Painful throbbing as if an abscess was forming in region of spleen, but very deep in, exact locality is half-way between median line and outline of l. side; it lasted eight days; with it departed remnant of a similar affection in this locality, against which eleven years of allopathic treatment had proved of no avail.—Tearing from l. hypochondriac region to r.—General soreness in whole of lower abdomen.—Rigidity of muscles of abdomen.—Pain in both groins; in r., two small kernels under skin, very painful.—Inguinal glands very much swollen, they pain for two hours.

13. Stool and Anus.—Tenesmus during and after stool.—Dysenteric stools with tenesmus; renewed as soon as he hears or sees water run.—When in the morning some water was poured out from pitcher into basin, pain and desire to stool returned.—Diarrhśa: with much pain, most during day, eighteen hours after dose, lasting twenty-four hours, with pain in lower part of bowels; < in morning; followed by nausea as if she would have to vomit; attended with violent pains early in morning; after stitches in side.—Stools of bloody mucus.—Involuntary stools.

14. Urinary Organs.—Urine too scanty and high-coloured (cured in a case of camp diarrhśa).—Constant desire to urinate on seeing running water; urinates a little at a time.—Prostatic juice passes after urinating.

15. Male Sexual Organs.—Lasciviousness: after eating, with feeling of weakness in parts; with erections in afternoon.—Strong erections, without sexual excitement or thoughts, in evening, while undressing in a cold room.—Sexual indifference with erections, even during act of coition, which is perfectly performed.—Increased sexual desire (dropsy of spine with sheep; hydrophobia of sheep).—Priapism, with frequent seminal emissions.—Satyriasis in a stallion; hot breath streamed from nostrils.—Semen is discharged too late or not at all during coition.—No emission during coition, but afterwards semen escaped unconsciously in sleep.—Glans is dry and sticks to foreskin.—Hydrocele.—Atrophy of testicles; testicles diminish in size, first l. then r.—Complaints resulting from abnormal sexual desire.

16. Female Sexual Organs.—Pain in l. ovarian region, uneasiness there.—Increase of uterine sensitiveness, conscious of having a womb.—With a painful sensitiveness of womb, slight degree of prolapsus, so that after any considerable physical effort there would be a strong conviction that it was prolapsed.—Any change of position that would tilt or rotate os uteri would cause much pain.—Prolapsus uteri of seven years' standing.—Severe leucorrhśa, with pains in back and lower part of bowels, sore vagina.—Sensitiveness of vagina rendering coition quite painful.—Weakness in back, with copious catamenia.—During pregnancy: strange notions, desires or cravings; rush of blood from chest upward; toothache, backache and other complaints; great sense of bearing down; intense pain from inflammation of os and cervix (formerly treated with caustic); great soreness in lower part of back and bowels.—Spasms excited whenever she attempts to drink water, or if she hears it poured from one vessel into another; sight or sound of water affects unpleasantly, even though desiring water (puerperal convulsions).—Since cessation of lochia a severe leucorrhśa; pain in back and lower part of bowels; soreness of vagina.—Both breasts swollen when waking in morning, she can hardly get up; three mornings in succession; same swelling of breasts at night when opening her dress.

17. Respiratory Organs.—Voice altered in tone; tones much suppressed; hoarse; rough; harsh and weak (last stage); shrill, inarticulate sounds; shrill sounds of utmost despair, or occasioned by violent expirations; very shrill and piercing bark, changing near its termination into a distressing, continuous howl (dogs).—Epiglottis crisp and dry (R.).—Sighing, with pain in heart.—Dyspnśa: with flatulency, cough and rattling in Chest; with sighing, groaning respiration; from cardiac pain; < lying down.—Oppression in breathing before a severe suffocative attack, induced by spasmodic contractions of respiratory muscles, combined with spasmodic, alarming constriction of pharynx.—Breathing during paroxysm gasping, irregular and usually quite rapid, often with decided dyspnśa.—Breathing peculiar;

held for a time, and then a few rapid breaths (P.).—Frothed at the mouth very much; almost choked with it (P.).

18. Chest.—Chest and abdomen feel expanded; expanding chest seems to invigorate him, though it usually fatigues.

19. Heart and Pulse.—Stitches in heart from ringing of church bells.—Stitches in heart, < when walking; they would kill him if they continued.—Heart had for three months not been free from a sticking, drawing, squeezing pain, result of an attack of rheumatism and cold, together with a palpitation and difficulty of breathing.—Violent pain in heart, as if it would burst or had needles running into it.—Pain in cardiac region, to which he is subject, is < half an hour after the dose, but much > in several days.—Heart palpitated violently and felt as if it was coming up into throat; drank several mouthfuls of water, which relieved.

20. Neck and Back.—Pressing in neck and up back of head.—Backache and headache.—Considerable pain in lower part of back, with soreness felt through to pubic region.

21. Limbs.—Weight and heaviness of legs and shoulders.—Severe twitching in arms and legs, much resembling chorea.

22. Upper Limbs.—Cramp in arms.—The pain up arm was followed by cramps and drawing in back and limbs of bitten side.—Weakness in arms.—Right arm becomes so heavy and inactive that writing is too great an exertion, and he allows arm to drop.—Hand trembles so much he can scarcely write.—Hands numb, with headache.

23. Lower Limbs.—Feeling as if hip bones would slip out of their sockets, > by resting hands on hips.—A pressive pain in r. hip bone, goes from there to middle of sacral bones.—L. hip aches in bone.—Along l. sciatic nerve a dull pain, returning periodically; < when rising from sitting.—Twitching in legs.—Weakness in legs when going upstairs.—Each dose he had taken made him feel as if he was getting corns on every toe, his real corns felt remarkably well and did not rain him at all.

24. Generalities.—Drawing from neck to forehead, immediately followed by sparks before eyes and vanishing of sight; red face; involuntary grinding of teeth; second attack; the first was felt in head after washing in morning; seven days after bite of mad dog (*Bellad*., three doses, *Hyos*. interpolated once a day).—Acute ascending paralysis (Landry's disease) diagnosed in early stage (P.).—Bitten by a mad dog in sixth year in several places; became somnambulistic ten years after.—Severe nervous twitches in whole body all day.—Twitching of muscles throughout entire body (R.).—Twitching of tendons with tendency to general convulsions (R.).—Prostration beyond description (P.).—Twitching every few

minutes; sometimes more violently than others; most marked in abdominal walls (P.).—Makes a peculiar noise like a waggoner driving horses (P.).

25. Skin.—Quick tendency of the wound to heal (the same in leprosy).—Biting, itching in various parts of body, < by scratching.—Bluish discoloration of bitten place (after *Laches*).—Pustules on forehead; around inflamed eye; on finger (after bite).—Malignant ulcers from bite of a dog.—Red scar from bite of a dog.—Dark, livid-marks where inoculations were made; pricking sensation in them, causing him to continually press his side, which relieved temporarily (P.).—Cancerous sores.

26. Sleep.—Inclination to yawn, with stiffness of lower jaw.—Frequent yawning without sleepiness, particularly when hearing others yawn.—Insomnia; sleepless in spite of narcotics (R.).—Starting in sleep, afternoon.—On waking is morose, inclined to be angry.—In morning, after exciting dreams, much fatigued, feels tired in sacrum and back.—On awaking from siesta numbness in head.

27. Fever.—Paroxysms of intense coldness with pain in spine.—Chilly feeling, more down r. (bitten) arm.—Became cold in bed at 3 a.m., although covered with four blankets; lasted about one hour.—Chills intermixed and followed by heat and cold sweat.—Cannot bear heat of sun.—Fever every evening, commencing at dusk and lasting until bedtime (midnight).—He feels the pulse beat through the body; from time to time there is a surging through throat into head, like a slow wave.—Sensation of heat felt internally and externally through entire body, no external warmth, it forces perspiration out on face as from weakness, and is accompanied by lassitude and aching in legs.—Restless, skin cool, perspiring, quite conscious (P.).—At 9 p.m. a dripping warm perspiration from whole r. hand, from wrist to nails; afterwards hands and fingers stiff, she can hardly bend them (R.).—Skin covered with a clammy sweat (last stage) (R.).—Skin moist, even covered with sweat; during spells, limbs cold and livid.—Much better after perspiring.—(A number of cures of hydrophobia have been reported from forced perspirations, and e. p. from prolonged and repeated use of the Turkish bath. This is known as the Buisson treatment, from Dr. Buisson who originated it.).—Intermittent fever.

Hydrophyllum Virginianum.

Virginian Waterleaf. N. O. Hydrophyllaceć. Tincture of fresh plant in flower.

Clinical.—Eyes, inflammation of. Rhus poisoning.

Characteristics.—The Hydrophyllaceć are nearly allied to the Borages. They grow among moist, shady rocks, and they derive their name from the circumstance that

in spring a small quantity of water is held in the cavity of each leaf. The older writers speak of *Hydrophyl. v*. as an antidote to *Rhus* poisoning. The only homśopathic experience on record is that of Dr. Hoyt, of Indiana, which is recorded by Hale. Ten minutes after gathering a cluster of the beautiful blue flowers, Hoyt noticed his eyes began to water and burn, with slight itching, By the time he reached home he was suffering severely, eyelids swollen, sclerotics fiery red, some sensitiveness to light. The symptoms continued through afternoon and evening and kept him awake some time. In the morning, the lids were agglutinated and eyes sensitive to light. The burning and smarting were less, but lachrymation remained, and it was a week before the eyes were quite right. Later on Dr. Hoyt tested the remedy in one case of catarrhal inflammation of the eyes, which it cured "like magic." It needs further proving that it may have its position defined. It should prove to be a good adjunct to *Euphrasia*.

Hyoscyaminum.

Hyoscyamine. A crystalline alkaloid of Hyoscyamus Niger. C_{17} H_{23} NO_3, Trituration or solution of the sulphate and hydrobromate. (A non-crystallisable alkaloid, Hyoscine, is also used in medicine in the form of the hydrobromate.)

Clinical.—Ciliary neuralgia; spasm. Delirium. Fevers. Mania. Nervousness. Paralysis agitans. Sleeplessness. Spinal sclerosis. Throat, sore. Typhus fever. Vision, disordered.

Characteristics.—*Hyos. sul*. is a very powerful poison obtained from *Hyos. nig*. It is sometimes used by occulists in place of *Atropine* to dilate the pupils for the purposes of ophthalmoscopic examination, and like *Atropine* it has the property of causing dryness of the mouth and fauces in some cases. Two cases have been recorded in which, whilst dilating the pupil, it caused intense boring pain in the eyes from cramp of the ciliary muscle. Dr. H. A. Hutchinson, who took gr. 1/4 of *Hyos. sul*., became flushed, arteries throbbing, lost power of co-ordination, fell into a comatose sleep, pulse 138, respiration 36, temperature 106° F., entire relaxation of voluntary muscles, except occasional spasmodic movement of arms and legs. The *hydrobromate of Hyoscine*, gr. 1/43, in solution, caused in a tall, robust lady, of 33: Numbness of body and limbs, dry throat, dim vision, flushed face, rambling talk, dilated pupils.—No specific differences between the two alkaloids have been observed. The majority of the symptoms of the Schema are the effect of the *Sulphate*, which was extensively proved by Harley. *Hyos. hydrobro*. 3x trit. has been reported curative in a case resembling paralysis agitans after excessive use of alcohol and tobacco; and in highly excitable, nervous children who have been frightened. The *hydrobromate of Hyoscyamine* is credited with relieving the tremors (right side) in a case of paralysis agitans, the curative effect

having followed instillation of the alkaloid into the eye for another purpose. With the 4x attenuation of Merk's, *Hyos. hydrobro*., Delameter relieves the tremors of disseminated sclerosis.

Relations.—*Compare:*—Hyos. nig., Bell., Atrop., Stram.

SYMPTOMS.

1. Mind.—Delirium violent, failed to recognise his family, saw animals about him, next day remembered nothing that had passed except the dreams of animals.—Wakeful, quiet, and usually pleasing delirium, with illusions of sight; or great sleepiness, and when aroused lapsing into dreamy sleep, broken by occasional mutterings and jerking of limbs.—Clear when engaged in conversation, but dreamy when undisturbed, eyes wide open, he reached to an object on the table and looked about on the floor, when questioned said that he thought something had dropped from the table, and that the walls appeared to move; afterwards quiet, but meddlesome when not engaged in conversation, grasping at objects, attempting to remove them before the hand reached them; when left alone he lapsed into forgetfulness and dreamy, meddlesome delirium, picking at objects; having reached them after unsuccessful efforts he fumbled with them till he dropped them, then on attempting to pick them up lost his balance; when aroused he rubbed his hand, gaped, answered readily, a remark excited a risibility which he could not restrain, and occasionally the suppressed chuckle burst into a hearty laugh.—Dulness, heaviness.—Difficulty in concentrating thoughts.—Coma, with relaxation of voluntary muscles, except occasional spasmodic movements of arms and legs.

2. Head.—Headache; congestion of head and face, violent throbbing of carotids with every impulse of heart.—Drunkenness, nausea, and vomiting.—Giddiness: with staggering on rising from a seat; with staggering on walking; weight across forehead.

3. Eyes.—Eyes suffused; sclerotic and conjunctiva injected.—Eyeballs restless.—A most intense boring pain in eyes (an hour after instillation, probably due to cramp of ciliary muscle).—Pupils dilated; and insensible.—Vision misty; letters run together, can read fine print only at distance of a yard; double vision.—Yellow vision.—Vision perverted as to colour and size; she thought some pills in a box were larger than others; inability to read unless the print was within two or three inches of the nose.

6. Face.—Face flushed and hot; esp. cheeks.—Heavy look.

8. Mouth.—Tongue: dry and brown; at centre; also with clamminess of rest of mouth; hard; and rough, except margins.—Hard and soft palates dry and glazed, afterwards tongue and palates covered with a sticky, acid, offensive secretion, as

after *Belladonna*.—Tongue and throat so dry that articulation was indistinct.—Forepart and margins of tongue wet with acid secretion.—Dryness of mouth; except gums.—Mouth: clammy and moist, exhaling an offensive odour; suddenly moist; sensation of mastic in it.

9. Throat.—Dryness of throat: with moisture of mouth; of pharynx; with difficult swallowing.

11. Stomach.—Vomiting during the coma.

14. Urinary Organs.—Urging, dysuria, and discharge in a feeble dribbling stream, partial retention (urine contained Hyoscyaminum).—Urine changed from high-coloured to glaucous green; from acid to alkaline and opalescent on boiling; and on standing a deposit of triple phosphates, the specific gravity increased.—Urine pale, specific gravity decreased.

17. Respiratory Organs.—Dry, tracheal cough.—Rapid respiration.

19. Heart and Pulse.—Heart's action excited and rapid.—Pulse increased in rapidity, force, and volume; then slow; then decreased in rapidity, force, and volume.—Pulse rapid; then slow and soft.—Pulse slow; and at first increased in force and volume.

21. Limbs.—Limbs jerking occasionally, and fidgety.—Inability to walk.—Inability to rise from his chair or walk without assistance, and as he sat, twitching now and then of the extensors of the legs, so as to advance the foot with a little jerk.—Weakness of legs; of feet, so that I could only walk by fixing eyes on the ground.

26. Sleep.—Yawning; and sighing; and tired feeling.—Sleepiness.—Either wakeful or excessively somnolent; sleep broken by mutterings and slight jerking of the limbs.

27. Fever.—Heat of skin with dryness.—Pulse 138, full and hard; respirations 34 to 40; temperature 106 F.

Hyoscyamus.

Hyoscamus niger. Henbane. N. O. Solanaceæ. Tincture of fresh plant.

Clinical.—Amaurosis. Angina pectoris. Bladder, paralysis of. *Bronchitis*. Chorea. *Coma vigil. Cough. Delirium tremens*. Diarrhœa. Dysmenorrhœa. *Enteric fever*. Epilepsy. Epistaxis. *Erotomania. Eyes, affections of*. Hæmoptysis.

Hæmorrhages. Hiccough. Hydrophobia. *Hypochondriasis*. Lochia, suppressed. *Mania*. Meningitis. *Mind, affections of*. Neuralgia. Night-blindness. Nymphomania. *Paralysis*. Paralysis agitans. Parotitis. *Pneumonia*. Puerperal mania. Rage. *Sleep, disordered. Stammering*. Tetanus. Toothache. Urine, retention of. Vision, disorders of.

Characteristics.—Hyoscyamus ("Hog-bean") is nearly allied to *Belladonna* botanically, and in pathogenetic action the two drugs are much alike in their main features. But when examined closely, their differences are sufficiently well marked to render their distinction easy. Though sometimes growing near rivers, *Bell*. flourishes best in a chalky soil. *Hyo*. is found growing on old rubbish heaps, near ruins, on roadsides, and sometimes by the seashore. The flower of Bell. is of a dull, purplish brown; of *Hyo*. a dirty yellow, with claret-coloured streaks. *Bell*. is a smooth plant, whilst *Hyo*. is densely covered with thickly woven hairs, and by a sticky, heavy-smelling exudation. A case of poisoning by *Hyoscyamus* seeds, put into soup instead of celery seeds, communicated to the *Times* (May 14, 1892), by Mr. F. Mackarness, one of the sufferers, gives a good general idea of the drug's action. "About ten minutes after taking the soup I began to feel quite dizzy, and could hardly swallow the food I was eating, which tasted as if it was nothing but dust and ashes. At the same time my wife became so faint that she asked me to help her up to her room at once. This I did with some difficulty, having to hold on to the bannister with one hand while I supported her with the other. At the same time, also, our sight became blurred, our mouths and throats parched, and we began to feel cold. I tried in vain to get warm by sitting over the drawing-room fire, but only felt intensely drowsy. . . . When Dr. Martin arrived I had great difficulty not only in getting up to receive him, but in making him understand what had happened, so indistinct was my articulation. However, from the dilatation of our eyes, the parched condition of our tongues, and the state of our pulse (my wife's having gone up to 140), he, of course, saw that we had been badly poisoned, and prescribed drastic remedies which saved us probably from very serious consequences; for even the next day our sight was still defective, and my wife's hands were slightly paralysed." Dr. W. S. Mills communicated to *N. A. J. H.*, November, 1899, an experience of his own. A patient had objected to the taste of water in which *Hyo*. Ø had been mixed, so Dr. Mills took a teaspoonful just to taste it. "A few moments later I found that it produced a queer feeling throughout the body. I felt as though without weight, as though I walked through and on air. My head felt light. I had an insane desire to laugh and shout. It was only by the utmost use of my will-power that I could keep myself from doing something ridiculous. Even when I forced myself to think of my position of responsibility as medical attendant on this very sick man, and the absolute necessity of keeping my wits about me, it was hard for me to restrain my hilarity. I can liken the condition only to one of mild hilarious intoxication—a "funny drunk." I knew I was silly, but I could not help it. To keep myself from losing my dignity before the nurses and the family, I locked myself in the bathroom for a few minutes and made faces at myself in the mirror." The condition passed off in half an hour. These two

experiences, brief as they were, cover a large share of the ground occupied by *Hyo*. The delirium of *Hyo*. is more of the low, muttering type, whilst that of *Bell*. tends to be violent and furious. *Hyo*. also has fits of ungovernable rage, but the violence is not so sustained as that of *Bell*. The face of *Bell*. is red, of *Hyo*. pale or bluish. *Hyo*. corresponds to a greater variety of cases of melancholia than *Bell*., and here one great characteristic is "suspicion," so frequently met with in cases of insanity or of those on the borderland. A patient of mine, a clever lawyer, suffering from nervous breakdown, had had to abandon his business entirely some time before he came under my care. He had improved considerably, when I heard from his wife in the country that he had had a kind of a fit, and became cold and senseless, his face working much. After that he fell asleep, and had another attack an hour and a half later. After this he was suspicious, and said that his wife was poisoning him. I sent a single dose of *Hyo*. 1m, to be given in food or in drink without his knowing. It was repeated once a week. He began to improve forthwith, and in a few months was perfectly restored to health; though some other medicines were given later on. In this case there was an additional indication for *Hyo*. in the working of the muscles of the face. Twitching is one of the grand characteristics of *Hyo*. "Every muscle in the body twitches, from the eyes to the toes," clonic spasms: twitching of groups of muscles; spasms in general; with unconsciousness. Another feature of the *Hyo*. insanity is uncovering. This is not because the patient feels too warm (for *Hyo*., like the other Solanids, is a chilly remedy), but because they will not remain covered: nymphomania; lascivious mania; lies naked in bed and chatters. There are violent outbreaks in the delirium of *Hyo*., but they cannot be kept up (as are those of *Bell*.), on account of the weakness. *Hyo*. corresponds to the typhoid state: tongue dry and unwieldy, sensorium so clouded that if the patient be aroused to answer he falls back into a stupor again. The sight is disordered; sees things too large or too near and grasps at them; picks the bed-clothes and mutters. Twitchings, subsultus tendinum, and picking at the bed-clothes. Teeth covered with sordes. Involuntary passage of urine and fæces. When influenza takes the typhoid form it often finds its remedy in *Hyo*, (I rapidly cured a boy in whom influenza attacked the meninges of the brain with pains in the head, especially forehead, piercing to the brain.) Parotitis with metastasis to brain. *Hyo*. is suited to many pulmonary conditions. The characteristic cough is < on lying down, almost completely removed by sitting up, < at night, < after eating, drinking or talking. Cough from elongated uvula. The drowsiness of *Hyo*. has another side in restlessness. The patient lies awake for hours; children twitch in sleep, cry out, tremble, and awake frightened. *Hyo*. is one of our best remedies in toothache, having well-defined symptoms. It is also an ancient domestic remedy for toothache, the application being peculiar. A penny is made hot in the fire, and when taken out a pinch of Henbane seeds is dropped on it and fumes come away. A wineglass is inverted over it, and this is soon filled with the fumes, and applied to the mouth, when the fumes are inhaled. The popular idea is that the fumes expel the "worms" of toothache, but, as Lauder Brunton has shown (*H. W*., xxv. 286), the supposed "worms" are the embryos of the seeds forcibly expelled on the rupture of

the seed coats by the heat. *Hyo*. 30 is one of the most useful remedies in restlessness and sleeplessness. *Hyo*. is suited to nervous, irritable, excitable, sanguine people; to light-haired people. The symptoms of *Hyo*. are < by touch; the abdomen is sore to touch; < evening and night < lying, down; < from cold and cold air. > From sitting up; motion; walking; warmth. < From mental affections; jealousy unhappy love; approaching menstruation; commencing menstruation; during menstruation.

Relations.—*Antidoted by:* Vinegar, Citric acid, Bell., Chi., Stram. *It antidotes:* Ether, Bell., Stram., Merc. *Is followed well by:* Bell., Puls., Stram., Ver., Phos. *Follows well:* Bell., Nux, Op., Rhus. *Compare:* Suppression of lochia, Nux, Secal., Con., Col., Pul.; loquacity, Stram., Lach., Op., Cup., Ver.; gossiping, babbling, Ver. (religious subjects, Ver.); difficult swallowing of liquids, Hydrob., Bell., Caus., Con., Ign., Lach., Lyc., Pho. Convulsions from fright or worms, Cin. Every muscle of the body twitching, Nux (but Nux retains consciousness, Hyo. has unconsciousness); cough < lying down, Dros.; (> lying down, Mang., Fer.); cough < at night, after eating, drinking, talking, singing, Dros., Phos.; hæmoptysis of drunkards, Nux, Op.; meningitis, Bell. (Bell. has < from shaking head; from sitting with head bent forward; Hyo. has > from both); tickling cough > in warm air, Rumex; convulsions, spasms, twitchings, Cic. v.; chorea, Stram., Ver., Agar; jealousy, Apis, Ign.; waves through head, Act. r.; mania, Stram. (Stram. has desire for light and company, Hyo. aversion to both; Stram. uncovers whole body, Hyo. especially the genitals; sexual mania, Grat., Calc. ph.; Stram. sees objects—mice, dogs, &c.—rise from every corner and come towards him); sees ghosts and demons, Plat., Kali bro.; fears being poisoned, Glo., Rhus, Kali bro., Bapt.; hiccough, Ign. (Ign. after emotions, Hyo. after abdominal operations); spasms, twitchings, Ign., Tarent.; levitation, Phos. ac., Sticta pul., Hyp.; fits of ungovernable rage, Staph. Teste puts Hyo. in the Mur. ac. group with Viol. od. He also puts it in the Bell. group.

Causation.—Jealousy. Lochia, suppressed. Milk, suppressed.

SYMPTOMS.

1. Mind.—Melancholy.—Melancholy from unfortunate love, with rage or inclination to laugh at everything.—Anthropophobia.—Suspicious.—Anguish and fear.—Fright followed by convulsions and starts from sleep.—Desire to run away from the house at night.—Fear of being betrayed or poisoned.—Disposition to make a jest of everything.—Loquacity.—Talks more than usual, more animatedly and hurriedly.—Jealousy; with rage and delirium.—Unfortunate love with jealousy, with rage and incoherent speech.—Peevish and quarrelsome humour.—Rage, with desire to strike and to kill.—Stupor, with plaintive cries, esp. on the slightest touch, and complete apathy.—Loss of memory.—Delirium without consciousness; does not know anybody, and has no wants (except thirst).—Loss of consciousness, with eyes closed, and raving about business.—Delirium tremens, with clonic spasms;

unconsciousness and aversion to light and company.—Delirium, sometimes with trembling, and fits of epileptic convulsions.—Delirium, sees ghosts, demons, &c.—Wandering thoughts.—Perversion of every action.—Mania, with loss of consciousness; or with buffoonery and ridiculous gestures.—Lascivious mania, and occasional mutterings; uncovers his whole body.

2. Head.—Confusion and heaviness of the head.—Vertigo, as from intoxication, or with obscuration of the sight.—Attacks of cerebral congestion, with loss of consciousness and snoring (with delirium; answering all questions properly; pupils dilated).—Headache, as from concussion of the brain.—Congestion of blood to the head; red, sparkling eyes; face purple-red; < in the evening.—Pressive and numbing pain in the forehead, esp. after a meal.—Headache as if brain shattered and shaken, when walking.—Pressive, stupefying headache, esp. in forehead, occurring in alternation with needle-like stitches, particularly on l. side.—Forehead feels as if screwed inward.—Sticking in head over r. eye, when coughing.—Violent throbbing headache, waking him at night; with throbbing carotids.—Headache in base of brain.—Brain feels as if loose.—Constrictive obstruction in the forehead.—Sensation of fluctuation, or of commotion in the brain, esp. on walking.—Heat, and tingling in the head.—Inflammation of the brain, with unconsciousness; heat and tingling in the head; violent pulsation in the head, like waves; the head shakes; < from becoming cold and after eating, > by bending the head forward (stooping) and from heat.—Hydrocephalus, with stupor; the head is shaken to and fro; sensation of swashing in the head.—Heat of the head, with general coldness of the body, without thirst.—Liability to catch cold in the head, principally from dry, cold air.—Headache, alternately with pain in the nape of the neck.—Waving or shaking of the head from one side to the other; with loss of consciousness and red sparkling eyes.

3. Eyes.—Eyes downcast and dull.—Eyes red, fixed, convulsed, and prominent.—Spasmodic movement of the eyes.—Redness of the sclerotica.—Swelling of the eyelids.—Strabismus.—Staring, distorted eyes.—Contortion of the eyes.—Quivering in the eye.—Spasmodic closing of the eyelids.—Inability to open the eyelids.—Pupils dilated.—Dimness of sight.—Myopia, or presbyopia.—Errors of vision.—Diplopia.—Objects seem to be much larger than they are in reality, or else of a red colour.—Objects have coloured borders, chiefly yellow.—Nocturnal blindness.—Weakness of sight, as from incipient amaurosis.

4. Ears.—Buzzing in the ears.—Hardness of hearing, as if stunned.

5. Nose.—Epistaxis.—Cramp-like pressure at the root of the nose and the zygomata.—Dryness of nose.—Nostrils sooty.—Loss of smell.

6. Face.—Face: cold, pale bluish, or puffed and blood-red.—Face flushed, excited; bloated; dark-red.—Twitching of muscles of face.—Distorted, bluish face, with

mouth wide open.—Cramp-like pressure on the cheek-bone.—Dryness of the lips.—Cramps in the jaw.—Lock-jaw.—Heat and redness of the face.

7. Teeth.—Pulsative and tearing pains in teeth, from cheek to forehead, esp. after a chill in the cold air, or in the morning, and often with congestion of the head, heat and redness of the face, swelling of the gums, and spasms in the throat.—Toothache driving to despair; in sensitive, nervous, excitable persons; causing spasmodic jerks of fingers, hands, arms, and face muscles.—Teeth feel too long.—Toothache < from cold air, morning.—Dentition.—Pulsating toothache, as from inflammation of the periosteum.—Painful drawing in a single tooth, here and there, as if a tooth were becoming pithy.—Toothache during sweat.—Tearing in the gums, with buzzing and sensation as if the teeth were loose.—Clenching of the teeth.—Grating teeth.—Teeth covered with mucus.

8. Mouth.—Dryness in the mouth.—Salivation of a salt taste.—Sanguineous saliva.—Foam at the mouth.—Fetid exhalations from the mouth, perceptible to the patient.—Heat and numbness of the tongue, as if it had been burned.—Tongue dry, and loaded with a brownish coating Redness of the tongue.—Utters inarticulate sounds.—Paralysis of the tongue.—Loss of speech.

9. Throat.—Dryness and burning heat of the throat.—Stinging dryness of fauces.—Constriction in the throat, and inability to swallow liquids.—Elongation of the uvula.

10. Appetite.—Loss of taste.—Bulimy, with violent thirst, with inability to swallow.—Thirst with drinking but little at a time.—Dread of drinking.—Hiccough, esp. after a meal (with spasms and rumbling in the abdomen).—After a meal, headache, intoxication, great anguish, and sadness.—After drinking, convulsions.

11. Stomach.—Nausea, on pressing the epigastrium.—Bitter eructations.—Retching and vomiting, with cutting pains which extort cries.—Vomiting and retching after coughing.—Aqueous vomiting, with vertigo.—Vomiting of mucus (sanguineous) and of blood, of a deep red, sometimes with convulsions, choking, pains in the pit of stomach, great exhaustion, and coldness in the limbs.—Vomiting of aliments, immediately after a meal, and sometimes with violent pain at the pit of the stomach.—Cramps (colic) in the stomach in periodical attacks, and > by vomiting.—Painful sensitiveness of the epigastrium to the touch.—Inflammation of the stomach, with burning pain.

12. Abdomen.—Dull pains in the hepatic region.—Abdomen tight, inflated, painful when touched.—Cramp-like pains in the abdomen, and cuttings, sometimes accompanied by vomitings, pains in the head, and cries.—Shootings in the umbilical region, on walking and breathing.—Pain, as from excoriation in the abdominal muscles, on coughing.—Spasms and rumbling in the abdomen, with hiccough.

13. Stool and Anus.—Constipation.—Frequent want to evacuate, with scanty and unfrequent relief.—Watery diarrhœa.—Painless diarrhœa.—Mucous diarrhœa.—Diarrhœa of lying-in women.—The stool is small in size.—Involuntary evacuations, from paralysis of the sphincter ani.—Hæmorrhoids; profusely bleeding.

14. Urinary Organs.—Retention of urine, with pressure in the bladder.—Retention of urine in child-bed.—Frequent want to make water, with scanty emission.—Urine copious and clear, like water.—Involuntary emission of urine, as from paralysis of the bladder.

15. Male Sexual Organs.—Increase of sexual desire, lascivious; exposes his person.—Impotence.

16. Female Sexual Organs.—Lascivious, uncovers sexual parts.—Lascivious furor, without modesty.—Excited sexual desire without excited fancy.—Catamenia more abundant.—Suppression of the catamenia.—Suppressed lochia.—Spasms of pregnant women, esp. during parturition.—Puerperal fever.—Metrorrhagia, of a bright-coloured blood.—Metrorrhagia, the blood pale, with convulsions.—During the catamenia, delirium, flux of urine, sweat and convulsive trembling.—Before the catamenia, hysterical cramps and fits of laughter.—During the menses, convulsive trembling of the hands and feet; severe headache; profuse perspiration.

17. Respiratory Organs.—Catarrh, with accumulation of mucus in the larynx and in the trachea, rendering the speech and the voice indistinct.—Constant cough when lying down, which ceases on rising up.—Fits of coughing, as in the whooping-cough.—Cramp-like cough at night, esp. when lying down, sometimes with redness of the face, and vomiting of mucus.—The cough is < at night (after midnight), when at rest, during sleep, in the cold air, from eating and drinking.—Dry, shaking, sobbing cough, with pain, as of excoriation, in the abdominal muscles.—Dry, spasmodic cough at night (in old persons) from continuous tickling in the throat (as if the palate or uvula were too long).—Greenish expectoration with the cough.—Cough, with expectoration of blood, and convulsions.—Violent spasmodic cough; short consecutive coughs, caused by a tickling sensation in the throat, as if some mucus were lodged in it; during the day, expectoration of saltish-tasting mucus, or of bright-red blood, mixed with clots.—Hæmoptysis, blood bright-red with spasms.—Hæmoptysis of drunkards.

18. Chest.—Slow, rattling breathing.—Oppression, and embarrassed and rattling respiration.—Pressure on r. side of chest, with great anxiety and shortness of breath, on going up stairs.—Spasms in the chest, with shortness of breath, which forces the patient to bend forward.—Shootings in the sides of the chest.—(Inflammation of the lungs.)

19. Heart.—Pressure, tightness, and anxiety in precordial region.—Oppression of heart with transient stitches.—Tearing, sticking in heart.—Violent stitch in precordial region.—Soreness in spots to l. of nipple alternating with stitches.—Soreness, tightness of heart region.—Heart's action violent; tremulous; irregular.—Palpitation, unable to move body without greatest anxiety; apprehension of suffocation, or swooning; unquenchable thirst in morning; frequent copious discharge of limpid urine.—Pulse: full, hard, strong; rapid, intermitting; slow, small; scarcely perceptible.

20. Neck and Back.—Tettery spots on the nape of the neck.—Pains in the back, and esp. in the lumbar region, with swelling of the feet.—Lancinations in the loins, and shoulder-blades.

22. Upper Limbs.—Trembling of the arms and of the hands, esp. in evening, after movement.—Painful numbness and stiffness of hands.—Swelling of hands.—Fists clenched, with retraction of the thumbs (in convulsive fits).—Carphologia (picking of the bed cover or of the face).—Fingers look and feel too thick.—Hands slightly paralysed.

23. Lower Limbs.—Painful cramps in the (anterior part of the) thighs, and calves of the legs, which contract the legs.—Gangrenous spots and vesicles on the legs.—Stiffness and lassitude in the joint of the knee.—Coldness and swelling of the feet.—Contraction of the toes when walking and ascending.

24. Generalities.—Incisive tearing, and dull pulling in the limbs and joints.—Limbs, cold, trembling and numbed.—Convulsive movements and shaking of some of the limbs, or of the whole body, sometimes on making the slightest effort to swallow liquid.—Spasms and convulsions (with watery diarrhœa).—Jerking of the feet and of the hands.—Epileptic fits, sometimes with bluish colour and puffing of the face, involuntary emission of urine, foaming at the mouth, drawing back of the thumbs, sensation of hunger and of gnawing at the pit of the stomach, eyes prominent, cries, grinding of the teeth, &c.—Epileptic convulsions, alternately with attacks of cerebral congestion (apoplectic fit).—Convulsions resembling St. Vitus' dance.—Convulsions with cries, great anguish, oppression of the chest and loss of consciousness.—After the epileptic convulsions, profound sleep, with snoring.—Uncommon sinking of strength.—Fainting fits (repeated attacks).—Great weakness and debility.—Sensation of levitation; as if walking on and through air.—Paralysis.—Jerking of the tendons (subsultus).—The majority of, and the principal symptoms, manifest themselves after eating or drinking, as well as in the evening.

25. Skin.—Skin dry and rough.—Hot, dry, brittle skin.—Miliary eruption.—Eruption of dry pimples, like confluent small-pox.—Brownish (or gangrenous) spots on the body, from time to time (as in typhus).—Frequent, large furunculi.—Spots and

gangrenous vesicles on different parts.—Rash from the abuse of Belladonna.—Bleeding of ulcers.

26. Sleep.—Somnolency, like coma vigil.—Retarded sleep, or sleeplessness caused by excessive nervous excitement, or by great anguish, sometimes with convulsions and starts.—Nightly sleeplessness.—Child sobs and cries in sleep without waking.—Profound, comatose sleep, with convulsions and involuntary movements of the limbs, esp. the hands.—When sleeping, carphologia; or smiling countenance; or starts with fright.

27. Fever.—Shuddering from head to foot.—Burning heat of the body, and esp. of the head.—Fever, with fits of epilepsy, great weakness, flames before the eyes, and congestion in the head, quartan or quotidian type.—Pulse quick (full hard), with swelling of the veins (arteries).—Universal coldness over the whole body, with heat of face, ascending from the feet.—Nightly coldness, extending over the back from the small of the back.—Heat in the evening, with thirst (congestion of blood to the head), and putrid taste.—Debilitating perspiration during sleep.—Cold, sour-smelling perspiration.—Perspiration, principally on the legs.

Hypericum.

Hypericum perforatum, H. perfoliatum. St. John's Wort. N. O. Hypericaceæ. Tincture of whole fresh plant.

Clinical.—After-pains. Asthma. Bites. Brachial neuralgia. Breast, affections of. Brain, concussion of. *Bruises*. Bunions. Compound fractures. Corns. Coxalgia. Diarrhœa. Gunshot wounds. Hæmorrhoids. Headache. Hydrophobia. Hypersensitiveness. *Impotence*. Labour, effects of. Meningitis. Mind, affections of. Neuralgia. Operations, effects of. Panaritium. *Paralysis*. Rheumatism. Scars. Sciatica. Spastic paralysis. Spinal concussion. Spinal irritation. Stiff-neck. Tetanus. Ulceration. Whooping-cough. *Wounds*.

Characteristics.—The leaves of various species of *Hypericum* are sprinkled with pellucid dots and black glands which contain an essential oil. These, which are most conspicuous in *H. perforatum*, have evidently given the signature which has led to the chief use of the plant in medicine, namely, as a remedy for wounds or perforations of the integuments. The leaves, moreover, are lance-shaped. The leaves of *H. androsænum*, commonly called Tutsan (toute saine), were applied to fresh wounds from olden time. The word *Hypericum* means "sub-heather" (ὑπό and ἐρείκη), indicating its manifest relation to the heaths, which at once leads us to think of *Ledum*. The proving of *Hyp*. by Müller and others is very complete and brings out the relation of the drug to wounds and their consequences and also its applicability in maladies of other kinds. Crawling sensations in hands and feet;

they felt fuzzy; sticking in them as from needles. Tearing, rheumatic, shaking pains; paralytic weakness. One of the provers had on waking at 4 a.m. a feeling as though she were suspended and not lying in bed, at another time as though she were lying very heavy in bed. The former condition has led to cures in effects of accidents attended with the sensation "as if being lifted high into the air; and great anxiety lest she should fall from this height." The particular kinds of wounds for which *Hyp*. has been found of signal service are wounds of parts rich in nerves, brain, spine (spinal irritation from falls), coccyx, finger-ends; wounds from stepping on nails, or any punctured wounds. The characteristic of the *Hyp*. wounds is that they are very sensitive to touch (*Led*. punctures are not particularly sensitive). W. J. Guernsey (*H. R*., x. 475) relates the following case: A boy, nine, was bitten by a pet rat on the first finger of left hand. Nothing particular was observed at the time, but some time after, he became ill, and when Dr. Guernsey was called his state was alarming. The boy could talk with great difficulty; teeth firmly locked; conscious; neck so stiff the head could scarcely be moved. There was *more tenderness about the wound than the appearance would indicate*. Hence *Hyp*. was preferred to *Led*. It was given (8 p.m.) in the 500th, dissolved in water, at first every fifteen minutes; later every two hours. At 3 a.m. there was improvement, he fell asleep, and the next morning was practically convalescent. *Hyp*. is called for in nervous depression following wounds; effects of shock, fright and mesmerism. Ulceration and sloughing of wounds. Hard, dry, yellow crusts form on healing wound. Bunions and corns when the pain is excruciating. Not only is the pain sense exalted, there is exaltation of the senses of hearing and smell. Violent labour-pains and after-pains. Tympanitic distension of abdomen, cutting pains. Gilchrist says *Hyp*. 3x, given at intervals of twenty minutes for twelve hours or longer, seems to control perfectly the pain following laparotomy. But it must not be thought that *Hyp*. has no sphere outside wounds and their effects. Like *Arnica* it has many uses in the respiratory sphere. It has cured asthma < in foggy weather; the attacks were > by copious expectoration. Whooping-cough < 6 to 10 p.m. Tightness of chest; stinging < on moving. Summer diarrhœa with eruption. Palpitation and local congestions, with or without hæmorrhage and nervous depression, following wounds. Roehrig (*H. R*., xii. 40) considers *Hyperic*. externally and internally the nearest thing to a specific in bleeding piles. He gives it to pneumonia patients who have piles; it cures the pneumonia and prevents the arrest of the flux, always a dangerous symptom in these cases. Ussher (*H. W*., xxvii. 500) confirms this; "pain, bleeding and tenderness" are his indications. "It seems to suit the plethoric, with great soreness." He uses the 1x. Toothache > lying on affected side and keeping quiet. *Hyp*. is sensitive to cold: < in cold air; in damp; in fog. The hacking cough is < from heat as well as by cold air. All symptoms < by least exposure. < From touch.

Relations.—*Antidoted by:* Ars. (weakness or sickness on moving); Cham. (pains in face). *It antidotes:* Effects of mesmerism (Sulph.). *Compare:* Aco., Cham., Coff. (exalted sensitiveness); Arn., Calend., Led., Ruta, Con., Bellis, Staph., Al. cep. (wounds); Hydrob., Lach. (bites); Nux (tetanus); Gels., Lathyrus; spastic paralysis.

Causation.—Fright. Bites. Wounds. Shock.

SYMPTOMS.

1. Mind.—Makes mistakes in writing; omits letters; forgets what she wanted to say.—Talks wildly in night after 4 a.m. while asleep; apprehensive; gasped for breath.—Mental excitement as after drinking tea.—Weakness of memory.—Great nervous depression following wounds.—Irritable.—Removes consequences of fright and effects of shock.

2. Head.—Great heaviness in the head.—Confusion, vertigo, and heaviness.—Tearing stitches in the brain.—Buzzing sensation in vertex at night as if something living were in brain.—Pulsation, heat and burning in the vertex (afternoon).—Sensation in the forehead as if touched by an icy cold hand.—Sensation as if the head became elongated.—Headache, extending into zygoma or cheek.—Headache, with sore eyes, after a fall.—Hair moist, rest of body burning hot.

3. Eyes.—Sticking through (r,) eye.—Burning stinging in tarsi.—Stye on l. lower lid.

4. Ears.—Sticking through (r.) ear in evening.—Itching in r. meatus.—Sensitiveness of hearing during menses.

5. Nose.—Pain in bridge of nose on rising.—Sore within nose; itching; continually picking it.—Dryness of nose; with sneezing; of l. nostril with crusts in it.—Smell very acute.

6. Face.—Hot and bloated.—Tension in the cheek.—Tearing in cheek; in l. zygoma.—Eruption around mouth and on r. ear.—Yellowish green scabs with cracking and moisture.

8. Mouth.—Dryness of the lips and mouth.—Dry, burning heat in mouth.—Tongue: coated white; or dirty yellow.—Taste: insipid; of blood.—Thirst, with feeling of heat in mouth.

9. Throat.—Sensation as of a worm moving in throat.—Hot risings in œsophagus after a fright, or with anxious feelings.

11. Stomach.—Great thirst.—Desire for warm drinks.—Eructation on drinking water.—Desire for wine; pickles.—Appetite increased morning and evening.—Pressure at the stomach on eating but little.—Nausea and inclination to vomit.

12. Abdomen.—Sticking in the stomach; in r. hypochondrium.—Tympanitic distension of abdomen; relieved by a stool.—(Effects of laparotomy).

13. Stool and Anus.—Loose, bilious, yellow stools evening or morning.—Summer diarrhœa with eruption.—Diarrhœa driving out of bed in morning.—Very unusual severe urging.—Constipation; violent tenesmus, with discharge of a hard little ball; with nausea.—Rectum feels dry, morning.—Hæmorrhoids.—Burning, biting, and feeling of dryness in rectum.—(Piles, with much pain, bleeding, and great soreness.)

14. Urinary Organs.—Nightly urging to urinate, with vertigo.—Desire to urinate, with violent tearing in the genital organs.—Swelling and hardness of female urethra, with burning soreness and sensitiveness.

16. Female Sexual Organs.—Menses too late; headache; sickening pain in abdomen; sensitive to noises.—Tension in region of uterus, as from a tight bandage.—Leucorrhœa.—After-pains after instrumental delivery.—Scirrhus of breast from injury.

17. Respiratory Organs.—Hoarseness; Scraping and roughness in larynx, upper part of pharynx and nares in foggy weather.—Asthma < in foggy weather.—Frequent dry hacking cough; short, barking cough.—Whooping-cough, < 6 to 10 p.m.

18. Chest.—Anxiety in chest in forenoon, with short breath.—Stitches in the chest, below the breasts.—Stitches from within outward, through l. breast and sternum, < from motion.—Pressure and burning in the chest.—Tightness in the chest.—< In foggy weather.—(Pneumonia in persons who have piles.).—Stinging in l. chest, < when moving.

19. Heart.—The heart feels as though, it would fall down, in the evening.—Palpitation.—Pulse rapid and hard.—Local congestions and capillary erethism, with or without hæmorrhages and great nervous depression, following wounds.

20. Neck and Back.—After a fall, slightest motion of arms or neck extorts cries.—Cervical vertebræ very sensitive to the touch.—Consequence of spinal concussion.—Violent pains and inability to wall, or stoop, after a fall on the coccyx.—Aching pain and sensation of lameness in the small of the back.—Stitches in the small of the back.—Lies on back jerking head backward.

21. Limbs.—Cannot walk, from affection of the spine.—Feeling of weakness and trembling of all the limbs.—Sensation of lameness of the l. arm and r. foot.—Articular rheumatism (knees mostly), much effusion, muddy urine.—Rheumatism of small joints.—Numbness and crawling in the limbs, hands, and feet.—Hands and feet feel fuzzy.—Compound fractures.—Affections of joints.

22. Upper Limbs.—Stitches on the top of the shoulder at every inspiration.—Flying pains in r. shoulder.—Neuralgia and paralytic pain in l. upper arm.—Tension in both arms and in the hands.—Numbness in l. arm, > by rubbing.

23. Lower Limbs.—Sensation as if the l. foot was strained or dislocated.—The feet feel pithy, as if pricked with needles.—Fearful sharp pain in knees, could hardly touch the m.—Coxalgia after confinement.—Sciatica, rheumatism; from injury.—L. leg numb, cold while sitting.—Effects of running nail or pin into foot.—Feet much swollen.

24. Generalities.—Consequences of shock or fright.—Prevents lockjaw from wounds in soles, in fingers, and in palms of the hands.—Convulsions from blows or concussions.—After a fall, slightest motion of arms or neck extorts cries.—Flesh sore, feels bruised all over.—Injuries to parts rich in sentient nerves, esp. fingers, toes, and matrices of nails.—Mechanical injuries, wounds by nails or splinters in the feet, needles under the nails, squeezing, hammering; of the toes and fingers, esp. the tips of the fingers; when the nerves have been lacerated, wounded, torn, with excruciating pains.—Lacerations, when intolerable, excruciating pain shows nerves are severely involved.—Next to the nervous tissues, the joints are affected.—Sensation as of being lifted up high into air.

25. Skin.—Smarting eruption, like nettle-rash, on the hands.—Painful scars in tissues rich in nerves.

26. Sleep.—Constant drowsiness.—Spasmodic jerks in arms or legs on going to sleep; twitchings.—Dreams: with activity, travelling; vivid; distressing.—At 4 a.m. talks nonsense in sleep, distorted staring eyes, throbbing arteries.—Wakes 4 a.m. with sense of levitation.—On awaking: weary, > by noon; feels refreshed; bowels distended.

27. Fever.—Pulse hard, accelerated.—Shuddering over the whole body, with desire to urinate.—Heat, with delirium; wild, staring look; hot head throbbing of the carotids; bright-red, bloated face; moist hair on the head burning heat of the skin; great oppression and anguish.

Iberis.

Iberis amara. Lepidium iberis. Bitter Candytuft. N. O. Cruciferæ. Tincture of seeds.

Clinical.—Asthma. Bronchitis. Dropsy. *Heart, affections of*; conscious action of; influenza heart.

Characteristics.—Iberis is one of the many remedies introduced into homœopathy by Hale. The genus was named by Dioscorides from Iberia (Spain), its supposed original habitat. Old-school authorities had mentioned *Iberis* as useful in the treatment of hypertrophy of the heart. This led Hale to have the remedy proved. Sylvester (old school) had observed that *Iber*. controlled "the *violence* and *sharp action* of the heart and *softened* the pulse; hence its great service in hypertrophy." Hale's provers confirmed this observation, the pulse being *softened* even during palpitations. Hale considers that the primary depressing action is transient, the secondary, exciting action more persistent. The cardiac symptoms of the drug are very pronounced and well marked, consisting of pains dull or stitching, with palpitation and breathlessness on slightest exertion; pains down the left arm and numbness; intermittent pulse. The concomitant symptoms are well marked. Fulness and heat in head and neck; vertigo; nausea. The excessive nervousness and frightened condition so frequently found associated with heart affections was pronounced in the provings. Cold hands and feet. Choking sensation in the throat was also marked. The stools were white as those of *Digit*. A common symptom was "On turning on left side a sharp sticking pain is felt as if a needle were crosswise in the ventricles and pricked at each contraction." Sharp stinging pains from before backward. The symptoms are < at night, and in the morning on rising; on the slightest exertion, as laughing or coughing; on stooping; on walking; on lying down; lying on left side; on turning in bed. At the same time trembling weakness and nervousness cause desire to lie down. < By sitting still; in afternoon; in open air. Proctor (*H. W*., xxxv., 489) has related his own experience with this remedy. After an attack of influenza of moderate intensity in 1890, he suffered from cardiac weakness for over two years. Every waking moment was attended with cardiac distress. On the least agitation the weakness developed into irregular palpitation with great anxiety. < From tobacco, which had to be discarded; < from wine, except port. After all the usual remedies had been taken in vain, he took *Iber*. Ø, one drop in a powder on the tongue, two or three times a day. "After about ten days the heart fell almost suddenly into its perfect, regular, unconscious beat, and retired at once and finally from further observation." Proctor has repeatedly given Iber. since then in similar cases with the same success. "Conscious of heart's action" may possibly prove a keynote for its use.

Relations.—*Compare:* Lepidium, Spigel., Digit., Cact., Bell., Amygd. am., Cratæg., Phaseol. nan.

SYMPTOMS.

1. Mind.—Sad, down-hearted, oppressed, with desire to sigh.—Very irritable, with dulness of mind and lack of memory.—Nervous and irritable on rising in morning.—Feels as if frightened, an indefinable dread with trembling.—An excited, frightened feeling, with cold sweat on face.

2. Head.—Vertigo: with dull pain and chilliness; when rising, morning, had to lie down; when making any exertion, with nausea; when standing, < on stooping; in back part of head, as if occiput were turning around.—Entering the house after walking felt faint.—Heat and fulness in neck and head, with flushed face and cold feet and hands.—Pain in r. side of head.—Frontal headache: on rising in morning; and loss of appetite.—Dull pain in head, with vertigo and feverish chilliness.

3. Eyes.—Red eyes with flushed face.—Feeling in eyes as if being forced outward.—Flashes before eyes, with dull headache and palpitation of heart.

4. Ears.—Dulness of hearing and comprehension (11 a.m.).—Dull hearing and laboured breathing.—Roaring in ears, with heaviness of head, slight nausea and palpitation of heart.

6. Face.—Flushed hot face and red eyes, with palpitation.

9. Throat.—Throat as if filled with dust.—Throat feels as if both tonsils were enlarged.—Constant hawking up of thick, viscid, stringy mucus > after a meal.—Choking sensation: in throat, with fulness and heat; just above cricoid cartilage.—Constrictive sensation in throat, with stabbing pains in heart, dyspnœa and palpitation.—Tickling in throat, with expectoration of stringy mucus.

10. Appetite.—Loss of appetite, with feeling of indigestion.—Desire for stimulants.

11. Stomach.—After eating: sour belching; hawking of stringy mucus >.—Nausea, with cold, chilly feelings over body.

12. Abdomen.—Fulness and oppression in r. hypochondriac region.—Pain in region of liver with clay-coloured stool.—Fulness and distension of bowels.—Tenderness of bowels, with thin, whitish stool.

13. Stool.—Stool: clay-coloured; thin, whitish; large, white.

14. Urinary Organs.—Frequent but scanty urination.—Excessive evacuation of urine.

17. Respiratory Organs.—Tickling and dryness in larynx and throat, with hawking up of thin stringy mucus for many hours; > after eating.—Tightness and constrictive feeling in larynx.—Dyspnœa and palpitation on going upstairs.—Constant desire to draw breath without relief.—Respiration more frequent and laboured.

18. Chest.—Slight pain under sternum, at articulation of third rib.—Fulness and constriction under sternum, with lancinating pain through chest.—Continued feeling of weight and anxiety in chest.—Fulness in chest, with fulness and heat in head and neck, and flushed face.

19. Heart and Pulse.—Increased action of heart, full feeling in neck and head.—Palpitation: with flushed hot face and red eyes; with dull headache and flashes before eyes; with heaviness of head, roaring, slight nausea, on going upstairs.—Conscious of heart.—Palpitation, with vertigo and choking in throat after walking, and on entering house felt faint: tingling and numbness commencing in fingers of l. hand, gradually extending up arm, with irregular, tremulous, and not well-defined pulse; dull, heavy aching in l. arm.—Palpitation of heart on slight exertion (pulling down a window).—Palpitation plainly visible over whole chest, < by walking, > sitting still, but renewed by slightest exertion.—Increase of heart's action from 72 to 88, after fifteen minutes.—A wavy, tremulous sensation in radial artery, felt by finger, pulse intermitting every third beat, easily compressible.—Pulse has peculiar double beats, which seem to run into each other, full, soft, and easily compressed.—Pulse first weak and small, later full and strong; easily compressed; intermitting every third beat.—Much pain over base of heart with dull, heavy pain in l. arm, and tingling and numbness in tips of fingers.—Sensation of weight and pressure in region of heart, with occasional sharp, stinging pains, passing from before backwards; heart's action from 70 to 96.—Hypertrophy of heart.—Pulse rises from 60 to 94 after fifteen minutes, with slight pains in region of heart.—Pains darting through heart at night, in bed; < lying on l. side.—Dull, dragging pain in heart not > by any position nor by pressing with hand.—Sharp, sticking pain in heart, with constriction in throat, red eyes, flushed face.—Pain as if needle were crosswise in ventricles, and pricked at each contraction.—Constant dull pain in heart < lying down.—Distressing palpitation with increase of dull pain, caused by coughing, laughing, or slight exertion.

20. Neck and Back.—Sensation of fulness in neck and head.

21. Limbs.—Cold feet and hands.

22. Upper Limbs.—Tingling and numbness commencing in fingers of l. hand, gradually extending up l. arm, with irregular, tremulous pulse, not well defined.—Dull, heavy aching in l. arm.—Tingling and numbness in finger-tips, < lying on l. side.—Dull aching in l. arm, as if he had slept on it all night.—Rheumatic pain in r. shoulder.

23. Lower Limbs.—Trembling of lower limbs after exercise.

24. Generalities.—On going upstairs: dyspnœa and palpitation.—Feeling of inability to move even a finger.—Nervous and irritable on rising in morning.—Feeling of lameness and soreness through whole body, as from a cold.—Trembling sensation all over, had to lie down.—Desire for stimulants.

26. Sleep.—At night in bed darting through heart.—Sleep at night disturbed by all sorts of dreams.—Restless turning in bed, with ludicrous dreams.—Restless nights with horrid dreams.

27. Fever.—Heat and fulness in neck and head with flushed face and cold feet and hands.—Feverish chilliness.—Cold, chilly feeling with nausea.—Quickly passing febrile symptoms.

Ichthyolum.

Ammonium Ichthyol Sulphonate. C_{28} H_{36} S_3 O_6 $(NH_4)_2$. The most important of the salts of ichthyosulphonic acid, prepared from a bituminous mineral of Tyrol, which is rich in fossilised remains of fish. A clear, reddish-brown viscid liquid. Solution.

Clinical.—Arthritis. Gonorrhœa. Neuralgia. Phthisis. Pruritus vulvæ. Rheumatism. Skin, affections of.

Characteristics.—This is an unproved remedy which has been used in old-school therapeutics as an external application, and internally in skin affections, rheumatism, scrofula, nephritis, and gonorrhœa. It is a powerful antiseptic. As an external application to rheumatic joints it has achieved marked results. A solution of equal parts of *Ichthyol* and water is warmed and applied to the affected joint on calico and covered with heated cloths, outside of which is an impervious fabric to prevent evaporation. Pure *Ichthyol* or an ointment of *Lanoline* and *Ichthyol* maybe used instead. Gouty joints have also been benefited. *Ichthyol* appears to act by virtue of its power of allaying pain and inflammation, but there can be no doubt that a thorough proving would bring out a specific relationship to the maladies in which it has been used with success. Scarpa claims to have used it with excellent effect in a large number of cases of phthisis.

Relations.—Ichth. belongs to the Petroleum class of remedies. Compare also Calc. caust. (lime-water compresses to allay inflammation); Sulph. Plantago (anodyne application); Carbol. ac.

Ictodes Fœtida.

Pothos fœtidus. Symplocarpus fœtidus. Skunk-weed. Skunk Cabbage. N. O. Orontiaceæ (Calliaceæ, Orontoidæ, allied to Araceæ). Tincture of whole fresh plant-including root.

Clinical.—Asthma. Catarrh. Cough. Dropsy. Herpes. Hysteria. Rheumatism.

Characteristics.—The *Treasury of Botany* thus epitomises the traditional uses of this plant in medicine: "The roots in cases of asthma; the leaves as an application to ulcers. The seeds are also considered to be anti-spasmodic, and useful in coughs." Hering and others proved it, and largely confirmed its popular reputation, as also its clinical relationship to the *Arum* family. Burning sensations from fauces down throat; enlarged glands of throat; swelling of nose and sneezing; spasmodic cough and skin affections are common to *Ictod*. and the *Arums*. Motion <. All complaints > in open air. Asthma is < or caused by dust.

Relations.—*Compare:* Arum t., Asaf., Meph.

SYMPTOMS.

1. Mind.—Cross; impetuous; inclined to contradict.—Absence of mind and inattention; enters sick-room without knocking, does not listen to patient.

2. Head.—Vertigo and dimness of sight.—Headache in single places, lasting a short while, then changing place; dulness; pressing in temples, now more in one, then more in the other, with violent pulsation of arteries.—Drawing in forehead in two lines from protuberances to glabella, where it draws outward as from a magnet.

5. Nose.—The nose is swollen as far as the nasal bones extend, red like a saddle, sore to touch, < l. side.—Cartilage cold and bloodless, with red spots on cheeks and small pimples on l. side of face.—Violent sneezing, with pains in palate, fauces, and œsophagus to stomach, hurting for a while after in cardiac end of stomach.

6. Face.—Swollen submaxillary glands.

7. Teeth and Gums.—Scurvy.

8. Mouth.—Numbness of tongue, cannot touch teeth with it.—Papillæ elevated.—Tongue red and sore on tip and edges.

9. Throat.—Burning from fauces downwards through chest.—Œsophagus painful on sneezing.

10. Appetite.—Inclined to smoke, but it does not taste good.

11. Stomach.—Nausea and vomiting.—With every firm step, pain in pit of stomach as from something breaking loose.

12. Abdomen.—Expansion and tension in abdomen.—Pain in abdomen here and there in single spots.—When walking, sensation as if the entrails were hanging loose and flabby without any pain.

14. Urinary Organs.—Great urging; urine darker.

15. Male Sexual Organs.—Titillation, voluptuous but painful, around corona glandis.

16. Female Sexual Organs.—Amenorrhœa.

17. Respiratory Organs.—Spasmodic asthma.—Sudden anxiety, with dyspnœa and sweat, followed by stool and relief of that and other complaints.—Inclined to take a deep breath: with hollowness of chest; with constriction in fauces and chest.—Asthma, < or caused by dust.—Heaves in horses from dusty hay.—Spasmodic cough.—Senile catarrh.

18. Chest.—Pain in chest and in axillæ; seems to have a connection with burning in œsophagus.—Pressing pain in sternum.

23. Lower Limbs.—Aching along r. crista tibiæ.

24. Generalities.—Hysterics.—Epilepsy.—Erratic and spasmodic pains.

25. Skin.—Herpes and cutaneous affections.

Ignatia.

Ignatia amara. (Strychnos ignatia? Strychnos multiflora?-The actual tree from which the so-called "beans" are obtained is not known.) Faba indica. St. Ignatius' Bean. (Philippine Islands.) N. O. Loganiaceć. Tincture and trituration of the seeds.

Clinical.—*Abdomen, distended. Anger, effects of. Anus, affections of. Anxiety. Appetite, disordered. Back*, weakness of. Catalepsy. *Change of Life. Chorea. Clavus*. Convulsions. *Croup. Debility*. Dentition. *Depression of Spirits*. Diphtheria. Dysmenorrhśa. *Epilepsy. Fainting. Fear, effects of*. Flatulence; obstructed. Glands, enlargement of. *Hćmorrhoids. Headache. Heart, affections of. Hiccough. Hysteria. Hysterical-joint*. Intermittent fever. *Locomotor ataxy. Melancholia. Numbness. Śsophagus. Paralysis*. Phlyctenular ophthalmia. Proctalgia. Rectum, prolapse of.

Rheumatic fever. Sciatica. *Sensitiveness. Sinking. Sleep, disordered. Spinal irritation. Tenesmus. Throat, sore*. Toothache. *Tremors. Urine, abnormal. Vagina, spasm of. Voice, lost. Yawning*.

Characteristics.—In order to obtain a proper understanding of the power and place of *Ignatia* it is necessary to get rid of two prevalent erroneous ideas. The first of these is that *Ign*. is a remedy for hysteria and nothing else; and the second is that it is the only remedy ever required in cases of hysteria. One minor inconvenience attending these notions is, that patients have become very shy of the drug, and resent having it prescribed for them, thinking that their doctor deems them hysterical if he does prescribe it. The recent outbreak of plague in the East has recalled the fact that *Ign*. has earned a reputation as curative even in that disease. Honigberger relates that it was a common plan when plague was raging in Constantinople for people to wear a bean attached to a string as a prophylactic; he administered "minute doses" of it to patients affected with plague with the best success. Later on he himself caught the disease in India, and cured himself with the same remedy (*H. W*., xxxiii. 51). In intermittent fever it is the only remedy that will cure certain cases. In the early part of my homśopathic career I astonished myself once by curing rapidly with *Ign*. (prescribed at first as an intercurrent remedy) a severe case of rheumatic fever, which had been making no progress under *Bryonia*, &c. The mental symptoms called for *Ign*., and along with these the inflammation of the joints, as well as the fever, disappeared under its action. The seeds of *Ign*. contain a larger proportion of *Strychnia* than those of *Nux vomica*, and the great differences in the characteristic features of the two medicines prove the wisdom of considering medicines apart from their so-called "active" principles. There are many activities in plants besides the alkaloids they may contain, and these are often the determining factors of the drug's specific action. It is in the mental sphere that the majority of the keynote symptoms of Ign. are developed. "Although its positive effects," says Hahnemann (*M. M. P*.), "have a great resemblance to those of *Nux v*. (which indeed might be inferred from the botanical relationship of these two plants) yet there is a great difference in their therapeutic employment. The emotional disposition of patients for whom *Ign*. is serviceable differs widely from that of those for whom *Nux v*. is of use. *Ign*. is not suitable for persons or patients in whom anger, eagerness, or violence is predominant; but for those who are subject to rapid alternations of gaiety and disposition to weep, or other characteristic emotional states, provided always that the other corporeal morbid symptoms resemble those that this drug can produce." Guernsey thus depicts the *Ign*. state of mind: "Any one suffering from suppressed or deep grief, with long-drawn sighs, much sobbing, &c.; also much unhappiness, cannot sleep, entirely absorbed in grief; for recent grief at the loss of a friend; affections of the mind in general, particularly if actuated by grief; sadness; hopelessness; hysterical variableness; fantastic illusions." To this list fixed ideas may be added, and desire to be alone. *Ign*. covers many of the effects of grief, especially if recent. I once gave instant relief with *Ign*. 30 in the case of a lady who had just heard of her brother's death (not unexpected), and who complained of an intense pain in the

head just over the root of the nose. The consequences of worry, or a worrying state of mind, no less than grief, call for *Ign*.—an introverted state of mind. The special indication of *Ign*. in cases of hysteria is the rapid alternation of moods. Uncontrollable laughter alternating with outbursts of tears. Laughs when she ought to be serious. Sensitive, impressionable. This condition with the characteristic globus hystericus (a lump rises from the stomach into throat as if she would choke; she swallows it down but it constantly returns; < by drinking water) unmistakably indicate *Ign*. Nervous twitchings and even convulsions also occur. Distortion of the facial muscles whenever the patient attempts to speak. Pains rapidly alternate in character and are excessive. Exaggerated and outlandish symptoms. Rapid alternation of effects is one of the leading features of the drug; also paradoxicalness. *Ign*. has cured many cases of diphtheric and other sore throats, when the pain has been > by swallowing. In the fever of *Ign*., the thirst occurs during the chill and in no other stage. This is a very unlikely condition, and no other remedy has it. Empty retching is > by eating. Suddenness is another note of the *Ign*. effects. Sudden loss of function in any organ. There are many bodily conditions not associated with mental disturbance that require *Ign*.; for it must always be borne in mind that the *absence* of any particular characteristic of a drug is no *contraindication* to its use provided other indications are sufficiently pronounced. *Ign*. will cure many painful conditions of the anus and rectum, including piles and prolapse when characterised by "sharp stitching pain shooting up the rectum"; or "constricting pain at anus < after stool, > whilst sitting." Pressure as of a sharp instrument from within outward is a characteristic. "Headache as if a nail were driven out through the side of the head, > by lying on it." Pains 2 change their locality, come gradually and abate suddenly, or come and go suddenly. Headaches terminate with a profuse flow of urine. In dentition it is frequently called for. It has cured hydrocephalus from sudden metastasis from bowels to brain during dentition, with sudden pallor, delirium, rolling of head, difficult swallowing; convulsive movements of eyes and lids. The eye symptoms are also noteworthy. It has cured many cases of inflammatory affections, especially with intense photophobia and nervous excitement; also asthenopia with spasms of lids and neuralgic pains. *Ign*. is one of the remedies which have "goneness." or sinking at the stomach, in a very pronounced degree. It often occurs in the night, keeping the patient awake. With this there is a disposition to sigh. Sometimes a feeling as if the stomach were relaxed. There is regurgitation of food. Hiccough < by eating, or smoking, or emotional disturbances (especially in children); empty retching > by eating; vomiting at night of food taken in evening. Hysterical vomiting. Sour saliva and sour taste in mouth. Toothache, < after a meal, not so bad whilst eating—another paradoxical condition. The facial expression of *Ign*. is one of deadly pallor, or it may be flushed at times. There are twitchings of individual muscles of eyelids or mouth, and fluttering in chest, and in smaller muscles of body; heart flutters and rises in chest, causing choking and oppression; it seems to rise and fall as she attempts to sleep. Convulsions, spasms from fright. The child stiffens out and bends backward. Half-unconscious state,

thumbs clenched, face blue. Cramps and spasms are prevalent as with *Nux*. The dysmenorrhśa in which *Ign*. is indicated has labour-like bearing-down in hypogastrium, > by pressure; by lying down; by change of position. The flow is black, putrid; if profuse, clotted. Spasms and convulsions, *ending in long-drawn sighs*, are met by *Ign*. Nash relates a case of puerperal convulsions in which this feature led to a cure. There are a number of characteristic respiratory symptoms: Hysterical aphonia. Laryngismus stridulus; patient sits up in bed, hoarse, hacking cough. The characteristic cough of *Ign*. is an irritable and irritating cough: the longer the cough lasts the more the irritation to cough increases. Kent describes it as: "Hack, hack-ety-hack, ending in sobbing." Cough every time he stands still during a walk. Hollow, spasmodic cough as from sulphur fumes. Cough as from inspired feathery dust. Sensations of formication and numbness are very general. Pains are apt to be in small circumscribed spots. The fever characters are: Thirst during cold spell only. Red face during chill. Chill > by external heat (wraps, stove). External chilliness and internal heat. As soon as heat commences must be uncovered (opp. *Nux*). Sensation as if sweat would break out but does not. Sweats: when eating; cold at times, generally warm; sometimes sour. *Ign*. is one of the chilly medicines like *Nux, Caps., Ars*. Cold < and warmth > (except in the last stage of fever). Rest > the pains; and so does change of position. Lying down >. Lying on side < headache; lying on painful side > headache. Sitting > anal and many other symptoms. < By stooping, walking, standing. < From slight touch; > from hard pressure. Soft pressure > headache. Slightest touch < stomach pains; cramps in uterus; tenderness of scalp and region of pylorus. There is great aversion to tobacco, which < many symptoms. Aversion to warm food, meat, alcohol. Desire for sour things; for bread, especially rye bread. < From emotion; from sweets; coffee; strong smells; from ascarides; when yawning. > From changing position; while eating; from eructation; when taking an inspiration; from swallowing. *Ign*. acts rapidly, and the duration of its action, according to Hahnemann, is short. "It is best administered in the morning if there is no hurry. When given shortly before bedtime it is apt to cause too much restlessness at night." It is adapted to the sensitive, excitable, nervous temperament; women of a sensitive, easily excited nature; dark hair and skin, but mild disposition; quick to perceive, rapid to execute. *Ign*. has been called the "feminine" of the "masculine" *Nux*. B. Simmons defines the place of *Ign*. in sciatica thus: "Lancinating, cutting pains, beating, bursting pains, < in winter, > in summer, chilliness with thirst, flushes of heat, chiefly face, without thirst." The limb is swollen and thigh knotty, and she cannot get up or lie down without pain; generally left side.

Relations.—*Antidoted by:* Puls. (chief antidote); Arn., Camph., Cham., Coccul., Coff. *It antidotes:* Brandy, coffee, chamomile tea, tobacco, Selen., Zinc. *Compatible:* Ars., Bell., Calc., Chi., Lyc., Nux, Puls., Rhus t., Sep., Sulph., Zinc. *Incompatible:* Coffea, Tabac., Nux (sometimes). *Compare:* Croc. (irresistible fits of laughter; rapidly alternating mental states); Lyc. (sinking sensation at night, preventing sleep canine hunger at night; also Chi.); Sep. (sinking, gone sensation

with Ign. it is attended with sighing); Phos. ac., Gels., Coloc. (grief Phos. ac., especially for chronic condition); Asaf., Asar. (nervous persons); Ars., Nux (fevers; > from external warmth). In difficult swallowing of liquids, Bell., Caust., Cin., Hyo., Lach., Lyc., Pho. Globus hystericus, Lach., Lyc., Plumb. Piles (> sitting, Ign.—< sitting, Lyc., Thuj., Phos. ac.). Piles during menses, Lach., Collins., Puls., Sul. Worry and its effects, Nux, Sul. (Sul. worried by trifles). Laughter when ought to be serious, Anac., Pho. Sadness, Puls. (Ign. hides her grief, Puls. shows it). Prolapsus ani, Pod. Jealousy, Apis, Hyo. Disappointed love, Phos. ac. > From hard pressure hollow cough as from sulphur fumes, Chi. Laryngismus, Gels. Headache ending in copious flow of clear limpid urine, Gels., Aco., Sil., Ver. Worms, Cin. In functional paralysis from fatigue, emotions, or worms, Stan., Coccul., Pho. Hysteria, Cupr., Plat., Hyo., Asaf., Mosch. (faints easily), Valer., Nux mosch. Spasms in delicate women, Bell. (but Bell. has bright red face, shining eyes, hot head, fever: Ign. has no fever with spasms), Hyo. (Hyo. has unconsciousness, Ign. not). *Sudden* effects of emotions, Opium (very similar, but Op. has dark red, bloated face), Glon. (in the convulsions of Glon. the fingers spread out widely, also Secal.), Ver., Cupr., Cham. In uterine spasms, Coccul., Cham., Mag. mur., Act. r. Hiccough (Ign. < by eating, smoking, emotions), Hyo. (after operations on abdomen), Stram. and Ver. (after hot drinks), Ars. and Puls. (after cold drinks), Teucr. (children, after nursing). Nervous cough, the more he coughs the more annoying the irritation, Apis. Sadness, indifference, profound melancholy, Tarent. (Ign. introverted state of mind; Trnt. cunning attempts to feign paroxysms and wild dancing, no paroxysms if no observers). Chorea; eye symptoms, Agar. Extreme sensitiveness to pain; flushing of one or other cheek, Cham. Ear symptoms, Phos. (Ign. hard of hearing except to human voice; Pho. exact opposite, over-sensitiveness to ordinary sounds, deaf to voice). Nervous women, Mg. c., Mg. m. Tears, fevers, Nat. m. (Nat. m. is the *chronic* of Ign.). Teste places Ign. in his Ipec. group: Nausea and vomiting; reversed peristalsis; congestive headaches and engorgements resulting from vomiting; tenesmus; intermittent fevers are the leading characteristics of the group.

Causation.—Grief. Fright. Worry. Disappointed love. Jealousy. Old spinal injuries.

SYMPTOMS.

1. Mind.—Taciturn, with continuous sad thoughts; still, serious melancholy, with moaning.—Sadness and concentrated sorrow, with sighing.—Irresolution; anxious to do now this, now that.—Impatience.—Strong disposition to be frightened.—Morose and discontented humour, and involuntary reflections on painful and disagreeable things.—Intolerance of noise.—Effrontery.—Tenderness of disposition and of conscience.—Inconstancy.—Alternation of foolish gaiety and tearful sadness.—Laconic speech.—Great weakness of memory.—Love of solitude.—Anguish, esp. in the morning on waking, or at night, sometimes with palpitation of the heart.—Lachrymose and apathetic humour, with dread of exertion.—Inclination to grief, without saying anything about it.—Changeable

disposition; jesting and laughing, changing to sadness, with shedding of tears (hysteria).—Despair of being cured.—The least contradiction excites rage and passion, with redness of face.—Fearfulness, timidity.—Anger, followed by quiet grief and sorrow.—Fear of robbers at night.—Cries, and complete discouragement, at the least provocation.

2. Head.—Vertigo; with sparks before the eyes.—Great heaviness of the head, as if it were full of blood.—Pressive headache, esp. above the root of the nose, and often accompanied by inclination to vomit, < or > by stooping.—Stinging pain, from within to without in the forehead.—Cramp-like pressure on the forehead and occiput, with obscuration of sight, redness of the face, and weeping.—Painful sensation of expansion in the head, as if the cranium were going to burst, esp. when conversing, reading, or listening to another.—Pain, as from a bruise in the head, esp. in the morning, on waking.—The headaches are < by coffee, brandy, tobacco-smoke, noise, strong smell, from reading and writing; from the sunlight; from moving the eyes; > when changing the position and when lying on the painful side.—Headaches with zigzags before the sight.—Skin across forehead feels drawn, with a lost and drowsy feeling, and thousands of stars float before sight.—Headache, as if a nail were driven into the brain; or out through the side of the head; > when lying on painful side.—Pressive headache in the forehead and vertex.—Piercing and shooting tearings, deep in the brain and forehead, > by lying down.—Pressive, pulsative headache.—Trembling of the head.—Throwing of the head backwards (during spasms); > by heat.—Falling off of the hair.

3. Eyes.—Pressure on the eyes, sometimes, as if sand had been introduced into them.—Inflammation of the eyes.—Redness of the eyes.—Acrid tears in the eyes during the day; agglutination of the eyelids during the night.—Lachrymation, esp. in the brightness of the sun.—Swelling in the upper lid, with enlargement of the (bluish) veins; the eyelid is turned upward.—Inflammation of the upper part of the eyeball as far as it is covered by the upper lid.—Convulsive movements of the eyes, and of the eyelids.—Fixed look, with dilated pupils.—Photophobia.—Sight confused, as if directed through a mist.—Flickering zigzags (and stars) before the eyes.

4. Ears.—Swelling of the parotids, with shooting pain.—Redness and burning heat in one of the ears.—Hardness of hearing; except for the human voice.—Itching in the ears.—Noise before the ear, as from a strong wind.—Worry takes away hearing and intensifies the noises.

5. Nose.—Itching in the nose.—Nostrils excoriated and ulcerated, with swelling of the nose.—Epistaxis.—Stoppage of one nostril; dry coryza, with dull headache, and excessive nervous excitement.—Dryness of the nose.

6. Face.—Face pale, red, or blue, or earth-coloured and wan.—Alternate redness and paleness of the face.—Clay-coloured, sunken face, with blue margins around

the eyes.—Perspiration on the face alone.—Redness and burning heat in one of the cheeks (and in one ear).—Convulsive startings and distortion of the muscles of the face.—Eruption on the face.—Lips dry, cracked, and bleeding.—Pain, as of excoriation, in the internal surface of the upper lip.—Scabs on the commissurć of the lips, and on the lips.—Pains in the submaxillary glands.—Convulsive jerking of the corners of the mouth.—Ulceration of one of the corners of the mouth.—Spasmodic clenching of the jaws (lock-jaw).

7. Teeth.—Odontalgia, as if the teeth (the molars) were broken.—Looseness of the teeth.—Toothache towards the end of a meal, < after its conclusion.—Difficult dentition, with convulsions.

8. Mouth.—Inflammation and redness of the mouth, and of the palate.—Constant secretion of mucus, or accumulation of acid saliva in the mouth.—Aptness to bite the tongue, on one side posteriorly, when chewing or speaking.—Moist tongue, loaded with a white coating.—Stitches in palate, extending to the ear.—Foam at the mouth.—Voice weak and tremulous.

9. Throat.—Sore throat, as if there were a plug in it, when not swallowing.—Palate red and inflamed, with a sensation as if what is swallowed passed over a burning and excoriated tumour.—Shootings in the throat, extending sometimes to the ear, chiefly when not swallowing.—When swallowing sensation as if one swallowed over a lump, causing soreness and a cracking noise.—Inflammation, swelling, and induration of the tonsils, with small ulcers.—Impeded deglutition (of drinks).—Constriction of the gullet, with sobbing risings.—Pain in the submaxillary glands when moving the neck.

10. Appetite.—Repugnance to food and drink, esp. to milk, meat, cooked victuals, and tobacco-smoke.—Want of appetite, and speedy satiety.—Insipid taste, like chalk, in the mouth.—Weakness and difficulty of digestion.—Sour taste in the mouth.—Bitter and putrid taste of food, esp. of beer.—Repugnance to, or strong desire for, acid things.—Dislike to wine and brandy.—Painful inflation of the abdomen after a meal.—Feeling of hunger in the evening, which prevents one going to sleep.—Desire for different things, which are disregarded when obtained.—Food has no taste.—Milk taken in the morning leaves an after-taste for a long time.—After smoking, hiccough, nausea, sweat, and colic.

11. Stomach.—Regurgitation of food, or of bitter serous matter.—Hiccough from smoking.—Hiccough, always after eating or drinking.—Acid risings.—Nausea, with agitation and anguish.—Vomiting of food, even at night.—Vomiting of bile and mucus.—Periodical attacks of cramp in the stomach, which disturb sleep at night, and are < by pressure on the part affected.—Dull aching or shootings in the epigastrium.—Coldness, or sensation of burning in the stomach, esp. after taking brandy.—Sensation of emptiness, and of weakness, in the epigastrium.—Sensation of weakness (sinking) in the pit of the stomach.—Heaviness and pressure in the pit

of the stomach.—Fulness and swelling in the epigastrium.—Painful sensitiveness of the pit of the stomach to the touch.

12. Abdomen.—Sensation of fulness and inflation of the hypochondria, with difficulty of respiration.—Pain in the l. hypochondrium, < by pressure, and by walking.—Shooting sensation of burning and pressure, or swelling and hardness in the region of the spleen.—Expansive pain in the abdomen, as if the intestines were going to burst.—Inflation of the abdomen.—The flatulence presses on the bladder.—Cutting pains in the umbilical region.—Spasmodic pains, cutting, stinging, like labour pains.—Violent aching in the abdomen.—Rolling sensation around the navel.—Drawing and pinching in the region of the navel.—Sensation of protrusion in the umbilical region.—The pains in the abdomen are < after taking coffee, brandy, or things sweetened with sugar.—Shootings and pinchings in the abdomen, esp. in the sides.—Periodical cramp-like pains in the abdomen.—Cramp-like pressure in the inguinal region.—Beating in the abdomen.—Borborygmi in the intestines.—Flatulent colic, esp. at night.—Sensation of weakness and trembling in the abdomen, with sighing respiration.

13. Stool and Anus.—Constipation from taking cold; from riding in a carriage.—Hard evacuations, with frequent ineffectual efforts.—Unsuccessful urging to stool, felt mostly in the upper intestines.—Fćces yellow, whitish, of a very large size, soft but difficult to eject.—Diarrhśa of sanguineous mucus, with rumbling in the abdomen.—Slimy evacuations, accompanied by colic.—Discharge of blood from the anus.—Prolapsus of the rectum while at stool.—Itching and tingling in the anus.—Ascarides in the rectum.—Contraction of the anus.—Contractive pain, as of excoriation, in the anus, after evacuation.—Prolapsus ani, with smarting pain, from slight pressure to stool.—Shootings from the anus high up into the rectum.—Smarting in the rectum during the loose evacuations.

14. Urinary Organs.—Frequent and copious emission of watery urine.—Urine lemon colour.—Involuntary emission of urine.—Urgent and irresistible want to make water.—Continual want to urinate after taking coffee.—Sensation of burning and smarting in the urethra during micturition.—Itching in the fore part of the urethra.—Urging to urinate with inability.

15. Male Sexual Organs.—Much itching in the genital parts, and in the penis, in the evening after lying down, removed by scratching.—Pain, as of excoriation and ulceration, on the margins of the prepuce.—Strangling sensation, and aching in the testes, esp. in the evening, after lying down.—Sweat on the scrotum.—Lasciviousness, with weakness of genital power (without erections).—Contraction of the penis; it becomes quite small.—Absence of sexual desire.—Erections, with painful uneasiness, and aching at the pubis.—Erections during every evacuation.

16. Female Sexual Organs.—Catamenia premature and violent, every ten or fifteen days.—Blood of the catamenia black, of putrid odour, mixed with clots.—Metrorrhagia.—During the catamenia, heaviness, heat, and pain in the head, photophobia, colic, and contractive pains, anxiety, palpitation of the heart, and great fatigue, even to fainting.—Cramp-like and compressive pains in the region of the uterus, with fits of suffocation; pressure, and lying on the back, mitigate the pain.—Cramp in the uterus, during the catamenia.—Uterine spasms, with lancinations, or like labour pains.—Corrosive and purulent leucorrhśa, preceded by contractive pressure in the uterus.

17. Respiratory Organs.—Sensation of soreness in the larynx.—Constrictive sensation in the trachea and larynx.—Voice feeble, inability to speak loud.—Catarrh, with coryza and headache.—Cough, excited by a sensation of constriction at the fossa of the neck, as from the vapour of sulphur.—Hollow spasmodic cough, caused in the evening from a sensation of vapour or dust in the pit of the throat; in the morning, from a tickling above the pit of the stomach, with expectoration in the evening difficult, tasting and smelling like old catarrh. (Whooping-cough).—Obstinate nocturnal cough.—Dry cough, sometimes with fluent coryza.—Cough, continuing equally day and night.—The longer he coughs the more the irritation to cough increases.—Dry, hoarse cough.—Spasmodic shaking cough.—Short cough, as from a feather in the throat, becoming stronger from repetition (the more he coughs, the more he wants to).—Hoarse dry cough, excited by a tickling above the stomach.

18. Chest.—Desire to draw a long breath.—Slow breathing.—Difficulty of respiration, and oppression of the chest, esp. at night (after midnight).—Oppressed breathing, alternating with convulsions.—Difficult respiration, as if hindered by a weight upon the chest.—Shortness of breath when walking, and cough as soon as one stands still.—Sighing respiration.—Feeling of suffocation on running.—Aching of the chest.—Constriction of the chest.—Shootings in the chest and in the sides, excited by flatulency (flatulent colic).

19. Heart.—Palpitation of the heart at night, with shootings in the heart, or else in the morning on waking, as well as when meditating, and during repose.—Throbbing in the chest.—Sticking in precordial region on expiration.—Cardiac hyperćsthesia.—Anxious feeling in precordia; sinking sensation and emptiness at stomach; constriction, with anxiety and disposition to cry.

20. Neck and Back.—Stiffness of the nape of the neck.—Stitches in the small of the back; in the nape of the neck.—Aching pain in the glands of the neck.—Enlarged glands (painless), like nodosities, in the neck.—Pain in the os sacrum in the morning, when lying on the back.—Violent sacral pains, like shootings or pullings, or like squeezing by a claw.—The back is bent forward.—Convulsive bending

backwards of the spine.—Lancinations as by knives, from the loins to the thighs.—Weak back, with sciatica.

22. Upper Limbs.—Lancinating, cutting pain in the shoulder-joint, when bending the arm forward.—Insupportable pains in the bones and joints of the arms, as if the flesh were being loosened, or with a paralytic sensation and pain of dislocation (on moving the arm).—Convulsive startings in the arms (in the deltoid muscle) and in the fingers.—Tearing in the arms, excited by cold air.—Tension in the wrist.—Hot sweat of the hands.—Sensation of torpor and digging in the arms, at night in bed (with the sensation as if something living were running in the arm).—Warm perspiration in the palm of the hand and fingers.

23. Lower Limbs.—Incisive, tearing pains in the posterior surface of the thighs, on fatiguing the muscles.—Sciatica, with weakness of back and lower limbs.—Limbs swollen, thigh knotty, cannot get up or lie down without pain (generally l.).—Heaviness of the legs and of the feet, with tension in the legs, and calves of the legs, on walking.—Heat of the knee, with coldness and itching of the nose.—Convulsive startings of the legs.—Stiffness of the knees and of the feet.—When walking, the knees are involuntarily drawn up.—Cracking in the knee.—Painful sensibility of the soles of the feet, when walking.—Shootings and pain, as from ulceration in the soles of the feet.—Sensation of burning in the heels at night, on placing them near one another; when they come in contact they are cold to the touch.—Coldness of the feet and legs, extending above the knee.—Sensation of burning in corns.

24. Generalities.—Simple and violent pain, in various parts, when they are touched.—Incisive or acute, and sometimes hard pressive pain (as from a hard pointed body pressing from within to without), in the limbs and other parts.—Trembling of the limbs.—Lancinations, as by knives.—Sensation of pressing asunder, or constriction in the internal organs.—Arthritic tearing in the limbs.—Pain, as of dislocation, or of a sprain in the joints.—Heaviness, and crawling numbness, in the limbs.—Convulsions alternating with oppressed breathing.—Attacks of cramps and of convulsions, sometimes with anxiety, fits of suffocation, throwing back of the head, bluish or red face, spasms in the throat, loss of consciousness, &c.—Epileptic convulsions, with foam at the mouth, frequent yawning, convulsed eyes, retraction of the thumbs, face red, or alternately pale and red, &c.—Convulsive twitchings, esp. after fright or grief.—Involuntary movements of the limbs, as in St. Vitus' dance.—After the convulsions, profound sighs, or drowsy sleep.—Great sensitiveness to the open air.—Convulsions, with cries and laughter.—Tetanus.—Hysterical debility, and fainting-fits.—Hysterical spasms.—The symptoms chiefly manifest themselves just after a meal, also in the evening, after lying down, or in the morning, immediately after rising.—Coffee, tobacco, brandy, and noise aggravate the pains.—The pains are removed either by lying on the back, or by lying on the part affected, or on the healthy side, and always by change of position.—Nocturnal pains which disturb sleep.

25. Skin.—Itching (over the whole body), which is easily removed by scratching.—Chilblains.—Excoriation of the skin; (esp. round vagina and mouth.—Cooper).—Itching on becoming warm in the open air.—Great sensitiveness of the skin to a draught of air.—Nettle-rash over the whole body, with violent itching (during the fever).

26. Sleep.—Profound and comatose sleep, with stertorous respiration.—Violent spasmodic yawnings (with pain in the lower jaw, as if dislocated, with running of the eyes), esp. in the morning, or after a siesta.—Very light sleep; hears everything that happens around him.—Sleep, disturbed by nightmare, or by starts and frequent dreams.—Starting of the limbs on going to sleep.—Dreams, with reflection and reasoning, or with fixed ideas.—Dreams with fixed ideas, continuing after waking.—Restless sleep, and great restlessness at night.—Starts with fright on going to sleep.—Whimpering during sleep.

27. Fever.—Pulse hard, full and frequent, or very variable.—Febrile shivering, esp. in the back and arms, with thirst for cold water, and sometimes with nausea and vomiting.—Chill, frequently only of the back part of the body.—Mitigation of the cold by external heat.—External heat with internal coldness.—Universal heat, esp. in the head, with redness, principally (of one) of the cheeks, and adipsia, sometimes with internal shuddering, coldness of the feet, shootings in the limbs, and headache.—Chill and coldness, causing the pains to increase.—Sudden flushes of heat over the whole body.—Troublesome sensation of heat, sometimes with sweat.—Absence of thirst during the heat, and perspiration, or during the apyrexia.—Only external heat, without thirst, with aversion to external heat.—Fever, with headache, and pain in the pit of the stomach, great fatigue, paleness of face, or paleness and redness alternately, lips dry and cracked, nettle-rash, tongue white, profound sleep with snoring, &c.—Intermittent fever; chill with thirst, followed by heat (without thirst), followed by chill with thirst, or afternoon fever; shiverings with colic (and thirst), afterwards weakness and sleep, with burning heat of the body.—During the fever violent itching; nettle-rash over the whole body.—Burning heat of the face, only on one side.—Very little perspiration, or only in the face.—Sweat, with shootings and buzzing in the ears.—Sweat during a meal.

Ilex Aquifolium.

Holly. N. O. Aquifoliaceæ. Tincture of fresh leaves, berries, and young shoots.

Clinical.—Diarrhœa. Eyes, affections of. Intermittent fever. Jaundice. Psilosis. Spleen, pain in. Staphyloma.

Characteristics.—The best-known members of the *Ilex* genus are the common Holly and the *Ilex Paraguayensis*, or Paraguay tea, from which the drink called Maté is made. The leaves of *Ilex aq*. are reputed to be equal to *Cinchona* in the treatment of intermittent fever. Haller commended the juice of the leaves in jaundice, the berries are purgative and emetic. Hale quotes Rafinesque as saying, "The decoction and wine have been used for cough, pleurisy, colic, gout, and rheumatism." Cooper has cured with it pain in spleen. His keynote indication for it is: "Symptoms > in winter." He improved with it a bad case of chronic deafness having this peculiarity. A feeling of irritation in urethra with constant dropping from orifice, probably prostatic, in a man about 50, disappeared after a dose of Ø. Hale quotes an article by Dr. Hendricks in *A. H. Z*. on the effect of *Ilex aq*. on the eye. With 5-drop doses of the 1x, given four times a day, Dr. Hendricks cured several cases of "rheumatic inflammation of the eye, with periostitis of the frontal bone, which almost always leads to staphylomatous degeneration of the cornea." Hendricks gives this case: A girl, 17, had been under the most renowned oculists since her fifth year. She had great infiltration of cornea, staphyloma; eyeball looked like a lump of flesh. Nightly burning pains in orbits. *Ilex aq*. cured completely in six days (*B. J. H*., xxxvii. 302). Cooper says the diarrhœa of *Ilex. aq*. is accompanied with mucous flux, and he suggests that it may be useful in psilosis (sprue).

Illicium Anisatum.

Star Anise. Chinese Anise. N. O. Magnoliaceæ. Tincture of seeds.

Clinical.—Catarrh. Colic. Cough. Hæmoptysis. Lungs, affections of. Stomach, catarrh of. Rheumatism. Thigh, pain in.

Characteristics.—*Illicium* is a genus of Magnoliaceous shrubs or low trees with smooth entire leaves, exhaling when, bruised a strong odour of aniseed, owing to the volatile oil contained in minute pellucid dots, which may be seen by the aid of a lens. The fruit is used throughout China, Japan, and India as a condiment, and is chewed in small quantities after a meal for sweetening the breath. It has also a local repute as a stomachic and carminative. Provings were made by Franz and Mure. Both showed the action of the drug on the nose, mouth, and stomach. Franz had many symptoms on the face, especially lips, skin, and extremities. A very remarkable symptom of Franz' has been confirmed by Flora A. Waddell (*H. P*., vii. 427). A man suffering from rheumatism of two years' duration came limping into Dr. Waddell's office, asking if she could do anything for his limb. He complained that when he sat down he couldn't rest in that position at all. Asked why, he replied: "Whenever I sit down my limb feels as if broken off right here," pointing to the middle of his thigh). He said he often got up to straighten himself in order to make sure. He also had some pain in his arm, and severe "sore pain" in his

back. *Illic*. 30x cured all the symptoms. Mure's symptoms were noted on head, abdomen, chest, and back. Tough white expectoration appears to be a characteristic; and this symptom has been frequently confirmed: Pain in region of third rib, about one or two inches from sternum (Junction of rib with its cartilage), generally on right side, but occasionally on left. Hering says it is useful for old asthmatics, and the stomach catarrh of old drunkards. Colic of babies. The pain in thigh is < sitting, > rising. Pains in the head are < in morning, > in evening.

Relations.—*Compatible after:* Aco. and Bry. in hæmoptysis *Compare:* In chest pains, Pix, Menth. pu. Botanical, Magnol.

SYMPTOMS.

2. Head.—Pains in head; > evenings, < mornings.

4. Ears.—Buzzing in ears.—Ringing in ears followed by sleep.—Itching over l. ear, going off when touching the place.

5. Nose.—Acute catarrh.—Watery discharge from nostrils.—Warm, smarting sensation in nose, succeeded by sneezing.—Sharp stitches in tip of nose.

6. Face.—Stinging sensation in upper lip, as if blood would press out, > from touch.—Dryness of upper lip, which is drawn closer to teeth.—Burning in inner surface of lower lip, with sensation as if it had gone to sleep.

8. Mouth.—Tongue covered with aphthæ; most on edges.—Edges of tongue folded like little bags.

9. Throat.—Tough, viscid phlegm from stomach; with old drunkards.

10. Appetite.—Rye bread tastes good, its odour is refreshing.—Satiety after eating but little.—All food, except rye bread, tastes too salty or bitter, yet appetite is good.

11. Stomach.—Nausea in stomach, extends to chest, then ceases.—Nausea, with gagging and inclination to vomit.—Bloating of stomach; acidity.

12. Abdomen.—Pain in splenic region.—Three months' colic, esp. if it recurs at regular hours; bowels disturbed.—Violent wind colic.—Rumbling in abdomen.

13. Stool.—Stools: bilious; compact and dark-coloured.

14. Urinary Organs.—Retention of urine.

17. Respiratory Organs.—Dyspnœa in old asthmatics.—After coughing, feeling of emptiness.—Frequent cough, with pain.—Spitting blood in small quantities and with

pus-like phlegm, pain in r. chest.—Whitish expectoration.—Tough, viscous phlegm, with old drunkards.

18. Chest.—Pain in region of third rib, about one or two inches from sternum, generally on r. side, but occasionally l.—Pain about junction of third rib with its cartilage; hæmorrhage; cough; congestion; enlarged liver.

19. Heart.—Palpitation, with aphthæ and weakness.

20. Back.—Pain in back and chest.—Cramp-like drawing, as from a cold, in l. side of dorsal vertebræ.

22. Upper Limbs.—Jerking and tearing in bend of l. elbow and at same time in palm; a feeling as if an artery had been injured by a blow.—Pressure back of r. hand, between the two middle metacarpal bones, as though something hard lying between them; < pressing hand against anything hard, not by touch.

23. Lower Limbs.—L. thigh feels as if broken in the middle while sitting; it disappears on standing.

25. Skin.—Stitches as with pins in l. palm, between first and second fingers; > by scratching, but afterwards return with burning.—Dull, painful stitches in skin of lower forearm.—Crawling, itching stitches in r. palm.—Itching in front and above left ear; > by touch.

26. Sleep.—Sleepless at nightfall.—Disturbed sleep.

27. Fever.—Heat from abdomen to stomach and chest, running over different places, and abating during day.

Imperatoria.

Peucedanum ostruthium, Koch. I. ostruthium, Linn. N. O. Umbelliferæ.
Tincture or infusion of root.

Clinical.—Skin, affections of. Stomach, affections of.

Characteristics.—*Imperatoria*, like *Athamanta*, belongs to the genus *Peucedanum*. Kleemann observed the effects of the infusion of the root, a teaspoonful every two hours. Only a few symptoms were noted, but they were peculiar. "Diminished secretion of mucus in intestines and air passages" is noteworthy.

Relations.—*Compare:* Atham. and Umbelliferæ.

SYMPTOMS.

1. Mind.—General excitement.

2. Head.—Active orgasm and confusion of the head.

11. Stomach.—Feeling of warmth, starting in stomach and extending over whole body.

12. Abdomen.—Diminished secretion of mucus in intestines.

17. Respiratory Organs.—Diminished secretion of mucus in air passages.

25. Skin.—Itching and burning in the skin.

27. Fever.—Feeling of warmth starting in stomach and extending over whole body.—General perspiration.

Indigo.

An oxidation product from the juices of several plants, chiefly Indigofera tinctoria. N. O. Leguminosć. Trituration.

Clinical.—Acne. Amenorrhśa. Anus, prolapse of. Brachial neuralgia. Constipation. Cough. Diarrhśa. Epilepsy. Epistaxis. Face, pimples on. Headache. Hysteria. Renal colic. Sciatica. Skin, affections of. Toothache. Urethra, stricture of. Worms.

Characteristics.—*Indigo* was introduced into medicine as a remedy for epilepsy. It has been extensively proved by homśopaths, and observations have also been made of its effects on epileptic patients who were receiving large doses from old-school practitioners. The provings bring out a number of neuralgic and nervous symptoms. These have been supplemented by clinical observations, and the place of *Indg*. in the materia medica is now fairly well defined. Teste tried *Indg*. in cases of epilepsy, but with little success, except in cases arising from the presence of worms. In cases of worm fever he has used it with great effect. The patients were children, from ton to twelve year sold, lymphatic, apathetic, peevish, who ate a great deal. The symptoms were: Chilliness, catarrhal cough, coming in long paroxysms in evening; whitish, moist tongue; sour or foul breath; large but soft abdomen; diarrhśa of two or three stools in twenty-four hours, like greyish pap, sour; ascarides in rectum, even crawling out during sleep. Teste also used *Indg*. with success in the following cases: (*1*) Semi-liquid diarrhśa (three to four stools a day, coming on especially after exercise in a stout old man, frequently given to excesses of eating). (*2*) Chronic catarrh of the bladder. (*3*) Stricture of urethra after

old gonorrhśa (with *Plumb*. and *Sep*.). E. P. Colby (*N. A. J. H*., November, 1879, 666) gave it in all cases of epilepsy coming under his care during twelve years, with the result that he apparently cured 10 per cent., and reduced the frequency of attacks in many more. The dosage is not mentioned, but was probably crude. In the dynamic cures of epilepsy effected by *Indg*., there has been great melancholy which the patient has sought to hide, spending many nights crying alone; or a furious excitable disposition before the attacks and mild and timid after. The attacks have been sudden; apparently originating in the solar plexus, from which flushes of heat arise to the head; induced by cold or fright. A peculiar sensation is an undulating sensation in the brain (which I have also observed in a case of epilepsy benefited by *Act. r*. The *Indg*. undulation causes obscured vision). A dry suffocative cough in evening and after going to bed, and a cough always attended by nose-bleed are characteristics. S. T. Yount (quoted *H. R*., ii. 271) relates that he had used *Indg*. successfully as an emmenagogue, having been led thereto by the discovery that a patient of his habitually employed it to procure abortion. He gave it in amenorrhśa in one to four-drachm doses. His contraindications are important to homśopaths. In very large doses, he says, the crude drug produces nausea and vomiting. It should not be given to pregnant women, nor where there is an irritable stomach, nor where there is the history of a previous pelvic inflammation, nor where there is marked cerebral anćmia. A case narrated by Nash (*Med. Adv*., xviii. 223) brings out one of the characteristic conditions of *Indg*. A hard-working man, over 70, gradually became unable to work. Weak; stiffness all over, especially right side, arm and leg. Pain in night hip running down leg; < beginning to move after resting. Can hardly turn over in bed. Appetite poor; stomach distressed, four or five hours after eating, if he eats more than a very little. *Pains in the limbs decidedly < after every meal*. *Indg*. cured promptly. There are marked symptoms of brachial and sciatic neuralgia which have this peculiarity: they come on or are < whilst sitting and are > by moving about. Symptoms in general are: < By rest; when sitting. > By motion; rising; walking. > By pressure; by rubbing. < In afternoon; in evening. The vertigo with headache is > in evening, and < in open air. Warmth rushes to head on entering a warm room after walking in cold air. All symptoms are < after eating and after evening meal.

Relations.—*Antidoted by:* Camph., Nux. *Compare:* Sul. (epilepsy; sinking sensation; hot flushes; worm fever); Kali bro. (epilepsy; acne); Act. r. (epilepsy with waving sensation in brain); Rhus (< by rest, > by motion); Bufo (epilepsy: Ind., timid, sad, low-spirited; Bufo, vehement or excitable); Lyc. (< in after noon); Ign. (sad, introverted); Baptis. ("Wild Indigo"), and other Leguminosć.

SYMPTOMS.

1. Mind.—Melancholy, sadness.—Discontented, retired in himself.

2. Head.—Vertigo, excessive, with headache.—Rush of blood to the head.—Sensation, as if the head were larger than its natural size, and occupied more

space.—Sensation as if the head were tightly bandaged around the forehead.—Pressure deep within the brain.—Shooting and tearing pains deep in the brain.—Tearing in the vertex.—Sensation as of a weight on vertex.—Noise and throbbings in the head.—Heat and bubbling in the occiput, as if produced by boiling water.—Undulating sensation in head from behind forward, causing vision to become indistinct.—Flushes of heat from the abdomen to the head.—Warmth and rushing like boiling water in occiput.—Heat in occiput, later more in middle of brain.—Violent stitches in occiput (l. and r.).—Peculiar sensation of fine sticking and of coldness in scalp, in front and above r. ear, spreading out like rays from this point.—Headache, with sensation as if the head was frozen, and anorexia.—Sensation in the crown of the head as if a bunch of hair were being torn out.

3. Eyes.—Convulsive twitching and quivering of the eyelids, impeding the sight.—Pressure in the ball of the eye.—Inflammation of the meibomian glands on the lower lids.

4. Ears.—Tearing, in and behind the ears, as well as in the lower jaw. Pressure and roaring in ears.

5. Nose.—Epistaxis, with vanishing of sight (afternoon).—Excessive continued sneezing, succeeded by violent bleeding of the nose.—Tearing and incisive pains in the bones and cartilages of the nose.

6. Face.—Tearing, piercing, and gnawing pains in bones of the face, and esp. of lower jaw.—Pricking in r. malar bone.—Pain in the submaxillary glands extending to the teeth.—Congestion in the face, with burning cheeks.

7. Teeth.—Drawing, gnawing, tearing pains in teeth (r.), as if being pulled out, along ascending ramus of jaw into temple and ear, with increase of saliva and sweat of r. half of head, and general sweat evening in bed; pains < by warmth; > by motion; momentarily > by cold air; pulsation in whole r. lower jaw. (Nux relieved this, but it returned succeeding days and became paroxysmal).

8. Mouth.—Numbness of interior of mouth, in the morning after waking.—Sensation of burning on the tongue and in the bottom of the palate.—Vesicles on the tip of the tongue.—Metallic taste in tongue with contracted feeling in pharynx.—Spitting of bloody sativa.

11. Stomach.—Empty risings.—Risings having the taste of ink.—Sweetish risings.—Retching and vomiting of watery fluid.—Vomiting of glue-like mucus.—Sensation in the stomach, as when fasting; with hot risings from time to time; when sitting.—Tingling pain in the pit of the stomach.

13. Stool and Anus.—Loose evacuations with pinchings in the abdomen, and urgent desire to evacuate.—Dull sticking in rectum.—Emission of an excessive quantity of flatulence.—Diarrhśa; stool liquid, with flatulence; creeping over the skin and cold hands and colic.—Obstinate constipation; stool scanty, hard, retained.—Itching at anus.—Pin worms.—Prolapsus ani after each stool.

14. Urinary Organs.—Renal colic.—Frequent desire to urinate, with burning in the fundus of the bladder; painful emissions of small quantities of turbid urine.—Increased emission of turbid urine, containing much mucus, without thirst, with violent contraction of the urethra and pain in the bladder.—(Stricture of urethra.)

15. Male Sexual Organs.—Depressed sexual desire.—Itching of the urethra, glans, and scrotum.

16. Female Sexual Organs.—Menstruation too early.—(Acts as an emmenagogue. Has been used to produce abortion.).—Stinging in the mammć, going off momentarily by rubbing.—Burning in the mammć during the menses.

17. Respiratory Organs.—Violent cough, inducing vomiting; bleeding of the nose.—Suffocating cough, exciting vomiting in the evening, before and after lying down.

18. Chest.—Rumbling and grumbling in the chest at every inspiration.—Shooting pains in and round the mammć.

20. Neck and Back.—Stitch between the scapula.—Stitch in the small of the back, going off after an evacuation.

22. Upper Limbs.—Weakness of arms.—Drawing in muscles; in deltoid.—Drawing, extending, down l. arm from lower part of neck.—Drawing, extending from r. shoulder-joint through whole arm to below joint of thumb, where it ended in the bone with a jerking while sitting; > moving about.—Tearing pains in the forearms, from the elbow to the fingers, which change their place on motion.—Convulsive startings in the arms.—Veins of the hands red, inflamed, and tense.—Shooting and tearing pains in the upper extremities.

23. Lower Limbs.—Aching, stinging, bruised pain in sciatic nerve, boring in knee-joint, pricking in calf; < sitting, > by motion, though motion also painful; < afternoon and evening; must lie down.—Indescribable pain from middle of thigh to knee in bone, > walking, returning during rest, in afternoon.—Tearing pain above the knee-joint extending to ankle; in afternoon, while sitting, > moving about.—Tearing in the lower extremities, esp. in the toes.—Great lassitude of the lower extremities in the evening, which is felt even after lying down.

24. Generalities.—Pains which disappear entirely, or at least re-appear only, with greatly diminished force, after resting on the part affected, or after scratching.—Shooting and tearing pains in the limbs, in the afternoon and evening.—Subsultus tendinum.

25. Skin.—Face and whole body covered with pimples.—Fine heat-rash, esp. l. side of face extending from forehead to throat.—Itching of skin with constipation.—Boils on ribs and various parts.—Itching, in face and various parts of body; > by rubbing.

26. Sleep.—Sleepiness in the evening and disturbed sleep at night.—Illusory sensations.—Children aroused at night with horrible itching at anus.—At night, anxious waking, with a start.—Anxious dreams.—Excessive nervous irritation.—Predominance of cold.—Convulsions; attacks sudden.

27. Fever.—Chilliness, with cold hands and violent headache, with constant desire to urinate; urine turbid.—Great heat, particularly in the face, with increased secretion of urine.

Indium.

A metal. In. (A.W. 1137). Trituration of the pure metal.

Clinical.—Backache. Epistaxis. Foot-sweat. Headache. Megrim. Pollutions. Sexual perversion. Sore throat. Throat, ulceration of. Uvula, enlarged; ulcerated.

Characteristics.—*Indium* (which receives its name from the Indigo blue line in the spectrum through which its presence was discovered in Zinc-blende) is a rare metal, nearly like lead in appearance and in softness. It has been proved under the direction of Bell, mostly in the potencies, and the symptoms mark it out as allied in action to *Selenium* and *Titanium* in its general action, and particularly in the male sexual sphere. There is diminished power and control; frequency of nocturnal emissions; sexual dreams of perversion which should render it of service in some cases of sexual psycopathy. The mental condition of *Indm*. is one of depression, curiously not unlike that of *Indigo*, whose colour it shows in the spectrum. Headaches were very marked in the proving, and one notable symptom appears: "Violent pain in the head when straining at stool." This is not infrequently met with in practice, and I have given great relief with *Indm*. 200 to a patient who had this symptom. Berridge reports (*H. P*., viii. 592) this case: A boy, 10, constipated five or six years. Stool about once a week, dark and short; sometimes with blood; anus sore after stool. Has to strain much, seizing his thighs with his hands and straightening himself forcibly; the effort makes his face red, and the head feels as if it would burst. *Indm*. in high potencies cured. There is also a headache with

sleepiness and nausea. There are many marked symptoms in the throat, the characteristic condition being < in evening and > by eating, and by drinking cold water. The urine is horribly offensive after standing a short while. The symptoms generally are > out of doors; in cold air; by drinking or washing in cold water. < In a warm room. Generally < by motion (walking; rising; sitting up; stooping slightly; turning; rotating head; moving eyes). On the other hand there is restlessness compelling to move about. Several symptoms occur in early morning 3 to 4 a.m.; in afternoon, 3 to 6. There is faintness at 11 a.m.

Relations.—*Compare:* Bell. (headache; menses); Aspar. (urine); Sang. (headache; rheumatism); Pho., Nat. c., Sul., and Zn. (faintness, 11 a.m.); Fer. (headache; ebullitions lameness of shoulder muscles); Selen. and Titan. (male sexual organs) Brucea, Lach., Nux mos., Op., Stn., and Stro. (headache with sleepiness. Indm. has nausea as well as sleepiness). In throat symptoms > from eating and drinking. Indm. resembles Æs. h., Benz. ac., Cist., Lach.

SYMPTOMS.

1. Mind.—Mental depression.—Mind feels tired; does not care to work.—Feels stupid and careless; cannot fix thoughts on anything.—Restless, cannot sit still, must walk about.—Sleepy and irritable with headache.—Feels almost crazed when attempting to study, with headache.

2. Head.—Vertigo: on rising from a seat; after retiring, with nausea; when sitting and stooping slightly; between 3 and 4 a.m., < on turning and on rising, cannot sit up.—Dull headache in temples and forehead, with sleepiness and nausea.—Very distressing headache in forenoon; pains commence on r. side of occiput and extend over head to l. eye.—Pain at 8 a.m., extending over r. side of head from occiput, leaving a bruised spot on vertex.—Severe l.—sided headache in evening.—Beating, throbbing pain in head, with much heat, and a stupid, cross feeling; > washing in cold water.—Beating, throbbing headache at 3 p.m., lasting till bedtime; head very hot; face red.—Slight throbbing headache, lasting two hours, with hot head and cold, clammy hands; afterwards, bruised feeling of brain in vertex, > in cold air.—Headache, in morning on rising, > eating; an hour afterwards headache returns and lasts till noon.—Severe itching of scalp on vertex lasting several days, > in morning.

3. Eyes.—People and things look ghastly pale or saffron coloured.—Mist before eyes, in evening.—Sharp pain in eyeball from before backward, on turning or moving eyes.—Irritation in l. eye, as if heavy with sleep, coming and going, not affected by daylight, < from artificial light, and from closing eye, with a desire to close it; in evening r. eye affected in the same way.—Spasmodic twitching at outer angle of l. eye.

4. Ears.—Throbbing in ears, in evening.—Bright redness of whole r. ear, with a row of very sore pimples on helix.

5. Nose.—Violent attacks of sneezing.—Epistaxis; nose bleeds whenever blown or touched.—Nasal discharge: green; bloody; then watery; thin, yellowish.

6. Face.—Very painful suppurating pimples on forehead; feel as though pierced with a needle; skin very red far around each pustule.—Sore pustules all over face; burning stinging.—Face: red during headache; red and hot; complexion sallow.—Fiery red places about an inch long over l. eye.—Patches of small vesicles on mucous membrane of lower lip; vesicles contain a colourless, limpid fluid.—Corners of mouth cracked and very sore.

9. Throat.—Uvula greatly enlarged, back part of pharynx covered with thick yellow mucus, very tough and hard to remove.—Destructive ulceration of uvula, soft palate and tonsils, with thick yellow secretion in ulcers.—Left tonsil swollen; pain and difficulty in swallowing.—Throat sore on r. side.—Tickling in throat inducing continual hawking.—Dryness, throbbing, stinging soreness; swallowing painful.—Throat: < in evening; > eating, and drinking cold water.—After eating lobster, taste of iodide of potash.—(Post-pharyngeal catarrh with tough, leathery streak of yellow mucus down back of throat.).

11. Stomach.—Qualmishness.—Nausea: with headache; during breakfast; with faintness at 11 a.m. and on rising; after retiring, with dizziness and pain in liver.—Sick feeling at stomach for two days; felt as if vomiting would relieve.—Fulness and pressure at stomach with soreness.

12. Abdomen.—Stitches in region of liver.—Colic; griping; from umbilicus downwards; as if diarrhœa would set in.

13. Stool and Anus.—Stool: pasty, brownish-yellow, fetid, with particles of undigested food, preceded by colic; involuntary, slight, when urinating; small and hard, afterwards pappy; hard with blood.—Diarrhœa: < by drinking beer; with headache on r. side.—Burning tenesmus and pain in anus after stool.—Violent pain in head when straining at stool.

14. Urinary Organs.—Painful urination.—When urinating: loss of power over sphincter ani.—Horribly offensive smell of urine after standing a short time.

15. Male Sexual Organs.—Sexual desire and power diminished, emission too soon, thrill deficient.—Increase of desire.—Emissions: twice the same night; four nights in succession; at night without knowledge.—Itching of glans penis.—Severe pain in r. testicle.—Testicles tumefied and very tender to touch; drawing pains along spermatic cords upwards; l. testicle much <.

16. Female Sexual Organs.—Menses two weeks too soon; bearing-down pains, with cross temper and weeping mood; face very red.

17. Respiratory Organs.—Hoarseness: on rising; with sore throat.—Habitual bronchial expectoration freer, but a little blood appeared in mucus.—Frequent desire to take a deep breath, when lying down; < lying on l. side, > lying on back.

18. Chest.—Severe pain behind lower r. portion of sternum.—Sharp pains through upper part of chest.—Burning pain on l. side of chest near sternum, which feels as if drawn towards back.—Dull pain in l. pectoral region.—Dull pain in l. axilla.

20. Neck and Back.—Stiffness of neck and shoulders.—Drawing through side of head and neck to clavicle, first r. side, next day l.—Pressing pain in upper scapular region, with stiffness on sitting still, pain < on beginning to move.—Severe pain under scapula of l. side.—Dull pain under r. shoulder-blade.—Rheumatic drawing across shoulders up to head; < in riding, turning in bed, flexure or rotation of head, and morning and evening.—Dull, aching pain in back and lumbar regions.

22. Upper Limbs.—Constant pain in l. shoulder, as if bruised.—Intermitting pains in l. shoulder.—Pain in l. shoulder, with soreness extending down arm.—Severe pain in l. shoulder; pain runs down to elbow, at times so severe as to disable arm.—Shooting pains in fingers.—Muscles of l. arm and shoulder feel flabby and soft; no power in arm.—Severe lancinating pains in biceps of l. arm, extending into shoulder; pains < extending arm; paralytic weakness.—Left elbow feels sore.—Slight pains in l. arm.—Palms of hands sweat continually.—Itching in palms.

23. Lower Limbs.—Tired feeling, weariness in legs.—Drawing, strained feeling of muscles of inside of r. thigh, while walking.—Sharp shooting pains in r. leg.—Legs from knees downward and feet feel heavy as if loaded.—Peculiar hot tingling in legs.—Dull, boring pain in l. great toe-joint, almost unbearable, must move foot to > it, for three evenings, from 8 to 9.—Burning and intense itching of all the toes the whole day.—Itching of toes in evening.—Feet sweat easily and feel cold.—Profuse foot-sweat.

25. Skin.—Itching of scalp, toes, &c.—Very painful sore pimples on various parts of the body.

26. Sleep.—Sleepiness: with headache and nausea; with irritability; from 4 to 6 p.m.; in evening, in a warm room.—Dreams: lascivious; amorous; of having unsuccessful intercourse with men; vivid of what had occupied his mind during the day; of annoying accidents; of being in foreign countries; chased by mad bulls; lost in mountains.—Nightmare: from lying on back; very stupid on awaking.

27. Fever.—Sensitive to cold.—High fever with chilliness on moving, great weakness, sore throat; thirst, stretching, violent headache and backache.—Fever: with nausea, after eating; > out of doors.—Easy perspirations.

Influenzinum.

The nosode of Influenza.

Clinical.—Catarrh. Colds. Influenza.

Characteristics.—The nosode of influenza has with many practitioners taken the place of *Baptisia* as the routine remedy in epidemics. It may be given in the 12th or 30th potency, either in the form of tincture, pilules, or discs; or ten globules may be dissolved in six ounces of water, and of this a dessertspoonful may be given for a dose. It may be repeated every two hours. This will be found sufficient to control a large proportion of the cases. The general directions I give to my patients are these: When "colds" appear in a family let all those who are unaffected take *Arsen*. 3 thrice daily, and let the patients take *Influ*. 30 every hour or two. This generally prevents the spread of the trouble and clears up the "colds," whether they are of the influenza type or not. Influenza has the property of developing old troubles, and thus it takes an infinite variety of forms in different persons, so that *Influ*. need not be expected to cure all cases unaided, or, indeed, to be appropriate to every case.

Relations.—I find Influ. compatible with Act. r., Ars., Bell., Bry., Hep., Merc., and many others.

Inula.

Inula helenium. Elecampane. Scabwort. N. O. Compositæ. Tincture of fresh root dug in autumn of the second year. (The juice of the root was proved.)

Clinical.—Backache. Cough. Cramp. Dysmenorrhœa. Erysipelas. Leucorrhœa. Rectum, pain in. Sciatica. Toothache.

Characteristics.—*Inula* is a "perennial plant with a stem from three to four feet high; large saw-toothed leaves tapering to a stalk; and large heads of yellow flowers. The root has an aromatic camphor-like taste, due to the presence of a crystalline substance called *Helenin*, allied in chemical constitution to *Kreosote*. It also contains a quantity of starchy material, called *Inulin*, which differs from ordinary starch in being coloured yellow by *Iodine*. *Elecampane* was formerly much used as an aromatic tonic, and as a stimulant of all the secreting organs, likewise in coughs, dyspepsia," &c. This quotation from the *Treasury of Botany* well sums up the chemistry and ancient medical history of the plant as

handed down from the time of Dioscorides. Ben Jonson refers to it in one of his poems. A popular tradition credits it with the cure of facial erysipelas, and certain symptoms of the face in the provings seem to confirm this. The homœopathic knowledge of it is due to. Fischer, who proved the root-juice. Clinical experience has confirmed and added to the symptom list. The old reputation of the remedy in coughs is confirmed: "Violent tickling in larynx, producing dry cough, < lying-down, < at night; larynx painful," also "dry cough, with constant tickling in throat-pit, difficult breathing and sensation as if hoarseness would occur." A very pronounced effect was observed in the pelvic organs; pressing and dragging towards the rectum and genitals, headache and labour-like pains. *Inula* is one of the remedies which has sensation as of something alive moving about internally; also twisting as of a ball in umbilical region; as if a substance would come out of rectum and genitals. Another peculiar sensation is: as though some one was poking him with a finger in various parts of the body, especially in diaphragm, so painful he awoke with clenched teeth. Sticking pains as with pins or a knife are numerous. The majority of the symptoms occurred on the right side. The symptoms are < at night; < lying down (except the uterine pain, which compels patient to remain lying); < by motion; after eating.

Relations.—*Compare:* Sep. (forcing in genitals and rectum), Crocus and Thuja (sensation of something alive); Tereb. (urine smelling of violets); Ign. (cough < lying down and in evening); Sul. (psora; < at night in bed).

SYMPTOMS.

1. Mind.—Excessive anxiety and trembling of the whole body, chattering of teeth from cold, during menstruation.

2. Head.—Vertigo on stooping.—Confusion of head with nausea, in evening.—Headache in r. side, afterward in l.—Tearing, throbbing in forehead and vertex after eating.—Sticking headache in r. side.—Jerking, tearing pain in occiput.—Rush of blood to head with sleeplessness.—Burning headache in l. temple, in a spot as large as a silver dollar, in evening.

3. Eyes.—Twitching in upper lids.—Burning in l. eyeball.—Swimming before eyes and pressure in temples and forehead.

4. Ears.—Dull stitches in l. ear, with transient sticking above r. eyebrow in evening.

5. Nose.—Stitches in r. side of middle of nose.—Sticking, crawling in root of nose, extending to eyebrows.

6. Face.—Left side of face red and hot, a white spot near nose.—Flushes of heat; l. cheek glowing.

7. Teeth.—Pain in decayed teeth, < at night.

8. Mouth.—Dryness of mouth with scraping and tickling in throat, swallowing difficult.

9. Throat.—Pain in throat on swallowing; tickling causing cough.

11. Stomach.—Nausea in morning coming from stomach.—Twisting as of a ball in epigastric region, above umbilicus.—Sticking pain in epigastric region.

12. Abdomen.—Violent motion beneath r. hypochondrium, as though something living were moving about, during menstruation.—Sticking: as with two pins to r. of umbilicus; as from a knife between umbilicus and r. groin.—Stitches in l. side of abdomen towards l. groin.

13. Stool and Rectum.—Pressing dragging towards rectum and genitals, as in labour; as if substance would come out, occurring repeatedly.

14. Urinary Organs.—Urging to urinate ten times in one hour; urine passes by drops.—Urine smells of violets.

16. Female Sexual Organs.—Movings about in abdomen, as at appearance of menstruation, followed by yellowish leucorrhœa.—Pain in uterus, with pain in small of back, very violent, with pressure as in labour; urging to stool, which she dreads; is obliged to remain lying.—Dragging in genitals, with more violent backache than she had ever had before.—Stitches in region of uterus and genitals.—Menses too early and painful.

17. Respiratory Organs.—Violent tickling in larynx, producing dry cough, < lying down; < at night; larynx painful.—Cough with abundant thick expectoration; accompanied by weakness of digestive tract, general languor and debility and much leucorrhœa; skin has been the seat of psoric manifestations; engorged glands (chronic bronchitis).—Difficult breathing with dry cough, constant tickling in throat-pit.—Dry, tickling cough.

18. Chest.—Stitches behind sternum and beneath l. seventh and eighth ribs.—Throbbing, jerking pain as from suppuration, in middle of chest.

20. Back.—Pain through back and chest, on inspiration.—Transient pain in r. scapula.—Violent backache during menstruation.

22. Upper Limbs.—Stitches and tearing pain in r. shoulder and wrist.—Tearing, cramp-like pain in tip of l. shoulder; in scaleni muscles on l. side of neck, as if pulled by pincers.—Tearing, jerking in r. arm.—Upper arms as far as elbows fall asleep.—Tearing in palm of l. hand, unable to double fingers.—Fine stitches in index finger.—Tearing in r. little finger, it seems dead.

23. Lower Limbs.—Tensive drawing in hips extending to nates.—Sticking in r. hip extending to groin; in middle toes of r. foot in r. heel.—Stitches: in thighs; in l. ankle, when walking; as if sprained in r. heel.—Spasmodic sticking beneath bend of r. knee, hot face and chilliness.—Cramp in calves during sleep.

25. Skin.—Itching: as from fleas; violent on legs during menses, with burning after scratching, in bed.

26. Sleep.—Sleep restless, starting and crying out.—Dreams: lascivious; disgusting.

27. Fever.—Coldness, shaking in bed, cold, blue hands and nails.

Iodium.

Iodium. Iodine. An element. l. (AM. 126.53). Tincture.

Clinical.—*Appetite, disordered. Atrophy*. Brain, atrophy of. Breasts, affections of. *Cancer*. Chilblains. Chyluria. Constipation. *Consumption*. Coryza. *Cough. Croup. Debility*. Diabetes. Diarrhœa. *Diphtheria*. Emaciation. Enteric fever. Galactorrhœa. *Goître* Hæmorrhoids. Headaches. Heart, hypertrophy of; affections of. Hiccough. Hydrocephalus. Iritis. *Jaundice. Joints, affections of*. Lactation, disordered. *Laryngitis* Leucorrhœa. Liver, affections of. Lymphatic swellings. *Melancholia*. Mollities ossium. *Ovaries, affections of*; dropsy of. *Ozæna. Prostate gland, enlarged. Rheumatic gout. Rheumatism. Salivation*. Scars. *Seborrhœa. Sterility*. Syphilis. *Tabes mesenterica. Throat, affections of. Uterus, affections of. Voice, affections of. Vomiting*. Worms.

Characteristics.—The most prominent feature of the action of *Iodium* is its power of causing absorption. It is this power which has made the drug such a favourite among old-school practitioners as a paint in all kinds of swellings. Given internally its power is much greater: the absorbents are stimulated to fresh activity; muscles, fat, tissues, and glands waste away, and general emaciation is the result. When new growths and hyperplasias are present, these come under the action of *Iod*. before the normal tissues. I have seen it given with excellent effect in the lower attenuations, when swollen and deformed joints have been left behind after an attack of acute rheumatism. Scrofulous and syphilitic indurations, effusions and tumours, and especially goître, are equally amenable to its resolvent action. Emaciation of single parts. In this connection must be mentioned its power to set up a ravenous appetite. "Eats ravenously, yet emaciates," is a keynote. It seems as if the waste of tissue set up the desire for absorbing great quantities of food. Absence of appetite is also among the effects of *Iod*., and either condition may indicate it. I once used it with excellent effect in the case of a young woman who had had a nervous shock, and had lost all appetite and desire to live. She was much

emaciated, and had quietly made up her mind to starve herself to death. I gave five drops of *Iod*. 3x in a wineglass of water half an hour before meal-times, and her appetite returned with such vigour she could not choose but eat, and was soon restored to a normal mental and bodily state. I have recorded another similar case of nervous shock producing rapid emaciation and vomiting cured by *Iod*. in my book on *Indigestion*. Both these patients were somewhat dark, and *Iod. is specially suited to* persons of dark hair and complexion; dark, yellow, tawny skin. Herein it is the antipodes of *Bromium* and *Spongia*. Its mental symptoms are more marked than those of *Brom*. There is increased erethism, patient very excitable and restless, moving about from place to place. Fears every little occurrence will end seriously. In his anxiety shuns every one, even his doctor. Fixed ideas are among the *Iod*. effects; also sudden impulses. A patient of mine had once been given *Iodine* for goître by an allopath. She was compelled to discontinue it because it produced this inconvenient symptom: impulse to run; she felt she must fall if she walked. *Iod*. produces atrophy of nerve and brain tissue, as well as of other tissues (Allen mentions that it is valuable in persistent headaches with vertigo in old people); and it also has a place in acute hydrocephalus; and in pleuritic effusions. In tubercular disease of all kinds it may be called for: tabes mesenterica; pulmonary phthisis. In rheumatism and heart affections it has a large sphere. It is indicated by indurations or atrophy of testes, ovaries, and uterus. The salivary glands and pancreas are especially affected by *Iod*., and a diarrhœa of milky, whey-like stools, often indicative of pancreatic disease, is especially amenable to its action. In pneumonia and phthisical affections with lung consolidation it is of great service. The chief indications are: Dyspnœa; cough with blood-streaked expectoration; tickling all over chest; weakness and emaciation; < of symptoms in a warm room. This last, "< by warmth," is a leading modality of *Iod*. In defects of growth, curvature of bones, and in children's ailments, it follows well upon *Calc*. In phthisis of rapidly-growing young people, thin and dark, it is especially indicated. There are many marked symptoms in the heart sphere: palpitation from slightest cause; sensation as if being squeezed; hypertrophy. With the heart symptoms there is a "gone," exhausted feeling, and the patient is scarcely able to breathe or walk. C. S. McKay noticed lumbrici passed by an infant who had tasted *Iodine* accidentally, and used the experience in another case, giving a dilute solution (one part of the Ø to three of water; of this three drops every three hours), and produced the expulsion of lumbrici when *Santonin* had completely failed. An Ioduretted solution of *Kali iod*. (*Kali iod*. gr. xxxv., *Iod*. gr. iv., *Aqua* one ounce; ten drops for a dose) has been used with success as a tænicide, expelling the tapeworm, dead. Erethism is marked in *Iod*.: nervousness; restlessness; twitching; subsultus tendinum and trembling; also sense of trembling in inner parts. Facial paralysis and epilepsy have followed suppression of goître by large doses of *Iod*. Weakness is excessive. Fainting on going upstairs. (General weakness and loss of appetite and pain in temples, and pain in left chest as if something were being torn away: heart large.—Cooper). Motion and exertion of all kinds <. Sitting up >, and lying down < dyspnœa and heart affections. < By warmth; by wrapping up; in warm room. < In wet weather.

Drinking cold milk > constipation. > By eating, of hunger and other symptoms, is another marked character of *Iod. Iod*. is a sensitive remedy, and many symptoms are < by touch and pressure. Nash thinks *Iod*. one of the remedies affected by the moon's changes. In cases of goître where it is indicated he gives a powder of *Iod*. c.m. every night for four nights after the moon has passed the full.

Relations.—Iod. must be compared with Iodoform and Kali iod. The febrile, inflammatory, and skin symptoms of Iodf. are more violent and pronounced than those of the other two. K. iod. has less erethism than Iod., has > from external warmth (though both have > in open air); and K. iod. has not the excessive appetite of Iod. or the general > from eating. Iod. *is antidoted by:* Starch or wheat flour mixed with water (to large doses). *Antidotes* to small doses: Ant. t., Apis, Ars., Bell., Camph., Chi., Chi. sul., Coff., Hep., Op., Pho., Spo., Sul. *It antidotes:* Merc. *Follows well:* Merc.; Hep. (croup); Ars. *Followed well by:* Aco., Arg. n., Calc., Merc. sol., Pho., Pul. *Complementary:* Lyc. *Compare:* Brom. (Brom. has light hair and complexion; Iod. dark; Bro. carrion-like odour of ulcers); Chlorum; Nat. m. (ravenous appetite yet gets thin—Nat. m. especially about the neck); Kali iod. (talkative as if from alcohol); Bar. c. (tabes mesenterica, extreme hunger, emaciates, talkative, averse to strangers; Bar. c. suited to dwarfish persons; has not the intolerable crossness of Iod., which is < than that of Ant. c.); Alumina (apprehensive, fears); Apis (joint effusions, sensitiveness, hydrocephalus); Cact. and Spig. (heart); Hydrast. (uterine affections); Ars., Calc., Cin., Sil. and Staph. (ravenous hunger); Hyo. (loss of voice; Iod. antidotes this); Sul.

Causation.—Nervous shock. Disappointed love.

SYMPTOMS.

1. Mind.—Lachrymose disposition and mental dejection.—Melancholy hypochondriasis, sadness, heart-ache, and anxiety.—Fear: shuns persons.—Anxious apprehensions.—Restless agitation (with inclination to move about), which will neither permit the patient to remain seated, nor to sleep.—Irresistible impulse to run; feels she will fall if she walks.—Cross, irascible, peevish.—Heart palpitates "like lightning" when thinking of real or imaginary wrongs.—Sudden maniacal impulses; to murder.—Excessive mental excitement, with great susceptibility.—Illusions of moral feeling.—Loquacity and immoderate gaiety.—Hesitation and irresolution.—Indolence of mind, with great repugnance to all intellectual labour.—Fixedness, immovableness of thought.—Delirium.—Effects of amorousness; of disappointed love.

2. Head.—Confusion of the head (with aversion to earnest work).—In the morning, dizziness.—Vertigo; throbbing in the head and all over the body.—Vertigo with red face, palpitation, hysteria, nervousness.—Headache, in hot air, as well as from the prolonged movement of a carriage, or from a long walk, and < by noise and speech.—Pain, as from a bruise, in the brain, with want of strength in the body, as

from paralysis.—Acute pressive pains in the forehead.—Headache, as if a tape or band were tightly drawn around the head.—Pressure on a small spot, above the root of the nose.—Congestion in the head, with beating in the brain.—Throbbing in the head at every motion.—Hair falls out.

3. Eyes.—Pains in orbits.—Feeling of depression above the eyes, as if they were deeply sunken, in the evening.—Pain, as from excoriation, in the eyes.—Inflammation of the eyes, sometimes after taking cold.—Watery white swelling of the eyelids.—Dirty yellowish colour of the sclerotica.—Protrusion of the balls.—Lachrymation.—Convulsive movements, and quivering of the eyes; of the (lower) eyelids.—Weak sight.—Dimness of vision following upon application of *Iodine* to any part of body.—Choroido-iritis.—Diplopia.—Sparks and scintillations before the eyes.

4. Ears.—Buzzing in the ears.—Hardness of hearing.—Sensibility to noise.—(Chronic deafness with adhesions in middle ear.—Deafness from Eustachian catarrh, inflamed tonsils, roaring in the ears, &c.).

5. Nose.—Small scab in the r. nostril.—Epistaxis.—Red, burning spot on the nose, below the eyes.—Stoppage of the nose, or secretion of mucus more abundant than usual.—Dry coryza, becoming fluent in the open air (< evening).—Fluent coryza with much sneezing.—Violent coryza with lachrymation and frontal headache; discharge hot, nose sore, fever.—Blowing of much yellow mucus from the nose.

6. Face.—Complexion pale, yellowish, or easily tanned; or greenish.—Acneous eruption on r. side of face, with burning, and itching, twitching of r. upper eyelid, and twitchings in other parts.—Sallow, distressed countenance.—Bluish lips, with swelling of the superficial veins.—Frequent and sudden redness of the face, with sensation of burning in the ears.—Face sunken with eyes cast down.—Starting of the muscles of the face.—Suppurating ulcer on the l. cheek, with swelling of the contiguous glands.—Swelling of submaxillary glands.

7. Teeth.—Pressive pains in the molars.—Teeth yellow, and covered with mucus, in the morning; easily blunted by vegetable acids.—Inflammatory swelling and bleeding of the gums, with swelling of the cheek; the gums are painful to the touch.—Teeth loose.—Softening of the gums.

8. Mouth.—Aphthæ in the mouth.—Ulcers in the mouth.—Pain and swelling of the glands of the interior of the mouth.—Exhalation of putrid odour from the mouth; after Mercury.—Salivation.—Tongue loaded with a thick coating.—Dryness of the tongue.

9. Throat.—Swelling and elongation of the uvula.—Sore throat, with pressive pain, when not swallowing.—Permanent constriction of the gullet and impeded deglutition.—Increased secretion of watery saliva.—Inflammation of the gullet, with

sensation of burning and scraping; burning in the fauces.—Ulcers in throat, with swelling of glands of neck.

10. Appetite.—Disagreeable, saponaceous, sourish, or bitter salt taste.—Increased thirst day and night.—Appetite variable; at one time bulimy, at another, absence of appetite.—Unusual hunger, with amelioration after a meal (after having eaten a good deal).—Great weakness of digestion.—Eats too often and too much; rapid digestion, but losing flesh all the time.

11. Stomach.—Risings, generally acid, with burning sensation.—Heartburn, after heavy food.—Hiccough.—Pyrosis, esp. after indigestible food.—Qualmishness, nausea (with spasmodic pain in the stomach).—Frequent nausea.—Violent vomitings renewed by eating.—Vomiting of bilious matter, or of yellowish mucus.—Excessive pains in the stomach, with bilious evacuations.—Aching in the stomach after every meal.—Cramp-like, gnawing, or burning pains in the stomach.—Inflammation in the stomach.—Pulsations in the epigastrium.—Gastric derangement with constipation.

12. Abdomen.—Abdominal pains, which return after every meal.—Inflation of the abdomen.—Incarceration of flatulence (l. side of abdomen).—Enlargement of the abdomen, which renders it impossible to lie down without danger of suffocation.—Region of liver sore to pressure; swelling and hypertrophy of liver; jaundice.—Hard, painful swelling of the spleen.—Cramp-like pains in the abdomen.—Violent colic.—Pains in the abdomen, like those of parturition.—Swelling and inflammation of the mesenteric glands.—Pancreas enlarged; whitish, whey-like diarrhœa.—Abdominal pulsations; throbbing of abdominal aorta.—Trembling in the abdomen, from the pit of the stomach to the periphery, with increased heat.—Hard swelling of the inguinal glands.

13. Stool and Anus.—Hard, knotty, dark-coloured fæces.—Constipation.—Loose, soft evacuations, sometimes whitish, alternately with constipation.—Evacuations copious of the consistence of pap.—Violent, frothy diarrhœa, or composed of sanguineous mucus.—Dysenteric evacuations of thick mucus, or sometimes purulent, with retention of fæcal matter.—In the evening, sensation of itching and burning in the anus.—Piles protrude and burn; < from heat.

14. Urinary Organs.—Suppressed secretion of urine.—Copious and frequent flow of urine.—Involuntary emission of urine at night.—Urine of a deep colour, turbid, or yellowish green; or milky; or acrid and corrosive.—Parti-coloured cuticle on the urine.—(Incontinence in old people with prostatic enlargement.).—(Diabetes.)

15. Male Sexual Organs.—Complete loss of sexual power, testicles atrophied.—Violent and constant erections.—Sexual desire increased.—Painful pullings in the anterior part of the penis.—Aching, pressing, twisting, or forcing pain in spermatic cords; after sexual dalliance.—Swelling and hardness of the

testes.—Hardness of the prostate gland.—After stool, milk-like fluid runs from urethra.—Hydrocele.—Offensive sweat of genitals.

16. Female Sexual Organs.—Catamenia at one time too late, at another too early.—Menses premature, violent and copious.—Metrorrhagia.—Weakness, palpitation of the heart, and many sufferings, before, during, and after the catamenia.—Atrophy of ovaries and breasts, with sterility.—Pain (dull, pressing, wedge-like) commencing in r. ovary passing down broad ligament to uterus.—Great sensitiveness of r. ovarian region during or after menses.—Inflammation of r. ovary with an itching eruption on head and hands following application of *Iodine* to os uteri.—Chronic oöphoritis (l.) with thick, yellow, burning leucorrhœa, > after eating (H. N. Martin.).—Pain in lower abdomen; < l. ovarian region; > by motion and by eating.—Induration and swelling (cancer?) of the uterus.—Uterine hæmorrhage renewed after every stool.—Leucorrhœa, corroding the limbs and the linen; acrid; profuse; worse at time of menses.—Flaccidity and atrophy of the breasts.—Mammary hyperæsthesia.—Heaviness of breasts as if they would fall off.—Acute pain and soreness in breasts with metritis.—Bluish red nodosities size of hazel nut; in both breasts; dry, black points at tips.—Galactorrhœa; thin, watery milk; weakness; emaciation.—Milk suppressed; breasts atrophied and relaxed.

17. Respiratory Organs.—Insupportable hoarseness and tingling in the throat, esp. in morning.—The voice becomes deeper.—Membranous croup, with wheezing and sawing respiration; dry, barking cough, esp. in children with dark eyes and hair; child grasps throat with hand.—Croup, with much mucous expectoration, sometimes streaked with blood.—Inflammation of the throat, of the larynx and trachea, with contractive pain of excoriation.—Pain in the larynx, with discharge of hardened mucus.—Contraction and heat in the larynx.—Increased secretion of mucus in the trachea, with frequent hawking.—Dry cough, with pressure, shooting, and sensation of burning in the chest.—Cough in the morning.—Cough, with expectoration of abundant, and sometimes sanguineous mucus, pains in the chest, and fever.—Rattling of mucus in the chest, with roughness under the sternum and oppression of the chest.—Cough, resembling whooping-cough, excited by an insupportable tickling in the chest, with anguish before the paroxysm, and excessive emaciation.—Hepatization; worse upper part of r. lung.

18. Chest.—Difficulty of respiration, and dyspnœa.—Difficulty of expanding the chest on taking an inspiration.—Suffocation.—Shooting in the l. side, on breathing.—Loss of power to breathe, esp. on going upstairs.—Weakness of the chest.—Congestion in the chest.—Burning, shooting tension in the integuments of the chest.

19. Heart.—Sensation of weakness in the chest (and heart).—Violent palpitation of the heart; increased by the least exertion (from walking or going downstairs).—Sensation as if the heart were squeezed together.—Constant, heavy,

oppressive pain in region of heart, with sharp, piercing, movable pain.—Great precordial anxiety, obliging him to constantly change his position.—(Hypertrophy of heart, very like that of *Arn*., and like that often met with in housemaids and others from over-exertion.—Fatty degeneration of heart.—Cooper.).—Pulse rapid, small, weak, with tumultuous, irregular, at times intermittent action of heart.

20. Neck and Back.—Tension in the neck.—Swelling of the exterior of the neck.—Swelling of the neck when speaking.—Swelling of the glands of the neck, of the nape of the neck, and of the armpits.—Hard and large goîtres.—Constant sensation of constriction in the goîtres.—Yellowish spots on the neck, and redness, as from ecchymosis.—Cramps in the back.—Pain in sacrum and coccyx.—Spinal complaints, with gressus vaccinus.

21. Limbs.—Chronic arthritic affections; with violent nightly pains.—Stiff and enlarged joints after acute rheumatism.—Subsultus tendinum.—Cold hands and feet.

22. Upper Limbs.—Pains in the bones of the arms, < when lying down, and disturbing the sleep.—Lassitude in the arms in the morning, in bed.—Convulsive movements and trembling of the arms, of the hands, and of the fingers.—Numbness of the fingers.—Tearing pains in the fingers.—Startings of the tendons of the fingers.—Panaris.—Constant coldness of the hands, which are covered with a cold sweat during labour.—Carphologia.

23. Lower Limbs.—Cramp-like pains in the legs when seated.—Heaviness, swelling, trembling and paralysis of the legs.—Rheumatic pullings in the thighs and knees.—Inflammatory swelling of the knee, with tearing pains, and suppuration.—Hot, bright-red swelling of the knee, with inflammation, pricking and burning; < by touch and pressure.—Dropsical swelling of the knee.—White swelling of the knee.—Cramps in the feet, esp. at night.—Startings of the tendons of the feet.—Œdematous swelling of the feet.—Chilblains.—Acrid and corrosive sweat on the feet.—Pain in the corns.

24. Generalities.—Erratic pains in the joints.—Chronic rheumatism in the joints, with violent pains at night; without swelling.—Sensation of torpor in the limbs.—Convulsive starting and twitching of the tendons.—Distortion of the bones.—Pains in the bones at night.—Swelling and induration of the glands.—Hæmorrhage from different organs.—Powerful over-excitement of all the nervous system.—Ebullition of blood, and pulsation over the whole body, increased by the slightest exertion.—Trembling of the limbs.—Tottering walk.—Great weakness; even speaking excites perspiration.—Plastic exudations.—Atrophy and emaciation till reduced to the state of a skeleton (with good appetite).—Emaciation; ending in marasmus; of glandular tissues (mammæ, testicles, thyroid gland, &c.).—Œdematous swelling, even of the whole body.

25. Skin.—Skin rough, dry, or clammy, moist, and of a dirty yellow.—Tetters.—Furfur.—Panaris.—Itching and itching pimples on an old cicatrix.—Papulous eruptions tending to pustulation.

26. Sleep.—Agitated dreams.—Restless sleep with vivid or anxious dreams.—Nocturnal sweat.

27. Fever.—Shivering, even in a warm room.—Chill alternating with heat.—Cold feet all night.—Internal dry heat, with external coldness.—Profuse night-sweat.—Increase of bodily heat.—Fugitive heat.—Acid perspiration in the morning.—Pulse quick, small, and hard; weak, threadlike.—The pulse becomes much quicker as soon as one moves about.—Fever, with consumption.—(West Indian and African fevers; ague.)

Iodoformum.

Iodoform. CHI_3. Trituration. Solution.

Clinical.—Breast, pains in. Chancre. Cough. Delirium. Diplopia. Eczema. Enteric fever. Eye, affections of. General paralysis. Headache. Heart, affections of. Hydrocephalus. Locomotor ataxy. Mania. Meningitis. Tuberculosis.

Characteristics.—*Iodoform* has been proved by Underwood and Haines. To the symptoms experienced by them have been added the recorded effects observed on patients treated with it in old-school practice. Many cases of fatal poisoning have occurred. All the symptoms of acute meningitis have been produced in some instances, and this fact has been turned to good account by homśopathists. An excellent collection of the pathogenetic effects of *Idf.* will be found in *C. D. P.*, from which I take the following: A boy of 10 had *Idf.* thickly applied to a point in amputated limb at which the stitches did not hold well. On the third day he was sleepy, after a restless night with frequent sighing. The dressing was renewed, and on the same day, not having eaten anything since the day before, he had several attacks of vomiting, bilious and easy. All these symptoms increased during the next few days. The child was constipated and seemed to suffer from his head. Nights very restless; sleep interrupted by sighing and cries like those of meningitis. Drowsiness during day. Pupils unequally contracted; reacted slowly to light. He was perfectly indifferent and did not recognise those about him. Later, nightly agitation was replaced by tranquil delirium. Pulse rapid and small. On the sixth day the dressing was changed, on the seventh day the symptoms began to abate, and disappeared after the ninth. W. J. Martin (*Hahn. Month.*, xxxi. 799) cured two cases of tubercular meningitis with *Idf.* 2x. He put 4 grains in half a tumbler of water, and gave a teaspoonful every two hours. One case was that of a child, fourteen months old, and the symptoms were: Sleeps much; moves mouth

constantly as though chewing or sucking; bores head back and rolls it from side to side. Had been ill twelve days. Violent convulsions followed, face distorted, eyes squinting, head retracted, neck and back stiff, automatic movement of one arm and leg. The child was expected to die that night, but *Idf.* was now given, and improvement set in. Fever abated, and in one week all symptoms had passed away. Drowsiness is a marked feature. In cases of medicinal poisoning the symptoms sometimes come speedily, and sometimes only after a long period of medication, when they set in with great suddenness and intensity. For instance, a woman, 26, who had taken 42 grains of *Idf.* in eighty days, suddenly after a hot bath felt very dizzy and weak in the legs, felt unable to knit, and diplopia set in. Symptoms of mania followed; weakness, staggering on closing the eyes. For twelve days she was unable to walk alone. These symptoms having set in suddenly after a *hot bath* seems to show that the "< by heat, and by damp" of *Iod.* is reproduced in *Idf.* Treves has observed evidences of poisoning develop slowly and insidiously: Malaise, loss of strength and of appetite, occasional vomiting; and the patient is weighed down with a sense of depression; moderate fever, rapid pulse; drowsiness; complete hebetude; wasting. The external use of it has set up eczema. In one case, that of a soldier (*H. W.*, xxv. 292) who had had *Iodoform* applied to his arm, a scarlatina-like rash appeared, spreading from the arm over the body, and ending in desquamation. Scarlatina was actually diagnosed, but some doubt was raised, and, suspicion being thrown on the *Idf.*, a piece of silver was placed in the mouth. *Immediately a garlic taste was experienced* showing the presence of *Idf.*, which other tests confirmed. *Idf.* imparts a garlic odour to silver. The symptoms are < at night; by warmth; by motion; by touch; by riding in cars. > By uncovering.

Relations.—*Antidoted by:* Hep.; Sang. (skin). *Compare:* Iod.; Kali iod.; Merc.

SYMPTOMS.

1. Mind.—Elated.—Excitement interrupted by broken sleep.—Transient irritation interrupting somnolence.—Excitement, melancholia, hallucinations of sight and hearing.—Screams out, leaves her bed but falls down after walking a few steps, talks nonsense unconnectedly, is unable to hold anything, sees everything double.—Talkativeness excessive; fear of death with anguish; holds fast to any person near her bed, and bemoans her approaching death.—Drowsiness developing into perfect coma.—Suddenly began to behave as if out of his mind; answered questions unwillingly and hesitatingly.—Delusions, dressing himself in strange costumes; imagining himself a prodigious height and growing rapidly.—His ideas all of an exalted kind; imagined he had the best tenor voice in the world and proceeded to hire a large concert hall. (After insufflation of *Idf.* into tunica vaginalis; he was sent to an asylum and recovered in four months.).—Apathetic, amnesia for recent events, nightly restlessness, did not recognise persons, weak-minded.—Forgetful.

2. Head.—Confusion, with nausea.—Feeling as if he had been intoxicated the previous day.—Headache all night; vertigo on sitting up in bed.—Sudden giddiness.—Stitching pain in head.—Headache on waking.—Heaviness of head: on attempting to rise, with aching in vertex.—Head heavy at night as if he could not raise it from the pillow, heaviness next morning after waking, with intermittent pain in skull, < l. side.—Frontal pain; < descending stairs, with shooting in r. ear; neuralgic, < stooping.—Stitching in temples.—Neuralgic pains in nerves of temples, < r. extending to behind ears.—Pain in temples as from a weight.—Sticking in r. side of head.—Pain in occiput and l. lumbar region.—Itching of occiput.

3. Eyes.—Eyes bloodshot and painful.—Smarting and burning in eyes; smarting and stinging.—Bruised feeling in r. eye in morning.—Sensitive to light.—Objects appear tessellated and red, > rising.—Sees all persons and objects as through a veil.—Vision double.—Exquisite diplopia.—("In purulent ulcers of the cornea, and esp. *ulcus corneć serpens, Idf*. has no equal."—Sattler in old-school practice.)

4. Ears.—Sticking in r. ear; sticking, then fulness.—Ears feeling dry and feverish; and full.—Neuralgic pains in l. ear.—Dull hearing.

5. Nose.—Dryness in nose, and he complains that he cannot get any discharge from it; with fulness of membrane and constant snuffing.—Constant sensation as if smelling fumes of iodine.—Smell as of decaying leaves in a swamp.

6. Face.—Pains in malar-bones; in zygomatic muscles, < motion and bending forward.—Drawing in malar-bones, with pressing.—Stiffness of zygomatic muscles.—Twitching of facial muscles.—Aching in r. lower jaw, increasing to pain as from a weight.—Lips and throat dry; lips dry and stinging.

7. Teeth.—Sharp pain in upper teeth.—Aching in sound teeth; in decayed teeth, < upper and r., coming and going quickly, toothache in afternoon quickly changing to temples.—Teeth feel sore and too long.

8. Mouth.—Metallic taste.

9. Throat.—Stitching in r. side of throat.—Dryness of throat, with bitter taste; dryness, with rawness on swallowing.

11. Stomach.—Nausea; at times.

12. Abdomen.—Rumbling in abdomen.—Scaphoid abdomen.—Flatulent colic.—Cutting in abdomen.—Warmth in abdomen and rectum, with nausea and desire for stool.—R. inguinal region, sharp pain; cutting, with desire for stool; sore pain.

13. Stool and Anus.—Desire for a liquid stool.—Stool delayed; with feeling as if anus were drawn up into rectum.

14. Urinary Organs.—Urine very yellow; and smelling like saffron.—Albumen and casts in urine.

17. Respiratory Organs.—Aphonic disturbance of voice.—Cough from dryness of throat.—Cough on going to bed, with wheezing from mucus in throat.—Smothering sensation.—Respiration irregular; deep inspirations alternating with apnśa.

18. Chest.—Sticking in r. chest, extending to lower angle of scapula.—Pain in l. chest.—Sharp pain in r. chest.—Ulcerative pain in l. breast, to r. of nipple at night, then grasping at base of heart, next day aching in l. breast.—Soreness on taking a long breath.—Soreness in lungs.—Sore pain in apex of r. lung, on breathing sensation as if two ulcerated surfaces were in contact.—Feeling in lungs as from a heavy cold.—Feeling as if a weight rested on chest, preventing free expansion.

19. Heart and Pulse.—Sticking through heart.—Pulse rapid; 150 to 180.

20. Neck and Back.—Contraction of muscles of neck.—Bruised sensation in nape.—Spine sore, does not wish it touched.—Pain along spine; along r. side of dorsal vertebrć; in lumbar region, with weakness and straining.—Sharp pain in angle of scapula.

21. Limbs.—Pain in l. arm and l. leg, < lower half of tibia and fibula, then extending into foot.—Bruised feeling in l. arm and leg, as the pain increases the muscles feel ulcerated.

22. Upper Limbs.—Sticking in l. shoulder; and arm.—Pain in median nerve of l. arm.—Pain in l. humerus, with bruised pain in muscles around the bone.—Rheumatic pain in r. arm; < using it.—Bruised pain in l. arm in morning on touch.—Pain in l. elbow; in nerves of l. hand.—Sharp pain in nerves of l. hand.

23. Lower Limbs.—Pain along l. crural nerve.—Pain in inside of knees.—Neuralgic pain in l. knee.—Weakness of knees on ascending stairs.—Weakness < standing, with pain.—Rheumatic pain in gastrocnemii; rheumatism of flexor muscles of legs.—Cutting in l. ankle on walking in open air.—Sticking in r. instep.—Pain in l. foot, < walking.

24. Generalities.—Sudden dizziness; weak in the legs.—Body in constant spasmodic motion, twitching of facial muscles, deep inspirations alternating with apnśa; every movement made slowly and without energy; on closing eyes cannot stand or walk straight.—Constantly wearied and tired.—Rapid collapse ending in coma and death.—Sphincters paralysed.—Stiffness of certain limbs, convulsive

movements.—Screams as if suffering from meningitis; draws up legs a good deal; twitching and rolling.

25. Skin.—Red rash over loins, back of arms and elbows (from application to inflamed bursa patellć. The rash was cured by Sang.).—Fine eruption of macules, papules, and vesicles on face, neck, hands, and wrists; diffuse redness with śdema followed; worst on hands and between fingers, vesicles running together and epithelium separating; back of hands desquamated (in a nurse who had been applying it to a patient).—Horrible irritation all over body (from application to wound).

26. Sleep.—Sleepiness.—Intermittent sleepiness ending in coma.—Wakefulness.—Jerks and shocks in nerves when trying to sleep.—Restless sleep, full of dreams.—Restless, < after 2 a.m.—Sound sleep till l.30 a.m., then sudden waking, restlessness and sleeplessness till 4.30, then partially conscious sleep for an hour and a half, then heavy sleep and difficult arousing.—Confused dreams; of accidents.

27. Fever.—Susceptible to hot weather.—Heat at night, keeps laying off covers.—Temperature may be elevated to 104° or more.—Sweats easily from motion.—Sweat on head.

Ipecacuanha.

Cephaëlis ipecacuanha. N. O. Rubiaceæ. Tincture and trituration of the dried root.

Clinical.—Anæmia. *Asthma. Bronchitis*. Catarrh. Cholera. *Consumption*. Convulsions. *Cough*. Deafness. *Diarrhœa*. Dysentery. *Enteric fever*. Eyes, affections of. Gall-stone colic. *Gastric Ulcer. Hæmatemesis. Hæmorrhage*. Hæmorrhoids. Hysteria. *Intermittent fever. Menstruation, disorders of*. Opium habit. *Pregnancy, disorders of. Remittent fever*. Salivation. Tetanus. Toothache. *Vomiting. Whooping-cough*. Worm-fever. Yellow-fever.

Characteristics.—The well-known emetic effect of *Ipecacuanha Wine* gives a rough keynote for the use of *Ipec*. in homœopathy. Wherever ailments are associated with the presence of constant nausea *Ipec*. is very likely to be of use. The special form of nausea is a constant but unavailing desire to vomit; or immediately after vomiting there is, instead of relief, a desire to vomit again. With this there is a clean or not very dirty tongue. There is profuse salivation with the nausea. The nausea of *Ipec*. is oftenest met with in affections of the stomach and bowels, of the respiratory organs, and in fevers. In the stomach itself there is a symptom which is very characteristic of the remedy, a feeling "as if the stomach

were hanging down relaxed." There is disgust at the stomach for food; empty vomiting; vomiting of bile; of blood. No > by vomiting. The stomach disorder may be occasioned by rich food-pork, pastry, fruits, candy, ice-cream. The stomachic disgust of the remedy is depicted on the countenance, which expresses nausea. The corners of the mouth are drawn down. Blue rings round the eyes. Sometimes the mental state corresponds: "Moroseness and contempt for everything"; "Disdainful humour." The irritability of the elders becomes in children crying and screaming. Another mental symptom is "full of desires they know not for what." *Ipec*. is a botanic relative of *China*, and it is also an antidote to the latter; (it is also closely allied to *Viola odorata*). Perhaps the relationship of *Ipec*. to *China* may have something to do with its large sphere of usefulness in intermittent fever. Jahr recommended that in all cases of intermittents in which no other remedy is particularly indicated *Ipec*. should be given to begin with. It will either cure the case or bring out more definitely indications for another remedy. I have frequently found this advice useful; and it occurs to me that as most intermittents have been treated with quinine it is through its antidotal properties that *Ipec*. exerts some of its good effects. It has a strongly marked periodic action. A special indication for it is: Nausea through all the stages. Other indications are: "Stages completely mixed up short chill, followed by long fever." *Ipec*. has many bone pains, in the head and elsewhere. Pains as if bones were all torn to pieces. *Ipec*. is given as an expectorant in old-school practice, and is supposed to act by its nauseating properties. But homœopaths have proved that nauseating doses are neither necessary nor desirable. The cough of *Ipec*. is dry, spasmodic, constricted, asthmatic. "Violent degree of dyspnœa, with wheezing and great weight, and anxiety about the precordia." "Threatened suffocation from accumulation of mucus." In whooping-cough a characteristic is the spasmodic rigidity of the patient. "Child loses breath, turns pale, stiff, and blue; strangling with gagging and vomiting of mucus; bleeding from nose or mouth." The great keynote, subject to slight variations, is─mental depression with tissue irritability. The tissue irritability of *Ipec*. is severe and urgent, but superficial; that of *Ars*., deep-seated, diffuse, and burning; that of *Ferrum* involves tissue, as with *Ars*., but is mostly painless (Cooper). *Ipec*. is a medicine of great importance in hæmorrhages. The blood is bright red and the flow steady. A grand keynote for *Ipec*. in hæmorrhages (whether of lungs, bowels, uterus, or other parts) is *nausea with the hæmorrhage*. Guernsey thus describes the effect of *Ipec*. in the female sexual sphere, in which the hæmorrhagic power of the remedy is of the highest importance: "Threatened abortion; often with a sharp pain around the umbilicus, which runs downward to the uterus, with constant nausea and discharge of bright red blood; discharge of blood before the proper period; metrorrhagia, often after confinement, which is heralded by a low pulse, nausea, &c.; there is a steady flow of bright red blood, which may soak through the bed to the floor, or may run over the foot of the bed. (Where there is this *steady flow of bright red blood* give *Ipec*., and do not resort to applications, manipulations, &c.) Menstruation too early and too profuse; deficient labour pains, and with the pains there is a great deal of suffering, but no good is accomplished, the suffering is

caused by the above-named pain about the umbilicus, moving to the uterus." Some of the pains of *Ipec*. run from above down; some from left to right (cutting pain in abdomen). There is a remarkable headache "as if bruised, all through the bones of the head and down into the root of the tongue." Nausea is generally an accompaniment. Brain feels bruised, pain piercing to roots of teeth. There is also a sick headache originating in the stomach, the nausea preceding the headache and persisting all through. Teste has used the remedy with good effect in "constrictive and contusive headaches seated in left parietal region, coming on every day at 11 a.m., increasing gradually until the pain became intolerable, then decreasing in the same manner" and ceasing completely at 2 p.m. Another sphere in which *Ipec*. has shown great curative power is the eye. According to Allen granulations of the lids have been cured by the instillation of the dilutions. Also subacute inflammation of the cornea, with intense pain and great photophobia. Pustular conjunctivitis, especially in children. Inflammation with tearing pain and gushing of tears. Violent neuralgia of eyeballs, shooting in the head, with gushes of tears, nausea, &c. Dr. Nancy T. Williams (*H. R*., xi. 65) has cured several cases of gall-stone colic with *Ipec*. 6. The relief was prompt and lasting. On the strength of this symptom of Hahnemann's, "external chilliness with internal heat," Mahony gave *Ipec*. 200 to an army sergeant, 49, invalided for aneurism, who had this symptom while recovering from a catarrhal attack: *coldness of hands and feet not perceptible to himself. Ipec*. soon removed this. (*Med. Adv*., xxvi. 110). J. R. Haynes (quoted *B. J. H*., xxxvii. 203) uses *Ipec*. as an antidote to the *Opium* and *Morphia* habit. He gives five drops of *Ipec*. Ø for every grain of *Morphia* (or its equivalent in *Opium*) which the patient has been accustomed to take. When a definite sequence is observed in the order of occurrence of symptoms this is of great practical importance. Woodward (*Hahn. Adv*., May, 1900, p. 278) has noted in twenty-three provers the symptoms of *Ipec*. develop in this order: (*1*) Gastric; (*2*) Respiratory; (*3*) Spinal; (*4*) Genito-urinary; (*5*) Cutaneous. In several instances, however, the cutaneous symptoms appeared before the genito-urinary. Owing to its immediate expulsive effect, given internally, upon the mucous membrane, its influence upon the skin has not been sufficiently considered. Mixed with oil, powdered *Ipec*. has been used to vesicate the skin; and, diluted, the tincture is used for the bites of insects, bee- and wasp-stings, &c. It produces violent irritation of the skin, and between the acts of vomiting an uncontrollable desire to scratch is often felt in those under the influence of material doses. Cooper cured an immense uterine fibroid where persistent painful irritation of the skin with constant retching and vomiting, made worse by eating, constituted the prominent symptom. Frightful irritation inside and out, especially vaginal, with thick leucorrhœa, and a feeling of desperation, yields to *Ipec. Ipec*. has been used locally and internally for malignant pustule and anthrax, in which disease Dr. Edwin Muskett considers it specific (*Alleg. Hom. Zeitung*., No. 23, Dec., 1888). In certain forms of peripheral neuritis it deserves more consideration than has hitherto been allotted to it (Cooper). In consequence of its proved cholagogue action, it constitutes nowadays a very frequent constituent of allopathic pills. *Ipec*. has much of the sensitiveness of *Chi*.—There is < by touch.

Over-sensitiveness to heat and cold. < In winter and dry weather. < In warm, moist wind (catarrh, asthma, &c.). Chill is < in warm room; by external heat. Summer heat or hot room = fainting. Drinking > chill. Cold water > spasmodic cough. Cold drinks or ice-creams = colic. < Periodically; by vomiting; by coughing; by suppression of eruptions. < From veal from rich food (pork, fat, pastry); from ices.; lemon-peel; raisins salads, < By eating. < From abuse of quinine. < By motion. > By rest; by pressure; by closing eyes. Ipec., according to Hahnemann, is a short-acting medicine. It is specially suited to stout persons of lax fibre; to fair people; to women and children to emphysematous persons; to persons who have a history of epistaxis or other blood-loss.

Relations.—*Antidoted by:* Arn., Ars., Chi., Nux, Tab. *It antidotes:* Alum., Apis, Arn., Ars., Chi., Copper fumes, Dulc., Fer., Lauro., Op., Sul. ac., Tab., Ant. t. *Followed well by:* Ars. (cholera infantum; debility; colds; croup; chills); Bell.; Bry.; Cadm. s. (yellow fever); Calc., Cham., Chi., Cupr., Ign., Nux, Pho., Puls., Sep., Sul., Ant. t., Tab., Ver. *Complementary:* Cupr. *Compare:* Cough after eating, Nux; (*whilst* eating and in open air, Calc.). Grass-green stools, Arg. n. Expression of nausea, Æthus., Ant. t. Bruised headache, Ptel., Ver. (bruised feeling here and there in brain). Gastric disturbance from rich food, Pul. (but Pul. has foul tongue, Ipec. clean; with Pul. symptoms last only whilst food is in stomach, Ipec. when stomach is empty). Stomach relaxed, Staph., Lobel., Tab. Asthma, Cupr. (spasmodic element predominates), Lob. (with a weak sensation in epigastrium spreading up into chest. Whooping-cough with rigidity, Cina (clucking sound down œsophagus as child comes out of paroxysm; grinds teeth), Cupr. (spasms of flexors predominate). Vomiting, Ant. t. (Ipec. has more nausea, Ant. t. more vomiting and retching; Ipec. has clean or slightly-coated tongue, Ant. t. thickly-coated white; both have vomiting after a meal, after acids and after coughing). Pains fly from left to right. Lach. (side to side, Act. r.; right to left, Lyc.; with nausea, Ipec.). Chest affections from retrocession of measles rash, Bry. Asthma, œdema, Linum n. Sweetish, bloody taste, Berb. (also bitter taste; Berb. mouth is pasty or sticky, Ipec. more generally clean; Berb. has dry mouth, Ipec. increase of saliva and smarting in mouth and tongue).

Causation.—Vexation and reserved displeasure. Injuries. Suppressed eruptions. Quinine. Morphia. Indigestible foods.

SYMPTOMS.

1. Mind.—Cannot endure the least noise.—Cries and howling (of children).—Anxiety and fear of death.—Moroseness, with contempt for everything.—Disdainful humour.—Desire for a number of things, without knowing exactly which.—Irritability, and disposition to be angry.—Ailments from mortification or vexation, with indignation.—Impatience.—Slowness of conception.

2. Head.—Vertigo when walking, and when turning round, with tottering and staggering.—Pain, as of a bruise, in all the bones of the head, as far as the root of the tongue (with nausea and vomiting).—Headache as of a bruise of the brain and skull, which pierces through all the cranial bones into roots of teeth, with nausea.—As if brain compressed.—Attacks of headache, with nausea and vomiting.—Tearing in the forehead, excited or aggravated by being touched.—Lancinating headache, with heaviness of the head.—Stitches in the vertex (or forehead).—Painful pressure on the forehead.—Pain in the occiput and nape of the neck.—Hydrocephaloid.

3. Eyes.—Eyes red and inflamed.—Neuralgia of eyes, esp. r., extended to nose and mouth; in evening biting and pressure in eyes; he was awakened between 2 and 3 a.m. by tearing pains in eyes, esp. r., radiating to forehead and driving him out of bed, < from strong light, accompanied by chilliness, heat, sweat.—Eyelids closed, painful expression of face; the pillow was soaked with tears which flowed freely on opening r. eye.—Twitching of l. upper lid with three black spots before sight on lifting lid.—Scrofulous ophthalmia, pain in forehead and temples, photophobia and corneal ulceration.—Conjunctiva rose-coloured; cornea opaque; sight gone from r. eye, could not read, evening, from being dazzled by candle-light, which appeared multiplied five or six times; next morning fiery iridescent rings before l. eye, which had been less affected.—Humour in the corners of the eyes.—Trembling of the eyelids.—Twitching of the eyelids.—Hardened mucus in the external canthi.—Pupils dilated.—Confused sight.

4. Ears.—Coldness and chilliness of the ears (during the febrile heat).

5. Nose.—Epistaxis.—Loss of smell.—Coryza, with stoppage of the nose.

6. Face.—Pale, earthy, or yellowish colour of the face, which is bloated, with livid circles round the eyes.—Convulsive startings of the muscles of the face.—Lips covered with small aphthæ and eruptions.—Rash in the face.—Fine branny eruption on face, with or without irritation.—Pityriasis.—Pain, as from excoriation, in the lips.—Convulsive startings of the lips.—Redness of the skin round the mouth.

7. Teeth.—Odontalgia by fits, as if a tooth were being extracted.—Toothache > while eating; < afternoon and night.—Toothache < by day; pain every few minutes with a jerk radiating into r. temple and nose, as if tooth being extracted.—The neuralgic pains of *Ipec*. and of *Viol. od*. often make for r. temple (Cooper).—Dentition.

8. Mouth.—Painful sensibility of all parts of the mouth.—Smarting in mouth and on (margins of) tongue.—Copious secretion of saliva.—Constantly obliged to swallow saliva.—Saliva runs from mouth on lying down.—Tongue: clean; white or yellow; pale.

9. Throat.—Sore throat, during deglutition, as from swelling of the pharynx.—Difficult deglutition, as from paralysis of the tongue and of the gullet.—Spasmodic contractive sensation in the throat.—Fauces, stinging, rough, sore, and dry.

10. Appetite.—Insipid and clammy, or bitter taste, esp. in the morning.—Sweetish taste, as of blood in the mouth.—Desire only for delicacies and things sweetened with sugar.—Want of appetite; the stomach feels relaxed.—Bad effects from eating pork, veal, &c.—Gastric catarrh from indigestible food, or from ice-cold things.—Adipsia.—Beer has an insipid taste.—Tobacco smoke is nauseous, and causes vomiting.—Great repugnance and dislike to all food.—Water-brash.

11. Stomach.—Nausea, as if proceeding from the stomach, with copious salivation, violent itching in the skin, and empty risings.—Retching, esp. after drinking anything cold, or after smoking.—Vomiting of drink, and of undigested food; or else of bilious, greenish, or acid, or mucous, gelatinous matter, sometimes immediately after a meal.—Vomiting of blood.—Vomiting, with sweat, heat, fetid breath, and thirst.—Vomiting with diarrhœa.—Vomiting on stooping.—Vomiting of black matter, like pitch.—Sensation of excessive uneasiness in the stomach and epigastrium.—Horrid, indescribable pain and sick feeling in the stomach.—Sensation, as if the stomach were empty and flaccid.—Swelling in the region of the stomach.—Pinching round the epigastrium and in the region of the hypochondria.—Pressure on the stomach with vomiting.

12. Abdomen.—Cutting and pinching in the abdomen (as from a hand, each finger sharply pressing into intestines), < in the highest degree by movement, > by repose.—Pinching pain in both hypochondria, and in region of pit of stomach.—Pain, as from excoriation in the abdomen.—Colic, with agitation, tossing, and cries (in children).—Colic, with cramp-like pains.—Incisive pains, in the umbilical region, with shuddering.—Flatulent colic, with frequent diarrhœic stools.—Colic of strangulated hernia.

13. Stool and Anus.—Loose evacuations, like matter in a state of fermentation (like yeast).—Obstinate diarrhœa.—Loose evacuations, greenish, or yellow- (lemon-) coloured, of a putrid smell, or sanguineous, bilious, and mucous.—Stools: grassy-green; of white mucus.—Loose serous evacuations.—Diarrhœa, with nausea, colic (and vomiting).—Autumnal diarrhœa; much griping about the navel.—Diarrhœa of children inclining to dysentery.—Dysenteric evacuations, with white flocks, and followed by tenesmus.—Evacuation of black matter like pitch.—Hæmorrhoids bleed profusely.—Itching of anus.

14. Urinary Organs.—Turbid urine, with sediment like brick-dust.—Red and scanty urine.—Unsuccessful urging to urinate.—Sanguineous urine, with pains in the region of the bladder, and of the navel, burning sensation in the urethra,

inclination to vomit, and pain in the loins and in the pit of the stomach.—Discharge of pus from the urethra, with biting pain.

16. Female Sexual Organs.—Troublesome sensation, as of bearing down towards the genital parts, and towards the anus.—Menstruation too early and too profuse.—Metrorrhagia, with discharge of bright red and coagulated blood, with oppressed breathing.—Metrorrhagia, much depression and pain in r. half of head; soreness about womb and pain in l. hip and back; weight across forehead, and phlegm in back of throat, causing sickness; skin yellowish and very irritable, dark round eyes (cured).—Steady flow of bright red blood after confinement.—In labour and threatened miscarriage pains fly from l. to r., with nausea.—Catamenia premature, and too thick.—Stitches from navel to uterus.

17. Respiratory Organs.—Cough, esp. at night, with painful shocks in the head and stomach, and with loathing, retching, and vomiting.—Cough catching the breath, even to suffocation; during the attacks the child gets quite stiff, its face blue. It is excited by a contractive tickling sensation extending from upper part of larynx to lowest part of bronchial tubes; < on walking in cold air; on retiring; in morning and evening; on taking a deep breath. Accompanied by cold, as if the navel would be torn out; pains in abdomen like strangury; heat in head and face. The cough causes vomiting without nausea.—Rattling noise in the bronchial tubes when drawing breath.—Dry cough, excited by a contractive tickling in the larynx (particularly in the upper part), extending to the extremity of the bronchia, esp. when lying on l. side.—Cough, which resembles whooping-cough, with bleeding from the nose and mouth, and vomiting of food.—Cough, with spitting of blood, provoked by the least effort.—Spasmodic cough, dry, shaking, with fits of suffocation, stiffness of the body, and bluish face.—Cough as from vapour of sulphur, with expectoration of blood with mucus in the morning.—Suffocative cough in the evening; continuous cough with perspiration on the forehead, shocks in the head, retching and vomiting.—Anxious and short respiration.—Quick, anxious breathing.—The breath smells fetid.—Suffocative attacks in the room; > in the open air.—Whooping-cough; every fresh attack sets in with a long-drawn, difficult, howling, sighing inspiration.—Spasmodic asthma, with contraction of the larynx, and panting respiration.—Sighing respiration.

18. Chest.—Oppression of the chest, and shortness of breath, as if dust had been inhaled.—Loss of breath on the least movement.—Spasms in the chest.—Pain, as of excoriation in the chest.—Palpitation of the heart.—Red itching spots on the chest, with burning after scratching.

20. Neck and Back.—Swelling and suppuration in the throat-pit.—Cramp pain between the scapulæ during motion.—Tetanic stiffness and bending of the back, backwards or forwards.

22. Upper Limbs.—Coldness of one hand while the other is hot.

23. Lower Limbs.—Convulsive startings of the legs and of the feet (not in the upper limbs).—Pain, as from dislocation, in the hip-joint, when sitting.—Nocturnal cramps in the muscles of the thigh, with lumps in the thighs.—Violent itching in the calves of the legs.—Ulcers, with black bases on the legs, and on the foot.

24. Generalities.—Pain, as from a bruise, in all the bones.—Tingling in the joints, as when numbed.—Fits of uneasiness, with dislike to all food, and excessive and sudden debility.—Nausea, with almost all ailments.—Bleeding from different organs; hæmorrhages from all the orifices of the body (bright red).—Too great sensibility to cold and to heat.—Tetanus; spasms and convulsions of different kinds; sometimes with bending backwards of the head, and distortion of the features; or with loss of consciousness; face pale and bloated, eyes half closed, convulsive movements of the muscles of the face, lips, eyelids, and limbs, at times with cries, inclination to vomit, and rattling of mucus in the chest.—In morning, on awaking, anxious agitation of the blood, as if he had been subjected to a great heat, or had had profuse perspiration, or had awakened out of an anxious dream, though the skin was neither hot nor moist; at same time a heaviness in head as if brain were compressed.—Dropsy of internal parts.—Chlorosis, menses scanty; skin and mucous surfaces pale, anæmic.—Excessive emaciation.

25. Skin.—Miliary eruptions, violent itching in the skin (of the thighs and of the arms).—During the nausea the patient is forced to scratch himself, until relieved by vomiting.—Rash (in lying-in women); suppressed rash.

26. Sleep.—Sleeplessness.—Sleep, with the eyes half open.—Agitated sleep, with groans.—During sleep, starting of the limbs.—Frightful dreams, with frequent starts and terror during sleep.

27. Fever.—Pulse very frequent, but at times scarcely perceptible.—Shuddering, with coldness in the limbs and in the face.—Chill of short duration and soon changing to heat.—Coldness, esp. in the hands and feet, with cold and copious perspiration on those parts.—External chilliness with internal heat.—Aggravation of the shivering from external heat.—Internal chilliness, as if under the skin, < from heat.—Before the shiverings, uneasiness, stretching, and lassitude, with cold sweat on the forehead, or coldness, or shivering, in the ears.—Sudden heat in a room, with sweat and vertigo.—Thirst during the shivering or coldness.—Fever, manifesting itself by much shivering, with little heat, or by much heat with little shivering; or with nausea, vomiting, and other gastric symptoms, tongue clean or loaded, and constrictive oppression of the chest.—Fever in the evening, with great inquietude, dry and troublesome heat, burning in the palms of the hands, and nocturnal sweat.—After a short chill dry heat, with parchment-like skin.—During the heat no thirst.—Perspiration smelling sour (with turbid urine).—Intermittent fever; nausea and vomiting predominate; slight chills are followed by much heat, with thirst and no subsequent perspiration, consequent upon the abuse of quinine; slight chilliness without thirst, afterwards violent heat, with thirst, nausea and vomiting, dyspnœa,

stitches in the chest, finally copious perspiration.—Damp coldness of the hands and feet.

Convolvulus Duartinus.

Ipomśa bona-nox. Morning Glory. N. O. Convolvulaceć. Tincture of Flowers.

Clinical.—Eye, inflammation of. Headache. Rheumatism. Vertigo.

Characteristics.—*Convol. d*. was proved under Mure, and some symptoms that are peculiar have been recorded: Reveries in daytime. Numbness in limbs. Dreams of dead persons. Symptoms are < in morning and > after cold bath.

SYMPTOMS.

1. Mind.—Moral weakness.—Reveries in the daytime.

2. Head.—Vertigo with faintness.—Burning in frontal region, ceasing after a cold bath.—Pain in frontal region with heat at root of nose.—Pain in l. temple (corresponding to inflamed l. eye).

3. Eyes.—Inflammation of l. eye.

8. Mouth.—Toothache.—Swelling of gums.—Tongue feels swollen.

9. Throat.—Heat and dryness at anterior and upper part of śsophagus.

12. Abdomen.—Pain in abdomen with internal heat.—Violent colic with drawings.

13. Stool.—Constipation.

14. Urinary Organs.—Red urine.—Yellow sediment in urine.

22. Upper Limbs.—Numbness of arms,< when hanging down.—Pains in l. shoulder; in l. wrist.—Numbness of r. index and middle fingers.

23. Lower Limbs.—Lancinating pain in r. knee.—Pain fore part of l. leg for four days.—Deep-seated pain in calves.

26. Sleep.—Drowsiness in daytime.—Dreams: about quarrelling; about dead persons; falling out of his front teeth; of flying along a lighted street; appearance of a ghost; wakes with a start.

Iridium.

The metal. Ir. (AM. 192.5). Trituration.

Clinical.—Anæmia. Axilla, abscess in. Bronchitis, chronic. Cramps. Gout. Hemiplegia (r.). Neuralgia. Numbness. Rheumatism. Spinal paresis.

Characteristics.—*Iridium* is a rare metal of the *Platinum* group found in platinum ore. It is one of the heaviest substances known. A. J. Tafel took gr. xx. of 3rd trituration. He experienced a number of symptoms, all within two hours of taking the dose. Prominent among them were: A sensation of numbness; in ears and throughout the body. A feeling as if the eyes were being affected from below upward. A feeling as of a triangle on face, the base formed by the two malar-bones, the apex in the vertex. The numbness, and a cramp-like contraction in right calf, show a resemblance to the action of *Plat. Irid*. needs and deserves a fuller proving. The majority of symptoms appeared on the left side. In the *Revue Hom. Française* of February, 1892 (translated *New York Med. Times*, November, 1892), M. Laboucher gave an account of this remedy and compared it with others. He does not mention how the symptoms were obtained. They will be found in the Schema marked with "(L)" after each. Those unmarked are Tafel's. Laboucher says it is "admirable in all cases of anæmia"; is better than *China* for the aged and persons exhausted by disease; for puny, weak-limbed children, and those who grow too fast. He mentions a peculiar alternation of symptoms or reaction. Painful weakness of lower limbs and renal region, followed by a favourable reaction—self-confidence and facilitated mental labour. It shares with *Osmium*, *Palladium*, and *Platinum* a place in the treatment of rheumatism and gout. Laboucher gave *Irid*. in the 4th attenuation, *Pallad*. in the 3rd, *Plat*. in 2nd, and *Osm*. in the 1st.

Relations.—*Compare:* In uterine diseases, Aur. and Aur. mur. (Laboucher says Irid. is superior to both and to Osm. in uterine tumours). In exhaustion after disease, Chi.

SYMPTOMS.

1. Mind.—Weariness in back and limbs followed by favourable reaction; feeling of *aplomb* and self-confidence (L).—Facilitates mental labour (L.).

2. Head.—Pains in middle of occipital bone.—Neuralgia of head, esp. temples; drives one crazy (L.).—Open air and noise seem to bruise the head.

3. Eyes.—Feeling as if eyes were being affected from below upward.

4. Ears.—Feeling of numbness in ears and throughout the body lasting but a short time.

6. Face.—Pain in l. malar-bone, a kind of stinging; from this place a kind of warmth spreads over whole face; the pain is also felt in r. malar-bone like a pressure.

8. Mouth.—Increased saliva with sensation in malar-bones, which is more perceptible on l. side.

11. Stomach.—Cramps in stomach.

16. Female Sexual Organs.—Swelling of ovaries without dropsy (L.).—Corroding and suppurating ulcers of uterus; bluish patches on uterus (L.). Uterine tumour with suppuration (L.).—Piercing, gnawing pains in breasts (L.).

20. Neck and Back.—Painful weakness of lower limbs and weakness in region of kidneys, followed by favourable reaction (L.).—Spinal paresis followed by greatly increased strength (L.).

21. Limbs.—Neuralgia of the limbs.

22. Upper Limbs.—Abscess in axilla, arrests suppuration (L.).—Transient pain in inner side of wrists, < l., also on bend of knee-joint.—Painful deep red glossy swelling of thumb (L.).—Pinching pain in wrists and fingers (rheumatic paralysis) (L.).

23. Lower Limbs.—Formication, scraping and smarting pains in hip-joints; sciatica preventing rest in bed (L.).—Transient pain in bend of knee-joint.—Pressing in anterior portion of l. thigh in middle of upper half, followed by pressing in groin.—While walking, feeling of tension in both thighs, < l.; then a dislocated feeling in l. hip-joint, and a dull pain tending towards l. buttock.—Cramp-like contraction in r. calf and middle of sole of foot.

24. Generalities.—R. hemiplegia when temperature of skin remains normal (L.).

Iris Florentina.

White flag. Orris-root. N. O. Iridaceæ. Tincture of fresh rhizome.

Clinical.—Convulsions. Delirium. Diarrhœa. Headache. Hemiplegia (r.).

Characteristics.—Powdered orris-root has been used as an application to the hair, and in some young girls has produced violent symptoms. Headache and giddiness occurred on waking in the morning. Complete paralysis of right side. In one case convulsions and delirium, from which complete recovery did not take place for

three months. It gives an odour of violets to the breath, and communicates to vinegar a flavour of raspberries, hence is used in manufacture of Raspberry Vinegar.

Relations.—*Compare:* Verat., Sabad., Iris v.

SYMPTOMS.

1. Mind.—Delirium and convulsions (lasting three months).

2. Head.—Giddiness and violent headache, on awaking in the morning.

9. Throat.—Pain and heat in throat as after cantharides.

11. Stomach.—Disposition to vomit.

13. Stool.—Diarrhœa.

14. Urinary Organs.—Difficult urination.

20. Neck.—Redness of neck.

24. Generalities.—Convulsions (recurring for three months).—Complete paralysis of r. side (lasting five hours).

26. Sleep.—A kind of sleepiness.—Uneasy sleep.

Iris Fœtidissima.

Iris fœtidissima. N. O. Iridaceæ. Tincture of root.

Clinical.—Headache. Hernia.

Characteristics.—*Ir. fœt.* was proved under Berridge's direction. One prover, Dr. Croker, chewed a piece of the root; another took the tincture; one experienced symptoms from potentising the drug, and later took the 14th dilution. The rest took very high potencies. The prover who chewed the root experienced a burning feeling in mouth and fauces extending to stomach, and not relieved by cold water or anything else. A number of pains were felt in the head.

Relations.—*Compare:* The Arums and the other Irises.

SYMPTOMS.

1. Mind.—Makes mistakes in writing and speaking; puts "right" for "left" and *vice versâ*.

2. Head.—Light-headed; staggers to l.—Great weight on vertex when the pain in the stomach (burning) occurs; cannot sit to his office work, in the morning; pain at vertex sometimes reaching down to over eyes.

8. Mouth.—Great burning feeling in mouth and fauces, extending into stomach, not > by cold water or anything else.

11. Stomach.—Burning as from vitriol in stomach.—Pain in r. groin as if inguinal hernia would protrude when walking (14th dil.).

Iris Germanica.

Blue Garden Iris. (Rhizome also used to make Orris-root.). N. O. Iridaceæ. Tincture of fresh rhizome.

Clinical.—Diarrhœa. Dropsy. Freckles.

Characteristics.—The fresh root of *Ir. German., I. Flor*., and our common yellow Iris, *I. Pseudo-acorus*, have been much used in dropsies and are violently cathartic. The juice is also used for the removal of freckles from the skin.

Iris Tenax.

Iris minor. ("Grows very luxuriantly in the clay ground and on the hillsides" of Oregon. The fibre of the plant is so strong that it is used by Indians for making cord, and weaving into bags, &c.). N. O. Iridaceæ. Tincture of the lower or bulbous stems. Tincture of whole plant.

Clinical.—*Appendicitis*. Fever. Headache. Home-sickness. Intermittents. Mania. Perityphlitis. Sleeplessness. Stomatitis. Vomiting. Xerostoma.

Characteristics.—Dr. George Wigg, of Portland, Oregon, proved *Iris tenax* in the latter part of 1885 (*Med. Adv*. xvii. 235, *Amer. Hom*., April, 1888; *H. W*., xxxv. 364). He published the proving under the name of *Iris minor*. This, as Heath has shown, is a local name only, its true botanical name being *Iris tenax* (*H. W*., xxx. 332). Dr. Wigg (æt. 44) took gtt. v. to 1x. of the strong tincture. A female prover

took repeated doses of *Ir. t.* 2x and 3x. The order in which the symptoms occurred in Dr. Wigg's case is roughly as follows: In fifteen minutes burning in mouth and throat. This passed off in the night, but was intensified by each fresh dose. After the second dose, taken early next morning, the burning was reproduced, followed by dry mouth and absence of saliva in two hours. Then came the mental gloom and home-sick feeling, increasing towards midnight; headache in temples; toothache; sinking, all-gone feeling; itching and burning of scalp; abdominal pains; diarrhœa; desperate exhaustion compelling him to keep in bed; hard chill followed by rise of temperature. The acute pains in the bowels passed off in the night, but for fourteen days there was a tender spot over the ilio-cæcal region, and the bowels did not act normally for ten days. The symptoms which Dr. Wigg considers most remarkable are: (*1*) Absence of saliva with dry mouth. (*2*) Gloomy, cast-down, home-sick feeling. (*3*) Burning in eyes without tears. (*4*) Pain in one tooth only (second upper molar). (*5*) Itching and burning of scalp without eruption. (*6*) Chill at 2 p.m. (he never had a chill before or since). (*7*) Painful spot in ilio-cæcal region and the length of time it lasted. It resembles *Ir. vers*. in producing bilious vomiting; burning sensations; and low spirits. In the female prover it produced a strange sensation in her mind: she thought some of her friends had died; the next day she was unusually cheerful. The most remarkable symptoms were, no doubt, the "fearful pain in the ilio-cæcal region"; and the "hard chill at 2 p.m." These indications led to the cure of the two following cases: (*1*) Miss X, school teacher, had for several years a pain beginning in right eye, extending thence to right half of head. When the pain was most severe she vomited a quantity of green bile. When she did not vomit she had nausea, and a chill between 2 and 3 p.m. The pain passed off in sleep at night. It always began on Saturday, before rising. *Ir. t.* 30x every six hours, commencing Friday morning, was given, and quickly cured after *Ir. v., Alo., Act. r.*, and *Kali bi*. had failed to give much relief. The relief from *Ir. t.* was so marked the patient thought she had received morphine. (*2*) Mr. E., after walking thirty miles over a mountainous country in August, while in a state of perspiration drank a large quantity of buttermilk. Four hours after he was taken with fearful pain in ileo-cæcal region, which caused a deathly sensation at epigastrium. Finally he vomited much dark green bile without relief. An old-school doctor was called in and diagnosed obstruction with probable death in four days. He lingered three weeks and was brought home to Portland, where Dr. Wigg saw him, and diagnosed typhilitis, badly treated. Pressure on the ileo-cæcal region caused death-like sensation at stomach-pit. Pain continued until he vomited a cupful of dark green bile. Somewhat constipated. Under *Ir. t.* 15x every three hours, he commenced to improve at once, and in two weeks was back at his business. Dr. Wigg noticed the all-gone feeling particularly on standing up, on waking in the morning. Cold water did not > burning in mouth and throat. Cold pillow > pain in temples. > By sucking in cold air (burning in mouth and throat). Hot applications > pain in bowels. Cup of tea > vomiting. Sweet oil and camphor > burning in mouth and throat. Many symptoms appear or are < on waking.

Relations.—*Compare:* (effect on cæcal region) Arn., Ars., Lach., M.; (headache) Gels., Gratiol., Ir. v., Kali bi., Ign. (Burning not > by cold) Caps.; (home-sickness) Caps., Phos. ac.; (xerostoma) Ar. t.

SYMPTOMS.

1. Mind.—Gloomy, cast down; home-sick feeling.—Strange sensation in her mind, thought some of her friends had died.—The impression was so strong that she sat down and had a good cry (after sixteenth dose of *Ir. t.* 2x. gtt. vi., taken every two hours).—Next day unusually cheerful.—(On a later occasion the same prover took out of a tumbler of water, in which a teaspoonful of pellets of *Ir. t.* 3x had been dissolved, one teaspoonful every hour; the prover, who did not know what she was taking, said, on the afternoon of the second day of taking it: "I am going to lose my mind. I feel just as I did when you gave me that Wild *Iris*." Attempts to persuade her she was all right only < the despondency. She could not keep from crying. Next day as cheerful as ever.).—At 11.40 a.m. courage all gone, could not help crying.

2. Head.—Pain returning weekly for several years, commencing in r. eye and involving r. half of head; vomits green bile when pain at height; if no vomiting has nausea and a chill between 2 and 3 p.m. (cured with 30x).—Headache in both temples with vomiting of green bile.—Awoke 5 a.m. with dull aching in both temples and itching in eyes; could not get to sleep again but kept turning the pillow as the cool side > the pain.—Itching and burning of scalp, on awaking; brushed head well with stiff brush, five minutes after whole scalp burning as from cayenne pepper; at same time eyes began to smart, but did not water (burning lasted eleven hours).

3. Eyes.—Itching in both eyes; with aching in temples.—Smarting burning in eyes, after brushing scalp; it was as if he had been near some one scraping horse-radish; no lachrymation (lasted eleven hours).

8. Mouth.—Pain in l. upper second molar, feeling too long; kept him awake till 2 a.m.; awoke 6.15, still in pain; at 10.25 the pain was worst; neither hot nor cold water relieved, nor camphor nor chloroform.—Thinking there was an ulcer at the root he had it extracted.—There was no ulcer, though the tooth was decayed.—Burning in mouth and throat, which increased, mouth and throat seemed on fire; not > by cold water; > after midnight, > by sweet oil and camphor; > by sucking in cold air; compelling him to keep swallowing every, second or two.—Mouth dry, without saliva.

9. Throat.—Burning in throat and fauces as if on fire, not > by cold water *fearful* burning in throat, fifteen minutes after taking 25 drops, pain and burning desire to swallow every second or two.—Burning in throat as from *Capsicum*, > by sucking in cold air.

11. Stomach.—On standing up, in the Morning, after sleep, "gone" feeling caused him to vomit a quantity of greenish yellow slime, not bitter; > by drinking a cup of tea.—Deathly sensation at stomach-pit.—Vomiting of very green bile.

12. Abdomen.—Cutting in abdomen, more severe r. than l.—Fearful pain in ileo-cæcal region.—Pressure in ileo-cæcal region causes deathly sensation at stomach-pit.—For fourteen days there was a painful spot over ileo-cæcal region, as if an ulcer, the size of a shilling, might be inside.—Pain in bowels increasing, headache in both temples; vomiting green bile; hot applications > bowels, and at midnight a copious evacuation occurs.

13. Stool.—At midnight a copious evacuation (following pain in abdomen).—Constipation; bowels did not act normally for ten days after the proving.

14. Urinary Organs.—Urine brownish.—At 11 a.m. passed brown urine, and continued to do so every fifteen minutes for two hours.

24. Generalities.—So exhausted cannot leave bed in the morning though pains have moderated.—Felt ill all over at 2 p.m. and went to bed.

26. Sleep.—Could not sleep and became more and more despondent.—Fell asleep at 1, woke at 5 with dull aching in temples and itching in eyes; could not sleep again but kept turning pillow over, cool side > pain in temples.

27. Fever.—Hard chill 2 p.m., lasted twenty minutes, after which temperature ran up to 102°; as it fell sweat came on, though not very profuse.

Iris Versicolor.

Iris hexagona. Blue flag. N. O. Iridaceæ. Tincture of fresh root collected in early spring or autumn. Trituration of the resinoid, Iridin or Irisin.

Clinical.—Anus, fissure of. *Bilious attack. Constipation*. Crusta lactea. Diabetes (pancreatic). *Diarrhœa*. Dysentery. Dysmenorrhœa. Dyspepsia. Eczema. Fistula. Gastrodynia, intermittent. *Headache*. Impetigo. *Liver, affections of*. Migraine. Neuralgia. Nocturnal emissions. Pancreas, affections of. Parotid glands, affections of. Pregnancy, morning sickness of. Psoriasis. Rectum, burning in. Rheumatism. *Salivation. Sciatica. Vomiting*. Whitlow. Zoster.

Characteristics.—The Blue Flag is in great repute as a remedy among the Indians of North America. It was introduced into homœopathic practice by Kitchen, of Philadelphia, by whom it was proved, as well as by that heroic prover, Burt, and

others, of all of whose experiences Hale gives an excellent account. I will relate one of Burt's experiments. "May 18th.—Took forty grains of the green root; fifteen minutes after, profuse flow of saliva and tears; mouth and stomach feel on fire; almost impossible to breathe, it is so acrid; one half-hour of great pain and distress in the stomach; it is awful to bear; continues all the afternoon and evening; it is not a sharp pain but an awful burning distress; appears to be deep in the region of the pancreas; cold water does not touch it; profuse flow of saliva all day; constant eructations of tasteless gas; very restless all night with bad dreams. May 19th.—Awoke at 4 a.m. with great rumbling and distress in the umbilical and hypogastric regions, with great desire for stool followed immediately by a copious, thin, watery stool, which could not be retained a moment without much pain; mouth feels as if it had been scalded, tongue thick and rough. 8 a.m.—Another thin, watery stool, with great rumbling in bowels; no appetite, loss of taste." Dr. Burt took more of the drug and developed a repetition of these symptoms and many others, including toothache, an eruption of pimples on the top of the head; inflammation of the glans penis; amorous dreams and seminal emissions (to which he was not accustomed). Vomiting of a watery, extremely sour fluid, excoriating the throat, was prominent in some provings. The sourness may be so great that not only the vomit but the whole person smells sour. "Everything in the stomach turns to vinegar; similarly in threatened rheumatic fever the sweat smells strongly of vinegar" (Cooper). Sometimes the vomit was not sour but bitter or sweetish. The action on the salivary gland., and pancreas was very marked, and *Iris* has proved an excellent remedy in affections of these organs. Nash relates the case of a middle-aged lady who had frequent attacks of vomiting of ropy mucus hanging from mouth to receptacle on the floor. Then the substance vomited became dark-coloured like coffee grounds. She became very weak and vomited all nourishment. There was also profuse secretion of ropy saliva. The patient believed she had cancer of the stomach and made her will. *Kali bi*. gave no relief. *Iris* cured in a short time and permanently. Kitchen found *Iris* the most effective all-round remedy in cases of vomiting of all kinds. He relates this case: A girl, æt. 9, had periodic spells of vomiting every month, six weeks, or sometimes four months. The attack would last three days. It began with vomiting of ingesta, then sour fluid, lastly bile, yellow and green, with great heat of head. Some general fever, and great prostration. Warm perspiration from efforts of straining. A single dose of *Iris* would arrest the attack at once, all other remedies having failed. This action of *Iris* on the intestinal tract and liver together with another characteristic action of the drug, on the nerves, renders it a great remedy in bilious sick-headaches. Here again it resembles *Kali bichr*., for the headache of *Iris* is associated with a blur before the eyes. Hemicrania begins with a blurring of sight; paroxysms attended with sour watery vomiting; pain involving supraorbital and dental nerves; with stupid or stunning headache. A dull soreness is left where the neuralgia had been. L. L. Helt relates a typical case (*Med. Adv*., xxii. 395). The patient, a lady, said: "The way I know an attack is coming on is, I feel so tired and drowsy that I can go to sleep at any time or place, and *my sight becomes dim*, but not one bit of pain

yet." After this stage has lasted from twelve to twenty-four hours, vomiting begins, always from 3 to 4 a.m. The vomiting stage continues about twelve hours, followed by a most excruciating headache, *or* by severe pain and great distress in stomach and abdomen. If one is present the other is absent. At the end of the third day she is able to sit up a little. The periods of recurrence are very irregular. *Iris v.* 3x given on the approach of an attack warded it off on three occasions, and then the attacks ceased to recur. *Med. Visitor*, xiii. 1, reports a discussion on *Ir. v.*, in the course of which C. C. Conant said he had repeatedly verified "right-side headache, beginning with a blur and very severe in front of head." E. H. Linnell cured a sick-headache of two years' standing invariably produced by eating anything sweet. Baruch (*H. W.*, xxxiii. 478) has cured with *Ir. v.* 2x a case of diabetes having (in addition to the glycosuria) right-side supraorbital pains, low spirits, dull mental faculties, anorexia, urine pale and copious, pain in pancreas. In pancreatic diabetes *Ir. v.* should have a very important place. *Ir. v.* is no less effective in pure neuralgias, either facial or sciatic. I have cured with it left-side sciatica following influenza. The generality of affections appear on the right side. Pains are erratic; shoot from right to left. The irritating, excoriating, and inflaming properties of *Iris* are seen in the affections of the skin. It has cured cases of herpes zoster (right side), eczema capitis, impetigo figurata, and psoriasis. There is well-marked periodicity in the *Iris* affections, headaches, colic; diarrhœa and dysentery, recurring every spring and autumn; diarrhœa and colic 2 or 3 a.m.; morning sickness; attacks at short intervals. Symptoms set in suddenly. The headaches are < by rest, > by moderate motion, < by violent motion. Bending forward > colic. Motion < abdominal and sciatic pains. Toothache is < in warm room. Open air > headache; cold air < headache and nausea. The concomitance of gastric symptoms gives the key to many of the cases which call for *Iris*; and it should not be forgotten that constipation as well as diarrhœa may be a strong indication.

Relations.—*Antidoted by:* Nux v. *Antidote to:* Merc., Nux v., Phytol. *Compare:* Ipec. (nausea and vomiting of pregnancy with tenderness over stomach, profuse salivation. Iris has thick, ropy saliva; Ipec. saliva is thin, must be constantly swallowed); Sang. (periodic sick-headache); Kali bich. (sick-headache beginning with a blur—with Kali bi. the blur precedes the pain and passes off as the pain comes on -thick, ropy saliva and vomit; sciatica); Ver. (diarrhœa and summer complaints; Ver. has collapse, coldness, cold sweat. Iris more inflammatory symptoms, excoriation about anus); Puls. (nightly diarrhœa -Puls. more before midnight; Iris 2-3 a.m.); Chi. (summer diarrhœa); Sep. (sick-headache); Epipheg. (sick-headache, ropy saliva); Ant. c., Ant. t., Ars., Colch., Eupat. perf., juglans c., Lept. In burning in throat, Caps. (Caps. has < by cold Water; Ir. v. is temporarily > by drinking cold water).

SYMPTOMS.

1. Mind.—Low-spirited; discouraged; vexed; despondent.—Great depression with headache.—Fear of an approaching illness.—Cannot fix mind on studies.

2. Head.—Fulness in and heaviness of the head.—Head and face are cold.—Headache (temples and eyes), with distressing vomiting (of a sweetish mucus, occasionally with a trace of bile).—(Sick headache invariably induced by eating anything sweet.).—Sensation of constriction around the forehead (when trying to cough).—Dull throbbing or shooting in r. side of forehead, with nausea; < toward evening; from cold air or coughing; > from moderate motion.—Dull, heavy frontal headache, with nausea, with dulness of eyes and pain over l. superciliary ridge.—During headache, nausea and profuse salivation.—Recurrent sick headaches with constipation.—Aching in forehead and vertex as if the top of the head would come off.—Shooting in the temples, mostly r., with constrictive feeling of the scalp.—Stitches in the lower part (r. side) of the cerebellum.—Pustular eruption on the scalp.

3. Eyes.—Redness of conjunctiva.—Burning in internal canthus (r.) with lachrymation.—Inflammation of eyelids, apparently from cold.—Eyes sunken Violent pains in both supraorbital regions, but in only one at a time.

5. Nose.—Constant sneezing.

6. Face.—Wakes with neuralgia, r. side of face, darting stitches in two carious teeth.—Neuralgia, involving supra- and infra-orbital, superior maxillary and inferior nerves; begins after breakfast every morning, with a stupid, stunning headache, and lasts several hours.—Pustular eruptions on the face, around nose, lips, and cheeks, secreting a sanious, irritating matter.

7. Teeth.—Toothache in the warm room.

8. Mouth.—Food tastes flat or acid.—Taste at first sweetish or insipid; later violent burning.—Dry mouth in the morning, in bed.—Mouth dry and clammy.—Mouth and stomach feel on fire; almost impossible to breathe, it is so acrid.—Mouth and tongue feel as if they had been scalded.—Profuse flow of saliva; ropy, drops when talking.—Raw pain in l. side of tongue.—The tongue and gums feel as if covered by a greasy substance in the morning on rising.—Dry, cracked lips.

9. Throat.—Sore throat, with constriction of pharynx and difficult deglutition.—Pains in tonsils shooting into ears.—Sometimes burning sensation, with feeling of enlargement like a burning cavern, while throat is dry, injected and of a bright red colour.—A peculiar irritability of throat sometimes attended with cough.—Spasms of pharynx while swallowing food.—Burning from fauces to stomach, > inspiring cool air, < exposure.—Feeling as if a horsehair were drawn tightly across l. palate with burning and smarting.—Cold water > burning short time only.

10. Appetite.—Loss of appetite.—Bitter, putrid taste.—Nausea and empty eructations.

11. Stomach.—Eructations of tasteless gas; frequently empty.—Nausea and vomiting of a watery and very acid substance.—Contents of stomach "turn to vinegar.".—Vomiting: of food; sour; bilious; of sweetish water; of sour milk in children.—Pain in stomach before breakfast and from drinking water.—Great burning distress in epigastrium; mouth and stomach feel on fire.—Cancer of pylorus with sour vomiting and great prostration (Cooper).

12. Abdomen.—Pain in the region of the liver; < from motion.—Awful burning distress, deep in region of pancreas, not > by cold water.—Colic > by bending forward; > by discharge of flatulence.—Cutting pain in the lower part of abdomen.—Fetid flatulence.—Sharp griping pains in the bowels.—Pain in abdomen > by discharge of flatus.

13. Stool and Anus.—Diarrhœa, with colic and rumbling in the bowels.—Stool: thin, watery; soft yellow, with rumbling, but no pain; mushy, painless; blood and mucus with straining.—Frequent watery stools with burning in anus; disposition to strain and bear down.—[Dysentery with choleraic depression.—Dark bilious discharges, low febrile state and much emaciation.—Chronic diarrhœa with pain in lower abdomen, followed by burning in rectum (A. E. Smith)].—Great burning in anus, as if on fire, after stool.—Anus sore in morning, as if points were sticking into it.—Distress in anus as if prolapsed.—Constipation: succeeded by thin, watery diarrhœa; with flatulent colic; with migraine; with irregular menses; with hæmorrhoids.

14. Urinary Organs.—Pain in r. kidney.—Cutting and pricking in the urethra while urinating with coldness and itching of genitals.—(Urine of high specific gravity containing sugar.).—Urine voided in large quantities.—Urine of disagreeable odour.—Urine thick, of strong odour, deep colour.—Urine passes without force.

15. Male Sexual Organs.—Coldness and itching of the genitals.—Emission with amorous dreams.—Inflammation of glans, which is much swollen and red.

16. Female Sexual Organs.—Neuralgia and rheumatism of uterus.—Menses regular but excessive.—Leucorrhœa.—Morning sickness of pregnancy, vomit sour or bitter; protracted nausea; profuse ropy saliva: tenderness over stomach.—Inflammation and soreness of uterus, very sensitive to touch; pain across umbilicus, griping at intervals, nausea and vomiting of green or yellow bile, eructations of much flatus between the vomitings; yellow bilious diarrhœa. (Miscarriage.)

18. Chest.—Rheumatism in muscles of chest along with acid indigestion (Cooper).

22. Upper Limbs.—Acute rheumatic pain in r. shoulder; < from motion, esp. on raising arm.—Severe shooting pains about the phalangeal and metacarpo-phalangeal articulations.—Pain in the fingers on writing.—(Will abort felon).

23. Lower Limbs.—Sciatica; painful drawing and lameness, as if l. hip were wrenched, extending to popliteal space.—Sudden shooting pains in l. sciatic nerve, causing lameness < on motion.—Moderate motion < exceedingly, violent motion does not affect.—Coxalgia in l. hip.

24. Generalities.—Great debility.—Nervous debility, more tired in morning than evening, head and eyes heavy, chilly, stomach sour with fulness, aches all over and feels rheumatic, < on awaking, cannot keep to work, stools dark brownish green (cured with Ø, man, 55.—Cooper).—Gastric symptoms predominate (with headache).

25. Skin.—Pustular eruptions (impetigo), esp. on scalp and face.—Tinea capitis.—Herpes zoster (r.).—Psoriasis; eczema, with gastric derangements.—Impetigo figurata.—Porrigo.

26. Sleep.—Great sleeplessness.—Starts up in his sleep.—Amorous dreams with seminal emissions.

27. Fever.—Pulse accelerated.—Chilliness during the whole night.—Heat over the whole body, followed by chilliness, with cold hands and feet.—Perspiration over the whole body, but principally in the hypochondria (and in the groin).—(Bilious and typhoid fevers.) Sweat smells of vinegar (Cooper.)

Itu.

Resina Itu. Solution in alcohol of the resin.

Clinical.—Ears, reports in. Eyes: muscæ volitantes. (Hernia.) Stiff-neck. Toothache. Vulvitis.

Characteristics.—*Itu* is one of the remedies proved by Mure. All he tells about the source of it is that "This rosin, which comes to us from the province of St. Paul, is used empirically for hernia." Among the most peculiar symptoms are: "Sudden report in the ear, with frightful pain extending to teeth for several minutes, repeated as many as eight times in a day; profuse sweat after the reports." "Chilliness at hypogastrium, especially in evening." "Earache when the least dampness sets in." "Toothache < after a cold drink."

SYMPTOMS.

2. Head.—Stupefying pain in the head, < when stooping.—Vertigo as if one would fall to the r. (1st day).—Aching pain in the forehead and eyes.—Beating in r. temple; the pain extends to the ear and the articulation of the Jaw.—Lancination in

the forehead r. side (2nd day).—Heaviness of the head, it inclines forwards (8th day).

3. Eyes.—Heaviness at the eyes when walking.—Burning in lids.—Muscæ volitantes like pins' heads.—Twinkling of the eyes.—Lancinating pain in orbit, extending to the eyebrow (8th day).

4. Ears.—Earache when the least dampness sets in, extending to the articulation of the jaw (1st day).—Sudden report in the ear, with frightful pain extending to the teeth, for several minutes; this paroxysm recurs four times in the morning, from hour to hour (7th day); repeated eight times the following day; profuse sweats after the reports; air < the pain.

5. Nose.—Repeated sneezing.—Coryza (9th day).

7, 8. Teeth and Mouth.—Toothache < when taking a cold drink (8th day).—The tongue feels big, as if it filled the whole mouth, though the swelling is but trifling.—Red tongue.—Difficulty of moving the tongue and talking (12th day).

9. Throat.—Inflammation of the tonsils.—Pain in throat and sensation as of a lump in pharynx (12th day).

11. Stomach.—Nausea < during motion.—Continual hiccough.

12. Abdomen.—Pain in the abdomen, from within outwards.—Sense of chilliness at the hypogastrium, esp. in evening (1st day).—Pain in l. hypochondrium, when inclining forwards (2nd day). Lancinating pain in region of liver, < when walking or stooping (8th day).

13. Stool and Anus.—Involuntary stools (6th day).—Profuse painless diarrhœa.—Copious, yellow, diarrhœic stools (7th day).—Burning pain at the anus after sitting (8th day).—Bright yellow stool, which cannot be retained as soon as one stands up (9th day)

16. Female Sexual Organs.—Burning at the vulva followed by violent itching (9th day).

18. Chest.—Violent itching near the sternal extremity of the r. clavicle, followed by a moist tetter, which scatters in six hours.—Pain in the l. breast < when walking.—Itching at the l. breast and nipple, esp. in the morning.

20. Neck and Back.—Pain on the l. side like wry-neck.—Pimples on the l. side of the neck; they itch as much, though less inflamed.—Stiffness of nape of neck, which prevents one from rising or inclining head.—Pain at the nape of neck, penetrating to forehead and causing a numbness and heaviness which carries the

head forward.—Pain at the posterior iliac spine when stretching the leg or rising, several days in succession.

22. Upper Limbs.—Violent itching at r. arm; it is covered with red pimples, round like pin's head; the itching ceases in the daytime, but the eruption lasts all day.

23. Lower Limbs.—Numbness at the tarsal joint, after sitting.—Numbness of the legs.—On rising from a chair one is unable to stand straight.—Cramps at the l. tarsal joint.—Numbness in the tarsal joint every time one rises from a seat. Crampy pain in tendo-Achillis.—Crampy pain from the calf to the heel.—Heaviness of the legs and weariness towards evening.—Acute pain in the knee-joint.

26. Sleep.—Light sleep at night, but unbroken.

27. Fever.—Profuse sweat after reports in the ears.

Jaborandi.

Pilocarpus pinnatifolius. N. O. Rutaceæ. Tincture of fresh leaves. Tincture of dried leaves and stems. (The alkaloid, Pilocarpin, has been experimented with independently and is dealt with in a separate article.)

Clinical.—Alopecia. Asthenopia. Bronchitis. Burns. Cataract. Ciliary spasm. *Consumption*. Diarrhœa. Dysmenorrhœa. Erysipelas. Eyes: tension in; hyperopia: affections of; operations on. Flushings, climacteric. Hair, affections of. Heart, affections of. Hypermetropia. Leucorrhœa. *Miliaria*. Mumps. *Perspiration, excessive. Pregnancy, salivation of. Salivation*. Scalds. Strabismus. Worms.

Characteristics.—*Jaborandi* is a South American tree growing to the height of twenty feet. It is used by South American Indians as an antidote to the bite of serpents of the Trigonocephalus group. The drug has been extensively used in ophthalmic practice for its mydriatic properties. Incidentally its action on the skin and salivary glands was observed and led to extensive provings being made. Robin (*C. D. P.*) sums up the effects of the drug in doses of 6 grammes of the powdered leaves in infusion: Very soon face becomes red; temporal arteries throb more strongly; then there is a peculiar feeling of heat in the mouth and on face and the flow of saliva begins. Soon the forehead becomes moist and the face more red; then beads of perspiration appear on forehead, cheeks, and temples. The flow of saliva increases, all the salivary glands contributing. The mouth is filled with immense quantities of fluid and expectoration is incessant. At same time perspiration covers face and neck; then the whole body becomes red and moist, and a pleasant warmth is experienced; in a few minutes perspiration breaks out over entire surface and soon runs down on all sides. Meantime other symptoms have supervened. The eyelids first become moist, then tears increase, collect in canthi, then roll down the cheeks; at the same time there is increased secretion of Schneiderian membrane, and increased activity of mucous glands of pharynx, trachea, and bronchi. These effects reach the maximum intensity forty-five minutes after taking the drug and last thirty or forty minutes more. Salivary glands enlarge. Thirst is intense. Pupils slightly contracted. When perspiration and salivation have ceased the subject is prostrated and drowsy, and the parts which secreted excessively become abnormally dry. In addition to these symptoms noted by Robin others have observed: vomiting; diarrhœa; pains in abdomen, especially hypogastric region and pubes; pains in bladder and urging to urinate. Dudgeon has recorded the following interesting case: A gentleman, 45, rose at an early hour and went to the other side of his bedroom to get a dose of *Nux* 3 for some fancied derangement of his stomach. On coming back to bed he was seized with sudden violent crimson flushing of the face followed almost immediately by profuse perspiration, beginning in the face and head and extending all over the body. This was followed by extreme coldness of the extremities and sickness, terminating in the vomiting chiefly of sour mucus. The attacks recurred every quarter of an hour

throughout the day. Not only was he unable to get out of bed, he could not raise himself up in bed, or lie otherwise than on his right side without the most distressing giddiness and a feeling "as if he should die." Pulse 60, regular and strong; temperature below normal. Ten drops of *Jaborandi* I were mixed in half a tumbler of water, and a dessertspoonful given immediately and repeated every half-hour. After the second dose the attacks ceased and he was able to take bread and milk without sickness. He had a good night's rest and was perfectly well the next day (*M. H. R.*, October, 1888). Hale commends its use in women or young girls who have always a dry skin, scanty menses, and tendency of blood to the head. Duncan (*H. W.*, xxxii. 189) has aborted erysipelas by painting the tincture on the part four to five times daily. A sharp smarting, is the first effect, followed by a more agreeable, soothing sensation. In burns, scalds and some forms of eczema and psoriasis the same use has given excellent results. The action of the drug on the eyes is very pronounced and it has been found useful in many conditions of eye weakness, especially hypermetropia, ciliary spasm, convergent strabismus, and after operations for strabismus. *Sandesberg (B. J. H.*, xl. 201) noticed that the internal use of *Jaborandi* and *Pilocarpin* in cases of detachment of retina and choroiditis seemed to occasion opacity of the crystalline lens. He treated a horse for irido-choroiditis and large opacities of the vitreous with infusion of *Jab*. leaves and injections of *Pilo*. The disease was quickly arrested, the vitreous cleared up completely, but during the first week the crystalline lens became opaque. Bell commends it in diarrhœa with gushing, painless stools; flushed face, profuse salivation, intense thirst; urine dark, scanty (or profuse); profuse sweat. Cooper has seen a violent leucorrhœa caused by *Jabor*.; also the discharge of a quantity of threadworms. One patient, after having been injected with *Pilocarpine*, complained of great sensitiveness to cold: constantly taking cold and in dread of bronchitis; the skin too became irritable. *Jabor*. has a reputation in the old school as a stimulant of the mammary secretion, and a case is quoted from the *Lancet* in *C. D. P*. in which a woman whose milk had ceased for a fortnight received gtt. x. of the fluid extract every four hours. The secretion of milk was reestablished, but the patient began to suffer from extreme nervous excitement accompanied by a fixed idea that she should murder all her family with a hatchet. The drug was stopped, and these symptoms disappeared and with them the activity of the mammary glands.
The *Hom. News*, February, 1900, quotes an incidental cure of dysmenorrhœa in a woman, æt. 23, who received five-drop doses of *Jabor*. for increased eye-tension, which rapidly disappeared. The patient noticed that she passed the next menstrual period without pain though she usually had to spend two to four days in bed. The drug was continued in smaller doses, and the improvement was maintained. "When the period begins with a feeling of coldness and faintness, and neuralgic throbbings in head and pelvis, with backache, a drop or two of *Jabor*. in hot water will at once relieve" (Cooper). *Jabor*. has been used as a remedy for baldness, and it forms the principal ingredient in some of the popular hair-restorers. In a number of patients who have been taking it white hair and blonde hair have been observed to turn black. *Jabor*. acts more on left side. Sometimes the left side only is affected by

sweating, the right side being quite dry. Headaches were more noticed on left side. Headache < at noon every day. Eating > distress in stomach.

Relations.—*Compare:* Amyl. nit. (flushings); Atrop., Physost., Sep., and Lil. t. (eyes); Hep. (increased bronchial secretion). Compare also Pilocarpinum and the Rutaceæ.

SYMPTOMS.

1. Mind.—Confusion.—Disinclination to speak.—Extreme nervous excitement, has a fixed idea that she will murder all her family with a hatchet.

2. Head.—Headache every day about noon.—Headache about noon, with hurried breathing, pressure on chest, anxiety, palpitation and pain in region of heart.—Headache towards dinner-time (noon), not affecting the appetite; < l. side, during sore throat; with suffocative feeling.—Uneasiness; increasing in forenoon to pain in occiput, then extending to forehead, > late in afternoon.—Empty feeling in head.—Vertigo.—Throbbing pain in vertex and front of head at 7.30 p.m.—Pain in lower part of occiput; extending over l. side of head to forehead; heavy, < l. side; pain in l. side of occiput in evening.—Baldness.—Light hair turns black.

3. Eyes.—Cornea red after waking at 5.30 p.m.—Lachrymation.—The lachrymal secretion is increased and there is a copious discharge from the Schneiderian membrane; also increased secretion of mucus from the pharynx, trachea and bronchi.—Pupils contracted; and tension (spasm) of accommodative apparatus, with approximation of nearest and farthest points of distinct vision, amblyopic impairment of vision from diminished sensibility of retina.—Pupils dilated; sluggish.—Balls sore on rolling them at 7 p.m.—Lids stiff and heavy.—Vision disturbed.—Spasm of accommodation, vision changing constantly, becoming more then less dim, then dim with pricking in eyes.—Eyes tire easily; are irritable.—Vision dim, restored suddenly.—Blurred vision for distant objects.—Swimming of distant objects.—Clouds before vision.—Vision of snowflakes during the sweat and salivation.—Vision lost for distant objects.—Hypermetropia.—Asthenopia.—Ciliary spasm.—Cataract.—Convergent strabismus.

5. Nose.—Copious nasal discharge.

6. Face.—Redness of face; and of ears and neck; and of body; involving cheeks and ears, < when the sweat was greatest, then pallor; with heat of face and throbbing of temporal arteries.—Acts powerfully upon the salivary and perspiratory glands, producing irritation and excessive secretion; under its influence the face soon becomes red, the saliva begins to flow, and profuse perspiration sets in, lasting for hours, though their maximum intensity is less than an hour.

8. Mouth.—Tongue furred.—Articulation difficult and indistinct.—Heat, < dryness.—Salivation; with profuse sweat; with dry skin; stringy, but not viscid.—Constant spitting of alkaline saliva.—Alkaline saliva flows upon pillow during sleep, causing collapsed feeling in glands in cheeks.—Saliva contained a notable quantity of urea.—After the perspiration and salivation have ceased the parts become very dry, esp. the mouth and pharynx, and there is great thirst.

9. Throat.—Swelling of submaxillary glands (*Merc., Calc.*).—Pain in submaxillary glands.—Dryness at back of throat.—Dry and inflamed feeling in forenoon, with scraping on swallowing anything, the inflammation < afternoon, with swelling of tonsils and stiffness of jaws.—Soreness and smarting of throat, with headache, < l. side, and hurried breathing.

11. Stomach.—Good appetite.—Hunger disappeared and he could not eat.—Urgent thirst.—Eructations and vomitings.—Hiccough.—Nausea; sudden, and retching, often with hiccough.—Vomiting: after supper; sudden, in the lad who failed to perspire; of the saliva that he had swallowed; severe, of the contents of the stomach, then of bile, then continued retching.—Distress in stomach, and in lower half of œsophagus, esp. the latter feels constricted.—Heavy distress at pyloric part at dinner-time, from an indigestible substance, > a full meal.—Constrictive feeling as if rugæ were puckered (probably owing to alcohol in tincture).

12. Abdomen.—Empty, gone feeling in abdomen.—Cutting in lower abdomen; without tendency to diarrhœa.—Pain over the pubes.—Severe pains over pubes with strong desire to pass water, which gave >.

13. Stool.—Stools: watery, yellow, frequent and painless; undigested, gushing, weakening; papescent and large; painless.—Stool, first part five-eighths of an inch in diameter and about five inches long, the last part papescent and dark brown.—Hard stool.—Constipation, two stools a day instead of three.—Stool at 7 a.m. and again at 7 p.m. difficult, of long, large, dark fæces.—Passage of threadworms.

14. Urinary Organs.—Sudden severe pain in bladder, shooting down to urethra and causing exclamations.—Burning in urethra, with urging to urinate.—Urine dark.—Urine increased; during the sweat; and sp. gr. diminished, urea increased.—Urine decreased; and sp. gr. and urea increased.—Urea diminished, next day increased.—Chlorine, chlorides, and uric acid diminished, next day increased.

15. Male Sexual Organs.—Orchitis: with incipient bronchial trouble; metastasis of mumps.

16. Female Sexual Organs.—Menses scanty, congested head, dry skin.—Flushing at climacteric.—Cured dysmenorrhœa in a young woman to whom it was given for

increased eye tension, which it rapidly cured.—Leucorrhœa.—Pregnancy: œdema of.—Puerperal convulsions, in stupor threatened suffocation from inability to swallow excessive quantity of saliva.—Milk: deficient; excessive.

17. Respiratory Organs.—Bronchial secretions increased.—Loose cough.—Breathing difficult.—Breathings hurried.

18. Chest.—Sticking in chest.—Pain in chest and around heart.—Pressure on chest, with anxiety, palpitation and pain in region of heart.—Anxiety in chest, with oppression, preventing sleep.

19. Heart and Pulse.—Pain in heart region.—Palpitation.—Irregularity, weakness and rapidity of action, with nervous, restless condition and constant yawning.—Pulse rapid; then slow; at beginning of sweat, the tracing becomes a little crooked, the rising line larger and more upright, the descending line more oblique, more dicrotic, at the height of the sweat the general outline very irregular, some beats shorter than others.—Pulse and temperature increased during sweat, then lowered.—The rapidity of the circulation is increased, but the arterial tension and temperature are lowered.—Tracings showed almost complete asystolia, with diminished vascular tension during sweat.

24. Generalities.—Redness of face, throbbing of temporal arteries, then heat in mouth and on face, salivation, then sweat on forehead, cheeks and temples; incessant expectoration, sweat covering face and neck, then whole body red and moist, pleasant warmth, then general sweat, which soon runs down on all sides; then lachrymation and copious discharge from nose, increased activity of mucous glands of back of throat, trachea, and bronchi; salivation so great that he can scarcely speak, salivary glands enlarged; sometimes accumulation in bronchi cleared away by cough, thirst, contracted pupils, after the sweat and salivation have ceased, prostration, drowsiness and dryness of the parts that have secreted so copiously; < mouth and throat with much thirst.—Restlessness; in evening, with anxiety.—Much trembling, esp. of upper extremities.—Weariness: in morning, with dryness of mouth and thirst; on rising; from a short walk, with hurried breathing and palpitation; so that the legs gave way when walking.—Faintness.—Collapse.

26. Sleep.—Sleepiness.—Fell asleep while sitting reading.—Profound sleep; in daytime.—Most wretched night that he ever remembers, fever, headache, malaise, no thirst, restlessness, moving and delirium.—Did not sleep well on account of restlessness, with pressure on chest and hurried breathing.—Distressing dreams towards morning.—Dreams of accidents and fights, waking him twice at night.

27. Fever.—Temperature sank.—Chilly up and down back at 7 p.m.—Shivering.—Temperature 98.5°, in taking which he uncovered himself; this caused coldness, with horripilation and griping, but as soon as he covered himself again profuse sweat.—Heat temperature rose then fell; glow in face and over

body.—Profuse sweat finger ends shrivelled like a washer-woman's; in drops on forehead.—Sweat on forehead, then over whole body, then chiefly on face, legs, and feet.—Sweat on forehead and over whole body, < trunk, simultaneously with the salivation; on face; on face and upper part of chest; on face, then on whole body; on chest, then on other parts, < upper extremities.—Sweat of neutral reaction running down all over body.—Sweat contains easily before taking, but did not sweat during the proving.—Semilateral (l.) sweat.

Jacaranda Caroba.

Caroba. Bignonia caroba. Jacaranda Braziliensis. N. O. Bignoniaceæ. Tincture of fresh flowers.

Clinical.—Balanorrhœa. Chancre. Chordee. Gonorrhœa. Gonorrhœal rheumatism. Muscular rheumatism. Phimosis. Syphilis.

Characteristics.—Several species of *Jacaranda* ("especially *J. procera*," says the *Treasury of Botany*) have the reputation of being curative in syphilis. Mure proved *J. caroba*, and the symptoms of the proving certainly point to this. Hering gives these symptoms as having been confirmed: "Contact of urine with chancre = tearing pains, which affect whole organism." "Prepuce much swollen, could not be drawn over glans; on attempting to do so, copious discharge of yellowish green pus." "Chordee in gonorrhœa." "Dull pain under sternum on raising head and drawing breath." Among other symptoms noted are: Lancinations in the heart. Rheumatic pains in the limbs. Itching at anus. Mahony has confirmed these symptoms: "Food tastes insipid; *nausea during eating*." Motion <. Symptoms come on when walking; raising head; sitting. J. S. Whittinghill (*H. R.*, xii. 279) has cured several cases of muscular rheumatism characterised by a peculiar soreness and stiffness of muscles in the morning < by any motion.

Relations.—Compare Thuja (gonorrhœa; Gonorrhœal rheumatism); Coral. r. (red and sensitive chancre and chancroids); jac. g.

SYMPTOMS.

2. Head.—Dull pain between the forehead and r. temple, shifting to the other side and then disappearing.—Fulness in the head.—Fulness in the r., later in the l. temple, going to the nape of the neck, where it disappears.—Pain, as if a plug were pressing on the r. side of the forehead.

4. Ears.—Flapping in the ears, as of wings.—Stoppage and heat in the l. ear, with burning, digging pain extending to the l. nostril.

5. Nose.—Sneezing and fluent coryza.—Coryza, with heaviness and weariness at the vertex, forehead, and eyes.

8. Mouth.—Food tastes flat or acid.—Dry mouth in the morning, in bed.—Raw pain at the l. side of the tongue.—Mouth dry and clammy.

9. Throat.—Sore throat, with constriction of the pharynx and difficult deglutition.—Constrictive sensation at the throat.

11. Stomach.—Nausea when eating.—Fulness at the pit of the stomach, with hurried breathing.—Pressure at the pit of the stomach.—Painful stitch between the pit of the stomach and the umbilicus.

12. Abdomen.—Painful stitch in the r. and l. side of the navel.—Swelling of the r. groin painful to the touch.—Acute pain at the hypogastrium when pressing upon it.

13. Stool and Anus.—Constipation.—Itching at the anus while sitting.—Acute pain, with lancinations in the anus.—Prickings around the anus.—Excrescence at the anus.

15. Male Sexual Organs.—Heat and pain of the penis.—The orifice of the urethra looks like two inflamed lips, itching on being touched.—Discharge of yellowish white liquid from the prepuce.—Prickling in the prepuce.—Pain in the prepuce, as if a small bundle of fibres were seized.—Phimosis.—The prepuce cannot be drawn back.—Suppuration between the glans and prepuce.—Itching and pricking at the margin of the prepuce.—Itching pimple at the glans, suppurating like a chancre, and leaving a red point when dry.—Acute pain in the left testicle when walking.—Heat and swelling of the scrotum.—Painful erections caused by the swelling of the prepuce.—The contact of the urine causes tearing pains, which affect the whole organism.—Syphilis.

17. Respiratory Organs.—Dull pain under the sternum on raising the head and drawing breath.—Prickings under the sternum.

19. Heart.—Sensation as if the heart beat in the pit of the stomach.—Lancinating pain in region of heart.—Painful stitch at the heart, extending to the r. side.—Stitch at the heart, which seems to beat slowly.

20. Neck and Back.—Pain in nape.—Neck so painful that the head cannot be turned to r.—Stiffness in loins.

22. Upper Limbs.—Rheumatic pains in the left arm in the morning.—Pain from the left elbow through the forearm.—Red spot with a yellowish pellicle on the wrist.

23. Lower Limbs.—Ulcers on the legs.—Rheumatic pain in the right knee, disappearing on motion.

26. Sleep.—Restless sleep with frightful dreams.

27. Fever.—Internal chill.—Dry, pricking heat all over.

Jacaranda Gualandai.

Jacaranda gualandai. N. O. Bignoniaceæ. Tincture of dried leaves.

Clinical.—Blenorrhagia. Chancroids. Diarrhœa. Eye, inflammation of. Gonorrhœa. Leucorrhœa. Syphilis. Throat, sore.

Characteristics.—*J. gualan*. was first brought to the notice of homœopathy by Dr. Julio F. Convers, of Bojota, Columbia, S. America (*H. R*., iv. 36; v. 149; ix. 343). Mr. José M. Reyes made a proving for Dr. Convers (see also *Med. Adv*., xxii. 244), taking considerable doses of the Ø tincture in the first instance; and later of the 3x. The chief symptom of the heavy dosing was a painless, blackish, and mulberry-coloured diarrhœa which persisted a long time and was finally cured with *Merc*. 12 after *Ars*. had failed. This cure by *Merc*. is important in regard to the popular use of the plant in syphilis. Convers says the natives use it much in syphilitic affections and atonic ulcers, and he adds that "the prostitutes are very, fond of it." The proving developed an action on the glans penis. When the 3x was taken there was very severe ophthalmia, chiefly affecting the left eye, "a syphilitic-like ophthalmia." The pharynx and larynx were also affected, which organs are favourite loci of syphilis. Convers has confirmed these observations. He prefers it to any other remedy in ophthalmia with agglutination of the lids; blenorrhagia and chancroids; sore throat with redness and heat and vesicles on pharynx without swelling of tonsils; in catarrhal leucorrhœa. In the Schema I have put in brackets Convers' additions to Reyes' proving. Its symptoms are < at night and < by laughing or talking. Convers prefers the Ø tincture, locally and internally for sore throat, and the 3rd for ophthalmias and catarrhs. It is an innocent remedy. The symptoms develop first in the head, next in intestines, lastly in eye and throat.

Relations.—*Antidoted by:* Merc. *Antidote to:* Merc. *Compare:* Bell., Merc., Phytol.

SYMPTOMS.

1. Mind.—Loss of memory.—Incapacity to study.

2. Head.—When raising head after stooping, vertigo, momentary, loss of sight, heaviness in forehead.

3. Eyes.—Irritation in eyes; become very red; sensation of sand in them.—Pain, weariness and all sensations < in l. eye; lids adhere in morning; had to bathe them

before they could be opened.—Sight weak.—Irritation of l. eye < towards inner canthus.—(Syphilitic ophthalmia.)

9. Throat.—Inflammation of l. tonsil.—Small bladders on pharynx.—(Sore throat with heat and redness and vesicles without swollen tonsils.)

13. Stool and Anus.—Diarrhœa, blackish, mulberry-coloured stools with mucus, not fetid; lasted a long time after the proving, and was eventually cured with *Merc*. 12x.

14. Urinary Organs.—Urine increased.

15. Male Sexual Organs.—Much weakness in glans.—(Blenorrhagia with discharge, staining linen a dull yellow.—Chancroids.)

16. Female Sexual Organs.—(Leucorrhœa.)

17. Respiratory Organs.—Heat in larynx when reading aloud or laughing.

20. Neck and Back.—Pain between sacrum and coccyx.—Pain and weakness in lumbar vertebræ during the night.

25. Skin.—(Atonic ulcers).

Jalapa.

Ipomœa purga (Hayne). Convolvulus purga (Wunderoth). Exogonium purga (Benth.). Jalap. (Mexico). N. O. Convolvulaceæ. Trituration of root.

Clinical.—Anus, soreness of. Coryza. Diarrhœa. Gout. Fainting. Restlessness.

Characteristics.—*Jalap*. is the well-known purgative of old-school practice. It has had a short proving by Noack and Trinks, and a later one by Jeanes. The characteristic stools of *Jalap*. are: Watery, sour-smelling, and bloody. There is cutting colic before and during the stool. The most marked < is at night. A child may be quite quiet all day, but *screams and tosses about all night*. In such a case *Jalap*. is very likely to be the remedy whether the child is suffering from diarrhœa or other complaint. Allen gives this as cured: Coryza in an infant, violent attacks of crying and intense pain; quiet during the day, but screaming all night. Nash cured with *Jalap*. 12 a desperate case of entero-colitis in which there was screaming all day as well as all night. With the screaming there were constant contortions of the body, bending forward, backward, and sideways alternately. There is great restlessness and anxiety with *Jalap*. General coldness and blueness

of the face. The abdominal pain is very severe: "as if the abdomen would be Cut to Pieces"; severe griping, cutting pains. Pain in sigmoid flexure. There is great weakness; fainting fits; excessive uneasiness and tossing about of limbs. There is > of pain by eructations of frothy matter and flatulence.

Relations.—*Compare:* Camph. (diarrhœa with coldness); Coloc. (colic). Ir. t. (pain in cæcum).

SYMPTOMS.

1. Mind.—Great restlessness with anxiety.

2. Head.—Violent headache.—Pain in head; smarting in skin of forehead.

4. Ears.—Humming in ears.

6. Face.—Dryness of lips.

8. Mouth.—Biting and smarting of tongue.—Stinging on tongue and in fauces.

11. Stomach.—Flatulent and frothy eructations with abatement of pain.—Nausea.

12. Abdomen.—Pain in r. hypochondrium.—Severe griping, cutting pain in bowels, < at night.—Pain in middle of abdomen and in region of l. superior flexure of colon.—Pain in cæcum.—Flatulent rumbling in bowels.—Colic: violent pain in small intestines, as if abdomen would be cut to pieces.—Inflammation of intestines.

13. Stool and Anus.—Stools: violent, excessive; bloody; watery, with weak pulse; sour-smelling; with great restlessness and anxiety.—Before and during stool: cutting colic.—Pain in sigmoid flexure of colon.—Soreness of anus.—Diarrhœa in infants: child is quiet all day, but screams and tosses about all night (severe cutting, griping pain in bowels).—Infantile diarrhœa, general coldness, blueness of face.

14. Urinary Organs.—Pain and pressure in region of bladder.

15. Male Sexual Organs.—Thrilling sensation in urethra whilst urinating.

20. Back.—Severe pain about superior margin of l. scapula.

21. Limbs.—Aching in arms and legs, most r. side.

23. Lower Limbs.—Pain in thighs.—Smarting on inside edge and at root of l. great toenail, with beat, tearing and pulsation.—Pain in large joint of great toe.—Burning of soles of feet.

24. Generalities.—Fainting fits; weakness.—Excessive uneasiness and tossing about of limbs.

27. Fever.—General coldness and blueness of face.—Febrile attacks.—Great disposition to perspiration of head and superior parts of body.

Jasminum.

Jasminum officinale. White Jessamine. N. O. Jasminaceæ. (Lindley. Some botanists include the jasmines in the Oleaceæ.) Tincture of red berries.

Clinical.—Convulsions. Tetanus.

Characteristics.—The only observation on this plant is one made by W. H. Hull on a boy who ate the red berries. They produced a comatose state, vomiting and convulsions ending in tetanus. [*Jasminum* must not be confounded with *Gelsemium*, the "Yellow jessamine," or "Carolina jessamine," which belongs to a different order of plants. "Gelsomino" is the Italian for jessamine, and it is probably from this that the word *Gelsemium* is derived; and this will also account for the spelling *Gelseminum*, which has sometimes been used.] The *Treasury of Botany* states that the bitter leaves of *J. floribundum* are used in Abyssinia against tapeworm; and the bitter root of *J. angustifolium*, powdered and mixed with the powdered root of *Acorus calamus*, is considered in India an excellent application in ringworm. *Jasmin. offic*. has not been used in medicine, but the poisoning case shows that it is a very powerful drug. The convulsive symptoms were > by a bath. Symptoms go from above downwards and from left to right.

Relations.—*Compare:* Nyctanthes (bot.)

SYMPTOMS.

1. Mind.—Comatose condition.—Perfect insensibility.

3. Eyes.—Pupils immoderately dilated.

6. Face.—Face pallid.—Muscular movements first about eyes and face, esp. l. side, towards which eyes and facial muscles were directed.

11. Stomach.—Slight emesis.—Slight emesis after a first sleep.

17. Respiratory Organs.—Respiration somewhat rhonchial but of unusual frequency.

19. Heart and Pulse.—Pulse slow and feeble.

24. Generalities.—Muscular movements observed first about eyes and face, esp. on l. side, towards which eyes and facial muscles were directed, becoming generally more severe, going from head to l. arm, then to l. lower extremities, till finally the whole body was thrown into most violent convulsions.—At one time the spasms were chiefly opisthotonus, when the whole surface was congested almost to a blackened hue; most marked about the muscles of the head and throat; jaws locked, trismus complete; > by a bath.—Weak and almost helpless for a few days.—Lying on the floor in a fainting fit.—Perfect insensibility.—Surface cool.

Jatropha.

Jatropha curcas. Physic nut. (West Indies.) N. O. Euphorbiaceæ. Tincture and trituration of seeds.

Clinical.—Blepharospasm. *Borborygmi* Cholera. Cholerine. Cramps. Diarrhœa. Eyelids, margins of, inflamed. Heels, sensitive. Mouth, ulceration of. Skin, affections of. Vomiting. Worms.

Characteristics.—*Jatropha* is one of the most active of the Euphorbians and strongly resembles *Croton* in its action, especially in the urgent gushing stools and the irritation and pimples of the skin. One of the most notable characteristics of *Jatropha* is the very marked and peculiar gurgling it causes: "Much noise in abdomen as if a bottle was being emptied, followed later by a thin stool." "*Sudden* desire for stool, and constant noises as of liquids in abdomen, especially on left side." The diarrhœa is very often associated with coldness; with mottled blue surface; with cold sweat. At times the purging is accompanied by copious (and easy) vomiting of watery albuminous ropy liquid. Sudden desire for stool is marked. Water is almost immediately vomited. It corresponds more to the earlier than the collapse stage of cholera. Cramps are predominant; griping cutting pains; sensation as if balls were rolling together in abdomen. The patient writhes about in bed with pain. Kent (*H. P.*, vi. 355) describes the sphere of *Jatr.* in cholera thus: "The characteristic is a rice-water discharge; it has vomiting and purging; more or less sweat; more or less cramps; suppression of urine, the great prostration, syncope and rapid onset peculiar to cholera; and it has this to differentiate it from all other remedies—the *vomit and purging and evacuations are thick, albuminous, lumpy, instead of thin and watery*." Walking in open air < rumbling; = pain in heels; > headache. Open air > headache; = rumbling. In room, headache <. Patient seeks to cool himself by throwing off covers and lying on ground. Touch and pressure <. At night: mouth dry; itching between toes. After midnight: profuse watery diarrhœa. In morning: stools < headache; metallic, bloody taste; much spitting of saliva. Summer diarrhœa, occurring suddenly.

Relations.—*Antidote to its effects:* placing hands in cold water. *Compare:* Euphorbiaceæ, especially Croton, Euphorb. coroll. In cholera, Verat. (Verat. has more pain and more pronounced collapse; it has not the albuminous vomiting of Jatr. nor so much rumbling). Ars. (vomits water as soon as drunk). Elat. (gushing, noisy stools). Jatropha urens.

SYMPTOMS.

1. Mind.—Depression.—Great anxiety.—Anxiety with burning pain in stomach and coldness of the body.—Attacks of anxiety at night constricting chest and preventing sleep till morning.—Quietude of mind; indifference to pain.—Great general prostration of strength.—Ecstasy, feeling of lively warmth, etherial lightness during the painful diarrhœa.

2. Head.—Giddiness, followed by unconsciousness and delirium.—Heat and heaviness of the head.—Head hot; stupefaction, with yawning and nausea.—Heat in head, face, and ears.—Headache, with nausea and vomiturition beginning in the morning.—Violent pressing pain in the temples, ceasing in open air and reappearing when entering a room.—Stiffness of muscles on forehead and neck.

3. Eyes.—Itching and smarting of margins of lids.—Twitching of l. upper lid.—Bright and dark spots before eyes.—Black points before eyes.

4. Ears.—Burning hot ears, with heat in the back part of the head.

5. Nose.—Itching of the nose while eating.—Ulcers in the nose (and mouth).

6. Face.—Hot face and head; chilliness in the back.—Pate face with blue margins round eyes.—Painful cracked lips.

8. Mouth.—Metallic, bloody taste, with much spitting of saliva (in the morning).—Increased accumulation of thin saliva.—Long-continued pain and burning of the tongue.—Numbness of tongue, with heat and dryness of mouth.—Dryness of mouth and tongue, without thirst (at night); mouth feels as if scalded.

9. Throat.—Dryness in fauces and throat.—Burning in the mouth and throat, followed by dryness.—Spasmodic constriction in throat, ascending from stomach.

11. Stomach.—Violent, unquenchable thirst, not satisfied by drinking water.—Dreads to drink on account of nausea.—Eructations of air.—Vomiting of a large mass of dark-green bile.—Glass of water almost immediately vomited.—Easy vomiting of large quantities of watery, albuminous substances; at same time watery diarrhœa, with spasmodically contracting pains in the stomach, burning in the stomach, cramps in the calves; coldness of body; viscid sweat

(cholerine).—Vomiting of pregnant women.—Heat and burning in the stomach.—Inflammation of the stomach and of the intestines.—Sensation of sinking, with nausea in the pit of the stomach.—Persistent dull pressure in stomach.

12. Abdomen.—Pain deep in abdomen, behind the navel.—Abdomen swollen, and sore to the touch.—Sensation as if balls were rolling together in abdomen.—Lancinating, stinging pain with the colic.—Burning in abdomen; seeks to cool himself by throwing off covering and lying on ground.—Painful thrusts from umbilicus to lumbar region.—Tympanites.—Rumbling in the abdomen with colic; > when walking in the open air.—Noise like the gurgling of water coming out of the bung-hole of a barrel during the fecal discharge.—Noise in the intestines, as if a bottle were emptied, or as if a fluid were running in the intestines; not > by a loose stool.

13. Stool and Anus.—Sudden desire for stool, and constant noises as of liquids in abdomen, esp. l. side.—Watery diarrhœa; it gushes from him like a torrent.—First stage of cholera, before collapse.—Very copious mushy stools with quantities of lumbrici and threadworms.—Stool watery and in gushes.—Stools like rice-water.—Profuse watery diarrhœa, from a cold, weakening patient greatly.—Constipation.—Stitches in anus and rectum.

14. Urinary Organs.—Frequent desire to urinate; urine, pale yellow, frothy.

15. Male Sexual Organs.—Aching in genitals as after excessive sexual intercourse.—Drawing in genitals, extending along inner side r. thigh to navel.

16. Female Sexual Organs.—Vomiting of pregnancy.

17. Respiratory Organs.—Painful pressure r. side of larynx, at night, waking him, not < by touch.—Short, hacking, persistent cough.—Hollow cough.—Respiration quick, panting.—Respiration difficult.

18. Chest.—Pain in region of l. 3rd rib inside nipple.—Constriction in chest with anxiety, preventing sleep.—Violent (aching) pain in l. clavicle.—Pressure in l. pectoral muscles; later in r.—Frequent, sudden, violent stitches to l. of ensiform cartilage, behind the costal cartilages, which arrest the breathing.—Frequent stitches behind the cartilages of the 6th and 7th ribs.—Sticking, from above downwards, deep in chest behind sternum.

19. Heart.—Feeling of sinking and nausea in the precordial region, followed by soft stool.—Violent palpitation, shaking the chest, when moving slowly about the room.—Pulse: irregular; small, thready, intermittent; greatly slowed.—Almost pulseless.

20. Neck and Back.—Stiffness of muscles of nape of neck; and forehead.—Bruised feeling in muscles of back and chest.—Stiffness in lumbar region.

21. Limbs.—Muscles of limbs contracted by violent spasms.—Pains in limbs and joints.

22. Upper Limbs.—Cramps in muscles of (upper) arms.

23. Lower Limbs.—Cramps in calves. (Cholera.).—Cramp-like pains in the legs, with cramps and knotting of the calves.—Violent cramps in legs and feet.—Tingling in the toes.—Itching between the toes at night.—The heels are very sensitive when walking on them.

24. Generalities.—Convulsions.—General coldness of the body.—Extreme weariness and sleepiness.—Prostration, with frequent and weak pulse; < by slightest exertion.—More susceptible than usual to wine.

25. Skin.—Pimples: on wrist; back of hand; cheek; back of neck bend of r. thigh.—Itching and slight tension round mouth.—Itching: between fingers; in palm; between toes in bed at night; first <, then > by rubbing.

26. Sleep.—Excessive drowsiness.—Restlessness at night on account of rush of thought and palpitation.—Attacks of anxiety at night did not permit sleep.

27. Fever.—Chilliness in the back, with heat in the face and head.—Chilliness, with cold hands and blue nails.—Coldness of the whole body; mottled blue; chilliness and clammy perspiration.—Cold hands, with heat in the mouth and throat.—Heat in head, face, and ears.—General cold, clammy perspiration.

Jatropha Urens.

Spurge nettle. Tread-softly. (Southern United States.). N. O. Euphorbiaceæ. Tincture of fresh plant.

Clinical.—Cardiac paresis. Œdema.

Characteristics.—According to Allen this is the most poisonous plant known. He quotes from the *Kew Gardens Quarterly* (December, 1851) the experience of Mr. Smith, who touched his wrist against the fine bristly stings of the plant whilst reaching over it. He experienced these symptoms: numbness and swelling of the lips. The action of the poison was on the heart; circulation stopped, and Mr. Smith soon fell unconscious, the last thing he remembered being cries of, "Run for the doctor!" Other *Jatrophas* are *J. Glauca* or *glandulifera* of the East Indies, the seeds

of which when crushed yield an oil which is used as an external application in rheumatism; and *J. Podagrica*, which has a curious nodulated gouty-looking stem.

Jequirity.

Abrus precatorius. Indian Liquorice. N. O. Leguminosć. Tincture or trituration of the seeds.

Clinical.—Epithelioma. Granular lids. Lupus. Ophthalmia. Ulcers.

Characteristics.—*Abrus precatorius* is a climbing plant, a native of India, but has been introduced to the Western tropics, and its use as an eye remedy was discovered by the natives of Brazil, who gave it the name *Jequirity*. It has "small nearly globose seeds, which are of a brilliant scarlet colour, with a black scar indicating where they were attached to the pods" (*Treas. of Bot.*). These are used for necklaces; and as a standard of weight under the name of Raté. The roots are used in the same manner as liquorice roots. The method of its employment in eye affections is as follows: Thirty-two grains of the powdered seeds are allowed to soak for twenty-four hours in a thousand grammes of water. The patient (with granular ophthalmia) bathes his eyes with the filtered product thrice daily for three days, at the end of which time he has become the subject of a severe conjunctivitis, which may be either purulent or more allied to the diphtheritic form. By the fifteenth day the inflammation ceases and the granulations are found to be much diminished in size or even destroyed (*B. J. H.*, xli. 280). The intensity of the inflammation may be regulated by the strength of the solution. Sometimes the inflammation does not confine itself to the eyes but affects the lids with an intense inflammation which spreads to the face, neck, and chest. Sattler propounded a theory that there was a specific bacillus in the *Jequirity* infusion, but Klein (*H. W.*, xix. 220) and later Benson (*H. W.*, xix. 286) conclusively disproved this by showing that the effect was produced equally well with powdered seeds, infusion freshly made and infusion in all stages of bacterial decomposition. In the old school *Jeq*. has been used instead of blenorrhagic infection for the cure of granular lids. Whilst allopaths adopt this crude bit of Homśopathy from the Brazilian natives there is no reason why homśopaths should not use *Jeq*. in the attenuations. A further use has been made of it by Shoemaker of Philadelphia (*Lancet*, August 2, 1884-*H. W.*, xx. 427) in affections of the skin showing great cell proliferation, lupoid conditions, epithelioma, sloughing ulcers. The preparation he used was made as follows: Two hundred grains of the beans are decorticated by being slightly bruised and crushed in a mortar, the red hulls being carefully picked from the cotyledons; the latter are put in a bottle and covered with distilled water. They are thus macerated twenty-four hours, then transferred to a mortar and thoroughly triturated to a smooth paste. Sufficient water is then added to make the whole weigh 800 grains. Prepared in this way it is like an emulsion and is applied to the

surface to be treated with a large camel-hair pencil or mop. The application of this emulsion to ulcerated surfaces is almost painless, but soon (often within an hour) there is much irritation and inflammation, the edges become red and infiltrated, surrounding tissues śdematous and shining. In the course of from six to twelve hours a desiccated cuirass-like crust has formed which cracks in twenty-four hours more, and the discharge escapes freely. This goes on for five or six days, the quantity of discharge diminishing. The crust then separates or is removed by water dressing and discloses healthy granulations. If any unhealthy granulations are left the application is repeated. Shoemaker says of the result of this treatment, that it exercises a destructive tendency on unhealthy granulated conditions followed by a constructive change, promoting under the protective cover of the exudation which it causes, a rapid development of healthy tissue. But it must be used with caution, for "it may give rise to erysipelatous inflammation, and if used on weak and irritable patients, to great constitutional disturbances." Shoemaker gives a series of striking cures with the remedy, but the constitutional effects are of more importance to homśopaths. They are: headache, pain in the limbs, fever, high pulse. In a case of ulcerative lupus of both sides of the nose which was cured by five applications, the first was *followed by:* an enormous amount of inflammation, accompanied by malaise, febrile exacerbation (103° F.), which lasted till the crust began to dry.—*Abrus Precatorius* was the plant employed by Professor Nowack to determine meteorological and telluric forecasts owing to the extreme sensitiveness of its leaves to atmospheric disturbances.

Relations.—*Compare:* In ophthalmia, Ipec.

SYMPTOMS.

2. Head.—Headache.

3. Eyes.—Purulent or diphtheritic inflammation of the conjunctiva; at times affecting lids with intense inflammation spreading to face, neck, and chest.—Cures granular ophthalmia after the inflammation subsides.

21. Limbs.—Pains in extremities.

24. Generalities.—Malaise.

25. Skin.—Erysipelatous inflammation of skin.—Lupus.—Indolent ulcers.

27. Fever.—High temperature and high pulse.

Juglans Cinerea.

Juglans cathartica. Butternut. (U.S.A.) N. O. Juglandaceæ. Tincture of bark of root. Triturations of the resinoid *Juglandin*.

Clinical.—Acne. Angina pectoris. *Axilla, pain in. Chest, pain in*. Coryza. Ecthyma. Eczema. Erysipelas. Erythema nodosum. Headache. Herpes. Hydrothorax. Impetigo figurata. Lichen. Migraine. Pemphigus. Ringworm. Rodent ulcer. *Scapula, pain in*. Scarlatina. Tetters. Vision, lost.

Characteristics.—The *Butternut* and the *Black Walnut* (*Juglans nigra*) are the American representatives of the Walnut family. *J. ciner*. and *Juglans regia*, or *Nux juglans*, have both been proved and studied. With both the digestion is first disordered, and with this other symptoms, as headache, occur. These run an acute course and then skin affections manifest themselves, and these run a chronic course (Clotar Willer, quoted by Hale). Before the homœopathic provings were made *Jug. c*. had a reputation as a mild cathartic and was successfully used in camp diarrhœa and dysentery in the early American wars. Applied to the skin, the juice causes reddening and blistering. "The green rind rubbed on tetters and ringworms dispels them." The provings brought out the characteristics in much detail, and clinical use has still further developed them. *Jug. r*. has been used with much success in scrofulous and scorbutic conditions; and both *Jug. r*. and *Jug. c*. cause dark, clotted hæmorrhage. *Jug. c*. from the lungs and *Jug. r*. from the uterus. Both act on the axilla, *Jug. c*. causing acute pains and numbness, *Jug. r*. affecting skin and glands. *Jug. c*. has some remarkable head symptoms. Sharp shooting pain in occiput is very characteristic. There is a headache with frequent micturition and burning. It has morning headaches like *Nux, Bry., Chelid*., and *Iris*; and it much resembles the last in the disturbance of the digestive organs. Pains in liver and right scapula; acute diarrhœa. It is one of the medicines which produces epigastric sinking. This extends to the abdomen and is accompanied by headache. One patient who was taking *Jug. c*. for acne developed all the symptoms of angina pectoris. But the skin is the organ most of all affected by the drug. All kinds of eruptions have been caused or cured by it, including scarlatina and rodent ulcer. There are a good many rheumatic pains in the remedy. The itching is < when overheated from exercise. Walking < chest pains; > pain from rectum to bladder. Going up hill < or = retrosternal pain. Stooping = pain in scapula and back. Dull headache is > when getting up.

Relations.—*Antidoted by:* Bry. (angina pectoris; Bry. Ø gtt. v. relieved immediately). *Compare:* Jug. r., Bry. (rheumatic pains; dropsy of chest; stitching in liver; occipital headache); Chel. (liver pain; pain under right scapula bilious stools); Nux v. (jaundice; liver pains): Iris v. (diarrhœa liver): Jalap. (diarrhœa); Septicæm. (camp, diarrhœa); Æthiops ant., Arsen., Prim. obc., Mezer., Olean., Viol. t., Rhus, &c. (skin); Gels., Coccul., Carb. v., Glon., Sul., Nat. sul., &c. (occipital headache); Carya alba (botan.; purpura and scurvy).

SYMPTOMS.

1. Mind.—Want to be alone, want to do nothing but eat and sleep, cannot think of concentrating my mind upon any one subject.—Confusion so that I could not study.—Dull feeling, cannot remember anything that I read—Absent-minded, forget what I am about.

2. Head.—Vertigo, with slight nausea 11 a.m.—Slight vertigo with sinking faint feeling in stomach extending to abdomen.—Headache in morning on waking, with yellow coat on tongue.—Dull headache in forenoon, < r. side.—Head feels as large as a barrel.—Severe headache; can hardly see.—Headache with frequent micturition and burning.—Fulness in frontal region.—Pain in forehead.—Pain in r. temple in forenoon.—Pain in occiput in morning; > on rising.—Sharp, shooting pains in occiput, often associated with liver disturbance.—Itching of scalp, intense, must scratch constantly.

3. Eyes.—Eyes red and swollen.—Inflammation with pustules on lids and around eyes.—Eyes burning in afternoon.—Feeling in eyes as if drawn together.—Loss of vision on sudden motion, with faint-like giddiness.

5. Nose.—Numbness at root of nose; in bridge, > rubbing.—Dryness.—Watery discharge (l.).—Bleeding.—"Noli me tangere" (rodent ulcer) on nose.

6. Face.—Pallor.—Erythematous redness, with dry, burning sensation.

8, 9. Mouth and Throat.—Tongue: coated white; yellow in the morning.—Burning and pricking in mouth and throat.—Taste coppery.—Swelling of submaxillary glands, < r.—Sore throat: in forenoon, with roughness; on swallowing; with swollen feeling.—Fauces dry.—Burning in pharynx.—Pain in r. side of fauces.

11. Stomach.—Ferocious appetite.—Thirsty, want to drink all the time.—Nausea in morning.—Nausea < at night.—Burning in stomach.—Sinking in stomach extends to abdomen; with headache.

12. Abdomen.—Stitches in hepatic region, and under r. scapula.—Pain in each hypochondrium; in umbilical region; in abdomen after dinner, then diarrhœa, with burning in anus; in region of inguinal rings, with soreness on rising from a recumbent position.—Flatulent pain in different parts of abdomen.—Heavy pain in umbilical region.—Burning in abdomen after stool.

13. Stool and Anus.—Stools bilious, copious, frequent, painless.—Loose stool smelling like onions.—Diarrhœa: with cutting in abdomen; with burning in anus before and after stool; painless in forenoon; yellow, frothy, with tenesmus and burning in anus after stool.—A drastic purge, producing irritation and inflammation of mucous membrane of bowels.—(Camp diarrhœa.).—Soft stool with pain and

flatulence in abdomen.—Stool soft and brown; dark, and sticky.—Constipation, with griping in umbilical region.—Constipation preceded by diarrhœa.—Stool: hard, and in balls; hard and dark brown; hard and brown, difficult; first part hard and brown latter part diarrhœic and greenish-yellow; small and brown; dark brown.

14. Urinary Organs.—Micturition: frequent and copious; frequent with burning smarting (with headache).

17. Respiratory Organs.—Raising a quantity of dark blood.—Expectoration of very tenacious mucus.

18. Chest.—Great oppression of chest with cutting pains in lungs.—Scrofulous consumption with great emaciation.—Pain in l. chest; in centre at times, by day and night, with foreboding feeling at night, not < by walking.—Dropsy of chest of rheumatic origin where there are bright red spots like flea-bites.—Retrosternal pain, <, or only felt when going uphill; when walking out of doors.—Oppression at chest; hindering long breathing.

19. Heart and Pulse.—Sharp wrenching in l. side at 6 p.m., when walking, with suffocating sensation under sternum, compelling him to stand still, which did not > the pain, the attack being similar to angina pectoris (Bry. Ø relieved immediately).—Pulse accelerated.

20. Neck and Back.—Neck rigid.—Lame feeling in nape.—Pricking up and down spine.—Sticking under r. scapula on stooping.—Pain: between scapulæ; under scapula; under r. scapula, making breathing difficult; under vertical border of r. scapula, < moving the part and drawing a long breath; in region of lumbar vertebræ and r. sacro-iliac symphysis; in region of lumbar vertebræ in afternoon, with restlessness; in lumbar and dorsal vertebræ at night; in region of sacro-iliac symphysis, < sitting, also in forenoon, and in region of lumbar vertebræ; in lumbar vertebræ, extending through lumbar region and up spine.—Occasional shooting in lumbar region.

21. Limbs.—Aching pains in the limbs.—Pain in elbows and knees.

22. Upper Limbs.—Pain in shoulder.—Sharp, rheumatic pain in shoulders and wrists.—Pain in r. axilla in afternoon.—Pain in r. axilla, extending down arm.—Pain in l. arm.—Arms and wrists, as if sprained by hard work.—Numb pain in r. axilla, extending down arm along nerves.—Numb pain in arms and wrists in forenoon; in elbows and knees; in wrists extending up arms.

23. Lower Limbs.—Cramp-like pain in hip at night.—Pain in thighs and l. knee in forenoon.—Pain in r. knee on ascending stairs; in ankles.—Occasionally sharp pain in calves.—Numbness of l. foot when sitting still.

24. Generalities.—Loss of weight.—Aching in various parts.—Feeling as if all internal organs were too large, < l. side.—Restlessness in afternoon, with pain in region of lumbar vertebræ.—Weakness; with sick feeling.—Faintness, > rising and moving about.—Deathlike feeling, with chills and shuddering.

25. Skin.—Exanthematous eruption resembling flush of scarlatina.—Eruption resembling eczema simplex on upper chest, with itching pricking when heated by over-exertion.—Pustules on thighs, hips, and nates, with itching and burning, a few pustules on body, face, and arms.—Itching in spots, now here, now there.—Itching on arms, > scratching.—Itching with burning.—Itching on head, neck, and shoulders, with pricking.—Itching on arms with burning and redness.

26. Sleep.—Constant yawning, without sleepiness.—Sleepiness.—Sleeplessness; after 3 a.m.—Sleep restless; and light.—Sleep unrefreshing.—Dreams: vivid; frightful; frightful at night, and waking covered with sweat; troublesome; of being among Indians; ridiculous.

27. Fever.—Chilliness alternating with flashes of heat; chilliness along spine; beginning in back when near the fire, without coldness of flesh.

Juglans Regia.

Nux juglans. Walnut. Juglandaceæ. Tincture of leaves and of rind of green fruit.

Clinical.—Acne. Anus, burning in. Axillary glands, suppuration of. Chancre. Ecthyma. Eyes, pain over. Favus. Flatulence. Headache. Herpes. Herpes preputialis. Levitation, sensation of. Menorrhagia. Purpura. Ringworm. Scurvy. Spleen, pain in. Syphilis.

Characteristics.—"It was said that in the golden age, when men lived upon acorns, the gods lived upon Walnuts, and hence the name of juglans, *Jovis glans*, or Jupiter's nuts" (*Treasury of Botany*). From many points of view the walnut-tree is of very great importance, and well deserves its lofty name. Besides providing food, at any rate fit for the gods, and wood at once light and strong, a sap that yields sugar, a fruit that yields a dye and an oil, and serves for pickles, the Royal Nut has a place in medicine which deserves to be better known. The *Treasury of Botany* gives a hint to homœopaths in this remark: "Its plantation should not be too near dwellings, as some persons are affected by the powerful aroma of its foliage." The remarkably brain-like appearance of the nut has given rise to the notion that it is a "brain-food." I cannot say that there is any other ground for it; but in Clotar Müller, who was the first to prove *Jug. r.*, it produced this curious symptom: "Excited, as if intoxicated, in the evening in bed, and a feeling as if the head were

floating in the air"; showing a decided brain action, such as we generally associate with the "wine" rather than the "walnuts" of dessert. Peevishness and mental indolence were other mental symptoms noted. The head symptoms are as marked as those of *Jug. c*., but the lancinating pains were not noted in the occiput as with that remedy, but in the forehead. There are few remedies which cause flatulence and bloating of the abdomen more markedly than *Jug. r*. It appears to affect the spleen more than the liver (opposite of *Jug. c*.). There is diarrhœa, and many rectal and anal symptoms; but the diarrhœa is not so distinctly bilious as that of *Jug. c*. Like *Carya alba* and *Jug. c*., *Jug. r*. is hæmorrhagic, the blood being black and clotted (uterine). Remarkable symptoms of inflammation and ulceration appeared in the male sexual organs. This to a large extent belongs to the general integumatary action of the remedy. It was Clotar Müller who made the observation that "In the digestive organs it causes derangement and irritation, which simultaneously call forth abnormal symptoms in other organs, especially in the head. After this action, which is *brief*, appear various exanthematous symptoms, which appear late and run a chronic course." The skin symptoms of the *Regia* are more pronounced and varied than those of *Cinerea*. This has led to its more frequent use in scrofula, as skin and gland affections go much together. Farrington says *Jug. r*. is one of the best remedies in "tinea favosa, especially in the scalp behind the ear, itching is intense at night so that the patient has difficulty in sleeping." Scabs appear on arms and in axillæ. In the proving of *Jug. r*. the symptoms went from the right axilla to left. In a patient of mine, a nurse who had poisoned her left arm some years before from a septic and possibly syphilitic case, inflammation of the axillary glands ensued, first of left then of right, leaving an eczematous itching condition. The glands of the groin also became affected. *Elaps*. 200 had relieved the bulk of the conditions, but there was still a little irritation occasionally in the axillæ, and I thought I might expedite matters by giving *Jug. r*. 12 three times a day. This is what happened: Five days after beginning the *Jug. r*. an eruption of minute vesicles appeared on her back, itching much. It extended all up the centre of the back from sacrum to mid-dorsal region, spreading out below, tapering above. She had scratched holes in two places. The rash was < after washing. But *all soreness and irritation had gone from the arms and axillæ*. I antidoted with *Rhus* 12. Four years later she had had no more trouble with the glands. Cl. Müller, who experienced the axillary skin symptoms in his own person, had never suffered from a skin affection before. One of the provers was cured of an itching eruption of the legs from which he had suffered in winter for four years, the itching commencing as soon as he began to undress. Many of the symptoms closely resembled syphilis, and the affection of the cheek in one of the provers was actually diagnosed as syphilitic by a medical man who saw him in Cl. Müller's absence. The left side of head, face, and abdomen mostly affected. Axillary symptoms proceed from right to left. The symptoms generally are < by motion; migraine < by speaking; pain in abdomen < by laughing. There is < after fat food. < Evening at 9 p.m., and after 9. The itching is < at night. Warmth of

bed < toothache. It removed a winter rash < by undressing. Rash caused in my case was < by washing.

Relations.—*Antidoted by:* Rhus. *Compare:* jug. c., Carya alb. (botan); Rhus (skin); Graph. (tinea favosa behind ears); Rumex (rash < undressing); Mezer., Merc.; Cean. (spleen); Lyc. (flatulence). *Follows well:* Elaps. (axillary affections; black hæmorrhages); Sulph. (head, hot, cold extremities); Grind. (pain over l. eye).

SYMPTOMS.

1. Mind.—Excited in evening in bed as if intoxicated, and feeling as if the head were floating in the air.—Peevish and discontented in evening.—Disinclined to talk or argue, as was customary with him; mental indolence.—Inattention when reading and disinclination to work.

2. Head.—Vertigo.—Headache after dinner and in evening; with flushed face.—Feeling in head and nose as in beginning of coryza.—Confusion in head.—Burning heat in head in the evening with icy-cold extremities.—Heaviness in head.—Lancinations in forehead.—Pain in l. side of forehead.—Pain above l. eye., with pain in eyes.—Pain above eyes, < motion; < shaking head or moving eyes; with yawning and sleepiness.—Pain above eyes, as if dizzy.—Throbbing in temples, > going into, open air, returning on entering warm room, with sharp pain in front part of head.—Migraine in a spot In region of l. parietal bone preventing speaking.

3. Eyes.—Burning in eyes.—Pressive pain above eye (l.) < by motion.—Feeling of coryza.

4. Ears.—Aching and fulness in r., then l. ear, then discharge of pus from both ears, external ear inflamed and two painful sores on it.—Burning in l. ear, then redness and swelling, then pimple on inside, then discharge of pus from both ears, < l., with burning and redness of l. external ear, and feeling as if something dropped inside of ear at every step, and soreness preventing lying on l. side of head.

6. Face.—Swelling of l. cheek and upper lip, with swelling of gum over l. upper incisors, without previous toothache, then a hard, reddish painful swelling in l. cheek, in the middle of which was a sharply-defined, depressed dark red, yielding circle, pus could be seen through the thin skin, the apparently sound tooth was drawn, and ichorous pus (from an abscess) was discharged through the opening, then the swelling disappeared.

8. Mouth.—Tearing in hollow teeth, < warmth of bed.—Tongue coated white; in morning, with bitter, slimy taste.—Tongue covered with white mucus.—Salivation.—Inclination to keep mouth dry after dinner, could not make up

his mind to drink wine or water as usual.—Taste bitter.—Taste slimy in morning on waking.

9. Throat.—Hawking of much mucus.

10. Appetite.—Appetite increased.—Unusually great appetite without increase of thirst.—Appetite lost.—Thirstlessness while eating, and aversion to wine.—Aversion to tobacco-smoking in evening.—Thirst increased.

11. Stomach.—Eructations: violent; frequent; loud; tasting as after eating fat.—Fulness and bloatedness of the stomach, which prevent one from eating while one has a good appetite, > from eructations.—Hiccough more violent after eating.—Nausea at 6 a.m.; and after supper.—Vomiting; woke suddenly, vomited food eaten four hours before, then slept without further trouble.—Burning in stomach.—Pain in epigastric region, with distension of abdomen.

12. Abdomen.—Fulness, bloatedness, tension, and heaviness in the abdomen, with frequent desire to go to stool, > by eructations and discharge of flatulence.—Distension: after eating; after dinner, with emission of flatus; with sudden desire for stool; so that he must loosen his clothes, with pressure in stomach; so that he could eat but little in spite of good appetite; tympanitic hardness of the abdomen.—Rumbling; with griping; with pressive pain in epigastric region.—Emission of flatus; especially when lying down.—Pain in abdomen > eructations.—Wandering pains.—Pressive and drawing pain, < motion, > appearance of menses (fifteen days too soon), then for eight days (instead of three as usual), copious discharge of blackish blood, often in large clots, with exhaustion and loss of appetite.—Drawing, with pressure in region of spleen.—Sticking beneath l. lowest ribs.—Pressure in region of spleen, with eructations.—Pain beneath the l. false ribs, < deep breathing, laughing or stooping.—Pain in l. side on rapid walking.—Pain over l. side with wandering gripings in intestines.—Pain above umbilicus.—Pain in hypogastrium, with nausea.—Sticking in hypogastrium on moving or stooping.—Cutting in r. hypogastric region.

13. Stool and Anus.—Stool: liquid twice a day; preceded or accompanied by pain in abdomen; thin; soft, large, at last almost thin.—Stool hard; difficult; scanty.—Stool delayed.—Constipation.—Bowels confined in morning, natural in afternoon.—Large stool, then burning pain and pressure in anus.—Stool scanty and frequent; difficult; omitted.—Itching at the anus in the evening in bed, with stitches, compelling one to walk about.

14. Urinary Organs.—Frequent desire to pass water from loss of tone of sphincter.—Constant urging and involuntary dribbling.—Continuous desire to urinate, and frequent micturition day and night, with very profuse

discharge.—Obliged to urinate at night.—Obliged to urinate often; and much at a time.—Copious urine; but no thirst.—Urine scanty and clear.—Urine dark red.

15. Male Sexual Organs.—Frequent erections day and night.—Burning in penis after coition with his wife, with abrasion where prepuce joins penis, afterwards a suppurating streak half-way around between glans and prepuce, then the ulcer became larger, margins hard, base lardaceous, bleeding on slight pressure, often there was a small scab, from beneath which pus oozed and which often came off and left a suppurating ulcer, afterwards a healthy scab formed in the middle and fell off, leaving healthy skin, so that instead of one long narrow there were two small round ulcers; these healed and left no scar.

16. Female Sexual Organs.—Menstruation too early and too profuse; discharge of a large quantity of black clots; preceded by pressive drawing pains in abdomen, < by motion; accompanied with general exhaustion and loss of appetite.

17. Respiratory Organs.—Aphonia or great hoarseness.

18. Chest.—Itching on the sternum.—Sticking in lungs not dependent on motion or respiration.—Oppression.

19. Pulse.—Pulse rapid and full.

20. Back.—Stitches in sacral region.—Violent stitches in the small of the back, causing one to tremble.

21. Limbs.—Drawing pain as if sprained, in first phalanx and joint of l. thumb, < motion, and while in bed the same pain in r. great toe.—Sticking and itching in r. leg and r. fingers.—Drawing and paralysed feeling in legs and knees, with weakness and with giving way of knees when walking, and a similar sensation in r. hand.

22. Upper Limbs.—Itching of skin of axilla (r.); tetters formed; afterwards (l.).—Electric starts in forearms and hands wake him as he falls asleep.—Weak feeling in r. hand.—Intermittent pain in r. index.

23. Lower Limbs.—Pain in the hips or knees, impeding walking.—Sticking in inner condyle of knee and feeling of impediment when walking.—Rheumatic pain in knee impeding walking.—Pain in r. instep when walking, and sensation of impediment.—A burning itching eruption of lower extremities occurring in winter, itching commencing as soon as he undressed, was cured by the proving.

24. Generalities.—Muscles relaxed.—Exhaustion and disinclination for the usual business.—Intoxicated sensation; as if flying.

25. Skin.—Eruption behind ears of children.—Itching eruption over the whole body.—Pimples on face; red pimples on face, neck, shoulders, and back, some containing thickish fluid; pimples on nape, discharging moisture when scratched (like acne).—Itching: here and there; on sternum; on hands; r. hand; dorsum of r. hand, then on feet, forehead, scalp and abdomen; r. fingers in afternoon; legs, arms and abdomen at night, with tossing about and inability to sleep; here and there causing restless sleep, with dreams and erections; on flexor surface of r. forearm, near elbow, with burning and red spot, in the middle of which was a pimple, the redness disappeared, but the pimple was painful and pus formed.—Painful, large blood-boils on the shoulder and in the region of the liver.—Glandular swellings (scrofulous swellings).—Pustules as in eczema, with burning-itching, red, cracked skin, discharging a greenish fluid stiffening the linen.—Syphilitic, scrofulous and mercurial ulcers and herpes.—Itching in r. axilla, with burning, skin sore and cracked then red and scaly, it became moist, on margin of tetter burning vesicles, the tetter < after perspiring much, the perspiration, with the secretion from the eruption, stiffened the linen and stained it greenish-yellow, the pain sometimes so great that violent motion of the arms was impossible, there were always new vesicles and larger extent of redness after increased burning and itching, the same trouble in l. axilla, then a furuncle on shoulder, on coracoid process, then a painful furuncle over biceps, with circumscribed redness and induration, discharging bloody matter, then two red itching spots on r. elbow, upon which a yellow pustule formed, a furuncle, with induration and pain, between 9th and 10th ribs, with thick, bloody discharge, leaving an induration, about this time a red spot near seat of second furuncle, becoming like an indurated gland, at this time on l. instep, then on r. redness, with itching and vesicles, leaving hard scurf, whereby the whole place became elevated and painful, the scabs were pressed in by the boots and rubbed off so that the part was raw, after healing the spot was bluish red and swollen.

26. Sleep.—Yawning; in afternoon, with stretching.—Sleepiness.—Inability to sleep after dinner though inclined to do so earlier than usual.—Restless sleep, with frightful dreams.—Restless dreams.

27. Fever.—Pulse full and frequent in the evening.—Cold limbs; after 9 p.m., with hot head.—Alternations of cold and heat in short attacks during the day.—Alternations of coldness and heat over whole body, with heaviness of head, which after eating increased to pain, > after 3 p.m.—Heat over whole body in evening.—Frequent and sudden attacks of flushes of heat.—Heat in flushes, with confusion of head.—Burning hot face in the evening, with cold extremities.—Hot head in evening.—Hot hands at 9 p.m., with rapid pulse, then general sweat.—Sweat staining greenish yellow and stiffening linen.

Juncus.

Juncus effusus. Soft Rush. N. O. Juncaceæ. Tincture (of root probably).

Clinical.—Asthma. Backache. Calculus. Catarrh. Dropsy. Flatulence. Headache. Kidney, diseases of. Rheumatism. Scars, affections of.

Characteristics.—*Juncus* was proved by Dr. Wahle, and a number of symptoms were produced. The most notable were bubbling sensations in various parts; and a number of pains pressive and sticking were noted in the chest. Pulling in cervical vertebræ; in neck muscles. There was much rumbling of flatus in abdomen, and marked > to abdominal symptoms when flatus was emitted. According to Jahr, quoting Noack and Trinks, *Junc*. is diuretic, and has been used in dropsical, calculous, and renal diseases. Hartmann used *J. conglomeratus* with success in dysury, strangury, and ischury. In Livonia a decoction of *J. pilosus* is used for stone and gravel. The exact preparation used in the proving was not recorded. Fresh plant tinctures should be used in any further experiments. The pains were < on l. side; appeared or were < at night and came on again in morning and evening. < Flexing parts; < bending sideways; > stretching out arm. Rheumatic pains < by rest, > by motion. Chilliness < on uncovering; > emission of flatus.

Relations.—Compare. Rhus (< rest, and uncovering; > stretching); Berb. (bubbling sensations); Sil. (scars).

SYMPTOMS.

1. Mind.—Anxiety in morning, during a partial slumber, like the orgasm of blood, with frequent palpitation so that he was obliged to sit up, when it disappeared.

2. Head.—Vertigo: as if everything were turning in a circle during rest; with nausea while walking.—Pressive drawing headache, extending from before backward.—Pressing-asunder headache, in forehead, on stooping, on rising up in bed in morning, a burrowing pain as in suppuration in forehead and occiput, which immediately disappears on lying down again.—Bubbling sensation in r. side of occipital bone, which extends to r. ear, where it leaves a dull, pressive sensation.

3. Eyes.—Itching on margins of lids, > rubbing.

4. Ears.—Cramp-like pain in external ear.—Feeling as if inner meatus were swollen.

5. Nose.—Stopped catarrh; feels like sneezing.—Itching on inner surface of l. nostril.—Dry coryza.

6. Face.—Sticking-itching pain above l. corner of mouth, as if a splinter sticking into it, morning.—Bubbling sensation in r. jaw-joint, leaving swollen feeling in the parts.

8. Mouth.—Tongue: coated white; yellow; with slimy taste.

9. Throat.—Throat dark and scrapy.—Pressure in throat during swallowing, as if tonsils swollen.—Hawks much yellow mucus without coughing.—Painful laming, drawing, stretching, and pulling in neck muscles.

11. Stomach.—Swelling in region of stomach pit.—Tightness in stomach pit.

12. Abdomen.—Constant rumbling, obliges him to go to stool, but no stool follows, only emission of flatulence.—Sharp stitch extending deep inward above crest of ilium, taking away breath.—Unusual feeling of relief of abdominal symptoms after emission of flatulence.

13. Stool and Anus.—Itching in rectum.—A thin stool consisting of small lumps.

14. Urinary Organs.—Tension in urethra with sensation as of something alive in it.—Slight itching; burning in urethra.—Urine: like clay-water deposits red sediment.

15. Male Sexual Organs.—Itching in penis and scrotum.

18. Chest.—Violent pressive pain in lower chest, < on expiration and by bending body sideways.—Sticking commences in l. third false rib extending to r. nipple.—Pain as if lower sternum were pressed inwards.

20. Neck and Back.—Pressive drawing in cervical vertebræ as if it would draw head to r.—Drawing and pulling in dorsal vertebræ as if he would be bent backward; frequently repeated.—Aching pain in small of back, causing an anguish, or attended with asthma.

21. Limbs.—Painless cracking in joints.

22. Upper Limbs.—Dull sticking pain in l. axilla, evening in bed.—Visible twitching of deltoid muscles.—Pressive paralytic pain in head of r. elbow, gradually disappears on stretching out arm, but renewed immediately on flexing it.—Painful burrowing in bones of wrist, during both rest and motion.

23. Lower Limbs.—While walking, stiffness in r. hip as if tendons too short.—Twitching in l. gluteal muscles, as if something alive beneath them.—Very painful drawing in bones of lower legs, during rest, > on motion.—Bubbling and drawing in muscles of calves.—Bubbling pain in bones of l. lower leg.—Itching and

jerking in knee.—Tension in tendo Achillis as if swollen and too short, on bending l. foot forwards.

25. Skin.—Itching, crawling in scar of incised wound several years old, with elevation of scar as if it would break out.—Itching on penis, scrotum, thighs, knees.

26. Sleep.—Wakes very early, cannot sleep again.—Dreams of hunting; of jests; laughs aloud in his sleep.

27. Fever.—Chilliness over whole body, immediately on getting out of bed in morning.—Becomes chilly over whole body on raising bed covering and allowing a little air to come to the feet.—Repeated shivering.

Juniperus Communis.

Juniperis communis. Juniper. N. O. Gymnospermæ of the Coniferæ. Tincture of fresh ripe berries.

Clinical.—Dropsy. Dysmenorrhœa. Hæmorrhages.

Characteristics.—*Juniper* has not been proved, but sufficient is known of its action to warrant its inclusion, and to show the analogy between its action and that of *J. Sabina*. Gin owes its distinctive properties to the oil of juniper berries, and that is why this spirit is in such popular repute as a remedy for dysmenorrhœa. It has a very powerful action on the kidneys, and has cured cases of renal dropsy. Hale also commends it in certain coughs with scanty, loaded urine. He says German doctors use *Juniper* much in gastric affections, abdominal flatulence and colic.

Relations.—*Compare:* Junip. virg., Sabina, Tereb.

Juniperus Virginianus.

Red Cedar. N. O. Gymnospermæ of the Coniferæ. Tincture of fresh twigs. Tincture of twigs and berries. Tincture of the oil.

Clinical.—Apoplexy. Convulsions. Eyes, twitching of. Strangury. Tetanus. Uterine hæmorrhage.

Characteristics.—The effects of *Jun. v.* have been largely observed on women who have taken it to procure abortion or bring on the menses. A number of fatal

cases have occurred, the patients passing into violent convulsions, followed by an apoplectic condition, insensibility, and collapse.

Relations.—*Compare:* Sabina, Junip. c.

SYMPTOMS.

1. Mind.—During paroxysm (of fever) raved incoherently.—Moaned most piteously.—Fright.—During the morning of her death lay in a stupid state; answered no questions and did not appear to be sensible.—As the convulsions continued the stupor became more and more profound; when they ceased coma ensued.—She lay apparently in a deep comatose sleep until about nine o'clock next day., when she woke to perfect consciousness, with no recollection of what had occurred since swallowing the oil.

2. Head.—Dizzy.—Head felt as if enclosed with an iron band.—Jerking of head.

3. Eyes.—Eyes began to glare and twitch; felt as if bursting from their sockets.—Jerking of eyes and head.—Pupils dilated.

6. Face.—Very red face.—Venous aspect.—Face swollen and livid.—Veins of face, head, and neck fully distended.—One half lower lip and part of chin and side of mouth much swollen and dark coloured as if bruised; tongue and gums also involved in the swelling and lividity.—Jaws firmly fixed.

8. Mouth.—Thought it would take the skin from her mouth and throat.—Could not speak so as to be understood; she articulated like one having hemiplegia.

9. Throat.—Fauces in spots denuded of their mucous covering.

11. Stomach.—Great thirst.—Sick and distressed at her stomach.—Vomited between the fits; vomited matter smelt of cedar oil.—Vomited black matter; afterwards green; vomiting continued all day.—Considerable distension and tenderness at pit of stomach.—Pain in stomach.—Burning in stomach.

12. Abdomen.—Abdomen swollen and hot; intense pain in abdomen.

13. Stool.—Violent purging which continued till death.

14. Urinary Organs.—Great difficulty in passing urine.

16. Female Sexual Organs.—Uterine hæmorrhage.—Considerable fever and pains like labour-pains.

17. Respiratory Organs.—The soft parts about the neck were sucked down at every effort at inspiration, and the lower jaw descended.—Stertor continued for a

few minutes; it was succeeded by breathing of a very different kind; and the chief character of this was an unsuccessful heaving of the chest in inspiration for breath, and a limp dropping together of the chest in expiration.—Expiration slow and without assistance from the expiratory muscles, the chest appeared to fall together from its own weight.

19. Heart.—Pulse less than 60, afterwards sank to 45, then intermitted.—Pulse fluttering, feeble, slow, very irregular.—Almost pulseless.

22. Upper Limbs.—Hands at times clenched.

23. Lower Limbs.—Staggering.

24. Generalities.—Twitching of the muscles.—A most violent convulsion came on and all further consciousness was lost for twelve hours.—All voluntary muscles tightened with the most rigid spasm, whole body jerking, eyes glassy, pupils dilated a little, pulse 60, respiration struggling, catching, and strangling; followed by another paroxysm, which, as in other cases, began by a jerking of the eyes, followed by a jerking of the head, contraction of muscles of one side of face and neck, then those of the other side, of back of neck, of arm, trunk, and extremities, accompanied by an imploring reaching out of the arm, groan, if groan *that noise* could be called, glaring eye, and natural language of the most extreme terror and amazement, and this succeeded by jerking of the whole body; so heart-sickening was her appearance that some bystanders fainted; the interval between the paroxysms was imperfect and the patient was inconstant motion; three men could not hold her. Something had to be kept between the teeth to prevent them shutting.—After the convulsions ceased an apparently apoplectic state came on with stertorous breathing, twitching of voluntary muscles, venous countenance and slow pulse.—After the fever, much exhausted.—Much exhausted or in a state of prostration when she attempted to inspire; when the air passed out of the chest, all strength seemed wanting.—Sore all over.

26. Sleep.—Could be aroused a very little, but would immediately doze away again.

27. Fever.—Rigors followed by fever.—Feverish.—Considerable fever and pains like labour-pains.—Skin dry and parched.

Kali Aceticum.

Kali acetas. Acetate of Potash. Normal Potassic Acetate. $KC_2 H_3 O_2$. Solution in distilled water.

Clinical.—Diabetes. Diarrhśa. Dropsy. Hćmorrhoids. Urine, alkaline.

Characteristics.—*Kali acet*. is a well-known diuretic (and in less degree cathartic) in allopathic practice. These actions are positive and direct; and the homśopathic uses are chiefly in cases of over-secretion of urine and in diarrhśa. One of the main purposes for which its diuretic and cathartic properties are sought by allopaths is as derivative in cases of dropsy, chiefly ascites and hydrothorax. It is quite possible that this action may be specific, that is homśopathic, and not merely derivative; for both *Acet. ac*. and the *Kali* cause great disturbance in the circulation of fluids in the tissues. A few provings have been made, and these have brought out a preponderance of abdominal and urinary symptoms—griping, diarrhśa, bleeding of hćmorrhoids, increased flow of urine, which was more watery and alkaline. Weakness; trembling; profuse perspiration, especially about the head. Symptoms generally were < in morning, but there was a headache, < 4 p.m.

Relations.—*Compare:* Acet. ac., Kali c., Am. ac.; Lyc. (< 4 p.m.).

SYMPTOMS.

2. Head.—Headache about 4 p.m.—Dull headache in morning.—Much perspiration of head, esp. 11 to 1.

11. Stomach.—Constrictive, dull pain in stomach, extending to low down in abdomen, gradually disappearing after two hours.—Dull, pressive, pinching, and constrictive pain in epigastric region, coming on a few minutes after each dose, and lasting an hour.

12. Abdomen.—Pains in region of umbilicus, lasting without cessation until going to bed, when they suddenly disappeared, and I was able to sleep through the night.—Unnatural distension of abdomen after supper.—Griping.—An indefinite gnawing pain in abdomen lasting an hour in afternoon.—Gnawing sensation in abdomen at 9.15 a.m., which became painful after fifteen minutes and lasted till evening.

13. Stool.—Discharge of hćmorrhoidal blood several times during day.—Diarrhśa.—Two stools in evening.

14. Urinary Organs.—Urine very much increased in quantity and very watery.—Urine: 16 ounces in twenty-four hours, containing 416 grains of solids; after three drachms had been taken, in the course of twenty-four hours she passed

46 ounces of urine containing 782 grains of solids, with an excess of 72 grains of urea over the amount in the 16 ounces of urine passed when no medicine was taken.—During the proving the urine evolved ammonia.—Urine strongly alkaline; sweetish odour; yellow colour.

21. Limbs.—Great weariness of all limbs, with some headache.—Extreme weariness and trembling in all limbs, in morning.

23. Lower Limbs.—The weariness in lower limbs and the dull headache disappeared half an hour after the afternoon nap.

24. Generalities.—Trembling and anxiety in whole body of transient duration.

27. Fever.—Much perspiration on head, esp. from 11 a.m. to 1 p.m. (4th d.).—Profuse perspiration, which was very offensive, during a walk of two hours (7th d.).

Kali Arsenicosum.

Kali arseniatum. Potassium arsenite. KH_2 ASO_3. "Fowler's Solution," the form in which *Kali ars*. has been tested, consists of Arsenious acid 1 part, Carbonate of potash 1 part. Compound tincture of lavender 3 parts, distilled water 95 parts. Dilutions should be made from this.

Clinical.—Bright's disease. Cancer. Deafness. Diarrhśa. Dropsy. Eczema. Epithelioma. Exophthalmos. Eyes, affections of. Herpes zoster. Jealousy. Measles. Melancholy. Miliary rash. Neuralgia. Neurasthenia. Psoriasis. Skin, affections of. Tongue, neuralgia of. Varicose veins. Ulcers.

Characteristics.—It is not possible to separate entirely the pathogenesis of *Ars. alb*. and *Kali ars. Kali ars*. is the favourite form in which *Arsenic* is prescribed by the allopaths, consequently the bulk of observations from over-dosing are due to this preparation; and as it is named *Liquor arsenicalis* it is considered as *Arsenic* and nothing else. However, a sufficient number of pure observations have been made to warrant a separate consideration. The cases of poisoning with massive doses present nothing to distinguish them from cases poisoned with other arsenical preparations. But *Kali ars*. has had a short proving, and a number of cases of medicinal provings in allopathic hands are on record. Jonathan Hutchinson has recorded a number of cases of right-side herpes. One of his patients observed that whilst taking *Kali ars*. her sclerotics became thick and yellow instead of clear and bluish. The iris which was blue became more grey. Her skin instead of being fair and florid became muddy and older looking. This was a mystery to Hutchinson seeing that he usually gave *Kali ars*. to make the skin clearer, but he was

compelled to record the homśopathic fact, though, he did not apparently perceive the homśopathic solution of the mystery. The same authority has put on record cases of epithelioma developing after prolonged medication with *Kali ars*. for psoriasis. The skin symptoms of *Kali ars*. are exceedingly well marked. In one case an attack of measles was almost exactly depicted. Itching was < at night; and < on undressing, < by warmth. Among the peculiar symptoms of *Kali ars*. are: "Head feels larger." "Protrusion of eyeballs." "Burning and numbness of tongue; tongue feels too large." "Sensation of a ball rising from pit of stomach to larynx causing suffocation." "As if a red-hot iron were in anus." Periodicity was marked as with *Ars*.; symptoms were < every other day in the morning; mind symptoms < every third day. The right-sidedness of *Ars*. was reproduced in the right-sided herpes, repeatedly noticed by Hutchinson, but there was a left-sided headache. A case of deafness of years' standing was cured with Fowler's Solution (gr. 1/60 of the salt), the accompaniment being constant sickness; nothing could be kept down.

Relations.—In some cases of overdosing Kali iod. proved *antidotal*. For other *antidotes* see Arsen., which it greatly resembles, and with which it must be compared. *Compare:* Levico, Nat. ars., and other Arsen. compounds; Chi. (periodicity) Cicut. (fixed eyeballs); Rumex and jug. r. (< on undressing); Iod. Kali bich., Merc. c.

SYMPTOMS.

1. Mind.—Scolding, morose, retired, quarrelsome, and discontented, jealous, indifferent to everything, scarcely answered questions addressed to her, or replied to them in a peevish tone; eyes had a fixed look, face looked frightened and anxious; < every third day.—Nervous depression.—Great nervousness.

2. Head.—Thought her head felt larger.—headache in l. parietal bone, as if it was sore and pressed upon by a hand; behaves like a crazy person.—Constricted feeling in head, as if there was a wound on parietal bone which was being scratched; the place feels hot; pressure does not >.—Crusta lactea.

3. Eyes.—Startled look, with protruding, brilliant eyes, pale face, and sunken cheeks.—Eyes red.—Heat and itchiness of lids, followed by swelling and tenderness; conjunctiva becomes inflamed, eye sensitive to light, dark discolouration round orbit.—Itching of conjunctiva.—Protrusion of eyeballs.—Whites of eyes look thick and yellow.—Jaundice.—The blue iris becomes more grey.—Conjunctiva glassy.—Dyspnśa; injected conjunctivć, and eyeballs fixed.—Right eye weaker; watery, as after weeping.

6. Face.—Nodular eruption on face; boils.—Face pale.—Complexion muddy.—Looks older.—Furfuraceous eruption on beard.

8. Mouth.—Gums swollen and tender.—Tongue clear, red, like raw beef.—Tongue coated on edges only with mucous stripes.—In middle towards tip of tongue a smooth, red spot with troublesome burning and numbness. (Neuralgia of tongue).—Tongue swollen, felt too large in mouth.—Tongue whitish.

9. Throat.—Sensation in throat and larynx as if forced asunder.—Throat dry and sore.—Throat constricted with copious flow of saliva.

10. Appetite.—Appetite lost.—Intense thirst.

11. Stomach.—Constant pain and nausea after food; frequent vomiting of ingesta.—Weight after eating.—For one or two hours, repeated every five or ten minutes, sensation as of a ball rising from pit of stomach to larynx threatening suffocation, > by loud belching.—From pit of stomach to spine an anxious feeling accompanied by palpitation, not perceptible objectively.—Empty feeling in stomach.—Sin king at epigastrium with faintness.

12. Abdomen.—Burning pain in bowels; unquenchable thirst; belly tense and painful; involuntary watery stools with sense as if a red-hot iron were in anus.—Frequent griping pains in bowels, and almost constant desire for stool; considerable tenderness in whole abdomen, which is distended.

13. Stool and Anus.—Violent diarrhśa.—Stools white, watery, frothy.—Sensation as of a red-hot iron in anus.

14. Urinary Organs.—Urine scanty with pellicle.

16. Female Sexual Organs.—Cauliflower excrescence of os uteri, with flying pains, pressure below os pubis, and stinking discharge.—Menses absent.—Milk entirely arrested (afterwards restored by treatment).

17. Respiratory Organs.—Some gastric cough, and frequent raking of throat and fauces of a muco-purulent secretion mixed with specks of blood.—Complete aphonia, following skin affection.

19. Pulse.—Pulse weak and contracted.—Pulse small, scarcely perceptible, rapid.

20. Back.—Much pain and tenderness down spine.

21. Limbs.—Palms and soles spreckled over with corns.

22. Upper Limbs.—Aching pain in r. shoulder and elbow, followed by herpetic eruption.

23. Lower Limbs.—Knees bent up so he could not move his feet.—Varicose veins of legs.—Crampy feeling of lower extremities, with partial loss of motion and sensation, livid in places, tending to slough.

24. Generalities.—Such weakness she cannot sit up in bed; a loud noise or sudden, unexpected motion throws her whole body into a tremor.—Emaciation.—Tremor.—Faintness.—Phagedenic ulcers, deep base and turned-up edges.—Rheumatic, gouty, and syphilitic pains.—Gouty nodosities.

25. Skin.—Dry, wilted skin; emaciated to a skeleton.—On three different occasions, swelling of face and eyelids, then erysipelas invading whole face ending in desquamation in a week.—Acne, appearance like that in early stage of variola.—Miliary eruption.—Herpes zoster behind r. ear, r. side of neck, r. shoulder, r. upper arm, r. chest, a few isolated vesicles l. side of neck.—Severe attack of shingles r. side of chest.—Eruption covering entire body except scalp, comes out in red papulć, varying in diameter from size of pin's head to that of a three cent. piece; vesicles form on summit, suppurate, crusts form and fall off, leaving a sore which heals; the places occupied by these sores are marked by a dark-coloured cicatrix, and the skin generally has a dusky look; intolerable itching, stinging, and burning, esp. on undressing at night; it is < on trunk, leg., and forearms; mind much depressed.—Lichen confluens over whole body except face, palms, and soles, and part of chest; the rest studded with papulć, particularly distinct about outer sides of thighs, arms, and back; they are covered with very minute, flimsy, whitish scabs, causing a powdery appearance of skin; head very scurfy; hair crisp and dry; often irritation in skin, which becomes reddened and cracked, particularly about bend of arms and knees.—One of the earlier signs is a minute papular rash, which by and by assumes the form of delicate, brownish scales giving the skin an unwashed appearance; esp. observed on parts protected from light by clothing.—After taking it for three weeks, suddenly, after feeling ill for a few hours, a copious rash made its appearance on face, hands, and chest, like measles; accompanied by catarrhal symptoms swelling of face, lips, eyelids, yellow-furred tongue, gastro-intestinal irritation, intense lameness of feet, standing giving great pain; complete aphonia followed in a few days, desquamation commenced in tenth day; redness lasted some weeks.—Epithelial cancer supervened after prolonged medication with *Kali ars*. for psoriasis.—A clerk had taken arsenic for a long time for psoriasis, palms and soles became spreckled over with corns, finally epithelial cancer of scrotum appeared (Hutchinson).—Dry chronic eczema; skin of arms thicker and rougher than natural, covered with flimsy exfoliations of epidermis; very irritable, itching and tingling when she gets warm; intensely fissured about bends of elbows and wrists; occasional exacerbation, with eruption of distinct vesicles; languor and lassitude; pale, sallow complexion; catamenia irregular.—Patches of psoriasis on back, arms, and spreading from elbows, and anteriorly on legs, size of a crown piece, and indolent.—Psoriasis: scaly itchings, causing him to scratch till an ichorous fluid discharges, forming a hard cake.—Discolouration of skin after psoriasis and lepra.—Psoriasis in numerous

patches, with great itching; the patches becoming more active, scale off, and are replaced by smaller they leave behind them a red skin.—Jaundice.

27. Fever.—Temperature of surface diminished.—Skin cool, dry.—Increase of heat and dryness of skin.—Temperature, which before had been normal rose to 101, with malaise and anorexia.

Kali Bichromicum.

Potassć bichromas. Potassic dichromate. Bichromate of Potash. Red Chromate of Potash. $K_2Cr_2O_7$. Solution in distilled water. Trituration.

Clinical.—Acne. Anćmia. Asthma. Blotches. *Bone, nodes on, exostoses. Bronchitis; croupous. Burns*. Cachexia. *Catarrh*. Climacteric flushes. *Coccygodynia*. Conjunctivitis. Constipation. Cornea, opacities of. Coryza. Descemetitis. *Duodenum, ulcers of. Dyspepsia*. Ears, pains in; inflammation of, internal and external. Emaciation. Epilepsy. Epistaxis. *Eyes, iritis; keratitis*. Farcy. *Gastric ulcer. Glanders*. Gleet. Gout. Hay fever. Headache. Intermittent fever. *Intestines, ulceration of. Lumbago. Lupus. Measles*. Mumps. *Neuralgia*. Nightmare. *Nodes. Nose, pressure at root of; soreness of*. Ophthalmia. *Ozćna. Polypus*. Post-nasal catarrh. Pruritus vulvć. *Rheumatism*. Rhinitis, atrophic. Sciatica. Scrofula. *Smell, illusions of*. Sun-headache. Sycosis. Syphilis. *Throat, hair sensation in; sore*. Tobacco, intolerance of. *Trachea, affections of. Ulcers*. Urethritis. Warts. Whooping-cough.

Characteristics.—*Kali bichromicum* (with the other *Chromium* preparations, *Chro. ac*. and *Chro. ox*.) owes its introduction into the homśopathic materia medica to the late Dr. J. J. Drysdale, whose monograph upon it, forming one section of the *Hahnemann Materia Medica*, and now occupying pp. 457 to 573 of *Materia Medica Physiological and Applied*, is the most complete account of the remedy which we possess. The *Bichromate of Potash*, which is manufactured in large quantities from chrome-iron-ore, is the preparation from which all other salts of *Chromium* are derived. The native association of *Chromium* with *Ferrum* is worthy of note. The *Bichromate* is largely used in the arts in dying, calico-printing, wood-staining, in photography, and as a solution for producing the current in electric batteries. Many of the most remarkable symptoms were obtained from workmen engaged in the preparation of the salt. Some of these had been noted before Drysdale took up the study of the drug. The first proving was published by him in 1844 in the *British Journal of Homśopathy*. The following year it was proved by the Austrian Society. The effects of the drug show profound action on the entire organism, and characteristic features of the utmost value to the prescriber have been brought out, rendering the drug one of the most important members of the homśopathic materia medica. Among these keynotes of *Kali bi*. four may be

named as pre-eminent: (*1*) Discharges from mucous membranes of tough, stringy mucus, or muco-pus, which adheres to the part and can be drawn out in strings. (*2*) The occurrence of pain in *small spots*. In connection with this is another feature showing a sharply defined action: (*3*) Punched-out, perforating ulcers, occurring on skin, mucous membranes, and affecting bones (*e.g*. vomer, palate). (*4*) Alternating and shifting conditions: pains wander from part to part; rheumatic pains alternate with gastric symptoms, or with dysentery; headache alternates with blindness; fibrinous deposits extend downwards. Among other leading characters, scarcely less distinctive are: (*a*) The formation of plugs or clinkers on mucous membranes, especially in the nose. (This may be regarded as an advanced stage of the stringy mucous secretions.) (*b*) Still another Variety of this is the formation of false membranes as in croup and diphtheria, with hoarse, metallic cough; and the formation of casts of the bronchial tubes in fibrinous bronchitis. (*c*) Yet another characteristic mucous discharge is one of "jelly-like mucus." (*d*) Indigestion from drinking beer; loss of appetite; weight in pit of stomach immediately after eating; flatulence. (*e*) Among peculiar sensations the "hair sensation" is marked in *Kali bi*. It occurs chiefly on the back part of the tongue and in the left nostril.─It can hardly be questioned that *Chromium* is the predominant partner in the action of this salt, but it would be wrong to consider the *Kali* element as of no account, and it would be still more wrong to disregard the very large proportion of oxygen. It is as an oxydising agent and disinfectant that *K. bi*. is chiefly known in general medicine, and it is probably to the oxygen element that the ulcerating properties of the drug are largely due. One of its effects is "odourless stools," and the oxygen element is probably accountable for this. Another point in this connection is that the antidotes to poisonous doses of *Kali bi*. are the same as the antidotes to the acids.
The *Kali* parallels must be sought chiefly in *Causticum* and *Kali carb*. The general resemblance is great, but the minute correspondences are not very striking. One possible point of correspondence has been pointed out. Storer (*Med. Adv*., xxv. 98), cured with *Kali bi*. a case of asthma in a man who noticed that the attacks *were caused by and always followed coitus*. The *Kali bi*. was prescribed on other indications, but this symptom must be noted for future verification. *Kali c*. has marked "< from coitus," and also from emissions; and *Caust*. has stupid feeling in the head the day after an emission." *Caust*. has many symptoms of disordered vision; though it has not the "blindness followed by headache, the sight improving as the pain becomes worse" *of Kali bi*. This is very characteristic and has led me to many cures. Both *Caust*. and *Kali bi*. have many symptoms of ulceration internal and external. Nash relates a good cure with *Kali bi*. A woman had deep punched-out ulcers with regular edges. One of them had perforated the soft palate and threatened the whole palate. It had a syphilitic appearance, and the patient had been long under old-school treatment. There was also a stringy discharge, but not to a great amount. In three weeks *Kali bi*. 30 made a cure which proved permanent; the local condition entirely healed and the patient's general state improved correspondingly. *Apropos* of syphilis Drysdale quotes a long series of cases of syphilis in all stages treated by J. E. Güntz with "Chrome water." This consists of

an artificial aerated water containing in 600 grammes of water *Kali bi*. 0.03 grms., *Kali nit*. 0.1 grm., *Natr. nit*., 0.1 grm., *Nat. mur*., 0.2 grm.; this mixture is incorporated with carbonic acid under the highest pressure, at low temperature, and kept some time before use. The dose given was from half to two bottles daily (each bottle containing 600 grammes) in five doses, given on a full stomach. Even in this dilution the mixture was sufficiently disgusting in taste, and to some quite intolerable. A number of the *Kali bi*. symptoms were produced, but on the whole very notable and evidently specific curative action was observed. Out of 100 cases of primary syphilis 64 remained without constitutional symptoms. In secondary and tertiary syphilis "chromo-water" was also remarkably successful. In strictly homśopathic practice *Kali bi*. has been no less successful, as its symptoms correspond to a great variety of the manifestations of that disease, especially keratitis and iritis, ozćna, bone-pains and nodes, sore throat, syphilitic rheumatism and ulcers. Like *Causticum* it has some sycotic symptoms as well, including asthma, early morning <, gleety discharge, and, according to Farrington, scabs on fingers, often about the nails, and on corona glandis. J. B. Garrison records the rapid action of *Kali bi*. in two cases of intermittent fever (*H. R*., iii. 105), on an indication given him by Martin Deschere. The latter once took by mistake an overdose of *Kali bi*., which was followed by vomiting of a large quantity of *bright yellow water*, tasting very bitter. Garrison's first case was a labourer, ill a month with fever, pains and paroxysm at 1 p.m. just before Garrison saw him he had vomited "a large quantity of bright yellow water." *Kali bi*. 1x, one grm. dissolved in a tumbler of water, a teaspoonful every two hours, cured at once. Case ii. was that of a woman who had been nine months under allopathic treatment, had not been out of the house for two months, and had been told she could not recover. Among other symptoms was this: Vomited much more than she drank: in the morning vomited a large bowlful of bright yellow fluid. The *yellowness* of *Kali bi*. secretions and excretions is noteworthy. *Kali bi*. is particularly suited to fat people; and Goullon (quoted *H. R*., vi. 267) gives the case of an enormously fat man of "formless colossal body" who complained of chronic accumulation of phlegm─he seemed fairly filled up with it, especially in the morning─for which all domestic remedies and mineral waters had been given in vain. *Kali bi*. 2x was ordered, a few grains in hot water every evening. In two weeks the patient could resume his walks. He felt easy on his chest, the accumulation of phlegm disappeared, his bowels became regular instead of constipated. H. W. Champlin (*Med. Adv*., xix. 393), cites a case of chronic rheumatism in an old over 70 confirming symptoms of *Kali bi*. She was restless and sleepless at night, and *Rhus* relieved this somewhat, but closer investigation brought out this: (*1*) The pains *changed rapidly* from one place to another, and (*2*) they occupied *small spots* that could be covered with the point of a finger. *Kali bi*. cured rapidly. *Kali bi*. also causes: Rheumatic-like or shooting and pricking pains here and there. In one prover (Drysdale himself) the rheumatic pains were <, and the gastric pains >, after eating. There were cramps in various parts; twitches in hands and feet; stinging pains all over. Pains in short jerks as if a nerve were suddenly pulled. Sudden pains. Pains

appear and disappear suddenly. *Diagonal pains*; right mamma and left elbow; left forearm and right occiput; right knee and hip, left breast and shoulder; right axilla, left thigh; right big toe, left little finger; right forearm, left elbow; right foot, ankles, shin, left hip, arm, shoulder; right big toe and thumb; wrists and ankles. Shifting pains and sudden pains. "Indolence" is a characteristic of many conditions—indolent ulcers; indolent inflammation about and of the eyes; slow scrofulous or sycotic ophthalmia, soreness of the canthi, pustules round the eyes, lids adhering and puffed, whites of the eyes yellowish. The face is bloated and blotched; may be yellowish; acne accompanies headaches and gastric conditions. The tongue is thick and broad and takes the imprint of the teeth. The stomach symptoms are very distressing. Painful vomitings; sour, and mixed with clear mucus; may be bitter from the presence of bile; vomiting caused by every attempt to eat or drink, with distress and burning rawness about the stomach. This corresponds to the vomiting of drunkards, especially in beer-drinkers; also to gastric ulcer. The abdomen swells up immediately after a full meal. Food lies like a load as if digestion were suspended. There is aversion to meat; and longing for beer; and for acid drinks. It removes the chronic effects of drinking too much malt liquor, especially lager beer. Some of the workmen found they could not drink coffee as it made them worse, and they were obliged to take to tea instead. (This bears out Hering's dictum that "wine-drinkers should take coffee and beer-drinkers should take tea." Coffee antidotes wine and tea antidotes beer; so as *Kali bi*. corresponds to beer effects tea will be likely to agree with it better than coffee). *Kali bi*. causes great prostration, discomfort, debility, and desire to lie down. The neuralgic attacks sometimes recur every day, at the same hour. Epilepsy has been cured by it when there was flow of tough, stringy fluid from the mouth in the attacks. In very weak solutions (about 1 to 2,000) *Kali bi*. has been used with much success as a local application for ulcers, especially when they are very painful. Lord and Moore had good success in treating horses for farcy, using the remedy both externally and internally. In the cough of *Kali bi*. the stringy, difficult expectoration, and early morning < will generally indicate; or a pain from mid-sternum through to back. But there is also a *cough caused by eating*. W. J. Pierce (*H. W*., xxx. 567) records the case of James S., 40. For four months past, as soon as he swallowed food (not liquids), a tickling in throat excited a severe cough, which stopped only on vomiting, and was followed by a watery coryza. This was so distressing that for two months he had eaten only two meals a day. There was pharyngeal catarrh with stringy mucus hanging from naso-pharynx. *Kali bi*. 1, a tablet every two hours, was given. He had no more vomiting, and only coughed twice in the next five days, and was soon quite cured. *Kali bi*. is credited with the cure of a case of Descemetitis [inflammation of the internal (Descemet's) membrane of the cornea] with redness of right eye, brightness of the lid and lachrymation. *Kali bi*. removed the spots and relieved the other symptoms. *Kali bi*. is *especially suited* to fair-haired, fat persons, especially fat, chubby children; fat, sluggish people. Most of the symptoms appear in the early morning or are < then 2 a.m. heat in pit of stomach; awakes with oppressed breathing with a start. 2 to 3

a.m. croup; early morning cough; morning diarrhśa; 9 a.m. pain in head begins; goes off in afternoon. Shooting from root of nose to external angle of eye begins morning, increases to noon, and ceases towards evening (sun-headache). Affections of autumn and spring. Complaints of hot weather are particularly likely to want *Kali bi*., but at the same time there is "great liability to take cold in open air"; and "moderately cold air is felt very unpleasantly." Eruptions begin in warm weather (opp. *Rhus*). Open air > symptoms generally, especially vertigo; but < gastric complaints and chilliness. Uncovering <; wrapping up >. Warmth > cough; undressing < cough. Cold weather > itching of eruption. < By eating; eating = cough weight in stomach. Touch < most symptoms; but pressure >. But pressure = pains to shoot along sciatic nerve. Moving the affected part > the pain. Most symptoms are < at rest and > by motion. Stooping <; sitting <.

Relations.—In the ordinary text-books the *antidotes* to Kali bi. are given as the same as antidotes for poisoning by Acids: Bicarbonates of Soda and Potash, Magnesia, Chalk, Soap, Milk, Eggs; olive or almond oil, also the Hydrated peroxide of iron. But no very brilliant results have been recorded from any of these, and they would be useless unless administered almost immediately after the dose, so rapid is the action of the poison. Among the *dynamic antidotes* are: Ars.; Laches. (croup, diphtheria, &c.); Puls. (wandering pains). K. bi. *antidotes:* Effect of beer; arsenical vapour; Merc.; Merc. iod. I have found it the best general antidote to the effect of metallic poisoning among brass workers. *Compatible:* After Canth. in dysentery, when, though scrapings continue, the discharge becomes more jelly-like; after Apis (scrofulous ophthalmia); after Iod. in croup. *It is followed well by:* Ant t. in catarrhal affections and skin diseases. *Compare:* Oxygen Caust.; Kali carb. (fat subjects); Kali iod. (syphilis); Chrom. ac. (sudden pains, shifting pains, > motion, ulcerations, rheumatism); Bro. (croup, fair subjects); Mez. (bone diseases); Nit. ac, (syphilis); Phytol. (syphilitic bone affections); Spo. (cramp); Sil. (bone affections); Hippoz. (ozćna, glanders, farcy); Hecl. (nodes); Hydrast. and Ir. v. (viscous, tough secretions); Lach. Tereb. (glazed tongue); Kali ca., Caust., and Staph. (< after coitus); Sep. and Teucr. ("clinkers"); Puls. (wandering rheumatism; gonorrhśal rheumatism; pains < in warm room; measles; catarrhal deafness; swelling of salivary glands); Thuj. (ozćna in sycotic subjects); Apis (scrofulous ophthalmia); Lach. (constriction of anus; sensation of plug in anus; diarrhśa brown, frothy, watery, spurting out in early morning and followed by tenesmus ani; dysentery, red, cracked, smooth tongue, blackish stools, typhoid cases; Lach. has more offensiveness, Kali bi. more jelly-like or stringy mucus) Coc. c., whooping-cough (mucus, clear stringy, Kali bi. yellow-stringy) Kaolin (membranous croup—with Kaolin there is internal and external soreness along course of trachea and upper part of chest -Farrington); Rhus (> of pain on moving affected part; Rhus has > by warmth; eruptions of Kali bi. begin in hot weather, those of Rhus in cold); Abies n., Bry., Nux, &c. (indigestion with sensation of weight in stomach); Graph. and Rhus (inflammation of external ears; Sul. (sensation of hair in throat).

Causation.—Indulgence in beer and malt liquors. Hot weather. Autumn. Spring.

SYMPTOMS.

1. Mind.—Ill-humour; low-spirited.—Listless.—Anthropophobia; taciturnity; misanthropy.—Vanishing of thoughts.—Aversion to mental (and bodily) exertion.—Weak memory.—Anxiety arising from chest.

2. Head.—Lightness in the head, across the forehead, on stooping; < morning.—Sudden attacks of giddiness, when rising from a seat.—Vertigo on rising up in bed (room seemed to whirl round); on lying down again it became < and was immediately associated with inclination to vomit.—Vertigo, with nausea, inclination to vomit; retching up of sour watery fluid.—Frequent, sudden attacks of vertigo when standing or walking.—Confusion and heaviness in head.—Headache in forehead, often only over one eye.—Soon after dinner a dull, heavy throbbing about eyes, as if head would burst; > by lying, or pressing head against anything, or in open air; < stooping or moving about.In morning, when waking, pain in forehead and vertex; later, extending to back part of head.—Violent pricking, stinging pain, from root of nose, extending over (l.) orbital arch, to external angle of eyes, with obscuration of sight, as if scales were before eyes; beginning in morning, increases at noon, and disappears towards evening.—Headache comes and goes with the sun.—Complete obscuration of sight is followed by violent headache, compelling one to lie down; with great aversion to light and noise; the sight returns with the increasing headache.—Stinging headache (in one temple).—Periodical attacks of semi-lateral headache, on small spots that could be covered with point of finger.—Morning headache.—Headache from suppression of discharge from nose (ozćna).—Bones of head feel sore.—Stitches in bones of head, as from a sharp needle.—Lancinating stitches in r. side of head, lasting but a short time.—Pressure on vertex, as from a weight.—Headache: > by warm soup; by pressure; in open air; by eating; < by stooping; by motion; by lying on it; at night.

3. Eyes.—Heaviness of upper eyelid on waking; it requires an effort to open it.—Eyelids burning, inflamed, much swollen.—Watering, itching and burning in eyes; heat in eyes and desire to rub them, with redness of conjunctiva.—Dryness; burning pain; itching.—The eyes are glued in morning; accumulation of yellow matter in angles.—Śdematous swelling of eyelids.—Large acute granulations of lids.—Large polypus springing from conjunctiva of upper lid.—Itching and redness of eyelids; tender to touch; tarsi seem rough, causing sensation of friction, as from sand on the eyeballs when moving them; feeling of sharp sand in eyes.—Conjunctiva reddened and traversed by large red vessels.—Rheumatic sclero-iritis with excessive pain and photophobia.—Syphilitic iritis.—Sequelć of iritis; pains pricking, stinging, wandering; < l.; chemosis; photophobia not commensurate with degree of inflammation.—Ulcers and pustules of cornea with no photophobia and no redness.—Corneal ulcers tend to perforate rather than

spread laterally.—Dense long-lasting opacities.—Albuginea dirty yellow, appears puffy, with yellowish-brown points, like pin-heads.—Soreness in r. caruncula.—Photophobia; only by daylight; when opening lids they twitch.—Lachrymation and burning of eyes.—Small white, granular pustules on (l.) cornea, with pricking pain.—Brown spots on conjunctiva.—Obscuration of sight; objects appear yellow.—Various colours and bright sparks before eyes.

4. Ears.—Stinging in ears; from external meatus into internal ear.—Violent stitches in (l.) ear, extending into roof of mouth, corresponding side of head and neck, which was painful to touch; glands swollen.—External meatus of (l.) ear swelled and inflamed.—Stitches in l. ear and l. parotid gland, with headache.—Hard, painful swelling of parotid gland.—Discharge of fetid, thick, yellow pus from both ears (after scarlet fever).—Itching of lobe of (r.) ear (waking him at night).—Redness, heat and itching of external ears.—Violent tickling and itching in ears.

5. Nose.—Nose painfully dry; air passes with great case through it.—Nose dry, burning, stopped up, swelling; < in warm, > in cool air.—Great dryness of nose, with feeling of pressure in nasal bones; also extending along frontal sinuses with soreness and burning.—Tickling, like a hair moving or curling itself in top of l. nostril.—Sneezing (in morning).—Coryza, fluent; < in evening, in open air; in wind; obstruction in morning and bleeding of nose (r. nostril).—Coryza fluent, excoriating nose and lips; discharge of mucus streaked with light-coloured blood.—Profuse secretion from r. nostril; a spot in the r. lachrymal bone is swollen and throbbing.—Flow of acrid water from nostril, excoriating nostril and burning upper lip (r.).—Violent shooting pains from root of nose along l. orbital arch.—Pinching pain in bridge, > by hard pressure.—Pressure at root of nose.—Nose stuffed up.—Nasal speech.—The sensation of a hard substance compels one to blow the nose, but there is no discharge from the dry nose.—When blowing nose violent stitches in r. side of nose, and sensation as if two loose bones rubbed against each other.—Expired air feels hot in nose.—Scab on septum.—Septum ulcerates.—Round ulcer in septum.—Small ulcers on edge of (r.) nostril, violent, burning when touched.—Discharge of large masses of thick, clean mucus from nose; if that ceases he has violent headache; pain from occiput to forehead.—Watery secretion with great soreness and tenderness of nose.—Discharge of tough green masses from nose.—Discharge of hard, elastic plugs (clinkers) from nose.—Though accustomed to smoke, every inhalation through the nose caused a sickening sensation like sulphuretted hydrogen.—Sensation of fetid smell before nose.—Loss of smell.—Fetid smell from nose.

6. Face.—Face: pale; yellowish; red in blotches; flushed; anxious expression.—Acne.—Shooting in l. upper maxillary bone towards ear.—Shooting inward in l. malar bone with pressure, < in morning.—Sensitive painfulness, as if bruised, of bones of face.—Syphilitic eruption from root of nose to upper lip.—Lupus r. side of nose with troublesome itching.—Lupus; pustules; impetigo of

face, with much itching.—Perspiration on upper lip.—Lower lip swelled, chapped.—Digging pain in rami of lower jaw.—Mumps r. side.—Parotids swollen.

7. Teeth.—Gnawing, dull burrowing, boring in roots of teeth.—Stitches in teeth extending to other parts, and alternating with wandering rheumatic pains.—Toothache not > by heat or cold, only momentarily > by pressure.—Gum of r. lower jaw much swollen, dirty white, extremely tender; teeth that side quite loose, will not bear slightest pressure; profuse ptyalism; gums of both sides unusually sensitive; cannot masticate any food; liquid food makes gums feel very sore and tongue rough.

8. Mouth.—Dryness of mouth and lips, > by drinking cold water.—Accumulation of saliva in mouth; saliva bitter, viscid, frothy, tasting salt.—Papillć very long on dorsum with a brown-coloured patch.—Sensation of a hair on back part of tongue.—Tongue coated, thick brown, as with thick yellow felt, at root; papillć elevated.—Tongue dry, smooth, red, cracked (in dysentery).—Ulcers with hard edges, smarting, at mucous surface of lips.—Painful ulcer on tongue.—Stinging pains in tongue.

9. Throat.—Sensation of a hair on back part of tongue and velum; not > by eating or drinking.—Erythema of fauces and soft palate, bright or dark red, or of a coppery colour.—Soft palate slightly reddened: uvula relaxed, with sensation of a plug in throat, which is not > by swallowing.—Deep-excavated sore, with a reddish areola, containing a yellow, tenacious matter at root of uvula; fauces and palate presenting an erythematous blush.—Posterior wall of pharynx dark-red, glossy, puffed, showing ramifications of pale-red vessels; on middle, towards l. side, a small crack, from which blood exudes.—Sharp, shooting pain in l. tonsil, towards ear; > by swallowing.—Burning in pharynx, extending to stomach.—In forepart of palate single circumscribed spots, of size of a barleycorn, coloured red, as if little ulcers were about to form.—Ulcer on roof of mouth, with sloughing (syphilis).—Pimples on uvula.—Śdematous bladder-like appearance of uvula; much swelling but little redness.—Ulceration of uvula and tonsils.—Throat pains more when tongue is put out.—Sensation as if an acid, acrid fluid were running through posterior nares over palate, causing cough.—Discharge of thick yellow matter through posterior nares.

10. Appetite.—Taste: coppery; sweetish; sour; bitter in morning.—Loss of appetite; increased thirst.—Longing for beer or acidulated drinks.—Aversion to meat.

11. Stomach.—Eructations of air, relieving an uneasiness of stomach as from wind pent up at great curvature.—Sudden nausea.—Nausea, with feeling of heat over body, with giddiness, rush of blood to head; < by moving about; in morning at sight of food; after meals; after stool; excited by drinking and smoking; > by eating; > in open air; with sweetish flat salivation.—Nausea and vomiting of mucus.—Vomits large quantities of bright yellow water.—Vomiting: of undigested

food, sour; of bile; bitter; of pinkish, glairy fluid; of blood; with cold perspiration on hands; burning in stomach; heat of face.—Burning in stomach and stomach pit.—After eating a full meal, which was relished, a sensation as if digestion were suspended; food lies in stomach like a heavy load.—Pressure and heaviness in stomach after eating.—Giddiness, followed by violent vomiting of a white, mucous, acid fluid, with pressure and burning in stomach.—Swelling of stomach (in evening), with fulness and pressure; cannot bear tight clothes.—(Round ulcer of stomach, and duodenum.)

12. Abdomen.—Colic alternating with cutting pain at umbilicus, during night.—Sensitiveness of abdomen to least pressure.—Dull, heavy pressure or stitches in region of liver.—Stitches in region of spleen, < by motion and pressure.—Stitches in spleen extending into lumbar region.—Tympanites; whole abdomen feels bloated; followed by eructations.—Cutting in abdomen, as from knives, soon after eating.—Attacks of periodical spasmodic constriction of intestines, with nausea, followed by a papescent stool and burning in anus, with tenesmus.—Stitches through abdomen, extending to spinal column.—Chronic ulceration of mucous membrane attended with vomiting of ingesta, hectic and emaciation.

13. Stool and Anus.—Constipation, with debility, coated tongue, headache and coldness of extremities.—Scanty, knotty evacuations, followed by burning in the anus.—Stool in one mass of excessive hardness.—Stools dry, with burning at anus.—Constipation, with painful retraction of anus.—Very painful evacuation of extremely hard feces.—Periodical constipation (every three months).—Stools slate-coloured, bloody.—Stools: blackish, watery; yellowish, watery; clay-coloured, watery and lumpy; jelly-like; involuntary and often painless and odourless; bloody and extremely painful.—Papescent evacuations, with much rumbling in intestines.—Morning diarrhśa; wakes from urgent pressure to stool; the watery contents gush out, followed by violent tenesmus; she cannot rise on that account; later, burning in abdomen, nausea and violent straining to vomit.—Frequent bloody evacuations, with gnawing pain about umbilicus with tenesmus; tongue smooth, red, cracked.—Dysenteric evacuations of brownish, frothy water, with violent, painful pressing, straining and tenesmus.—Pressing and straining in anus, with tenesmus.—Periodical dysentery every year in early part of summer.—Sensation of a plug in anus (can scarcely sit down).—Soreness at anus, making it very painful to walk.—Fulness in hćmorrhoidal vessels.

14. Urinary Organs.—During micturition heat in urethra.—During and long after micturition burning in glandular portion of urethra.—After micturition burning in back part of urethra (in bulbus urethrć; in glands of urethra; in fossa navicularis), with sensation as if one drop of urine had remained behind with unsuccessful effort to void it.—Stitches in urethra, esp. after micturition.—Frequent discharge of watery urine of strong smell, awaking him at night.—Continuous desire to urinate during day.—Painful drawing from perineum into urethra.—Urine with white film and

deposit, with mucous sediment.—Violent pain in os coccygis; < when rising, after he sat long, to urinate.—Some time in passing urine.—Scanty red urine, with pain across back.

15. Male Sexual Organs.—Sexual desire absent; in fleshy people.—(Provoked by and following coition, asthmatic attacks.).—Stitches in prostate gland (when walking; must stand still).—Itching in hairy parts of genitals; skin becomes inflamed and small pustules of size of a pin's head are formed.—Constrictive pains at root of penis (morning, on waking).—Pricking and itching at glans.—Chancres ulcerating deeply.—Gleet, with stringy or jelly-like profuse discharge.

16. Female Sexual Organs.—Menstruation too early, with giddiness, nausea, and headache; suppression of urine or red urine.—Membranous dysmenorrhśa.—Swelling of genitals.—Soreness and rawness in vagina.—Leucorrhśa yellow, ropy; pain and weakness in small of back and dull pain in upper part of abdomen.—Subinvolution.—Prolapsus uteri, seemingly from hot weather.—Climacteric flushes.—Vomiting of pregnancy.—Milk as it flows appears to be stringy masses and water.

17. Respiratory Organs.—Respiration oppressed; wakens 2 a.m.—Sensation of choking on lying down.—Sensation as from ulceration in larynx.—Accumulation of mucus in larynx, causing hawking.—Hoarse, rough, or nasal voice.—Hoarseness (in evening).—Tickling in larynx; every inhalation causes cough (with hoarseness).—Cough caused by eating.—At dinner, after first mouthful, great tickling in larynx; > on eating more.—Cough in morning, with viscid expectoration.—Cough hoarse, metallic, with expectoration of tough mucus or fibrous elastic plugs (croup; membranous or croupous bronchitis).—Dry cough, with stitches in chest.—Violent, rattling cough, lasting some minutes, with an effort to vomit, and expectoration of viscid mucus, which can be drawn in strings to the feet.—(Expectoration sticks in chest so as to almost cause strangulation; it is found in croup, whooping-cough, catarrhs.—Snuffles of infants, particularly in fat, chubby, little babes, where there is a tough, stringy discharge from the nose, &c.—Cough, with thick, heavy expectoration; bluish lumps of mucus.—Hawking up of copious, thick, bluish mucus.—Expectoration with traces of blood.—Expectoration of yellowish tough matter.—Cough, with pain in sternum, darting to between shoulders.—Sensation of dryness in bronchi (in morning).—Dry cough after dinner.—Cough, with pain in loins, vertigo, dyspnśa, shootings in chest.—(Asthmatic attacks always caused by and follow coition).—Oppressed breathing, awakens at 2 a.m.; palpitation; orthopnśa: cold sensation and tightness about heart, lower portions of lungs oppressed.—"Stuffing" cough, with pain in chest and expectoration of yellow or yellowish green tough matter.

18. Chest.—Pressure and heaviness on chest, as from a weight; wakens with this sensation at night and is > after rising.—Stitches below sternum, extending to back.—Dull pain in r. side of chest over circumscribed spot, < on inspiration.

19. Heart.—Cold sensation about heart: tightness of chest; dyspnśa.—Sensation of pressure on heart (after eating).—Sharp, irritating, fixed pain in region of apex of heart.—Pricking pain in region of heart.—Palpitation.—Pulsation felt in arteries.

20. Neck and Back.—Stiffness of neck when bending head forward.—Sticking pain from ears to glands.—Swollen cervical glands and occipital glands.—Sharp, stinging pain in region of kidneys.—Pain in back striking through to sternum with cough.—Pain, as from a knife, through loins; cannot walk.—Violent aching pain, "like a gathering," in small spot in sacrum, a steady, throbbing pain, < at night hindering sleep; > in day when up, walking about, but unable to lift anything.—Pain in sacrum; cannot straighten himself.—Cutting in outer l. side of sacrum, shooting up and down.—Pain in os coccygis (in morning); < from walking and touching it.—Pain in coccyx while sitting.

21. Limbs.—Rheumatic pains in limbs.—Periodical wandering pains, also along bones.—Cracking in joints, < by motion.

22. Upper Limbs.—Rheumatic pain in both shoulders (< at night).—Stitches at lower angle of l. shoulder-blade.—Stiffness of shoulder-joint.—Sensation of lameness of r. arm (as if it had gone to sleep).—Burning pain in middle of forearm, extending to wrist.—Painful stiffness of r. arm.—Stinging pain in l. elbow.—Rheumatic pains in joints, esp. wrists.—Great weakness in hands.—Bones of hands as if bruised, when pressed, ulcers on fingers with caries.—Spasmodic contraction of hands.—Rheumatic pains in fingers.—Cracking of all joints from least motion.—Psoriasis diffusa of hands, degenerating into impetigo.—Ulcer under thumb-nail.—Pustules on roots of nails.

23. Lower Limbs.—Rheumatic pains in hip-joints and knees on moving—more esp. during day.—Pain in course of l. sciatic nerve, extending from behind great trochanter to calf of leg; > by motion.—Stitches in r. side of chest and l. sciatic nerve.—Pain in tendons of muscles of calf, as if stretched, causing lameness.—Soreness in heels when walking.—Heaviness of legs.—Pain in r. hip, extending to knee; > by walking and flexing leg; < in hot weather, by standing, sitting, or lying in bed; pressure = pain to shoot along entire nerve.—Pain in middle of tibia.—Sensation of dislocation in l. ankle.—Ulcers on previously inflamed feet.—Small irregular ulcers on leg.—Acute twinging pain in l. great toe; pricking and stinging pains in different parts of body; acute gouty pain in ball of r. great toe, four minutes after same pain in l.—Sore pain inner side r. great toe where the nail joins the flesh.

24. Generalities.—Pains which wander quickly from one part of body to another.—Periodical wandering pains in all limbs.—Sensitive painfulness of whole body (morning on rising).—Gastric symptoms supersede rheumatic symptoms; or they alternate with one another.—Liability to take cold in the open air; drowsy in open air.—Great debility, with desire to lie down.—Great prostration.—Drawing in

various parts; in sheaths of muscles; near bones, as if in periosteum; in neck, back, and limbs; in morning on waking, > on rising.

25. Skin.—Hot, dry, and red skin all over body.—Dry eruption, like measles, over whole body.—Small pustules over whole body, similar to smallpox; they disappear without bursting open.—Pustules over whole body, appearing on inflamed parts of skin, as large as a pea, with a small black scab in middle.—Blood-boil on r. thigh; on r. side of spine, near the last rib; painful on the least motion.—Small pustules on roots of nails, spreading over hands to wrist; arm became red and axillary glands suppurated; the small pustules on hands secreted a watery fluid when they were broken; if they were not touched the fluid became thickened to a yellow, tough mass.—The eruption begins in hot weather.—Suppurating tetter (ecthyma).—The pustulous eruption resembling small-pox, with a hair in the middle, is more prominent on face and arms.—Brown spots (on throat) like freckles.—Blister, full of serum, in sole of r. foot.—Scabs on fingers, or corona glandis.—Ulcers, dry, form oval; have overhanging edges, a bright red, inflamed areola, hard base; movable on subjacent tissues; dark spot in centre; after healing the cicatrix remains depressed.—After an abrasion, a swelling like a knot, forming an irregular ulcer, covered with a dry scab and painful to touch; under skin is felt a hard, movable knot, like a corn, with a small ulcerated spot in middle, where it touches the cuticle; the hard knotty feel remains after the healed ulcer is covered with white skin.—Ulcers corrode and become deeper, without spreading in circumference.—Ulcers esp. painful in cold weather.—Ulcers on previously inflamed feet.—Ulcers on fingers, with carious affection of the bones.—Hands become covered with deep, stinging cicatrices.

26. Sleep.—Sleepiness and prostration, can hardly write.—Unrefreshing sleep; feels very debilitated, esp. in extremities.—Wakens in a start, with nausea or headache (2 a.m.), with heat and perspiration, accelerated pulse, palpitation of heart and dyspnśa; with anxiety, heat in pit of stomach, and spitting of blood; from frequent desire to urinate.—Woke with great oppression on chest (nightmare).—< After sleep.

27. Fever.—Pulse accelerated; irregular, small, contracted.—Great inclination to yawn and stretch.—Chilliness in the back and sleepiness; seeks a warm place.—Chilliness alternating with flushes of heat.—Chilliness, with giddiness and nausea, followed by heat with sensation of coldness and trembling, and periodical stinging pain in temples; without thirst.—Attacks of chilliness, extending from feet upwards, and sensation as if skull on the vertex became contracted, in frequently returning paroxysms.—Chill, followed in an hour by heat, with dryness of mouth and lips, which have to be moistened all the time; followed in morning with great thirst, but no perspiration.—Chilliness, esp. on extremities, and flushes of heat alternating with general perspiration.—Heat of hands and feet; nausea; pain in upper part of abdomen; dryness of mouth; sleeplessness, followed by perspiration of hands, feet, and thighs; ceasing for two hours, when they reappear.—Giddiness;

violent, painful vomiting is followed by pain in forehead, burning of eyes, great burning heat of upper part of body and face, with internal chilliness and violent thirst.—Perspiration on back during effort to stool.

Kali Bromatum.

Bromide of Potassium. Potassic Bromide. K. Br. Solution. Trituration.

Clinical.—*Acne. Aphasia*. Apoplexy. Asthma. Cholera infantum. *Chordee*. Colic. Diabetes. *Emissions*. Epilepsy. Erythema nodosum. General paralysis of insane. Hæmorrhoids. *Impotence*. Laryngeal crises. Laryngismus. Locomotor ataxy. *Nightmare. Nose, eruption on. Ovaries, affections of*. Paralysis. Paralysis agitans. Polypus (rectal). Psoriasis. *Screaming*. Sebaceous cysts. Seborrhœa. *Self-abuse*. Sensibility, loss of. Sleeplessness. *Somnambulism. Speech, affections of*. Syphilis. Tetanus. *Urine, incontinence of*.

Characteristics.—*Kali bro*. has been proved, but the greater part of the pathogenesis is made up of symptoms observed in allopathic overdosings, to which are added symptoms cured in the practice of homœopaths. In old-school practice *K. bro*. has been given in epileptic and other convulsive affections rather with the idea of overwhelming disease than of curing it. The effect has been in numberless cases to reduce or prevent the recurrence of tits at the expense of keeping the patient constantly under the influence of the drug and producing a state of mental hebetude or actual imbecility, "decreasing the excitability and power of the motor cells of the brain" (Alberton). Along with this it has produced a great variety of skin eruptions. At the same time, *K. bro*. has a decidedly specific relation to epilepsy and the epileptic state, and in its own cases will cure in the attenuations. *K. bro*. has a very profound action on the generative organs and the mental side of the generative sphere: sensual, lascivious fancies; satyriasis and nymphomania and finally impotence and wasting of the sexual organs. The cases of epilepsy in which it is curative are chiefly those associated with sexual excess or abuse in men; and those in which the fits occur during or near the menstrual period in women. The power of *K. bro*. over the sexual sphere is very great. In my allopathic days I have often known a few grains of the salt given at bedtime permanently relieve youths who were troubled with erections and sexual excitement on going to bed. It might have acted as well in the attenuations, but it could not have done better. It is indicated also in cases of epilepsy occurring at the new moon; and when headache follows the fit. In spasms from fright, anger, or emotional disturbances in nervous, plethoric persons; during parturition, dentition, whooping-cough, in Bright's disease. One of the most troublesome "accidents" of the allopathic use of *K. bro*. is the production of eruptions of many kinds, but most notably acne. Acne has a very definite relation to the sexual organs, being especially noticeable at puberty and, in women at the menstrual period. I know of

no remedy of such universal usefulness in cases of simple acne as *K. bro*. 30. It has produced moist eruptions and pityriasis of the scalp. The sebaceous follicles are particularly affected, which should give it a place in seborrhœa. Erythema nodosum was observed in some patients under its influence. The moral and intellectual faculties are greatly disordered. The memory is lost: forgets how to talk; aphasic, has to be told the word before he can speak it. Depressed, melancholic; uncontrollable weeping. "Feel as if they would lose their minds." Restlessness and sleeplessness from worry. Staggering gait; ataxia; numbness and tingling in legs and spine, with increase in sexual appetite. "Fidgety hands"; fingers must be playing with something; twitching of fingers; cannot sit still. Night terrors in children from over excitability of brain; from worry; during dentition. Cholera infantum with hydrocephalic symptoms. Drowsiness is one of the notes of the drug: "Drops asleep in his chair, and if aroused falls asleep again immediately." The deep sleep may be broken by a start, though waking is very difficult. Confused dreams. Benumbed sensation of brain. Reflexes are diminished, and there is general loss of general sensibility, and also of certain parts, particularly fauces, larynx, and urethra. This depressed state has another side to it in the curious restlessness and fidgetiness. In the lungs pulmonary œdema or suffocative bronchitis may develop; the patient may become cachectic and the condition resemble typhoid fever (Amory Hare). Wenzel Heyberger has recorded (*H. R*., ii. 215) a case of diabetes in a lady, 68, cured with *K. bro*. The patient had been ill five months and was reduced to a skeleton. She first noticed a remarkably good appetite but after meals had heartburn and eructations. Then there was polyuria and frequent disturbances at night to pass water. Weak in the head, confused, memory impaired. Vision almost gone. Rushing and roaring in ears. Tormenting thirst. Stools difficult and delayed. Powders medicated with *K. bro*. 2 were given, one every six hours. The first night the patient slept without disturbance and the quantity of urine and proportion of sugar diminished. After about six-weeks the improvement seemed to stop and *K. bro*. was given in allopathic doses, but this aggravated the condition. *K. bro*. 2 was resumed, and the case went on to a cure. Hale cured with *K. bro*. many cases of cholera infantum, and one case of "violent *periodic* umbilical colic, leaving tenderness on pressure." The characteristic hour of recurrence is 5 p.m. Another feature of the *K. bro*. action is in relation to new growths. A number of cases of ovarian cyst have disappeared under its action, also fibroids and fatty tumours. The acne-producing property of the drug shows its relation to sebaceous secretions, and it has removed sebaceous cysts and wens. In connection with ovarian tumours or other affections, or independently, there may be uterine hæmorrhage─metrorrhagia or menorrhagia. It may arise from reflected irritation and may be accompanied with sexual excitement. But that is not necessarily the case. "Flooding, especially in young women," is Hering's indication. Burford has used it extensively in such cases and generally in attenuations approaching the crude. *K. bro*. is more *particularly adapted* to persons inclined to obesity; to children; to nervous women. More symptoms have been noted on the right side than on the left. Among the

remarkable *sensations* are: "Parts feel as if growing large." "Paroxysms of numbness; feels as if needles were pricking him." Trembling sensation. A marked periodicity appears in the symptoms (which itself relates the drug to epilepsy); symptoms recur paroxysmally. Every 2, 3, or 24 hours. Twice a week; fortnightly; at new moon. Urticaria in winter. Most symptoms are < at night. < 2 a.m. regularly. There is chilliness in a hot room; and itching during high temperature. < In hot weather; < in summer. Skin > in cold weather. Vertigo is < by stooping. Cough < lying down. The old-school contra-indications for the Bromides are: General asthenia and feebleness of the nervous system; post-typhoidal and post-puerperal insanity; senile softening of the brain; and when the gastro-intestinal mucous membrane is irritated (Hare). These are keynotes for *K. bro*. in high attenuations.

Relations.—K. bro. *is antidoted by:* Vegetable acids, oils, Camph., Nux v., Zinc. *It antidotes:* Lead-poisoning. *It follows well:* Aco. and Spong. in croup; Eug. jambos in acne. *Compare:* Bro., Camph. bro., Amm. bro., Aur. bro. (night-terrors), K. carb. (persons inclined to obesity; also Am. c., Calc. c., Graph.), K. iod. (acne, syphilis), K. phos. and Calc. c. (night-terrors). Hyo. (mania; excited sensorium without inflammation of brain; fears being poisoned; sees ghosts; sexual excitement); Plat. (sees ghosts, demons, &c.); Arg. n. (fearful apprehensive mood; imagines cannot pass a certain point). Glo. (fears being poisoned; also Rhus t.); Staph. (mental depression, weakness of legs from masturbation); Gels. (in inco-ordination of muscles); Con. (nervous cough during pregnancy). Bov., Stram. (slow, difficult speech; stammering); Ip. (cholera infantum); Zinc. (fidgety restlessness; Zinc. of feet, K. bro. of hands); Tarent. (reflex symptoms; any little irritation such as dentition or indigestion may = convulsions. Fidgety hands).

Causation.—Anger. Fright. Emotional disturbance. Worry. Business losses and embarrassments. Sexual excess. Sexual abuse.

SYMPTOMS.

1. Mind.—Unconscious of what is occurring around them; cannot recognise, nor be comforted by, their friends.—Memory absolutely destroyed; anæmia; emaciation.—Loss of memory; had to be told the word before he could speak it (amnesic aphasia).—Inability to express oneself.—Writing almost unintelligible from omission of words or parts of words; words repeated or misplaced.—Mentally dull, torpid; perception slow, answers slowly.—Benumbed sensation of brain.—Fearful, apprehensive mood; imagines he cannot pass a certain point.—Drowsiness.—Fears to be alone.—Frightful imaginings at night (in pregnant women during later months), they are under impression that they have committed, or are about to commit, some great crime and cruelty, such as murdering their children or husbands.—Hallucinations of sight and sound, with or without mania, precede brain and paralytic symptoms.—Delirium, with delusions; thinks he is pursued; will be poisoned; is selected for Divine vengeance; that her child is dead,

&c.—Delirium tremens, in first or irritative stage; face flushed; eyes red; delirium active; horrid illusions; hard, quick pulse.—Puerperal mania, with fulness of blood-vessels of brain.—Hands constantly busy; all sorts of fearful delusions; walks the room groaning, bemoaning his fate; full of fear; unsteady.—Fits of uncontrollable weeping and profound melancholic delusions.—Feeling of lightness and exhilaration in place of heaviness and depression.—Depressed; low-spirited; has nervous anxiety.—Profound melancholic depression, with religious delusions and feeling of moral deficiency; frequent shedding of tears, low-spirited and childish, giving way to her feelings; profound indifference and almost disgust for life (melancholia).—Profound melancholy from anæmia.—Night terrors of children (not from indigestion), with screaming in sleep, trembling, unconsciousness of what is around them; cannot recognise, nor be comforted by, their friends; sometimes followed by squinting.

2. Head.—Heaviness, confusion; slow speech; staggers as if drunk.—Dizziness, noises in ear; nervous excitement; sleepless.—Vertigo: palpitation, nausea, even unconsciousness; memory growing weak; as if ground gave way; staggering gait; confusion and heat of head, drowsiness, stupor; fainting and nausea followed by sound sleep.—Constrictive sensation in brain as if too tight, with a feeling of anæsthesia of brain.—Headache in r. frontal protuberance; sleepy.—Severe, throbbing aching pains in occipital region, extending down as far as dorsal region cannot sit up or walk, or shake head without feeling <; great weakness and depression of mind.—Violent headache, particularly in occiput.—Flushed face, throbbing of carotids and temporals, suffusion of eyes; feeling of fulness of head.—Brain irritated.—Anæmia of brain from loss of fluids; constant drowsiness; coma; pupils dilated, eyes sunken, eyeballs moving in every direction without taking any notice; feet and hands blue and cold; pulse imperceptible. (Hydrocephalus.).—Bad results from overtaxing brain; esp. with grief or anxiety; nervousness.—Violent headache from concussion of brain.—Mercurial headache.—Drooping of head; cannot hold it erect.—Scalp feels tight, brain numb, confused.—Seborrhœa.—Pityriasis.

3. Eyes.—Vision dim, pupils dilated; with heavy lids and invincible drowsiness.—Eyes sunken, lustreless; gaze fixed.—Eyeballs moving in every direction.—Pupils dilated, contract sluggishly, vertigo and confusion of head; pupils contracted.—Vessels of fundus enlarged; conjunctivæ congested.—Eyes suffused.—Squinting; after night terrors of children.

4. Ears.—Ringing in ears.—Roaring in ears at night synchronous with pulse.—Sounds echo in ears; headache.—Hardness of hearing.

5. Nose.—Smell impaired.—Thick mucus and yellow scabs in nostrils.—Erythematous swelling of nose.

6. Face.—Expression: pale, but otherwise appeared as one drunk, with hallucination, &c.; wearied, anxious; dull, stupefied; imbecile.—Expressionless face: incipient softening of brain.—Complexion yellow, cachectic.—Face flushed.—Acne; on face in young fleshy people of gross habit.—Papular rash.

7. Teeth.—Odontitis of children.—Difficult dentition of children.—Vomiting and diarrhœa of teething children.

8. Mouth.—Difficult speech action of tongue disordered slow and difficult after waking; stammering.—Tongue: red, dry, enlarged red, later dry and brown; white, involving edges as well as dorsum, with languor and sleepiness; pale and cold.—Fetid breath; a peculiar sickening odour; tongue white.—Saliva profuse, with fetid breath.—Suppressed salivation in teething children.

9. Throat.—Anæsthesia of mouth, throat, and pharynx; (chronic alcoholism).—Dysphagia of liquids (in infants); can swallow only solids.—Uvula and fauces congested, then œdematous.—Dryness of throat.—Diphtheritis with quick pulse; fever; dry tongue; offensive breath; highly injected and dusky red fauces; patches of wash-leather exudation on tonsils or pharynx.

10. Appetite.—Taste: foul; salty; lost.—Anorexia, foul breath, white tongue, involving edges as well as dorsum, and not necessarily furred; great languor; violent headache; loathing vomiturition or vomiting of mucus; saltish taste in mouth.—Thirst intense with dry mouth.—(Children who from time of birth can swallow solids with ease, yet choke every time they try to drink).—Troublesome pressure at stomach after dinner; lassitude.

11. Stomach.—Repeated retching and emesis; sick and giddy.—Hysterical women who vomit their food after each meal, esp. if subjected to exciting emotions.—Vomiting: with intense thirst; of drunkards after a debauch; in whooping-cough; of meconium.—Weakness of stomach; dyspepsia.—Troublesome pressure at stomach after dinner.

12. Abdomen.—Enlargement of liver and spleen.—Small tumour in region of spleen.—Sensation as if bowels were falling out.—Internal coldness of abdomen.—Abdomen sunken, almost stuck to vertebral column (cholera infantum).—Colic in young children; walls of belly are retracted and hard, while intestines can be seen at one spot contracted into a hard lump, of size of a small orange, travelling from one part of intestines to another; attacks frequent and excruciating, unconnected with diarrhœa or constipation, but often associated with an aphthous condition of mouth.—Periodic colic in infants, occurring about 5 p.m.—Flatulent colic in children and hysterical women.—Ascites of hepatic or splenic origin.

13. Stool.—Painless diarrhœa, with great chilliness, even in a hot room. Stools: watery (like rice-water); painless.—Frequent, green, watery discharges, with violent abdominal spasms, during which abdomen gets hard; thrush in mouth; convulsive motions of eyes and limbs.—Bloody muco-purulent diarrhœa, with intense thirst, vomiting, eyes sunken, pupils dilated, skin corrugated and spotted blue, body cold, tongue red and dry, pulse imperceptible, urine suppressed.—Cerebral irritation during cholera infantum. Asiatic cholera, first stage, vomiting, cramps, rice-water discharges restores secretion of urine.—Constipation; stools very dry, hard and infrequent.—Retention of meconium, with vomiting of all food and obstinate constipation.—During stool: sensation as if bowels were falling out; dribbling of urine.—Spasmodic stricture of sphincter ani.—Constant diarrhœa and more or less tenesmus, and passage of much blood; on making efforts to expel, protrusion of several elongated bodies resembling earthworms; with this expulsion there was always a yellow, very fetid discharge; fæces flattened; flatulent distension of bowels; patient pale and sickly-looking (polypus of rectum).—Blind, intensely painful varices with black stools.—Pain in hæmorrhoids, fissure of rectum and painful growths.

14. Urinary Organs.—Pain in region of kidneys extending in direction of ascending colon; afterwards copious urine.—Neuralgia of neck of bladder.—Diminution of sensibility of urethra.—Urine: profuse with thirst; with abundance of phosphates; copious, pale; scanty, even suppressed in collapse; scanty, dribbling a few drops at beginning of every stool.—Incontinence of urine.—Thin, yellowish urine.—Nocturnal involuntary emissions of urine.—Emaciation; paleness; skin cold and dry pulse rapid and feeble; tongue red and tender; gums spongy and bleeding thirst excessive; appetite voracious; bowels constipated; urine pale, frequent, large quantity, of high density, and loaded with sugar; liver tumid and tender (diabetes mellitus).

15. Male Sexual Organs.—Sensual and lascivious fancies and dreams.—Excessive sexual desires, with constant erections at night.—Satyriasis.—Diminution of sexual desire; lessened even to impotence.—Erections at night; backache uncontrollable fidgetiness.—Impotence with melancholy, loss of memory nervous prostration; epilepsy.—Effects of sexual excesses, such as impotency, paralysis and spasms from exhaustion of spinal cord.—Seminal emissions, with depressed spirits, dull thought, backache, staggering gait and great weakness.—Spermatorrhœa, before paralytic symptoms have set in; erections normal but teasing and persistent, with nocturnal emissions and nervous disturbances growing out of unsatisfied sexual desire.—Chordee during gonorrhœa.

16. Female Sexual Organs.—Nymphomania.—Sterility from excessive sexual indulgence.—Abolition of all sexual feeling during coition.—Aversion to coition; menses scanty.—Induration of uterus; enlargement of uterus (after parturition), with abnormal discharges.—Uterine fibroids.—Ovarian neuralgia from ungratified sexual desire; nervous unrest.—Neuralgia of ovaries; pain, swelling, tenderness of l. ovary,

diminution of sexual desire.—Epilepsy from ovarian irritation.—Large tumour, smooth and tense, in hypogastric and r. iliac region; tumour slightly tender when pressed, and there is distinct fluctuation; measurement of abdomen taken in a line with crests of ilium shows an increase of size of ten inches; urine scanty and frequent calls to pass it (ovarian cystic tumour).—Abdomen large but not tense; on palpation, well defined, elastic tumour, yielding indistinct fluctuation, in l. iliac region, here also movements are felt as in quickening (ovarian enlargement).—Metrorrhagia from reflex irritation, or of nervous origin.—Menorrhagia, metrorrhagia, nymphomania, and menstrual epilepsy; nervous symptoms led to its use.—Menorrhagia from ovarian irritation caused by strong sexual desire.—Flooding, esp. in young women.—Erotomania, a few days after menses.—Before menses: headache.—During menses: epileptic spasms, nymphomania, itching, burning, and excitement in vulva, pudenda, and clitoris.—After menses: headache, insomnia, and heat in genitals.—Epileptic attacks at or near menstrual periods.—Scanty menstruation in fleshy women.—Change of life: restless, must be on the move; sleepless; trembling; flushings of face and much congestion of blood to head; palpitation of heart; menorrhagia.—Vaginismus.—Pruritus of external genitals; arising from irritation of uterus, or ovaries, or any hyperæsthesia of veins of that location; sexual excitement intense, often actual nymphomania.—Nymphomania during puerperal state.—Frightful imaginings at night, that she has committed some great crime as the murder of her children or husband (during pregnancy).—Morning sickness and vomiting during pregnancy.—Nervous cough during pregnancy, threatening abortion; the cough dry, hard, and almost incessant.—Convulsions during labour.—Enlarged uterus.

17. Respiratory Organs.—After parturition voice changed, whispering.—Hyperæsthesia of laryngeal nerves.—Loss of sensibility.—Chronic catarrh with purulent slate-coloured sputa.—Follicular and catarrhal laryngitis.—Laryngismus stridulus, uncomplicated, from neurosis or reflex irritation.—Laryngeal crises of locomotor ataxy.—Spasmodic, dry croup, occurring suddenly from reflex irritation, teething, worms, not catarrhal.—Membranous croup, with whitish exudation.—Breath hot and hurried.—Breathlessness, nervous headache, and want of sleep.—Spasmodic asthma; with dry, nervous, spasmodic cough, great tightness of breathing.—Paroxysmal, dry cough.—Dry, fatiguing cough at intervals of two or three hours, with difficult respiration, followed by vomiting of mucus and food, < at night and when lying down; tightness of chest when breathing.—Weak, nervous children, arouse with a dry, spasmodic cough, which greatly frightens them, causing them to cry out in terror.—Nervous, dry, hysterical cough of women, esp. if pregnant.—Whooping-cough, with spasmodic, dry cough; spasm of glottis; with convulsions.

18. Chest.—Burning in chest.—Pneumonia in drunkards.

19. Heart and Pulse.—Feeble intermitting action; so nervous she must be busy and walk; slow and small pulse; heart's beat wanting in energy, and its sounds distant and feeble; action of heart slow and fluttering.—Pulse, accelerated, later becomes slower.—(Cardiac neuroses from spinal or uterine irritation.)

20. Back.—Tabes dorsalis from sexual excesses.—Backache; tired lameness of legs (seminal emissions).

22. Upper Limbs.—Trembling of hands during voluntary motion; or, as in delirium tremens.—Hands and fingers in constant action; busy twitching of fingers.

23. Lower Limbs.—Cannot stand erect; legs weak.—Unsteady gait; frequently taken for a drunken man.—Loss of sensibility; pinching or burning causes no pain (locomotor ataxia).

24. Generalities.—Nervous, busy, must occupy one's self; often in nervous women.—Inco-ordination of muscles; nervous weakness; even paralysis of motion and numbness.—Weakness of extensors of leers and feet.—Temperature lowered, with coldness of extremities; hands and wrists icy-cold and wet; cerebral irritation, in cholera infantum.

25. Skin.—Skin cold, blue, spotted, corrugated (cholera infantum).—Moist eczema of legs with pityriasis of scalp.—Moist eruptions.—Slightly elevated, smooth, red patches, like urticaria, but with hardened bases, like erythema nodusum; itching at night in bed and in a high temperature; appear in winter.—Acne simplex and indurata; bluish red, pustular, < on face and chest; esp. in lymphatic constitutions.—Rose-coloured mammilated eruption on lower extremities; sometimes pustules in centre of patches that become umbilicated, exuding a creamy moisture and forming thick, yellow scabs.—Eruption of small boils in successive crops, mostly on face and trunk, with troublesome itching.—Large, indolent, painful pustules; boils.—Long-lasting scrofulous ulcerations.—Syphilitic psoriasis.

26. Sleep.—Sleepiness; deep sleep, often broken by a start, though waking is very difficult; confused dreams.—Sleepy; drops asleep in his chair; if aroused falls right asleep again; during day.—Sleepless; restless; can only calm herself by incessant occupation.—Sleeplessness: in anæmic patients, or nervous persons who are exhausted but irritated; from over-fulness of cerebral blood-vessels; during convalescence from acute diseases; in case of mercurial poisoning; accompanying mental anxiety, hysteria, pregnancy, and general nervous irritability; from sexual excitement.—Deep, profound, and quiet slumber.—Profound and yet disturbed sleep, always awakens with a mental struggle, not knowing at first where he was or what had become of him.—Night terrors of children; grinding teeth in sleep, moans, cries; horrible dreams.—Somnambulism in children.—Waking with severe headache in a child.

27. Fever.—Body cold; skin corrugated and mottled.—Shivering with cold and cold skin, although child was covered with mustard plasters.—Chilliness and general feeling of coldness, more pronounced about extremities (ague).—Heat, like cold stage, not very strongly marked.—Head hot, feels as if in a furnace, with coldness and chills.—Sweat abundant and viscid, all over body; unusually long lasting and exhausting (ague).

Kali Carbonicum.

Potassium Carbonate. Potassic Carbonate. Salt of Tartar. Salt of Wormwood. Carbonate of Potassium. K_2CO_3 Solution. Trituration.

Clinical.—Amenorrhśa. Anćmia. *Asthma. Axilla, perspiration of. Back, aching. Biliousness*. Bronchitis. Catarrh. *Change of life*. Chilblains. *Clavus*. Cold. *Consumption. Cough*. Debility. Dropsy. Dysmenorrhśa. *Dyspepsia*. Ear, inflammation of. Eyes, inflammation of; śdema around. *Face, blotches on. Fear. Freckles*. Gastralgia. Hćmorrhage. Hćmorrhoids. *Hair, affections of. Headache*. Heart, affections of. *Hip-joint disease*. Hydrothorax. Hysteria. Kidneys, affections of. Knee, affections of; white swelling of. Larynx, catarrh of. Leucorrhśa. *Liver, affections of*. Lumbago. Menorrhagia. Metrorrhagia. Pleurisy. *Pleurodynia. Pregnancy, disorders of.* Proctalgia. *Sciatica*. Sleeplessness. Spinal irritation. *Stomach, affections of*. Throat, sore. *Toothache*. Typhoid. *Urine, frequent passage of*. Urticaria. Uterus, cancer of. *Vertigo*. Wens. *Whooping-cough*.

Characteristics.—*Potassium carbonate*, sometimes called "Vegetable alkali," exists in all plants, and was originally obtained from the ashes left after burning wood and vegetable structures. Potassium salts play a no less important part in the animal economy. *Kali carb*. may be regarded as the typical member of the Kali group of homśopathic remedies, though *Causticum* has also claims on the title. The Potassium salts have more specific relation to the solid tissues than to the fluids of the body; to the blood corpuscles rather than to the blood plasma. The fibrous tissues are particularly affected, the ligament of joints, of the uterus, of the back. It corresponds to conditions in which these tissues are relaxed-joints give way; the back feels as if broken; the patient feels compelled to lie down in the street. Goullon (translation, *H. R*., xv. 327) calls attention to the importance of this polychrest in complaints of women, in which it rivals *Sepia*, differing from the latter in having menstruation "too protracted and recurring too frequently; the pains and troubles occur before the menses. The climacteric flushings of *K. ca*. are associated with disturbances of the heart. Palpitations are most violent. By quieting these *K. ca*. often serves as an excellent soporific. In addition to the uterus and heart, lungs, pleura, bronchi, and larynx all come under its action. Chronic laryngeal catarrh Goullon specially mentions as frequently cured by it. He places it in the front rank as a knee remedy. Among the grand characteristics of *K. ca*., three

stand out above the rest: (*1*) Stitching, lancinating pains, also called jerking pains; < during rest, < lying on affected side. (*2*) Early morning aggravation: < 2 to 4 a.m. (*3*) The occurrence of bag-like swellings over the eyes, between the eyebrows and the upper lids. Relaxation of tissues is a great note of *K. ca*. It is suited to persons of soft tissues with tendency to be fat. Easy sweating may be placed in the same category, and when there is a combination of "sweat, backache, and weakness," the three, according to Farrington, constitute a grand characteristic. The backaches of *K. ca*. are very important. The pain often extends downwards to the buttock and even to the knee. Pain from hip to knee (more especially if right sided) has led to the cure of many cases of hip-joint disease. This symptom also led me to make a remarkable cure of another kind. A lady, 73, stout, short, pale, and of very soft fibre, had for four months suffered from "rheumatic pains," and an offensive vaginal discharge. A local practitioner of repute was consulted (the patient lived in the country, and I did not see her till a year or two afterwards) and pronounced it cancer of the womb in an advanced stage, and gave her four months to live. She described to me the pain as being all round the lower abdomen, and a "dull, heavy, depressing, dead pain, commencing at the inner part of the top of the right hip (iliac crest) and extending to the knee." The pain was so severe it made her feel quite sick and faint. The discharge was very offensive, like decaying meat. Great weakness and trembling accompanied the discharge; urine was almost like blood at times, and had a sandy sediment. *K. ca*. 1m. was given and at once improvement set in. In a few months all the bad symptoms had disappeared and never returned. The patient lived ten years after this. In connection with this case I may mention another. A man had an ulcer of right leg with swelling of ankle, and he complained of waking at 2 a.m. *K. ca*. 30 cured, but meantime he developed this symptom: "Great weakness of right thigh, as if it would give out when walking." This "giving-out" feeling is very characteristic of the remedy. "Constant backache, the patient feeling all the time that the back and legs must give out." *K. ca*. corresponds to many cases of lumbago, stitching pains, pulsations; > by pressure and by lying flat on the back. "Weakness, sweat, and backache" appear in many conditions of debility as from loss of fluids; after confinement or abortion (puerperal mania, fever, or spasms). Complaints after coition in males, especially complaints of the eyes. Weary and sleepy during and after eating. Yawns continually. The mental state of *K. ca*. is one of peevishness and irritability. Easily startled by any noise (especially if unexpected). Fear is prominent; fears to be alone. Intellect impaired, does not care for anything. Indifferent, with bodily exhaustion; when questioned does not know what to answer. The "touchiness" of the remedy is very marked: "Cannot bear to be touched; starts when touched ever so lightly, especially on the feet." *K. ca*. acts profoundly on the tissues. It causes fatty degeneration of the heart and other muscles. It affects the blood itself as well as the circulation, causing anćmia and hćmorrhages. Throbbing of blood-vessels all over body and to ends of fingers and toes is a marked symptom. Irregularity of heart's action. A peculiar symptom is: sensation as if the heart were suspended by a thread. The digestion is very much disordered; flatulence, distension, constipation.

Many symptoms come on when eating: Drowsiness; toothache only when eating. It has the fishbone sensation in the throat, which is part of the general tendency to stitching pains. Another feature is easy choking; food easily gets into windpipe; pain in back when swallowing. The cough has peculiarities in addition to that of time aggravation 2-4 a.m. It is dry, paroxysmal, loosens viscid mucus or pus which must be swallowed. Or spasmodic with gagging or vomiting of ingesta. The expectoration consists of hard, white, or smoky masses, which fly from the throat when coughing. Globules of pus may be contained in it. Hahnemann said that persons suffering from ulceration in the lungs could hardly get well without this antipsoric. I have frequently had occasion to verify its value in such cases. The stitching pains, sweat, and weakness are leading indications, also the locality of the affection. *K. ca*. is more a right than a left-side medicine. The base of the right lung is more affected than any other part. Goullon says also the apices. *K. ca* is a remedy often called for in sick-headache. "Violent headaches about the inner temples; violent stitching or jerking pains, on one side of the head or both." One-sided headache with nausea. One case which I cured was > by lying down, > by a tight band round the head. Pressure and drawing in forehead extending into eyes and root of nose. Congestion to head and heat of face often accompany the headaches. "Drowsy whilst eating" is a very characteristic symptom of *K. ca*. Ide, of Stettin, Germany, has recorded a case (translated by McNeil, *Med. Adv*., xxiv. 294) which well illustrates this. A lady, 65, suffered from chronic bronchial catarrh and emphysema. In November, 1886, she had asthmatic complaints, depriving her of sleep, with cough and mucous expectoration difficult to raise. *Always when eating she was so weary she fell asleep*, and could not finish her meal. After eating still very tired. In the morning passed much flatulence. *K. ca.* 10 removed the condition in a few days. The following March after a cold there was a recurrence, but *without the weariness*, and *K. ca*. failed, whilst *Ars*. 15 rapidly cured. In the same patient *K. ca*. manifested its power in another set of symptoms: Toothache alternating with tearing, stitching pain in left breast and under left false ribs. The side pains were < at night, especially in evening as soon as she lay down; < lying down, particularly < lying on right (*i.e*., painless) side. Not influenced by pressure or motion. *K. ca*. is a chilly medicine. There is great tendency to take cold, and < of symptoms when body temperature is low; aversion to open air. I have often relieved with *K. ca*. blotchy eruptions of the face which were < in a wind or cold air. Among the notable *sensations* of the remedy are: Feeling of emptiness in whole body as if it were hollow. Sensation of a lump rolling over and over on coughing; rising from right abdomen up to throat, then back again. Lump in throat. Feeling as if the bed were sinking under her. Pulsative pains and throbbings. Burning sensation and burning pains. *K. ca*. appears to have *alternating* symptoms: it has cured a case of toothache which alternated with tearing, stitching pains in left breast and under left false ribs. It has also pulsations in the back alternating with pains in the back. The pains in the side were < evening, on lying down, and especially on lying on right (painless) side (*Med. Adv*., xxiv. 295). The nervous excitability of *K. ca*. may go as far as pronounced hysteria; sudden shrieking;

cannot bear to be touched. Spasms (puerperal convulsions) and paralysis. Twitching of muscles; rigidity of muscles; muscular atony, disposition to easy overlifting. Oppression of breathing accompanies most complaints. Anćmia with great debility, skin watery, milky white. Dropsical affections. Ulcers bleeding at night. *K. ca*. is *suited* to the aged, rather obese, lax fibre; to dark-haired persons of lax fibre and inclined to be fat; to diseases after parturition; after loss of fluids. The symptoms are: < At rest; < on lying down (cannot get breath). Unable to remain lying at night, > during the day when moving about; < lying on right side (pain in chest; heart feels suspended to left ribs); < by stooping; > raising head. > Sitting bent forward; > raising head (stitches in forehead). Motion = headache with vertigo; < pain in tumours of scalp; wobbling in stomach; stitches in loins. < By sudden or unguarded motion. Walking > obstruction in nose; and < most other symptoms. Coughing < pain in hćmorrhoids. Debility = desire to lie down. The chief time aggravation is from 2 to 4 a.m., or any time between. In general the symptoms are < in the morning. > By day; < at night. < Evening on lying down. < After midnight. Heat > most symptoms; cold air and open air <. Open air > obstruction of nose. Change of weather and damp weather <. Washing face = nose-bleed. Cold air < stitching pain in right side. Cold and damp = chronic bronchitis. Warm drinks < sweat. Warm applications = pain to move to other places. Drinking cold water > jerking in head; drinking cold-water when overheated = dyspnśa and pyrosis. Hunger = palpitation. Touch <. Pressure < most symptoms; > pain in abdomen; dull stitches in chest; glandular swelling of neck. < From coitus.

Relations.—*Antidoted by:* Camph., Coff., Nit. sp. dulcis. *It is complementary to:* Carb. v., Phos., Sep., Nit. ac., Nat. m. *It follows well:* K. sul., Phos., Stan., Bry., Lyc., Nat. m. *Is followed well by:* Carb. v., Phos., Fluor. ac., Ars., Lyc., Pul., Sep., Sul. *Compare:* The Kalis, especially Caust. (paresis; respiratory affections; hćmorrhoids; rheumatism); and K. bi. (catarrh with tenacious secretions; wandering and alternating pains; headache; affections of stout persons; dyspepsia). Bry. (sharp pains; bilious affections; but Bry. is < by motion); Chel. (pneumonia of right base); Merc. v. (pneumonia of right base, but Merc. has sweat without >); Sep. (diseases of women—but Sep. has scanty menses, K. ca. too early and profuse; empty feeling, bloating after eating; chronic laryngeal catarrh); Apis and Ars. (puffing of face and eyes); Spi. (stitches in heart); Bellis, Ars., Nux v., Calc., and Sep. (waking early, 3 am.); Ip. (constant nausea); (K. bi.) and Staph (< after coitus); Ant. t. (capillary bronchitis); Calc. hypophos. (sweat, backache, and weakness—very close analogue); Pso. (debility of convalescence; profuse sweat; hopelessness of recovery); Calc. c. (hopelessness of recovery; irritability; chilliness, < from washing); Puls. (erratic pains; amenorrhśa); Berb. (bubbling sensation in back). Phos. ac. (apathy); Hep., Nit. ac., Carb. v., and Arg. n. (fish-bone sensation). Rhus (pain > motion; affections of ligaments) Hamam. (hćmorrhoids). Mag. c. (nervous debility from overstrain) Bry. and Silic. (knee affections). Nat. m. (anćmia; amenorrhśa—"K. ca. will bring on the menses when Nat. m., though apparently indicated, fails." Hahn.—backache: that of K. ca. is, in

general, < lying; that of Nat. m. is > by pressure and lying on back); Arn. c., Graph. (obese persons); Chi., Phos. ac., Pho., and Pso. (complaints from loss of fluids); Ars., Bis., and Lyc. (averse to be alone.—Ign., Nux, desire to be alone); Am. c. and Arn. (nose-bleed when washing face); Phos. (fatty degeneration of heart); Lach. (heart as if suspended by a thread).

Causation.—Catching cold. Overstrain.

SYMPTOMS.

1. Mind.—Sadness with tears.—Anxious apprehension and inquietude, esp. about the health, with fear of not being cured.—Irresolute, timid, and apprehensive disposition.—Fear, in evening, in bed.—Peevish humour, discontent and impatience.—Dread of labour.—Changeable humour, at one time evincing mildness and tranquillity, at another time passion and rage.—Tendency to take alarm.—Shrieks about imaginary appearances.—Becomes easily startled; great tendency to start when touched, esp. on feet.—Vexed and irritated mood; trifles vex one; noise is disagreeable.—Irascible and passionate humour.—Loss of memory.—Misapplying words and syllables.

2. Head.—Confusion and dulness in head.—Sudden attack of unconsciousness.—Dulness of the head; confused, stupid feeling, as after intoxication.—Vertigo as if ears were stopped up; with darkness before eyes.—Vertigo in morning, in evening, and after a meal, as well as on turning head or body hastily.—Vertigo, with tottering.—Vertigo, which seems to proceed from stomach.—Headache from motion of a carriage, on sneezing, coughing, or in morning.—Semi-lateral headache, with nausea, and vomiting, < so as to become insupportable, by slightest movement.—Violent headache across the eyes.—Pressive headache in the occiput, esp. during a walk, with irritability, or else in forehead with photophobia.—Tearing and drawing pains in head.—Lancinating headache, chiefly in temples and forehead; < from stooping and moving head, eyes, and lower jaw; > when raising head and from heat.—Violent headaches about inner temples.—Congestion in head, with throbbing and buzzing.—Trembling in head, and sensation as if it contained something movable. (Constant sensation of something loose in head, turning and twisting towards forehead.).—The headaches are > by pressing the forehead.—Sensation as of a blow in the head, which causes it to incline to one side, with dizziness.—Strong tendency to take cold in head, esp. when exposed to a draught after being heated (from it headache or toothache).—Painful and purulent tumours in scalp, like beginning blood-boils; more painful from pressure and motion, and less so from external heat; accompanied by itching, as if in bones of head, with great dryness of hair.—Wens.—Scabby eruption on scalp.—Falling off and dryness of hair, esp. on temples, eyebrows, and beard, with violent burning-itching of the scalp in morning, and evening; the scalp oozes if scratched.—Perspiration on forehead, in morning.—Large, yellowish, and furfuraceous spots on forehead.

3. Eyes.—Pressive and tearing pain in eyes.—Sensation of biting, of smarting, of burning, and shootings in eyes.—Redness and inflammation of eyes, with pain on reading by candle-light.—Swelling of eyes and lids, with difficulty in opening them.—Pimples in eyebrows.—Swelling (like a bag) between upper eyelids and eyebrows.—Excoriation and suppuration in corners of eyes.—White of eye red; capillaries injected.—Sensation of coldness of eyelids.—Agglutination of eyelids, esp. in morning.—Lachrymation.—Eyes dull and downcast.—Propensity to a fixed look.—Spots dancing before sight, on reading and on looking into open air.—Rainbow colours, spots (blue or green), and sparks before sight.—Vivid and painful brightness before eyes, when closed, extending deeply into brain, in evening after lying down.—Photophobia.—Dazzling of eyes by daylight.

4. Ears.—Shootings in ears, sometimes from within outwards.—Inflammatory swelling of ears, with discharge of a yellow pus or of liquid cerumen.—Itching and tickling in ears.—Redness, heat, and violent itching of external ear.—Ulcer in ears.—Excoriation and suppuration behind ears.—Inflammation and swelling of parotid.—Excessive acuteness of hearing, in evening, on lying down.—Weak and confused hearing.—Dulness of hearing.—Singing, tingling, and buzzing in ears.—Cracking in ears.

5. Nose.—Swelling of nose, with redness and burning heat.—Nose red and covered with pimples.—Ulceration of interior of nose.—Epistaxis in morning; when washing face.—Dull smell.—Coryza and stoppage of nose, sometimes with secretion of yellowish green mucus, and constant want of air.—Blowing offensive matter from nose.—Fluent coryza (with excessive sneezing; pain in back and headache), with secretion of sanguineous mucus.—Secretion of purulent mucus from nose.—Dryness of nose.—Sore, scurfy nostrils.

6. Face.—Colour of face, yellow, or pale and sickly, with sunken eyes, surrounded by a livid circle.—Haggard, exhausted look; lifeless expression.—Great redness of face, alternately with paleness.—Drawing pain in face.—Tearing in bones of face.—Flushes of face.—Bloatedness of face.—Eruption of pimples on face, with swelling and redness of cheeks.—Tearing stitches in cheeks.—Swelling between eyebrows.—Pimples on eyebrows.—Warts on face.—Ephelides.—Lips thick and ulcerated.—Lips cracked and exfoliating.—Cramp-like sensation in the lips.—Cramps in jaw.—Swelling of lower jaw and sub-maxillary glands.

7. Teeth.—Toothache, only on eating, or in morning on waking; or else excited by cold things (water) in mouth.—Teeth painful when touched by, either cold or warm substances.—Toothache, with soreness of bones of face, and drawing, jerking, or tearing pains, esp. in evening in bed.—Lancinating pains in teeth, with swelling of cheek (with stinging pain).—Digging, piercing, pricking, and gnawing in teeth.—(Toothache alternating with stitches in l. chest.).—Looseness of all teeth.—Bad smell from teeth.—Inflammatory swelling and ulceration of gums.

8. Mouth.—Bitter taste in mouth.—Fetid exhalation from mouth.—Sensation of dryness in mouth, with copious accumulation of saliva.—Excoriation, with vesicles in interior of mouth and on tongue.—Soreness of frćnum linguć.—Swelling of tongue, covered with small painful vesicles.—Painful pimple on tip of tongue.

9. Throat.—Sore throat, with lancinating pain on swallowing.—Deglutition impeded by inertia of muscles of gullet (the food descends very slowly in the śsophagus, and small particles of food easily get into windpipe).—Copious accumulation of mucus on palate and in throat; difficult to hawk up or to swallow, with sensation as if a lump of mucus were in throat.—Hawking up of mucus.—Dryness in posterior part of throat.

10. Appetite.—Bitter or acid taste.—Unpleasant taste in mouth, as from derangement of stomach.—Putrid, sweetish taste, or as of blood in mouth.—Bulimy.—Strong desire for sugar or acids.—Disgust for brown bread, which lies heavy on stomach.—Milk and warm food are unsuitable.—During a meal, sleepiness.—After a meal, drowsiness, paleness of face, shivering, headache, ill-humour, nausea, sour risings, and pyrosis, colic, inflation of abdomen and flatulency.—After taking hot food (pastry or soup), pinchings and uneasiness in abdomen.

11. Stomach.—Frequent risings.—Sour risings and regurgitation.—Burning acidity rising from stomach, with spasmodic constriction.—Feeling in stomach as if cut to pieces.—Constant feeling as if stomach were full of water, wobbling on motion.—Pressure in stomach like a heaviness after eating.—Sensation as of a lump in stomach the size of the fist.—Pyrosis.—Nausea from mental emotions.—Nausea, as if he would faint; also with anxiety.—Nausea during pregnancy.—Nausea to such a degree as to cause loss of consciousness, sometimes during a meal.—Anxious nausea, with inclination to vomit, esp. after a meal, or after mental emotion.—Retching in evening (for several evenings).—Vomiting of food and acid matter, with prostration of strength, as if about to faint.—Nocturnal vomiting of food.—Fulness in stomach, esp. after a meal.—Pressure on epigastrium.—Tension above stomach.—Contractive cramps in stomach, renewed by all kinds of food and drink, or else at night, with vomiting.—Pinching, digging, and shooting in stomach.—Lancinations in epigastrium and in hypochondria, which suspend respiration.—Pulsations in epigastrium.—Extreme sensitiveness of epigastrium.

12. Abdomen.—Pain in liver, on stooping, as if it were wrenched.—Burning pain, aching, and shootings in liver.—Pressure and shootings in region of loins.—Pains in abdomen, with frequent risings.—Pressure on abdomen, esp. on stooping.—Tension across the abdomen.—Great inflation of abdomen, esp. after a meal.—Inquietude and heaviness in abdomen.—Abdominal pains, contractive and spasmodic.—Colic renewed after each meal.—Colic, resembling pains of labour, sometimes with pains in loins.—Feeling of coldness, as if a cold fluid passed through intestines; during menses.—Lancinations throughout the abdomen.—Inertia and coldness in

abdomen.—Dropsical swelling of abdomen.—Drawing and shootings (and painful bloatedness) in groins.—Abundant production and incarceration of flatus.—Incarceration of flatulence, with colic.—Restricted or excessive emission of flatus, sometimes preceded by pressive pain in rectum.

13. Stool and Anus.—Constipation, sometimes every second day.—Constipation during menstruation.—Constriction of the abdomen and difficult evacuation of fćces of too large a size.—Retarded stool from inactivity of rectum.—Obstruction from inactivity of bowels, as a want of peristaltic motion; hćmorrhoids.—Resultless inclination to evacuate, and scanty evacuation.—Stool resembling sheep's dung.—Diarrhśa, mostly in evening and at night, with cutting pains and great physical debility.—Discharge of mucus, or of blood, during evacuation.—White mucus before and during stool.—Painless diarrhśa, with rumbling in abdomen.—Discharge of tenić and lumbrici.—Anxiety before the evacuation.—Itching in anus.—Tearing, shooting, incisive, and burning pains in anus (and rectum), esp. after evacuation.—Protrusion and distension of hćmorrhoids during stool, with pricking and burning.—Protrusion of hćmorrhoids during micturition, emitting first blood, afterwards white mucus.—Inflammation, soreness, stitches, and tingling, as from ascarides, in hćmorrhoids.—Hćmorrhoidal pimples in anus, painful, bleeding, and with shooting pain.—Sensation of red-hot poker being thrust up rectum, temporarily > by sitting in cold water.—Excoriation and pustulous eruption in anus.—Stitching, pressing proctalgia (during pregnancy).

14. Urinary Organs.—Frequent want to make water, and scanty emission of fiery urine.—The urine is discharged slowly.—After micturition, discharge of prostatic fluid.—Urine pale greenish; turbid.—Frequent emission of urine, day and night.—Incisive pains in bladder, from r. to l.—Burning sensation in urethra, esp. on (and after) making water.

15. Male Sexual Organs.—Tension, tearing, and pulling in glans and in penis.—Itching and pain, as from a bruise in scrotum.—Hot swelling of testes and spermatic cord.—Excessive increase or absence of sexual desire.—Repugnance to coition.—Want of erections, or too frequent and painful erections.—Absence of, or immoderate pollutions.—Pollutions with voluptuous dreams.—After coition and pollutions, weakness of body, but esp. of eyes.

16. Female Sexual Organs.—Repugnance to coition in women.—During coition, pinching and pain, as of excoriation, in vagina.—Constant sensation of bearing down.—Burning pain and shootings in vulva.—Erosion, itching, and gnawing in genital parts, and in interior of parts.—Difficult first menstruation.—Catamenia premature, or too weak.—Suppression of catamenia.—Suppression of menses, with anasarca and ascites.—Hćmorrhage of pregnant women (clots of coagulated blood).—Corrosive menstrual flux.—During catamenia (the menstrual blood is acrid) itching eruption, and excoriation, between thighs.—Gastric symptoms, and agitated and anxious sleep during catamenia.—During menses: (morning)

headache; cutting pain in abdomen; pain in small of back, like a weight: stitches in ears; coryza; itching of whole body.—Leucorrhśa, sometimes with violent pains in loins, and pains like those of labour (extending from back to uterus).—Yellowish leucorrhśa, with itching and sensation of burning in vulva.—(Uterine cancer with pain round loins extending down r. thigh to knee.).—Tearing stitches in breasts on flow of milk.—During pregnancy: sickness (only during a walk) without vomiting, with feeling as if she could lie down and die;—pulsation of arteries, even down to tips of toes; hollow feeling in whole body; heavy broken-down feeling, only with the greatest effort that any exertion can be made;—back aches so badly while walking she could lie-down in the street;—pressing, forcing pains in small of back as if heavy weight came into pelvis, low down; also stitching, pressing proctalgia.—Impending abortion with pains from back into buttocks and thighs; discharge of Clots (2nd and 3rd month).—Weakness after abortion.—Labour pains insufficient; violent headache, wants back pressed; bearing-down from back into pelvis.—False pains; sharp cutting pains across loins, or passing off down buttocks, hindering labour; pulse weak.—Pains stitching or shooting.—Chills after delivery.—Puerperal fever; intense thirst.—After confinement, hćmorrhage, hćmorrhoids, peritonitis.—Hćmorrhage a week after labour.

17. Respiratory Organs.—Hoarseness and roughness in throat, with violent sneezing.—Aphonia (with violent sneezing).—Easy choking.—Sensation as of a plug in larynx.—Cough on moving arm (when playing the violin).—Cough, excited by a tickling.—Dry cough, esp. at night, and in evening; in morning with expectoration.—Night cough; < from 3 to 4 a.m.—Cramp-like cough, with inclination to vomit, and vomiting, esp. in morning.—Shootings in throat, or chest, while coughing.—Expectoration: difficult; or, small round lumps come flying from mouth without effort.—Spasmodic cough, in short but frequently returning attacks, caused by a tickling in the throat and larynx; during morning and day cough is loose, but the yellow pus and tough mucus has to be swallowed again.—Cough with sourish expectoration, or of blood-streaked mucus, or of pus.—During cough, rough pain in larynx; stinging in throat; stitches in r. side of chest (lower part); sparks dart from eyes; asthma.—Whooping-cough (with inflammation of lungs; with swelling between upper eyelid and eyebrows, and < from 3 to 4 a.m.).

18. Chest.—Difficult respiration.—Shortness of breath in morning.—Respiration impeded on walking quickly, or in morning.—Stitches in sternum and r. side of chest through to back, when taking an inspiration.—Tearing in sides of chest.—Spasmodic asthma (in the morning); > by sitting up and bending forward, resting head on knees).—Anxious oppression at chest.—Obstructed respiration awakes him at night.—Wheezing in chest.—Oppression at chest, as from hydrothorax.—Pain in chest when speaking.—Cramp in chest, sometimes on coughing.—Sensation in chest as if heart were compressed.—Pressure, burning pain, and shootings in chest, sometimes on breathing.—Inflammation of lungs (and liver) with stitches in chest (r. side).—Suppuration of lungs; abscesses of

lungs.—Weakness and faintness in chest from walking fast.—Small pimples on chest and back.—Incisive pains in chest.

19. Heart.—Palpitation of heart (sometimes with anguish), esp. in morning on waking, with ebullition of blood.—Frequent and violent palpitation; with anxiety.—Palpitation when he becomes hungry.—Frequent intermissions of beats of heart.—Burning in region of heart.—Crampy pain in region of heart.—Stitches about heart and through to scapula.—Pinching pain in or by heart, as if heart were hanging by tightly drawn bands; < on deep inspiration, on coughing; not noticed on motion of body.—On lying on r. side, heart feels suspended to l. ribs.—Feels pulse over whole body to tips of toes.—Pulse slow.

20. Neck and Back.—Stiffness between scapulć.—Dull pain, like hot water, between scapulć.—Stiffness of nape of neck.—Weakness of muscles of neck.—Goître.—Hard swelling of axillary glands and of those of neck.—Sweat under armpits.—Pains in loins; also after a fall.—Pain, as from a bruise in back, during repose.—Drawing pains in back, which often proceed from loins.—Burning, tearing near r. side of spine, above small of back.—Sharp stitching pains awaken him 3 a.m., he must get up and walk about; pains shoot from loins into nates.—Stitching and shooting pains in back, shooting down into gluteal region or hips.—Stitches in kidneys.—Back aches as if broken.—Pain across sacrum like labour-pains; feeling of tightening of skin of lower abdomen; feeling of weight in abdomen on walking, and esp. on standing.—Pain in small of back as from flatulent distension, morning in bed, with feeling as if bubbles accumulated at small of back, with urgent desire for stool, all of which disappeared after passing wind.—Violent constant drawing in small of back, alternating with pulsations in it, only > when lying.—Pain as if broken on moving about.—Bruised pain in back only during rest.—Feeling in morning as if small of back were pressed inward from both sides.—Pressure in region of both kidneys.—Gnawing in coccyx.

22. Upper Limbs.—Swelling of shoulder, with pain.—Swelling and sore pain of axillary glands.—Cracking in shoulder-joint when moving or raising arm.—Pain, as from blows and bruises, under r. shoulder-joint, esp. when moving and touching it.—Tearing in l. shoulder-joint.—Pressure on shoulder.—Tension, tearing, pulling, in muscles and joints of shoulders, arms, hands, and fingers.—Cold stiffness and numbness of arms, esp. in the cold, or after violent exercise.—Want of energy in arms and hands, esp. in morning in bed.—Frequent startings in arms.—Stiffness in joint of elbow.—Paralytic pain in wrist.—Shootings in wrist and fingers during movement.—Trembling of hands when writing.—Coldness of hands.—Skin of hands rough and cracked.—Torpor and numbness in extremities of fingers.—Burning pain in extremities of fingers.—Gnawing vesicles on fingers.—Startings in fingers when sewing.—Tearing between thumb and index finger.

23. Lower Limbs.—Acute pullings (rheumatic pains), esp. at night, in joints and bones of hips, legs, feet, and toes.—The limbs fall asleep while lying.—Numbness

and great inclination of whole r. limb to fall asleep, esp. lower leg.—Stitches in l. hip-joint while standing.—Tearing in hips and knees even while sitting.—Paralysis of thighs.—Cramp in r. thigh and calf.—Stiff, cramped feeling in both calves, lasting all day and coming on when walking in morning (Cooper—from Potash water.).—Tearing in and on nates not far from hip-joint.—Great weakness of r. thigh, feeling as if it would give way when walking.—Difficulty in knees on going up or downstairs.—Dull pains in side of knee, walking or extending leg.—Frequent tearing in knees.—Pressive pullings and tearings in legs.—Jerking of muscles of buttocks and thighs.—Burning pain and lancinations in legs and feet.—Uneasiness (restlessness) in legs in evening.—Torpor and numbness of legs.—Crawling shuddering on tibia.—Swelling of legs and feet.—Swelling and redness of soles.—Stiffness of joint of foot.—Shootings in joints of foot.—Cold feet, even at night in bed.—Numbness of feet after a meal.—Fetid perspiration on feet.—Burning pain and shootings (red chilblains on toes) in ball of great toe.—Corns on feet, painful when touched.—Stitches in the painful and sensitive corns.—Sensation as if nail of big toe would grow into flesh.—Tips of toes very painful when walking.

24. Generalities.—Affections in general, occurring in r. hypochondriac region; r. abdominal ring; l. chest; l. upper extremity; external and internal ears; of inner surface of liver; inner region of kidneys; lower part of chest; shoulder; shoulder-joint; elbow and elbow-joint; hollow of elbow; wrist-joint; big toe; tips of toes; joints of legs in general; joints of toes.—Disgust of food in general.—Inflammatory swelling of the part, with characteristic (stitching or jerking) pains.—Dryness of the skin.—Painful sensibility of extremities in whatever position they are placed.—Pressive pains in joints.—Spasmodic contraction of some parts.—Drawing, tearing, rheumatic pains in limbs, esp. during repose, with swelling of the parts affected.—Rheumatic pains in back, chest, shoulders, and arms, < on moving them.—Shooting pains in joints, muscles, and internal organs.—Swelling and hardness of glands.—Anćmia, with great debility; skin watery, milky white; muscles weakened, esp. heart; hence weak pulse is a general characteristic.—Dropsical affections of internal organs, or of whole skin of body.—The pains often manifest themselves towards 2 a.m., and are then stronger than by day during movement.—Shiverings immediately after pains.—Remaining in open air greatly < many of the symptoms (esp. the febrile), while some others are > by it.—Hectic fever.—Burning at various places under the skin.—Spasmodic attacks and convulsive startings of limbs and muscles.—Nocturnal epileptic fits.—Tendency to suffer a strain in loins.—Tendency in limbs to become numbed, when lying down.—Paralysis.—Dropsical affections and paralysis of old persons.—General sensation of emptiness in whole body, as if it were hollow.—Heaviness and indolence.—Weakness, as if on the point of losing consciousness, and trembling, esp. after a walk.—A short walk fatigues much.—Attacks of weakness with nausea, sensation of heat and lassitude in pit of stomach, vertigo, and dizziness.—Violent ebullition of blood, with throbbing in all arteries.—Excessive dread of open air and of currents of air.—Great tendency to take cold, esp. after heating exercise.

25. Skin.—Painful sensibility of skin, as if it were ulcerated, when pressing on it.—Skin dry, with obstructed perspiration.—Sensation of burning, or burning and lancinating itching, in skin.—Itching, burning, yellow, or red spots on body (over abdomen and around nipples), sometimes with oozing after being scratched.—Miliary nettle-rash.—Corrosive vesicles.—Chilblains of a reddish blue.—Warts.—Tetters.—Bleeding of ulcers, esp. at night.—Fissure in cicatrix of an old issue.—Ascites and anasarca.—Swelling and induration of glands, after contusions.

26. Sleep.—Drowsiness and yawning.—Great drowsiness during day and early in evening.—Falls asleep while eating.—Half-sleep at night.—Tardy sleep.—During sleep, shuddering, tears, talking, and starts with fright.—Gnashing of teeth while asleep.—Agitated sleep, with frequent, anxious, and frightful dreams.—Dreams of robbers, death, danger, serpents, sickness, spectres, devils, &c.—Fits of anguish at night, gastric sufferings, pains in stomach and precordial region, colic, flatulency, diarrhśa, frequent erections and pollutions, asthmatic sufferings, nightmare and cramps in calves of legs.—Arrest of breath rouses him from sleep at night.—At night l. leg and r. arm go to sleep.—Waking too early, particularly at 3 or 4 o'clock in the morning; sleepiness in evening; sleeplessness after midnight; sleeplessness in general.

27. Fever.—Pulse very variable; frequently more rapid in morning than in evening; strong pulsations in arteries.—Chilliness generally in morning.—Shivering in evening, with thirst, often accompanied by toothache.—The Chilliness in evening is > near warm stove and after lying down.—Internal heat with external chilliness.—Morning perspiration.—Perspiration more on upper part of body and < by warm drinks.—Perspiration is fetid or smells sour.—Intermittent fever; constant chilliness, with violent thirst from internal heat; hot hands; loathing of food.—Long yawning, with heat; pain in chest and head; pulsations in abdomen, 9 a.m. and 5 p.m.—Chills and heat alternate in evening, followed by perspiration during night.—Evening fever; first, chilliness with thirst (for one hour), then heat without thirst, accompanied by violent, fluent coryza; afterwards slight perspiration with sound sleep.—Chill and fever, with oppression of breathing, constriction of chest; pain in region of liver; most of the thirst during chill.—Intermittent fevers, with whooping-cough.—Shivering immediately after pains.—Frequent shuddering during day.—Heat in morning, in bed, with pains in loins and chest.—Want of perspiration and inability to perspire, or else great tendency to perspire during intellectual labour, or during a walk.—Nocturnal sweats, every night.

Kali Chloricum.

Potassium Chlorate. Potassic Chlorate. $KClO_3$. Trituration. Solution.

Clinical.—Albuminuria. *Aphthć*. Asthma. Cancrum oris. Clumsiness. Crusta lactea. Cystitis. Dysentery. Epithelioma. Hćmaturia. Hćmorrhages. Hćmorrhoids. Hangnails. Mercurial poisoning. Mouth, inflammation of. Nephritis. Neuralgia. Śdema. *Paralysis (facial)*. Pharyngitis. Pimples. Proctalgia. Purpura. Scurvy. Stomatitis. Syphilis. Tic-douloureux. Ulcers.

Characteristics.—The *Chlorate* of Potash is not to be confounded with the *chloride* which constitutes the *Kali muriaticum* of Schüssler. Hering has amalgamated the symptoms of the two under the heading *Kali mur*., but I think it best to keep them separate. *Kali chlor*. is an exceedingly active poison. It has long been used in the old school, in solution, as a wash for sore mouth and for foul ulcers. Hutchinson observed a number of case in which it produced the very condition which it was given to cure: "Most acute ulceration and follicular stomatitis. The whole mucous surface was red and tumid, and in the cheeks, lips, &c., were numerous grey-based ulcers." Rushmore (*H. P*., xii. 530) records a proving in an unmarried lady, 50, short, brunette, who had had goître in early life, which disappeared under the application of *Iodine*. Later on a fibroid tumour developed in the uterus, and for this the patient was advised to take crude *Potassium chlorate*, dissolved in water, daily. The following symptoms were observed: Increased moral irritability. Felt dreadfully dull and stupid. Dizzy on stooping and rising. Slight headache over eyes, objects appear double, beside each other. Face swelled so she could hardly see on rising in morning. Smarting of tongue. It took away her desire for acids. Diminished appetite. Much commotion and flatulence in abdomen. Increased urine. Dreams worse, of terrible things never thought of. Great coolness; shivering on cold days; seemed as if it cooled off her blood. Clumsiness. General bloated feeling.—Fatal poisoning has occurred, death taking place in convulsions. The blood is disorganised, and after death liver, spleen and kidneys are found softened and filled with disorganised blood; this should give it a place in cases of lardaceous and fatty degeneration of solid viscera. Mouth, hypochondria, and rectum are the parts most affected. In the provers great weakness was manifested, rheumatic and neuralgic pains, many occurring in the facial nerves. Facial paralysis has been cured with it. The heart was the seat of much disturbance, and a coldness was felt about the precordia. The stomach and bowels were disordered, and Allen credits it with the cure of this: "Dysentery, with most violent cutting pains as from knives, frequent stools, tenesmus, making the patient cry out, evacuations very small, almost pure blood, great prostration." The sexual organs were excited. The skin also manifested a number of symptoms: Pimples in various parts; between lip and chin. It has cured epithelioma of face and of great toe (Allen). Sir James Simpson recommended it in 20-grain doses daily where abortion was likely to occur from fatty degeneration of the placenta

(Brunton). As this is frequently a syphilitic affection it is probable that when successful it neutralised that disease. < By jar of coughing or sneezing (eyes). Mental symptoms > by nose-bleed.

Relations.—*Antidote to:* Merc. *Compare:* Especially K. mur.; Caust. (facial paralysis), K. bi. (follicular pharyngitis). Zinc., Cad. s., and Cact. (asthma with great constriction of chest); Graph., K. nit. and Nat. m. (cold feeling about heart).

SYMPTOMS.

1. Mind.—Liveliness; then ill-humour.—Ill-humoured, anxious, tension in precordial region, > nose-bleed.—Feels dreadfully dull and stupid.—Apathy; in evening, with sadness, chilliness and disgust of life.—Consciousness suddenly almost lost after a glass of wine.—Convulsions followed by delirium.

2. Head.—Dizzy on stooping and rising.—Vertigo: after violent motion, with congestion of blood.—Cutting pain in head extending into malar-bones.—Head aching; continuous, esp. in evening.—Confusion; bewilderment; on walking in open air.—Congestion of brain, so that one-half of head, face, and nose felt paralysed.—Feeling of congestion, with pain in forehead.—Intoxication from a small glass of beer.—Forehead: jerking in upper and lower part of frontal bone; pain; drawing; tension, then sneezing and catarrh, tension in sinciput.—Intermittent sticking in r. temple; pain in l. temple.—Pain in temporal bone extending to eye-teeth.—Pain in l. side of head.—Pain in occiput; in evening, at times extending into jaws.—Confusion in occiput, with peculiar sensation in muscles of nape.—Itching.—Crusta lactea of children.

3. Eyes.—Redness of eyes in evening, with pain.—Stitches in eyes.—Cramp in l. eye.—Pressure in eyes.—Rush of blood; with irritation of eyes.—(Conjunctivitis and keratitis (scrofulous) with a formation of phlyctenulć, but only superficial.).—Feeling of strength in eyes.—*K. chl.* detected in the tears.—Twitching in (inner) canthi.—Pain in upper lid in evening.—Appearance of light (flames and sparks) before eyes when coughing and sneezing.—Double vision; sees objects beside each other.

4. Ears.—Roaring in ears, with a painful bloody stool.

5. Nose.—Drawing in root of nose.—Irritation at root of nose.—Sneezing.—Catarrh: violent; with much sneezing and profuse mucus.—Tension in forehead, followed sometimes with coryza and sneezing.—Nosebleed; at night; only from r. nostril; > mental state.

6. Face.—Face swelled so she could hardly see on rising in morning.—Face pale; bluish; livid.—Suffering expression.—Twitching of face and eyes of masseter muscles.—Sticking in various parts.—Tearing and tension in face.—Pain in r. malar-

bone, beneath margin of orbit, then tension in whole cheek and temple.—Drawing pain in r. cheek till he sneezes.—Drawing: in r. cheek; and in gum, with cramp in muscles of r. cheek; with pain in lobule of r. ear, at one time more beneath orbits, at another in masseter muscles.—Drawing, cramp-like, tensive, pressive and pulling pains in bones of face.—Cramp-like pain in cheeks extending into joint of jaw, at times with tearing in upper jaw.—Tensive pain in l. cheek near orbital margin.—Tension with pressure towards eyes, < r. side; tension in cheek beneath eye, extending to ear, r., then l.—Drawing in r. cheek, then inclination to sneeze.—Sensitiveness.—Jerking in nerves of lower jaw, at foramen maxillare posticum.—Lightning-like neuralgic pains in face, l. side < from talking, eating or slightest touch, followed by numbness.—Cramp-like pressure in joint of jaw, with stitches in jaw and teeth, < r. side.—Lips blue; swollen.—Pimples on r. commissure; on lower lip.—Eruption of pimples on face, forehead, and between lip and chin.

7. Teeth.—Aching in upper teeth.—Cramp-like drawing in cheeks, extending to articulation of jaw, with stinging pain in jaw and teeth.—Teeth blunted.—The teeth are set on edge.—Gums bright red.—Gums bleed easily on brushing teeth.

8. Mouth.—Tongue white; in middle.—Tongue coated; at back with diarrhśa.—Two symmetrical ulcers on sides of tongue.—Tongue cold and throat.—Sticking (stinging) burning on tongue.—Smarting of tongue.—(Stomatitis; ulcerative and follicular, mucous surface red and tumid, and grey-based ulcers in cheeks, lips, &c.).—Tanned appearance of mucous membrane of mouth and throat.—Contracted feeling in muscles of palate.—Salivation; acid.—Taste: burning, alkaline; as of blue vitriol; salt; sour; saltish, sour; bitter, sourish; bitter, > expectoration of mucus; bitter, with coldness of tongue (like laurel-water with salt); lost.

9. Throat.—Submaxillary glands swollen, throat red and śdematous.—Pain in throat and stomach, with inclination to eructate.—Scraping; roughness; rawness; dryness of throat; and of chest; with violent cough as from sulphur fumes.—Swallowing difficult.—Dryness of fauces.—Cynanche tonsillaris.—Throat constricted.

10. Appetite.—Appetite increased; paroxysms of ravenous hunger, > a drink of water, then loss of appetite.—Appetite diminished; lost.—Thirst.—(Desire for acids removed.)

11. Stomach.—Eructations: of air, sourish; violent, with alternating pains in chest and abdomen.—Frequent risings of flatus.—Aching in the stomach and precordial region, sometimes with inclination to eructate, or with apathetic humour and shiverings.—Sensation of heat or coldness in stomach.—Incisive pains in region of stomach.—Nausea; and shivering; and attempts to vomit, though nothing but air was ejected.—Vomiting: sudden; incessant; of all food; of offensive dark green mucus.—Acute gastritis, nausea, pain in splenic region, enlargement of spleen.—Cardialgia.—(Gastralgia.).—Pyrosis.—Cutting in stomach.—Pressure with

feeling of emptiness.—Pressure in epigastric region; and of stomach with apathy and chilliness.—Heavy pain in stomach after a walk of an eighth of a mile, with sinking sensation.—Weight, fulness, distension in epigastric region, regularly and generally increased for six hours; repeated next day; > at night.—Warmth in stomach.

12. Abdomen.—Much commotion and flatulence in abdomen.—Movings (frequent) with inclination to diarrhśa.—Fatulence: during day; in afternoon; with epigastric distress, preventing sleep.—Griping.—Colic, with diarrhśa and shifting of the flatulence.—Intermittent weight, tension and pain in umbilical region.—Pressure: in l. hypochondrium; in r. extending to umbilicus; tensive in r., > emission of flatus.—Pain in pelvic region, with diarrhśa.

13. Stool and Anus.—External piles; with constipation.—Congestions and obstructions to portal system and liver, with hćmorrhoidal complaints.—Persistent pain in rectum.—Urging; constant, with normal stool.—Stool: liquid; thin; diarrhśa; violent, constantly getting more liquid, at last consisting only of mucus; copious, as after a refrigerant purging salt (painful); with weakness.—Slow, hard and dry evacuations—the latter part is mixed with mucus and blood.—Liquid, loose, and sometimes mucous evacuations.—Painful diarrhśa.—Dysentery; much blood passing with the slime.—Stool hard; and at last mixed with mucus and blood.—Green stools.—Light-coloured stools.—Stool indolent, delayed.

14. Urinary Organs.—Nephritis.—Urging; frequent.—Itching in urethra and scrotum.—Inability to empty bladder.—Could pass only a few drops of bloody urine.—Frequent micturition; and copious, with irritation about bladder and urethra.—Hćmaturia.—Urine: increased in evening and night; scanty; black and albuminous, greenish-black, containing hćmatin; urine containing albumen, casts, and altered blood, drawn off by catheter; acid and deposits urates abundantly; turbid; suppressed.—(Albuminuria during gestation.)

15. Male Sexual Organs.—Violent (frequent) erections, with itching on scrotum; with emissions.—Frequent pollutions with lascivious dreams.—Depression of desire, with chilliness and apathy.

17. Respiratory Organs.—Hoarseness.—In larynx irritation to cough.—External sensitiveness of larynx and throat.—Cough; violent, with catarrh.—Dryness of throat and chest, with violent cough as from vapour of sulphur.—Violent cough with coryza.—Breathing laborious.

18. Chest.—Pain in sides and loins.—Painful pressure superiorly in l. costal region.—Chest, tight; constriction as from sulphur fumes.—Oppression, with sensation as if lungs were constricted with a fine thread; with violent beating of heart; rush (congestion) of blood to chest.

19. Heart and Pulse.—Precordial anxiety with palpitations and oppression.—Coldness in precordial region.—Palpitation.—Heart's beat distinctly perceptible to touch (but not accelerated beating), with coldness in precordial region.—Violent beating of heart; sometimes with oppression of chest and cold feet.—Pulse: rapid; compressible; feeble, as after a sudden and copious hćmorrhage; slow; and small, weak.—Pulse diminished in fulness and force; accelerated, or soft and sluggish, not synchronous with beats of heart.—Pulse in r. hand full and soft, intermittent, slower than beat of heart, in l. hand small, soft, compressible.

20. Back.—Pain in lumbar region, with weight.—Heaviness in lumbar region, with dragging and increased urine.

22. Upper Limbs.—Rigidity of muscles.—Drawing: in forearms; in wrists, with tearing.—Tearing in r. wrist and along ulna.—Extraordinary coldness of arms.—Cramp in r. index.—Inflamed hang-nails.—Phlyctenć and itching pimples on back of hands.

23. Lower Limbs.—Drawing in thigh.—Violent lancinating pains in knee.—Sticking in r. knee.—Cramp in leg.—Cold feet with palpitation of heart.

24. Generalities.—Convulsions; followed by delirium.—Jerking of head and other parts.—Clumsiness.—General bloated feeling.—Blood taken from a vein was very viscid.—Rheumatic pains in different parts.—Malaise.—Discomfort.—Weakness; lassitude and sleepiness.—Collapse.—> From warm baths, which were always followed by profuse sweat and quiet sleep.—Great chilliness, constant shivering and shuddering, sometimes with stiffness of hand.—Constant coldness of feet.

25. Skin.—Cyanosis, < lips and extremities.—Icterus.—Duskiness of skin.—Small purple maculć on forearms.—Rash, with painful pimples on l. shoulder.—Pimples: on forehead; between lip and chin; on thigh; red pimples; burning on l. cheek; itchings; itching pimples, with vesicles on back of l. hand, > during day, but returning next morning.—Miliary eruptions.—Itching pustules filled with matter, surrounded by red areola, on limbs.—Numerous small red papulć.—Itching vesicles on back of r. hand.—Itching over whole body: < in evening in bed; in face; at night, next morning red pimples on legs and shoulders, not on joints, then pimples on face.

26. Sleep.—Yawning.—Sleep uneasy; and interrupted by heavy dreams.—Sleep full of vexing dreams.—Waking towards morning from an anxious dream, lying on back, snoring and breathing with difficulty.—Dreams of occurrences of day previous.—Quiet dreams of prophecies of death; of death from nervous (typhus) fever.—Voluptuous dreams with emissions.

27. Fever.—General coolness; shivering on cold days; seemed as if it had cooled off her blood.—Chilliness: in afternoon; in open air; with stiffness of hands.—Shivering: in evening; over back and neck, with warm feet.—Cool skin.—Cold limbs (r. arm; internally in r. forearm; feet, with palpitation).—Heat: in bed; with violently throbbing pulse and heart; in face in flushes.—Orgasms, < chest.—Intolerable heat in head.

Kali Chlorosum.

Javelle Water. Bleaching fluid. (Formula variable, contains Potassium hypochlorate principally, chloride and some carbonate.) Solution.

Clinical.—Aphonia. Asthma. Coryza. Diphtheria.

Characteristics.—The observations with this substance are from poisoning cases. The most notable symptoms were: Watery eyes; pale, puffy face; constriction of throat and of chest. There was much sensitiveness noted: sensitiveness of epigastrium; and especially of larynx and whole anterior portion of neck. This will probably prove an indication in laryngeal affections. Cramps and restlessness were also noted.

Relations.—*Compare:* K. chi., Calc. mur., Chlorum, Nat. hypochlor.

Kali Citricum.

Citrate of Potash. Potassic Citrate. $K_3C_6H_5O_7$. Solution. Trituration.

Clinical.—*Bright's disease*.

Characteristics.—The *Citrate of Potash* has been used in solution (eight to ten grains to a wineglass of water) to assist the action of the kidneys in sufferers from Bright's disease who were under the absolute skim-milk dietary. It has also been used in the same way, in old-school practice, as a solvent for gouty concretions about joints. *K. cit*. has not been proved, but "Agricola" (*H. W*., xxv. 446) has recorded the effect of a large dose given by an allopath to a patient suffering from suppressed kidney action after influenza. In three days the kidneys acted freely, but these new symptoms were set up: Tympanites; constant flow of mucus from anus; awful gastric and abdominal pains, "as if a machine were at work inside, skinning the inside of the stomach and the whole length of the intestinal tube." Flatus was constant and in great amount, producing a pain of its own, which was a prominent feature. This pain as if machinery were at work inside recalls a pain of *Nit. ac*.

Kali Cyanatum.

Kali Cyanidum. Kali Cyanuretum. Cyanide of Potash. Potassic Cyanide. KCN. Solution. Trituration.

Clinical.—Apoplexy. Asthma. *Cancer*. Cheyne-Stokes breathing. Ciliary neuralgia. *Epilepsy*. Headache. Neuralgia. Rheumatism. Speech, lost. *Tongue, cancer of*.

Characteristics.—The *Cyanide of Potash* is much used in photography, and being for this reason an accessible poison, numbers of cases of suicide and attempted suicide by its means have occurred. It is from the symptoms observed in such cases that a great part of the pathogenesis is built up; but it has also been proved by Lembke and others. The apoplectic and epileptic symptoms of *Hydrocy. ac*. were reproduced in the salt, and one very pronounced symptom was *slow breathing*. Loss of consciousness and vision occurred, and as consciousness and vision returned, vision was double. Strong tetanic convulsions. In one poisoning case the fingers were stretched out and spasmodically contracted. In another case, after the failure of all efforts to restore the patient (a photographer) with ether injections and repeated washings out of the stomach, he was placed in a hot bath and ice-cold water was poured over head and nape. Each time water was poured on his head, the patient drew deep inspirations, which gradually grew deeper and more regular till consciousness was restored. He complained of sharp occipital and gastric pains. Convalescence was rapid, but a general muscular weakness and impairment of speech lasted a long time (*C. D. P*.). The chief clinical uses recorded of *K. cy*. have been in epithelioma of the tongue, apoplectic and epileptic conditions, respiratory disorders, rheumatism of the joints, and neuralgias. Cattell recorded in the early volumes of the *Brit. Jour. of Homœopathy* (xi. 348) several remarkable cases of neuralgia cured by *K. cy*. I quote them from Hering's *Guiding Symptoms*: "Agonising attacks of neuralgic pains between temporal regions and ciliary arch and maxilla, with screaming and apparent loss of sensibility, as if struck with apoplexy; pulse 84; face flushed." In this case the concomitants pointed to the drug. "Severe neuralgia in temporal region and left upper jaw, daily at 4 a.m., increasing till 10 and ceasing at 4 p.m.; in the interval, anorexia, fever, headache." The symptoms were < in a room; < immediately after meals (fulness); > by motion in open air. E. T. Adams (*H. R*., iv., 209) treated an inveterate whiskey-drinker, 55, for a swelling on the right side of the tongue, excavated so deeply that the first joint of the thumb could be laid in it. It had been pronounced cancerous. The patient could take no solid nutriment and fluids only with great pain. Under *K. cy*., 1/200 gr. doses, he recovered rapidly, was able to walk, and to eat dry bread and cooked beef with comparative ease. Persuaded by his former attendants to undergo operation, he died nineteen days after. Petroz was the first to give *K. cy*. in cases of this kind. A woman had cancerous ulcer of right side of tongue, involving the root.

With a view of relieving the woman's sufferings Petroz gave her gr. 1/100 of *K. cy*. once in four days. In a fortnight the suffering was diminished, the tongue appeared less thick, and speech easier. In another fortnight the patient's countenance had lost its grey hue and drawn features, and she could eat a crumb of bread. The case went on to complete and permanent cure.

Relations.—*Compare:* Hcy. ac., Amyg., Camph. In periodic ciliary neuralgia, Cedron. Neuralgia gradually increasing and decreasing, Stan., Plat. (also, according to Cooper, Sul.—Sudden onset, gradual decline, Sul. ac.). Fingers spread out, Secal.

SYMPTOMS.

1. Mind.—Disposition gentle.—Crossness almost uncontrollable on entering room; while cold open air produces good spirits.—Inability to recollect certain words (aphasia) for several days.—Lying on floor in a deep stupor.

2. Head.—Intense vertigo, so that all objects seemed to be moving around him.—Head drawn backwards.—He was unable to tolerate any covering on head, whether in the cold or warmth, because it caused the frightful headache, for months after the attack.—Gnawing pain across temple.—Sharp pains in occiput.—Soreness of scalp over parietal regions.

3. Eyes.—Eyes fixed.—Eyelids began to open and shut alternately, eyeballs stared in different directions (after a few seconds).—Eyes closed, but on raising lids the balls were seen to be in uninterrupted convulsive motion.—Swelling of upper lids.—Pupils largely distended, and insensible to light.—Obscuration of vision, so that it was with difficulty that he distinguished the features of those near him.—Loss of sight; as sight returned there was double vision.

4. Ears.—Rushing in ears.

5. Nose.—Blew pure blood from nose about 10 a.m.; inside of nose feeling parched, hot, and dry; blood drying in nose very quickly.

6. Face.—Pallor.—Face livid and bloated.—Turned blue in the face.—Torturing neuralgic pains in orbital and supra-maxillary region, recurring darts at same hour with much flushing of that side of face.—Twitching of face.—Lips white (almost immediately).—A reddish froth covered mouth and nose.—There was noticed slight twitching of mouth when patient was spoken to in a loud tone, as though sense of hearing were awakened, though stupor still continued.—Some difficulty in using lower jaw in act of speaking.—Patient lay in a frightful tetanic cramp, jaws so tightly closed that it was impossible to open them: eyes drawn completely back into orbits, face distorted, nose pointed, mouth drawn outward, pulse imperceptible, and hands frequently attacked with muscular twitches.

8. Mouth.—Lips and mucous membrane of mouth pale.—Slight frothing at the mouth.—A peculiar astringent taste in mouth, as of alum or green vitriol.—(Cancerous ulceration of r. side of tongue).—Tongue has peculiar darkish ground seen through heavy white coating.—Power of speech lost, but intelligence preserved.—Impediment of speech lasted a long time.

9. Throat.—Astringent sensation in throat with nausea, lasting till after midnight.—Feeling of constriction about fauces, with muscular tremors about throat; for one or two days afterwards complained of great stiffness about throat.—Patient was able to swallow as soon as a large amount of fluid filled the pharynx; after every swallow the whole body was seized with convulsive tremors and flushes of redness overspreading face.—Had no sensation of act of swallowing.

11. Stomach.—Copious vomiting; followed by return of consciousness.—Sharp gastric pains.—Pain at epigastrium of a griping, intermittent character.—Epigastrium prominent, almost immediately.—Severe burning in stomach.—Great sensitiveness of epigastric region.

12. Abdomen.—A feeling as if bowels were about to act.—Pains in abdomen; in groins, in afternoon.

13. Stool.—Fæces came away involuntarily.—Bowels obstinately constipated.

14. Urinary Organs.—Bladder distended by a large amount of urine, which had to be evacuated by a catheter.—Urine came away involuntarily.

17. Respiratory Organs.—Voice hoarse after the attack.—Loud mucous rattle.—Respiration superficial.—Slow and difficult breathing.—Respiration became very slow, only seven to the minute; expiratory act prolonged; intervals between respirations remarkably long.—Respiration nearly suspended, but thorax convulsively raised, at irregular intervals, far apart.

18. Chest.—Anxious feeling in chest, soon (second day).—Oppression.

19. Heart.—Stitches in heart and lungs.—Jerking stitches in heart on respiration.—Palpitation of heart.—Pulse at times fifteen beats slower than usual.

20. Neck and Back.—Vague pain in nucha.—Very marked weakness in lumbar regions, with dull pain and weakness of r. and l. iliac region, while walking and during afternoon.

21. Limbs.—Limbs rigid and convulsed.—Tetanic spasms of muscles of arms and legs.—Limbs flaccid, with occasional slight general convulsions more like a shuddering than anything else.

22. Upper Limbs.—Fingers stretched out and spasmodically contracted.

23. Lower Limbs.—Gait seemed unsteady.

24. Generalities.—General convulsions.—Sudden convulsive action of whole body, about ten minutes after heart ceased to beat.—Sphincters rigidly contracted.—Took some weak milk punch, and smoked in afternoon; after which all symptoms vanished, and the effect of the medicine seems to have been cut short by this slight irregularity.

26. Sleep.—Sleepiness during day.—Restless, dreamful sleep all night; could not lie on one side for any length of time.—Dreams very lively, esp. towards morning.—During whole night, dreams horrid and exciting; then waking up partially, and feeling tired of lying on that side, as after great fatigue; turning on other side, another dream, waking, and turning again, and so on till morning.

27. Fever.—Surface of whole body cold and moist.—Shiverings.—Coldness of extremities, which were pendulous and without muscular power.—Extremities icy cold (almost immediately).—On awaking from *cat-naps* has a chill, which, in fact, wakes him before he can get soundly asleep; followed by a very slight sweat.—Awoke about 6 a.m., with heat and disagreeable feverish perspiration over whole body, except legs below the knees, with flushed face.—Hands and face covered with cold perspiration.

Kali Ferrocyanatum.

Kali ferrocyanidum, Kali ferrocyanuratum, Yellow Prussiate of Potash, Potassic Ferrocyanide. $K_4Fe(CN)_6$ 3H2O. Trituration. Solution.

Clinical.—Chlorosis. Debility. Dysmenorrhœa. Dyspepsia. Heart, fatty degeneration of. Leucorrhœa. Menorrhagia. Rheumatism.

Characteristics.—The *Ferrocyanide of Potash* is prepared "by fusing animal substances such as the cuttings of horns, hoofs, and skins with *Carbonate of Potash* in an iron pot, lixiviating the crude product with water, and purifying the salt with crystallisation" (Brunton). In the old school the only uses made of this salt are as a test, and in the preparation of *Hcy. ac*. Thanks to a proving made under the guidance of J. B. Bell, homœopaths have found in it a remedy rivalling *Sepia* in the uterine sphere, and *Kali c*. in its action on the heart. The *Kali* element seems the predominating power in this salt. The bearing-down sensation and the gastric sinking are prominent indications. Menses too frequent and too profuse. Passive uterine hæmorrhages. There is a periodicity in the complaints of *K. fcy*. Debility, tremors, numbness, hæmorrhages, chlorosis, wandering neuralgic pains are among its general effects. W. G. Dietz reports (*Amer. Hom*., xxiii. 58, quoting *N. A. J. H*.) this case: Mrs. H., 23, mother of three children, small, anæmic, weak. Four years

ill with "incurable heart disease," as she had been told. Symptoms: Much distress in heart region. Frequent attacks of pain, a severe ache with occasional sharp plunges; generally < by moving about, exertion, and > by rest; occasionally the conditions are reversed. Palpitation generally accompanies the paroxysms, but may occur independently. Mentally depressed, knows she has heart disease and is going to die." Appetite fitful bowels inclined to be constipated. Urine pale, 1,014, passed frequently. No abnormal constituents. Chilly, hands and feet cold. No organic disease of heart discovered. Has taken quantities of patent medicines. *K. fcy*. 1x three times a day, improved in two weeks and cured in four months.—The symptoms are < on rising; on awaking; in the morning; on moving; on walking. > In afternoon. Touch <; patients very sensitive to touch.

Relations.—*Compare:* Sep. (bearing-down pus-like leucorrhœa, profuse, unirritating; sadness even to tears sinking sensation; passive uterine hæmorrhage with consequent debility); K. ca. (gastric sinking connected with weakened heart; heart-beats diminished in number and force with consequent coldness, sinking, vertigo, tremors); K. cy. (periodic neuralgia); Stann. (sun-headaches) Fer. and K. ca. (chlorosis); Digit. (heart-poison; slow pulse) K. ca., K. chl. (sensitiveness to touch); Collins.; Hcy. ac.

SYMPTOMS.

1. Mind.—Sad; tearful; thinks he will soon die and leave his friends.—Irritable, easily vexed.

2. Head.—Vertigo, coldness, numbness, with sensation of gastric sinking, sometimes universal tremors as in ague fit.—Periodic neuralgia following the sun.

5. Nose.—Much sneezing during pressure and mucous discharge.

8. Mouth.—Ptyalism, with redness, swelling, and tenderness of gums, and aphthæ of mouth and fauces.

9. Throat.—Throat sore and dry on waking, but soon after expectoration came on with >.—On waking, sensation as if fauces raw and tonsils swollen.

11. Stomach.—Sinking.—Slight nausea when dressing.—Acidity; sour eructations; flatulence, sour or tasting of ingesta; pressure at stomach after eating accompanying symptoms of uterus.

15. Male Sexual Organs.—Too early emissions and little pleasure.—Nocturnal emission with indistinct amorous dreams.

16. Female Sexual Organs.—Menses: too frequent and too profuse; late; metrorrhagia.—Passive painless flow, natural colour, thin, causing much

debility.—Leucorrhœa: like pus, yellowish, creamy, profuse, unirritating; only after menses, usually by day; with pain in small of back.—Sensitiveness of hypogastrium to pressure, womb tender (during pregnancy).

19. Heart.—(Fatty heart with weak, irregular pulse.).—Heart's action weakened and slowed.—(Hypertrophy with dilatation.—Functional heart disorders with anæmia.)

24. Generalities.—Debility; pale lips, gums, and skin; cold hands and feet; frequent profuse watery urine, sometimes with traces of clotted blood; wandering neuralgic pains; periodic neuralgia of head following sun.

Kali Iodatum.

Potassium Iodide. Kali hydriodicum. KI. Solution. Trituration.

Clinical.—Actinomycosis. *Aneurism. Anhidrosis*. Bright's disease. *Bubo. Bunions. Cancer*. Caries. *Cold*. Condylomata. Consumption. Cough. Croup. Debility. Dropsy. Ears, otalgia; tinnitus. Emaciation. Erythema nodosum. *Eyes, affections of*; cysts on lids of. *Fibroma. Glandular swellings*. Gonorrhśa. Gout. *Gumma*. Hćmorrhages. Hay fever. *Housemaid's knee*. Influenza. Intra-menstrual hćmorrhage. *Joints, affections of. Laryngitis. Liver, diseases of. Locomotor ataxy*. Lumbago. Lungs, hepatisation of; śdema of. Menstruation, disorders of. *Neuralgia. Nodes*. Noises in ears. Nystagmus. *Odour of body, abnormal*. Śdema glottidis. *Pancreatitis*. *Paralysis*. Pleurisy. *Prostate, affections of*. *Rheumatism*. Rickets. *Rupia*. Sciatica. Scrofula. Small-pox. Spine, Pott's curvature of. Spleen. *Syphilis*. Tic-douloureux. Tongue, neuralgia of. Tumours. *Ulcers*. Wens.

Characteristics.—*Kali iod*. is one of the few medicines on whose definite action reliance can be placed in ordinary practice. In active secondary syphilis, in ulcers of the constitutional type, and in cases of subacute rheumatism, *Iodide of Potassium* will generally do what is expected of it. That its action is specific is generally admitted; and *specific* is the same thing as *homśopathic*. I rarely find occasion to use it in lower attenuations than the 30th. The history of the drug in relation to syphilis is both interesting and important. As we should naturally expect, *K. iod*., being anti-syphilitic, is also antidotal to mercury. Experience seems to show that it is those patients who are charged with the disease or with mercury, or both together, who can support the massive doses of *K. iod*. which are sometimes given. But the salt is often given as a diagnostic, and then, if care is not taken, there is great danger to the patient. I have seen patients irretrievably reduced in strength by *K. iod*. given on the supposition that they were syphilitic. I have recorded in my *Diseases of the Heart* (p. 165) the case of a gentleman, 74, who had a psoriasis-like skin affection for which he consulted a homśopath. His health remained excellent, but his skin did not get well, and he consulted a well-known

skin and syphilis specialist, who at once pronounced it to be syphilitic, though the patient denied that he had ever had the disease. Massive doses of *K. iod*. were given, and the skin disease disappeared in a fortnight. But the patient was practically killed. He cried like a child without knowing why. He lost over a stone in weight. He could eat very little, and everything Caused distress and a full sensation. Palpitation came on at all times, and kept him awake at night. The pulse was a mere flicker in the attacks, and was irregular, intermittent, or very frequent in the intervals between. It was in this state that he came to me, but the powers of reaction were destroyed, and nothing that I gave made any impression. He left London, and died very shortly afterwards. Here is another case of *K. iod*. poisoning, when unbalanced by antidotal drugs or disease. It is related by Jonathan Hutchinson. The patient, a man of 26, had been treated with 5-grain doses of *K. iod*. at a hospital for a swelling in the groin which was diagnosed as syphilis. There was no skin eruption at that time, but shortly one did appear, and was thought to confirm the diagnosis. The dose was increased to 10 grains at the end of the week, ten days later to 15 grains, and still later to 20 grains. This was kept up from July 23rd to October 9th. Mercury was then substituted, but this made no change, and the patient, who was getting worse the whole time, died of exhaustion in a fortnight. The last part of the time he was in the London Hospital, to which he had been removed, and it was there found, on careful inquiry, that no evidence of syphilis existed. This was his condition when he arrived in the London Hospital a few days before his death: There was a generalised skin eruption, consisting of swellings varying in size from small papules to enormous tuberous masses, some of the latter being ulcerated. The swellings attained the greatest size on face, legs, and upper chest. A coloured plate illustrating the case was published, showing the tumours to be dark purplish red in colour. The antidotal action of syphilis to *K. iod*. is further borne out by the observation of Fournier (*Allen's Encyclop*., Appendix), who noted the occurrence of purpura in patients under its influence. But it only occurred in an intense form in persons who had no signs of syphilis, and to whom it was given "only as a preventive." But the anti-syphilitic relation of *K. iod*. only takes in a small part of its power as it is known to homśopaths. Though it has not been extensively proved, the recorded and attested effects of over-dosing are numerous enough. P. Jousset (*L'Art Médical*, October, 1899, 241) has referred to Rilliet's experiments with the drug on the healthy. He experimented on twenty-eight persons, mixing their table-salt with one ten-thousandth part of *K. iod*., so that in two years each would have taken 40 centigrammes. Here is one of the cases: A man, 45, of very strong constitution, never had any illness. At the end of seven months he began to waste; had palpitation; became sad and melancholy; had fixed ideas, weakness, indefinable malaise in the lower abdomen with constipation. The iodised salt was accidentally suspended during January and February, and he completely recovered. Returning home in the month of August, he commenced the salt again, and the same symptoms returned with much more intensity than before: notable and progressive wasting with voracious appetite; trembling; palpitations; fixed look; yellow complexion; above all the moral disturbances were very

pronounced agitated even to tears; irritability; disgust and discouragement agitated sleep. It took two months for him to recover this time. The record says that the man's health was again "completely restored"; but this is not quite correct. After the first poisoning, although complete health was apparently regained, there was left an extreme susceptibility to the drug's action, so that a much shorter period of poisoning was required to reproduce the symptoms in a greatly aggravated degree. And two years after this, although health was apparently perfectly restored, a visit of twenty-one days to the seaside nearly cost the man his life. The same symptoms reappeared. He was reduced to a skeleton, the appetite being all the time exaggerated. In walking he was almost bent double, trembling and out of breath at the slightest movement. Pulse weak and very frequent. Finally he was compelled to keep his bed, and had great difficulty in reaching his home in Geneva. There he promptly got better. But in spite of the apparent recovery a very profound change in the organism had occurred; and from this experience "< at the seaside" must be numbered among the conditions of *K. iod*. Two others, both women of sixty, had the same symptoms as this man, one at the end of two months, the other at the end of four. On the rest of the twenty-eight experimented upon no symptoms were observed. Joussett quotes from the same authority experiences with the same salt in the treatment of goître. A man of fifty had a round, indolent, non-fluctuating goître on the right side of the neck, the size of an orange, of very slow growth. He took every morning, fasting, a spoonful of water containing one gramme (15 1/2 grains) of *K. iod*. From the first day of the treatment he felt an indefinable anguish. The sixteenth day there was increased malaise and considerable wasting, and the patient threw his potion into the lake. Two days later his doctor found all the grave symptoms of the poisoning; *but the goître was three parts gone*. The patient was sent to the country and was ill all the summer, but completely recovered in the winter, *the goître having returned to its original size*. This experience was repeated on three other patients; but a goîtrous dog was more fortunate. Two centigrammes (gr. 1/6) was sufficient to produce all the symptoms in him, and his goître disappeared and did not return when he recovered from the poisoning. In this connection may be mentioned the power of the salt over tumours of other kinds. Enlarged lymphatic glands, syphilitic nodes, condylomata, and tumours of the breast and uterus have been removed by it. This has occurred under the action of the crude salt for the most part; and the general explanation is that the solvent action of the drug is most powerfully excited on the more lowly organised new tissues. But this would not apply to all cases. We have seen in Hutchinson's case that *K. iod*. can produce tumours as well as remove them; but Jules Gaudy has put on record another experience (*Journ. Belge d'Homśop*., vi. 57). Several cases of abdominal tumour were successfully treated by him with *K. iod*. in 3x, 10 and 15 centesimal triturations. Two of these had been unsuccessfully treated with the crude salt before coming under his care. This they could not tolerate on account of loss of appetite and irritation of the mucous membrane of mouth and throat. One of these patients had a large tumour on the level of the great curvature of the stomach extending on both sides, plunging into the abdominal cavity and extending into the

pelvis; it was adherent and difficult to define. She had a jaundiced, dirty-looking skin, and loss of appetite, and mostly vomited her food. A suspicion of latent syphilis led Gaudy to the remedy, which was perfectly tolerated in attenuation, though not in the crude. Health rapidly improved, and in three months there was hardly any tumour to be discovered. The remains of it evidently depended from the epiploon. The second case was very similar in nature to this. Cooper reports this case: "Womb packed with fibroids, pain in right inguinal region on exertion, spirits depressed, tinnitus like buzzing of flies, constant tired, sleepy feeling down the limbs, hot burning feet, though sometimes intense shivering all over, pains in the breasts, which are tender, unable to go long without food, constant distension as from flatus, sinking at scrobiculus cordis at 11 a.m., sleep dreamy; all these symptoms moved away under *K. iod*. 30, leaving the patient in absolute comfort." Cooper adds this note: "There is much resemblance between the actions of *K. iod*. and of *Sul*. in their 30th dilutions. After bronchitis, pneumonia, erysipelas, and other inflammatory affections, *K. iod*., in 30th and also in cruder forms, acts like magic, apparently from the removal of the effete products left in the tissues.".—*K. iod*. has also been proved in the regular way, but not so extensively as some other *Kali* salts. It acts on the tissues much in the same way as syphilis does—dissolving them—glands atrophy, tissues, especially connective tissues and ligaments, inflame and ulcerate. The periosteum and bones are attacked and nodes appear. But *K. iod*. is perhaps more anti-scrofulous than anti-syphilitic. It acts best in scrofulous patients, especially if syphilis or mercurialisation or both are superadded. It also causes infiltration, śdema and dropsy of various kinds. The blood is acted upon, hćmorrhage occurs, and purpura hćmorrhagica. A grand indication for *K. iod*., as pointed out by Cooper, is a "diffused sensitiveness" over parts affected. This appears in the provings: "The scalp is painful on scratching, as if ulcerated (after eleven days)." This is from Hartlaub and Trinks. "Swelling of the whole thyroid gland, increasing very rapidly, *with some sensitiveness to touch and pressure*." It has removed sensitive syphilitic nodes. I have often verified this indication. In all neuralgic or inflammatory conditions where there is heightened and diffused sensitiveness of the affected part, *K. iod*. must be considered. I cured with *K. iod*. 30, in a middle-aged man, neuralgia occurring daily over the left eye; in addition to this he complained that his *head was very sore*. He had also Sore gums and a cough, and was > lying down. There was no syphilis in this case. Farrington mentions "Headache of the external head, hard lumps like nodes on the scalp which pain excessively." This may be either syphilitic, mercurial, or rheumatic. Cooper cured with *K. iod*. 30 a case of rheumatic gout in a lady; every joint affected; unable to sleep for weeks on account of the pain. The keynote indication was: "After fatigue, hepatic region becomes tender." He commends it in affections of the spleen with diffused sensitiveness of spleen region and dropsy. *K. iod*. also corresponds to serous effusion on the brain secondary to hepatisation of the lungs. The action of *K. iod*. in the respiratory sphere is very important. The coryza of *K. iod*. is well known, and constitutes for the old school the only generally recognised indication of "Iodism," as it is called, with supreme disregard

of the *Kali* element. The discharge is acrid, watery; the eyes smart and are puffed, there is lachrymation. (This action on the eyes may develop into iritis, keratitis, and chemosis.) The coryza recurs repeatedly from every little cold, and makes the nose red and swollen. The discharge may become thick, green, offensive; ozćna and perforation of the bones may occur. The voice becomes nasal, hoarse, or is lost. "Awakened especially 5 a.m., with dry throat, oppression, loss of voice, glands swollen," as in croup and śdema glottidis. *K. iod*. corresponds to many cases of phthisis, laryngeal and pulmonary. A characteristic is: Stitches through the lungs; in middle of sternum; through sternum to back or deep in chest while walking. "Deep, hollow, hoarse cough with pain through breast." The characteristic expectoration is greenish, copious, and *looks like soapsuds*. Hering speaks of *K. iod*. as having been curative in pneumonia and Bright's disease. Lutz (quoted *H. W*., xxviii. 175) remarks on the frequency (from atmospheric causes) of bronchial asthma among both whites and natives in the Sandwich Islands, the symptoms being those of a suffocating capillary bronchitis with defective expiration, *K. iod*. (crude) giving speedy relief. "The initial, pronounced, and unmistakable symptoms of *K. iod*. are: coryza, sneezing and bronchitis; and from these spread out an expanse of symptoms such as might be expected from so usual a starting-point of disease" (Cooper). K. iod. has been commended as a protective against foot-and-mouth disease in cattle (*B. M. J*., June 26, 1895). The heart is profoundly affected, as we have seen above. "Fluttering on awaking; must get up, fearing otherwise he will smother." It is a favourite remedy for aneurism among old-school practitioners, but there is no need to imitate their massive doses; its action is evidently specific. Walking greatly < all heart symptoms. It is suited to many cases of rheumatic heart, as well as other rheumatic conditions. The digestive tract is no less disordered than other mucous membranes. There is a terrible pain at the root of the tongue which is characteristic. There is loss of appetite and indigestion with flatulence and bloating almost as intense as that in *Lycopod*. Cold much < all these symptoms. The rectum and genito-urinary tract have many symptoms. I cured with it a case of spasm of the rectum with a little pain in the urethra coming on after coitus. *Psorinum* and *Sulphur* had given partial relief before. This < after coitus relates *K. iod*. to the other *Kalis*—*Caust., K. bich*., and *K. carb*. Eruptions of many kinds appear, scrofulous and syphilitic in appearance. There is a papular and pustular eruption, especially on scalp and down back, the pustules leaving scars when they heal. Among the *peculiar sensations* of *K. iod*. are: As though head was enlarged; as if it were screwed in; as if a large quantity of water were forced into brain; as if it would be forced asunder; as if a leaflet were at root of nose. As if a worm was crawling at root of nose. Back as if in a vice. As of a tumour in ovaries. In chest as if cut to pieces. In coccyx as if bruised. Cooper has cured with it many cases of noises in the ears, giving a single dose of 30 or higher and allowing it to work. The chief time Condition of *K. iod*. is in the main the same as those of the other great anti-syphilitics—*Syph., Aur., Merc*., and of the disease itself, < at night, from sunset to sunrise. This applies to its rheumatic and other affections. The sciatica of *K. iod*. is < at night, < lying on painful side, > in open air. The chest

symptoms, like those of *K. ca*., may be < in early morning 2 to 5 a.m. Headache < 5 a.m. (also headache < after a night's rest). Loose stools also occur at that time (*K. bi*.). Like *Merc., K. iod*. has great sensitiveness to atmospheric changes: Every little exposure every damp day will set up the symptoms. At the same time there is the > in open air of *Iod*., &c.: "Irresistible desire for the open air; walking in open air does not fatigue." The chill of intermittent fever is not > by warmth; but warmth > many symptoms of teeth and scalp. In general, however, there is aversion to heat. Heat < headache. Motion <, especially walking; after the first movement, in the lower limbs it is more bearable. Sitting hurts, and flexing limbs > some of the pains. < From touch is a very marked feature of *K. iod*.; this is part of the "diffused sensitiveness" noted by Cooper. All symptoms < by drinking cold milk. "*K. iod*. is a remedy that has a great number of keynotes. It seems to meet all temperaments, and while suitable for pale, delicate subjects, is also required for those who flush easily and are manifestly plethoric. A diffused arterial vasculosis is met by it, but it is also called for in venous states. Its characteristic tinnitus aurium is certainly the sharp, shrill, hissing and piercing noises, but it also relieves the throbbing, pulsative noises, especially when the heart is hypertrophied and inclined to fatty degeneration. Diversity of lesion, diversity of aggravation, and prolixity of symptoms without any one feature being in prominence, calls for it: a moderate amount of catarrh of one or more of the orifices of the body, with tendency to flatulent distensions, depression, used up feelings, inability to think, are characteristic. But perhaps the most satisfactory action of *K. iod*., in the 30th, is in rickets (and rickety conditions) along with its many attendant symptoms. When children cannot bear to be touched, cannot ride in jolting conveyances, have big heads and emaciated limbs, big teeth and small jaws, and when they incline to frequency of urination and of defćcation, *K. iod*. 30 will work wonders. In child-life *K. iod*. acts at once if indicated and completely clears away the symptoms: in adult-life it may often have to be reverted to during the treatment of very obstinate forms of disease. While this is true in a broad sense, it is also true that there is no known prescription that gives a better chance of removal of that very obstinate symptom tinnitus aurium than a single dose of *K. iod*. 30 allowed to act. This must not be taken as justification for careless selection of the remedy in cases marked by contra-indicating features" (Cooper).

Relations.—*Antidoted by:* Hepar. [Also Nit. ac. I have found in many instances Nit. ac. 12 or 30 give vast relief to syphilitics who had been saturated with K. iod. under old-school treatment, and were getting worse under it. This includes cases of iritis. Burnett mentioned to me a case of actinomycosis affecting the anal region cured by him with Nit. ac. 3x. The patient had been under leading old-school doctors, among whom massive doses of K. iod. is the general treatment of this disease.] Arg. n. relieved "fulness and indigestion after each dose" caused by K. iod. in a patient to whom I had given it. *Antidote to:* Merc., Lead-poisoning. *Follows well:* Merc. *Followed well by:* Nit. ac. *Compare:* Iod. (goître; heart affections; < from warmth; phthisis); Caust. (< by touch; syphilis); K. carb. (< from coitus; < 2-4 a.m.; extreme sensitiveness); Lach. (smothering sensation on

waking; extreme sensitiveness;—the K. iod. headache is much more violent than that of Lach. and has hard lumps on scalp; K. iod. = Infiltration of bones as well as soft tissues, Lach. only of the latter); Merc. (syphilis, catarrh, sensitiveness to weather; stitching pains through lungs—Merc. in different directions; K. iod. through sternum to back); Pso. and Gels. (hay fever; Gels. has more sneezing); Eriodict.—"Yerba Santa "-(catarrhal phthisis) Ant. t. (threatened paralysis of lungs); Arsen. (catarrhal symptoms wasting; restlessness); Bell. (brain congestion); Apis (dropsy; < by heat); Lyc. (flatulent distension); Mez., Pul., Sil., Sul.; Act. r., Chi., Nat. sul., and Carb. sul. (noises in the ears).

Causation.—Drinking cold milk.

SYMPTOMS.

1. Mind.—Half mad all night.—Talkative and full of jokes.—Sadness.—Anxiety.—Fright at every trifle; every little noise starting.—Apprehensive and lachrymose in evening.—Irritable; irascible, esp. towards his children; and excited, quarrelsome.—Weeping from slightest cause.—Sadness.—Anxiety.—Dreads the return of dawn, and the trivial details of life seem insupportable.—Always troubled.—Troublesome and unreasonable impressions easily strengthened into fixed ideas.—Loss of memory; cannot find words at the moment wanted; cannot write his reports; cannot play music; formication in hands, marked weakness of lower limbs.—Intellectual weakness and paroxysms of dementia, accompanied by headache.

2. Head.—Intoxicated feeling.—Vertigo.—Vertigo in the dark, < railway travelling.—Headache; at 5 a.m.; inability to find a resting-place for head, > rising, with heaviness of it.—Heaviness; on stooping; after dinner, making her fretful; and dulness.—Congestion.—Feeling as if much water were being forced into brain; as if head being distended.—Violent, compressive or expansive headaches, with sensation of coldness in part affected, which is hot notwithstanding.—Forehead: stitches on stooping; tearing or jerking stitches in l. sinus; tearing in r. side in evening, transiently > by pressure, with sticking; digging in l. side; aching; aching in sinuses and r. ethmoid cells.—Digging or throbbing in one side of forehead only.—Heaviness in sinciput and vertex, evening and night, with sensitiveness to touch.—Temples: sticking in l. at 6 p.m., with tearing; heaviness in r.; painful throbbing in l. in evening.—Vertex: stitches in front of in evening; pinching here and there; pain as if it would be forced asunder, > external warmth but often returning, with external heat in vertex, but general chilliness; tension, with sticking in it and with tearing in l. temple extending into nape.—Screwing together from both sides in morning, > open air.—Occiput: pain, heaviness towards evening; tension in bones, with stitches.—Pain in scalp on scratching, as if ulcerated.—Hard lumps on skull with headache.—Hair changes colour and falls out.

3. Eyes.—Eyes surrounded by dark rings; and sunken; ferrety in morning.—Cellular tissue about eyes śdematous.—Protruding eyes.—Discharge of purulent mucus in morning.—Constant oscillation, inability to fix them, pupils dilated.—Tearings beneath l. eye.—Pain waking him, with lachrymation and burning in nose and throat.—Biting in r. eye, > scratching recurring in evening.—Burning in afternoon; in evening, with purulent mucus; with redness of lids and with lachrymation of r. eye.—Uneasy feeling in l. eye in morning and on waking, external edge of periosteum of orbit tender on pressure, l. eye similarly affected, next day a peculiar pain in a direct line from external border of one orbit to that of the other.—Lachrymation; (of r. eye).—Balls painful on movement.—Balls felt as if in a rubber covering, which kept up a constant contraction.—Lids: swelling of; swelling of upper and tarsal regions, which were bluish red; tarsal cysts.—Cutting in r. external canthus in evening; burning, with photophobia, evening.—Conjunctivć injected; chemosis.—Orbital margins: gnawing on r. lower; painful drawing in r. upper.—Sensitiveness to light and vision obscured by undulations.—Vision: dim; double; disturbed; dim with ringing in both ears.

4. Ears.—Sticking: in r. ear during day; in l. in evening in bed, extending into head; extending into l. ear.—Tearing: now in r., now in. l.; deep in r. in forenoon; in r. in evening, making it sensitive; in front of l., extending into temple, in bones; in front of r., extending into temple making whole side painful.—Otalgia, with great sensitiveness of ear.—Piercing pain, < r.—Gnawing within and behind l.—Boring pain in r. ear.—Indescribable pain extending outward from l. ear in evening, and if she moves hand towards ear, even without touching it, it creeps over side of face, as if mesmerised.—Feeling as if something had fallen in front of ears; with tearing.—Itching in l. ear.—Cracking in r. on attempting to swallow.—Ringing; and buzzing.—Sounds as of a river sweeping by; as of rain on roof; like cutting stones; grating, cracking noise, membrane sensitive.—Hearing almost gone.

5. Nose.—Tearing in upper part of l. nostril.—Burning: in nostrils; in upper part, with feeling as if a leaf were in front of it; and in throat.—Stoppage (in morning), with running of clear water; corrosive, burning.—Tingling prickling, with violent paroxysmal sneezing, alternately r. and l. nostril occluded, heat in nasal sinuses, acrid discharge from anterior nares.—Sneezing and running of clear water.—Ineffectual efforts at sneezing.—Coryza: with redness of eyes, nose, throat, and palate, with lachrymation, violent sneezing, running of water, frequent irritation to cough and swelling of upper lids; laryngitis.—Running from nose; of burning water, making the skin sore; a stream of hot fluid, waking at 3 a.m., with salivation at 7 a.m.—Discharge of thick yellow mucus.—Violent bleeding.—Loss of smell.—Great sensibility of nostrils.—From the least cold, redness of nose; ears; face; white-coated tongue, nasal voice, violent thirst, alternate heat and chilliness, dark hot urine, headache, and great soreness and tenderness of nose (in persons who have previously taken much mercury).—Fulness in nose.

6. Face.—Face yellow; more yellowish green than dead white.—Swelling of l. cheek.—Distension of cheeks and submaxillary spaces, with stiffness.—Look earnest, wild, uncertain; excited, sometimes depressed; sad.—Sticking in l. cheek, with jerking, then sensitiveness.—Tearing in l. zygoma in morning when lying on it, with sticking.—Malar bones sensitive to touch.—Lost the power of moving cheeks and lips and unable to masticate.—Jaws: stitches from l. upper to parietal bone in morning in bed; tearing in l. lower and in corresponding teeth; tearing in both sides of lower as if it would be torn out; gnawing in both sides of lower; excruciating pain in shocks like neuralgia, and in teeth; stiffness; stiffness and uneasiness; immobility.—Lips dry, cracked, and coated; full of glutinous mucus in morning after waking.—Painful drawing in r. side of upper lips and in gum.—Sensitiveness of upper lip and of nostril, even when not touched.

7. Teeth.—Jerking or shooting in r. eye-tooth, < lying down till midnight and from 4 to 5 a.m., < cold, > warmth, at one time pain as if the tooth would break, or as if a worm were digging in it.—Tearing in l. upper teeth.—Tearing in r. upper molars and in margin of r. orbit.—Tearing in lower teeth in evening and feeling as if a weight hung from lower jaw.—Throbbing in a hollow tooth when walking in open air.—Grumbling in a hollow l. lower molar.—Teeth feel too long in evening and are painful.—Gum swollen and painful.—Swelling about a hollow tooth.—Ulcerative (shooting) pain in r. lower gums.—Pain as from ulceration in teeth at night.

8. Mouth.—Tongue: blister on tip of tongue with burning pain; hypertrophied, tender, covered with nodes and fissured by deep cracks; coated white.—Spasmodic pain at root of tongue at night before sleep, extending to both sides of throat, causing fear of impending death, with sensation as if a spasm would close the pharynx.—Tongue dry in morning and stiff, coated dark brown.—Burning in a spot (also sore pain) on l. margin of tongue.—Speech thick and indistinct.—Hard and soft palate swollen, tender, and in many places excoriated, afterwards palate painful and felt as if the tissues were stretched laterally across posterior part of soft palate and root of tongue, pharynx and larynx dry, causing hoarseness, afterwards the secretions from mouth, nose, and eyes very acrid.—Mouth dry; during chill in evening, with thirst.—Mouth and throat dry and bitter.—Burning in mouth as after hot food.—Mouth numb in morning after waking.—Salivation; with nausea.—Flow of mucus and saliva from mouth.—Bloody saliva with disgusting taste. Offensive odour; in morning after rising, almost as after onions.—Taste:
bitter, < throat, > breakfast; sweetish-bitter after waking; rancid after eating and drinking (after all kinds of food or drink); after taste of food; lost or like straw.

9. Throat.—Swelling of thyroid gland (goître) with sensitiveness to touch and pressure.—Swelling and suppuration of submaxillary glands.—Choking as if something stuck in throat, > hawking up a piece of thick mucus.—Sticking in l. side only on swallowing, < evening, with ulcerative pain.—Constriction.—Rawness and scraping.—Dryness and itching with burning at epigastrium, salivation, and coryza.—Swallowing painful and difficult, with redness and swelling of soft palate

and tonsils (< r.).—Burning and uneasiness in śsophagus and stomach.—Increased secretion of mucus in throat.

10. Appetite.—Great bitterness in mouth and throat going off after breakfast.—Bulimy.—Appetite increased, next day diminishing or disappearing; lost.—Aversion to all food to broth.—Thirst; evenings.

11. Stomach.—Eructations: of air in quantities; empty, hiccough-like.—Hiccough in evening.—Nausea: with pressure in stomach; with emptiness, not > eating.—Vomiting; and purging at same time.—Violent vomiting with salivation.—Pain in stomach; intermittent; like an emptiness and coldness in evening, not > by soup.—Painful beating in l. side of epigastric region in evening.—Burning pressure in stomach, which is not > by risings.—Burning in epigastrium; during digestion; > eructation, but immediately returning, with pressure; with acute pain.—Constant inclination to water-brash without its really occurring.—Heaviness; discomfort; faintness; indigestion.—Clucking, a kind of crying, and borborygmi in stomach.—Rumbling and shrill noises in stomach.—Inflammation of stomach and intestinal canal.

12. Abdomen.—Hypochondria: sticking in l. hypochondrium; in r. and in l. side of chest on talking; constriction in l. on a line with cardiac orifice of stomach; burning externally in l.; then in both groins.—Sudden distension as if abdomen would burst, > by emission of flatus, in morning after waking, then diarrhśa twice.—Movings and rumblings; rumbling as if something alive were moving in abdomen; then tension in groins.—Emission of flatus.—Tearing from both sides as if flesh would be torn off in afternoon, extending towards umbilicus.—Cutting and burning round the umbilicus.—Painful distension beneath umbilicus, > stool.—Sticking at I side.—Cutting in r. side; cutting in attacks in afternoon, with burning and nausea, inclination to eructations, which afterwards occur, itching externally about umbilicus and inclination to emission of flatus.—Griping and burning.—Griping, as by a claw, and in groins, with bearing down as if something would come out at pudenda.—Cutting burning pain, always > open air, always returning on entering house.—Pain; then hard, then soft stool; in abdomen and stomach, > evening after lying down, returning in morning on waking.—Indescribable uneasiness, < night.—Bruised pain in groins and small of back during menstruation.—Drawing in l. groin with feeling as if something living were in it.—Heat during menstruation; sudden heat in l. groin.

13. Stool.—Discharges of serous mucus from rectum.—Diarrhśa; with pain in lumbar region, as if broken, or as if menses would appear.—Constipation.—A few small fćces, hard, tenacious lumps, difficult to evacuate.

14. Urinary Organs.—Bladder irritable.—Painful urging.—Urgent want to make water, with copious emission day and night.—Frequent micturition of copious urine as clear as water; < night.—Nocturnal and diurnal enuresis of childhood.—Uric acid

sediments disappeared gradually; while those of ammonio-phosphate of magnesia increased.—Urea decreased.

15. Male Sexual Organs.—Atrophy of testicles; r. disappeared, the l. of the size of an almond.—Penis swollen and inflamed, with constant semi-erection and desire.—Extensive swelling of glans with paraphimosis.—Chancre-like ulcers with raised edges on penis, with burning in urethra.—Condylomata.—Excoriation by least friction.—Erection slow and long-lasting, coition painful, prolonged, and no emission.—Erections even after ejaculation.—Descent of testicles with effusion into scrotum.—Lancinations in scrotum frequently after coitus.—Compressive pains in testicles, as if returning into pelvis.—Sexual desire diminished.

16. Female Sexual Organs.—Biting in pudenda, with leucorrhśa.—Pressure in uterus when walking, > sitting, with dragging pain.—Acrid leucorrhśa.—(Leucorrhśa became thinner and more watery.).—Menses returned in a week.—Menstruation that had been suppressed six months flowed profusely, with pain in abdomen and diarrhśa.—Menses two days late, but more increased.—Discharge of blood between the periods.—Sudden dragging in groins so that she must bend together, after the usual cold milk in morning, with frequent yawning, weariness in thighs, griping in abdomen, extending to thighs, restlessness, chilliness, gooseflesh, with anxiety and warmth in head, then eructations and rumbling in abdomen, menstruation which had just begun partly stopped, then nausea, pressure in stomach, < moving about, shivering in face and hands, with heat and Sweat in face.—Menstruation that had existed two days diminished.—Discharge of mucus from the vagina.

17. Respiratory Organs.—Spasmodic croup in morning.—Choking in trachea, with rawness obliging hawking, whereby she expectorated mucus.—Affection of bronchia.—Provocation in larynx to dry cough.—Voice: altered in sound; nasal catarrhal; short, like her answers; feeble, at times tremulous; lost; lost at night.—Inclination to cough.—Dry cough, mornings; and evenings in evening with soreness of larynx.—Short, hacking cough from rawness in throat.—Śdema glottidis.—Respiration difficult; on waking, in night, with loss of voice.—Dyspnśa on ascending stairs, with pain in region of heart.—Hoarseness with pain in chest, cough, oppression of breathing, and pain in both eyes.—Dry, hacking cough, afterwards copious, greenish expectoration.

18. Chest.—Pain as if cut to pieces in evening.—Pain in l. chest as if sore externally, < touch.—Oppression.—Uneasiness about chest.—Sticking: deep in middle of chest; in r. side; in r. costal region behind breast; in middle of sternum in afternoon, with pressure; in l. in evening; in r. lowest ribs at 8 p.m., with sore pain; in middle when walking; in upper part of l. when sitting bent over, > becoming erect; in middle > moving about; in middle of sternum extending to shoulders.—Breasts diminished in size, supply of milk was esp. diminished.

19. Heart.—Sticking in heart; when walking.—All the symptoms of endocarditis, oppression, faint-like exhaustion, tumultuous, violent, intermittent, and irregular action of heart and pulse, with tensive pain across chest, esp. affecting r. ventricle, which gradually became dilated.—Seemed unequal to the task of circulating the blood.—Palpitation; fluttering, causing faintness and sickness and preventing sitting up.—Pulse-rapid; and full; and irregular; and small; slow and weak; slow and irregular; hard and tense; small and soft.

20. Neck and Back.—Cervical glands enlarged.—Sticking in r. side of nape when lying.—Hard painless tumour like a wen on nape.—Cracking in nape when moving head (Cooper).—Throbbing between scapulć.—Small of back: sticking when sitting; pain as if screwed in; pain and soreness; pain as before menstruation, with diarrhśa twice; pain as if beaten, so that she does not know how she shall lie; < sitting bent.—Pullings in loins as if something alive there.—Pott's curvature.—Pain in coccyx as if she had fallen upon it.

21. Limbs.—Tremor.—Tearing above r. malleolus, in l. index and r. arm, but not in joints.

22. Upper Limbs.—Shoulders: tearing in l.; in r., then in r. ear; pain in tendons of r. on motion, touch, and rest, like a tension and as if swollen; bruised pain in l.; paralytic pain only on moving them.—Arm weak.—Tearing in l. elbow, now in shoulders, now in r. elbow.—Cramp in r. forearm above wrist on moving it.—Pain like a tension and sticking in articular end of radius on moving r. index.—Tearing in r. wrist, then itching on it, not > scratching, then an itching vesicle.—Hands tremble.—Bruised pain in margin of r. hand above little finger.—Tearing: in index from base to tip; on inner margin of r. thumb; on l. middle and ring-fingers in evening: in inner surface of r. ring-finger, which is thereby flexed and cannot be extended; in r. thumb as if it would be torn out; jerking tearing in a line on outer side of bone of l. thumb, with sticking.—Pinching on metacarpal joint of l. thumb.—Contraction of fingers.

23. Lower Limbs.—Gait disturbed; tottering.—Sticking: in upper part of l. thigh; now in thigh, now in tibia, in l. hip on every step, obliging her to limp.—Pain in hips, which produces lameness, with shootings at every step.—Tearing: above hollow of knee, then also below it; in l. femur; posteriorly in r. thigh, with sticking; in r. thigh on and after waking at 11 p.m., extending to below knee, > lying on sound side, lying upon r. side or back was intolerable; in a spot in middle of l. thigh, with paralysed pain as far as knee.—Gnawing in hip-bones; in middle of r. thigh in evening when sitting with r. thigh over l.—Upper part of thigh seems compressed during menstruation.—Tearing twitching in r. knee.—Housemaid's knee.—Tearing: in knees at night; in periosteum of l. knee at night, with a swollen feeling; in outside of l. knee when sitting; in r. tibia; l. calf, then weakness of whole leg; l. calf when standing, > walking, with tension; downward in tibić in evening.—Gnawing in periosteum of l. leg.—Painful drawing in calves when

sitting.—Legs give way.—Painful weakness of legs.—Tearing in back part of l. heel when sitting; in r. heel when standing, > walking.—Ulcerative pain in heels and toes.—Pain in l. instep in evening as if beaten.—Tearing in great toes; in r. second toe.

24. Generalities.—Emaciation.—Marasmus resembling the third stage of phthisis.—Nervous mobility; trembling; spasms.—Spasmodic contraction of the muscles.—Subsultus tendinum.—Attacks of jerking of limbs, < l. arm, and of face, < l. side, with anxiety, apprehension and palpitation, one attack ended with vomiting and headache, once violent rolling of l. eyeball, pupils contracted, facial muscles contracted, l. corner of mouth drawn downward, mouth opened and closed numberless times while uttering unintelligible words, short rapid respiration, pulse hard and full, forehead, neck, and chest covered with sweat, face red, unconsciousness, after the paroxysm trembling, weeping, complaints of heaviness of l. arm, abdomen small, soft, tongue white rather than yellow, efforts to vomit, > vomiting.—Hćmorrhage from nose, lungs, rectum.—Paralysis.—Sticking in l. lower jaw, in tibia, l. thigh, l. forearm, in bones in forenoon, then in l. ear, at last in tendon of hollow of l. knee.—Nervous susceptibility exaggerated.—Sensation of turning around.—Malaise.—Irresistible desire to go into the open air.—Vague indescribable feelings in head, back, and limbs.—Restlessness.—Weakness.—Affects fibrous structures, as periosteum and capsular ligaments of joints.—Most symptoms arise during rest, and are > motion.—Consequences of rheumatic fever.

25. Skin.—Purpura; miliary, non-pruriginous, sanguineous spots like purpura, in one case on thorax, in all others on legs only, more confluent anteriorly, sometimes an intermixture of petechić of different ages, the new being of a brighter colour than the old.—Multiple hćmorrhage from skin and mucous membrane.—Erysipelatous swelling of cheeks extending towards temples, with redness, with a few spots on forehead.—Itching tetter on face; and dry, on cheek.—Pimples: on chin and nose; sticking burning, below corner of mouth; sensitive, on nostril; sensitive, on cheek, surrounded by redness and swelling; itching, on chin and exuding water.—Erythema.—Eczema impetiginoides.—Small boils (like furuncles) on the neck, face, head, back, and chest.—Ulceration and yellow colour of tip of l. thumb, but it does not break.—Vesicles of all sizes, becoming confluent and forming bullć, on hands, arms, groins, and feet; they contained a clear serous fluid, were on a hyperćmic base; in the early stages those on hands resemble dysidrosis, but became semi-opaque and shrivelled and dried without forming crusts.—Biting on nape and forehead, then burning after scratching.—Itching on r. natis, > scratching; on right instep in evening, < scratching; on inner side of r. upper arm, after scratching a dry red spot, which at first itches.—Great itching of pubes.—Unable to wash in cold water.

26. Sleep.—Frequent yawning without sleepiness; frequent excessive yawning.—Sleeplessness; almost all night, only sleepy towards morning.—Waking

every hour.—Cried aloud in sleep towards morning.—Starting up in first sleep, but soon falling asleep again.—Restless confused sleep; and unrefreshing; from which he wakes with a start and distress as from some strong emotion or sense of calamity.—Weeping during sleep.—Dreams: wandering; joyous; of danger; anxious; that she would be killed; of falling and consequent violent starting up.—Nightmare.

27. Fever.—Chill: in afternoon from afternoon till next morning.; from 4 to 7 p.m., > in bed, with thirst from 6 to 10 p.m., < lying down; at night.—Shaking chill at to p.m.; at night on frequent waking.—All night with shaking and frequent waking.—Shivering; of whole body in morning, except head, which felt hot.—Shivering-creeping during menses, with coldness of hands and pressure and griping in hypogastrium.—Creeping in back in evening, then coldness of whole body; chilliness from 6 to 8 p.m., creeping up back and extending over whole body, with sleepiness.—At times chilly with dry skin, at other times with profuse perspiration.—Chilliness not easily removed by external warmth.—Heat in afternoon.—Heat (flushes of), with dulness of head and discomfort of body; then sweat, from 1 to 3 p.m.—Hot skin.—Heat of head; with burning and redness of face; in forehead, eyes, nose and mouth, with anxious burning in throat extending behind sternum to ensiform cartilage; in feet.—Sweat.

Kali Manganicum.

Kali manganicum. Kali hypermanganicum. Permanganate of Potash. $KMnO_4$. Solution in distilled water. Trituration.

Clinical.—Cough. Diphtheria. Gastritis. Ozćna. Salivation. Throat, sore. Uvula, swollen. Warts.

Characteristics.—*K. pm*. is the well-known disinfectant, and has been chiefly used in medicine as a local application in diphtheria and other conditions where there are fetid discharges. A proving by H. C. Allen has brought out the fact that the medicine is homśopathic to both. There was intense irritation of nose, throat, and larynx, with sanious and bloody discharges, and constant inclination to swallow, although swallowing gave great pain. Profuse salivation and constant flow of ropy mucus from the stomach were among the noted effects. The uvula was swollen and red. Extreme fetor of the breath and sanious discharges from the nose and intense prostration appear to be the leading indications for it in diphtheria. (Kraft, who has used it largely in diphtheria, gives it in this way: A few grains are dissolved in a tumbler of water, sufficient to make it very red. A teaspoonful of this is put into another tumbler of water, and a teaspoonful out of the second tumbler is given every hour or two). The swollen uvula is also noteworthy. The exterior of the throat is very sensitive. A patient of mine made a curious use of *K. pm*. externally.

He had a wart on the tip of his nose, for which I had given him *Thuja* internally, and externally in vain, and after this *Causticum* internally, with no better success. He on his own account applied a strong solution of *K. pm*. in the form of Condy's fluid, and it disappeared in a week.

Relations.—*Compare:* Other oxydising salts, especially K. bi.; also Mang., Caust., K. ca.; in śdematous uvula, Mur. ac., Apis.; in diphtheria, Diphth., Merc. cy., Ar. t., K. bi., K. m.; in thick, ropy mucus, K. bi. K. pm. antidotes Opium. A case of Opium poisoning is *reported (H. W*., xxxiii. 380), in which recovery took place after half an ounce of laudanum had been swallowed by mistake. Kali permang. in dilute solution (gr. ii. to the pint) was given repeatedly and acted promptly. Next day only dryness of mouth and throat was felt.

SYMPTOMS.

2. Head.—Head feels full.

3. Eyes.—Profuse lachrymation.

4. Ears.—Sharp pricking pains extending from throat to l. mastoid process, apparently along Eustachian tube.

5. Nose.—Nasal discharge smarts and irritates.—Sanious discharge; nares feel stuffed and full as in catarrh; discharge blood-streaked, although he had no catarrhal symptoms two hours before.—Discharge from nares and larynx streaked with blood.—Profuse bleeding from nose; on every attempt to free the obstructed nose.

8. Mouth.—Mouth and lips very dry, lips smart when exposed to cold air.—Profuse flow of saliva, with a burning, raw, smarting, nauseating pain in fauces, pharynx, and larynx, and extending down śsophagus to stomach.—Constant inclination to swallow.—Increased flow of saliva, runs constantly out of the mouth, with more pain and difficulty of swallowing.—Speech painful, difficult; hoarse as from tonsilitis.

9. Throat.—The throat was primarily affected.—Throat swollen and very painful.—Small ulcerated spots here and there on walls of throat, with stinging, burning pains.—Everything hawked up is streaked with blood.—Constant, ineffectual, inclination to hawk something up.—Throat dry, painful, with almost incessant attempts to swallow, from which it is almost impossible to refrain.—Continual dryness in throat, with a slight, irritating, hacking cough on attempting to swallow.—The whole throat and larynx feel as though the cavity was constricted, apparently from thickening of mucous membrane.—Peculiar constrictive, smarting sensation in throat and fauces, with the hot, burning sensation in cardiac end of stomach.—Acute pain in throat, extending to ears and

pharynx, and producing a titillating cough.—Throat feels raw, and bleeds on attempting to hawk up the secretions, which appear to fill the cavity.—Posterior nares painful.—Uvula, soft palate, and fauces mottled of a dark red colour, with livid spots here and there.—Soft palate and uvula swollen, śdematous, dark red.—Fauces and pharynx red and painful, efforts to swallow almost incessant, profuse flow of saliva which escapes by the mouth on, account of the difficulty of swallowing.—Mucous membrane feels thickened.—Burning, nauseating pain in fauces, extending down śsophagus to stomach, with dryness and constant inclination to swallow.—Constant, intense, painful inclination to swallow.—Muscles of neck feel sore, esp. digastric and stylo-hyoid, glands opposite hyoid bone swollen and very painful.—Considerable difficulty in opening mouth from soreness of parotid gland and muscles of neck.

11. Stomach.—Appetite lost.—Thirst, but inability to drink.—Almost constant flow of ropy mucus from stomach, which is ejected without pain, but in no way relieves the nausea.—Nausea and constant inclination to swallow.—Could take no more of the drug from a loathing which would almost produce vomiting to look at it; began to search, in vain, for an antidote.—Nausea and vomiting, first of contents of stomach, then thick, ropy fluid, ejected without difficulty in large quantities, with < of throat pain.—The vomiting, which had ceased last evening, returned in aggravated form, attended with a burning, nauseating pain in stomach and duodenum, which became almost insupportable.—Deep-seated, sickening pain in stomach, with a raw dryness in throat, and constant inclination to swallow.—Hot, burning pain in stomach, seeming to radiate over whole epigastrium.—Hot, burning sensation in cardiac extremity of stomach, with peculiar constricting and smarting sensation in throat, and inclination to swallow, &c., hot, uneasy, constricting sensation through whole length of śsophagus, lasted two hours, > by eating.

13. Stool.—Obstinate constipation.

14. Urinary Organs.—Compelled to urinate frequently; urine copious, clear, watery.—Urine profuse and watery.

17. Respiratory Organs.—Aching in region of cricoid cartilage, < every attempt to swallow.—Raw sensation in larynx.—Short, hacking cough, with a constant painful urging to swallow, which = nausea and inclination to vomit with profuse lachrymation.—Constant short, painful hacking cough, with blood-streaked sputa.—Coughing or even hacking brings up a sanious fluid.

23. Lower Limbs.—Legs feel as though he could not move them, tremble on attempting to stand.

24. Generalities.—Terrible weakness and languor; esp. of lower limbs, compelled him to lie down.

26. Sleep.—Restless at night.—Sleepless.

27. Fever.—Face hot.—Profuse sweat.

Kali Muriaticum.

Kali chloratum. Chloride of Potassium. Potassic Chloride. K Cl. (Not to be confounded with Chlorate of Potash, Kali chloricum, $KClO_3$). Trituration. Solution.

Clinical.—Acne. Aphthæ. Bubo. Bunion. Burns. Cataract. Chilblains. Constipation. Croup. Cystitis. Diarrhœa. Diphtheria. Dropsy. Dysentery. *Ear, affections of*. Eczema. Embolism. Eustachian tubes, occlusion of. Eyes, affections of. Glands, swollen. Hæmorrhoids. Heart, affections of. *Hodgkin's disease*. Ingrowing toenails. Jaundice. Joint, cracking of. Leucorrhœa. Mumps. Rheumatism. Scorbutus. Shingles. Small-pox. Sycosis. Tendons, creaking of. Vaccination, effects of. *Warts*.

Characteristics.—It is to Schüssler that we owe the introduction of this salt into homœopathy. His account of it is this: "It is contained in nearly all the cells and is chemically related to fibrin. It will dissolve white or greyish-white secretions of the mucous membrane and plastic exudations." This gives the indication for it in catarrhs, in croupous and diphtheritic exudations, and in the second stage of inflammation of serous membranes when the exudation is plastic. "When the cells of the epidermis lose molecules of *K. mur*. in consequence of a morbid irritation, then the fibrin comes to the surface as a white or whitish-grey mass; when dried this forms a mealy covering. If the irritation has seized upon the tissues under the epidermis, then fibrin and serum are exuded, causing the affected spot on the epidermis to rise in blisters. Similar processes may take place in and below epithelial cells." These are practically the whole of the cardinal indications in which *K. mur*. has been prescribed. On these indications it has been extensively used by homœopaths, but I am not aware of any proving having been made. Boericke and Dewey, in their standard work on the Tissue Remedies, give a schema of "guiding symptoms," but these consist in great part of names of pathological states. They contain, however, valuable indications, and I am indebted to these authors for my Schema. The conditions and symptoms most strongly emphasised are: Chronic catarrhal condition of middle ear. Closed Eustachian tubes. Snapping and noises in the ear. Greyish-white, dryish or slimy tongue. Hæmorrhoids, bleeding, blood dark, fibrous, clotted. Diphtheria. Rheumatic fever with exudation and swelling around the joints. The symptoms are < by motion, and < by any fatty or rich food or pastry. < By warmth of bed (rheumatic symptoms). It is said to have cured cataract after *Calc. fl*. had helped. I have cured with it rheumatism affecting most left shoulder and elbow, < in morning on rising. *K. mur*. manifests the action of its two elements in about equal proportions.

It compares closely with *K. chlor*., and it is quite possible that the proving of the latter will be available for both preparations, as Hering infers. Among the symptoms of *K. chl*. are: "Tendency to rush of blood to both eyes" and "Light before both eyes on coughing and sneezing." Boericke and Dewey give: "Protruded appearance of eyes, white tongue, croupy, hard cough, harsh barking." Hering gives: "Cough, stomachy, noisy, with protruded appearance of eyes." To which preparation this last belongs I cannot say; but in a case of mine *K. mur*. caused a severe aggravation of the following: "As if eyes would be forced out of head, with cough." I conclude, therefore, that "cough affecting the eyes" is common to *K. chl*. and *K. mur*. The great keynote of *K. mur*. is, *whiteness*—whiteness of secretions, exudations, eruptions of tissues. The next is, *toughness*—fibrinous exudations and discharges, too readily clotting blood-hence embolism, indurations, hard swellings. In *H. R*., xv. 341, is an incidental proving of *K. mur*. by "J. De W. C." I have included his symptoms and marked them "(C)." They are mostly in the throat.

Relations.—*Antidoted by:* Bell., Calc. s., Hydrast., Puls. *It follows well:* Calc. ph., Calc. fl., Fer. ph. *Compare:* K. chl.; in tough secretions, K. bi., K. ca., Hydrast.; in rheumatic affections, Bry., Rhus, Sul., Merc.; in Eustachian tube affections, Merc.; in inflammation of ear, Graph., K. bi., K. ca.; in < from fatty food, < from warmth, Puls. *Compare also:* Nat. mur., Nit. ac., Silic., Apis, Thuj.

Causation.—Vaccination. Sprains. Burns. Blows. Cuts. Rich food. Deranged internal functions.

SYMPTOMS.

1. Mind.—Patient imagines he must starve.

2. Head.—Headache with vomiting, hawking up of white milk-like mucus.—Sick-headache with white-coated tongue, vomiting of white phlegm arising from a sluggish liver, want of appetite, &c.—In meningitis Schüssler's second remedy.—Crusta lactea.—Dandruff.

3. Eyes.—Discharge of white mucus from the eyes, or yellow, greenish matter and yellow, purulent scabs.—Specks of matter on lids.—Superficial, flat ulcer of eye arising from a vesicle.—Blisters on cornea.—Feeling of sand in the eyes.—Parenchymatous keratitis.—Cataract.

4. Ears.—Chronic catarrhal conditions of middle ear.—Deafness or earache from congestion or swelling of middle ear or Eustachian tubes, with swelling of the glands, or cracking noises on blowing nose, or swallowing.—Deafness due to throat troubles, white tongue, &c.—Deafness from swelling of external ear.—Granular conditions of external meatus and membrana tympani.—Closed Eustachian tubes.—Seems to act more on Eustachian tube.—Snapping and noises in ear.

5. Nose.—Catarrh, phlegm white, thick.—Stuffy cold in head, whitish-grey tongue.—Vault of pharynx covered with adherent crusts.—Nose-bleed in afternoon.

6. Face.—Cheeks swollen and painful.—Faceache from swelling of face or gums.

8. Mouth.—Aphthæ, thrush, white ulcers in mouths of little children or nursing mothers.—Swollen glands about jaw and neck.—Swelling of tongue.—Coating of tongue greyish white, dryish or slimy.—Mapped tongue.—Sensation as if a tumour growing on tongue (removed in a patient of mine).

9. Throat.—Tonsils excessively swollen; stringy, tough mucus; swallowing excessively painful, even water or the softest bread; must twist his neck to get it down (C.).—Mumps, swelling of the parotid glands.—Hawks up offensive, cheesy, small lumps.—Greyish patches or spots in throat.

11. Stomach.—Want of appetite.—Dyspepsia and indigestion, with a whitish-grey tongue, sick feeling after taking fat, pain and heavy feeling on r. side under shoulder.

12, 13. Abdomen and Stool.—Jaundice if caused by a chill resulting in catarrh of duodenum, stools light in colour.—Sluggish action or complete torpidity of liver, pain in r. side.—Constipation, light-coloured stools denoting want of bile, sluggish action of liver, or occurring in consequence of some primary disturbance, esp. where fat and pastry disagree.—Diarrhœa after fatty food, and in typhoid fever, with pale yellow, ochre, or clay-coloured stools, white or slimy stools.—Dysentery, purging, with slimy stools.—Hæmorrhoids, bleeding, blood dark and thick, fibrinous, clotted.

14. Urinary Organs.—Acute cases of inflammation of bladder, in second stage, when swelling has set in and discharge is thick, white mucus.

15. Male Sexual Organs.—Schüssler's principal remedy in gonorrhœa, and orchitis resulting from a suppression of same.—In bubo for the soft swelling, and in soft chancres Schüssler's chief remedy.—Gleet combined with eczema, visible or latent.

16. Female Sexual Organs.—Menstruation too late or suppressed, checked or too early, excessive discharge, dark-clotted or tough, black blood, like tar.—Leucorrhœa, discharge of milky-white mucus, thick, non-irritating, bland.—Pregnancy: morning sickness with vomiting of white phlegm.

17. Respiratory Organs.—Loss of voice, hoarseness from cold, tongue white.—Protruded appearance of eyes, white tongue, croupy, hard cough, harsh and barking.

19. Heart.—Palpitation from excessive flow of blood to heart in hypertrophic conditions.

21. Limbs in General.—Nightly rheumatic pains < from warmth of bed; lightning-like from small of back to feet; must get out of bed and sit up.—Puffiness of ankle-joints (C.).—Ulcers on extremities, fibrinous discharges; bunions.—Tenalgia crepitans, creaking of tendons on back of hand.

24. Generalities.—Schüssler's specific or chief remedy in epilepsy, esp. if occurring with or after suppression of eczema or other eruptions.—Tabes dorsalis.—Hæmorrhages, dark, black clotted, or tough blood.—Effects of blows, cuts, and bruises, for the swelling.—Dropsy, arising from heart, liver, or kidney disease, from obstruction of bile ducts, from weakness of heart with palpitation.—Chief remedy in glandular swellings, follicular infiltrations.—Scrofulous enlargement of glands.—Scurvy, hard infiltrations.—Schüssler's second remedy in sprains.

25. Skin.—Acne; erythema; eczema and other eruptions on skin, with vesicles containing thick, white contents.—Albuminoid eczema, or other skin disease, arising after vaccination with bad vaccine lymph.—Eczema from suppressed or deranged uterine functions.—Dry flour-like scales on skin.—Obstinate eczema, crusta lactea, scurfy eruption on head and face of little children.—Burns of all degrees (externally also), blisters, &c.—Bunions, chilblains, eruptions connected with stomach or menstrual derangement.—Ingrowing toenails.—Warts on hands.

26. Sleep.—Somnolence.—Restless sleep; startled at least noise.

27. Fever.—Congestions and inflammations, second stage, of any organ or part of the body.—Catarrhal fever, great chilliness, the least cold air chills him through, has to sit close to fire to keep warm and is chilly.—Rheumatic fever; exudation and swelling around the joints.

Kali Nitricum.

Nitrum. Nitre. Saltpetre. Nitrate of Potassium. Potassic Nitrate. KNO_3. Trituration. Solution.

Clinical.—Asthma. *Chest, pain in*. Colic. Diabetes insipidus. Dysentery. Dysmenorrhœa. Enuresis. Gastritis. Headache. Heart, affections of. Herpes preputialis. Menière's disease. Menorrhagia. Nose, bleeding of. Peritonitis. Phthisis. Pleurisy. Pneumonia. Polypus. Rheumatism. Vertigo.

Characteristics.—*K. n.* is known in old-school practice principally as a "refrigerant diuretic," and as the active agent in the well-known "nitre papers," which are burnt for producing fumes to allay attacks of asthma. It has also been used in rheumatism, and for incontinence of urine in children. It has been extensively proved by homœopaths, and symptoms have been added from cases of poisoning, so that its characteristics are well defined. It is almost equal to *K. ca.* in producing stitching pains; and it is like it in having a cough at 3 a.m. The pains produced by *K. n.* are very severe—stitching, cutting, lancinating, tearing, and pressing. And there is, as with many other *Kalis*, much external sensitiveness—of scalp; of abdomen; of testes. That its anti-asthmatic properties are homœopathic is abundantly shown in the respiratory symptoms it produces. Its "diuretic" properties are utilised homœopathically in diabetes insipidus, and its use in enuresis must come in the same category. *K. n.* acts with great intensity on the abdominal and pelvic organs, producing most painful colics, diarrhœa, and dysentery; in the male sexual sphere, excitement and pain in testes and cords; in the female, menorrhagia with flow of *ink-like* blackness. This is very characteristic. Another characteristic of *K. n.* is < from eating veal, or effects of eating it—headache, diarrhœa, &c. The mental state of *K. n.* is chiefly one of peevishness, fretfulness, and *ennui*. There are many curious symptoms in the nose: "The pain-like contraction in the eyes, forehead, and face concentrates in the tip of the nose"; "Swollen feeling in right nostril, which is painful on pressure" sore pain in upper part of right nostril with external sensitiveness these two last symptoms led to the cure of a large nasal polypus in a girl. In a poisoning case there was in the period of recovery intense vertigo with tinnitus, which should indicate *K. n.* in some cases of Menière's disease. Easy intoxication by wine or beer was noted by several provers. A peculiar symptom is a sour taste *in the throat*. Another peculiar symptom is in connection with the asthmatic state. The breathlessness is so great that the patient though thirsty can only drink a sip at a time between the breaths. Allen thus defines the asthma of *K. n.*: Asthma with excessive dyspnœa, faintness and nausea, with dull stitches or with burning pain in chest, rather free expectoration. A solution of saltpetre as an application was an old remedy for inveterate mange in cats. Nitre with Sulphur and Charcoal forms gunpowder. A teaspoonful of this in hot water was a favourite remedy for gonorrhœa among soldiers in the days when black powder was used. In the lower triturations gunpowder has cured ascarides in adults. In some experiments made by myself with gunpowder 2x, severe herpes facialis involving right eyebrow and right side of nose was developed. The most characteristic < is from veal; < from wine or beer, < from a slight draught of air (headache). < After washing in cold water (eye). < 3 a.m. (cough). < Lying with head low (dyspnœa), < in morning; afternoon; evening; after midnight. Walking < many symptoms. < Breathing; < by coffee. > Lying down; lying right side; uncovering head (pain in parietal region). *Suited to:* asthmatic constitutions and chest complaints.

Relations.—*Antidoted by:* Smelling Nit. sp. dul. Ipec. relieved the cough. Smelling Camph. intensified the sufferings. *Follows well:* Aco. in dysentery, and is *followed*

well by Nux in the same. Also *follow well:* Bell., Calc., Puls., Rhus, Sep. K. n. *antidotes* the renal symptoms of Caust. *Compare:* Arn., Dros., Nat. m., Nit ac.

Causation.—Eating veal.

SYMPTOMS.

1. Mind.—Excitement after a glass of wine as if he had taken too much.—Anxiety and agitation.—Despondency, out of humour, uneasy.—Ennui; lachrymose mood, sad expression.—Fretful; peevish.—Disinclined to think or work.—Half stupor.—Discouragement and fear of death.

2. Head.—Confusion almost like intoxication.—Vertigo; on sleeping; tends to fall forwards; to r. and backwards after drinking beer.—Fainting fits with vertigo in morning on standing, > on sitting down; afterwards obscuration of sight with great weakness and drowsiness; pain in small of back And constriction in abdomen; staggering gait with vertigo.—Vertigo and tinnitus.—Headache in vertex on rising.—Headache, after eating veal.—Headache, with contraction of eyelids, from one evening to another, insupportable on stooping head.—Headache, alternately with cramp-like tearing in joints of fingers.—Stunning (stupefying) heaviness of the head, in morning, as after intoxication.—Pressive pains in head, < by coffee, and > by motion of a carriage.—Headache with heat; < towards evening.—Pains in r. frontal sinus with stopped catarrh.—Pressive headache: in forehead towards root of nose; on either side, in vertex as if a stone were lying on it.—Headache on vertex as if the hair were being pulled.—Violent pain r. side of head from a slight draught of air.—Coldness in occiput with pains in head.—Compression in occiput, producing rigidity in surrounding parts.—A feeling of contraction in head, which seems to extend to nose.—Cramp-like drawing in occiput and nape, which = head to be thrown back.—Stinging pain in head.—Lancinating headache.—Pains in occiput are > by unbinding hair.—Painful sensitiveness of scalp.—Scurfy spots on head.—Profuse falling out of hair.

3. Eyes.—Burning in eyes, with lachrymation and photophobia, < in morning, after washing with cold water.—Transient blindness.—Cloudiness of sight.—Coloured circles before eyes.—In evening, candles appear surrounded by a rainbow-like halo.—Everything appears black before eyes (after smelling Camphor).

4. Ears.—Shooting in ears, in evening, < by lying down on ear.—Tension, shootings and tearing behind ears; behind r. ear.—Inflammation and swelling of lobe of r. ear, with burning, and jerkings pain.—Tingling in ears.—Tinkling and ringing in ears.—Chronic deafness, from paralysis of auditory nerve.—Vertigo and tinnitus.

5. Nose.—Burning, in nose, with digging, and clawing pain, < by touch.—The nasal bones are painful, esp. to the touch.—Inflammation of extremity of nose, with

shooting pain.—Swelling of interior of nose.—Swollen feeling in r. nostril.—Ulcers in the nostrils covered by a scurf.—Epistaxis, with acrid blood (sharp, like vinegar).—Violent coryza, with obstruction of nose, and loss of smell.

6. Face.—Pale and sickly complexion.—Face sunken, cold nose.—Muscles of face convulsed, jerking.—Heat on face without rapid pulse.—Redness and tension in cheeks, with < of the headache.—Tearing in bones of face.—The pain-like contraction in eyes, forehead and face concentrates in tip of nose.

7. Teeth.—Toothache, with lancinating drawing, or tearing pains in teeth and head.—Shooting in carious teeth, when touched.—Pulsative toothache, at night, < by cold things.—Swelling of gums, of an inflammatory or scorbutic character; they bleed readily.

8. Mouth.—Fetid breath.—Burning blister at tip of tongue.—Crawling on tongue.—Tongue loaded with a white coating.—Taste: disagreeable; nauseous; disgusting; sourish, in throat in morning on rising.

9. Throat.—Sore throat, with shooting pain and inflammation of velum palati, and uvula (during deglutition).—Impeded deglutition from tension and cutting in the larynx.—Loss of speech.—Nocturnal pain in throat, as if it were contracting with obstructed respiration.

10. Appetite.—Want of appetite, with burning and continued thirst.—Appetite, principally in evening.—Ravenous hunger returned between 10 and 11 a.m., and alternated with cutting pain in region of r. umbilicus.—Ravenous hunger without real appetite.—Cannot drink for want of breath, drinks in sips.—Painful sensation in upper orifice of stomach.

11. Stomach.—Nausea, as if about to vomit, esp. at night.—Heaving, ineffectual retching after each dose of 30th, mouth gets sore, feels altogether poorly (Cooper).—Retching, and vomiting of mucus, mixed with blood.—Pains in stomach, with a sensation as if something were turning about in it.—Gnawing, spasmodic weakness, and pressure on epigastrium.—Faint-like weakness at stomach pit.—Violent cramps in stomach, with contractive pain (esp. after eating veal).—Shootings in stomach and epigastrium.—Sensation of coldness, or of burning in stomach.—(Inflammation of stomach.).—Severe gastric pain recurs after every meal for years after a single large dose (Fraser).

12. Abdomen.—Exceedingly violent pain in abdomen after eating veal, esp. at r. side.—Excessive distension of abdomen.—Griping about umbilicus; and beneath short ribs l. side; > by emission of (fetid) flatus.—Griping and cutting in abdomen before normal stool.—Stitching and sticking pains; abdomen swollen and very tender to touch; coldness of lower extremities; stiff feeling in affected parts as if made of wood (peritonitis).—Cutting pains, which disappear towards

evening.—Shooting pains in abdomen.—Incarceration of flatus, esp. in afternoon and evening.—Very loud rumbling in abdomen.

13. Stool and Anus.—Fæces hard, difficult, and retarded, evacuated with much effort (by violent pressing).—Urgent want to evacuate, with tenesmus.—Soft fæces, with cutting pains.—Diarrhœa after eating veal.—Stools: watery; thin fæcal; bloody; soft and diarrhœa-like; sluggish; hard like sheep's dung.—Before stool: violent colic; urging.—During stool: cutting colic in whole intestinal canal; tenesmus.—After stool: cutting colic; tenesmus; burning and stinging in anus.—Diarrhœa, sometimes without pain, or colliquative.—Frequent pressing in rectum.—Dysentery with much cutting pain, great thirst and icy coldness of feet.

14. Urinary Organs.—Frequent want to urinate, and profuse emission of a clear urine, with a reddish cloud.—Burning in urethra while urinating and greatly diminished urine.

15. Male Sexual Organs.—Erections, increased sexual desire and pleasure.—Prickling sticking in glans.—Smarting in orifice of prepuce.—Frequent itching of glans.—Swelling in l. epididymis.—After unsatisfied desire, violent drawing tension and pressure in both testes, extending along cords into abdomen, lasting some hours, testicles very painful.—Sensitiveness of both testes which are drawn up with a pressive sensation in them.

16. Female Sexual Organs.—Catamenia too early, and too profuse, with discharge of blood black as ink.—Menses retarded; suppressed.—Abortion at second month.—Before and during catamenia, violent pains in abdomen and sacrum.—White serous leucorrhœa, which stiffens linen, and is discharged during the sacral pains.—Frequent sticking beneath l. female breast.

17. Respiratory Organs.—Hoarseness, with roughness and scraping in throat.—Tension, and incisive pains in larynx, with obstructed deglutition.—Irritation to cough caused by tickling in larynx.—Sudden violent irritation to cough in r. side near pit of throat, as if in r. bronchus, neither painful nor, itching; it could be suppressed by a slow, deep breath and by an effort of will.—Cough with expectoration and pressive pain beneath sternum.—Cutting under sternum when coughing.—Pressing pain under sternum when coughing with a feeling of warmth in same locality.—Cough, which awakens patient about 3 a.m., with violent headache.—Cough in open air, or when going up stairs, also whenever the breath is held in.—Dry cough, esp. in morning.—When coughing, incisive pains in chest, until the mucus is detached.—Cough, with shootings in chest, and expectoration of pure blood.—Cough, with purulent expectoration, and colliquative sweats.

18. Chest.—Cannot drink for want of breath; must take it in little sips; children take cup in both hands and drink greedily one sip after another.—Obstructed respiration,

which does not permit lying down with the head low.—Oppression on chest, when ascending.—Pain in chest with pressive tension, accompanied by a sensation of roughness under sternum, which excites violent coughing.—Contractive pain in chest, commencing from the back, with sensation of constriction in lungs.—Lancinations in chest, esp. when taking a full inspiration, when lying down, and when coughing, accompanied by excessive anguish and oppression.—(Inflammation of lungs.).—Sticking in l. side near sternum.—Sticking in l. side of chest, cutting and tearing in lungs.

19. Heart and Pulse.—Violent palpitation of heart, esp. when lying in bed, at night, waking him.—Stitches in heart.—Full pulse.

20. Neck and Back.—Pain in nape of neck, extending into shoulders, as if hair were violently pulled.—Shooting pains in sacral region.—Violent pains in loins, night and morning, on waking.—Pains in back on stooping.—Full, tense feeling in back as if kidneys engorged (removed at once by 1x dil.—Cooper).—Aching in lumbar region, during repose, < esp. by coughing.—Shootings in and between scapulæ, often accompanied by oppressed respiration, < at night, when lying on back, > by lying on r. side.

21. Limbs.—Drawing in limbs with paralytic weakness.—Tearing in limbs, day and night, >, but for a short time only, by friction.—Rheumatic pains and stitches in limbs and joints.

22. Upper Limbs.—Rheumatic tearing in shoulders, at night.—Tearing and shooting in joints of arms, elbow, hands and fingers, principally at night, with heaviness, a sensation as if the hand were too large, and swelling of fingers.—Numbness and tingling in arms and hands.—Drawing and tearing in arms, from shoulder to fingers.—Wrenching pain in joints of fingers.—Paralysis of the arms after each dose of *K. n.*, crude, taken for headache several times repeated.—Weakness in arms, hands, and fingers, which prevents the holding of anything firmly.—Cramp-like tearing in joints of fingers, alternating with headache.—Cramps and rigidity in joints of fingers.

23. Lower Limbs.—Rheumatic pains in the legs.—Tearing in legs.—Great lassitude and paralytic weakness in legs, after short walk.—Jerking tearing in soles.—Numbness and tingling in feet.—Contraction of toes.

24. Generalities.—Affected parts feel numb, as if made of wood.—Tearing, shooting, and drawing pains.—Most symptoms occur in evening, after midnight, and in afternoon.—The symptoms which have manifested themselves during the day disappear on lying down in evening.—Rapid swelling of whole body.—Great dejection in morning, with sensation of heat in face, and burning in forehead.—Inflammation of internal organs.—Lassitude, which is greater when seated than during movement.

25. Skin.—Lancinations in skin, pricking like needles, followed by burning, principally in face.—Tubercles, size of a pea, also on face.—Burning vesicles, filled with yellowish serum, which break when scratched, and then cease to burn.—Sudden dropsical swelling.

26. Sleep.—Drowsiness during day.—Disturbed sleep at night; constant dreaming, with frequent awakening.—Coma somnolentum.—Anxious and uneasy dreams about dangerous situations.—Nightmare.

27. Fever.—Pulse full, hard, and rapid.—Pulse slow in morning, rapid in afternoon and evening.—Extraordinary shiverings not > by hot drinks or coverings.—Shivering in evening, with pain.—Coldness in afternoon, with thirst; or coldness, preceded by headache, with adipsia, and followed by nocturnal heat, without thirst or sweat.—Quotidian fever, with drawing pains in limbs.—Profuse and colliquative sweat.—Sweat in morning, esp. on chest.

Kali Oxalicum.

Kali oxalas. Potassium Bioxalale. Salts of Sorrel. KHC_2O_4, $2H_2O$. Trituration. Solution.

Clinical.—Convulsions. Cramps. Eyes, inflamed. Lumbago. Vomiting.

Characteristics.—Only cases of poisoning have been observed with this salt. The main symptoms are those of violent irritation—convulsions, violent and continuous vomiting, cramps, severe pain in the back, coldness, and collapse. One patient became insane. A peculiar symptom was throbbing in the head with great thirst. There were severe pains in the back recalling the action of *Oxalic acid*, with which (and with Rumex acet.) this remedy must be compared.

SYMPTOMS.

1. Mind.—Became insane.—Extreme depression.

2. Head.—Swimming in head; heaviness; throbbing pain and great thirst.

3. Eyes.—Great soreness of eyes with dim vision.—Conjunctivæ injected; pupils dilated.

6. Face.—Countenance flushed.—Face pale, anxious-looking, and covered with a cold sweat.—Face and lips pate, with continual rigors over whole body.

8. Mouth.—Tongue and fauces red and irritable.—Very strong acid taste of poison lasting two days.;

9. Throat.—Scalding sensation in throat and stomach.

11. Stomach.—Great thirst and throbbing pain in head.—Vomiting and faintness.—Vomiting, continuing at intervals of ten minutes to an hour for nearly a week.—It had scarcely reached the stomach when she was seized with excruciating pain, followed by violent convulsions and death within tell minutes.—Very severe burning pain in stomach and bowels.

12. Abdomen.—Violent pains in abdomen and convulsions.—Scalding sensation extended over abdomen, with tenderness on tolerably firm pressure.

14. Urinary Organs.—Micturition accompanied by a sensation of scalding.

20. Back.—Pain in back.—Severe lumbar pain.

22. Upper Limbs.—Spasmodic contractions in hands.—Nails and fingers blue as in cholera.

23. Lower Limbs.—Great weakness in lower limbs.—Cramps in legs.

24. Generalities.—Convulsions and violent pains in abdomen.—Great muscular weakness.—Falls and utters loud cries.—Tendency to faint.—Lying on the floor quite faint.

27. Fever.—Skin cold and clammy.—Sensations of coldness, succeeded by burning heat in chest and stomach, and general muscular weakness.—Continued rigors affecting whole body.

Kali Permanganicum.

Kali manganicum. Kali hypermanganicum. Permanganate of Potash. $KMnO_4$. Solution in distilled water. Trituration.

Clinical.—Cough. Diphtheria. Gastritis. Ozćna. Salivation. Throat, sore. Uvula, swollen. Warts.

Characteristics.—*K. pm*. is the well-known disinfectant, and has been chiefly used in medicine as a local application in diphtheria and other conditions where there are fetid discharges. A proving by H. C. Allen has brought out the fact that the medicine is homśopathic to both. There was intense irritation of nose, throat, and

larynx, with sanious and bloody discharges, and constant inclination to swallow, although swallowing gave great pain. Profuse salivation and constant flow of ropy mucus from the stomach were among the noted effects. The uvula was swollen and red. Extreme fetor of the breath and sanious discharges from the nose and intense prostration appear to be the leading indications for it in diphtheria. (Kraft, who has used it largely in diphtheria, gives it in this way: A few grains are dissolved in a tumbler of water, sufficient to make it very red. A teaspoonful of this is put into another tumbler of water, and a teaspoonful out of the second tumbler is given every hour or two). The swollen uvula is also noteworthy. The exterior of the throat is very sensitive. A patient of mine made a curious use of *K. pm*. externally. He had a wart on the tip of his nose, for which I had given him *Thuja* internally, and externally in vain, and after this *Causticum* internally, with no better success. He on his own account applied a strong solution of *K. pm*. in the form of Condy's fluid, and it disappeared in a week.

Relations.—*Compare:* Other oxydising salts, especially K. bi.; also Mang., Caust., K. ca.; in śdematous uvula, Mur. ac., Apis.; in diphtheria, Diphth., Merc. cy., Ar. t., K. bi., K. m.; in thick, ropy mucus, K. bi. K. pm. antidotes Opium. A case of Opium poisoning is *reported (H. W*., xxxiii. 380), in which recovery took place after half an ounce of laudanum had been swallowed by mistake. Kali permang. in dilute solution (gr. ii. to the pint) was given repeatedly and acted promptly. Next day only dryness of mouth and throat was felt.

SYMPTOMS.

2. Head.—Head feels full.

3. Eyes.—Profuse lachrymation.

4. Ears.—Sharp pricking pains extending from throat to l. mastoid process, apparently along Eustachian tube.

5. Nose.—Nasal discharge smarts and irritates.—Sanious discharge; nares feel stuffed and full as in catarrh; discharge blood-streaked, although he had no catarrhal symptoms two hours before.—Discharge from nares and larynx streaked with blood.—Profuse bleeding from nose; on every attempt to free the obstructed nose.

8. Mouth.—Mouth and lips very dry, lips smart when exposed to cold air.—Profuse flow of saliva, with a burning, raw, smarting, nauseating pain in fauces, pharynx, and larynx, and extending down śsophagus to stomach.—Constant inclination to swallow.—Increased flow of saliva, runs constantly out of the mouth, with more pain and difficulty of swallowing.—Speech painful, difficult; hoarse as from tonsilitis.

9. Throat.—The throat was primarily affected.—Throat swollen and very painful.—Small ulcerated spots here and there on walls of throat, with stinging, burning pains.—Everything hawked up is streaked with blood.—Constant, ineffectual, inclination to hawk something up.—Throat dry, painful, with almost incessant attempts to swallow, from which it is almost impossible to refrain.—Continual dryness in throat, with a slight, irritating, hacking cough on attempting to swallow.—The whole throat and larynx feel as though the cavity was constricted, apparently from thickening of mucous membrane.—Peculiar constrictive, smarting sensation in throat and fauces, with the hot, burning sensation in cardiac end of stomach.—Acute pain in throat, extending to ears and pharynx, and producing a titillating cough.—Throat feels raw, and bleeds on attempting to hawk up the secretions, which appear to fill the cavity.—Posterior nares painful.—Uvula, soft palate, and fauces mottled of a dark red colour, with livid spots here and there.—Soft palate and uvula swollen, śdematous, dark red.—Fauces and pharynx red and painful, efforts to swallow almost incessant, profuse flow of saliva which escapes by the mouth on, account of the difficulty of swallowing.—Mucous membrane feels thickened.—Burning, nauseating pain in fauces, extending down śsophagus to stomach, with dryness and constant inclination to swallow.—Constant, intense, painful inclination to swallow.—Muscles of neck feel sore, esp. digastric and stylo-hyoid, glands opposite hyoid bone swollen and very painful.—Considerable difficulty in opening mouth from soreness of parotid gland and muscles of neck.

11. Stomach.—Appetite lost.—Thirst, but inability to drink.—Almost constant flow of ropy mucus from stomach, which is ejected without pain, but in no way relieves the nausea.—Nausea and constant inclination to swallow.—Could take no more of the drug from a loathing which would almost produce vomiting to look at it; began to search, in vain, for an antidote.—Nausea and vomiting, first of contents of stomach, then thick, ropy fluid, ejected without difficulty in large quantities, with < of throat pain.—The vomiting, which had ceased last evening, returned in aggravated form, attended with a burning, nauseating pain in stomach and duodenum, which became almost insupportable.—Deep-seated, sickening pain in stomach, with a raw dryness in throat, and constant inclination to swallow.—Hot, burning pain in stomach, seeming to radiate over whole epigastrium.—Hot, burning sensation in cardiac extremity of stomach, with peculiar constricting and smarting sensation in throat, and inclination to swallow, &c., hot, uneasy, constricting sensation through whole length of śsophagus, lasted two hours, > by eating.

13. Stool.—Obstinate constipation.

14. Urinary Organs.—Compelled to urinate frequently; urine copious, clear, watery.—Urine profuse and watery.

17. Respiratory Organs.—Aching in region of cricoid cartilage, < every attempt to swallow.—Raw sensation in larynx.—Short, hacking cough, with a constant painful

urging to swallow, which = nausea and inclination to vomit with profuse lachrymation.—Constant short, painful hacking cough, with blood-streaked sputa.—Coughing or even hacking brings up a sanious fluid.

23. Lower Limbs.—Legs feel as though he could not move them, tremble on attempting to stand.

24. Generalities.—Terrible weakness and languor; esp. of lower limbs, compelled him to lie down.

26. Sleep.—Restless at night.—Sleepless.

27. Fever.—Face hot.—Profuse sweat.

Kali Phosphoricum.

Phosphate of Potassium. K_2HPO_4. Trituration. Solution in distilled water.

Clinical.—Alopecia areata. Amenorrhœa. Anæmia. Asthma. Atrophy. Brain, concussion of. Brain-fag. Brain-softening. Cancrum oris. Carbuncle. Chilblains. Cholerine. Diphtheria. Dysentery. Enuresis. Face, neuralgia of. Feet, fidgety. Gangrene. Hypochondriasis. Hysteria. Insomnia. Melancholia. Menstrual headaches. Nervous dyspepsia. Neurasthenia. Night-terrors. Noma. Nymphomania. Œdema pulmonum. Paralysis. Pneumonia. Ptosis. Puerperal fever. Puerperal mania. Sciatica. Scurvy. Stomach, ulcer of. Ulcers. Urticaria. Whitlow.

Characteristics.—According to Schüssler: *K. ph*. is contained in the cells of the brain, nerves, muscles, blood (corpuscles and plasma), and intercellular fluids; and a disturbance in the motions of its molecules produces:-(*1*) In Thought cells: Despondency, anxiety, fearfulness, tearfulness, home-sickness, suspiciousness, agoraphobia, weak memory. (*2*) In Vaso-motor Nerves: First, small and frequent pulse; later, retarded. (*3*) In Sensory Nerves: Pains with sensation of paralysis. (*4*) In Motor Nerves: Weakness of muscles and nerves even to paralysis. (*5*) In Trophic fibres of Sympathetic Nerve: Retarded nutrition; even total arrest in a limited area of cells and then a softening. Depression is the characteristic of its action; conversely it cures depressed states of mind and body, hypochondriasis, hysteria, neurasthenia, nervous insomnia, spasms of irritable weakness, paralysis; septic states and septic fevers and hæmorrhages, noma, scurvy, phagedenic chancre, carbuncles, typhoid, typhus fever and adynamic states, progressive muscular atrophy, round ulcer of stomach (due to disturbed function of trophic fibres of the sympathetic), alopecia areata (due, according to Schüssler, to the same cause).—Thus far Schüssler, to whom we owe the medicine; and a very excellent ground-work of indications it provides. The action of the phosphoric element is

very clearly visible, but for accurate prescribing something is needed beyond Schüssler's indications, excellent as they are; and this something has been provided by a proving published by H. C. Allen in *Med. Adv*., xxviii. 194. Schüssler, as is usual with him, uses lower triturations, from 3x to 12x. No doubt that is wise when prescribing on the general indications he gives; but those who prescribe on the fine indications need not limit themselves to these. H. C. Allen's symptoms will be found in the subjoined Schema. As Allen points out, a vein of *Kali* symptoms runs through the proving, *e.g*., early morning waking, the peculiar mouth, and the severe action on the skin. (I may add to these "< after coitus," and "sensitiveness to touch.") In menstrual headaches it is indicated, and in neurasthenia, and Allen has developed clinically the characteristic colour of the excretions—golden or orange-yellow. The urine is very yellow. He cured with *K. ph*. an old pelvic abscess, with orange-coloured discharge, having given the remedy for sleeplessness. The provers experienced great lassitude; they lost much flesh. Nervous, hot, restless, easily startled. Trembling of hands from nervousness. *Sensations*: as if tongue would cleave to roof of mouth; as if a ball were rising in throat; as if a rocket had passed through head. Stitching pains. Numb finger-tips. The least touch causes starting. There is a toothache alternating with headache. *K. ph*. corresponds to those numerous cases in which there is increased sensitiveness to all impressions, from a weakness of the vital organismic resistance or control. In weakened states from shock, mental or physical, from over-strain or over-drain of the system. Nervous, restless; fidgety feeling in feet; trembling sensation in muscles of legs, especially of gastrocnemii. Numb sensations. W. T. Laird (*H. R*., xiv. 461) points out that *K. ph*. cures a nervous dyspepsia almost identical with that of Anac. The *K. ph*. patient is more decidedly neurasthenic than the other; and the relapses, which are frequent in both, are mostly due to dietetic errors in *Anac*. cases, and to excitement or worry in the *K. ph*. cases. H. M. Rean (*Hom. News*, xxviii. 82) reports three cases of amenorrhœa cured: Miss B., 19, very nervous, pale blonde, skin rather waxy, cross and snappish, cries easily, constant dull headache, yet very drowsy all day.—At times so fidgety could not control herself, and called her mother to hold her hands. Menses did not appear till eighteen, and were scanty then and since. *K. ph*. 3x four times daily caused great improvement at next menstrual period. In three months menses were regular and normal, and in five months the patient was perfectly well. H. T. Dodge gives these indications: Worn-out nursing mothers, tired to distraction by nervous babies. Worn-out business and professional men. Special indications being: Foul breath with low nervous condition; tongue with brownish mustard-like coat; dull heavy ache between shoulders; restlessness. He commends the higher attenuations where indications are close (*Hom. News*, xxix. 10, quoting *Critique*).—J. C. Nottingham (*H. R*., vii. 229) considers a leading indication of *K. ph*. "nervousness arising from excessive sexual excitement, whether *indulged* or *suppressed*. He as cured impotence and seminal losses on these indications. Accompanying symptoms are: Aching in sacrum, sleeplessness, *pain in back of neck and head*, general irritability, *great despondency*, frequent micturition, large quantities being passed night and day and

containing phosphates.—H. C. Allen reports a case of subacute laryngitis in a woman six weeks after confinement, occurring concurrently with suppressed lochia and piles and non-appearing leucorrhœa, to which she had been subject. She was almost *in articulo mortis* when, on these indications—"In cases coming late under treatment, with great weakness, pale bluish face, &c." (Raue) "Speech slow, becoming inarticulate, creeping paralysis" (Hering) and "The oxydation processes, the change of gases on respiration and other chemical transformations in the blood is brought about by the presence of *K. ph*." (Grauvogl).—*K. ph*. 30 was given and rapidly rescued the patient from the dangerous condition, though other remedies were required to complete the cure, in the course of which the piles and discharges came back.—*K. ph*. craves ice-cold water, vinegar, and sweets.
The *conditions* are: < After eating (stomach and bowels and maxillæ—diarrhœa *while* eating); after rising in morning on falling asleep; by lying on painful part by sitting and walking at 3 to 5 a.m.; in early morning (diarrhœa) from exposure to cold (neuralgic pains); from coitus; from continued motion; from sneezing (side pains); from facing the sun (eye pain); after drinking water (bearing-down pains); by lying down (ears); by lying on back (lumbar pains). > When menses come on (< before); after lying down; leaning against something; sitting up; bending double (colic in hypogastrium); from belching gas; from warmth; from motion if slight and of short continuance; from eating (occipital headache); by daylight (nervousness); out of doors (dull headache). It is *suited to* pale, sensitive, irritable persons.

Relations.—*Compatible:* Cycl. (disordered mental conditions); K. mur. (puerperal fever); Mag. ph. (bladder troubles); Zinc ph. (brain paralysis with nephritic irritation); Nat. m. and Nit. ac. (hæmorrhages). *Compare:* Phos., Phos. ac., the Kalis; Rhus (typhoid states; > motion, < by cold); Anac. (nervous dyspepsia); Hyo. (mania); Fer. (diarrhœa while eating); Ign. (hysteria); Bapt. (typhoid low conditions); K. ca. (< by coitus; stitching pains); Cycl. (menstrual headache); Op. (drowsiness); Lach. (< from sleep; typhoid states; putrid discharges; post-diphtheritic paralysis; > menses coming on); Arn. and Con. (blows); Con. (suppressed sexual excitement); Ars., Carb. v., Chi., Kre., Phyt., Puls. Compare also Agaricus. Hering says mushrooms contain *K. Ph*., and hence are useful after weakening illness to restore muscle and nerve.

Causation.—Mechanical injuries. Blows. Sexual excitement, indulged or suppressed.

SYMPTOMS.

1. Mind.—Morose, irritable; tearful; averse to be talked to; everything is too much; depression.—Lethargy.—Cannot recall names or words; mind sluggish, but will act if aroused.—Extreme lassitude and depression; apprehensive.—Loss of memory.—Exhaustion after moderate mental effort.—Flies into a passion and can

hardly articulate; tongue feels thick.—Restless.—Nervous; starting.—Perverted affections; cruel to husband; to baby.—Indifferent and captious.

2. Head.—Giddy when out of doors, < when facing sun.—Seasick without nausea.—Vertigo with pressure on brain.—Occipital headache, lasting all night; frequent waking, with the pain > on rising.—Woke with pains in occiput and loins, > lying on back, passed off after rising.—Pains from l. eye to head, making him wretchedly ill; no > after sleep.—Dull headache across eyes, > outdoors; < l. side; l. eyelid droops.—Before menses violent tearing in forehead and sense of fatigue, > lying down and on menses appearing.—Pain through base of brain from eyes to occiput, < night, > eating and gentle motion.—(Headache before and during menses; r. eye to occiput, > heat, pressure, lying down, eating, gentle motion; < noise; always hungry, with headache.).—Burning in forehead during stool.—Intense headache from emotions and physical effort.—Headache: morning on awaking; with vomiting of sour phlegm; making eyes unable to bear light.—Pain across forehead and into both temples.—Neuralgic pain at base of brain and upper spine.—Sensation of a band round forehead just above eyes.—Heavy dull pain over eyes as if brain would expand but for cranial bones.—Sharp darting pain over l. orbit.—Neuralgia in r. parietal eminence.—(An aching nervous sensation in cerebellum and upper cranial region, with tenderness, involving entire head when aggravated.).—Intense itching on scalp, < morning after waking.—Soreness back of head, < pressure.—Back of head sore, as if hair being pulled; then as if hairpins sticking in.—Neuralgia in l. mastoid process, < motion and in open air.—Itching of scalp; bald and dry.

3. Eyes.—Conjunctivæ inflamed.—Watery secretion from eyes.—Sensation: of sticks in eyes; of sand; dryness; burning; pricking and smarting.—Eves full of mucus; < evening.—Balls (l.) ache and are sore, tender to touch and pressure.—Lids: swollen; agglutinated in morning; stye on l. lower; l. lid droops, almost closed.—Sharp pain from eyes (r.) to temples in morning; > pressing on temples.—Eyes feel sore round edge of lids, and burn as though they had been full of smoke.—Eyes sore as after crying hard; awoke with severe pain through l. eye; throbbed and was < in sunlight.—Eyes twitch.—Eyes blurred.—Intolerance of light with headache.—Eyes tire with reading.—Black spots moving before eyes.

4. Ears.—Itching and pimples in canal and external ear.—Deep-seated pain in ears, stinging, itching; < lying down.—Sharp pain in l. ear and down l. cheek.—Fulness, singing, and surging in ears.—Hearing too sensitive; cannot endure noise.

5. Nose.—(An inveterate catarrh was greatly relieved after proving the 30th.—Thick yellow discharge, < morning.).—Nostrils stopped, discharge of clear, stringy mucus.—Obstruction; sneezes on slightest exposure to air 2 a.m.; fluent watery coryza.—Violent sneezing with symptoms of fresh cold.—Sores inside nares with yellow crusts, and dark blood.—Symptoms of cold with headache.—Soft green or

white discharge (< r. nostril).—Small growth, very sensitive, at opening of l. nostril (lasted two weeks).—Very sensitive smell and lack of smell.

6. Face.—Itching: under beard; on r. cheek and temples.—Itching pimples on forehead, suppurating next day.—Brown patch from edge of brow to eyebrows three inches wide, lasting three months.—Neuralgic stitches, esp. from upper teeth to l. ear, and from temples forward to a point just above r. eye, < from cold air (whilst driving), > by warmth of hand.—Hydroa on lips; on upper lip r. corner; lip feels swollen and itchy.—Pimples and sore crusts on lips; peeling.—Soreness and swelling of parotids and axillary glands.—Red, hot, burning face and forehead, at other times pale and yellow.—Sickly, pale, dirty complexion.—Pain in jawbones with stinging and aching, > after eating, speaking, walking, and by touch.—Warm feeling, as if a candle were held near l. cheek.

7. Teeth.—Teeth feel sore.—Severe pains in decayed or filled teeth; surrounding gums much swollen.—Pain in teeth after every cold.—Aching in teeth, with much secretion of saliva.—Grinding teeth, and mumbling, in sleep.—Swelling of gums and upper lip; aching of teeth all night and forenoon.—Gums feel swollen, soft, bleed easily.—Dull frontal headache and nausea with dizziness, alternating with toothache.

8. Mouth.—L. submaxillary gland swollen and sensitive.—Offensive odour from mouth; mornings, like rotten cheese.—Tongue: white; and slimy; greenish yellow; upper surface of, stiff; edges red and sore; red edges and transverse cracks.—Roof of mouth: swollen; in ridges; feels as though lined with grease.—Saliva profuse; and thick and salty; mouth tastes badly.—Taste: bitter in morning; putrid, bitter, and sour.

9. Throat.—Tonsils large and sore, esp. l.; dry sensation in throat as if from husks of grain.—In morning both tonsils have distinct white solid deposits like diphtheric membranes; traces of it on pillars of fauces.—Severe shooting pain from l. tonsil to inner ear, while driving in forenoon.—Severe pain r. tonsil,< swallowing.—Soreness; full sensation; burning soreness and dryness, evening.—Mucus: much after rising, causing nausea; salty.

10. Appetite.—Hungry; but sight of food took away all appetite.—No appetite; except for sweets.—Appetite first increased; later, lost till end of proving.—Desire for vinegar.—Great thirst; for ice-cold water, a quantity at a time.—Sweat during meals with drinking.

11. Stomach.—Nausea after eating, afterwards drowsiness.—Belching, smelling of sour and bitter food and of blood.—Vomiting of blood and palpitation of the heart.—Eructations of bile, < after eating.—Nausea > by belching.—Stomach: growls during menses; sore as if pounded; gnawing in, 5 a.m. on waking; fulness and burning in.

12. Abdomen.—Region of liver sensitive to pressure.—Stinging and catching in spleen, < from motion.—Awoke with extreme soreness of back and sides; sneezing occasionally, constant desire to; seems as though sides would break when sneezing.—Abdomen distended with pain.—Colic in hypogastrium, with ineffectual urging to stool; after breakfast; > bending double.—Borborygmus (afternoon); fermentation; soreness.—Sharp cutting pains r. side.—Bearing down, > sitting up; < l. side; < after drinking water.—Flatulence, griping, < when eating.

13. Stool and Anus.—Stool: clay-coloured, watery; with urging, putrid flatus, followed by tenesmus, after breakfast; light-coloured, offensive, unsatisfactory; profuse, painless, offensive, before 6 a.m., imperative; offensive, undigested, dark; < after breakfast and supper; < after dinner, < after breakfast and dinner.—Diarrhœa while eating.—Constipation; stools dark brown, streaked with yellowish green mucus.—Aching in shoulders and arms, > by motion, evening.—Burning in forehead with stool; afterwards slight chill from behind up back.—Hæmorrhoids protruding, with swelling and burning pains.—(Paretic condition of rectum and colon following removal of hæmorrhoids).

14. Urinary Organs.—Urine saffron yellow, reddish sandy sediment.—Scanty, stream sluggish, a few drops pass later and wet linen.—After micturition: burning, smarting in urethra.—Stitching in bladder and urethra.

15. Male Sexual Organs.—Passion increased; priapism in morning.—Sexual instinct depressed; impotence.—Strong desire, erections with desire to urinate, mornings; followed by impotence and painful seminal emissions at night.—Utter prostration and weak vision after coitus.—Emissions without erections.

16. Female Sexual Organs.—Menses: five days early, scanty, with dragging pain in l. lower jaw; (late in appearing; amenorrhœa); irregular, scanty, almost black, first day thick.—Stomach growls and legs ache as if about to become unwell.—Before menses: sense of fatigue.—During menses: sharp bearing-down pain; sensation of being bloated to bursting; restlessness, > moving and lying on abdomen; sharp pain through l. ovary, > lying on back, and by bending double; dull bursting headache, pain in l. leg and groin, tired and sleepy, borborygmus and heartburn at night.—Stitching all through pelvis and in womb.—Pains: in l. side and ovaries; across sacrum; across abdomen, l. to r.—(Chronic abscess discharging periodically through vagina and rectum a copious orange-coloured fluid.).—Yellow, greenish, blistering leucorrhœa, with too short menses.—Intense sexual desire for four or five days after menses.—Bloody discharge during pregnancy.—Feeling of heavy weight on pelvis pressing down and backward.—Night-pains during pregnancy.

17. Respiratory Organs.—Cough: from irritation in trachea just below larynx, with scanty, thick, white, yellowish expectoration; without expectoration, 2 to 2.30 a.m.; sudden unexpected spell preceded by pressure in throat.—Hoarseness, trachea

feels hurt.—Rattling or whistling cough; expectoration green or like soap-suds.—Sputa; like salt, fetid or sweet; (yellow in phthisis).

18. Chest.—Intensely sharp, cutting pains (transitory) under (r.) breast and near waist, catching breath.—Chest: painful; stinging in chest and sides; sore to touch; aching, l., through to scapulæ.

19. Heart.—Dull throbbing, l. side, seems to stop heart beating.—Vomiting of blood, with palpitation.—Palpitation from slightest motion or ascending stairs.

20. Neck and Back.—Stiff neck from swelling of glands.—Neck lame, tender to touch.—Aching between scapulæ.—Stitches: severe in middle of back; towards front of chest with dyspnœa; > leaning against something, < lying on back and sitting or walking.—Awoke with pains in occiput and loins, > lying on back, passed off after rising.—Creeping sensation and intense pain along spine relieving the headache at intervals.—Back: lame as from a fall; sore from shoulders down.

21. Limbs.—Drawing pains in back and limbs, esp. of soles to knees, and shoulders to head, > by warmth and (temporarily) by moving the parts.—Awakens 5 a.m. with rheumatic pains in r. leg and both arms, passing away 10 a.m.—Constant pain in back and limbs, > motion.

22. Upper Limbs.—Aching in shoulders and arms, > motion.—Severe pain in scapulæ on waking in morning, had to sit up in order to turn over.—Pain first in r., then l. scapula.—Soreness and swelling of axillary and parotid glands.—Pain in arms from raising them.—Twitching of muscles of arms and fingers.—Numbness of r. arm and hand; itching and purple.—No feeling in finger-tips.

23. Lower Limbs.—Weak, tired, with pains in legs and back, > by gentle motion.—Pain in l. groin; throbbing pain in r.—Thighs lame.—Legs swollen, numb.—Pain in r. great toe and across instep, not > taking off shoe.—Feet: cold, perspiring; swelling of, cracking of heels; burning of toes and soles; stinging of soles.—Fidgety feet.

25. Skin.—Blue spots on calves as if they would ulcerate.—Itching: of whole skin, < on chest and under arms; in the night, esp. on scalp and under beard, soles, and palms, < 3 to 5 a.m.—Pimples, small boils, itching.—Pricking in abdomen as from a pin.

26. Sleep.—Woke early, nervous, hot, restless; expected to see burglar enter.—During sleep: mumbling and grinding teeth; talking.—Sleepy, yawning, hard to wake.—Very hard to awake, eyes hurt they feel so sleepy, yawns a great deal.—Talks in sleep.—Pains frequently change location and keep him awake; from 2 or 3 to 4 a.m.—Dreamed he was only partially clothed in a public place.—Tendency to sleep on back developed (which was very uncomfortable

before the proving).—Lascivious dreams, with emission, wakes angry and cross.—Sleeplessness during latter part of night (cured during the proving).—(The instant she fell into a doze was aroused by violent spasms in l. ovary.).—Night-terrors of children; awoke from sound sleep screaming with fright; somnambulism.—Sleeplessness: from excessive mental exertion; after worry over business troubles; from nervous exhaustion; simple painless wakefulness.

27. Fever.—Chills run up spine in evening, continued after retiring, could scarcely get warm in bed.—Chilly; cold all day; heat during night, with strong inclination to eat.—Return of offensive axillary sweat (cured months before with *Lach*.) Axillary sweat of odour of onions.

Kali Picricum.

Potassium picrate. $C_6H_2K(NO_2)_3O$. Trituration (which must be made with great care, on account of the explosive nature of the salt).

Clinical.—Eructations. Jaundice.

Characteristics.—Allen quotes from Wolff and Gouzee the following constant pathogenetic effects observed in patients to whom K. pi. was given for intermittent fever: jaundice; diarrhœa; pain in pit of stomach; violent eructations; colic; urine clear, brownish red, not from bile pigment, but from large quantities of urate of ammonia.—*K. pi*. is an intensely yellow salt, and yellow substances generally act powerfully on the liver, as is the case with *Picric acid* itself and its other salts.

Relations.—*Compare:* Pic. ac., Fe. pi.

Kali Sulphuratum.

Hepar sulphuris kalinum. Sulphurate of potassium. (A dark brown mass resulting from the fusion of Sulphur and Potassium Carbonate, consisting of the Pentasulphide and the Hypersulphate of Potassium, $K_2S_3 + K_2S_2O_3$). Trituration.

Clinical.—Gastric fever. Gastritis. Hiccough. Œsophagitis.

Characteristics.—Observations have been made on two persons with large doses, and violent effects ensued, which are recorded by Allen. The violence of the gastric intestinal irritation was the chief feature. An accompanying redness of the face may prove a guiding symptom. The vomiting was at first ineffectual, and

afterwards convulsive. Great chilliness at first, followed tardily by fever and sweat with burning skin and very strong and rapid pulse.

Relations.—*Compare:* Hep. s. calc.

SYMPTOMS.

1. Mind.—Stupid and unconscious, with small, contracted, irregular pulse, deathlike paleness, and sunken face.

6. Face.—Redness of face gradually came on, at first momentary and partial, afterwards persistent and general, with symptoms of violent inflammation of stomach.

8. Mouth.—Great heat in mouth, throat, œsophagus, and stomach.

9. Throat.—Throat and fauces dry and reddish brown, with burning pain.—Constriction in throat.—Œsophagus painful to pressure on neck.

11. Stomach.—Thirst.—Hiccough.—Constant inclination to vomit without being able; followed by vomiting of contents of stomach; afterwards frothy substances streaked with blood; afterwards clots of blood, even purulent pieces of membrane 2 1/2 inches long seemingly detached from walls of stomach.—Constant efforts to evacuate, up and down.—Convulsive vomiting.—Violent pain and heat (burning) in stomach; and round navel.

13. Stools.—Copious stools.

17. Respiratory Organs.—Suffocation; could not expand chest.

19. Heart.—Pulse irregular, very small, almost suppressed, slower than natural.

24. Generalities.—Great weakness and paleness.

27. Fever.—Skin and limbs extremely cold.—Fever developed only after several hours, when patient became restless with all the symptoms of inflammation of the bowels.—Violent fever, soon.—General profuse sweat, burning skin, very strong pulse.

Kali Sulphuricum.

Kali sulphas. Potassium Sulphate. K_2SO_4. Trituration.

Clinical.—Antrum of Highmore, disease of. Asthma. Cataract. Catarrh. Chorea. Dandriff. Dyspepsia. Eczema. Epithelioma. Eustachian catarrh. Gleet. Gonorrhœa. Itch. Nails, diseased. Nettle-rash. Ozæna. Polypus. Psoriasis. Rheumatism. Rhus poisoning. Vertigo. Whooping-cough.

Characteristics.—Schüssler's account of this remedy is as follows: *K. s*., which in reciprocal action with iron effects the transfer of the inhaled oxygen to all the cells, is contained in all the cells containing iron. A deficiency of *K. s*. causes: "A sensation of heaviness and weariness, vertigo, chilliness, palpitation of the heart, anxiety, sadness, toothache, headache, and pain in the limbs." These are < in a room; in warmth; towards evening; > in open, cool air. "There ensues a desquamation of cells of the epidermis and epithelium, which have been loosened from their connection because they were not sufficiently provided with oxygen. The scaling off of these epithelial cells is followed by catarrhs with a secretion of yellow mucus. Therapeutically *K. s*. answers to the process of desquamation which takes place after scarlatina, measles, erysipelas of the face, &c."; to catarrh of larynx, bronchi, nostrils, &c., where the secretion has the above-named characteristics; to catarrh of stomach, where the tongue has a yellowish mucous coating; to catarrh of middle ear, and of the kidneys. *K. s*. effects the access of oxygen, and so facilitates the formation of new epithelium. Schüssler points out that *K. s*. and iron carry on the same transference of oxygen in the organic world. When a sulphate and any oxide of iron comes into contact with decomposing organic substances they surrender their oxygen and form sulphurate of iron. By more oxygen this may be further decomposed into sulphuric acid and an oxide of iron. *K. s*. is Schüssler's *Pulsatilla*. It has had no proper proving, and the fine indications are not so clear as they might be. The leading indications are those given by Schüssler—the *Yellow* colour of the discharges; the skin and mucous membrane appearances, and the < by warmth and > in open air. M. E. Douglass (*H. R*., x. 279) reports a case of asthma with thick yellow expectoration, much rattling in chest, laboured breathing, talking almost impossible, cured with *K. sul*. 3x, five grains every hour in the attack. Hansen cured with *K. sul*. 3x a case of psoriasis beginning on right leg, later attacking left leg and left elbow. Eruption, papular, oval and annular with paler centres, covered with whitish scales, skin beneath red and smooth. The guiding symptom was "great desquamation of the epidermis." All symptoms are < in evening (*Puls*. < in twilight). "Its sphere of action is in lymphatic vessels: when there is lack of this substance, a yellow mucous catarrh arises, or a yellow sticky discharge from isolated places on membranes." The pains are wandering: wandering rheumatism (*Puls., K. bi*.). Gonorrhœa and ophthalmia neonatorum (*Puls*.).

Relations.—*Antidote to:* Rhus poisoning. *Compatible:* Acet. ac. (itching and redness of skin); Calc., Hep., Puls., Rhus, Sep., Sil., Sul. *Compare:* Puls., K. bi.; Hydrast. (dyspepsia, epithelioma).

Causation.—Chill when over-heated. Injury.

SYMPTOMS.

2. Head.—Dreadful vertigo: < rising from lying or from standing; when looking up.—Rheumatic headache < in warm room, in evening, > in open air.—Great pain on moving head from side to side or backwards, can move it forwards without pain.—Yellow dandriff; moist, sticky.—Bald spot l. side of head, also beard (after gonorrhœa,).

3. Eyes.—Purulent or yellow mucus in eye diseases; yellow crusts; yellow discharge.—Ophthalmia neonatorum.—Catarrh.

4. Ears.—Catarrhal deafness; swollen Eustachian tubes.—Discharge: watery, mattery; thin, yellow, sticky; brown, offensive (r.), with polypus; stinking.

5. Nose.—Smell and taste lost (ozæna).—Discharge: yellow, offensive; alternating with watery, < l.; thick, dark brown, semi-fluid, fetid from antrum of Highmore (l.); yellowish viscous in old catarrh.

6. Face.—Faceache < warm room; evening; > cool or open air. Epithelioma r. cheek; r. side nose.—Lips, blistered, swollen.

8. Mouth.—Toothache < warm room, > open air.—Taste: insipid, pappy; lost.—Tongue: coated with yellow mucus; yellow, slimy, sometimes with whitish edge.

11. Stomach.—Faint sensation at stomach and befogged feeling in head, fears to lose her reason.—Stomach affections (pressure, as of a load; fulness) with yellow mucus coat on tongue.

12. Abdomen.—Gastro-duodenal catarrh: jaundice.—Hard, tympanitic abdomen (whooping-cough).

13. Stool and Anus.—Diarrhœa.—Stools: yellow, slimy; watery, mattery; thin, offensive.—Constipation; hæmorrhoids (with yellow tongue).

15. Male Sexual Organs.—Gonorrhœa of glans or urethra; discharge yellow, mucous, or greenish.—Orchitis from suppressed gonorrhœa.—Gleet.

16. Female Sexual Organs.—Menses: too late and scanty, weight and fulness in abdomen; every three weeks (ozæna); headache during.—Metrorrhagia.—Leucorrhœa yellowish or watery, mattery.

17. Respiratory Organs.—Hoarseness from cold.—Bronchitis, asthma, whooping-cough, pneumonia, &c., with yellow slimy skin, or watery, mattery and profuse expectoration; easily expelled.

20. Neck and Back.—Stiff neck, head inclined to l., shoulders raised.—Periodical pains in back, nape, or limbs, < warm room, > cool air.

21. Limbs.—Acute and wandering rheumatism of joints; from chill when over-heated.

22. Upper Limbs.—Eruption on l. axilla about neck and on back of hands (Rhus poisoning).—Scaly eruption, most on arms, > from hot water.

25. Skin.—Jaundice.—Suppressed rash of measles, &c.—Abundant scaling of epidermis.—Burning itching, papular eruption exuding pus-like moisture. Fine red pimples running together.—Scurfs, scaling, chapping.—Sores with yellow, sticky secretions.—Epithelial cancer.—Eczema.—Itch.—Intertrigo.—Nails diseased.

26. Sleep.—Very vivid dreams.

27. Fever.—Intermittents, with characteristic tongue.

Kali Tartaricum.

Tartrate of Potash. Cream of Tartar. $K_2C_4H_4O_6$. Trituration. Solution.

Clinical.—Paraplegia.

Characteristics.—A few symptoms of this well-known substance are collected in Allen, and among them pain in loins and paraplegia are very noticeable. There is vomiting of blackish green fluid; fæces like coffee-grounds; and pain in umbilical region with great thirst.

Relations.—*Compare:* Ant. t., Tart. ac.

SYMPTOMS.

8. Mouth.—Tongue brown and dry.

11. Stomach.—Great thirst and pain in umbilical region.—Violent vomiting and diarrhœa.—Vomits a blackish green fluid.—Inflammation of stomach and intestines.

12. Abdomen.—Pain in umbilical region with thirst.—Flatulence and griping.—Diarrhœa; and violent vomiting.—Fæces like coffee-grounds.

19. Heart.—Pulse feeble.

20. Back.—Pain in loins.

23. Lower Limbs.—Thighs and legs paralysed.

24. Generalities.—Emaciation.—Extreme weakness, can scarcely walk.

Kali Telluricum.

Potassium tellurate. $K_2TeO_4 5H_2O$. Trituration. Solution.

Clinical.—Breath, offensive. Salivation. Tongue, swelling of.

Characteristics.—A few symptoms of this salt have been observed, of which the garlicky odour of the breath was the most noticeable and persistent. The tongue was coated white and swollen, and there was salivation. The appetite was increased.

Relations.—*Compare:* Tellur., Phos., and Kali phos. (garlicky odour).

SYMPTOMS.

8. Mouth.—Tongue coated white and somewhat swollen.—Garlicky odour in mouth (appeared soon after first dose, lasted seven weeks, was so offensive to others he was obliged to avoid society).—Copious secretion of saliva.

11. Stomach.—Appetite increased at first; later diminished; finally lost.—Inclination to vomit.

19. Heart.—Oppression in cardiac region (7th d).

26. Sleep.—Sleepiness; during first days.

Kalmia Latifolia.

Ledum floribus bullatis. Cistus chamærhododendros. Mountain Laurel. American Laurel. Calico Bush. (Rocky sterile hills, near water, in New England States. Flowers May and June.) N. O. Ericaceæ. Tincture of fresh leaves when the plant is in flower.

Clinical.—Angina pectoris. Blindness. Bright's disease. Dropsy. Dysmenorrhœa. Gastralgia. Globus hystericus. Gout. Headache. Heart, disease of. Herpes zoster; neuralgia after. Keratitis. Leucorrhœa. Locomotor ataxia. Lumbago. *Neuralgia*. Paraplegia. Ptosis. Pregnancy, albuminuria of. Retinitis albuminurica. *Rheumatism*. Rumination. Scleroderma. Sclerotitis. Somnambulism. Sun-headaches. Syphilitic sore throat. Tinnitus. Tobacco, effects of. Vertigo. Vomiting.

Characteristics.—*Kalmia* is the name of a genus of heathworts, natives of North America. *K. latifolia*, which has large and showy flowers, is found in the northern parts of the United States. Its flowers "yield a honey said to be deleterious, and its leaves and shoots certainly are so to cattle. *K. angustifolia*, probably for the same reason, has received the name of Lambkill. The powdered leaves of some are used as a local remedy in some skin diseases. The hard wood of *K. latifolia* is used in the manufacture of various useful articles. The Canadian partridge is said to become poisonous as human food after feeding on *Kalmia* berries" (*Treasury of Botany*). Hering introduced *Kalmia* into homœopathic practice, himself and his friends being the first provers. The head, including eyes and face, shows the chief intensity of its action, and scarcely less so, the heart. A number of skin symptoms confirm the popular use of the leaves; and among them a "stiffness" of the skin (especially of the eyelids) is the most remarkable. Neuralgias (especially of right side); wandering rheumatic pains which tend to travel from above downwards; tumultuous action of the heart and slow pulse—these are the cardinal features of *Kalm*. Though *Kalm*. acts most markedly on the right side of the head, it acts very markedly on the left (heart-) side of the chest and left arm. Von der Luhe cured with *Kalm*. 200 an intercostal neuralgia of left side, so intense that the patient could not lie down or sleep at night. The chief guiding symptom was a concomitant numb sensation of whole left arm (*H. W*., xxxiii. 503). With the same potency I cured in a married woman the following symptoms: "Sick feeling and pains flying about, especially down left side; headache at vertex; chilliness"; and in a case of hypertrophied heart in an unmarried woman, "pain through heart region with inability to lie on left side." Lambert has recorded (*H. W*., xxx. 64) the case of a gate-keeper, 54, who had smoked since he was seven years old, and who suffered from "tobacco heart," palpitation, occurring on least exertion or fright, and sometimes awakening him in the night; pulse intermittent; no valvular lesion; tingling in left arm and leg and sensation as if the blood did not circulate in them. He could walk all right, but not far. The chief thing he complained of was sharp pain in right temple like pins and needles, of eighteen months' duration. It was

induced by touch and turning head quickly. *Kalm*. 3x cured the temporal neuralgia and greatly alleviated all the other symptoms. *Kalm*. also relieved an old ataxic patient (man) of "vertigo and pains in legs which shoot and shift their position frequently." In connection with this spinal case the effects on animals are worth recalling. Meadows (*C. D. P.*, quoting *Southern J. of H.*, Apr., 1890,) says cattle eat *Kalm*. in the latter part of the winter when they are in want of something green. The first symptom is intense thirst; then follow trembling, weakness, staggering, and jerking, the abdomen being full of wind. Then clonic spasms, every fifteen to twenty minutes, increasing to violent convulsions, which are renewed if the animal tries to rise in the intervals between the seizures. Eyes become fixed, pupils turned up, head drawn back, limbs rigid, abdomen bloated, bowels loose. If the animal recovers there is prostration for a week or more, and for three or four months it is weak, nervous, and walks as if intoxicated, tottering as if unable to control its limbs. The spinal action is unmistakable here, and the provings give "weakness and paralytic condition of limbs"; "shuns all exertion, can hardly go upstairs"; and many symptoms of pain in back. Neuralgias appear in almost all regions—in eye; in uterus (dysmenorrhœa); in stomach as well as head, chest, and limbs. Pains in the periosteum preventing sleep. The rheumatic pains proceed from above downwards, but some of the sensations ascend: as if a ball was rising in the throat. Sensation of weakness in abdomen extending to throat. Every heart-beat has a strumming as if it would burst, along sternum to throat. Pain between shoulders coming up over head. Also in rheumatism, the lower limbs are affected first, then the upper. Other peculiar sensations are: As if something loose in head diagonally across the top. As if the body was surcharged with electricity, a shuddering without coldness. As if something would be pressed off below pit of stomach. As if the stool was glazed. As if one squeezed throat with thumb and finger. Pain in chest (in hands, in feet) as from a sprain. Pressure like a marble from epigastrium to heart. Cracking in head frightens him, ending in sound in ears like blowing a horn. As if something was being pressed away from under sternum. The pains and conditions requiring *Kalm*. frequently have nausea and slow pulse as concomitants. Among noteworthy symptoms are: Dry throat. Dry, stiff, swollen, cracked lips. Tingling in salivary glands immediately after eating. Stitches in tongue. Vomiting with ruminating action; without the least nausea. Pressure on rectum after stool. The sensation of "rigidity of the skin" should make us think of it in scleroderma. There is much external sensitiveness: Face, pit of stomach, muscles of neck sore, < by touch. Rubbing eyes = stinging in them. The pains are < during early part of night, or soon after going to sleep. Pain in forehead conies on in morning on waking. The headache is < again in evening, when eye-symptoms and pains generally are <. *Kalm*. has a "sun-headache," < and > with the sun. (H. G. Grahn cured in a girl, 18, a headache "beginning in occiput, going over forehead; *comes on at sunrise, gets < towards noon and declines as sun sets*," with *Kalm*. 2x. A few weeks later exposure to the sun brought on another attack, which was promptly cured with the same remedy.) A sudden chill, or exposure to a sudden wind = the pains. Heat < and cold > pain in head. Open air < headache and eyes. Every

summer there is roughness of cheeks. Mental effort < headache. Motion <. Lying down, mental faculties and memory perfect, least motion = vertigo. Lying on back > breathing; on left side < palpitation. The < from motion is very marked, almost equalling that of *Bry*.; even motion of eyes and eyelids is painful. The pains in the stomach are < sitting bent, though he feels impelled to do so, > sitting or standing upright. But symptoms of vision are < in erect position. Vertigo is < on stooping; on looking down; on rising from a seat. Palpitation is < on bending forward; and < by mental effort. (Proell cured with *Kalm*. 1, 2, and 3 headache and weakened memory preventing him from continuing his studies, in a boy of 13 who had insufficiency of the mitral valve.) The neuralgic pains are > by food; wine > vomiting. Symptoms < during leucorrhœa. A leading *concomitant* of the *Kalmia* neuralgias is a paralytic weakness and trembling.

Relations.—*Antidoted by:* Aco., Bell. *Antidote to:* Tab.? *Follows well:* Nux, Thyroidin, Spigel. *Compare:* Tab. (slow pulse and heart; nausea; blindness); Puls. (wandering rheumatism; but Puls. has > by motion); Led. (botan.; rheumatism affects first lower then upper parts; but Led. *pains* shoot up, Kalm. *pains* shoot down); Rhod. (botan.; rheumatism); Abrot. (metastasis of rheumatic pains to heart); Arbut. (rheumatism < by movement; urinary symptoms); Æsc. g. (paralytic symptoms); Æsc. h. (rectal symptoms); Urt. ur. (gout); Rhus (rheumatism; numbness of l. arm; but Rhus is > by movement); Act. r. (headache; eyes); Ced. (supraorbital neuralgia; Ced., l.; Kalm., r.); Aco. (heart; numbness of l. arm and fingers); Ars. (neuralgia, burning pains); Dig. (chest rheumatism, pains so sharp, take away breath, shoot down into stomach, slow pulse; Kalm. more suited to gout or rheumatism shifting from joints to heart); Gels. (ptosis—Kalm. muscles and lids are stiff; Gels., heavy); Bell. (throbbing head, erysipelas, symptoms travel down); Benz. ac. (gout); Calc. (cardiac hypertrophy); Diosc. (gastralgia); K. bi. (catarrhs, shifting rheumatism); Lith. c. (heart); Lyc. (rheumatic gout; urinary symptoms); Spigel. (rheumatism, neuralgia, eyes, heart, tobacco antidote; < and > with sun; but Spigel. more left side, and often affects whole head, pains stitching, run back, < by least jar or noise); Cact. (heart, pains shooting down); Alo. (cracking in head); Sang. (headache < and > with sun). Led., Rhod., and Uva ursi are close allies.

Causation.—Chill. Exposure. Wind. Sun.

SYMPTOMS.

1. Mind.—When lying down mental faculties and memory perfect, but on attempting to move, vertigo.—Anxiety and palpitation.—Cross.

2. Head.—Vertigo: with headache (and nausea), blindness, pains in limbs, weariness; while stooping and looking down; with aching in face.—Every motion = vertigo.—Aching in forehead, followed by rending in bones of r. and l. side of face; shooting down into teeth, moving backward down neck and outwardly on both sides; followed by pains in l. shoulder; rending in bones of legs and

feet.—Pain in r. eye; giddiness; eyes weak and watery.—Pressing pain on a small spot r. side of head.—Headache internally, with sensation when turning of something loose in head diagonally across top.—Pain between shoulders coming up over head to temples (not affecting eyeballs).—Neuralgia every afternoon and night; begins back of neck and runs up; affects also face, < r. side.—A cracking in head frightens him; it ends in a sound in ears like blowing a horn.—Drowsy feeling, followed by raging headache in temples and occiput.—A shuddering without coldness commences with cracking as if surcharged with electricity.—Severe pressing headache < and > with sun.—Sensation of heat in head, morning.—Dulness in head, headache; backache; preceded by nausea.—Neuralgic paroxysmal pains.—Headache < in evening and in open air.—A shock towards occiput from back of neck, with heat.—Rheumatic pain in scalp (r.).

3. Eyes.—Glimmering before eyes.—Almost complete blindness when in erect position.—Blindness < in erect position; < during paroxysms of vomiting; < looking down.—(Retinitis albuminurica; pain in back as if it would break.).—(Sclero-choroiditis anterior, with glimmering before eye, < on reading with the other.).—Severe pain in r. eye extending over forehead; begins at sunrise, increases till noon, and leaves at sunset (cured after *Aco*. and *Bell*. failed).—Pains in eyes; < turning them; < evening and in open air.—Stiffness in muscles round eyes and lids.—Pressure (r.); stitches; itching in eyes.

4. Ears.—Stitches in and behind r. ear; in neck and thighs, at night.—Acute inflammation of meatus.—Sound like blowing a horn, after cracking in head.—Menière's disease.

5. Nose.—Coryza; with increased sense of smell; with sneezing, dulness, headache, and hoarseness.—Tearing in root of nose and nasal bones, with nausea.

6. Face.—Face: red, with throbbing headache; pale.—Anxious expression.—Flushing with vertigo.—Pressing pains, r. side of face, esp. between eye and nose.—Prosopalgia (r.); pains, rending; agonising; stupefying or threatening delirium; with alkaline taste in mouth.—Neuralgia involving upper teeth, but not from caries.—R.—sided neuralgia after exposure to cold, going down r. arm; attended or succeeded by numbness in the parts; pains shooting downward, irregular; < by worry or mental exertion, > by food.—Face itches at night.—Cheeks rough in summer.—Lips swollen, dry, stiff.—Cracked lips, with dry skin.—Stinging in jawbones.—Tired feeling in masticator muscles.—Stitches and tearing in lower jaw.

7. Teeth.—Teeth tender with neuralgia of face.—Pressing pain in molars, late in evening.

8. Mouth.—Bitter taste with nausea, > after eating.—Tongue: white, dry; sore l. side; hurts when talking.—Stitches in tongue.—Cutting pain r. side of tongue > by

biting on it.—Tingling in salivary glands, immediately after eating, with sense of fermentation in œsophagus and copious salivation.—Sublingual salivary gland inflamed.

9. Throat.—Throat feels swollen, sensation as of a ball rising.—Sensation of dryness in throat (and actual dryness with aching pains, dryness causing cough), difficult swallowing, thirst.—Pressure in throat, stitches in eyes and nausea.

11. Stomach.—Pains > by food.—Eructations.—Nausea, everything black before eyes, pressure in throat, incarcerated flatus, oppressed breathing, pains in limbs.—Vomiting with ruminating action, without the least nausea.—Wind > vomiting.—Pressure in pit of stomach, like a marble; < sitting in stooping position (yet a feeling as if this was necessary), > sitting erect; sensation as if something would be pressed off behind pit of stomach.—Rumbling and sense of emptiness in stomach, as if he had had no breakfast.—Pit of stomach sore to touch.

12. Abdomen.—Pains in region of liver.—Incarcerated flatus with nausea.—Sensation of weakness in abdomen extending to throat; > by eructation.—Sudden pains in paroxysms, across abdomen, above umbilicus, from lower border of liver downward towards l., then ceasing in r. side; < from motion and from lying on either side, obliged to lie on back; > sitting up.—Neuralgia of bowels in married women.

13. Stool and Anus.—Stool like mush, easily discharged, as if glazed, followed by pressure on rectum.—Diarrhœa, with dulness, dizziness, weariness, nausea, and bellyache.

14. Urinary Organs.—Frequent micturition of large quantities of yellow urine.—Profuse micturition > headache.—Frequent micturition in small quantities; it feels hot.—Albuminuria: with pains in lower limbs; with dropsy, casts, triple phosphates, sallow complexion, skin very dry.

15. Male Sexual Organs.—Frequent, spontaneous, lasting erections, without desire.—Pain in r. testicle, morning; changed to l., afternoon.

16. Female Sexual Organs.—Menses too soon, regular but painful.—During menses, pains in limbs, loins, back, and interior of thighs.—Suppressed menses, with severe neuralgic pains throughout body.—Leucorrhœa yellowish; one week after menses; symptoms < during leucorrhœa.

17. Respiratory Organs.—Pressure as if one squeezed throat with thumb and finger.—Noise as from spasm of glottis when breathing.—Hoarseness with coryza.—Tickling in trachea.—Frequent cough caused by dryness or scraping in throat.—Expectoration easy, smooth, grey; tasting putrid; saltish.—Difficult and

oppressed breathing; throat feels swollen, nausea.—Oppressed breathing with palpitation, anxiety; with pain (angina pectoris).

18. Chest.—Feverish heat with great pain in chest; < when breathing and from slightest motion.—Pain in chest as from a sprain.—Shooting through chest above heart into shoulder-blade; pain in l. arm.—Stitches in lower chest.—Stitches below breast.—(False pleurisy of winter season.).—Rheumatism of muscles of thorax and back; < from every motion.

19. Heart.—Fluttering of heart.—Palpitation; with anxiety, suppressed breathing; with faint feeling; with dyspnœa, pain in limbs, stitches in lower chest; r.—sided prosopalgia.—Palpitation up into throat, after going to bed, trembling all over; < lying on l. side; > lying on back; anxiety.—Severe pain in cardiac region, slow, small pulse (hypertrophy, dilatation, aortic obstruction).—Paroxysms of anguish about heart, dyspnœa, febrile excitement; rheumatic endocarditis, with consequent hypertrophy and valvular disease.—Pressure like a marble from epigastrium towards heart, with strong, quick heart-beats; every beat has a strumming as if it would burst, along sternum to throat; third or fourth beat louder, followed by an intermission.—Wandering rheumatic pains in region of heart, extending down l. arm.—Shooting stabbing from heart through to l. scapula causing violent beating of heart.—Quickened but weak pulse.—Pulse: slow, weak; arms feel weak; scarcely perceptible, limbs cold; irregular; remarkably slow; 40 to 48; slow, very feeble.

20. Neck and Back.—Muscles of neck sore to touch and on moving them.—Stiffness in neck, greatest at vertebra prominens.—Pain in sterno-mastoid muscle.—Tearing in nape.—Pains from neck down arm to little and fourth finger; neck tender to touch; pain, paroxysmal, < in early part of night, and attended by stiffness; slow pulse.—Violent pain in upper three dorsal vertebræ, extending through scapulæ.—Constant pain in spine, sometimes < in lumbar region, with great heat and burning.—Sticking in lumbar region < on motion; comes and goes.—Pain in back during menses.—Lameness in lumbar region.—Sensation as if spinal column would break with an anterior convexity.—Feeling of paralysis in sacrum.—Aching across joints.

21. Limbs.—Rheumatic pains, mostly in upper arms and lower part of legs, < when going to sleep.—Joints hot, red, swollen.—Pains shift suddenly.

22. Upper Limbs.—Pain in shoulders.—Deltoid rheumatism, esp. r.—Stitches in lower part of l. scapula.—Paroxysmal pains in r. arm.—Pain in l. arm.—Cracking in elbow-joint.—Stitching in hands; hands feel as if they had been sprained.—Pain in l. wrist, causing hand to feel paralysed.—Erysipelatous eruption on hands extending further.—Weakness in arms, pulse slow.

23. Lower Limbs.—Tearing pains from hip (r.) down leg to feet.—Stitches: externally on knee; in feet, soles, toes, big toe.—Sensation of weakness in calves.—Feet feel sprained.—Unable to walk; ankles swollen; pains, though mostly confined to ankles, shift about from joint to joint.

24. Generalities.—Rheumatism often attacks heart, and generally goes from upper to lower parts; pains shift suddenly.—Weariness in all muscles; shuns all exertion, can hardly go upstairs.—Weary and giddy, with diarrhœa.—Weakness the only general symptom with neuralgia.—Trembling, thrilling, strumming, with palpitation.

25. Skin.—Sensation of rigidity of skin.—Pricking sensation in skin, with moderate sweat.—Dry skin.—Erysipelatous inflamed eruption on hand (like that of Rhus), with oppressed breathing.—Eruption like itch.—Red inflamed places here and there, exceedingly painful, as if boils would form.

26. Sleep.—Restless sleep, turns often.—Periosteal pains prevent sleep.—While sleeping stands up and walks about; talks in sleep.—Dreams: racking his brains; fantastic; of murder.

27. Fever.—Chilliness with coldness; shaking chill in cold air; chills run over back.—Febrile excitement.—General heat; with burning and pain in back and loins.—Cold sweat.

Kamala.

Croton coccineus. Rottlera tinctoria. (India, South Arabia, Tropical Australia.) N. O. Euphorbiaceæ. [A red mealy inflammable powder, obtained from the trilobed capsules of the plant.] Tincture. Solution in Ether. Trituration.

Clinical.—Skin, affections of. Tapeworm.

Characteristics.—*Kamala* is best known in medicine as a remedy for tapeworm. It is given in doses of half to two drachms. Hanbury (*Pharm. Jour*., February, 1858, quoted in *Treas. of Bot*.) says: "Among the Arabs of Aden it is given internally in leprosy, and used in solution to remove freckles and pustules; while in this country it has been used successfully in treating the eruption known as "wildfire" (Strophulus volaticus) in children, by rubbing the powder over the affected part with moist lint. It appears, however, to be most valued as an anthelmintic, and has been extensively used with much success in India in cases of tapeworm, three drachms being sufficient for a robust person, and half that quantity for one of

feeble habit." *Kamala* shows by its clinical uses its relationship with Croton and the other Euphorbians.

Kaolin.

Alumina silicata. China Clay. Porcelain Clay. [Kaolin is disintegrated Felspar, the formula of which is Al_2K_2 $(Si_3O_8)_2$]. Trituration.

Clinical.—Chest, soreness of. Croup. Diphtheria. Lead-poisoning. Nose, soreness of.

Characteristics.—According to J. Landesmann (quoted in Raue's *Record*, 1870, 171) Ægidi was the first to use *Kaolin* in cases of croup. Landesmann confirmed its efficacy and relates a case as an example. After *Aco., Hep., Spo., Bro., Pho*., and *Iod*. had failed to relieve, *Kao*. 6, four or five globules every half-hour, rapidly removed the labouring, sawing respiration, and the child was out of danger. "It seems to be especially indicated where the croupous inflammation has its seat in the lower portion of the larynx or upper part of the trachea, which may be recognised by the much more labouring and sawing respiration." According to Farrington a leading indication is: Internal soreness along trachea and upper part of the chest; the child will not be touched. The use appears to be from the clinical side entirely. *Kao*. 30 relieved symptoms of lead-poisoning in a case of mine. In old-school practice it is used "as a completely inert (?) powder" (Brunton) in the same way as fuller's earth, and also as a basis for making pills.

Relations.—*Compare:* Alum., Silic.; K. bi., Spo., Iod., Hep., Aco., Fuller's Earth.

SYMPTOMS.

2. Head.—Pain in forehead.

5. Nose.—Nostrils feel sore; scabs form in nose; scanty and blood-streaked secretion.

9. Throat.—Membranous covering of l. side of throat; of r. side.

17. Respiratory Organs.—Husky voice; metallic, rasping breathing, and suffocative cough.—Croup dipping down into trachea; heavy, laboured, sawing respiration.—Excessive soreness along trachea and chest.

24. Generalities.—Symptoms < towards evening and in the night.

25. Skin.—Dryness of skin.

Karaka.

Corynocarpus lævigatus. Kopi Tree (New Zealand). N. O. Myrsinaceæ (Allen puts it in Anacardiaceæ). Tincture or Trituration of fresh seeds.

Clinical.—Paralysis.

Characteristics.—G. Bennett has recorded a few symptoms observed in the case of a Maori chief poisoned with the seeds of *Karaka*, which contain a tasteless farinaceous substance and are eaten in times of scarcity. But the raw seeds are poisonous and produce spasmodic pains, giddiness, and partial paralysis. To obviate this they are steamed for twenty-four hours, and then either buried in the ground or allowed to soak in water for some days (*Treas. of Bot.*). C. F. Fischer (*H. W.*, xxviii. 515) proved *Karaka* and used it clinically in cases of convulsions. He quotes an account of its effect from the *Proceedings of the New Zealand Institute*:—Violent spasms and convulsions of whole body, arms and legs stretched violently and rigidly out; great flushings of heat; protrusion of eyes and tongue; gnashing of jaws. The poison proves rapidly fatal if the patient is not attended to immediately; and the limbs are permanently and rigidly distorted if they are not fixed in proper positions until the crisis is passed. The general treatment is to bind the patient (generally a child), with the limbs in right position, dig a pit and place him in it, standing, buried up to the chin with a gag in his mouth. The writer describes a youth, æt. 12, who had recovered after being poisoned, but whose limbs had not been properly secured and were ever after absolutely useless. One leg was curved up behind his loins, the other bent up with the foot outwards; one arm inclined behind his shoulder, the other slightly bent and extended forward, and all, as to muscles, inflexibly rigid. He could not move himself or even drive away the flies.

SYMPTOMS.

2. Head.—Giddiness.

3. Eyes.—Protrusion of eyes.

4. Ears.—Deafness (soon).

6. Face.—Gnashing of jaws.

8. Mouth.—Protrusion of tongue.

24. Generalities.—Spasm with pains.—Violent pain lasting a week (soon).—Partial paralysis.—Heat-anæsthesia; when warm water was applied he did not feel any

warmth from it.—Violent spasms and convulsions of whole body, arms and legs stretched violently and rigidly out.—Permanent rigid distortion.

Latrodectus Katipo.

Latrodectus katipo. N. O. Arachnida. Tincture of living spider.

Clinical.—Chorea. Faintness. Heart, slow. Nettle-rash. Œdema.

Characteristics.—*Katipo* is a venomous spider found in New Zealand and some parts of California. The symptoms recorded are the effects of bites. The seat of a bite becomes immediately painful and swelling occurs. In some cases the swelling does not come on until some days after the bite. In one case, five days after the bite, a scarlet papulous rash appeared on both extremities, burning like fire. Lassitude, faintness, twitchings, and in one case trismus were noted. The symptoms were somewhat slow in evolution, and in a fatal case, that of a girl bitten on the abdomen, death did not occur until six weeks after the bite.

Relations.—*Compare:* Lat. mact., Tarent., Mygale., Aranea, Apis, Vespa, and serpent poisons.

SYMPTOMS.

1. Mind.—Delirium, half smothered by imperfect intoxication.—Nervous depression.

6. Face.—Anxious expression.—Extreme pallor changing to blue tint, of face and body.—Jaws stiff very soon, could not open mouth to eat, and could scarcely articulate.

11. Stomach.—Lost all desire for food (after a fortnight); lingered six weeks and then died.

12. Abdomen.—Very severe drawing or cramping sensation in abdomen.

17. Respiratory Organs.—Respirations almost ceased.

19. Heart.—Almost pulseless.—Pulse slow, scarcely more than twelve or fourteen beats to the minute.

23. Lower Limbs.—Severe shaking, burning pains ran from the bite on the foot up the limbs to back, accompanied by nervous twitching all over body soon; pain felt

almost equally in both limbs, and seemed to centre about heel.—Feet felt as if rudely lacerated by dull instrument, waking him from sleep (immediately).

24. Generalities.—Suffered long, wasting and losing all energy, some having appearance of one going into a decline; it was three months before he rallied and six before he recovered.—Nervous twitching all over body.—Suddenly became faint and pallid.—Large quantities of whisky produced little impression, except a feeling as though affected side was drunk.

25. Skin.—Small, red spot like flea-bite.—Bitten surface raised, as large round as teacup, the raised part white with red halo; with pain; swelling and pain > by spirits of *Ammonia*.—Swelling size and shape of hen's egg; pain > by ammonia, but not the swelling.—The bite remained a small purple point for nine days, on the tenth began to swell and turn white like a bee-sting; pain and swelling rapidly increased, dorsum of foot and ankle like a puff-ball, red streak running up leg.—A bright scarlet, papular eruption on both lower limbs, which stung and burned like fire.

27. Fever.—Extremities cold and flaccid.—A cold, clammy sweat covered l. lower extremity; in morning sweat covered both limbs.

Piper Methysticum.

Macropiper methysticum. Ava. Kava-kava. Kawa. N. O. Piperaceæ. Tincture of fresh root.

Clinical.—Albuminuria. Anus, prolapse of. Brachialgia. Brain-fag. Catalepsy. Cystitis. Dysuria. Eczema. Gonorrhœa. Headache. Head, enlarged feeling. Ichthyosis. Leprosy. Neuralgia. Neurasthenia. Orchitis. Paraplegia. Prostatorrhœa. Rheumatism. Toothache. Urethritis. Uric acid, excess of.

Characteristics.—*Piper methysticum* (it is called *Macropiper methysticum* in most recent botanical works, but I retain the older name by which it is best known in homœopathy) furnishes the root called Kava in Polynesia. The natives use it as a stimulant, either chewing the root or drinking a beverage made of it before undertaking any important business or religious rites. Excessive indulgence in it produces a skin disease like leprosy, called at Tahiti Arevareva. Lutz (quoted *H. W.*, xxviii. 175) describes the disease as observed amongst natives of the Sandwich Islands: "The skin, particularly that of the extremities, assumes the appearance of well-marked ichthyosis, associated with a certain degree of atrophy, such as is observed in senile skin. There is an absence of inflammatory symptoms." The mental symptoms of the" Intoxicating Pepper" (μέθνσις, drunkenness) are the most interesting feature of the drug's action. W. N. Griswold proved the third and second dilutions, and developed a large number of nervous, mental, and brain symptoms,

among which are some which have proved to be keynotes. The drug causes a feeling of buoyancy, as if every nerve was strung up to the highest pitch; feels he can work without fatigue, quickly followed by a feeling of tired brain, and over-sensitiveness to all external impressions. Mental tension; feeling as though the head were enlarged even to bursting. The mental symptoms, excitement or depression, and the headache, were > by diversion of mind. This is one of the keynotes, and it has served to indicate Piper m. in connection with other symptoms. Griswold cured a case having burning in chest, > *by diverting mind* (*Org*., i. 229); and three cases having: "Agonising pain, with tossing, twisting, and writhing; patient *driven irresistibly to change position, which generally gives little or no* >." This italicised passage is the second keynote of *Piper m*. These cures were with the 1x or Ø tinctures. Skinner gave fractional doses of Ø tincture in water to a highly excitable young girl who had severe toothache and earache, and had worn out her family by the incessant day and night attendance she required. The pains were dragging, heavy, < at night in bed, and after or when eating, "forgets all about her pains if amused with anything, but directly she is tired of it she exclaims, 'Oh, my tooth or ear!' " In addition she had "Agonising pain with tossing, twisting, and writhing; irresistibly driven to change position." The patient slept well that night the first time for a fortnight, and had no more pain. The remaining swelling was removed by *Puls*. 200. Skinner also reports this case: Miss R., 20, has toothache in a decayed molar, > if attention is diverted by anything sufficiently exciting. When pain is at all violent she has no rest in any position, must keep continually changing it. *Piper m*. 500 (F. C.) was given, and there was relief very soon after the first dose. A few doses completely removed the pain (*Org*., i. 299).—*Piper m*. has much dizziness and vertigo; > on closing eyes. The forehead was full, "solid with pain;" this shifted to occiput and cervical spine, where it became a compression, extending as a constricting sensation to stomach and chest. The sensation of enlargement of head was marked and persistent. Farrington says convulsions simulating catalepsy are produced. Cerna (quoted *H. W*., xxvi. 556) as a result of his investigations found *Piper m*. a general and local anæsthetic. It diminishes reflex action by its action on the cord, and kills by paralysing respiration. Cerna illustrated its relationship to *Cubeba* by citing cases of gonorrhœa, acute and chronic cystitis, gleet, prostatorrhœa, vaginitis, cured with it. The provings give the indications. The symptoms were < before meals (sour eructations); reading and thinking; urinating (burning in urethra); walking. Going down stairs = symptoms to rush up. > Moving; diverting mind; open air; closing eyes (vertigo).

Relations.—*Antidoted by:* Puls. and Rhus (partially). *Compare:* Cubeba, Piper nig., Matico (botan.). In > by diverting mind, Ox. ac. > By motion, Rhus. Feeling of buoyancy, Coff. (but with Coff. the reverse condition of brain-fag does not quickly follow). Neurasthenia, Pic. ac., Arg. n., Avena. Unbearable pains, Coff., Aco., Cham.

SYMPTOMS.

1. Mind.—Hilarious from 10 a.m. till 1 p.m.—Lively after an emission.—Lively and inclined to work, can dance with more ease than usual.—Agreeable excitement and support against great fatigue.—From increased doses intoxication of a sorrowful, silent, and sleepy character, different from that produced by alcohol.—Faculties sharpened.—(Capable of working more without fatigue or brain-fag.).—Lazy and drowsy.—Deep torpor and irritation from least noise (intoxication from root grown in damp soils).—Want of vigour, timid, apprehensive.

2. Head.—From 5 to 9 p.m. very dizzy; swimming sensation and faintness.—Intoxication, with fantastic ideas and desire to skip about, although he cannot for a moment hold himself on his legs.—Vertigo in morning in bed, with frontal pressure.—Brain tired; in morning on waking, > getting on feet.—Tired feeling in brain at night.—Fulness, sometimes in one part, sometimes in another, < in forehead.—Heaviness of head.—Headache with pressure in upper part of orbit; with sleepiness.—Shooting: intermittent after 3 p.m., in l. supra-orbital nerve; in l. temple.—Headache: in l. supra-orbital nerve; back of eyes; l. brain from front to back; over eyes and deep-seated; at 9 a.m., < 3 p.m.; in afternoon and evening, with drowsy and stupid feeling; above eyes at 5 p.m.; at 7 p.m.; in l. side and deep in upper part of orbits, with pain on moving eyes; intermittent in r. frontal eminence, > open air and motion; above r. eye radiating over eyes, at 10 a.m.; heavy in forehead and temples, < thinking and reading.—Frontal brain "solid with pain"; this ache during day generally moved to base of brain and along medulla, > by slight motion, < by large, continued and active motion; slight mental effort, passing from topic to topic, for an instant >; sustained effort <.—Compressive pain and soreness back of head and cervical cord; disappear later leaving cerebellum sensitive; parts feet treble their normal size.—Dulness in forehead, with fulness and pressure, and on raising head or moving it to either side vertigo, after the noon meal the pressure shifted to lateral and occipital regions, < lying down, but not amounting to real pain, pressure; < remaining in one position, > moving, apprehension of pain by rapid movement, but temporary relief from it.

3. Eyes.—Conjunctivæ red.—Pain along r. optic nerve when reading at 3 p.m.—Pain deep in l. eye as if ball would be pressed out, in the street at 5.30 p.m.—Dizzy blindness when dressing, vertigo, > closing eyes, directing attention to head and exerting the will, at the same time vertigo, then rush of blood and fulness in forehead, then similar sensation in occipital and basilar regions.

4. Ears.—Singular pressure in lobules of pinna of l. ear.

6. Face.—Pressure outward in face at 7 p.m.

7. Teeth.—Teeth deep yellow.—Teeth sensitive to cold water, cold air, brushing, &c.

8. Mouth.—Tongue feels as if covered with velvet or fur at night.—Burning on tongue.—Burning in whole mouth followed by numbness.—Dryness of mouth on waking from afternoon nap, with sweat (in a hot day).—Salivation.—Taste: nauseous; sweet, then piquant and sharp; pappy; everything tasteless; lost to food, but ravenous haste in eating.—Taste and relish to food not as usual, at noon, but appetite unusually good.

10. Appetite.—Appetite: formidable at 8 p.m.; slight; hungry at noon, but not able to eat much; able to eat but little supper.

11. Stomach.—Sour eructations, < an hour before meals and at night, at times rolling up and rumbling from stomach to mouth, but generally breaking at throat-pit, and in throat-pit sensation of something that cannot be swallowed, the latter temporarily > by eructations.—Bloating at 11 p.m.—Constriction extending from base of brain.—Crampy pain, > pressure against edge of table.—Warmth in stomach.

12. Abdomen.—Pain: every day about 9 a.m.; in forenoon after first stool, with distressing full sensation; > motion.—Pain in abdomen, above umbilicus; in r. groin when walking, then a large stool, the latter part soft.

13. Stool and Rectum.—Diarrhœa threatened.—Stool: loose in morning, more difficult in evening; soft, difficult.—Constipation: stool hard; large; light-coloured.—Stool large; soft.—Urging: all day; every evening.—Continuous desire, next day forced a large stool, which caused prolapsus ani.—Burning in rectum.

14. Urinary Organs.—Micturition at 4.45 a.m.—Burning in urethra during micturition.—Urine nearly neutral at 10 a.m., hot and over-acid at night.—Urine: increased; scanty in morning.

15. Male Sexual Organs.—Shooting in penis.—Erection: in afternoon; at night; at 4 a.m. after an emission.—Pain in r. testicle.—Emission early in morning, without dreams.—Amorousness.

18. Chest.—Heaviness behind upper part of sternum, as from wind that cannot be eructated.—Constriction of chest and stomach, extending from base of brain.

19. Pulse.—Pulse steadied.

20. Back.—Pain in back only felt on pressure.—Soreness about second dorsal vertebra.

21. Limbs.—Pain: in r. foot and wrist and l. toe at 10. p.m.; r. elbow and l. knee, with stiffness; r. foot and back of l. hand at 11.30 p.m., with heat of them.—Pain in r. arm as if marrow would be affected, changing its location, with paroxysmal paralysed feeling in hands, in toe at 9 p.m.

22. Upper Limbs.—Pain: in l. shoulder; in l. arm in the street, with flushing heat in l. hand.—Excoriating pain in r. arm, as if the marrow would be affected; paralysed feeling in hands.—Pain in r. arm, running in all directions, with heaviness, soreness, and tired sensation.—Dragging in l. arm at 8 p.m., > 10 p.m.—Tingling as from an electric current from l. elbow to fingers.—Numbness of r. elbow.—Pain in r. wrist, < writing.—Weakness of l. hand.—Pain in joint of l. thumb, < pressure.

23. Lower Limbs.—Drunk in his walk, but intellect unclouded, aware of his inability to control the movements of his legs.—Numbness of lower limbs.—Weakness; all day; in afternoon; in thighs as if unable to stand.—Sticking in l. knee at 4 p.m. when walking.—Heaviness of legs when walking.—Pain: in feet; l. foot and toe; r. sole; at outer and under border of l. foot and in r. great toe, with coldness of l. foot.—Sticking: in end of l. toe on waking at 4.45 a.m., in great toe when moving and walking.

24. Generalities.—Emaciation and decrepitude.—Trembling.—Pains (esp. of head) temporarily > by turning mind to another topic.—Feeling as if drug descended and impressed lower part of system, causing trembling of abdomen and lower limbs and blood-vessels connected therewith, but on descending stairs the drug seemed to come upward through the circulation, reaching the brain, causing exhilarating dizziness and disposition to swing and stagger, as if under the influence of liquor, felt talkative and happy, after the dizziness felt a "toned-up" condition of brain and nervous system, dizziness returned on beginning to move.—Nervous system strung up to its highest tension.—Stimulating and sedative effects, then sweat.—Vigour; all day, with exhilaration, next day feelings varying and generally depressed.—Uneasiness and weakness during day, with timidity and apprehension.—Weakness in morning, > rising and moving around.—Want of tone and life in all functions towards night.—< In open air and on motion.

25. Skin.—Covered as in leprosy with large scales, which fall off and leave white spots, and these often become ulcers.—Dryness, esp. where it is thick, as on hands and feet, with scales, cracks, and ulcers.—Painful hard swelling in lower corner of l. ear; red, painful lump, threatening to become an abscess, on forehead above r. inner canthus and on back.

26. Sleep.—Sleepiness: at 10 p.m., soon afterwards liveliness and wakefulness; irresistible.—Hard sleep several times a day.—Stupid sleep.—Heavy sleep with disturbing but unremembered dreams.—Sleepless; from 12 till 2.30 a.m.; at 4 a.m., after an emission, then sound sleep, next night wakeful after an emission till I got up for breakfast; latter part of night, mind working on business problems, next

morning tired feeling before and after rising.—Difficult falling asleep.—Restless sleep last part of night.—Fragmentary sleep last part of night.—Fragmentary sleep from 12.30 till 4.20 a.m., with varied and exciting dreams, then sleeplessness so that I had to get up at 4.30 a.m., did excitedly all kinds of unusual office work.—Dreams: curious, nonsensical, wild; amorous; of travelling by rail; active, vivid, last part of night, alternating with half-conscious waking; in afternoon, of fighting unknown men, left them to follow an unknown woman, and when she left me found that she had conducted me to a prayer-meeting, which must have changed to a restaurant, for I ordered a Hamburg beef steak, but woke before it was served; of a fire, heard the engines and firemen.

27. Fever.—Chilliness for the last few hours, at 8 p.m.—Heat: at 9 a.m.; flush of general heat; in face and hands, < l. hand; flushing, in cheeks; heat in l. ear-flap and l. hand; over upper part of body in evening.—Hands sought cool places, otherwise no perceptible increase of heat.—Heavy perspiration, with great dryness of mouth on waking from afternoon nap.

Kerosolenum.

[One of the lighter products (probably the lightest) obtained by distillation from the crude oil obtained from *Albatite* from Nova Scotia, Kerosolene being the trade name given by the "Downer Kerosene Oil Company." Nearly or quite identical with "Gasolene," the lightest oil from Petroleum.—Allen.]
Solution in Rectified Spirit.

Clinical.—Anæsthesia. Convulsions. Ecstasy. Laughter.

Characteristics.—The effects of *Kerosol*. have been observed on workmen, and also experiments have been made with it for the purpose of testing its anæsthetic properties. It causes a pleasurable kind of intoxication, but too much muscular rigidity, asphyxia, and intermittent pulse to render it a safe anæsthetic. Laughter was noticed in two cases, and this should prove an indication in some kinds of delirium and insanity. The symptoms are > in open air.

Relations.—*Compare:* Petrol., Paraff., Benzin.

SYMPTOMS.

1. Mind.—On breathing the vapour one seems to float away into a wavy maze with a sense of complete loneliness; there seems but one object in the universe, oneself; on recovery, the first object seen seems the only other object.—Laughed (after tooth extraction) and only felt he had had a pleasant dream.—Lost himself, but was inclined to laugh and would not keep still.

2. Head.—Peculiar lightness of head.—Slight headache.

3. Eyes.—Eyes a little unnaturally open and staring.

6. Face.—Momentary dusky redness of face at each convulsion (as in epilepsy).

18. Chest.—During the convulsions breathing somewhat checked by rigid contraction of chest muscles.

19. Heart.—Pulse: accelerated; intermittent; volume diminished during insensibility.

21. Limbs.—Weakness of the limbs.

24. Generalities.—Moderate convulsions.—More muscular rigor than usual in favourable anæsthesia.—Partially or wholly insensible, but rapidly recovers when brought into open air.—Insensibility complete, though eyes not closed.

27. Fever.—Some sweating.

Kino, see Angophora.

[Kino is the name of various astringent gums, obtained from several plants, principally Pterocarpus marsupium (Indian Kino) and P. erinaceus (African Kino). These belong to the N. O. Leguminosæ. Under the name of "Kino Australiense" Allen gives symptoms of "Red gum." These are nearly identical with those obtained by F. Kopp, and recorded under *Angophora*. (*which see*). Lippe gives under *Kino* (origin not stated) "Stitches in ear (r).—Suppuration after inflammation of ear."]

Kissingen.

Cold, chlorinated, gaseous, saline Springs of Kissingen in Bavaria (Source Rakoczy). Dilution.

Clinical.—Albuminuria. Constipation. Corns. Diabetes. Diarrhśa. Gout. Hćmorrhoids. Liver, affections of. Mesenteric glands, affections of. Noises in ears. Rectum, affections of. Spleen, affections of. Warts.

Characteristics.—The water of *Kissingen* has been proved by Carl Preu, and observations have been made on its general effects. The composition of the solid

constituents is very complicated, but *Nat. mur*. is the leading ingredient, existing in the proportion of 5.82 out of a total of 8.55 in the 1,000. It compares with Nauheim, Kreutznach, and, to some extent, with Vichy. Constantin James gives an excellent account of its action, and one of especial interest to homśopaths, as it bears strongly on the doctrine of chronic diseases and the homśopathic aggravation. The dose is from three to six glasses of the water in the morning and two at 4 p.m.; but the general rule is that no more is to be drunk than the stomach can digest without difficulty. In the first days there is increase of appetite and force; but in proportion as the water is absorbed the effects become general. Then an eliminatory "crisis" comes on. The stools become brownish, loose, bilious. The urine is turbid, depositing a sediment which rapidly putrifies. The secretion of the bronchial, genital, and ocular mucous membranes, and also of the skin, is increased and changed in character. At the same time patients experience a sort of moral and physical prostration, and *are alarmed to see old and long-forgotten troubles reappear*. This crisis, which appears in the first or second week, soon disappears of itself, and the cure proceeds. The conditions against which *Kis*. is especially useful are abdominal affections—especially a catarrhal ("saburral") condition of the primć vić; intestinal atony; convalescence from typhoid and choleraic affections; affections of the liver and spleen and intestinal glands. Also in cases of gout "where the asthmatic principle appears to be repercussed upon the abdominal viscera"; for then the waters draw it out to the articulations. "Only these waters require to be managed with extreme prudence; if you overdo the doses by ever so little you will bring on a true attack of gout." Thus far Constantin James on the effects on the sick, and observations recorded in Allen confirm them. Some of these effects were also observed in patients, and one of these is noteworthy. The patient suffered from vomiting of blood consequent on the disappearance of a hćmorrhoidal flux. Under the action of the waters the latter was restored and the blood-vomiting ceased. Among the general effects, trembling of the whole body, weariness, pulsation of the Whole body, stitches here and there, were noted; and especially a very tearful disposition: "If he only looks at any one he must weep" (especially at 10 a.m.); muscć volitantes, and noises in the ears; chills, heat, and perspiration. The symptoms were < in the forenoon and at night, on waking; while eating (vertigo); during menstruation (toothache); while reading and writing.

Relations.—*Compare:* Nat. m. (weeping disposition; chill 10 a.m.; catarrh; constipation); Ant. c. (saburral condition); Urt. ur. (gout); Fer. pic. (warts and corns).

SYMPTOMS.

1. Mind.—Yielding disposition.—Weeping and complaining, tossing, to and fro on account of pain.—If he only looks at any one he must weep.—Constantly seeks for unpleasant things to think about and broods over them.—Anxiety and weakness preceding menses.—Very easily frightened.—Frightful thoughts at night on waking.—Ill-humoured, fretful, exhausted, weary of life; suddenly; always an hour

after drinking the water; very transient.—Inability for mental work.—Irresolute.—Speech difficult because he constantly makes mistakes in speaking.—Loss of ideas.—Weak memory.

2. Head.—Vertigo while eating; suddenly after eating cooked cherries.—Feeling of intoxication.—Tensive headache < by reading.—Rush of blood to head and chest with cold feet.—Pain in both frontal eminences, extends down to nasal bone.—Headache above l. eye with double vision.—Drawing in head extending from root of nose upwards.—Pressive pain deep in occiput.—Tensive pain in whole scalp.—Itching on occiput.

3. Eyes.—White of eye seems yellow.—Staring eye.—Burning in eyes, evening.—Pressure, and itching in eyes.—Lids: tensive; twitching in r. lower; redness; agglutination.—Acrid lachrymation with pain in canthi.—Muscć volitantes.

4. Ears.—Hot ears.—Ringing and roaring in ears.

5. Nose.—Catarrh: fluent; stopped.—Nose dry.—Crawling in r. nostril as if he would sneeze.

6. Face.—Deathly paleness.—Feeling of pressing asunder in both zygomata.—Frighful pressure in malar bones and in ear.—Upper lip burns at night and seems as if it would become swollen.

7. Teeth.—Teeth on edge as after acid.—Toothache during menses.—Roots of all l. lower teeth painful.

8. Mouth.—Coated tongue with pasty taste.—Prickling sticking on margin of tongue as if an ulcer would form.—Much accumulation of saliva, like soap and water.—Flat taste in mouth; his food has sour taste.—Salty taste (of the spring) lasting weeks after using the water.

9. Throat.—Mucus in throat.—Contraction.—Neck glands swell.

11. Stomach.—Appetite without hunger.—Painful hunger but immediately satisfied.—Constant thirst, even in forenoon.—Frequent eructations in open air.—Nausea with accumulation of water in mouth; half an hour after breakfast.—Vomiting of leathery, yellow-brown in mucus.—Excessive vomiting and purging of black clotted blood.—Heaviness and distension beneath pit of stomach.—Stitches in epigastrium, r. side.

12. Abdomen.—Feeling as though everything too tight about hips, obliging her to loosen her dress.—Distended abdomen.—Incarceration of flatus.—Enormous colic with violent cramps.

13. Stool and Anus.—Swelling of hćmorrhoidal veins.—Hćmorrhoidal flux more profuse.—In rectum: feeling of dryness; dragging; frequent stitches; itching.—Frequent ineffectual desire for stool.—Stools: leathery, yellowish brown, diarrhśa-like; pasty.—Evacuation of a large quantity of slimy, bilious matter, smelling like asafśtida (lasted two weeks in one habitually constipated).—Blackish-green stools.—Incredible amount of blackish-green, burnt, lumpy fćces, like large pieces of slate, preceded by blackish-green substances like gastric mucus, preceded by colicky pains and rumbling in abdomen; the former stool required so much exertion and caused so much pain that long-lasting faintness ensued (in a patient with intestinal inactivity).—Frequent bloody stools; afterwards hćmorrhoidal flux and no more vomiting of blood.—Passage of gall-stones.—Constipation.—Stool was difficult to press out of rectum; obliged to press the nates apart.

14. Urinary Organs.—Feeling of moisture at meatus urinarius, as if he would have gonorrhśa.—Itching and sticking in urethra when not urinating.—Sand and gravel in urine for several weeks.

15. Male Sexual Organs.—Unusual seminal emission at night.

16. Female Sexual Organs.—Profuse menstruation; with discharge of membranous concretions.

17. Respiratory Organs.—More hoarse than usual.—Frequent expectoration of mucus.

18. Chest.—Tightness of chest.—Pressure on (l.) chest.—Stitches in l. breast.

19. Heart.—Fulness in precordium.—Palpitation with anxiety.—Beats of heart intermit.—Pulse greatly accelerated and feverish.

21. Limbs.—Cramp-like feeling in limbs, esp. hands, as if arms had fallen asleep; violent inflammation of extensor digitorum communis of both hands in one hitherto paralysed.

22. Upper Limbs.—Weakness and heaviness in arms.—R. arm has fallen asleep and feels paralysed.—Shoulders painful as if hot water had been poured over them.—Fuzzy feeling in finger-tips.

23. Lower Limbs.—Frequently stumbles when walking from stiffness of joints.—Jerking in limbs while writing.—Cramp in r. calf and l. toe at night.—Heaviness of feet.—Painfulness, boring and Sticking in corns.

24. Generalities.—Trembling of whole body.—Unusually weary after a walk.—Uneasiness, cannot lie still in any place.—Stitches here and there.—Pulsation of the body when he remains perfectly quiet.

25. Skin.—Yellowness of skin.—A three-months' old wart on the finger disappears.—Itching eruption on abdomen and feet.—Itching in limbs.

26. Sleep.—Frequent yawning.—Sleeping during day.—Wakes several times at night with great uneasiness.—Jerking during sleep.—Starts up twice while falling asleep is from electric shock through whole body.—One dream follows another the whole night though he frequently wakes between them.—Dreamy steep with confused dreams.—Frightful dreams of murder and fire.

27. Fever.—Chilliness while walking, immediately followed by easy perspiration.—Febrile chill recurring daily at 10 a.m., but generally occurring later.—Shivering and goose-flesh.—Cold hands and feet.—Great heat after a little wine (in one accustomed to it).—Flushes of heat and easy perspiration.—Head constantly hot during febrile chill.—Whole body reeking with perspiration.—Anxious sweat.

Kousso.

Brayera anthelmintica. Kuso. Cosso. (Abyssinia.) N. O. Rosaceæ. Infusion of dried flowers. Tincture of flowers.

Clinical.—Abortion. Tapeworm.

Characteristics.—The flowers of *Kousso* are a favourite remedy for tapeworm with the natives of Abyssinia, and the use of them in European practice for that purpose has led to the observation of the few symptoms recorded, among which thirst, nausea, and vomiting are prominent. In one case miscarriage was caused. The mode of administration as a tænifuge is as follows: Take a quarter of an ounce of the dried flowers, boiling distilled water four ounces. Infuse fifteen minutes without straining. The powder is to be taken with the infusion, in the morning, fasting. Two such draughts may be given. It is best to give a purgative before and an hour or two after the draught. A remark by Alexander Milne is significant to homœopaths: "Though *Kousso* leads to the expulsion of the worm, it seems not to improve the morbid condition which favours its production." (Living tænia placed in an infusion of *Kousso* mixed with milk were killed in about half an hour.) The prostration caused by the treatment is so great that Milne advises a course of *Cinchona* and *Iron* to follow.

Relations.—*Compare:* Cucurb., Granat., Filix m.

SYMPTOMS.

2. Head.—Headache.

11. Stomach.—Thirst.—Nausea.—Vomiting.

13. Stool and Anus.—Prolapsus ani.—Watery diarrhœa.—Stools loose and dark.—Expulsion of lumbrici, of dead tænia solium and of bothriocephalus latus.

14. Urinary Organs.—Increased secretion of urine.—Diuresis followed by scanty urine.

16. Female Sexual Organs.—Miscarriage.

24. Generalities.—Rapid and extreme prostration.

27. Fever.—Slight sensation of heat.

Ratanhia.

Rhatany Root. Ratanhia. Mapato. Pumacuchu. The root of several species of Krameria, especially Krameria triandra. N. O. Polygalaceć (or Leguminosć according to some). Tincture of the root.

Clinical.—*Anus, fissure of*. Breath, offensive. Constipation. Diabetes. Dysentery. Dyspepsia, atonic. Epistaxis. *Eyes, pterygium*. Fissures. Gonorrhśa. Hćmorrhages. Hćmorrhoids. Hiccough. Hydrothorax. Infra-mammary pain. Itching. Metrorrhagia. Miscarriage. Nipples, fissures of. Pimples. Pleurisy. Scurvy. Snoring. Speech, arrested. Stomach, distension of; ulceration of. Throat, contraction of. Tinnitus. Worms.

Characteristics.—"*Krameria triandra*, remarkable for its entire, obovate, acuminate leaves, covered on both sides with silky hair, is one of the species most known as yielding the Rhatany root of commerce, but all the species (of *Krameria*), as far as known, are intensely astringent. In Peru an extract is made from this species which is a mild, easily assimilated astringent medicine, possessed of great power in passive, bloody or mucous discharges; it acts as a tonic in weakness of digestive organs and muscular debility, and is even useful in intermittent and putrid fevers. It is also styptic and restores tone to relaxed parts, and when applied as plaisters is said to cure all kinds of ulcers. An infusion is used as a gargle and wash, and the powder forms with charcoal an excellent tooth-powder. The colour of the infusion of the root of the *Krameria* is *blood-red*, on which account advantage is taken of it to adulterate port wine" (*Treas. of Bot.*). Teste (who puts *Rat*. in his Sulphur group), writing of its pre-homśopathic use, says, "There is perhaps no plant the properties of which have been so well indicated by chance as this. Used as an astringent and tonic, this root sometimes arrests passive hćmorrhages (*epistaxis, hćmoptysis, metrorrhagia*, &c.). It was

successfully used against *scurvy, mucous discharges*, such as *chronic catarrh of the bronchia, vagina, large intestines*, &c., against various forms of *incontinence of urine, chronic śdema of the skin*. Dr. Tournel, who, no doubt, did not suspect that *Ratan*. produced abortion, had the happy idea of prescribing it as a tonic in cases of incipient miscarriage, and thus preventing that accident in delicate and nervous females who had never yet been able to go their full time." All these uses are really homśopathic, as is also the cure of a case of fissure of the rectum by Bretonneau, whom Teste quotes from Trousseau and Pidoux: A lady suffered from constipation and fissure of rectum, which caused her horrible pains and had damaged her health. Bretonneau ordered a daily injection mixed with one-fourth of *Rat*., and in a short time constipation and fissure were cured. Other like cases were cured; and then the same treatment was given in cases of fissure without constipation, and again with the same success. The provings (Hartlaub and Trinks chiefly) bring out the keynotes of *Rat*. in rectal cases: "Straining, stool so hard she cried out, with great protrusion of hćmorrhoids; *followed for a long time by burning in anus*." The burning persisting for a longtime after the stool is very characteristic of *Rat*.; and it occurs when the stool is diarrhśic as well as hard. Burning also precedes and accompanies the stool. Another peculiarity in connection with the stool is a bursting headache, which accompanies and follows a straining at stool. Dry heat with sudden stitching like knife-stabs. Oozing at anus. Dropping of blood from anus. One patient cured by *Rat*. of fissure had > by application of hot water; he sat in a sitz-bath as hot as he could endure; the relief only lasted while in the bath. In connection with the rectal symptoms is an important head symptom: "Pains in middle of forehead, as if brain would fall out," and a similar pain after stool. The head pains are also < on bending forward. The eye symptoms are striking: burning, smarting, twitching of lids, obscured vision. This symptom has led to the cure of cases of pterygium: Inflammation of whole of eye; a membrane seemed to extend to central point of eye, which burned. The old use of *Rat*. in nose-bleed, scurvy, and as a tooth-powder are justified by the symptoms of the proving: Violent nose-bleed; bleeding gums; toothache < lying down. A curious symptom in the aching molars is a sensation as if coldness rushed out of them. Toothache of pregnancy compelling the patient to get up at night and walk about. "Tasteless water collects in mouth" may meet another condition of pregnancy; and *Rat*. both causes and prevents abortion, metrorrhagia and leucorrhśa. It also meets fissure of the breasts in nursing women, as well as fissure of the anus. Contractive sensations (*Rat*. is astringent") are numerous: in stomach; groins; anus; eyes; neck; muscles; throat; "painful spasmodic contraction of throat during which she could not speak a loud word." *Peculiar Sensations* are: As if intoxicated. As if head in a vice. As of a white speck before eyes; skin before eyes. As if coldness rushed out of molars. As if rectum and anus were all twisted up. As if splinters of glass in rectum and anus. As if rectum protruded and then suddenly went back with a jerk. As if abdomen (and chest) cut to pieces. Movement as if something alive in abdomen. As of cobwebs about right side of mouth. Jerkings and quiverings. *Eyelids feel stiff*. Right side is most affected.─Cushing, who made

a proving of *Rat*., says (*Med. Cent*. quoted *H. R*., xi. 142) it caused great itching in the rectum; and he has cured with it since nearly every case of pin-worms in his practice. In a woman, old and feeble, he cured with *Rat*. 3x internally, and a *Rhatany* rectal suppository each night, frequent discharges of mucus, blood and pus from the bowels night and day with great pain and burning in rectum almost wholly preventing sleep. Cushing considers that, next to *Sang. nit., Rat*. meets more rectal cases than any other remedy. Rummel (quoted *H. R*., i. 140) relates the case of a servant girl who had rapid twitching of the lids of right eye to such an extent as to hinder her seeing. There seemed to be also a rotary motion of the ball. *Bell*. and *Calc*. failed to relieve. *Rat*. 12 relieved quickly. The symptoms are: < By touch (teeth). Pressure > pain in chest. < Lying down; > by motion. < Straining at stool; sitting bent over (headache); stooping. Stepping = pain in ribs. Sitting = weariness and heaviness in right thigh; pain in right knee and great toe. Bending arm <; extending it >. Eating <; emission of flatus >. After dinner, hiccough; before dinner, abdominal distension. > Hot-water applications. > Open air; moving about in open air. < Night; "most symptoms come in evening, night and morning. They are > by exercise and in open air, very much < by uneasiness of mind" (Teste).

Relations.—*Follows well:* Sul., Bovis, Sep. in uterine affections (Teste). *Compare:* Botan.; pleurisy, Seneg. Fissure of anus, Nit. ac. Anal symptoms, Sul., Ir. v., Canth., Pćon., Graph. (Graph. is nearest, but has not the constriction of *Rat*.). Splinters of glass in rectum, Thu. (Sticks, Ćsc. h.). Pain in head from straining at stool, Indm., Pul., Sil. Hiccough, Cycl. Burning on tongue, Rap. Ran. s., Sang. Toothache of pregnancy, Rap., Mg. c., Cham. Alive sensation, Croc., Thu. Cobweb sensation, Ran. s., Bar. c.

SYMPTOMS.

1. Mind.—Irritable, peevish, and quarrelsome humour.—Apprehensive depression when alone, > in company.—Woke with a start, 2 a.m., with trembling apprehension and fear.—Changeable mind.

2. Head.—Dulness of head as if intoxicated.—Bruised pain in small spots on head.—Jerking in small spot r. temple.—Pains in head, as if cranium were about to burst, esp. when sitting with body bent forwards.—Long-lasting headache as if screwed in a vice.—Jerking, smarting, and shooting in head.—Congestion in head, with heat and heaviness.—Dull, deep stitches on vertex.—Painful tearing and burning on vertex, even at night, > in open air, during menses.—Pain in middle of forehead, as if brain would fall out while straining at stool.—Pains in head as if it would burst after stool.—Tearing from occiput to vertex.—Sensation as if scalp from root of nose to vertex were stretched.—Stiff feeling in forehead < knitting brows.—Itching of scalp not > by scratching.—Itching l. occiput, where small glandular swellings were found.

3. Eyes.—Pains in eyes as if compressed in a vice, and could not be moved.—Sensation in r. eye as if screwed in, or as if there were an impediment so that it could not be moved, still she could move it easily.—Contractions and burning sensation in eyes, esp. in evening.—Inflammation of sclerotica; a membrane seemed to extend to central point of eye that burned.—Sensation as if a cuticle were placed before eyes.—Agglutination of eyes at night, and lachrymation in morning.—Jerks and quivering of eyes and eyelids.—Twitching in r. eye and r. upper eyelid.—Stiffness of upper lids with soreness of upper tarsal edges.—White spot before eye, which obstructs the sight (in evening, by candle-light, with constant urging to wipe the eyes, and > after wiping).—Vision dim for distant objects.—Myopia.

4. Ears.—Tearing in ears.—Itching and shooting in ear.—Violent stitch in r. ear; chirping in r. ear; crawling as if insect in r. ear.—Nocturnal tinkling, and ringing in ears.

5. Nose.—Itching in nose.—Violent itching on tip of nose > by rubbing.—Nostrils inflamed and scabby, with burning sensation.—Epistaxis.—Violent nose-bleed, three times a day, for five days in succession.—Dryness of nose, with frequent sneezing.—Dry coryza, with complete stoppage of nose.

6. Face.—Heat in face.—Tearing pain in face and jaw bones.—Violent tearing in l. malar bone, evenings.—Sensation of cobwebs above r. side of mouth.—Tearing in inner surface of lips in a small spot.—Tearing in l. side of lower jaw and corresponding teeth.—Burning vesicles on the red part of upper lip.

7. Teeth.—Toothache in evening, esp. after lying down (compelling one to rise and walk about); or in morning, generally with tearing or jerking, or at times with digging pains.—Pulsative pain in teeth.—Bleeding of teeth.—Painful sensation of coldness and elongation in the molars, and as if coldness rushed out of them.—(Violent pain in one l. upper incisor, which is painful to the touch.).—Acid blood from gums on sucking them.—Burning at tip of tongue.

8. Mouth.—Dryness of mouth at night.—Tension and burning sensation on tongue.—Tasteless water collects in mouth.—Breath offensive.

9. Throat.—Sore throat, generally felt during empty deglutition.—Painful spasmodic contraction in throat, which stops the voice (unable to speak a loud word).

10. Appetite.—Mawkish taste in morning, in bed.—Thirst; in evening.—Anorexia, with dislike to food and drink.—Constant desire to eat.—Risings, with taste of food; empty.

11. Stomach.—Violent hiccough, which causes pain in stomach.—Long-continued hiccough after dinner.—Nausea and disgust, esp. at night (1 a.m.), with retching and vomiting of food (> in open air).—Vomiting: of water; of mucus streaked with blood.—Pains as from ulceration in stomach.—Excessive distension of stomach.—Stomach feels too full.—Digestion more difficult.—Rolling and constriction in stomach.—Painful constriction of stomach, which is sometimes removed by risings.—Sensation in stomach, and above scrobiculus, as if abdomen had been cut to pieces, < deep breathing.—Heat and burning sensation in stomach and epigastrium.—Sudden painful bursting in pit of stomach.

12. Abdomen.—Repeated violent sticking in r. (and l.) hypochondrium.—Pullings, and a sensation of coldness, in umbilical region.—Pinchings in abdomen, and sides of abdomen, sometimes with a burning sensation.—Movements in sides of abdomen as of something alive.—Shootings, pinchings, and contraction of groins.—Pinching in both groins > by emission of flatus, morning on waking.—Griping in lower abdomen, externally violent itching.—Constrictive pain in small spot in groins; in r. groin.—Sticking in groins, in afternoon while sitting.—Dragging downward in both groins, as before menses, with discharge of mucus from vagina.

13. Stool and Anus.—Hard and broken evacuations, with urgent want to evacuate (with straining) and protrusion of hćmorrhoidal excrescences.—Ineffectual want to evacuate, with troublesome pains in loins.—Straining; so hard that she cried out; great protrusion of hćmorrhoids, followed for a long time by burning in anus.—Sudden stitches.—Fissures; excruciating pains immediately after stool, if costive.—Fissure with constriction.—Dry heat, with sudden stitches, like stabs with pen-knife.—Oozing from anus.—Burning in anus before and during a diarrhśa-like stool.—Very urgent desire for normal stool.—Diarrhśa with evacuation of some drops of blood, accompanied by dragging in groins and rumbling in abdomen.—Stool yellow, diarrhśa-like, with burning like fire in anus.—Sensation as if splinters of glass sticking in anus and rectum in every direction; as if rectum protruded and went back with a jerk; > in hot sitz-bath.—Severe itching about anus.—Pin-worms.—Soft loose evacuations, preceded by cuttings, with burning pains in anus, before and after.—Thin, fetid stools, burning like fire in anus.—Sanguineous diarrhśa.—Discharge of blood from the rectum, with or without stool.—Pains in head, as if it would burst (during and) after evacuation.

14. Urinary Organs.—Frequent and urgent want to urinate, with scanty emission.—More frequent and more abundant emission of urine, even at night.—Pale urine.—Urine more scanty, which soon deposits a cloud, and becomes turbid.—Burning in urethra (and root of penis) when urinating.

15. Male Sexual Organs.—(The chronic gonorrhśa became much worse.).—Burning in root of penis while urinating.—Itching in scrotum not > by scratching.

16. Female Sexual Organs.—Pressure in groins, as of a general bearing down towards genital organs, followed by leucorrhśa.—Leucorrhśa with itching in rectum and discharge of bloody mucus.—Catamenia too early and of too long duration, and too copious, with pains in abdomen and loins.—Metrorrhagia.—Miscarriage.—Uterine pains following retrocession of eruption on loins.—Menses suppressed, with swelling of abdomen and breasts, simulating a pregnancy of several months, accompanied by profuse leucorrhśa and constant pain in kidneys.—Menses delayed.—Fissure of nipples in nursing women.

17. Respiratory Organs.—Dry cough, with tickling in larynx, and pain of ulceration in chest.—Some tight mucus evacuated with great difficulty.

18. Chest.—Pressure at chest on the least exertion, with shortness of breath.—Violent pressure in chest as from a stone, with short breath, on slight exertion.—Rush of blood and heat to chest, with difficult breathing.—Ulcerative pain in chest during and after coughing.—Burning stitch in last ribs near back on stepping.—Pain as if cut to pieces in small spot in upper sternum.—Coarse stitch as with a knife in sternum, felt at every breath on ascending steps, takes away breath.—As if pointed instrument sticking in sternum just above ensiform cartilage.—Sticking burning cutting beneath l. chest, along one rib, evening.—Sticking and drawing along l. clavicle as if skin drawn in.—Stitch in l. ribs, so violent it = her to cry out.—Several fine stitches beneath l. breast, on ribs, extending downward.—Throbbing-burning, cutting and ulcerative pains beneath l. breast near pit of stomach < motion, > pressure.—Painful constriction in both sides of chest.—Shootings in chest, esp. when going up stairs, with obstructed respiration.—Congestion (of blood to) chest, with heat, and impeded respiration.

19. Heart.—Sharp sticking in prćcordial region, rather external.—Pulse full.

20. Neck and Back.—Drawing tension, from nape of neck to the bottom of spine.—Stiffness in nape on turning head, > on violent motion.—Tearing in nape of neck, with heaviness of head.—Pain in loins and back, as if they had been beaten.—Bruised pain in whole spine.—Bruised pain in loins and hips, morning rising, > on motion.

21. Limbs.—Tearing in limbs.—Contraction of flexor muscles.

22. Upper Limbs.—Tearing in shoulder, arms, forearms, and wrists.—Spasmodic and painful contractions in elbows and fingers.—Pain in bend of elbow (r.) when flexed, > when extended.—Violent tearing in r. wrist.—Jerking, tearing, and stitches in thumbs.

23. Lower Limbs.—Drawing and tearing in thighs, knees, legs, feet and toes.—Tension and burning sensation in thighs.—Jerking in thighs, calves, and feet.—Tearing from l. tendo Achillis up.—Sprained pain in last joint of big toe,

while sitting, > on motion.—Sticking and burning tearing in l. big toe.—Tickling on heels and soles.—Voluptuous itching in l. sole.

24. Generalities.—Weakness and prostration with anxiety and sweat over whole body.—Malaise with frequent yawning, repeated and laboured attempts to draw a long breath and distressing constriction across chest.—Sore pain frequently mingled with fine sticking now in chest now in shoulders, &c.—Shooting pains, as from excoriation.—Jerking in different parts.—Hćmorrhage.

25. Skin.—Sickly skin.—Small red and white pimples which do not suppurate, esp. between shoulders and on loins, remaining a long time.—Pimples; itching and burning after scratching.—Formication and itching eruption on back.—Itching: in nape and between scapulć; on scrotum; front of thigh; bends of knees, &c.

26. Sleep.—Disposition to sleep, esp. after dinner.—Violent yawning.—Retarded sleep.—Frequent waking, and prolonged wakefulness.—Waking with a start, with trembling, inquietude and fear.—Snoring.—Dreams: of battles; sick people; quarrels, anger, vexation; funerals, death of friends; earthquakes.

27. Fever.—Predominance of coldness, and of shivering, esp. in evening.—General chill 8 or 9 p.m.—Chilly even in warm room.—Heat of whole head with heaviness.—Heat and puffiness of face.—Dry heat in anus with cuttings.—Woke 1 a.m. with sweat, thirst, and dry mouth.—Nocturnal perspiration.

Kreosotum.

Kreasote or Creasote. A product of distillation of Wood Tar. $C_8 H_{10} O_2$. Solution in Rectified Spirit. [J. Meredith makes dilutions of "the first heavy distillate of hard green wood," which he has named *Carbo Pyroligneus*.]

Clinical.—Acne. Amenorrhśa. *Cancer*. Carbuncle. Change of life. Cholera infantum. Coccygodynia. Congenital syphilis. Constipation. *Consumption. Dentition*. Diarrhśa. Ear, affections of. Enuresis. Epithelioma. Eructations. Eruptions. Flushings. Gastromalachia. Glossitis. Hćmorrhages. Hćmorrhagic diathesis. Herpes. *Hysterical vomiting. Irritation. Leucorrhśa*. Lip, epithelioma of. Lupus. *Menstruation, disorders of*. Neuralgia. Ovary, affections of. Prostate, irritation of. *Pregnancy, vomiting of*. Pustules. Rheumatism. Seasickness. *Stomach, affections of*. Syphilis. Syphilitic deafness. *Teeth, caries of. Toothache*. Ulcers. *Urine, incontinence of*. Uterus, affections of. Vomiting. Whooping-cough. Yawning.

Characteristics.—*Kreosote*, a product of the distillation of pyroligneous acid and of tar, the preservative principle of the smoke, used for smoking meats and fish,

was discovered by Reichenbach, a Moravian chemist, early in the nineteenth century. The second edition of his work, published in 1835, supplies many of our data, but independently *Kre*, has been well proved. Its name, derived from the Greek, means "flesh-preserver"; and Teste includes it with *Arsen., Merc. cor., Plumb., Stan., Nit. ac., Sul. ac., Crocus*, and *Arg. met*., in his *Merc. Sol*. group. He remarks that several members of this group, whilst preserving dead organic matter from decomposition, have just the opposite effect on living tissues. The entire group have these characters: Suppressed or more frequently increased secretions with putridity. *Foul breath*. Bloating. Caries of teeth and bones. Cadaverous coldness. *Predominant left-sidedness*. Deep, nervous and mental derangement. Violent oscillation of symptoms-ravenous hunger to anorexia, &c. All favour the production of intestinal parasites and all are therefore anthelmintic. Excessive indulgence in smoked meats and fish is very injurious to the health. The principal observed effects are: Scorbutic condition of gums, falling out and decay of teeth, foul breath, costiveness, malaise. (*Salt*, another great preservative, also produces scurvy.) Kermes, of Weinsberg, has collected 135 cases in which death has occurred apparently from eating smoked foods. The leading symptoms in all were: Burning pain at epigastrium, bloody vomiting, meteorism, violent colic with constipation, slow breathing, sinking of pulse and dilatation of pupils. (Teste.) Reichenbach not only discovered *Kre*., he also introduced it into medical practice, and there was, as usual, a rush for the new remedy, which for a short time was a panacea; and then, except among homśopaths, fell into neglect. Teste observed that it *acted particularly well* on infants in the cradle, and congenital syphilis was a very strong indication for it. The marked action of *Kre*. on the teeth and dentition confirms this. [Cooper cured with *Kre*. 30 a case of auditory vertigo in a patient with pegged teeth. No other medicine would touch the case.] But it is also frequently called for in acquired syphilis, especially in the skin manifestations. Nash confirms the action on children and especially during dentition. The teeth decay almost as soon as they appear. Gums dark red or blue and very painful; incessant vomiting; cadaverous-smelling stools. The urinary symptoms are also marked, and *Kre*. is one of the most important remedies in enuresis. The chief urinary features are: (*1*) Copious pale urine. (*2*) Sudden; great urging; the patient cannot go quick enough. (*3*) The child wets the bed during the first sleep which is very profound. J. Meredith ("Agricola") proved on himself (*H. W*., xxviii. 84) "the first heavy distillate from hard green wood," obtained at charcoal works, in the 4x attenuation. The symptoms observed were so like those of pure *Kre*. that I do not think they need be separated. Among them were: Great thirst in evening. Enormous appetite. Stabbings here and there. Eyes feel as if in a woody smoke. Sneezing. Spleen pain. Nasal pus. [Teste emphasises a discharge "of fetid pus from nostrils."] At 7 a.m. sitting up in bed, pain and stiffness across hips and sacrum, which continued during the day. *Prostate and bladder irritation*, during night frequently rises to pass a very little urine, coming away like spray. It cured at the same time constipation of ten to twelve days' duration. Meredith cured with it a girl, ćt. 17, of intense urethral scalding *after* urination (*H. W*., xxx. 83). *Kre*. is no

less suited to women than it is to children; and especially to the leucophlegmatic temperament. Grauvogl cured with *Kre*. 3x a girl of 20 of suppression of menses, with a concomitant state of imbecility. (In another woman who had suppressed menses with tertian intermittent fever, the intermittent was cured with *Chi. sul*., one grain four times a day, and then Grauvogl, hearing for the first time of the suppression of the menses, gave *Kre*. 3x, with the result that the fever returned in full force. *Quinine* was again given, and the fever again disappeared. Before the next period, as the patient was of the *Nux* type, that remedy was given and the period was re-established. According to Grauvogl *Kre*. has a short period of action, one or two days, *Chi. sul*. having two or three weeks; and he quotes the case to illustrate the law of incompatibility; in intermittents *Chi*. may be given after *Kre*., but not *Kre*. after *Chi*.) Guernsey summarises the action of *Kre*. on women thus: "*Lencorrhśa putrid*, with accompanying complaints., leucorrhśa in general, especially if very fetid and exhausting. Female genitals in general. Complaints after menstruation; of females at change of life." According to the same authority *Kre*. affects especially the inner temples, external ears and lobe of the ear. It is suited to *very severe* old neuralgias with tearing pains sensations affecting upper jaw; upper teeth; inner navel region shoulder-blades. Dry-peeling lips are a characteristic: and *Kre*. has cured a tumour of lower lip, supposed to be epithelioma, with dry, cracked skin. In my own experience *Kre*. (3 and 30) meets a very large proportion of toothache cases where the teeth are decayed, especially if the gums are scorbutic. Its nearest rivals are *Staphisagria* with *blackened* teeth, and *Mercurius* with suppurating gumboil. The scapular pain is illustrated by a case of Lutze's. A lady had a pain under left scapula, < by motion, excruciatingly < by riding in a carriage; > by pressure, by lying with that shoulder on something hard, and by warmth. A long succession of homśopathic remedies was given in vain. Then the old school had a trial with *Antipyrine* and *Morphia*, with no better success. Long after, Lutze met the patient casually, and she mentioned that she had pains in the *left thumb*. This led him to *Kre*., under which he found the other symptoms of the case. He asked the patient to let him give her one other dose. She consented. *Kre*. 200 was given and completely cured the patient, who had become nervous and worn out by the suffering she had endured (*J. of Homśopathics*, May, 1890). In the same number of the same journal a case is recorded by Jean. I. Mackay in which *Kre*. 45m., twice repeated at long intervals, wrought a cure: Mrs. L., 28, fair, nervous. Has one child, ćt. 9. Six years before Mackay saw her had an abortion and since then health had been failing. Her chief complaint was of hćmorrhage from the uterus, brought on by lifting, over-exertion, and *always followed coitus*. No pain during coitus. Menses regular but profuse and clotted. Constant dull aching pain in back. The day after the flow has a terrible left-sided headache > by hot water applied to head. Annoying itching in genitals at times. Os eroded, speculum soon filling with clotted blood. "Coitus followed by flow of blood the next day" is a keynote for *Kre*. W. P. Wesselhśft (*Hahn. Ad*., xxxviii. 23) confirms these symptoms: Coarse, red elevated acne pimples, especially in *blonde women*. Nocturnal enuresis from too profound sleep; child cannot be awakened

when taken up. Giving out of knee-joint with annoying cracking (in a large, fat *blonde woman*). Large purulent blisters on concha of both ears, with a red base, like small-pox pustules. Chronic headache accompanied with great drowsiness, during which the patient would sleep most of the time, and groan in his sleep. Relief was followed by the appearance of a great number of small warts on scalp. [Hering mentions these constitutions as suited to *Kre*: Dark complexion, slight, lean. Complexion livid, disposition sad, irritable. Old women. Torpid, leuco-phlegmatic temperament. Old-looking children, hard to awaken. Blondes.] The following case of coccygodynia was reported in *Amer. Hom*. Miss A. complains of unbearable burning pains in sacrum extending down to coccyx, with feeling there when sitting as if an electric battery were attached with needles which were pricking through the skin. > Rising from seat. Attended with milky leucorrhśa. *Kre*. cured in three days. James H. Freer (*N. A. J. H*., xliv. 489) cured a lady over 80 who suffered from incontinence of urine on the occurrence of a bronchial attack which compelled her to keep her bed. Villers has reported a case of incontinence < *when lying down* cured by *Kre*., and this led Freer to the remedy, which rapidly cleared up the case, bronchitis and all. (In Villers' case *Kre*. 30 was given for "incontinence of urine when lying down" because he had cured with it many cases of uterine hćmorrhage occurring only in, or < by, the horizontal position.─*H. R*., x. 24.) Freer also cured incontinence in a case of locomotor ataxy (man, 74) with *Kre*. 6. An allopathic authority, Vladimir de Holstein, of Paris (*Amer. Hom*., xxiv. 93), accidentally cured with 6-drop doses of *Kre*., given in beer or milk, aggravated constipation in a chlorotic girl. He gave it with the sole idea of "disinfecting" the intestines. The vomiting of *Kre*. is noteworthy. The most characteristic form is that due to weakness of stomach, which cannot digest, and which rejects a meal undigested some hours after it was eaten. Vomiting of pregnancy, sweetish water with ptyalism; of cholera infantum; incessant vomiting with cadaverous stools; in malignant disease of stomach. Gentry has recorded the following: Lady, 45, on visiting a friend ill with dysentery, was struck with the odour, went home, commenced to vomit, and vomited all food or drink and continued, without ceasing, vomiting or retching for three weeks, being fed by the rectum all the time. She had to be held up by the nurse. She was greatly emaciated. *Kre*. 200, one dose given. In twenty minutes the retching ceased. The patient fell asleep, had no more vomiting, and rapidly recovered. Up to this time she had been under allopaths, who advised that homśopathy should be tried, as they could do no more. Harmar Smith (*H. W*., xxiii. 496) cured a girl of 10 of very frequent and violent eructation; she was apparently healthy in other respects. *Bell*. and *Puls*. did no good. Arg. n. aggravated. *Kre*. 2x at once did good and cured in a few days. A fatal case of poisoning with eighteen drops of *Kre*. has been recorded (*H. W*., xxix. 344) and brings out many of the symptoms in the cases above quoted. A woman, 52, was given for a pulmonary affection *Kre*. six drops in milk three times a day. After the third day she had: Dysphagia, gastric pain, vomiting, diarrhśa, and a distressing tendency to cough. On admission to hospital twenty-four hours later the breath smelt of *Kre*. Skin and mucous membranes pale; lips blue;

dysphagia marked. Mucous membrane of mouth of a dull white colour in parts. Paralysis and anćsthesia of palate, paralysis of larynx, analgesia of left arm and part of left leg. Later, albumen and casts in urine. After four days, some stupor, and weakness more marked. Next day collapse and death. After death two large erosions were found on upper part of śsophagus and others about pylorus. Stomach red and congested. Kidneys acutely inflamed. Cloudy swelling of liver.─Burning pains are a marked feature of *Kre*. (lupus of nose with burning pains. Chronic pneumonia with pain like red-hot coals in chest); and stitches are even more characteristic. Itching is intense. Among the *peculiar sensations* are: As if a board was across forehead. As if brain would force through forehead. As if something floating before eyes. As if a hard twisted ball was lying in umbilical region. During defecation children struggle and scream and seem as if they would go into fits. Burning as of hot coals deep in pelvis. As if something coming out of vagina. As if a load was resting on pelvis. As if sternum being crushed in. As of a heavy burden on crest of ilium. As if small of back would break. As if scapulć and other parts bruised. As if tendon of elbow-joint too short. As if small of back would break. As if hip dislocated. As if leg too long when standing. There is general sensitiveness to touch and contact. Marked periodicity is apparent. Intermittent fevers. Prostration and restlessness. Fretful, irritable, apprehensive. Music makes him weep. Weak-minded with suppressed menses. Sufferings from the non-appearance of menses─hence at change of life. The symptoms are < after menstruation; during leucorrhśa; when yawning. < In open air; cold weather; when growing cold; from cold washing or bathing. < At rest and especially when lying. Leucorrhśa is > sitting, < standing and walking. Cough compels sitting up all night. Touch <. Pressure >. General > from warmth. < By coitus and after coitus. Hoarseness is > by sneezing. Coughing = involuntary micturition. Drawing in limbs alternates with sufferings in the eyes.

Relations.─*Antidoted by:* Acon. (vascular erethism), Nux (violent pulsations in every part of body); according to Teste, Fer. met. is the best antidote, especially for over-action of Kre. in lively, sanguine, and vigorous children. *Incompatible:* Carb. v.; also after Chi. *Followed well by:* Sul., Ars. (in malignant disease); Bell., Calc., K. ca., Lyc., Nit. ac., Rhus., Sep. *Compare:* Eupion and Kre., as might be expected, have many identical symptoms, notably hćmorrhages, pulsations, and menstrual disorders. The Carbons and Carbol. ac. are closely related to Kre., and Carb. v. so closely as to be inimical with it. Pix. compares in phthisis. K. ca. (product of burning wood; stitches; < after coitus). Sep. (intermittent menses; outward pressure in genitals; painful coitus; vomiting of pregnancy; red sand in urine, turbid, offensive: but Kre. has menses usually copious, accompanied with difficult hearing, noises and humming and roaring in head, dragging in back > by motion─Sep. < from motion─and leucorrhśa is more irritating, even excoriating, smells like green corn; Sep. has not the acridity or the malignancy); Murex (passes copious pale urine at night; wakes with a start and violent desire; Kre. cannot get out of bed quickly enough, urine offensive); Lil. t. (bearing down); Bell. (enuresis, dentition, child worries all night, must be petted and tossed about, teeth decay

rapidly; bearing down < lying, > standing—Kre. < rest, > motion); Calc. (cholera infantum); Nux (irritable weakness of stomach, food cannot be digested: but Kre. retains food several hours and vomits it undigested); Pho. (vomiting; but Pho. vomits food or drink as soon as it becomes warm in stomach): Plat. (vaginismus; but Kre. has flow of blood after coitus); Arg. n. (inflammation of eyelids in children or adults; but Kre. has discharge of scalding tears early in morning); Ars. (neuralgia with burning pains); Staph. (teeth; < after coitus); Bry. (neuralgia of sound teeth, severe pains < by motion, > by pressing head hard on pillow, and by cold applications: Kre., neuralgia of face, burning pains, in nervous, irritable people, < by motion and talking, teeth decay rapidly); Cham., Carb. v., Bell. and Ars. (menses offensive). Agn. c., Carb. a., Chel., Nit. ac., Nux, Pru. sp., Sep., and Thuj. (leucorrhśa staining yellow). Lach. (change of life); Phos. (hćmorrhagic diathesis; dark, slight, lean, ill-developed, ill-nourished, overgrown patients); Abrot. (children old-looking, wrinkled); Iod. (scrofulous, psoric affections; rapid emaciation; inordinate appetite; wasting of mammć); Ham. (dark, oozing hćmorrhage); Ol. anim. (stitches in breasts: Ol. an., "shooting *out of* nipple"); Bapt. (effects of bad smells).

Causation.—Bad smells. Sprains.

SYMPTOMS.

1. Mind.—Restlessness when seated, with shivering, and frequent want to draw a long breath, which, however, is impossible.—Music and other emotional causes impel him to weep.—Lachrymose humour, sometimes with moroseness or melancholy.—Continual excitement, with obstinacy, and disposition to be angry.—Ill-humour.—Mental dejection, and despair of being cured, towards evening.—Mild melancholy, with desire for death.—Easy loss of ideas.—Weakness of memory.—Frequent absence of mind, and a sort of stupidity.

2. Head.—Vertigo, which causes falling, sometimes in morning in open air.—Headache, like that which results from intoxication.—Headache caused by mental emotions.—Headache with inclination to sleep, and drawing in eyelids, or redness of face, lassitude (esp. in legs), bitter taste, ill-humour, and tendency to shed tears.—Sensation of tension, of heaviness and of fulness in head, sometimes as if everything were going to protrude through forehead, < on stooping.—Sensation of a weight in occiput, as if the head were going to fall backwards.—Painful pressure and compression, esp. in the vertex, temples, and forehead (when awaking in morning), with heat in face.—Pulsative pain and throbbing in the head, esp. the forehead.—Drawing pains, acute pullings and shootings in the head, sometimes extending to the jaws and teeth.—The headaches sometimes commence on waking in morning.—Shootings in side of head, with loss of ideas.—Buzzing in head.—Soreness of scalp on being touched.—Falling off of hair.—Miliary pimples on forehead.—Pimples on forehead, like those seen in drunkards.

3. Eyes.—Eyes red and moist, as after weeping.—Eyes dull and sunken.—Itching in eyes with soreness after scratching them, inflammatory redness of the sclerotica, and pressure as from sand.—Continual heat, and burning sensation in eyes, and frequent lachrymation, even on waking in morning, and esp. on beholding light of day.—Eyes constantly, as it were, bathed in tears.—Burning and corrosive tears.—The tears are like salt water.—Interstitial keratitis, with pegged teeth.—Nocturnal agglutination of eyelids.—Redness and swelling of eyelids, and their margins.—Furfuraceous tetter on eyelids.—Quivering of eyelids (uncontrollable).—Sight confused as when looking through a veil, or as if there were down before eyes.—Sensation as if something were floating before eyes, obliging one to wipe them constantly.

4. Ears.—Heat and burning in ears.—Inflammatory swelling of the ear, with tensive, burning pains, or else with painful stiffness of neck, on side affected, with swelling of the cervical glands and livid grey complexion; pains extending to shoulders and arm, heat in forehead, and pressure above eyes.—Inflammation of (l.) outer ear, red, hot, swollen, burning, proceeding from a pimple in the concha, with stiffness and pain in l. side of neck, shoulder, and arm.—Pullings and shootings in ears, or cramp-like, pressive, and expansive pains.—Deafness, or aural vertigo, with signs of hereditary syphilis.—Buzzing in ears, with hardness of hearing, alternately with tingling and whistling in head.—Roaring in head; also humming and difficulty of hearing before and during menses.—Humid tetters on ears.—Itching in ears (and soles of feet).

5. Nose.—Offensive and fetid smell before nose, sometimes with want of appetite.—Bad smell before nose (on waking).—Nose constantly moist.—Bleeding of nose, even in morning; blood bright red and thin, or thick and black.—Frequent sneezing, esp. in the morning.—Fluent coryza, with painful sensibility of the nasal fossć, on breathing the air.—Coryza, with sensation of erosion under sternum.—Dry coryza, with frequent sneezing.—Chronic catarrh with old people.

6. Face.—Frequent, and even constant heat in face (during siesta), sometimes with throbbing in cheeks and forehead, and with a deep red colour of whole face, frequent want to make water.—Acne.—Face pale green with swelling of cervical glands.—Greyish, earthy colour of the face.—Furfuraceous tetters on cheeks, on eyelids, and round mouth.—Acute drawing pain in r. side of face, from jaw to temple.—Dryness of lips (with peeling off), as if caused by internal heat.—Burning pains; < talking or exertion; > lying on unaffected side.—Pustulous pimples on chin and cheek, which are covered with yellowish scabs.

7. Teeth.—Drawing pains and successive pullings in teeth, even on waking in morning, and sometimes with pains in diseased side of face, extending to temple.—Elongation of teeth.—Drawing, throbbing, jerking pains in teeth.—Bad odour from decayed teeth.—Teeth wedge-shaped (syphilitic deafness).—Dentition, great restlessness, wants to be constantly in motion, screaming all night.—Teeth

show dark specks and begin to decay as soon as they appear.—After extraction, oozing of dark, slightly coagulated blood.—Inflammatory redness of gums (l. upper side).—Gums bluish red, soft; spongy.—Protruding gums infiltrated with dark watery fluid.—Gums bleed readily; scorbutic, spongy, and ulcerated.—Absorption of gums and alveolar processes.

8. Mouth.—Putrid odour from mouth.—Ańćsthesia and paralysis of palate.—Tongue pale and flabby, with an accumulation of thin saliva in mouth.

9. Throat.—Continual dryness in throat, with burning and frequent thirst.—Scraping and roughness in throat with dryness and pain as of excoriation or pressure in throat on swallowing.—Painful sensation of choking at bottom of gullet, extending to chest and back.—Upper śsophagus eroded.

10. Appetite.—Greedy drinking followed by vomiting; great thirst.—Keen appetite, esp. for meat; craves smoked meats.—Cold food <; warm food >.—Dares not remain fasting (< fasting).—Bitter taste, esp. in throat, and when swallowing food.—Water after it is swallowed tastes bitter.—Sickly taste in mouth.—Entire loss of appetite, sometimes with pale and flaccid tongue, accumulation of saliva in mouth, and burning thirst.

11. Stomach.—Risings of flatus and sour regurgitations.—Frequent and violent eructations.—Nausea, with inclination to vomit, salivation, and shivering over whole body, or with a burning sensation in mouth.—Retching, esp. when fasting in morning, as during pregnancy, and sometimes with vomiting of water and of mucus, dryness of nose, heat and pressive pain in forehead, thirst, and coldness in hands and feet.—Vomiting of sweetish water, when fasting in morning.—Vomiting; with dreadful burning at chest.—Stomach weak, cannot digest, food is immediately rejected, or vomited undigested some hours after eating.—Oppression of stomach, and of epigastrium, which renders the pressure of clothing insupportable.—Hardness in epigastric region, with painful sensibility to touch.—Cancer of stomach.—Pulsation in region of stomach, extending to all the upper part of body, esp. when in motion.

12. Abdomen.—Shooting and pressive pains in hepatic region.—Sensation of fulness, and pain as from contusion, in liver.—Pressure in region of spleen; the spot is painful to external pressure, esp. when sitting down soon after rising from bed in morning.—Pain, as from ulceration, in abdomen, when breathing and moving; the pains sometimes hinder sleep during night.—Painful sensation of coldness in abdomen, with too scanty emission of urine.—Inflation and tension of abdomen (as after a copious meal), sometimes with shortness of breath.—Contractive pain in abdomen, even at night, towards morning, with a sensation as if there were a hard compact mass in umbilical region.—Shootings in abdomen, sometimes extending to sexual parts.—Colic, resembling labour pains, sometimes with frequent want to make water (which is finally emitted in small quantities and hot), ill-humour and

irascibility, shiverings after the attack, and sometimes also a milky discharge from the vagina.—(Obstinate flatus in old abdominal disease.)

13. Stool and Anus.—Stools: watery; papescent; dark brown; watery, putrid, containing undigested food; greyish or white; chipped, very fetid; frequent, greenish, watery; cadaverous-smelling.—Ineffectual painful urging.—Children struggle and scream during act of defecation, and scream as if they would go into fits.—Evacuations hard, dry, difficult, and only every third or fourth day.—Several evacuations daily.—Pulling, acute drawing pains, and cramp-like pains in rectum (towards the l. groin).

14. Urinary Organs.—Diminished or excessively increased secretion of urine (also, he drinks much, with frequent desire to micturate, passing but little at a time).—Frequent and urgent want to make water, even at night.—(Relieves thirst in diabetes.).—Frequent urging with copious pale discharge; at night cannot get out of bed quick enough.—Wets bed at night; dreams he is urinating properly.—Urine spurts from her during each cough.—Can only urinate when lying.—Incontinence < lying down.—Urine of a chestnut colour, or turbid.—Urine fetid and colourless.—Reddish, or whitish sediment in the urine.—Burning corrosive urine.—Before urinating, discharge of bland leucorrhśa.—During micturition, burning between the labia.

15. Male Sexual Organs.—Burning in genitals (during coition) and impotence.—Prepuce bluish black with hćmorrhages and gangrene.

16. Female Sexual Organs.—Premature catamenia, of too long continuance, and too copious, with a discharge of black blood.—During an embrace, burning in the parts, followed next day by menstrual discharge of dark blood.—Appearance of menses in third month of pregnancy (blood black, flows in a stream).—Before the catamenia, abdominal spasms, leucorrhśa, irritation, and inquietude, vomiting of mucus or frothy risings, and inflation of the abdomen.—During menses: Hardness of hearing; discharge of fetid wind, constipation, and incarceration of flatus; buzzing and roaring in head; with pressive pains, colic, cuttings, sacral pains, constant shivering, or sweat on the back, and on the chest.—After menses: Abdominal spasms; pressure in the genitals; leucorrhśa; and many other sufferings.—Pains during menses, but < after.—Menses flow only when lying down; cease on sitting. or walking about.—Metrorrhagia < lying, > getting up and walking about.—Metrorrhagia; in fungoid disease of endometrium.—Leucorrhśa, corrosive or mild, and sometimes followed by exhaustion and fatigue, esp. in legs.—Leucorrhśa of a yellow colour, staining linen yellow, with great weakness in legs.—White leucorrhśa, having odour of green corn.—Nausea during pregnancy; ptyalism; excoriating lochia.—Dwindling away of mammć, with small, hard, painful lumps in them.—Leucorrhśa putrid, with accompanying complaints; leucorrhśa in general, esp. if very fetid and exhausting.—Complaints of females at change of life.—Cramp-like pains in external genitals.—Excoriation, with smarting

pains between genitals and thighs.—Shootings in vagina, as if produced by electricity.—Voluptuous itching in vagina.—Itching in vagina, inducing rubbing in evening, succeeded by smarting, swelling, heat, and induration of external parts, with soreness in vagina when urinating.—Desire for coition, in females, esp. in morning.—After coition, pain, as of excoriation, and hard knottiness in neck of uterus, or swelling of the genital parts (both male and female) with burning pains (worse in morning than in evening).—After coition discharge of dark blood the next day.—Prolapsus vaginć.—Prolapsus uteri.—Pulling, stitches, and shootings in the mammary glands.

17. Respiratory Organs.—Scraping and roughness in throat, with roughness and hoarseness of voice (> by sneezing in morning).—Paralysis of palate.—Dry cough, excited by a scraping in throat, or by a tickling in bronchia.—Dry, wheezing cough.—Cough, with shortness of breath.—Cough in evening, in bed, caused by crawling below larynx, with involuntary micturition.—Constant cough, with sleep and shiverings, followed by dry heat.—Convulsive cough, with retching, esp. in morning.—Continual hoarse and hollow cough, excited by an accumulation of mucus in throat, with easy expectoration of whitish, or of yellowish and thick mucus.—Cough, with pain in chest and sternum, compelling to press the hand on it; stitches and soreness in chest.—The mucus which is expectorated has sometimes a sweetish taste.—Involuntary emission of urine, and concussion in abdomen on coughing.

18. Chest.—Shortness of breath, sometimes with a sensation of heaviness in chest, and desire to make a deep inspiration, or with pain, as of a bruise, in chest (esp. sternum), when breathing.—Difficult and anxious respiration.—Frequent blood-spitting; afternoon fever and morning sweat.—Violent shootings in chest, in region of heart, in ribs, and in intercostal muscles, sometimes when breathing, or with suspended respiration; these shootings manifest themselves also at night.—Burning pain in chest, as after drinking brandy; the pain extends from centre of chest to throat and tongue, and is accompanied by heat, redness, and tension in face.—Terrible burning at chest, as from hot coals. Stitches in chest above heart, with oppression of breathing; in r. side, extending under scapula, arresting breathing.

19. Heart.—Stitches in heart.—Pulsation in all arteries when at rest.

20. Neck and Back.—Glands of neck swollen.—Pain in back; great sleepiness and profound sleep.—Pain as if small of back would break; < at rest; > from motion.—Pain in back at night; < when lying.—Scapulć feel as if bruised.—Pain under (l.) shoulder-blade; > hard pressure and by warmth; < riding in carriage and by any motion.—Pains in small of back, like spasmodic pains of labour, with urgent want to make water, and to evacuate, or with leucorrhśa.—Pains, as of ulceration, in the lumbar vertebrć.—Nocturnal pains in back, more violent during

repose.—Continuous burning in small of back.—Drawing pain along coccyx to rectum and vagina, where a spasmodic, contractive pain is felt.

21. Limbs.—Analgesia of l. arm and part of l. leg.

22. Upper Limbs.—Shootings in muscles and joints of shoulders.—Pain, as from contusion, in arms.—Pain in shoulders as if they had been uncovered all night.—Painful paralytic sensation in fore-arms and fingers.—Cramp-like pains in elbows and fore-arms.—Stiffness of hands, with cracked skin.—Pimples on hand, with violent itching, esp. in evening in bed.—Tetters on elbow, hands, and fingers.—Pain, as from dislocation, in thumbs.—L. thumb pains as if sprained and stiff.—Fingers dead; they grow pale and insensible, early in morning, when rising, with tingling.—Numbness of fingers.

23. Lower Limbs.—Pain, as from fatigue, in hips and legs.—Bruised pain on crest of ilium, as if from a heavy burden or after running; stitches from same through abdomen; pain in same and in lumbar vertebrć, in morning, as if tired.—Drawing and shooting pains in thighs, < by movement.—Pains, as of a bruise, and bluish spots on thighs.—Pains in hams, as from contraction of tendons.—Heaviness in legs.—Drawing and shooting pains in limbs, alternately with sufferings in eyes.—Pain, as from dislocation, in joints of knees and feet.—Skin in ham red and rough, like herpes.—Tension and cramps in calves.—Pain, as of ulceration, and burning (itching) sensation in soles.—Śdematous (white) swelling of the feet, from toes to calves.—Coldness (and heaviness) of feet.—Sweat on feet.—Tetters on ankles.

24. Generalities.—Pain, as from excoriation and ulceration; painful paralytic sensation; pulling and shooting pains.—Hćmorrhages; small wounds bleed much.—Putrid ulcers of any kind; putrid diarrhśa.—Glossitis.—Exanthema on face; on cheeks; around mouth; on upper lip; on forehead; burning urine; erethism of blood; yawning in general; complaints accompanying yawning.—Pulse changed in general.—Pinching pains, and shootings, esp. in joints.—Lassitude, heaviness, and painful weariness in all limbs, esp. in legs.—Shocks in limbs, esp. when asleep at night.—Nocturnal pains.—Fainting fits on waking in morning.—Fainting (in morning, when rising too early).—Disposition to faint in a warm room, with heat of face and shortness of breath.—Numbness; loss of sensation.—Rapid emaciation.—Attacks of stupor, with paleness and coldness of several parts, which seem then as if dead.—Pains, as from a bruise or contusion.—Excessive excitement of whole body.—Restlessness in whole-body, < during repose.—Pains < during repose.

25. Skin.—Soft, unnatural feel of skin, with pegged teeth.—Violent itching all over body, esp. towards evening, and with burning sensation in arms and legs, after scratching.—Burning itching at night, and heat over whole body.—Nettle-rash.—Eruption, like bug-bites, with violent itching esp. in evening.—Large,

greasy-looking, pox-shaped pustules over whole body.—Mealy and pustular, dry or humid tetters (on backs of hands and fingers, in palms, on ears, elbows, knuckles, and malleoli), with violent itching in almost every part of body.

26. Sleep.—Great inclination to sleep, with frequent yawnings; sometimes with putrid taste in mouth, and want of appetite.—Fits of yawning, with shivering, weeping, pressive pains in forehead, or lassitude.—Constant inclination to sleep.—Difficulty in going to sleep, caused by restlessness over whole body, or a sensation of fatigue, with pains in all limbs.—Disturbed sleep, with tossing.—Frequent waking during night.—Unrefreshing sleep, with paralytic sensation in all limbs on waking.—At night, pains in loins, internal shiverings, pulsations in head, restlessness over whole body, pressive and burning pains in eyes, agglutination of the lids, &c.—Starting from sleep in a fright.—Frequent, anxious dreams; dreams of snow, of falling, pursuits, poisoning, emaciation, fire, of erections and of wanting to make water, of foul and disgusting linen, &c.

27. Fever.—Feverish sensation over whole body, with good appetite.—Predominance of cold, tendency to shiver, and frequent shiverings, sometimes with heat in face, redness of cheeks, coldness of feet, sensation of heaviness in arms, and excessive ill-humour; or with epistaxis, or pain in loins, head, and eyes, distressing cough, &c.—Chilliness predominating while at rest.—Chill, with great bodily restlessness.—Flushes of heat, with circumscribed redness of the cheeks.—Perspiration only during morning, with heat and redness of cheeks.—Thirst after the shiverings.—Feverish heat, with red cheeks; then sweat, followed by sacral pains.—Throbbing all over body < when at rest.—Pulse small and suppressed.

Laburnum.

Cytisus laburnum. N. O. Leguminosæ. Tincture or trituration of seeds. Tincture of fresh bark.

Clinical.—Convulsions. Eyes, affections of. Hydrocephalus. Vertigo.

Characteristics.—All parts of this well-known ornamental tree are poisonous, our knowledge of it being derived chiefly from the accidental poisoning of children who have eaten the pea-like seeds and pods. Here is a typical case: W. G., æt. 10, ate eight to ten seeds. Five or ten minutes after began to sweat, but soon became cold and shivering, skin pale, pulse scarcely perceptible, general collapse. Pupils dilated, is drowsy and giddy, but in no pain. Emetics and brandy were given, but after an hour of this there was no improvement. An enema of hot strong coffee was now given, the patient was wrapped in blankets, and hot bottles applied. The collapse then gradually passed off (*Brit. Med. Jour.*, Sept. 26, 1891).—The giddiness is intense and in some cases peculiar: "Constant vertigo, even while lying; if she attempted to sit upright, she immediately fell back again." In one case the head was rigidly thrown back. Head hot. Convulsions, insensibility, drowsiness, and mental indifference were leading features; and muscular twitchings about the face were noted. Pupils dilated; in two cases they were *unequally dilated*. These patients were two boys poisoned by the root of an old tree; they had very strange waving motions of the arms and convulsive drawing up of the legs, first one leg then the other. A boy who ate the green twigs was seized with vomiting, pain in the stomach, and collapse; there was no diarrhœa but tenesmus and erections. After a few hours he passed 300 grams of grass-green urine, after which he felt >. The urine soon after passing assumed a natural colour.

Relations.—Antidoted by Coffee, and stimulants, hot and cold douches to chest. *Compare:* Nux; Gels. (> by copious urination).

SYMPTOMS.

1. Mind.—No anxiety; remarkable indifference to all around.—When spoken to, seemed stupid and unconcerned; when aroused by a shake and asked a question, he answered by a nod or shake of the head.—Stupefaction.

2. Head.—Constant vertigo even while lying down; if she attempted to sit up, she immediately fell back.—Giddy, wheeled perfectly round before and during vomiting.—Staggered, rolled head from side to side, eyes closed.—Giddiness prevented him from walking, but he could sit upright.—Head rigidly thrown back.—Head hot.—Headache.—Pain in head and abdomen.

3. Eyes.—Eyes: dull, lustreless; surrounded by livid zone; sunken.—Lids only half open; mostly closed.—Pupils: much dilated, but react to strong light; unequally dilated; slightly contracted; sluggish.

6. Face.—Expression anxious.—Face: pale, cold, of dull expression; pale and expressive of severe pain, augmented from time to time by a succession of spasmodic muscular contractions after the pain; deathly pale with blue lips.—Twitchings of muscles of face (and neck); with efforts at vomiting.

8. Mouth.—Slight frothing at mouth.—Pale, glazed tongue.—Tongue dry, glazed, and red.—Dryness of mouth; and throat.—Lips parched.—Speech very indistinct.

9. Throat.—Burning in throat with great thirst.

11. Stomach.—Impaired appetite.—Excessive thirst.—Greedily thirsty, grasped at liquids with avidity, seizing the vessel with both hands and draining it.—Constant nausea and eructations.—Vomiting, pain in stomach, collapse; no diarrhœa but tenesmus and erections; followed by copious urination.—One vomited repeatedly during twelve hours, another one two or three hours; in the latter case the other symptoms were much more violent.—Nothing remained in stomach, even water or ice was almost immediately rejected.—Burning pain in epigastrium.—Cramp-like sensation in region of stomach.

12. Abdomen.—Abdomen distended; tympanic sensation.—Flatulent distension.—Colic < by pressure.

13. Stool.—Diarrhœa: followed by cessation of convulsions; with tenesmus and slightly bloody stool.—Never vomited but was much purged.—Watery fluid with peculiar odour constantly drained involuntarily from bowels.—In the crude form it colours the stools, giving them either a green, clay, or dark appearance.—The bowels almost always become constipated.—Tenesmus and erections.—(Marked relief to constipation due to pressure on rectum.—Cooper.)

14. Urinary Organs.—After a few hours passed 300 grains of grass-green urine and felt > after. The urine soon assumed natural colour on standing.

15. Male Sexual Organs.—Tenesmus and erections.

17. Respiratory Organs.—Breathing: stertorous; accelerated after the fever; hurried and laboured; slow, expiration very markedly prolonged.

19. Heart.—Heart's action rapid and tremulous.—Slight increase of pulse, and respiratory movements are also accelerated; this is transient, pulse soon falls below normal; languor and tendency to sleep follow.—Pulse alarmingly weak.

21. Limbs.—Jerking and trembling of limbs.—Extremities weak and cold.

23. Lower Limbs.—Some had a peculiar twitching in their walk.

24. Generalities.—Convulsions.—Insensible, very strange waving motions of arms to and fro; now and then the legs, first one then the other, convulsively drawn up.—Complete collapse with great restlessness; with, perfect consciousness.—Extreme intractable restlessness ending in incessant, almost frantic jactitation.—Felt faint and giddy.

26. Sleep.—Remarkably sleepy.—Transitory somnolence and languor, but this soon passed off, leaving marked insomnia, which lasted through the night.

27. Fever.—Surface of body pale, remarkably cold, almost like marble; at same time great aversion to slightest covering.—Sub-normal temperature.—Skin, very cold add clammy.—Every now and then severe rigors shook his frame.—Skin covered with clammy sweat.—Cold sweats, vomiting, vertigo, preceded by slight feeling of malaise, and followed by high fever.

Lac Caninum.

Bitch's Milk.

Clinical.—Arms, varicosis of. Breasts, painful. Chancre. Croup. Diphtheria. Dysmenorrhśa. Epulis. Eyes, affections of. Gonorrhśa. Headache. Ichthyosis. Leucorrhśa. Neuralgia. Ovaries, affections of. Ranula. Rheumatism. Sciatica. Spinal irritation. Stomach, affections of. Syphilis. Throat, sore. Ulcers. Uterus, affections of. Vaccinosis. Varicose veins. Warts.

Characteristics.—*Lac caninum* is not a novelty in remedies. "Dioscorides, Rhasis, Pliny, and Sextus recommended it for the removal of the dead fśtus. Sammonicus and Sextus praise it in photophobia and otitis. Pliny claims that it cures ulceration of the internal os. It was considered an antidote to deadly poisons." (Quotation by Hering.) Hering adds that the remedy was revived by Reisig, of New York, who used it successfully in the treatment of diphtheria. After Reisig the remedy was used by Bayard and Swan, to whose indefatigable exertions we owe the present status of this medicine. Swan's potencies were prepared from Reisig's 17th. The provings were made with the 30th and upwards and are published in a little volume by Swan and Berridge. As in the case of *Bufo, Castor equi*, and other remedies of ancient times, homśopathy has stepped in to confirm the accuracy of the old observers. In the provings a large number of the symptoms were manifested in the region of the throat, the effects being diagnosed as actual diphtheria in some instances. It is in diphtheria, both as curative and prophylactic that *Lac can*. has won its greatest fame; and the provings and clinical experience have developed a grand characteristic in this and other affections—an alternation of sides, often very

rapid. "Soreness of throat commences with a tickling sensation which causes constant cough then a sensation of a lump on one side, causing constant deglutition this condition entirely ceases, only to commence on the opposite side, and often alternates, again returning to its first condition; these sore throats are very apt to begin and end with the menses." This "alternation of sides" once led me to the cure of an eczematous condition of the eyelids in a child. The child's aunt, who brought her to me, casually remarked that it often left one side entirely and went to the other and then back again. *Lac can*. cleared it up in a very short time. Rheumatic and other affections having this peculiarity of changing from side to side are very likely to be benefited by *Lac can*. From diphtheria, with its fetid discharges, it is not a far step to ozćna, and *Lac can*. has proved itself curative in a number of cases. Corners of mouth and alć nasi cracked. It has cured a case presenting the following characters: Crusts under which grey matter forms. Throat bad, swallowing difficult; mucous follicles swollen, covered with cream-coloured mucus. Nose bad; feared destruction of bones. Bloody pus discharges several times a day. Bones of nose sore to pressure. In addition to the changing sides characteristics *Lac can*. has: "Inflamed surfaces (of throat) *glistening*." The same appearance when found on ulcerated surfaces in the skin is a leading indication for *Lac can*. The mental symptoms are remarkable. One prover had delusions about snakes; imagined she was surrounded by them; was afraid to close her eyes at night for fear of being bitten by a large snake which she imagined was beside the bed. Awoke in the night with a sensation that she was lying on a large snake. After menses, imagined all sorts of things about snakes. These snake-symptoms led to a cure. E. T. Balch (*H. P*., x. 286) asked for advice in this case: "Maud R., 10, demi-brunette, of healthy parents, one and a half years before fell forward and hurt her chest whilst playing. Nothing was thought of it at the time, but when brought to Dr. Balch she was pale, emaciated, capricious, no desire for play. Sleep disturbed by frightful dreams, during the day piteously begs her mother to take her, she is so afraid. *She feels as though snakes were on her back*. In response to advice tendered one dose of *Lac. can*. 50m. was given, dry, and in twenty-four hours the child became more lively and cheerful and very soon all abnormal sensations disappeared. Another mental curiosity which has proved a useful pointer is this: "Imagines he wears some one else's nose." Restlessness, nervousness, and prostration appear in the provings and show the relation of the remedy to diphtheritic paralysis as well as to diphtheria itself. In one prover the symptoms occurred periodically: < in morning of one day and < in afternoon of next. Wandering rheumatic pains. The sensation of lightness or levitation was noticed—seemed to walk on air; not to touch the bed when lying. Cannot bear one part of her body to touch another; must even keep her fingers apart. The symptoms in general were < at night. Cold winds and cold, sharp air <. Cold washing = pain in herpetic eruption. Cold application > pain in upper jaw and teeth; and cold water gave momentary > to sore throat. Pains in ankles, forehead, and upper jaw were > by warmth. Rest and lying down > most symptoms; motion <. Flexion >, extension <. Going up and down stairs = pain in heart.

Walking = leucorrhśa, < sores between labia and thighs. Touch < (external throat; breasts, causing sexual excitement). < After sleep. The Schema comprises both caused and cured symptoms; the latter are bracketed or have the name of the disease in which they occurred appended in brackets.

Relations.—[According to Nichols, Lac. can. "acts best in single dose; if repeated should be given at exact intervals."] *Compare:* Lachesis is the nearest analogue (throat, ovaries, symptoms changing from side to side—Lach. left to right; < after sleep; fainting on raising arms); Lac. vac. deflor. (dreams of going on a journey). Lac. vac. coag., Lact. ac. [The following were mostly supplied by Lippe to Swan's arrangement.] Weak memory for what she has read, not for other things (Lach., Nat. m., Staph.). Absent-minded (Anac., Caust., Con., Dulc., Lach., Nat. m., Sep.). Crying, fearing she was contracting consumption (Calc., Guar., Sep.). Exalted feeling in sensorium (Plat.). Headache < in cold wind, > in warm room (Aur., Nux v., Rhus). Headache < by noise > by keeping quiet; confused feeling in head (Calc.). Must have light, but intolerant of sunlight (Aco., Bell., Calc., Gels., Ruta, Stram). Soreness and scabbing of nostrils (K. bi., Thu.). Lips dry and peeling (Nat. m.). Throat sensitive to touch externally (Lach.); < by empty swallowing (Ign.). Breasts sensitive to pressure (Calc., Murex); to deep pressure (Merc.); as if full of very hard lumps, very painful when going up and down stairs (Bell., Calc., Carb. an., Lyc., Nit. ac., Phos.); soreness and enlargement (Bell., Bry., Calc.). Small, round, or irregular grey white ulcers on tonsils and fauces (Merc. i.). Discharges of diphtheritic matter from vulva and rectum (Apis). Empty, weak feeling in stomach-pit (Dig., Ign., Pet., Sep.); pain as from a stone or undigested food in stomach-pit (K. bi.). Pain in right ovarian region (Ap., Lyc., Pallad.). Sensation as if breath would leave her when lying down, must get up and move about (Grind.). Sciatica (Cur., Graph., Gnap., K. bi., Ir. v., Lach., Phyt., Tell.). When walking seems to be walking on air; when lying does not seem to touch the bed (Asar., Chi., Coff., Nat m., Nux, Op., Rhs., Spi., Stram., Thuj., Stict. pul., Phos. ac.). Dreams of going on a journey (Lac. v. deflor., Laches., Sang., Sil.). Spreads fingers apart (Secale—in spasms). Retina retains impressions of objects (Tuberc. Nicotin.—Lyc., ear retains impression of sounds). Red spot before vision (Dubois. Hyo.). Flatus from vagina (Bro., Lyc., Nux m., Nux v., Sang.). < Going down stairs (Borax). Diphtheria (Diphtherinum, Merc. cy., Gels.). [Hydrophobinum is a dog-engendered nosode and must be compared with Lac. can; Lach. is one of its antidotes.] Cannot bear one finger to touch the other (Lac. f. cannot bear one foot to touch the other).

Causation.—Result of fall.

SYMPTOMS.

1. Mind.—Illusions or hallucinations about snakes; imagines they are all around her; that they are creeping into her bed; fears to close her eyes.—Horrible visions, fears they will take objective form; when sitting still and thinking.—Wakes at night with a sensation that she was lying on a large snake.—After menses, imagines all

sorts of things about snakes.—Woke at daylight, feeling that she was a loathsome, horrible, mass of disease.—Could not bear to have any one part of her body touch another; felt if she could not get out of her body in some way, she would soon become crazy; could not think of anything but her own condition.—Feels weak, and nerves so thoroughly out of order, that she cannot bear one finger to touch the other (nervous throat affection).—Is impressed with the idea that all she says is a lie; that all her symptoms are unreal, and the result of a diseased imagination; it seems to be very difficult to speak the truth, but continually distrusts things; when reading anything she rapidly changes the meaning, omitting or adding things.—Imagines that he wears some one else's nose (diphtheria).—Felt very short in morning while walking; ditto in evening.—Finds it very difficult to read understandingly anything requiring a mental effort to follow it.—Very restless; cannot concentrate her thoughts or mind to read; wants to leave everything as soon as it is commenced.—When speaking, substitutes the name of the object seen for that which is thought.—Cannot remember what she reads, but can remember other things.—In writing, uses too many words or not the right ones; very nervous.—Absent-minded.—Cannot bear to be left alone for an instant (diphtheria).—Fear: of disease; of consumption; of heart disease; of falling downstairs.—Fits of weeping two or three times a day (metritis).—Depression.—(Thinks she is looked down upon by every one, and feels insulted thereat.).—Anxious.—Easily excited; easily startled.—Cross and irritable; while headache lasted.—(Attacks of rage, cursing and swearing at the slightest provocation.)

2. Head.—Dizzy sensation with slight nausea.—Constant noise in head very confusing; < at night, and much < at menses (metritis).—(Sick headaches beginning in nape; the pain settling gradually in r. or l. forehead.).—Pain in l. occipital region running up when moving head.—(Headache over eyes, < when sewing; frontal and occipital, < turning eyes up.).—Sharp lancinating pain, in a zigzag line from r. side of forehead to an indefinite point in occiput; instantaneous, and sometimes repeated; as soon as it is felt, she lays aside whatever she is doing and lies down, from an indefinite dread that it will return; if at night, she goes to bed at once; has great dread of the pain, though not very severe; recurred for several days.—Sharp, throbbing pain in r. side of forehead; then in l. side of forehead slightly.—Sharp pain like a stab in r. temple, at 7 p.m.—Throbbing pain just over r. temple, then sharp pain in socket of r. eye and in r. temple, disappearing quickly.—Pain in forehead, afternoon, first on l. side, then on r., over l. eye principally.—Headache over l. eye on first waking, and great pain in pelvis, most marked at r. ovary.—Neuralgic pain in l. side of head, followed by a film over l. eye, wants to rub it off; not > by rubbing.—Headache first on one side of forehead, then on the other.—On going into the cold wind, felt a terrible pain in forehead as if it would split open, > on going into warm room.—Headache in upper part of forehead, with sensation of a broad band pressed firmly across forehead from one temple to the other.—Darting pain across forehead and over eyes.—Headache over both eyes, extending back over l. ear.—Slight pressure on vertex and over eyes, the day before

menses ceased.—Dull pain in r. temple and r. eye, with pressure on vertex during menses.—Stiffness in occiput on turning head, with soreness on pressure.—(Occipital headache, with shooting pains extending to forehead.).—Headache < by noise or talking, > by keeping quiet; confused feeling in head.—Intense headache, entirely > by cold-water application, but soon returned, not, however, as severe.—Pains in head during day, first on one side then on the other; it seems perfectly unbearable; > on first going into the air, but soon grows <.—Sensation as if brain were alternately contracted and relaxed, several times rapidly; generally only when lying down; at various times all through proving.—Excessive dandriff on head for past week.—Sore pimples on scalp, which discharge and form a scab; extremely painful when touched, or on combing hair.—Head very sore, and itches almost all the time, < at night.—Slight roughness of skin of forehead, as of numerous pimples.

3. Eyes.—Sharp pain in socket back of r. eye, followed by tenderness in r. temple; both transient.—Darting intense pain round l. eye.—Heaviness of upper eyelid, with pain above l. eye; burning in l. eye; agglutination of l. lids (rheumatism).—Eyes slightly swollen; profuse lachrymation; with catarrh.—Looking at different objects causes eyes to ache.—Pricking sensation in eyeballs; eyes sensitive to cold air.—Upper eyelids very heavy, can scarcely keep eyes open; very sleepy.—Pain in eyes when reading; followed by a film over them, apparently requiring to be wiped off before she can see.—Tendency in retina to retain the impression of objects, esp. of colours; or somewhat of the object last looked at is projected into the next.—(Sees faces before her eyes, < in the dark; the face that haunts her most is one that she has really seen.).—Small floating discs before eyes occasionally, and showing primary colours at edge of discs.—When reading the page does not look clear, but seems covered with various pale spots of red, yellow, green, and other colours.—Occasionally when looking at an object sees red spots on it.—While looking at an object appears to see just beyond or out of the axis of vision, an object passing across the field of sight; but on adjusting the eye to see it, it is gone; it always appears as a small object, like a rat or bird, sometimes on the floor, at others in the air.

4. Ears.—Pain in r. ear, sometimes intense.—Very sharp pain in r. middle ear, while walking in wind; had to cover it with hand, which gave entire relief; sharp pain in r. side also.—No pain during day, but is awakened several times during night by sore aching pains in middle and external ear of side on which she is lying; soon passes off when the pressure is removed.—(Green, odourless discharge.).—Reverberation of voice as if speaking in a large, empty room; with pain in frontal region, first over one eye and then over the other.—(Sounds seems very far off.).—Ringing in r. ear.—At night a buzzing in r. ear.—Noises in ears; sensation as though ears were full.—(More than any other remedy, relieved deafness from hereditary syphilis.)

5. Nose.—Sore on r. side of septum of nose; next day nose sore, constant inclination to pick at it and get the scab off; nose still sore on sixth day, and on seventh day was very painful to touch; but on eighth day scab came off nose, leaving it as well as ever.—L. nostril first dry, afterwards discharging a thin, ichorous fluid, excoriating nostrils.—Stuffed feeling in nose and throat.—Watery discharge, followed by dry sensation in nose.—Fluent catarrh from both nostrils, with sensation of fulness in upper part of nose.—(Profuse nocturnal nasal discharge, like gonorrhśa, staining pillow greenish yellow.).—One side of nose stuffed tip, the other free and discharging thin mucus at times and thin blood; these conditions alternate, first one nostril stopped up and the other fluent, and *vice versâ* (diphtheria).—Bad smell in nose.—Cannot bear smell of flowers; they seem to send a chill over her.—All drinks return by the nose, nothing being swallowed (diphtheria).

6. Face.—R. cheek burns like fire, and is red after coming in from the cold.—Pain as from a knife-thrust from under l. zygoma up to vertex.—Burning, flushing of face.—Marked pallor of face.—Lips dry and peeling off.—Jaw cracks while eating (dyspepsia).

7. Teeth.—Pain in l. upper molars, coining from l. temple through l. ear.—Teeth sensitive to cold water.—Gums swollen, ulcerated, retracted, bleeding, teeth loose; caused by defective nutrition and exposure.

8. Mouth.—Tongue coated brown.—Tongue dirty, deeply coated near back and centre, except on edges, which are bright red; at 9 p.m. tongue looks patched.—Taste: putrid; of lead, afternoon.—Swelling of l. sublingual gland; ranula.—Mouth and throat covered with aphthous yellowish-white ulcerations, easily bleeding.—Roof of mouth very sore, with blisters that break and leave loose skin; any seasoned food causes great pain.—Inside of lower lip feels tender and sore, and looks very red.—Mouth very dry.—Saliva: increased, slightly viscid; ran from mouth during sleep.—Mouth constantly full of mucus, but a constant inclination to swallow, which = pain.—Frothy mucus in mouth < by going into open air, and after eating.—Breath very offensive (diphtheria).—Talking is very difficult, and there is a disposition to talk through nose (nervous throat affection).

9. Throat.—In morning throat very sore; r. tonsil covered with ulcers and patches, which extended over palate and covered l. tonsil; next day membrane extended across posterior wall of pharynx; uvula elongated, accompanied by chilliness, high fever, pains in head, back, and limbs, great restlessness, and extreme prostration. This was pronounced to be "severe diphtheria," but it soon got well.—Diphtheritic patch appeared first on r. tonsil, then on l., and frequently on alternated sides; the swelling of submaxillary and lymphatic cervical glands also alternated in like manner; there Was a noticeable < after a cold storm from north-east.—Quinsy; alternating sides; thick, tough pieces of diphtheritic membrane coming away, and new membrane constantly re-forming; swelling in throat so large and tense that

mouth could not be closed.—The diphtheritic deposits look as if varnished; exudations migratory, now here, now there (diphtheritic croup).—Throat sore: with severe headache; pain extending to chest; dry and sore; deep red colour on either side of throat opposite tonsils; on l. side; painful to external pressure on both sides.—Throat feels stiff (diphtheria).—Sore throat, alternating sides, beginning and ending with menses.—Feeling of a lump in throat, which goes down when swallowing, but returns; throat < r. side; < on swallowing saliva; afterwards, throat which had been getting well, suddenly one evening grew rapidly <, but this time on l. side.—Constant inclination to swallow, which causes pain extending to r. ear.—Tickling and sense of constriction in upper part of throat, causing constant dry, backing cough.

10. Appetite.—Appetite improved; increased.—Cannot satisfy her hunger.—Desire for highly-seasoned dishes, which is very unusual; has used pepper, mustard, and salt freely.—No appetite (diphtheria; acute rheumatism).—Considerable thirst.—Great hunger for large quantities, often.—Craves milk and drinks much of it (diphtheria).—Aversion to anything sweet.

11. Stomach.—Nausea, with headache, on waking; continuing all morning.—Nausea > by eructations of wind.—At 5 p.m. while smoking a cigar, great nausea with severe pain in stomach-pit; vomiting seemed imminent, but the sensation ceased in four or five minutes.—At 10.15 a.m., empty, weak feeling in stomach-pit; next day, same at 6 p.m.—Weak, sinking feeling at stomach-pit, on waking in morning.—Burning in epigastric region, feeling of a weight and pressure of a stone in stomach.

12. Abdomen.—Pain in r. side of pelvis; while it lasted there was no pain in l. side.—Pain and burning in l. side of abdomen and pelvis, with weight and dragging on that side; clothes feel very heavy.—Feeling of tension in l. groin; does not want to walk or stand, as it < the sensation; > by flexing leg on abdomen.—Very acute pain in l. groin, extending up l. side to crest of ilium; > by stool; sometimes the pain is in track of colon.—Abdomen swollen, and sensitive to deep pressure, which also = nausea, the nausea passes off when pressure is removed.—Felt as though abdomen and chest were firmly compressed all over, as if the skin were contracted.—Abdomen very sensitive to pressure and weight of clothes, entirely > by removing them, during very profuse menses.—Pains in abdomen intermittent.—Pain in pelvis, principally over r. ovarian region.—Headache (l.) on first waking, and great pain in pelvis, most marked at r. ovary.—Pressure from within outwards, as if contents of abdomen would be forced out literally, just above pelvis.—Sensation while walking as if abdomen would burst.

13. Stool and Rectum.—Frequent desire for stool all through provings.—When having a soft passage great tenesmus; rectum does not act as if it had lost power, but as if it could not expel fćces because they are soft, and adhere to the parts like clay.—Constipation; occasionally natural passages; urgent desire for stool, but

passes nothing but wind, or possibly one or two small pieces like sheep-dung; considerable wind in abdomen, with rumbling, but never any pain.—Profuse diarrhśa, with colic pain; diarrhśa watery, profuse, coming out with great force.—Great constipation before and after menses; bowels very loose (not diarrhśa) during menses.

14. Urinary Organs.—Urination causes intense pain in urethra, soon passing off.—Sensation after urinating, as if bladder still full; continued desire to urinate.—Frequent desire to urinate, which if not immediately attended to causes pain in bladder; a numb, dull sensation; if not > by urination it spreads over abdomen and l. side to ends of fingers; never in head; would frequently wake at night dreaming of the pain, and would have to urinate to > it.—Constant desire to urinate, passing large quantities frequently; at night she dreams of urinating, and wakes to find an immediate necessity; a less strong and healthy person would probably have wet the bed.—(Nocturnal enuresis, a specific.)

15. Male Sexual Organs.—Sexual desire quite marked.—R. spermatic cord, low down, sore to touch.—Chancre on prepuce, l. side of frenum; penis greatly swollen; chancre like a cauliflower excrescence, red, smooth, and glistening.—(Small sore at entrance of urethra; parts of glans around urethra an open ulcer, exhaling most fetid smell, and with most excruciating pain; red, glistening appearance.).—Gonorrhśal pains, intermittent, in front, middle, or posterior part of urethra; when the gonorrhśa is >, catarrh sets in.

16. Female Sexual Organs.—Menses scanty; terribly cross and impatient first day; on second day, severe paroxysmal pains in uterine region, causing nausea; occasional pain in l. ovarian region, passing about half-way down thigh, on upper part of it; all these pains > by bending backwards; pain and aching in r. lumbar region when leaning forwards (as in sewing) even for a short time; entire > when bending back.—Menses scanty at first; with pain in l. ovary.—Menses very profuse; abdomen very sensitive to pressure and weight of clothes, entire > by removing them.—(Several cases of membranous dysmenorrhśa.).—Dysmenorrhśa, pain in l. groin, with bearing down and nervousness.—Leucorrhśa all day, but none at night, even after taking a long walk.—Slight leucorrhśa during the day, < when standing or walking.—Severe pain in r. ovarian region, completely > by a flow of bright-red blood, which lasted an hour, and did not return.—In afternoon, intermittent, sharp pains in r. ovarian region.—Constant pain in r. ovary.—Pain in l. ovarian region, and all across lower part of abdomen.—Sharp pains beginning in l. ovary, and darting like lightning either towards r. ovarian region, or else up l. side and down arm, or sometimes down both thighs; but generally down l. leg to foot, which is numb, pains like labour-pains; accompanied by great restlessness of legs and arms, and great aching in lumbar region; (5th d. after premature labour).—Sharp, lancinating pains like knives cutting upward from os uteri, and as these were being relieved, sensation as of needles darting upwards in uterus.—Escape of flatus from vagina.—Pressure on anterior part of vulva, entire > by sitting; sensation as if

everything were coming out at vulva; with frequent desire to urinate and smarting in urethra.—Itching in l. side of labia, with rough eruptive condition on l. side of vagina, with acrid leucorrhśa; excoriating severely.—Great swelling of l. labia, and terrible, pain while urinating; (from gonorrhśa).—Itching of vulva.—Intense painful soreness of vulva, extending to anus, coming on very suddenly about noon, and lasting for about two hours; came on again during evening; could not walk, stand, or sit; > by lying on., back and separating the knees as far as possible.—Raw and bad-smelling sores between labia and thighs, in folds of skin; < when walking, would rather keep still all the time; these sores are covered with a disgusting white exudation.—Sexual organs extremely excited; very much < from the slightest touch, as putting the hand on the breast, or from the pressure on vulva when sitting, or the slight friction caused by walking.—(After-pains very distressing, extending to thighs, rather < on r. side.).—Menses very stringy and sticky, cannot get rid of them.—Urination caused intense pain in vulva, when even the least drop of urine came in contact with it.—Breasts very sore and sensitive to pressure for a day or two during menses.—Breasts very sore and painful, with sharp, darting pain in r. ovarian region extending to knee, very painful and must keep leg flexed (1st d. after miscarriage at 6th month).—Constant pain in breasts, they feel very sore when going up or down stairs.—Breasts seem very full.—Constant pain in nipples.—Breasts sensitive to deep pressure.—Breasts painful; feel as if full of very hard lumps, < going up or down stairs.—Loss of milk while nursing, without known cause.—Galactorrhśa (many cases).—Dries up the milk when nursing.—Given for an ulcerated throat to a nursing woman, it cured the throat and nearly dried up the milk.—After two doses of c.m. rapid decrease in size of breasts and quantity of milk in a lady who wanted to wean her child.

17. Respiratory Organs.—Slight hoarseness, with now and then a change of voice, after waking, but soon passing away.—Cough from tickling in upper anterior part of larynx, < when talking and also when lying.—Cough from tickling under middle of sternum.—Cough with pain and oppression of chest; it jars her all over.—Loss of voice, cannot speak in a whisper (pharyngitis).—Marked soreness on touching larynx (diphtheria).—Sensation as if the breath would leave her when lying down and trying to sleep; has to jump up and stir around for an hour or so every night.

18. Chest.—Terrible dyspnśa immediately after sleep, first on l. side of chest; the dyspnśa compelled her to be lifted upright with violent exertion to get breath; there was sharp pain in region of heart with each of these attacks; after the medicine had but one attack of dyspnśa, and all the pain was referred to r. side of chest (acute rheumatism).—Lungs feel as though fast to chest, < while writing.—Clavicles sore to touch.—Stabbing pain in r. lung, just below nipple, preceded by pain in stomach-pit as of a stone or undigested food.—Sharp pain in r. breast at 4 p.m.—Feeling of oppression and tightness behind sternum, with desire to draw a deep breath.

19. Heart.—Palpitation of heart, irregular, causing shortness of breath.

20. Neck and Back.—Neck stiff (rheumatism, neuralgic headache; diphtheria).—Sharp neuralgic pain under r. scapula.—Lameness and cutting pain under l. scapula, < turning in bed.—Sharp, cutting pain under l. scapula, shooting forwards through lung.—Backache nearly all day between scapulć, < after becoming warm, somewhat > by leaning back.—Pain in sacrum < by riding (not by walking.).—Aching pain, < by stooping, > by leaning back, with weakness; this pain extended around l. side of pelvis (leaving the back) to inside of thigh followed by a bloody leucorrhśal discharge after six hours, which came all at once, leaving labia extremely sensitive.—Spine aches from base of brain to coccyx (pharyngitis).

21. Limbs.—Aching pains in limbs and back.—Rheumatism beginning in soles flying from joint to joint and side to side, < every evening and by movement and touch; numb pains in ankle.—Burning of hands and feet at night (ovaralgia.)

22. Upper Limbs.—Painful swelling and hardness, with suppuration of l. axillary gland; menses came on at same time.—Pains down r. arm and in fingers, which feel cramped; does not seem to have the same power in r. hand.—From draught in evening, sudden, violent pains in r. shoulder, so much so that when retiring she could not raise arm to finish toilet, as if disabled by dislocation.—Right wrist lame and painful.—Sharp, shooting pains in ball of r. thumb.—Sharp pain round l. arm, as of a cutting instrument; felt principally at the vaccination-cicatrix; passed from thence to l. elbow and disappeared; (forty-five minutes after first dose.).—Trembling of l. hand, as in paralysis agitans.—Woke at night feeling very chilly, with sharp pain in l. hand, and sensation in l. arm as if asleep; lasting fifteen minutes.—Palms and soles burning hot.—Two warts on little finger noticed to be leaving.—Painful eruption on axillć, like moist herpes, exceedingly painful on washing them. Veins in hands look bluer than usual, they are swollen.—Sensation as if an insect were crawling on shoulders and neck, occasionally on hands.—Perspiration in axillć, stains linen bright orange colour, no smell.—Very fetid perspiration in axillć, staining linen brown.—Wrists very lame, esp. r., which has sharp pains passing from thumb to little finger.

23. Lower Limbs.—A few days before menses, inside of both thighs became raw and painful when walking, they then broke out with large, flat, red pimples; the soreness soon left; but the pimples remained.—Varicose veins on outer r. thigh, from hip to knee.—Sensation of numbness in l. leg with great heat as if burning, but cool to touch; brought on by pressure.—Stiffness through thighs, < on attempting to move after sitting.—Veins of feet and ankles very much swollen.—Feet swollen and very sore, causing considerable pain while walking.—Cramps in feet.—Numbness and paralytic feeling in inner side of both knees, extending to both big toes.—Pain in r. hip and leg while walking, with a trembling of leg, and slight feeling of uncertainty, esp. on going down stairs (metritis).—(Articular rheumatism in r. hip and knee-joints, esp. former; she was seated in an armchair, unable to move, complaining of bruised, smarting, lancinating pains in both joints and in lumbar region with swelling of affected joints; pains < by slightest motion at night; by

touch and by pressure of bed clothes; next day pains and swelling had gone to l. hip and knee joints, leaving r. almost free; the ensuing day they had almost entirely disappeared from l. hip and knee-joints and had again attacked r. hip and knee; complaining, moaning, and sighing on account of her sufferings and probable termination of her illness).—Rheumatic pains in l. hip and along sciatic nerve; wandering pains in nape of neck, with stiffness; pains in one or other shoulder; pain above l. eye and heaviness of eyelid; burning in eye, agglutination of eyelids; sensitiveness to light (sciatica and rheumatism).—Intense, unbearable pain across supersacral region, extending to r. natis and down r. sciatic nerve; pain so severe as to prevent sleep or rest (sciatica).—(Partial paralysis of r. leg from miscarriage; leg numb and stiff, but cannot keep it still; feels > flexing it on abdomen.).—Numb pains chiefly in ankles, < while quiet, with swelling; veins of ankles distended; > while extreme heat is applied (rheumatism).—Ecthyma: on r. leg.

25. Skin.—Sensation as if an insect was crawling on shoulders and neck, occasionally on both hands.—Herpetic eruption in both axillć, with light brownish scab, extremely painful when washing; eruption most in r. axilla, and in both instances appeared previous to pain in labić, which was followed by a discharge of blood from vagina.—Every scratch gets sore.—Icthyosis, with branlike desquamation of skin.—Shining, glazed, and red appearance of ulcers on shin and wrist (syphilis).—Crusts on skin, under which greyish yellow matter formed and was squeezed out.

26. Sleep.—Great desire to sleep (diphtheria).—Cried out and talked in sleep (diphtheria).—Cannot find any comfortable position in bed; there is no way that she can put her hands that they do not bother her; falls asleep at last on her face.—Dreamed a large snake was in bed (tonsillitis).—Got to sleep late; profuse sweat during sleep; felt feverish all night; in morning > in every way.—At night lies with l. leg flexed on thigh, and thigh on pelvis; restless; < after sleep (ovaralgia).—Dreams frequently that she is urinating, and wakes to find herself on point of doing so, requiring immediate relief.—Symptoms < after sleep (diphtheria).

27. Fever.—Chilly feeling lasting all day.—Internal chilliness with external warmth.—Cold chills run down back, hands as cold as ice (on entering house 4 p.m.; 6.30 entire > after a good dinner).—Fever and chills for a few days, and up and down every few hours.—Intense fever on waking in morning, with perspiration.—Dry, hot skin (diphtheria).—Exhausting sweats; after sleep.—Wakes at night in cold perspiration, with fearful foreboding (metritis).—Perspired considerably through night, sweat having a rank smell (acute rheumatism).

Lac Felinum.

Cat's Milk. Dilution.

Clinical.—Ciliary neuralgia. Dysmenorrhœa. Headache, Keratitis. Mouth, inflammation of. Stye. Throat, catarrh of.

Characteristics.—This is another of the remedies introduced by Swan. The full pathogenesis appears in *Med. Visitor*, Aug., 1893, part having already appeared in *H. W.*, xviii. 15l. The greatest number of the symptoms were experienced in the head and eyes, and many of these have been confirmed. Here is one from Swan: "Terrible headache penetrating the left eyeball to centre of brain, with pain in left supra-orbital region extending through brain to right vertex" (*H. W.*, xviii. 429). Many eye cases are on record. Swan benefited this case: "Pain in eyes back into head, extremely sharp, with a sensation as if the eyes extended back. Great photophobia: any continued glare causes the pain" (*H. W.*, xvii. 54). Berridge reports this case: "Mr. H., 37. Left eye inflamed three weeks; deep red; photophobia; on left segment of cornea an ulcer. For three nights pain like a knife running from left eye to left occiput, on lying down, especially on left side. Burning in left temple, near eye, < at night. *Lac. fel.* 40m. (Fincke) every four hours. Eye was better next day, and steadily got well. The pain ceased first." Berridge remarks that "< lying on left side" has been verified by him in another case (*Lach.* has < lying on painful side; *Zinc.* < lying on unpainful side—*H. P.*, vi. 376). One of the provers took 17th, and afterwards 1m. (Fincke) potency. Another prover took the 200th. Among the verified symptoms are: Morbid conscientiousness; heaviness in forehead; scalded sensation on tongue; absence of appetite. The eye affections are mostly accompanied by shooting pains from eye backwards. Styes were present in some cases. (In the Schema cured symptoms are bracketed or have the name of the disease in which they occurred appended in brackets.)

Relations.—*Compare:* Lac. can., Lac. def., &c. In eye affections, Spigel. Stye, Staph., Puls., Hep.

SYMPTOMS.

1. Mind.—Great depression of spirits.—Very cross to every one.—Fear of falling downstairs, but without vertigo.—Morbid conscientiousness; every little fault appeared a crime.—Mental illusion that the corners of furniture, or any pointed object near her, were about to run into eyes; the symptom is purely mental; the objects do not appear to her sight to be too close (asthenopia).

2. Head.—Dull pain in forehead in region of eyebrows.—Heaviness in forehead.—Heavy pressure in sides of head and vertex.—Pulsations in head with sensation of heat in forehead, and constriction across bridge of nose.—Acute pain

on vertex.—Acute pain in frontal region.—Intense pain early in morning on vertex, and l. side of head: it commences just in front of vertex, with a flush of heat which extends front about an inch, and is followed by the intense pain; the heat and pain then spread, never crossing median line, down l. side as a veil, taking half the nose and jaws, and entering ear, causing her to close the eyes from its intensity; during the pain, head drawn down so that chin pressed heavily on chest, and her agony was so great that she had to hold the head firmly in her hands, and rush through the house from room to room screaming (from the 17th potency).—Acute pain over l. eye and temple.—Pain in head < from reading.—Sharp lancinating pains passing zig-zag down l. side of head about every ten minutes from vertex towards l. ear.—Pain commencing with a chilly sensation at root of nose; also a cold pain passing up median line to vertex, and passing down to ear (like the previous symptom).—Headache over eyes (l.).—Pain in forehead, occiput, and l. side of head, with rigidity of cords of neck (splenius and trapezius), and heat in Vertex; the pain in forehead is heavy, pressing down over eyes (headache).—Intense pain from head along lower jaw, causing mouth to fill with saliva.—Crawling on top of brain (asthenopia).—Weight on vertex (asthenopia).—Terrible headache penetrating l. eyeball to centre of brain, with pain in l. supra-orbital region extending through brain to vertex (headache).—Burning in l. temple near eye, < at night (keratitis).

3. Eyes.—Sharp lancinating pain through centre of l. eyeball, leaving in very sore internally, and causing profuse lachrymation (from the 1m.).—Heavy pressure downwards of eyebrows and eyelids, as if the parts were lead.—Inclination to keep eyes shut.—Eyes feel as if sunken in head, and l. eye occasionally waters.—Twitching of outer end of l. upper lid, inside.—(Twitching of eyelids r. and l.).—(Ciliary neuralgia.).—Sharp lancinating pain in centre of r. eyeball extending externally to temple and frontal region over eye, with intense photophobia, redness of conjunctiva and lachrymation; < by reading or writing; the pain appears to be in interior of eyeball, and extends thence to posterior wall of orbit, and then to the temples, with throbbing; dim sight when reading: also constipation, loss of appetite, lassitude in legs (choroiditis).—(Have had great success with it in eye cases, esp. where there is severe pain in back of orbit, indicating choroiditis.—Swan.).—On looking fixedly, reading, or writing, darting pain from eyes nearly to occiput; much < in r. eye (asthenopia).—When reading letters run together, with dull aching pain behind eyes, or shooting in eyes, the confused sight and shooting being < in r. eye; symptoms excited by catching cold or by over-fatigue (asthenopia).—Pain in eyes, back into head, extremely sharp, with a sensation as if eyes extended back; great photophobia to natural or artificial light; any continued glare results in this pain (improved).—Darting pain going backwards in centre of r. eye, < at night (keratitis).—If she lies on l. side. r. eye feels as if it were moving about and too heavy, with great pain.—(Ulceration of cornea.).—Photophobia.—[L. eye feels hot and adheres in morning.—White spot on outer edge of l. cornea, with red vessels running up to it from conjunctiva, and shooting pains from the spot to occiput.—Pain in r. lower orbital border as if sore, with tenderness there on touch, and shooting in r. eye.—R. eye inflamed, with

shooting backward where the white spot is; l. eye also inflamed, but without shooting.—Stye on l. upper lid.—Two styes on r. lower lid.—Eyes get bad every September.—Eyes ache by gaslight. (Cured in various cases of ulceration of cornea)].

5. Nose.—Cannot bear the smell of clams, of which she is naturally very fond, and cannot eat them.

7. Teeth.—Pains in all the teeth as the hot pain from head touched them.

8. Mouth.—Sensation as if tongue were scalded by a hot drink.—Redness under tongue, on gums, and whole buccal cavity.—Soreness and sensation of ulcers on tongue and roof of mouth.—The parts of mouth seem to stick together, requiring an injection of air or saliva to separate them.—Loss of taste.—Brassy taste in mouth.—Salivation, tongue enlarged and serrated at edges by teeth.—Small white ulcers covering tongue and whole buccal cavity.—Elongation of palate.—Very sore mouth.—(Dryness of mouth.)

9. Throat.—Tough mucus in pharynx.—Stringy, tough mucus in pharynx, cannot hawk it up and has to swallow it; when it can be expectorated it is yellow.—Mucus in pharynx between head and throat is thick, yellow, tough, stringy, expectorated with difficulty, and has a sickish sweet taste.—Posterior wall of pharynx slightly inflamed, with sensation of soreness.

11. Stomach.—No appetite.—After eating feels swollen; has to take off her dress and loosen clothes.—Great desire to eat paper.—Stomach sore all around just below the belt, < l. side.—Occasionally very slight nausea.—Heat in epigastrium.—Great soreness and sensitiveness of epigastric region.

12. Abdomen.—Pain in abdomen and back, as if menses about commencing.—Pain in bowels.—At midnight, sensation of a cold bandage over lower part of abdomen.—Great weight and bearing down in pelvis, like falling of the womb, as if she could not walk; < when standing.—Pain in pelvis through hips on pressure, as when placing arms akimbo.

13. Stool and Rectum.—Natural stool, but very slow in passing, at 2 a.m.—Stool long, tenacious, slipping back when ceasing to strain; seeming inability of rectum to expel its contents.

14. Urinary Organs.—Frequent desire to urinate, urine very pale.—(Obstruction in urinating, has to wait.)

16. Female Sexual Organs.—Leucorrhœa ceased on third and reappeared on fourth day.—Furious itching of vulva, inside and out; yellow leucorrhœa.—(Dragging pain in l. ovary.)

17. Respiratory Organs.—Dryness of rim of glottis.

18. Chest.—Very much oppressed for breath, continuing for several days; it is a difficulty in drawing a long breath, or rather that requires the drawing of a long inspiration, for it seems as if the breathing was done by upper part of lungs alone.

22. Upper Limbs.—Pain in right side of l. wrist when using index finger.

23. Lower Limbs.—L. foot feels cold when touched by r. foot.—Legs ache.

24. Generalities.—Entire r. side from crown to sole felt terribly weak, heavy, and distressed, so that it was difficult to walk.—(Constant nervous trembling, esp. of hands, as in drunkards.)

26. Sleep.—Dulness, sleepiness, gaping.—Heavy, profound sleep, not easily awakened.—Dreamed of earthquakes.

27. Fever.—Cold and heat alternately, each continuing but a short time.

Lac Vaccinum.

Cow's milk. Dilution.

Clinical.—Albuminuria. Blindness. Diabetes. Headache. Milk, intolerance of. Rheumatism. Sternum, pains in. Tongue, ulcers on.

Characteristics.—*Lac vac*. was proved by J, C. Boardman, of Trenton, New jersey (*H. W*., xix. 402). Swan's 200th potency was used. I have given the symptoms in the Schema. To these might be added the effects of milk on persons intolerant of it. The headaches, biliousness, and constipation frequently induced by milk are well known. The headaches were well brought out in the proving. Milk frequently aggravates rheumatism; and Burnett has observed that children who drink much milk after their teeth are grown become very liable to colds. The keynote of *Lac can*. is alternation of sides; in *Lac vac*. the symptoms appeared both sides simultaneously. The great thirst and excessive flow of urine suggest diabetes. Swan gives a brief proving (*H. P*., ix. 252) and some cures. The cures were: (*1*) Short rheumatic pains in knee and ankles on walking; passing fetid flatus. (*2*) Fever at night followed by profuse sweat all over; the fever was preceded by chilly feeling, beginning at shoulders, then running up from feet to head; headache. (*3*) Flat white ulcers on tongue, sensitive, covered with white slimy mucus, extending to sides of cheeks. (*4*) Brown crusts, having greasy appearance, especially in corners of mouth, like "butter-sores." (*5*) Fulness of head, as if too large and heavy. (*6*)

Vertigo. (*7*) Eructations and passing of much flatus.—The symptoms of Swan's proving (by Miss H. from the 1m. of Fincke) are included in the pathogenesis.

Relations.—*Compare:* Lac. v. def., Lac. v. flor., Lac. can.

SYMPTOMS.

1. Mind.—General nervousness, with depression of spirits, feeling as though about to hear bad news.—Mental confusion, lasting a long time after proving.

2. Head.—Vertigo: falls backwards if she closes her eyes.—A creeping sensation, or screw-like or vertical motion, began over l. eye, and continued upwards to vertex, next the same motion or feeling began two inches behind l. ear, and likewise went upwards to vertex; also a pressure on vertex, with a sensation of heat when hand was applied (1h.).—Sensation like a fire-ball in each temple simultaneously (20 m.).—All these symptoms passed away except pain on top of head, which feels as though something heavy were laid there, and occasionally a sharp pain simultaneously (3 1/2 h.).—Woke in morning with an aching pain all over head, most severe in occiput.

3. Eyes.—Dull pain over r. eye, and very, slight dull feeling over l. eye.—Eyes have a blur, or dimness, or obscurity of sight, off and on for a few moments at a time.—Blindness of both eyes, which came on three or four times in succession, lasting only a second at a time, then passing entirely away, leaving a pain in each temple, on top of head, l. ear, and below l. ear in the neck (2 1/2 h.).

4. Ears.—Ears felt stopped up; felt deaf in both ears, although she could hear as before.

8. Mouth.—Had a dirty, yellow-coated tongue, which felt parched.—Sour taste.—Acid saliva staining handkerchief yellow.

9. Throat.—Sensation of plug in throat or larynx.

10. Appetite.—Thirst for cold water in quantities; drank three tumblerfuls during evening.

11. Stomach.—Had a swelling or bloating of stomach (3rd d.).—At 10.30 a.m. sour taste; nausea, but no rising or vomiting (1 h.).—Contractive, pressing pain in stomach-pit, > by external pressure.

12. Abdomen.—Pain proceeding from sternum, extending across abdomen about an inch below umbilicus.

13. Stool.—Obstinate constipation.

14. Urinary Organs.—Urine was not increased in morning, but was dark red, without sediment.—Filled a large iron spoon with the urine and boiled it for twenty minutes; it left quite a mass of albumen, about a quarter of the whole; specific gravity 1030.—Yesterday the urine turned blue paper red; to-day it turns the red paper blue (13th d.).—In afternoon was obliged to urinate every fifteen minutes, in large quantity each time; was afraid to go across the street to a store for fear it would overtake me before I could return; it all passed off the same night.—The density of urine varied during a few days from 1,013 to 1,028, colour clear, odourless, acid reaction.—Frequent discharge of clear urine, nearly colourless, no sediment.

16. Female Sexual Organs.—White watery leucorrhœa; pain in sacrum.

17. Respiratory Organs.—Sensation of plug in throat or larynx.

18. Chest.—A sharp pain appeared in a spot the size of a shilling on each side of sternum and about middle of chest, with a sense of suffocation.—Later a burning sensation in same region.—Same pain, extends across abdomen about five inches lower down (about an inch below umbilicus); it did not seem to involve the bladder; no rumbling or passing of flatus.—Sharp pains in l. lower chest, or in region of lower lobe of l. lung; the pain was momentary, and did not return (5th d.).—Sharp pain began in r. chest, about three inches below clavicle; it passed upwards to top of r. shoulder, then down arm and forearm to thumb, and then passed off.

20. Back.—Pains in sacrum.

21. Limbs.—All the joints of body, esp. knees, feel weak and powerless, as when half drunk.

22. Upper Limbs.—Fingers of both hands, esp. when stretched out, tremble and quiver as from extreme weakness.—A clammy sticky coldness in both hands and both feet simultaneously.—Sharp pain under l. scapula, about three inches down from top; it then passed upwards to top of l. shoulder, then down arm and forearm and hand to the four fingers of the l. hand and then passed off.—Soon afterwards an aching pain was felt in l. hip-joint, which soon passed off.

23. Lower Limbs.—Piercing or lancinating pain in each hip-joint, not severe.—Aching pain along both thighs on outer side and terminating in both knees.—Aching pains in both knees like a rheumatic pain; they began simultaneously in both knees, but the r. was most severe (5th d.).—On going upstairs the knees trembled or quivered or were extremely weak, so as to be unable to take a step forwards.—Aching pains in bones from both hip-joints to both feet; simultaneously also burning sensation in both feet.

24. Generalities.—The pains in chest, abdomen, hips, thighs, and knees were all felt on r. and l. sides simultaneously.—She was so suddenly prostrated mentally and bodily that she was unable to collect her thoughts or use a pencil to write her symptoms I was therefore compelled to witness and ask questions and record them after the proving was nearly over she said she had so much mental confusion that she could not get mentally clear enough to feel her thoughts or express them; she could only give direct short answers to questions; as for writing her symptoms, she had no physical power to do it. In 2 h. all symptoms subsided gradually, but still there was a general trembling or quivering of whole body as well as the fingers. In 6 1/2 h. nearly relieved, except great physical prostration; mind is again normal.

26. Sleep.—Slept well all night, and woke in morning free from pain (8.30 a.m.).—Head feels all over heavy, dull, aching, drowsy, wants to go to sleep.—Gait is unsteady.—Must force herself to keep awake.—Must force herself to keep her eyes open, for if she shuts them she cannot avoid falling backwards and down to the floor. In 7 h. said she still felt sleepy, and could have fallen asleep in a minute at any time during the whole day.—General restlessness and bad dreams.—Dreams of trying to lay out a corpse, &c.

27. Fever.—Hands became hot and dry, a decided fever heat of hands.—Also pain on l. side of head, extending from neck to top of head, and a chilling sensation with it.—A slight fever over the entire body with a moisture in both hands, and aching in legs from thighs to knees, both sides simultaneously.

Lac Vaccinum Coagulatum.

Curds.

Clinical.—Nausea of pregnancy.

Characteristics.—The only use that I know as having been made of *Lac. coag*. is in the nausea of pregnancy, the indication being "Nausea of pregnancy with desire for food and > by drinking milk (*Chel*.)."

Lac Vaccinum Defloratum.

Skimmed Milk (cow's). Dilution.

Clinical.—Anæmia. Appendicitis. Asthma. Bright's disease. Constipation. Diabetes. Dropsy. Fainting spells. Headache. Heart, affections of. Lactation, defective. Leucorrhœa. Menses, suppressed. Obesity. Sciatica.

Characteristics.—"The idea of potentising *skimmed milk* originated with Swan upon reading Donkin's Skim Milk Treatment for Diabetes and Bright's disease." The first proving was made by a lady in New York, in whose case the headache and nausea with constipation were strongly marked. A subsequent, more extensive proving was made under Swan by Dr. Laura Morgan." I quote from Hering, who adds, that with but few exceptions the symptoms of the Schema have received clinical verification. The symptoms set up by milk in some sensitive persons, especially the violent headache and the constipation, are a matter of common knowledge, and it is in these affections that the remedy has especially distinguished itself. As milk contains within it an epitome of all the tissues and salts of the animal which secretes it, it is natural to expect of it a wide range of action in the attenuations. As *Natrum. mur*. is a prominent ingredient, it is not surprising that symptoms of this are found in the pathogenesis, *e.g*., "thirst for large quantities, often," "nausea and vomiting," "depression with crying and palpitation." The characteristic headaches of *Lac def*. are: Periodic sick-headaches in women; menstrual sick-headaches. Intense headache, fore part, with nausea and constipation. Throbbing frontal headaches in anæmic women, nausea, vomiting, and obstinate constipation. The symptoms which specially indicate it in diabetes are: Intense thirst; wasting. The menses are irregular; sometimes very dark, scanty; sometimes colourless water. (*Lac def*. cured this case: Menses suppressed suddenly from putting hands into cold water. Great pain in uterine region. Intense headache. Pains fly all over. Flushed face. Patient slept after first dose, next morning slight flow appeared. Second dose brought back flow profusely, and patient felt well and the flow continued.) Nutrition is perverted. There is loss of weight, or else obesity. Dropsy. Fatty degeneration. Some peculiar sensations are: As though a knife was cutting up and down through the heart. As if head would burst. As if eyes full of little stones. As if top of head was lifted off. As if a ball of pain in centre of forehead. As if flesh was off bones and edges were separated and sticking out. As if objects were tossed up from below in all directions. As if a large ball rose from lower end of sternum to upper end of œsophagus. As if a stone in abdomen. As if sheets were damp. As if a cold air blowing on her. It may be well to recall in this last connection that milk is one of the articles forbidden to hydrogenoid or chilly patients. Burnett maintains that excess of milk in the dietary of children after they have cut their first teeth renders them susceptible to colds. There is periodicity in the symptoms: every eight days. Headache ceases at sunset. Most symptoms occur in the morning. Fever and prostration come on in afternoon. Putting hands into cold water = suppression of menses. External heat does not > chilliness, < pain in eyeball. Sensation as if cold water were blowing on her, even while covered up warm. No position >. Lying down < vertigo; headache; urinary pain. Vertigo compels to sit up. Extending arms above head = fainting spells. Motion < all symptoms. < Walking; < sitting down, though ever so gently. Abdomen is sensitive to touch. Pressure round waist = fainting spells. Pressure > pain in eyeball (presses eyes into pillows); bandaging head lightly > pain. After injury subject to distress in head.

Relations.—*Compare:* Lac can., Lac coag., Lact. ac., Sacch. lac., Vaccin. (a cow nosode); Nat. m. (diabetes, headache, constipation, heart); Coccul. (menstrual sick-headaches); Cact. (heart; but Lac d. has not the "grasp" of Cact.); Nux m. (head heavy, tends to fall to left—Lac. d. to right).

Causation.—Injuries.

SYMPTOMS.

1. Mind.—Loss of memory; listlessness, disinclination for bodily or, mental exertion.—Depression; does not care to live; questions as to quietest and most certain way of hastening one's death.—During conversation, headache and depression of spirits >.—Depression with crying and palpitation (fainting spells).—Imagines that all her friends will die and that she must go to a convent (fainting spells).—Does not want to talk to any one.—Can remember what has been read only by a strong effort of will.—Vacillation of mind.—Great despondency on account of the disease, is sure he is going to die in twenty-four hours; without fear of death.

2. Head.—Vertigo: on moving head from pillow; < lying down and esp. turning while lying, obliging to sit up.—Intense vertigo when opening eyes while lying, < when rising up; objects appeared to move swiftly from l. to r., at other times moving as if tossed up from below in every direction.—Head feels heavy with marked tendency to fall to r.—Faintness and nausea when stepping upon floor in morning.—Pain first in forehead, then extending to occiput, very intense, distracting and unbearable; great photophobia, even to light of candle; deathly sickness all over, with nausea and vomiting, < by movement or sitting up; very chilly, and external heat does not >; frequent and profuse urination of very pale urine.—After injury subject to distress in head; severe pain in forehead just above eyes; breath offensive; appetite poor, nausea; at times sleeps for hours during attack; great distress across back; urine dark and thick.—Nausea and sometimes vomiting, which >; pain in forehead as if head would burst, with blindness; pain is > by bandaging head tightly; < by light and noise; constipation, stools large; hands and, feet cold (hemicrania).—Headache: < during menses; < by speaking, alternating with tonsillitis.—Throbbing frontal headache (over eyes), nausea, vomiting and obstinate constipation; esp. in anæmic women.—Headache: with pains in eyes; as if full of little stones; < closing eyes; profuse urination.—Dim vision, as of cloud before eyes; profuse urination; full feeling in head; slight nausea at pit of stomach; face pale; feet cold; coldness in back.—Intense pain at point of exit of supraorbital nerve, diffused thence over forehead; attack commences with chill, quickened pulse, flushed face and discharges of wind from stomach.—Severe headache, with a sensation as if top of head was lifted off, raised about five inches and brains were coming out; head feels hot, motion < pain; face felt as if flesh was off bones and their edges were separated and sticking out.—Pain first in forehead, extending through occiput, making her nearly frantic.—In morning nausea and

sensation of a round ball full of pain in centre of forehead.—Head feels large as if growing externally.—Head heavy, falling to r. side.—General sore pain of head produced by coughing.

3. Eyes.—Dim vision; can only see lights, not objects; preceding headache.—Great photophobia, even candle light unbearable.—Great pain in eyes on first going into light, soon passed off; on closing eyes on account of light, pain was felt in eyeballs as if from pressure of lids.—On closing eyelids painful pressure as if lids were short laterally, causing sensation of band pressing upon balls.—Upper eyelids feel very heavy; sleepy all day.—Pain in head, most marked over l. eye and in temple, extending into eyes, and causing profuse lachrymation.

5. Nose.—Painful pressure or tightness at root of nose (catarrh).

6. Face.—Deathly paleness of face.—Sallow complexion with eczematous eruption.—Flushes of heat in l. side of face.—Face, neck, arms and body generally flush colour of a red rose, with swelling, but no itching or burning.—Sensation as if all flesh was off bones of face and edges were separated and sticking Gut.—Pimples on face and forehead (irregular menses).

7. Teeth.—Grinding of teeth when asleep, with pain in stomach and head with vomiting.

8. Mouth.—Mouth very dry.—Breath very offensive.—Mouth clammy and frothy, esp. during conversation.

9. Throat.—Globus hystericus; sensation of a large ball rising from a point about lower end of sternum to upper end of œsophagus, causing distressing sense of suffocation.—Sore throat < when swallowing; slight, hacking cough.

10. Appetite.—Entire loss of appetite.—Great thirst for large quantities and often; intense thirst.—Could not drink milk without its causing sick-headache.

11. Stomach.—Sour eructation.—Nausea: in morning; from a recumbent position at any time during day or evening, or on moving or rising in morning; deathly, cannot vomit, with groans and cries and great distress, great restlessness with sensation of coldness; although skin was hot, pulse was normal.—Nausea and vomiting and a sensation of deathly sickness, < from movement or rising up in bed.—Vomiting first of undigested food, intensely acid, then of bitter water, and lastly of a brownish clot, which in water separated and looked like coffee grounds; no smell; bitter taste.—Incessant vomiting, which had no relation to her meals.—Violent pain in pit of stomach, seldom lower, brought on by fatigue.—Much wind, and acid stomach, no tenderness.—Dyspepsia.—Bloating in epigastric region, with attacks of asthma; he could scarcely breathe: hard pressive pain at about fourth cervical vertebra.—Cramps in epigastric region.

12. Abdomen.—Abdomen sore and sensitive to touch.—Severe pain across umbilicus with headache.—Great fatigue from walking, on account of heaviness as of a stone in abdomen.—Drawing pain across lower part of abdomen, with heat and pressing, bearing down in pelvic region, both sides; < by, pressure.—Flatulence.

13. Stool and Anus.—(Constipation.).—Is generally constipated, and when it is most persistent, very chilly; cannot get warm.—Constipation: with chronic headache; most powerful purgatives were of no avail; fæces dry and hard, passed with great straining, lacerating anus, extorting cries and passing considerable blood; chronic.—Continual persistent constipation, > only by cathartics and enemas, with violent attacks of sick-headache, pain unbearable; great photophobia; deathly sickness all over, with nausea and vomiting < by movement or sitting up; chilly, not > by external heat.

14. Urinary Organs.—Frequent and profuse urination of very pale urine.—Frequent but scanty urination.—Profuse, pale urine.—Albuminuria.—Constant pain in region of kidneys, passing around each side above hips to region of bladder, also downward from sacral region to gluteal, and from thence down back of thighs; pain burning, not > in any position, < lying down.—Urine dark and thick.—Urine very pale; cannot retain it.—Urine comes away drop by drop, or else gushes out with a sensation of very hot water passing over the parts; wetting bed at night.

16. Female Sexual Organs.—Pressing bearing down in ovarian region.—Drawing pain across uterine region, with heat and pressive bearing down in both ovarian regions; cannot bear pressure of hand or arm on abdomen, intense distress in lower part of abdomen during menstruation, not > by any position; violent inflammation in ileo-cæcal region, with intense pain, swelling, tenderness, fæcal accumulation and violent vomiting.—Menses delayed a week with congestion of blood to head; coldness of hands, nausea, and vertigo; flow commenced next morning after taking Lac defl., scanty with pain in back; sensation of weight and dragging in l. ovarian region.—After putting hands in cold water sudden suppression of menses; pains all over, esp. in head.—Irregular menstruation, sometimes very dark and scanty, sometimes colourless water.—Slight yellowish leucorrhœa.—Morning sickness during pregnancy; deathly sickness at stomach on waking; vertigo and waterbrash on rising; constipation.—Decrease in size of breasts.—(Has never failed to bring back the milk in from twelve to twenty-four hours.).—Diminished secretion of milk.

17. Respiratory Organs.—Asthma so that he could scarcely breathe, accompanied by bloating in epigastric region.—Short, dry cough, with difficult expectoration of a small lump of mucus, which > cough.

18. Chest.—Soreness of chest with great pressure.—Tuberculous deposit in apices of both lungs.

19. Heart and Pulse.—Pressure around heart (not like grasping of Cactus), with dyspnœa and a feeling of certainty that he is going to die in twenty-four hours.—Sharp pain in apex of heart, as if a knife were cutting up and down; this preceded a heaviness of head, dulness over eyes, throbbing in temples and palpitation of heart.—Palpitation of heart and flushes of heat, esp. in l. side of face and neck.

20. Neck and Back.—A symmetrical patch of herpetic eruption on each side of neck, itching and burning after scratching.—Hard, pressive pain at fourth cervical vertebra; chills creeping along back between scapulæ.—Intense burning pain in small of back and sacrum, commencing in region of kidneys, passing around on both sides above hips into groins, also downward from renal region through gluteal region, down back part of thighs; pain, burning, and > by no position; lying down.

21. Limbs.—Cold hands or feet during headache.—Aching pains in wrists and ankles.

22. Upper Limbs.—Ends of fingers icy cold, rest of hand warm.

23. Lower Limbs.—Numbness and loss of sensation over outer and anterior surfaces of thighs.—Pains passing down under side of thighs to heels, and pains across top of feet as if bones were broken across instep; pains would come on as soon as she stepped upon floor in morning, upon which she would be faint and nauseated and would have to lie down.—Weakness and aching in ankles, puffiness.—Skin thickened at edges of feet.

24. Generalities.—Great lassitude and disinclination to exertion.—Great restlessness and extreme and protracted suffering from loss of sleep at night.—Feels completely tired out and exhausted, whether she does anything or not; great fatigue from walking.—Great loss of strength, commencing with a sharp cutting pain in apex of heart; forehead feels heavy, with a dull sensation over eyes and throbbing, principally in temples, rest of head feels light.

25. Skin.—A symmetrical patch of herpetic eruption on each side of neck, itching and burning after scratching.

26. Sleep.—Sleepy all day long.—Great restlessness, extreme and protracted suffering from loss of sleep at night.

27. Fever.—Hot fever 9 p.m., continues until near morning, wakes in profuse sweat, which stains linen yellow, difficult to wash out.—Hectic fever; malignant typhoid.—Sensation as if the sheets were damp.

Lacerta.

Lacerta agilis. Green Lizard (also Large Green Spotted Lizard of U.S.). N. O. Lacertilia. Tincture of whole animal. (A separate preparation of the spotted lizard should be made.)

Clinical.—Skin, eruptions on. Tongue, vesicles under.

Characteristics.—The Green Lizard is usually considered to be non-poisonous; but Baldelli, who ate a lizard cut into small pieces, developed some decided symptoms of indigestion, vesication under the tongue, and skin eruptions; and a girl, bitten on the sole of the left foot by a "large green spotted lizard," died of the effects of the bite after twenty-one days of suffering. This is recorded in Allen's Appendix, and comes from an American source, so it is probably an American variety of *Lacerta* that is accountable for this. Swelling, pain, numbness, delirium, with an alternating state of greatly increased mental acumen, left-sided paralysis, neck and jaw of left side rigid and muscles tender. In the Schema the symptoms due to the bite of the American lizard are marked (A). The symptoms of the proving were > by drinking frequently vinegar and water. Motion = excruciating, pains in bitten limb. Touch <.

Relations.—*Compare:* Amphisbœna, Heloderma. *Antidote:* vinegar (?)

SYMPTOMS.

1. Mind.—Occasional delirium.—Wonderfully increased mental acumen during intervals of reason (A).

6. Face.—Muscles of l. (bitten) side neck and jaw rigid and tender to touch (A).

8. Mouth.—Large vesicles under tongue.—Constant accumulations of saliva in mouth.

9. Throat.—Much difficulty in swallowing (A).

11. Stomach.—Violent eructations and some distress in stomach.—Nausea and a feeling of weight and pressure in stomach.

12. Abdomen.—Pains in intestines, > by frequently drinking vinegar and water.

16. Female Sexual Organs.—Ulcerated places on female genitals.

19. Pulse.—Pulse rose eight beats; subsequently fell fourteen beats.

24. Generalities.—Numbness; prickling; swelling spreads up from bitten foot, with most excruciating pain on slightest motion; muscles of neck and jaw of l. (bitten) side stiff and tender to touch, while l. side paralysed. The limbs were spotted a short time before death on the twenty-first day (A).—All the symptoms disappeared on the subsequent night after a profuse sweat.

25. Skin.—Moist white eruptions in several parts of the body, esp. inner canthus of eye.

Lachesis.

Trigonocephalus lachesis. The Surukuku Snake of South America. N. O. Ophidia. Trituration. Dilution.

Clinical.—Albuminuria. Alcoholism. Amblyopia. Aneurism. Apoplexy. Appendicitis. Asthenopia. Asthma. Atheroma. Bedsores. Boils. Bubo. *Cćcum, inflammation of. Carbuncle. Catalepsy*. Chancre. *Change of life*. Chilblains. Ciliary neuralgia. *Cough*. Cyanosis. Delirium tremens. *Diphtheria*. Dog-bite. Dropsy. Dyspepsia. Ears, polypus of; wax in; noises in. Enteric fever. Epilepsy. Erysipelas. *Eyes, affections of*; hćmorrhage into. Fainting. Fistula lachrymalis. *Flatulence*. Fungus hćmatodes. Gall-stones. *Gangrene. Glanders*. Gums, bleeding of. Hćmorrhages. Hćmorrhoids. Hay fever. *Headache. Heart, affections of*. Heartburn. Hemiplegia. Hernia. Herpes facialis. Hoarseness. *Hydrophobia*. Hysteria. Injuries. Intermittent fever. Jaundice. *Labour, pains after*. Laryngismus. *Laryngitis*. Leprosy. Liver, affections of. Locomotor ataxy. *Malignant pustule*. Measles. *Méničre's disease*. Mercury, effects of. *Mind, affections of. Morvan's disease*. Mouth, sore. Mumps. Neuralgia. *Neurasthenia*. Noises in ears. Nymphomania. Śdema of lungs. Otorrhśa. *Ovaries, affections of*. Paralysis. Paraphimosis. *Perityphilitis. Perspiration, bloody*; absent. Phlegmasia alba dolens. *Plague*. Pneumonia. Puerperal fever and convulsions. *Purpura. Pyćmia*. Quinsy. Rabies. *Scarlatina*. Sciatica. Scurvy. Small-pox. *Stings*. Strangury. Syphilis. *Throat, sore. Trachea*, affections of. *Traumatic fever*. Tumours. *Ulcers. Veins, varicose*. Vertigo. Vicarious menstruation (nosebleed). Warts. *Whitlow. Wounds*.

Characteristics.—"The first trituration and first dilution in alcohol of the snake-poison *Trigonocephalus lachesis* was made by Hering on July 28, 1828. The first cases were published in the Archives in 1835. In 1837 this remedy was introduced into our materia medica." I quote from Hering's *Guiding Symptoms*, vol. vi., of which *Lach*. occupies nearly one hundred pages, and comprises the substance of a monograph he was compiling at the time of his death to celebrate the fiftieth anniversary of the introduction of the remedy into the materia medica. To the genius and the heroism of Hering the world owes this remedy and many another of

which this has been the forerunner. When Hering's first experiments were made he was botanising and zoologising on the Upper Amazon for the German Government. Except his wife, all those about him were natives, who told him so much about the dreaded Surukuku that he offered a good reward for a live specimen. At last one was brought in a bamboo box, and those who brought it immediately fled, and all his native servants with them. Hering stunned the snake with a blow on the head as the box opened, then, holding its head in a forked stick, he pressed its venom out of the poison bag upon sugar of milk. The effect of handling the virus and preparing the lower attenuations was to throw Hering into a fever with tossing delirium and mania—much to his wife's dismay. Towards morning he slept, and on waking his mind was clear. He drank a little water to moisten his throat, and the first question this indomitable prover asked was: "What did I do and say?" His wife remembered vividly enough. The symptoms were written down, and this was the first instalment of the proving of *Lachesis*. The natives crept back one by one next day, and were astonished to find Hering and his wife alive. The snake grows to seven feet and upwards in length, has fangs nearly an inch long, a reddish brown skin marked along the back with blackish brown rhomboidal spots. Nearly all the provings of *Lachesis* were made with the 30th and higher attenuations.—The four grand characteristics of *Lach*. are: (*1*) < By sleep. (*2*) Excessive sensitiveness of the surface with intolerance of touch or constriction. (*3*) Left-sidedness, and the direction left to right: symptoms begin on the left side and either remain there or proceed to the right. (*4*) > From the onset of a discharge. There is headache > as soon as nasal catarrh comes on. Uterine pains > as soon as menses appear. The other side of this is < from non-appearance of an expected discharge, and it is this which is the foundation of the appropriateness of *Lach*. to the climacteric state. Wherever one or more of these features is prominent in any case *Lach*. will most likely prove the remedy. Homśopathic literature abounds with illustrations of the first named—< from sleep. I will take an illustration from Nash: An old syphilitic suffered from obstinate constipation, and was taken with severe attacks of colic. The pains seemed to extend all through the abdomen, and always came on at night. The man was not making any progress, when one day he remarked to Nash, "Doctor, if I could only keep awake I would never have another attack." And in response to an inquiring look from the doctor, he added, "I mean that I sleep into the attack and waken in it." He never had another. One dose of *Lach*. 200 cured the colic and the constipation too. "Sleeps into an aggravation;" "< after sleep whether by day or by night;" "as soon as he falls asleep the breathing stops "—there are endless varieties of forms in which this peculiarity may be met with. < By closing the eyes (vertigo) is allied to this. But the presence of the opposite condition > after sleep) does not necessarily contraindicate *Lach*. Rushmore (*H. P*., xii. 64) cured with *Lach*. c.m. a married woman who had been a great sufferer from headache, which always began with dim and aching eyes. The pain was of sharp, neuralgic character, in temples and eyes, < right side. If she could not be still with it she had nausea and very bitter vomiting. Sometimes unable to be still a minute, at others could not stir. Brought on by least fatigue.

Keeps her in bed all day, and one attack is scarcely over before another comes on. Mental excitement, as receiving a call; induces it. With the headaches she is very cold; and with and after them has a very bitter mouth. *Wants to close the eyes with the headache, which is > by sleep*. Smarting in eyeballs and dim vision for several days after headache. During the headache much heart trouble; after the headache "skipping beats," soreness about head, pain in side. Loss of appetite after headache. Menses regular, painless, too free. Leucorrhśa many ears. A single dose of *Lach*. was given at the time, and the severe headache left on the way home. A constant light headache, with heaviness of head in morning, remained some days; but, without repetition, the remedy completely cured the headaches and the heart trouble as well. The hćmorrhages of *Lach*. have this peculiarity—they contain flakes of decomposed blood looking like charred wheat straw. Uterine hćmorrhage and hćmorrhages in typhoid fever presenting these characters will find their remedy in *Lach*. The sensitiveness to contact of *Lach*. is not so much on account of pain or aggravation of pain as on account of the uneasiness it causes. In uterine affections the patient wants to lift the clothes up to prevent contact with lower abdomen. Touching the throat in laryngeal affections causes suffocative spasms. A minor characteristic of *Lach*. is pain in the shin bones. "Much pain in shin bones of an aching kind only." This has been frequently verified, but W. J. Guernsey (*H. P*., x. 476) has pointed out Rat when such pains occur concomitantly with throat affections, *Lach*. is specific. This I have confirmed. Guernsey remarks that in such cases it will always be found that the throat affection is < on left side or commenced on left side. According to Hering, *Lach. is particularly suitable* to those of melancholic disposition (Such provers showed most symptoms); next, to *choleric* individuals. Phlegmatic and lymphatic persons are also suitable, but principally when their dispositions border on the *melancholic*, with dark eyes and tendency to laziness and sadness. *Lach*. does not suit sanguine persons with high colour, fine, delicate skins, and impressible natures, *unless* the disease should have imparted to their disposition a choleric or melancholy tinge. *Lach*. especially suits choleric women with freckles and red hair. To this list must be added: Persons who have peculiar sensitiveness of the surface of the body. Women who "have never been well since the change of life." Debilitated, weakened persons. Thin rather than fat persons; persons who have been changed both mentally and physically by their illness. Drunkards. Sufferers from effect of masturbation. Persons who have been overdosed with Mercury; and to syphilitic, mercurial affections. Children and old people. Persons who cannot stand the sun and who are < in summer weather. A patient of mine, a tall, broad-shouldered, very nervous man of forty-seven, who had fled from the Cape as he could not bear the summer there, sent for me to see him at his hotel because he did not dare venture out in the middle of the day for fear of being caught in the sun. *Lach*. 200 soon enabled him to attend garden parties. The delirium of *Lach*. is of the low, muttering type; at times the patient sinks into a torpid state, with cold extremities, tremor of body and hands, tremor of tongue. Tremor of tongue is a leading feature of many *Lach*. states. It not only trembles, but it catches in the teeth or lower lip when the patient attempts to put it

out. The mind is profoundly disturbed. There are rapidly alternating states: exalted powers, rapid succession of ideas; and again there is weak memory; frequent mistakes in writing; confusion. "*Frantic loquacity*, jumps from one subject to another," is a strong characteristic; "talks, sings, or whistles constantly; makes odd motions with arms"; "insane jealousy"; "intense sadness and anxiety"; "irritable, irascible, peevish, malicious." A curious symptom in the mental sphere is a derangement of the *time sense*. It occurs also in *Merc*. (to which *Lach*. is an antidote); but is more prominent in *Lach*., when a patient is always making mistakes in the time of day, and confounds the morning hours with the evening hours, *Lach*. will generally put this right, if it does no more. Fainting fits and vertigo on closing eyes; on looking intently at any object; in morning on waking. Rush of blood to head. Sun-headaches. Headache with very pale face. Throbbing headaches in temple, with heat of head. Headache extending into nose; > when nasal catarrh comes on. A woman, forty-four, to whom I gave *Lach*. 12 for a poisoned finger, experienced after each dose a sensation "as if a hand were in her head, moving and squeezing," an eruption of spots came out, and she felt as if she had no energy. The finger healed, but when she left off the medicine on account of the head pains, the finger became worse with cramping pains and a feeling of pins and needles. There is intense nervous irritability, restless, tossing, moving; nervous exaltation, hysteria. Trembling in whole body, thinks she will faint or sink down from weakness. Convulsions, spasms. Cases of hydrophobia have been cured with *Lach*., the thirst, spasms, sensitiveness and nervous prostration closely corresponding to the symptoms of rabies. Fainting accompanying other complaints is an indication for *Lach*.: with pain at heart; with nausea; with vertigo and pale face. Catalepsy. Awkward gait; left side weak. Gressus gallinaceus. Disturbances of sight and hearing are numerous. I have frequently cured with it noises in the ears when < after sleep. In hay fever it is the remedy when there is headache extending into nose < on suppression of the discharge, which may occur in sleep; or when the paroxysms are < after sleep. Sore nostrils and lips. Pus and blood from nose. Red nose of drunkards. Dark red eruptions; purplish swellings; black and blue spots are characteristic of *Lach*. Ulcer sensitive to least touch. Small ulcers surrounding larger. The throat is in an especial degree the seat of the *Lach*. action. Sore throats of almost all descriptions come within its range, provided some of the characteristics are present: < after sleep; by touch; symptoms < left side or proceeding from left to right; *cannot bear any pressure about neck*; empty swallowing is agonising, liquids are swallowed with less pain and solids with least pain. Diphtheria, mercurial and syphilitic sore throat. Fetid breath. The prostration is out of all proportion to the appearance of the throat.—*Lach*. has sinking at the stomach, and cannot go long without food. Unquenchable thirst. Desires: oysters, wine, coffee (coffee agrees). Symptoms are > after eating, especially after fruit. The throat symptoms are < by hot drinks. Nausea always after drinking. Everything sours; heartburn. Alcoholic drinks < (except the immediate effects of the bite). Although *Lach*. is a left-side medicine, it has a powerful action on the liver as well as the spleen. "Acute pain in liver extending towards stomach,"

though contrary to the general "left to right" direction, is characteristic, as I can testify. *Lach*. is also one of the most prominent remedies in appendicitis. The general characteristics will guide here. Bubos. *Lach*. and *Naja* have had the greatest success of all homśopathic remedies in the recent epidemics of Plague in India. The bladder and rectum are most painfully affected. There is a very characteristic symptom in the bladder: Sensation as if a ball were rolling loose in the bladder or abdomen on turning over. The urine is almost black; frequent; foaming; dark. ("The patient always has to urinate after lying down, day or night, especially after sleep; more frequent in the night. Urine has little black spots or flakes like soot floating in it."—H. N. Martin.) Stitches in kidneys. The ball sensation occurs elsewhere: as if a ball, or lump, or button in throat; as if two balls threatened to close the throat; as if a ball rose from abdomen to throat; as if a plug were in anus. Many severe and characteristic symptoms appear in rectum and anus. Diarrhśa of fetid, cadaverous kind and also constipation. Atony of rectum. Painful hćmorrhoids. Visible spasmodic tenesmus in paroxysms, from two to five minutes, extorting cries; passes blood and mucus. Painful constriction of anus followed by collapse. Hćmorrhoids with scanty menses. Burning in rectum. Stitch in rectum (upwards) when coughing or sneezing. Full feeling in rectum, and sensation as of little hammers beating. Tugging upward sensation as from a mouse. Both ovaries are affected, but principally the left; swelling, induration, tumours. Menses regular but scanty; pains > when flow is established. In a case of mine, *Lach*. 12 postponed menses for a week. Many symptoms occur in connection with menses. The breasts are affected. I have seen most obstinate and distressing eruptions appear on the nipples and areolć of a middle-aged woman after a dose of *Lach*. in high potency. Cancer of the breast when assuming a bluish appearance will be helped by *Lach*. Lochia are thin, ichorous, insufficient. Milk thin, blue, nipples extremely sensitive to touch. In the respiratory sphere the sensitiveness of the parts to touch, constriction, and < by anything tight round neck, are the ruling conditions. Tickling, irritating cough. The least thing coming near mouth or nose interferes with breathing. Sleeps into an attack of asthma. Threatened paralysis of lungs. The heart feels too large—cramp-like pain in precordia. Constriction. Palpitation with numbness down arm. Cyanosis. Varicosis. *Peculiar sensations* of *Lach*. (in addition to those already mentioned) are: As if frightened by visions behind him; as if knives were being thrust into brow; as if tongue bound or tied up; as if a part of right-side of head cut away; as if a thread was drawn from behind to eye; stitches as from knives in eyes; eyes as if they had been taken out, squeezed and put back; ears as if closed from within; as if stuffed up as if insects whizzing in ears; as if he had a moustache of ice as if a small crumb lodged in throat; as if he had had a blow on neck; as if a stricture in rectum. As if heart hanging by a thread and every beat would tear it off; as though heart turned over and ceased beating for a moment; as if heart hadn't room to beat. As if neck constricted with a cord. (*Lach*. is one of the remedies for "gridle pain") as if burnt or scalded in different parts (tongue, tibia, hypogastrium). Burning sensation and pains are a leading feature throughout this remedy. *Lach*. is called for in many kinds of fever,

particularly intermittents after abuse of *Quinine*. The symptoms of *Lach*. are < in spring or summer; from extremes of temperature; from sun's rays; change of weather, especially in a warm spell. Must have open air, which >; but draughts of air < External warmth > (wants head closely wrapped up); hot drinks < thirst; = toothache and bleeding of gums. Cold weather, cold washing <. Most symptoms appear or are < at night and in early morning after sleep. Lying down > pain in head; < vertigo, throat, cough, breathing. Lying right side > earache in right ear; palpitation. Lying left side = pain in heart. > Sitting bent. < Standing or stooping. < Motion generally. < Contact. < Constriction. Swallowing = stitches into ears. > By discharges.

Relations.—*Antidote:* Radiate heat outwardly, Alcohol inwardly, Salt,-effects of bite. *Antidotes to dilutions:* Alum., Bell., Coccul., Coff., Hep., Merc., Nit. ac., Nux, Pho. ac.; to the visible spasmodic tenesmus of rectum, Sep. According to Teste the chief antidote is Cedron. *It antidotes:* Bufo, Crotal., Rhus. *Compatible:* Aco., Ars., Bell., Bro., Carb. v., Chi., Hep., Hyo., Kali bi., Lac. can., Lyc., Merc., Nit. ac., Nux, Olean., Pho., Pul., Sil., Sul. (pneumonia), Tarent., (Plat. follows well when Hep. and Lach. fail to evacuate pus from ovarian abscess). *Incompatible:* Acet. ac. (Am. c.). *Complementary* Hep., Lyc., Nit. ac. [Lyc. is the chief complement; it is the opposite of Lach. in many respects (right to left, right upper, left lower; > warm drinks); Iod. and Kali iod., which are complementary to Lyc., are probably complementary to Lach. K. iod. has the diffused sensitiveness of Lach.] *Compare:* Crotal., Naja, Bothrops., Helod., Apis, Sul. and Lyc. (aphasia); Therid. and Mosch. (vertigo < closing eyes and sun-headache); Ars., Hydr. ac., Lauroc., Dig. and Ver. (fainting from cardiac weakness); K. carb. (heart hanging by a thread); Glon., Bell., Camph., Nat. c., Therid. (< from heat of sun); Stram., Agar., Mephit., Act. r., and Paris. (loquacity); Op., Hyo., Arn., Alum., Lyc., and Rhus (typhoid); Merc., Chi., Pul., Bry. and Gels. (catarrhal and rheumatic headaches); Sil. (> wrapping up head; aversion to touch); Crot., Pho., and Arn. (retinal apoplexy); Crotal. and Elaps. (otorrhśa); Apis, Ars. and K. ca. (śdema of face); Cic. (dyspnśa from spasm); Grind. (stops breathing on falling asleep); Apis, Rhus and Euphorb. (erysipelas, herpes, &c.); Phyt. (sore throat); Chi., Carb. v., Hep., Kre., K. bi., Nux and Lyc. (dyspepsias and abdominal diseases); Colch. and Elaps. (cold feeling in stomach); Bell., Caust., Nat. m., Nit. ac., Ign., K. bi., Op., Pb., Mez. and Coccul. (constriction of anus, anal tenesmus, and dysentery); Anac. (sensation of plug in rectum); Hep., Asaf., Lyc., Mur. ac., Silic., Sulph. ac., and Ars. (ulceration); Apis, Arg. m., Plat., Murex, Pall., Lyc. and Graph. (ovarian and uterine diseases); Crotal., Helleb., Dig., Tereb., Apis and Colch. (vesical and rectal affections, with hćmaturia); Calc. (gall-stones); Pho. and Thu. (fungus hćmatodes); Nat. m. and Led. (effects of bee-stings) Lact. ac. (fulness of throat and constriction); Lac. can. (diphtheria changing sides; sees snakes); Tarent. cub. (carbuncles); Colch. and Carb. ac. (black urine); Sel., Nat. c. and Nat. m. (< in warm, relaxing weather); Carb. v. (craves coffee—it > Lach. but not Carb. v.); Ant. t. (threatened paralysis of lungs); Merc. (Lach. occasionally antidotes Merc., when pus degenerates and becomes dark, thin, offensive); Chi. sul. (intermittents after

abuse of Quinine, when chills return in spring); Am. c. (blueness, somnolence, engorgement of neck; but Am. c. right-sided and without sensitiveness); Hep. (any kind of food = indigestion); Nat. m. (opp. Lach., has > from tight clothing); Apis (jealousy); Ar. t. (diphtheria); Anac. (has two wills; thinks he is under control of superhuman power); Arn. (sensitiveness of chest—Lach., of peripheral nerves; Arn., soreness of over-full blood-vessels); Bry. (headache from suppressed coryza); Act. r. (puerperal mania); Bapt. (offensive discharges; typhoid); Bell. (head symptoms; throat; scarlatina); Hyo. (talks of things of daily life, jumps from one subject to another); Spi. (larynx sensitive; Lach., hyperćsthesia; Spi., inflammation of cartilages, turning head = suffocative spell): Sul. (left side; inflammation of liver, going on to abscess; < after sleep—also Nat. m.; Pho. > after sleep); Staph. (on swallowing pain runs externally along parotid gland to ears; perspiration impossible); Pho. (sensation as if anus open; Lach., as if uterus); Sil., Caul., Sul., Ustil. and Vib. o. (left ovarian and left inframammary pain). Nux m. (cough of pregnancy; Lach., cough at menstrual period when it is going off. Patient must swallow what loosens); Puls. (menstrual cough; menses scanty; but pain < as flow increases); Con., Graph. (scanty menses); Anthracin. (carbuncles; boils); Tereb., K. bi. (tongue glazed;—and shining, Apis, Lach.); Pul., Pho., Sul. and Mur. ac. (piles during menses) Solania, Bell. and Dulc. (paralysis of lungs); Iris t. (appendicitis) Pho. ac. (disappointed love); Hydrophobin.; Sabad. (throat affected left to right—Sabad., more chronic).

Causation.—Injuries. Punctured wounds. Poisoned wounds. Grief. Vexation. Anger. Fright. Jealousy. Disappointed love. Alcohol. Masturbation. Sprain (bluish swelling of joints). Sun. Warm weather. Draught of air.

SYMPTOMS.

1. Mind.—Great anguish, insupportable anxiety, and uneasiness, from which patient seeks relief in open air.—Fear, and presentiment of death.—Discouragement; distrust; easily affected to tears.—Mental dejection and melancholy, with apprehension, uneasiness about one's malady, great tendency to give way to sorrow, to look upon the dark side of everything, and to think oneself persecuted, hated and despised by acquaintances.—Dread of death; fears to go to bed; fear of being poisoned.—Thinks she is some one else; in the hands of a stronger power; that she is dead and preparations are being made for her funeral; that she is nearly dead and wishes some one would help her off.—Sadness when awaking in the morning or night (particularly in the morning); no desire at all to mix with the world.—Restless and uneasy; does not wish to attend to business, but wants to be off somewhere all the time.—Sadness, and disgust to life.—Mistrust, suspicion, and a strong tendency to take everything amiss, to contradict and to criticise.—Frantic jealousy.—Indolence, with dislike and unfitness for any labour whatever, either mental or bodily.—Timidity of character, with variableness and indecision.—Great apathy and extraordinary weakness of memory, everything that is heard is, as it were, effaced, even orthography is no longer remembered, and there is

forgetfulness even of things on the point of utterance.—Confusion as to time.—Mistakes are made in speaking and writing, as well as in the hours of the day and the days of the week.—Imbecility and loss of every mental faculty.—Over-excitement and excessive nervous irritability, with a tendency to be frightened.—Perfect happiness and cheerfulness followed by gradual fading of spirituality, want of self-control and lasciviousness; felt as if she was somebody else and in the hands of a stronger power.—Amativeness.—Affections of the intellect in general.—State of ecstasy and exaltation which even induces tears, desire to meditate, and to compose intellectual works, with a sort of pride.—Frantic loquacity with elevated language, nicely chosen words, and rapid and continual change of subject-matter.—Loquaciousness, with mocking jealousy, with frightful images, great tendency to mock, satire and ridiculous ideas.—Nocturnal delirium with much talking, or with murmuring.—Dementia and loss of consciousness.

2. Head.—Head fatigued from intellectual labour.—Momentary vertigo on closing eyes.—Giddiness after resting.—Vertigo chiefly on waking in morning, as well as after lying down in evening, on going into open air, on raising arms, and often with fainting, paleness of face, nausea, vomitings, congestion in head, bleeding of nose, and lassitude of limbs.—Intoxication, stupor, and loss of consciousness.—Apoplectic fits, with blue face, convulsive, movements of limbs, and extravasation of blood in brain.—Softening of brain and its membranes.—Violent pain in head, with yellow face and flushed cheeks.—Headache, with congestion of blood, sparkling before the eyes, drowsiness, shiverings and inclination to lie down, or with nausea and vomiting.—Headache preceding coryza.—Cephalalgia from heat of sun.—Pains deeply seated in brain; or in the sockets of the eyes; or above the eyes; or in occiput; with stiffness in nape of neck.—Pain as from a bruise in crown of head, or sensation of boring, with jerks and throbbings on moving the head.—Heaviness and pressure in head, as if it were going to burst, or tension, as from threads drawn from occiput towards the eyes, or shootings, as from knives, in different parts of the head, and as far as the eyes.—Pressing headache in temples as if the brain were pressing out, in the morning after rising, from motion, from stooping; < from pressure and while ascending; > from lying down after eating.—Cutting headache as if a part of the r. side of the head were cut off, < after rising or ascending; > from heat and after belching up wind.—Pains which spread from the interior of head to ears, nose, and neck.—Headache extending into root of nose.—Headache with flickering before the eyes.—Headache every morning on awaking, or after dinner; or else on every change of weather.—Pulsating, beating headache with heat in head, esp. on vertex, or on r. side, or over eyes, preceding a cold in the head, with stiffness of neck.—Swelling of head, muscular throbbings in temples, tension in occiput extending to nape of the neck, painful sensibility of scalp, with troublesome itching, excessive desquamation, and falling off of the hair.—Falling off of the hair, esp. during pregnancy, with great aversion to rays of sun.—Sensitiveness of scalp in l. vertex down, and l. side of face on touch or moving muscles, a sensation as if sunburnt.—Cannot bear to have hair touched.

3. Eyes.—Yellow colour of the white of eyes.—Eyes yellow or turbid, dull and dejected, or bright and convulsed, with fixed look.—Pupils strongly dilated.—Ecchymosis and hćmorrhage of the eyes.—Hćmorrhages into interior chamber.—Dryness of eyes, as if full of dust; or lachrymation with tears, which sometimes seem to be cold.—Photophobia.—Over-sensitive to light.—Itching and burning of the eyes.—Itching, and shootings as from knives, in eyes, or violent aching, as if the ball were going to start from the socket, < by moving eyes.—Eyes red and inflamed, with redness of conjunctiva and sclerotica, burning heat and lachrymation.—Eyes water with headache from a cold.—Sensation as if the eyes were too large or the sockets too small.—Feels when throat is pressed as if eyes were forced out.—Swelling and inflammation of the eyelids or of the edges.—Convulsions, heaviness, and paralysis of eyelids.—Weakness of sight and presbyopia.—When reading the letters appear to be confused.—Clouded vision as when looking through a veil.—Obscuration and loss of sight.—Dimness of vision; black flickering before the eyes; often makes reading difficult.—Bright blue rings, filled with fiery rays, about the light; zigzag figures.—Flames and sparks appear before the eyes, or a blue veil or blue circles round the candle.—Eyes appear small and inexpressive.—Fistula lachrymalis accompanied by long-standing eruption on face.

4. Ears.—Ears cold, sensitive to the wind.—Painful swelling of interior of ear.—Dryness of ears.—Cerumen scanty, too hard and too pale, or like pap, and white, with diminution of the power of hearing.—Very disagreeable throbbing, tinkling, roaring, cracking, buzzing and rolling, or a resounding noise, as if a drum were beaten, in ears.—Whizzing, as from insects in ear.—Ears as if stopped.—Excessive sensibility, or hardness of hearing.—Hćmorrhage from the ears.—Pain in ears with sore throat.—Tearing extending from zygoma into ear.—Swelling of parotids.—Excoriation and scabs behind ears.

5. Nose.—Nocturnal pains at bridge of nose.—Stoppage of nose, as from an internal swelling, principally in morning, or with coryza.—Swelling, redness and excoriation of edges of nose, with scabs in nostrils.—The nose bleeds when it is blown (blood dark), and blowing of blood from the nose, esp. in the morning.—Nose-bleed in amenorrhśa, typhus, &c.—Copious bleeding from nose, of a bright-red, or thick and black.—Flow of (blood and) pus from the nose.—Paroxysms of sneezing in hay fever.—Dry, chronic coryza, with stoppage of nose, or fluent coryza, with abundant discharge of serous mucus, lachrymation, frequent sneezing, and inflammation and excoriation of nostrils.—Imperfect coryza, with many sufferings of head and mind, all of which disappear as soon as the catarrhal flux commences.—Red, chronic pimples on nose.—Redness of the point of the nose.—Many symptoms end with catarrh.

6. Face.—Face pale, wan, wasted, and cadaverous; leaden, or earthy, discoloured, yellowish complexion.—Red spot on cheeks with yellowness of rest of face.—Dark bluish-red patch on l. side of nose and cheek, coming on when flushed, generally at

noon or after wine; never in evening or night (Cooper).—Blue circle round eyes.—Small red veins in cheeks.—Bloatedness, sometimes to a frightful extent, tension and red swelling of face.—Heat and redness of the otherwise pale face.—L. side of face and lower jaw swollen and sensitive to touch.—Tri-facial neuralgia, l. side, orbital; heat running up into the head.—Heat and redness of face (during delirium).—Erysipelas in face, sometimes with itching, pimples or vesicles, cracks and corrosive oozing, burning pains and swelling.—Miliary eruption and pimples on face.—Tetter with thick scabs in region of whiskers.—Tensive and crawling pains in face, pains in bones of face, prosopalgia, with vomiting of food.—Feeling of stiffness of the malar bone coming from the cervical glands.—Lips dry and swollen, pimples on lips, trembling of the lips.—Weakness and paralysis of lower jaw, with distortion of features.—Trismus, with clenching and grinding of the teeth; chattering of the teeth.

7. Teeth.—Boring pains in the teeth which are carious, principally after dinner, and sometimes with swelling of the cheeks, and a sensation as if the teeth were too long.—Toothache every morning after waking, or after dinner every day, with tearing, drawing, and shooting pains in roots of teeth (of lower jaw); from warm and cold drinks.—Toothache with pains in head, shiverings, heat and heaviness of the legs.—The toothache affects the ears.—Brittleness and looseness of the teeth; the carious teeth become soft, and pieces of them are broken off.—Swelling and painful sensibility of the gums.—Gums bleeding; swollen, spongy.—Hot and cold drinks renew the pains.

8. Mouth.—Inflammatory swelling of the buccal cavity.—The mouth and palate are excoriated and very painful.—Dryness of the mouth and tongue, or accumulation of water in the mouth and salivation.—Tongue shining, dry, red and cracked; or inflamed, swollen (covered with blisters), brownish or blackish.—Stiffness, immovableness, and paralysis of the tongue.—Aphonia, or confused, indistinct speech, nasal tone of voice, difficulty in pronouncing certain letters or particular words; the speech is louder and more precipitate than the speaker wishes.—Tongue heavy; cannot open mouth.—Tongue trembles when protruded, or catches behind the teeth.—Stammering.

9. Throat.—Constant tickling in throat, as if a crumb of bread, or something similar, were stopping in it.—Partial or general dryness of throat, often extending to ears, nose, and chest.—Burning and pain as of excoriation in throat, principally on swallowing.—Painful excoriation and inflammatory swelling of throat, with redness of parts affected, as if they were coloured with vermilion.—Swelling of the tonsils (mostly l.).—Large and small tumours in throat, which impede deglutition.—Cannot swallow the food after masticating it, because it rests on the back part of the tongue, and produces a thrilling pain there.—Constant desire to swallow, and a sensation on swallowing as if there were a tumour, or a piece of something, or a plug in the throat.—Sensation of contraction, of strangulation, and of constriction in throat.—The throat as it were stiff and paralysed.—Convulsions and spasms in

throat.—Impeded deglutition, with dread of drinks, which often pass through nostrils.—Hydrophobia.—Much slimy saliva, esp. in back of mouth.—The pains in the throat are < by slightest contact, and by least pressure on neck, as well as after sleeping, and while swallowing the saliva; the pains are > by eating.—When swallowing the pain extends to the l. ear.—Sore throat, which affects only a small part, or which, on the contrary, affects the ears, larynx, tongue, and gums; frequently with dyspnśa and danger of suffocation, salivation and hawking up of mucus.—Much hawking up of mucus, which is exceedingly painful.—Empty swallowing < the pain in throat more than swallowing food; or fluids are swallowed with less pain than solids.—Copious accumulation of tenacious mucus in throat.—In old chronic sore throats: throat may not be very sore, but a great quantity of mucus will stick there, and occasions much hawking and spitting to no purpose; the mucus will stick and can't be forced up or down.—Sore throat alternately with stoppage of nose, or with sufferings, while speaking.—Ulcers on palate, on back, of mouth (on the inflamed tonsils), and in throat, with fetid odour, abundant suppuration, and sharp pains on swallowing food.—The inflammation and ulceration of throat begin on l. side and extend later to r. side.—The external throat is very sensitive to touch (not painful, but an uneasy sensation); on lying down, with suffocative sensation; even to touch of linen.

10. Appetite.—Disagreeable, or saccharine, acid, rough, astringent, or metallic taste.—Want of appetite; complete indifference to food and drink.—Repugnance to bread, which it is impossible to swallow.—Irregular appetite, at one time anorexia, at another bulimy.—Sickly craving, with nausea, convulsive yawnings and fainting fits, if food is not eaten instantly, or with gnawing and aching in stomach, which is renewed shortly after eating.—Insatiable thirst.—Thirst, with dry tongue and skin.—Desire for wine or for milk, both of which, however, disagree; desire for oysters.—After a meal: pressure on stomach, risings, vertigo, flatulency, inclination to vomit, or vomiting of food, weakness in knees, indolence, and heaviness of body, mental fatigue, uneasiness, regurgitation, diarrhśa, difficult respiration, pain in head and teeth, and aggravation of all the sufferings.

11. Stomach.—Hiccough after having drunk; or after smoking tobacco.—Violent empty risings, with danger of suffocation.—Risings, which > the sufferings.—Acid risings, with taste of the food.—Pyrosis from the throat, as if the whole of the śsophagus were filled with rancid substances.—Nausea and inclination to vomit, principally in morning, or after a meal; as well as in consequence of many other sufferings.—Violent and convulsive vomiting of everything taken, or of bilious, bitter, greenish matter.—Vomiting of pure blood, or of bloody mucus.—Vomiting, with diarrhśa, obscuration of sight, pains in stomach, and diuresis.—Excessive sensibility of precordial region to slightest touch; tight garments are insupportable, and the least pressure is very painful.—Great weakness of stomach; it can bear neither food nor drink.—Stitches extending into the chest.—Gnawing in stomach; > after eating, but returns when stomach gets empty.—Painless gnawing.—Pressure in stomach; after eating; with weakness in knees.—Sensation as

if something encumbered the cardia and impeded deglutition.—Aching in stomach, extending to chest, and a sensation as if a worm were moving about in it and gnawing it.—(Every evening) cramps and violent pains in stomach, with risings, retching, and vomiting of slimy matter.

12. Abdomen.—Burning, drawing, or cutting pains in liver.—Acute pain in liver, extending towards stomach.—Inflammation and softening of liver.—Hepatic abscess.—Gall-stones.—Pains and stitches in region of spleen, sometimes on riding in a carriage or walking.—Enlargement of abdomen in young girls.—Painful distension, flatulence; can bear no pressure, surface nerves sensitive.—Sensation of emptiness in abdomen.—Pains in abdomen, in consequence of a strain in the loins.—Pains, generally pressive, in umbilical region, sometimes with difficult respiration, < an hour after a meal, and > by eructations.—Tearing and cutting pains in r. side of abdomen.—Cutting pains, so violent as to drive patient distracted; or acute pullings, with contraction of abdomen.—Burning in abdomen, with pressure on bladder.—Abdomen hot, sensitive; painfully stiff from loins down thighs; peritonitis; pus formed.—Inflammation of intestines.—Extravasation of blood in peritoneum.—Swelling in cćcal region; must lie on back, with limbs drawn up (typhilitis).—Abdomen hard and distended, with flatulent colic, pain in back, vomiting, diarrhśa, and diuresis.—Frequent emission of flatus; the flatus sometimes penetrates into inguinal ring.—Pain, as if a hernia were going to protrude.

13. Stool and Anus.—Slow evacuation.—Obstinate constipation with hard and difficult evacuation.—Constipation, anus feels tight as if nothing could go through.—Fćces small, scanty, and tenacious.—Constipation alternately with diarrhśa.—Diarrhśa, with violent colic, nausea, vomiting, anguish, pains in rectum during passage of fćces, tenesmus and excoriation of anus.—Stool lies close to anus without passing and without urging.—Loose evacuations, principally at night, or after a meal, or in warm (and damp) weather, or from having taken fruits and acids.—Diarrhśa after food, with occasional pain across navel, loins, and back.—Involuntary and unperceived evacuations.—Stools excessively offensive.—Evacuation of fetid matter, or of soft fćces, of the consistence of pap, or liquid, or slimy, like pitch, or sanguineous and purulent, or of undigested substances, or of pure blood, or of sanguineous mucus.—Stools watery, offensive, dark; watery, frequent, sudden, about midnight, offensive, ammoniacal; soft, bright yellow; pasty, putrid.—During the evacuations: pain, tenesmus, and burning in anus.—After the stool: congestion of blood to head, vertigo, debility, pains and throbbings in anus.—Painful constriction of anus and rectum.—Anus feels closed: sensation of a plug.—Prolapsus recti during evacuation.—Discharge of mucus and blood from rectum, sometimes with violent colic.—Hćmorrhoids with colic, or with burning and cuttings in rectum, or with congestion of blood in anus, and diarrhśa.—Stitch in rectum when laughing or sneezing.—Sensation in anus as of several little hammers beating there.—Piles irritable, with painful drawing upward like a mouse tugging at one side and drawing it up.—Bleeding hćmorrhoids.—Hćmorrhoidal tumours protrude after stool, with constriction of

sphincter.—Large hćmorrhoidal tumours (in persons addicted to spirituous drinks).—Hćmorrhoidal tumours protruding with stitches at each cough or sneeze.

14. Urinary Organs.—Pressure on bladder, with urgency to urinate, or with cuttings and burnings in abdomen.—Frequent want to urinate, with copious emission even in night.—Violent pain, as if a ball were rolling about in bladder, and thence into urethra.—Violent tenesmus, with scanty emission of urine.—Paralysis of bladder.—Continual incisive shootings in urethra.—Small tumour in urethra, with retention of urine.—Urine turbid and brown, or red, or deep yellow, and sometimes with frequent but scanty emission, or with brown and sandy or red or brick-coloured sediment.—Frothy urine.—Urine frequent, foaming, black.—Involuntary and unnoticed emission of urine.—Pains in back and loins during the want to make water.—Sensation of burning in urethra on making water, and many other sufferings, all of which are renewed by motion of a carriage, and return after drinking wine.—Pain, as from excoriation, in urethra and in glans.—Flow of urine after evacuating and after urinating.

15. Male Sexual Organs.—Pressure in testes, as if a hernia were going to protrude, when making an effort to urinate.—Pimples on the hairy parts.—Strong sexual desire without physical power, and with flaccidity of the penis.—Erections without sexual desire.—Pollutions night and day, sometimes with debility and sweat.—Flow of prostatic fluid when urinating, or after having urinated.—Semen of a pungent smell.—During coition the emission is tardy or does not occur at all.—Abundant secretion behind the glans.—Spots and red pimples on the glans and on the corona.—Mercurio-syphilitic ulcers.—Attenuation of scrotum and hardness of testes.—Thickening of prepuce.

16. Female Sexual Organs.—In females who never get well from the change of life -"have never felt well since that time"; may have unnatural unwell periods.—During change of life, where she has flashes of heat all day, and cold flashes on retiring at night.—Sensation in the abdomen as if a ball were ascending from thence to chest, as in hysteria.—Pains from ovaries to uterus, with discharge of pus while at stool.—The uterus feels as if os were constantly open.—Redness and swelling of external parts (with discharge of mucus).—Swelling of the parts, with itching and sexual desire.—Catamenia feeble, tardy, and of too short duration, often accompanied by hćmorrhoidal and, other sufferings.—Menstruation suppressed.—Menstruation too scanty (blood black).—Abdominal spasms during catamenia.—Before menses: pains and throbbing in the head, vertigo, epistaxis, aching in stomach, risings, cuttings in hypogastrium, flow of mucus from urethra, and cramps in chest.—Before and after menses, diarrhśa with violent colic.—Menstrual colic, beginning in l. ovary.—Swelling, induration, pain and other anomalies of l. ovary.—On the appearance of the catamenia, sacral pains, with pain as of a fracture in hips and chest.—During the catamenia, pains in the loins like those of labour, throbbings in the head, and cuttings.—Miscarriage.—(The milk of females bitten by the serpent becomes venomous and curdles.).—Mammć

swollen.—Intolerably itching tetters on and around nipples.—Nipples swollen, erect, painful to the touch.—Sexual desire excited: nymphomania.

17. Respiratory Organs.—Catarrh, with cough, coryza, shooting pains in head, stiffness of nape of neck, and affection of chest.—Continual hoarseness, with a sensation as if there were something in the throat which impeded speech, and which cannot be detached.—Oppressed breathing, < when talking and eating.—Contraction and constriction of the larynx, with a sensation of swelling and of tension.—Painful sensitiveness of larynx and neck to touch, and on slightest pressure, with danger of suffocation on feeling the gullet, and on holding back the head.—Sensation of pulsation and of choking between larynx and chest.—Dryness, burning, and pain as of excoriation in larynx.—Sensation as if there were a ball in the larynx.—Voice weak, hollow, nasal.—Cough, often fatiguing, and by which nothing is detached, excited mostly by a tickling in larynx, chest, and pit of stomach, or by pressure on the gullet, as well as by conversation, walking, and everything which increases the dryness of the throat.—Cough caused by pressure on the larynx, or by any covering of the throat; by a tickling in pit of throat and sternum; when falling asleep; from ulcers in the throat.—Constant irritating cough, with or without expectoration.—Very chronic coughs.—Cough with rawness of chest, difficult expectoration and pains in throat, head, and eyes.—Frequent attacks of short cough from tickling in pit of stomach, dry during the night; difficult, sometimes watery, salty mucus, which has to be swallowed again, is raised.—The cough is < during the day; after sleeping; from changes in the temperature; from alcoholic drinks; from acids and sour drinks.—Cough with hoarseness.—Diphtheria.—Cough always after sleeping, or at night, when sleeping, or in evening after lying down, as well as on rising from a recumbent posture.—Dry, short, suffocating and croaking cough, sometimes with vomiting.—Spittle mucous, tenacious, or acid, and of a disagreeable taste, or sanguineous.—Hćmoptysis.—On coughing, accumulation of water in the mouth, sharp pains in pit of stomach, shocks in head, and tension of eyes.

18. Chest.—Respiration short, frequent, or convulsive or rattling, stertorous, and croaking, or wheezing, moaning, and deep.—Frequent want to draw a long breath.—Dyspnśa and oppression of the chest, with effort to breathe.—Shortness of breath, principally after a meal, on walking, after making an effort with the arms, and sometimes with sadness, or with an asthmatic cough.—Attacks of asthma, and difficulty of respiration, principally after eating, or in the evening on lying down, or at night, during sleep, and sometimes with anguish, thirst, nausea, vomiting, fainting, and cold sweat.—Fits of suffocation, esp. on lying down in evening or in bed at night, and principally when anything is placed before nose or mouth.—Paralytic orthopnśa.—Offensive breath.—Pressure on chest, as from a weight, or as if it were filled with wind, and principally at night.—Contraction of the chest wakens him after midnight, with slow, heavy, wheezing breathing, compelling him to sit up with his chest bent forward.—Violent pains with great anguish and constant movements in the chest.—Burning and pain of excoriation in

chest, as if it were raw, principally after a meal.—Oppressive pain in the chest as if full of wind, > by eructations.—Stitches in side and in chest, < by breathing, and sometimes with cough and sanguineous-expectoration.—Stitches in (l. side of) chest, with difficult breathing.—Extravasation of blood in lungs.—Pneumonia (hepatisation of the inflamed lungs).—Gangrene of lungs.—Swelling and bloatedness of integuments of chest.—Itching, red places, and miliary eruption on chest.

19. Heart.—Palpitation of heart, with (fainting and) anxiety, sometimes excited by cramp-like pains, with cough, and fit of suffocation.—Palpitation of heart and choking from slightest anxiety.—Feels as if heart hanging by a thread and every beat would tear it off.—Irregularity of beats.—Constrictive sensation in region of heart.—Spasms in heart (with aneurism of r. carotid) and disagreeable pulsation in ears.—As if heart too large for containing cavity.—Stitches in region of heart, with shortness of breath, fainting fits and cold sweat.—Faint feeling about heart, with heats up spine and flushings of face.—Faintings, giddiness, and palpitation constantly recurring.

20. Neck and Back.—Nape of neck and neck excessively sensitive to least pressure.—Rheumatic stiffness of nape of neck and neck.—Stitches in back and between shoulders.—A small tumour is formed near the spine.—Burning in back.—Spasms in muscles of back.—Painful stiffness from loins to hip, as if muscles were too short.—Insupportable nocturnal pains in back, in loins, hip and knee.—Pain in the small of back, with constipation, intermittent fever, palpitation of the heart or dyspnśa.—Pain in the os coccygis, when sitting down one feels as if sitting on something sharp.—Want of strength in back and knees, which forces patient to stoop when walking.—Pain, as from dislocation, in loins, as after great exertion.—Papulć, vesicles, tetters, pimples, and scarlet spots on back and shoulder-blades.

22. Upper Limbs.—Lameness in l. shoulder.—Pain in r. shoulder-joint with headache.—Perspiration in axillć of strong smell (like garlic).—Rheumatic and arthritic pains, and aching pains in bones of arms, in hands, fingers, and wrists.—Malignant ulcer on upper part of arm.—Tension, as from contraction of tendons, from the elbow to fingers.—Erysipelatous inflammation in elbow.—Pimples on arms after scratching.—Sensation of fatigue or of paralysis, and pain, as from dislocation, in arms.—Paralysis of hands.—Trembling of hands (in drunkards).—The hands are dry and burning.—Extremities of the fingers numbed and painful.—Tingling and pricking in l. hand.—Prickings in extremities of fingers.—Numbness in tips of fingers (morning).—Itching, psoric eruptions, red spots with vesicles, furunculi, excrescences, and warts on hands and fingers.—Hard and cold swelling of a bluish black colour, on the back of hand and fingers.—The hands are cold, as if dead.—Hard swelling from hand to elbow, with excessive pain.—Panaris.

23. Lower Limbs.—Sensation of contraction, and contractions of the tendons of the ham.—Nocturnal pains in hip and thigh.—Caries of the tibia.—Burning spots on tibia.—Agonising pains in tibia (with throat affections).—Sharp and drawing pains in legs, when there is change of weather, and in windy weather.—Furunculi on thighs.—Sensation of heaviness, paralysis, of numbness and trembling in thighs and knees.—The knees are, as it were, dislocated, stiff and weak.—Stinging in knees.—Sensation as if hot air were going through knee-joints, which were shaky.—The l. knee feels as if sprained.—Swelling of knees.—Swelling of feet, < after walking (during pregnancy).—Flat ulcers on lower extremities, with blue or purple surroundings.—Gangrenous ulcers on legs (toes).—Cramps and pains in calves of legs.—Red pimples on the thighs and on the legs, after scratching.—Excoriated places, and superficial ulcers with foul bases, on the legs.—Red or bluish, and painful swelling of feet and legs.—Heaviness, numbness, icy coldness, sweating of the feet.—Itching, psoric eruptions, papulć and spots as from a burn, in feet and legs.—Cracks and rhagades between the toes.—Abscess in the heels.

24. Generalities.—Sensation of pain accompanied by voluptuous feelings; dreadful or strongly pressive pains in various parts of body.—Sensation of dislocation and of paralysis in the joints.—Stiffness and tension of the muscles, as if they were too short.—Pains in the bones.—Sharp and drawing rheumatic pains in the limbs (first in l. side then in r.), or gnawing pains, with sensations as if bruised on moving.—Nocturnal pains, which appear insupportable, and which do not permit patient to remain in bed.—The pains affect the sides of the body alternately, or at one time the limbs, at another the body, and often manifest themselves transversely.—Intermittent and periodical pains; sufferings, accompanied by danger of suffocation; and sufferings, with want to lie down, and aversion to move.—Aggravation or renewal of the sufferings after sleep or at night, and principally before midnight, or some hours after a meal, or during damp hot weather, as well as when there is a change of wind and weather (excessively cold and excessively warm weather cause great debility); many of the symptoms are > in open air.—Mental emotions, such as disappointment, fear, fright, &c., frequently renew all the sufferings.—Slight touch intolerable.—Obliged to wear clothes loose; cannot bear the contact.—Paralysis, with heaviness and stiffness of the limbs; semi-lateral paralysis.—The l. side is principally or first affected (throat, ovaries).—Affections in general of r. chest; r. lower extremity; r. abdominal ring; symptoms generally appear on l. side; symptoms beginning on l. side with great tendency to spread to the r. side.—Extreme feebleness of body and mind; exhaustion, like that caused by loss of blood; rapid failure of strength; relaxation of muscular force.—Weakness of whole body in morning on rising.—Nervous hypercśsthesia, with external flushings.—Fainting fits, with dyspnśa, nausea, cold sweat, vertigo, pallid face, vomiting, dizziness, obscuration of the eyes, pains and prickings in region of heart, convulsions and epistaxis.—Tearing, pricking, and pulsating pains.—Attacks of asphyxia and of syncope, with loss of sense and motion, insensibility like death, clenching of teeth, stiffness and swelling of body,

pulse tremulous or imperceptible.—Trembling of limbs, muscular palpitations, and jerking in several parts of body.—Contractions of the muscles.—Convulsive and epileptic fits, with screaming, movements of the limbs, falling down without consciousness, eyes convulsed, foaming at mouth, fists clenched; before the attack, cold feet, eructations, paleness of the face, vertigo, head heavy and painful, palpitation of heart, inflation of abdomen; after the attack, sleep.—Attacks of tetanus, with distortion of limbs.—Hćmorrhage and extravasation of blood in different organs.—Affected parts look bluish (cyanosis).

25. Skin.—Ecchymosis; wounds and ulcers bleed readily and copiously (small wounds bleed a good deal; ulcers bleed readily; cicatrices bleed readily; pain in old cicatrices), wounds bleeding a great while; skin very hard to heal, masses of blood pass through the pores.—Varicose swellings.—Dropsical swelling over whole body.—Hard and pale tumefaction.—Skin yellow, green, lead-coloured, or bluish-red or blackish, chiefly round the wounds and ulcers.—Yellow, red, copper-coloured spots.—Pale, livid spots, with fainting fits.—Dry, miliary itch, with eruption of large vesicles of a yellow or of a bluish-black colour, with swelling of parts affected, and pains which drive to despair.—Miliary eruption, which subsequently resembles nettle-rash, scarlatina, or morbilli.—Erysipelas and vesicular eruptions with a red crown.—Excoriated places, on touching which a burning pain is felt.—Rupia and other skin affections, with angioleucitis (Cooper).—Ulcers, surrounded by pimples, vesicles, and other small ulcers (on a purple skin).—Ulcers with great sensitiveness to touch, uneven bottom, ichorous, offensive discharge when touched, esp. around the lower extremities.—Gangrenous ulcers.—Gangrenous blisters.—Superficial ulcers, foul at bottom, with a red crown.—Cancerous ulceration (of wounds), or putrefaction of the flesh, which becomes detached from the bones, and falls off piecemeal.—Gangrenous wounds, with inflammatory fever, weak, quick, and intermittent pulse, fainting nausea, spasmodic and bilious vomiting, convulsions, and cold sweats.—Papulć, warts, hard swellings.—Panaris.—Red and itching lumps and tuberosities.—Carbuncles, with copper-coloured surroundings and many smaller boils around them.—Flat exanthemata which do not fill up; pustulous exanthemata; spongy excrescences.

26. Sleep.—Great drowsiness by day, and principally after a meal.—Sleeplessness, chiefly before midnight, with excessive nervous excitement.—Lively and wide awake in evening.—The patient sleeps into an aggravation, as (e.g.) in croup; is very well while awake, but as soon as goes to sleep the croup symptoms appear in great violence; child almost suffocates, and the mother or nurse is consequently really afraid to let him go to sleep.—Also in convulsions; patient has none while he is awake, but as soon as he is asleep they appear.—Drowsiness and sleeplessness alternately every two days.—When falling asleep he is awakened by a tickling cough.—Restless sleep, with many dreams.—Sleeplessness in the evening with talkativeness.—Light sleep, with frequent and easy waking, agitation and tossing, groans and sighs, starts and fright.—Dreams connected and frequent, poetical and meditative or voluptuous; dreams of quarrels, of horrible things, of spectres, and of

death.—At night, heat, agitation, burning in palms and soles, pains in the bones or rheumatic pains, diarrhśa, emission of urine, mental excitement, and many other sufferings.—After sleep, sensation of stiffness, and pain as from fatigue in the limbs, erections with sexual desire, pains in the back and loins, congestion of blood, heaviness and pain in head, pressure in stomach, sore throat, nervous yawnings, and aggravation of all the sufferings.

27. Fever.—Icy coldness of the skin or of the limbs, or only of the feet, with great desire to be near a fire, and sometimes with loss of sensation, clammy sweat, weakness and great quickness of the pulse.—Shiverings, sometimes only partial, often with pains in the limbs, sacral pains, agitation and tossing, colic, trismus and convulsive movements of the limbs, pain in chest, thirst, chattering of teeth.—Chill ascending the back, often on alternate days.—Shuddering while the heat continues, and principally on lifting the bed-clothes.—Shivering, chiefly after a meal, or in afternoon.—Dry heat, principally at night, or in evening, and esp. in feet and hands, often accompanied by agitation and tossing, headache, delirium, insatiable thirst, eructations, bilious vomitings, cries, groans, dryness of mouth and throat, and frequent stools.—Heat, alternately with cold (alternating and changing localities), shivering of shuddering.—Fever at night or in evening, quotidian, tertian, or quartan, and often accompanied by headache, rapid prostration of strength, and debility which obliges the patient to lie down; want of appetite, hiccough, vomiting, sensibility of the neck to the touch, palpitation of the heart, anguish, yellow urine, diarrhśa, pains in the limbs, back, and loins, nervous and spasmodic yawnings, stretchings, swelling of the body, spots and ulcers.—Internal sensation of heat, with cold feet.—Chronic fevers; slow fevers; typhoid fevers.—The fevers are renewed by acid food.—Dry, burning skin.—Sweat >.—Perspiration colouring linen yellow red.—Febrile sweat, principally after hot stage, towards morning; copious sweat; fetid sweat; cold sweat; sanguineous sweat.—Pulse intermittent, or feeble and quick (but accelerated), or irregular, or scarcely perceptible, or tremulous, or alternately full and small.—Intermittent fever, the paroxysms come on every spring, or after suppression of the fever in the previous fall by quinine; face red; feet cold; during hot stage continuous talking; face yellow or ashy.—Typhus fever, esp. when the tongue is red or black, dry or in fissures, esp. at the tip, or when tongue trembles when put out, or if while endeavouring to put it out, the tip remains under the lower teeth or lip and cannot be put out.

Lachnanthes.

Lachnanthes tinctoria. Red Root. N. O. Hæmodoraceæ. Tincture of whole plant.

Clinical.—Cough. Diphtheria. Headache. Heart, heat in; pains in. Phthisis. Pneumonia, typhoid. Sore throat. Stiff-neck. Wry-neck.

Characteristics.—*Lachnan*. is a herb, growing in sandy swamps near the coast. The root is red and fibrous; leaves sword-shaped; stem hairy; flowers yellow, woolly. It belongs to the same order as *Aletris*, and is allied to the Irises. The head, the chest, and the circulation seem most prominently affected by *Lachn*. There are headaches of great intensity; right-sided, as if split open with a wedge; with icy coldness of body; crying spells; < by vomiting. In the chest there are lancinating stitches, in quick succession in right side of chest below mamma. Stitches in heart with anxiety. A peculiar symptom is: Sensation of heat, bubbling and boiling in chest and region of heart, rising to head; giddy; breaks out into perspiration. Trembling of heart. There is also burning of palms and soles and burning under nail of left toe. On the other hand, there is much coldness and chilliness. Continued chilliness. Sensation as if a piece of ice was lying on back between shoulders, then a shock followed by coldness over whole body with gooseflesh. These attacks occur on moving, > after going to bed. Cannot get warm under a feather bed. A hot flat-iron > icy coldness of body. Lachn. has been largely used in cases of phthisis, often empirically, but sometimes on its indications. Arthur Dalzell reports these cases (*H. W*., xxv. 158): (*1*) Mrs. B., 43, fibroid phthisis of both lungs, collapse of right lower lobe. Great prostration; night-sweats; bowels alternately relaxed and confined; *pain and stiffness in back*; bruised all over; dry cough; roughness of throat, heart-sounds weak. Sleep bad owing to cough. *Lachn*. Ø, three drops every four hours. In three days the prostration was diminished, and the cough was much better, night-sweats and bruised feeling gone. From this time an emulsion containing cod-liver oil, liquor pancreaticus, eggs, cream and hypophosphites, and oil of Eucalyptus were given in addition. The case went on to recovery. (*2*) Mrs. R., 45, in last stage of consumption. Right lung consolidated; left in cavities. Remittent fever. This patient had *circumscribed flush on face; brilliant eyes; throat rough*; felt bruised *all over*. Skin dry, except at night, when she had profuse perspiration. Constant dry cough. Muco-purulent expectoration. *Lachn*. Ø, five drops every three hours, relieved all the symptoms and procured euthanasia, the patient dying quite easily twelve days later.—Toothache is < eating and drinking warm things. With fever there is loquacious delirium, brilliant eyes, and circumscribed red cheeks (there is also a blueness about face, blue under eyes, blue lips). During the cold sensation the skin is damp and clammy. The loquacity of *Lachn*. is remarkable. Hering says the Indians chew the plant when they meet the white man to give them a flow of language. *Lachn*. has been used with success in diphtheria, typhoid fever, typhoid pneumonia. A peculiar symptom is stiffness of the neck, the head being twisted to one (right) side. This occurring in connection with sore throat is a strong indication. There is much dryness of throat, which is < on waking in the night, with much coughing. *Sensations* are: As if head enlarged; as if split open with a wedge; vertex as if enlarged; as if hair standing on end. As if a cloud before eyes; pressing as from dust in eyes. As if something had closed ear. Bridge of nose as if pinched (confirmed by E. E. Case—*H. P*., xiii. 76). As of something crawling over face. A curious observation is quoted in *Brit. J. of*

H. (xxxix. 181), that the *while* pigs and sheep of Virginia lose their hoofs if they feed on *Lachn*., while the *black* varieties eat it without inconvenience.

Relations.—*Compare:* Aletris, the Irises and Veratrums (botan.); heat in heart (Croc., Op., Rho.); pain in lower right lung (Chel., K. ca., Sep.—right apex, Ars., Calc.; left apex, Ars.; left base, Oxal. ac., Sul.; right middle lobe, Sep.; right chest, Sang., Phell. aq., Zn.); cold between shoulders (Am. m.;—heat between shoulders, Lyc., Pho.); loquacity (Lach., Hyo.); brilliant eyes, red cheeks, delirium (Bell.). *Compare also:* Act. r., Æth., Agar., Can. ind., Cic., Crotal., Sele., Glo., Gymnoc., Plat., Stram.

SYMPTOMS.

1. Mind.—Restlessness, tosses about (during perspiration).—Great loquacity; afterwards stupid and irritable.—Ill-humoured and sleepy.—Great hilarity (evening).—Became much excited over a trifle.—Loquacious delirium, with brilliant eyes and circumscribed red cheeks (1 to 2 a.m.).

2. Head.—Giddiness in the head, with sensation of heat in chest and around heart, and perspiration.—Giddiness with icy coldness of the forehead.—Painful tearing in forehead in the open air.—Dull headache and pressing in forehead.—Tearing in forehead from l. to r. side.—On forehead elevated red pimples.—Wrinkles on forehead, with longitudinal ridges from interior corner of eyebrows upward.—Head feels heavy.—Sensation as if the vertex were enlarged and were driven upward.—Tearing in vertex.—Headache pressing eyes outward.—The head feels enlarged, and as if split open with a wedge from the outside to within; the body is icy cold; she cannot get warm also for a long time under a feather bed; the whole face becomes yellow; she has to whine with the headache; the head burns like fire, with much thirst; during the cold sensation the skin is moist and clammy.—Tearing in (r.) temple, extending to cheek.—Pricking headache (evening).—Sensation as if the hair were standing on end; < in the occiput.—Scalp very painful to touch.

3. Eyes.—Obscuration of sight; could not see in evening; as if a cloud were before the eyes.—Pressing in eyes as from dust; with secretion of white mucus.—Secretion of white mucus from eyes (canthi).—Twitching of r. canthus.—Sensation of twitching in upper eyelids, < when closing them.—In morning, violent lachrymation and burning of eyes, with sensation of dryness.—The eyes feel heavy, as if they could not be kept open.—Eyes dry.—Eyes feel cold.—The eyebrows and upper eyelids are drawn upwards; looks with fixed eyes.—Yellow spots before eyes.—Bright, sparkling eyes with delirium.

4. Ears.—Singing in ear when walking in open air.—Tearing in ears.—Crawling and itching in ears.—Itching or tingling in ears; > by boring with the finger, but immediately returning and feeling as if something had closed ear.—Almost complete deafness (during fever).

5. Nose.—The nose bleeds profusely; the blood is pale.—Bridge of nose feels as if pinched.

6. Face.—Face swollen, with redness and blueness under eyes.—Pale, sickly countenance; face and lips bluish; eyes dull, feel thick and cold.—Circumscribed redness of face (1 a.m. to 8 am.), with violent delirium and brilliant eyes.—Redness of face; yellow face.—Sensation as if something were crawling over face.

7. Teeth.—Pain in all the teeth when eating or drinking warm things.—All the teeth feel loose and too long; < in bed.

8. Mouth.—Saliva of tough mucus.—Swelling and tension of the lips.—Lips red.—Sensation as if the mouth were sore and thick.

9. Throat.—Great dryness in throat, esp. on awaking during the night, with much coughing.—Sore throat, with short cough.—When swallowing, itching (in a small spot).—Sensation of swelling in pharynx, with stiffness of neck, and head drawn to one side (diphtheria).

10. Appetite.—Aversion to meat.—Much thirst.

11. Stomach.—Sensation of qualmishness above navel, when walking in open air.—In pit of stomach, beating as from a pulse, as if a hammer were beating on an ulcerated spot.—Fulness in pit of stomach.

12. Abdomen.—Rolling of wind in abdomen, and discharge of flatulency.—Sensation of heat through abdomen.

13. Stool and Anus.—Frequent stool; passes much wind.—Frequent unsuccessful desire to evacuate.—Continuous stitch in rectum.

14. Urinary Organs.—Pressure on bladder while urinating.

15. Male Sexual Organs.—Violent burning in l. half of the scrotum, drawing towards r. side.—Tingling and itching of scrotum.—Perspiration and itching of scrotum and penis.

16. Female Sexual Organs.—Menses too early, blood viscid, mixed with mucus.—During menses, sensation of distension of abdomen; it feels as if it were boiling.—Menstrual blood profuse, bright red.

17. Respiratory Organs.—Burning in r. side of larynx.—Hoarseness (forenoon).—Cough dry, as if it came from larynx (with sore throat); expectoration streaked with blood, with severe pain in chest (pneumonia).—Sensation of fulness in chest; is compelled to inhale deeply.—Stitches in l. side of chest.—Stitches (like

knives) under r. breast and under clavicle.—Cough < in bed and after sleeping.—Feels hot and oppressed in chest, with gentle perspiration all over.

19. Heart.—Bubbling and boiling in chest and region of heart; it rises to the head and he becomes giddy; he breaks out into a perspiration.—Sensation of heat in region of heart.—Stitches in heart, with anxiety.—Frequent violent pulsations of heart, each beat is double, one hard and full, the other soft and small.—Trembling of heart with great debility.

20. Neck and Back.—Stiffness and pain in neck, extending over whole head down to the nose, and sensation as if nostrils were pinched together.—Sensation of spraining in neck when turning or moving head backward.—Stiff neck; the head is drawn to one side (after diphtheria, scarlet fever.—Burning on r. scapula.—Sensation as if a piece of ice were lying on back, between the shoulders, followed by a chill, with gooseflesh all over.—Sensation between the shoulder-blades as if wet with cold perspiration, the skin being dry and cool.—Burning in region of l. kidney, extending towards r. side.—Burning in spine above sacrum.—Burning in sacrum.

22. Upper Limbs.—Tearing from the shoulder, extending to finger-joints.—Thumb and index-finger feel as if sprained.—Tearing in elbow-joints.—Tearing in knuckles of the middle fingers of the r. hand.—Burning of palms and soles.

23. Lower Limbs.—Tearing in r. ischium.—Small pimples around l. gluteus muscle, which discharge a watery fluid when scratched open.—Burning stinging in, above, or below the knee-pan.—Tearing in l. knee.—Tingling in both lower limbs and feet, < in heat.—Burning in feet (soles).—Cramps in the feet (during night).

24. Generalities.—Very restless; throws herself about; feels weak.

25. Skin.—Sensation in skin as if an eruption would appear.—Pimples appear here and there, containing a watery fluid.—The red pimples on the forehead suppurate.—Itching and burning in the skin all night; < after scratching.—Stinging, itching, and tingling on thighs, legs, feet, arms, &c.

26. Sleep.—Sleepiness with yawning, eyes feel so heavy that she cannot keep them open.—Sleepless, or restless sleep, with distressing dreams.—Cannot go to sleep easily.—After waking and stretching, a shock followed by chilliness and gooseflesh all over.

27. Fever.—Flashes of heat alternating with chilliness.—Continuous chilliness.—Sensation as if a piece of ice were lying on back between shoulders, then a shock, followed by coldness over whole body with gooseflesh; these attacks recur on moving and go off after going to bed.—Feels hot, but the chills run all over her before the heat can develop itself.—Icy coldness of body.—Heat with redness of

face; after heat circumscribed redness of both cheeks; < on r. side; fever with violent delirium and brilliant eyes (< from 1 a.m. to 2 a.m.).—Fever with somnolency.—Perspires freely (after restless sleep), esp. after midnight.—The skin is cold, damp and clammy during the coldness.—Icy cold perspiration, principally on forehead.

Lacticum Acidum.

Lactic Acid. Milk Acid. $HC_3 H_5 O_3$. Dilution.

Clinical.—Bones, swelling of. Diabetes. Foot-sweat. Indigestion. Pregnancy, sickness of. Rheumatism. Sciatica. Throat, constricted, sore. Vomiting.

Characteristics.—*Lactic acid* "was discovered by Scheele in sour milk, the result of the spontaneous fermentation of sugar of milk, under the influence of casein. It is also met with in many vegetable products which have turned sour" (Hering). Reisig introduced it into homœopathy. It has been proved in both the lower and higher attenuations, but many valuable observations have been made on patients taking substantial doses for diabetes (*C. D. P.*). In these cases the symptoms of rheumatic fever were directly traced to the acid. Pain, swelling, and stiffness and tenderness of joints < by motion (as with *Bry*., which antidotes *Lact. ac*.), and flying pains about limbs. One prover had pain along the right sciatic nerve. The well-known effects of milk that has soured on the stomach and remained undigested were produced—nausea, vomiting, burning and sense of weight; and these have all proved useful indications in the homœopathic use of the drug. Diabetes is the affection for which it has been most given in old-school practice; but it has also proved of great power in this affection in the homœopathic attenuations. Nash regards the concomitance of rheumatic pains as the chief guiding symptom here. (In *Med. Adv*., xxi. 508 he records a case of diabetes, with rheumatic fever supervening, cured with *Lact. ac*. 200.) But nausea is no less a guide: Constant nausea; nausea on awaking before rising; > by eating. This may occur in diabetes; or it may occur in pregnancy. It is also an indication when occurring in rheumatism. There is > by eructations; and < by smoking. Smoking < eructations. Copious foot-sweat is a feature of *Lact. ac*., but it is not offensive. It is *suited* to anæmic, pale women. Large doses disagreed with melancholic, choleric constitution, dark hair and eyes.

Relations.—*Antidoted by:* Bry. (relieved sharp pains upper third right side, but soreness remained). *Compatible:* Meat diet in diabetes. *Incompatible:* Coffee < symptoms. *Compare:* Lac can., Lac coag., Lac defl., Sac. lac. In nausea of pregnancy, Nux, Puls., Ph. ac., Colch., Lyc., Lac d., Ip. Excessive hawking with (or without) nausea, Caust. (phlegm in throat, cannot be hawked up, causing nausea). Diabetes, Pho. ac., Acet. ac., Lac d., Ur. nit Flying

rheumatism, Puls., Rhus. Great discouragement, Pso. *Compare also:* Vegetable acids, which all cause weakness and thinness of the blood.

SYMPTOMS.

1. Mind.—Great discouragement.—Lazy.—Sarcastic.—Memory lost.

2. Head.—Vertigo: when turning head suddenly; with heat, on rising; on stooping; at night.—Congestion of head; painless, with strong pulsation of vessels of neck.—Headache, with sensation of fulness in vertex.—Dull pain in forehead, just over eyes, and extending into eyes.—Pain in head and back all night.—Pain in occiput, and alternating between there and forehead.

3. Eyes.—Sensation of fulness in eyes, with headache.—Eyes feel as if they would burst.—Photophobia.—Jerking of l. upper lid.—Marked protrusion of eyes; pupils dilated; eyes feels tired.—Hyperæsthesia of retina, steady aching in and behind eyeball.

4. Ears.—Disturbed and troubled by noise.—Roaring in l. ear on rising in afternoon; singing, snapping in l. ear.—Pain from parotids into ear; stiff feeling in parotids.

5. Nose.—Great sensitiveness of smell.—Nose-bleed every morning.—Severe coryza, stopped nose, sneezing, thick mucus from head to throat, yellow; dead sweet taste.

6. Face.—Face flushed or congested from headache.

8. Mouth.—Tongue coated thick white.—Yellow coating on tongue, with bad taste in morning.—Tongue sore on l. side, raw and red; dry, parched, sticky.—Mouth and fauces very dry and hot.—Very sore mouth; canker sores.—Much saliva in mouth, tasting salty.—Copious salivation (pregnancy).—Bad taste in mouth: acrid, with nausea; sour; coppery.

9. Throat.—Sensation of a plug in the throat.—Fulness in throat which keeps him swallowing frothy mucus; lump or fulness feels like a small puffball; not > by swallowing.—Intense burning in throat, fauces, and œsophagus < by eructation.—Sense of constriction low down in throat; rough and dry.—Fauces hot, dry and swollen.—Difficulty of swallowing solids; less in swallowing liquids.—Excessive hawking with or without nausea.

11. Stomach.—Appetite impaired.—Voracious appetite and great thirst.—Eructations of hot, acrid fluid, which burns from stomach to throat.—Food sours.—Eructations of burning, hot gas from stomach, causing a profuse secretion of tenacious mucus, which must be constantly hawked up; < by smoking tobacco.—Burning and weight in stomach.—Constant nausea; persisting for

days.—Nausea on rising in morning.—Nausea after breakfast; not severe, but very persistent.—Nausea with waterbrash or vomiting.—Sensation as if all food were lodged under upper end of sternum, which oppresses and distresses her for hours.

13. Stool and Anus.—Aching pain in anus.—Soft, mushy stool; diarrhœa.—Greenish yellow stools with tenesmus.—Very costive, stool once a week, hard, black.

14. Urinary Organs.—Frequent pain in kidneys.—Frequent desire to urinate large quantities.—Urinates frequently day and night; the attempt to retain it causes pain.

15. Male Sexual Organs.—Annoying erections in morning, but loins ache too much to attempt coition.—Seminal emissions three successive nights.

16. Female Sexual Organs.—Aching pain in region of r. ovary, < by rapid walking or exercise.—Menses: scanty; seventeen days late; two days early; more profuse than usual; pain in small of back and lower abdomen; itching of vulva during flow.—Leucorrhœa; staining linen yellow; when checked nasal catarrh ensues.—Heaviness and dragging down as if womb down.—Pain as if menstruating; sitting with feet high > uterine soreness.—During pregnancy: morning sickness; salivation; nausea and vomiting; waterbrash > by breakfast.

17. Respiratory Organs.—Dryness and rawness, extending to larynx.—Hoarseness.—Aphonia.—After rising, voice was entirely without control, whispering and squeaking when expecting to speak aloud.—Spasmodic, ringing cough, caused by irritation in throat.—Hoarse, hard, dry cough, with dryness of glottis.—L. side of chest sore and painful.—Cutting or sticking pain in upper third of r. side.

20. Neck and Back.—Pain in small of back, extending into shoulders.—Sore aching in lower part of back; < when walking.

21. Limbs.—Severe, sharp pains in joints.—Acute pains in joints; flying pains about limbs.—Joints swollen, not tender, stiff.—All pains < by movement.

22. Upper Limbs.—Rheumatic pain in shoulders.—Rheumatic swelling with redness and pain in wrists and elbows, wrists, and small joints of hands.

23. Lower Limbs.—Soreness to touch along r. sciatic nerve, on getting out of bed, lasting all day and pulsating constantly but slightly.—Sharp pain in r. knee with stiffness.—Knees and other joints stiff and painful.—Rheumatic pain in knee-joints.

24. Generalities.—Weakness as if from exercise, with rheumatic pains in the bones.—Debility, weariness of the limbs.—Aversion to exercise.

25. Skin.—Skin harsh and dry, no sweat.—Red spots or blotches on various parts of the body, particularly thighs and lower extremities.—Itching and burning, < by cold.

26. Sleep.—Restless all night.—Does not sleep well.

27. Fever.—Cold and chilly at times.—Flashes of heat.—Chilly, mostly on limbs.—Copious perspiration.—Unusual perspiration of feet.

Lactis Vaccini Flos.

Cream. Attenuations by Swan's fluctional potentiser.

Clinical.—Diphtheria. Leucorrhœa. Menorrhagia. Throat, sore.

Characteristics.—Many persons can take cream who cannot tolerate milk, and *vice versâ*, therefore Swan decided to prove the different parts of milk independently. He proved his 200th (which, according to Skinner's calculation, is not the same as the 200 centesimal, being duplicated instead of centupled at each remove) on himself and Miss Mary P. As with the other *Lac* preparations, a large number of the symptoms were manifested in the throat and female sexual organs. Dry throat and extreme difficulty of swallowing. Menses profuse and accompanied by cramps.

Relations.—*Compare:* Lac c., Lac f., Lac v., Lac v. coag., Lac v. def. Ars. stopped abruptly the excessive menses and accompanying pain; Lac v. def. restored the flow, and then they ceased naturally.

SYMPTOMS.

8. Mouth.—Food tastes as if it lacked salt.

9. Throat.—Dryness and redness of upper part of pharynx.—Increased redness and soreness of upper part of pharynx, < at night, causing difficulty of deglutition, obliging her to bend the head forwards on swallowing, so as to favour it, otherwise a pain runs up to ears.—Great dryness of upper part of pharynx in the morning; difficult deglutition; yellow mucus, with a sickish sweet taste; throat < night and morning; at night had to take hold of throat to assist in swallowing.

12. Abdomen.—Tendency to flatulence in lower intestines.

14. Urinary Organs.—Urine appears to stain more yellow.

15. Male Sexual Organs.—Soreness of end of prepuce, as if there were longitudinal cracks there, though none could be discovered.

16. Female Sexual Organs.—Menses seven days too soon.—Menses profuse; cramps in and above region of navel, bending her double; during the cramps was very cold, and, although well clothed, could not get warm; painful, frequent, and profuse diarrhœa; Arsen. stopped the pains and the menses; Lac vac. deflor. restored the menses, and they ceased naturally; since then, albuminous leucorrhœa, like white of egg, if she walks much, or is on her feet much.—Sexual desire easily excited when the hand touches the bosom.

17. Respiratory Organs.—Hoarseness after singing.—Sensation of shallow breathing; has to take a deep respiration to relieve.

23. Lower Limbs.—Rigidity on posterior side of lower legs, just below knees, while walking; very unpleasant, but not painful.

25. Skin.—Itching of body above pubes and hips, on abdomen, chest, and back, without eruption.

26. Sleep.—Horrible dreams; saw a dead person in a coffin; slept and dreamed the same dreams; feels stupid; does not care to speak.—Wakefulness, without restlessness.—Drowsy and sleepy; head feels heavy.—Constant talking during sleep.

Lactuca.

Lactuca virosa. Poisonous Lettuce. Opium Lettuce. Also, Lactuca sativa. Garden Lettuce. N. O. Compositć (Genus, Cicoraceć). Tincture of fresh flowering plant (Specimens of both L. vir. and L. sat. might be included in the tincture. Tincture of impissated juice," Lactucarium" or Lettuce Opium. (The symptoms in the Schema marked "(s)" were produced by Paris Lacucarium prepared from Lactuca sativa. American Lactucarium is prepared from L. elongata.)

Clinical.—Angina pectoris. Anus, affections of. Ascites. Asthma. Constipation. Cough. Diarrhśa. Globus hystericus. Gonorrhśa. Heartburn. Hysteria. Lactation. Levitation. Liver, affections of. Muscć volitantes. Noises in ears. Pylorus, pain in. Sleep, excessive. Smell, illusions of. Spinal cord, pains in. Spleen, affections of. Whooping-cough. Yawning.

Characteristics.—The leaves of garden lettuce, *Lactuca sativa*, when too old and going to seed, have a bitter taste, and the stalk then contains a milky juice which is

intensely bitter. This juice contains *Lactucin*, and is common to all lettuces, but is especially virulent in *L. vir*., from which (as well as well as from *Lact. sat*.) *Lactucarium*, or "Lettuce Opium," is prepared. It has a soporific action, and is used "instead of *Opium* to allay cough, quiet nervousness, and induce sleep in cases where, from idiosyncrasy, *Opium* is not borne" (Brunton). This use of lettuces has been known from very remote times, and has not been added to by old-school observers. The sleep-provoking powers of *Lactuca* are recognised by sensitive persons who eat ordinary garden lettuce in salad. Homśopathic provings and records of poisonings have produced an extensive array of symptoms. A simple reading of the symptoms will show what a powerful agent we possess in *Lactuca*, though the homśopathic uses have not been as extensive as the proving seems to warrant. As an instance of poisoning I take this from *C. D. P*. A man, 25, ate *Lact. v*. in a salad, 7 p.m. Went to bed at 9. Was waked at 11 with sharp colicky pains, soon followed by nausea and vomiting, which lasted all night. Fell asleep at 5 a.m., but in the morning was astonished to find himself unable to distinguish objects clearly. A boy of 10 who ate of the same meal became affected with lively delirium at midnight, and it lasted till morning; he jumped about on the bed, played all sorts of pranks, and nobody could quiet him. He had no colic or vomiting. His pupils were dilated till the iris was a mere rim. Trying to read he mistook M for P and O for V. In his delirium he had hallucinations, saw on his bed a soldier, an inkstand, &c. Both these patients and another had liquid stools. The dilated pupils persisted some time. One of the keynote symptoms of *Lact. v*. is an indescribable sensation of tightness, affecting the whole body more or less, but especially the chest: must yawn and stretch to relieve the squeezing of the lower chest. This develops into asthma and angina pectoris. There is tightness in the liver region, and enlargements of the liver have been removed by *Lact. v*. when that symptom was present. Squeezing in left breast. Feeling as if a hundredweight on chest. On the other hand there is also a feeling of relaxation in the chest. There is intolerance of touch and pressure. *Lact. v.* has cured a spasmodic cough in frequent paroxysms with feeling of suffocation. Attacks came suddenly without any apparent cause, and were induced by a violent tickling in pharynx and roof of mouth (*N. A. J. of H*., May, 1890). Whooping-cough, paroxysms preceded by anxiety. There is both constipation and diarrhśa, and many concomitant anal symptoms. Hering gives "Painful gonorrhśa in females" as an indication; and one of the symptoms of the male urethra is suggestive. "Sensation as of a drop continually passing along the urethra when seated." Urine has smell of violets. *Lctu*. has cured hypertrophy of ovaries in a woman of fifty, consequent on an abortion twenty-five years before. The tumour was excessively large, and the patient could get no rest for the pain of the pressure. The rectum was contracted, and fćces evacuated with great pain. "Fatigue during stool," and also "sleepiness during stool" are peculiar and may prove characteristic. Ebullitions rising up from abdomen suggest globus hystericus. In addition to the sense of *tightness* there is a sense of *lightness* no less pronounced. Extraordinary lightness of body, more pronounced in open air. Feels as if swimming, in bed. Dreams of swimming in the, air, or of walking above the

ground. The head feels light; also empty. Sensation as if head too large; as if brain loose. Sensation as if looking through gauze. "Pain in spinal marrow even to cauda equina and streaming along coccyx" should prove a leading symptom in some spinal cases. Other *sensations* are: As if chest would fly to pieces; as if circulation in legs was suspended. Coldness of stomach, throat, chest, feet. Right arm is much affected by Lact. v. Sitting up > chest symptoms. Bending > pain in stomach. Crossing legs > pinching in umbilical region. Touch <. Sneezing <. Symptoms are > in open air; < in warm room. Yawning and stretching > pressure in chest.

Relations.—*Antidoted by:* Vegetable acids and Coffee. (In a proving of Lactucarium, Acetic Ether and Hock were more effectual than Coffee.) *Compare:* Drowsiness and constipation, Op., Nux mos.; levitation, Sti. pul., Pho. ac., Lac can., Asar., Thuj., &c. intolerance of anything tight round neck, Lach.; gonorrhśa, Thuj. urine smells of violets, Tereb.; squeezing in left breast, Borax (Borax has empty feeling). Coldness, Helod.; pain in soles as if he had jumped on a stone, Bro.; heart symptoms, K. carb. and K. iod.; cough, Drosera.

SYMPTOMS.

1. Mind.—Disposition melancholy, fretful; seeming to invite sadness, with extravagant and exaggerated notions, of such a nature that the simplest occurrence suggests apprehensions of the most terrible and disgusting kind; after suffering from grief, stunning pain in forehead in evening, and violent contractions in throat, with constant inclination to weep.—Internal anguish and agitation.—Excessive ill-humour, provoked by slightest contradiction; ill-humour, peevishness, with indisposition to labour, and inability to remain in bed; cross-grained humour, which is roused by slightest provocation.—Difficulty in thinking (thinking = headache) (s), indisposition to intellectual labours, because the thoughts are intermixed, and it is found impossible to resolve them into any general idea; various places are searched before anything can be found.

2. Head.—Confusion: of head; in morning, sometimes with heaviness, as from fulness; in forehead sometimes with a sensation of heat in the part, sometimes in r. frontal protuberance, sometimes in l. (externally), with lancination across l. protuberance, on stooping; sensation of giddiness and of vertigo; head bewildered, sometimes in morning on rising.—Sensation as if head were empty; with stupidity as from want of sleep, and vertigo, so as to cause falling down; in morning, as after a nocturnal debauch, or else with pressure outwards in direction of forehead and orbits.—Feeling of intoxication.—Vertigo (s also): turning, with heaviness of legs, sensation of weight in head, esp. in occiput, with darkness before eyes; the threads appear confused in sewing; in a warm room, with fulness in head, and sensation as if the body were swimming, in bed; also as if the head were too large, or that its volume had been increased by a rapid movement of upper part of body.—Pain in region of vertex, sometimes on one spot, as in clavus hystericus (of a young female); sometimes in one place, sometimes in another, in the head, esp. in

occiput; cephalalgia in afternoon.—Dull pain: in forehead; in whole head; with great depression and physical indolence; in l. temporal region (when the head is shaken, while washing), and < each time it is moved.—Sensation of weight in head; in occiput; with dull pain, or with aching, or else in afternoon; in forehead with lancinations, esp. in l. frontal protuberance.—Pressive cephalalgia; sometimes with sensation as if brain were waving to and fro in head; or else < by the heat of a room, or lancinations as if with blunt instruments, or (in evening) burning, with external heat on forehead; very much felt in glabella; acute on one side of head, as on the bone; in occiput, tensive, with heat in forehead and coldness of hands.—Aching in forehead, in morning on awakening, or else after slight mental application, also affecting eyes; as of forcing outwards in temples, esp. l., and thence sometimes pervading whole head.—Compression in occiput.—Drawing pain in temples towards the forehead; tearing in r. temporal region; dull shocks in both temples.—Painful shaking of head on coughing but slightly, with wavering and aching, which remain a long time afterwards.—Starting and throbbing in head, during repose; buzzing within and before ears, with sensation of fulness in the head; resonance in r. side of forehead in the morning.—On exterior of head: a painful spot near the vertex, pain < by touch; fixed dull pain on one spot on coronal bone, to l.; drawing pain on a spot on coronal bone, towards r. side, < by touch.

3. Eyes.—Biting in the eyes.—Itching above the eyebrows; aching, with sensation of distension in ball of r. eye; smarting in eyes, esp. in external canthi, < by friction; or else in the l. internal canthus only.—Burning in eyes, esp. in the lids (sometimes in the daytime only when writing, or else more particularly in r. eye, with clouded vision and dilated pupils).—Redness of conjunctiva, with increased mucous secretion in elderly persons, with abdominal congestion.—Eyelids charged with humour.—Pupils dilated (s).—Cloudiness of vision; weakness of sight, sometimes with heat in eyes; sight feeble, cloudy (s); sight intercepted as by a cloud or veil, which sometimes disappears on the attention becoming fixed on some object.—Flying insects before eyes, on stooping, after a meal.—Hemiopia.

4. Ears.—Drawing pains in ears; shootings followed by tension in l. ear.—Buzzing in ears; ringing sound before ears, evening, in bed.

5. Nose.—Sensation as though end of nose were distended.—Peculiar smell before nose, and a like taste in mouth.—Frequent sneezing, with < of symptoms in chest; or else with soreness of chest (sometimes like excoriation, which subsequently turns to aching).—Coryza, followed by excoriation and dryness in nose.

6. Face.—Look: haggard (s); visage pale, wan.—Heat of face, with trembling and sensation of swelling of lips (s).—Tingling, with a feeling of tightness on face.—Pricking, drawing pains, from r. sub-maxillary gland to ear and tongue.—Lancinations in chin at extremity of sub-maxillary nerve.—In lips, quivering.—Swelling of the lymphatic glands.

7. Teeth.—Sharp pain in molars on l. side of lower jaw, as if they were being twisted.—Soreness of gums, on an empty socket on masticating.

8. Mouth.—Sensation of tightness in bottom of mouth and palate, with constant spitting; increased accumulation of saliva, sometimes acidulated (or acrid).—Dryness of mouth, without thirst.—Tongue charged with a white coating (s also), coated with thick mucus (s); sore, as if burned at tip.—Contraction under tongue.

9. Throat.—Slight burning in throat, sometimes in evening; sensation in throat as if the part were exposed to heat of a brisk fire.—Difficult deglutition, with sensation as if uvula were raw, with burning, or else as if muscles of pharynx could not perform their office.—Accumulation of mucus in throat; viscid mucus in throat in morning (s also).

10. Appetite.—Taste: sickly (s); bitter, after eating bread and butter; bitter as gall, in throat.—Want of appetite (s also): at noon food is repugnant; no appetite for bread and meat.—Appetite increased (s also); sometimes more particularly at noon.—Increased thirst.—After a meal, sensation of fulness in stomach, with pressure downwards.

11. Stomach.—Risings: frequent, repeated, which > the oppression of the chest; empty, sometimes deep, with taste of the extract of lettuce; repugnant, with sensation of coldness in gullet, and continued bitterness in mouth; acrid, and sometimes acid.—Loathing (s also); nausea (s also); sometimes with uneasiness at pit of stomach.—Vomiting and loathing (s).—Pains in stomach, with contraction of pit of stomach, < by pressure.—Sensation at pit of the stomach and sternum, as if patient had sat a long time with the body much curved; uneasiness at pit of stomach, with anguish in precordial region; sensation of softness in stomach.—Pressure in stomach (s also); with fulness, bursting, followed by tingling under r. breast, with sensation as if a blister were being formed there; feeling as though the contents were striving to pass out in a volume the size of the palm of the hand, followed by tenesmus; aching at orifice of the stomach, pressure and fulness at the pit of the stomach; the pressure in the pit of the stomach turns to anguish, in the midst of gurgling in stomach, risings, borborygmi in abdomen, and emission of wind, which affords >; it occurs presently below the sternum, and alternates with a sensation of burning or of coldness.—Sensation of coldness in stomach (s also); tingling in stomach and pit of stomach, with frequent risings, as if ice were in gullet and stomach, following a sensation of heat in stomach, with nausea which rises in throat, and sickly taste at root of tongue.—Shootings in pylorus.—> Of pains in stomach, on bending body forwards, while seated, or on expulsion of fetid wind.

12. Abdomen.—Dull shocks, or else lancinations, esp. in r. hypochondrium.—In hepatic region: contusive pain in morning; periodical dragging; dragging pain;

aching, sometimes in evening; lancinations, sometimes after a meal, either directed towards the back, or else accompanied by a sensation of weight; enlargement of liver, sometimes with aching, or else with tension or pressure.—In region of spleen, quick lancinations; squeezing, esp. while at rest.—Sensation of relaxation in the abdomen.—Pinchings: in abdomen; during and after breakfast, with want to go to stool, although nothing is emitted but wind; in umbilical region, < on crossing legs; in upper part of abdomen, in morning, in bed, or else with cutting pains, and < during and after a meal, so as to cause writhing of the body.—Cutting pains in abdomen: in different places, with pinchings; throughout abdomen, with painful borborygmi, and followed by a liquid mucous evacuation.—Disagreeable sensation of heat in abdomen; frequent ebullition, ascending from abdomen into chest.—Sensation of weight in abdomen, which presses downwards after breakfast; sensation as though a burden were lying on abdomen, chiefly on umbilical region, and pit of stomach; < in an upright position.—Affections of the portal system.—Abdominal dropsy (following an intermittent fever, with constipation), with excessive enlargement of abdomen, feet, and face; or else with induration of liver and asthma.—Sensation of fulness in abdomen, sometimes with borborygmi and emission of wind (s); sensation of fulness in r. side, with difficulty of respiration, > by risings and emission of wind (s); tightness of abdomen, esp. in hepatic region, in evening.—Movement of flatus in abdomen, very frequent borborygmi in abdomen, sometimes during a meal, or else afterwards (with lancinations below the precordial region, or else with pinchings in abdomen), or chiefly in umbilical region; abundant emission of wind, sometimes fetid (after the borborygmi), or else in evening, preceded by pinching pains.

13. Stool and Anus.—Constipation: no stool first day, or else a tardy and hard evacuation (habitual constipation diminishes).—Stool only after urgent calls, and griping.—Want to go to stool, with sensation of great lassitude, and with evacuations difficult and infrequent.—Stool preceded by tenesmus, hard, and not ejected without effort, with continued pain as of a bruise in anus.—Scanty stool.—Stools: hard; hard and tardy, dry, hard, difficult, and with straining; hard, knotty, with burning at anus, after a constipation of two days' continuance; stools altogether more infrequent and more firm.—Provokes easy stools (s?), facilitates the intestinal evacuations (s?); soft stools or else like pap the first few days; frequent stools, like pap (s); diarrhśa (s); sometimes diarrhśa, at others constipation.—During stool: general lassitude, fatigue so as almost to bring on sleep, yawning, and accumulation of water in mouth.—After stool (soft), pressure in the anus.—At anus: drawing; pricking, towards evening (bruised pain); hćmorrhoidal tumours round anus, with tenesmus in rectum, and a fresh evacuation of a liquid stool after each solid evacuation.

14. Urinary Organs.—Want to make water, with frequent drawing pain in glans, which extends throughout the body.—Increased secretion of urine (s also); more frequent and more copious emission of urine; it is necessary to rise during the night to urinate; pressure on bladder, towards morning, from an unusual accumulation of

urine.—Urine clear as water, and at same time more copious, and more frequently passed, than usual; clear yellow, with a smell of violets; brown, hot, and burning in urethra.—In urethra continual sensation, on being seated, as of a drop of water passing along it; heat at orifice.—Dragging pressure in region of bladder, as from urgency to urinate.

15. Male Sexual Organs.—In penis, swelling of a lymphatic vessel, following morning erections.—Drawing pains at root of penis, or also in r. spermatic cord, and along internal surface of thigh.—Diminished sexual appetite; chases away lasciviousness and voluptuous fancies (s).—Painful erections during morning sleep.—Pollutions, sometimes during lascivious dreams, during morning sleep, or else two in one night, happening unconsciously during a profound sleep.

16. Female Sexual Organs.—Catamenia too early by four or six days (with cramp-like pains in abdomen).—Promotes catamenia (s).—Increase of milk in breasts (s).—(Painful gonorrhśa of females.).—Bearing down and weak feeling about pelvic organs, and general relaxed feeling.

17. Respiratory Organs.—Power of voice increased.—Roughness: in throat, after reading with a loud voice; in pharynx; in larynx, causing deep inspirations; with scraping in throat (s); dryness and scraping in pharynx and upper part of chest; hoarseness in evening, or also in morning, with roughness in throat; sensation of fulness in larynx, diminished on throwing body backwards; frequent need to cough; constant sensation of fulness in larynx, with irritation of a suffocating cough, impeded speech, and frequent cough, with expectoration.—Cough: provoked by a tickling in throat; sometimes with a sense of oppression of chest; with sensation of burning dryness in throat; dry from time to time, or else by fits, with shaking of chest, as likewise of abdomen and occiput; dry, barking, painful; proceeding from a pre-existing cough, with easy expectoration; spasmodic, hollow, and dry, or else very violent, and threatening to burst the chest, induced by a tickling in gullet; the dry cough arising from a cough already established, and appearing more particularly according to the changes of the weather, disappears entirely.—Excretion of mucus by the cough (which was dry previously?), and the movements in coughing are more violent and prolonged; copious expectoration of mucus, by means of a short cough.—During coughing or hemming chest pains <; cough suffocating, dry, in hysterical persons, with prolonged sleeplessness, and a nipping coldness in stomach and pit of stomach.

18. Chest.—Dyspnśa: shortness of breath, respiration straitened (s); difficulty of respiration, with lancinations in the l. lung, or else with pressure in pit of stomach; respiration rapid, from fulness and ebullition in chest; frequent want to breathe deeply, esp. on being seated in a bent position; respiration, as it were, insufficient, on walking and on holding body erect, by reason of a spasmodic constriction in umbilical and precordial regions, with frequent want to draw a long breath; on breathing deeply, sensation as though the chest were imperfectly

inflated.─Asthma: straitened respiration, or constraint of chest (s also); as if lower part of chest were too narrow, with fear to breathe deeply, because a shock is experienced at each effort; laboured at night, arousing from sleep, and forcing prompt assumption of a sitting posture, with anguish (s); frequent, with weight on chest, want to breathe deeply, > for the moment by yawning and stretching; as from corrosive exhalations, in evening, in bed, with cough, suffocating, hollow; with constant need to double up the body when seated, because otherwise there is a feeling of constraint, as if the parts were too narrow; as if thorax were too narrow, compressed, or constricted, esp. on being seated in a bent position, or else with frequent constrictive pain in lower part of chest; sensation of spasmodic constriction in hypochondria, esp. r.─Oppression of chest, or difficulty of respiration (s also): necessitating deep inspirations (s also), sometimes with yawning and anxiety; or else > on rising after having been seated in a bent posture, or on throwing back the shoulders; with dull pain below sternum; great, with frequent pain in different places in chest; slight, of the sides, and below sternum, followed by a sensation of heat on wall opposite the chest, with slight starting and bruise-like pain in chest.─Sensation of weight on chest, with difficulty of respiration as if there were a hundred-weight on chest, with want to throw off clothes in evening, with sensation of fulness in pharynx; on walking in open air, as if there were a weight on chest; periodical, increasing or diminishing, with squeezing, oppression, and heat in chest.─The chest symptoms are > on sitting up; nothing tight can be borne round the neck (because it impedes respiration).─Convulsive asthma, sometimes attending an organic affection of heart; fits of suffocation in dropsy of chest; dropsy of chest, with general swelling, anxiety, want of power to breathe on lying down, obliging the resumption of a sitting posture; cough short and dry, great weakness, irresistible inclination to sleep in afternoon, and diminished secretion of urine.─Dull pains, forcing patient to breathe deeply, at l. side of chest, and shortly afterwards at r. side also, but only transient there.─Breathing deeply increases the dull pain in chest.─Aching pain in chest: in centre of chest; below sternum, on pressing the hand upon it; in both sides of chest, in morning, < on drawing a long breath; below sternum, occasioned by movement, with tension; in upper chest, after walking in open air, with weakness, to the extent of sinking down, squeezing pressure in different parts of chest, or else chiefly in upper part, with oppression, yawning, and stretching of upper part of body.─Lancinations in chest: in r. side of chest, with constant sensation of spasmodic jerking; or else in lower part of chest, towards back (s), in upper region of cartilages of false ribs; acute, below small l. ribs; pleuritic, towards middle of sternum; squeezing in upper part of l. breast, with oppression of the whole chest.─Dull stitches from l. side of chest to scapula.─Dull dragging pain in chest, morning, in bed; < after rising.─Ebullition in chest, with squeezing, and forcing to breathe rapidly; with oppression, sometimes after even moderate exercise, or else followed by cramp-like pains in chest, externally.─Painful throbbing, burning, in r. cavity of chest, in one particular spot.─Feeling of relaxation in chest, from noon to evening; sensation of internal coldness (s).─Pain, as of fatigue, from physical

exertion, at bottom of chest, and walls of thorax, esp. l., in morning after awakening.—Rapid pain externally, in muscles of chest and of delta, in direction of shoulder, during repose.

20. Neck and Back.—Pain in nape of neck, when coughing; drawing pains and tension (sometimes simultaneously in shoulders and muscles of neck); subcutaneous pricking, which gradually becomes fixed under r. shoulder-blade.—Tension in muscles of neck on r. side, sometimes spasmodic.—Lancinations under r. armpit, as if caused by a pointed instrument, < on raising arm, and on pressing the part with finger.—Drawing pains in loins, towards the groins.—In the back: pains in spinal marrow, as far as the cauda equina, and extending to sacrum; cramp-like pains passing over back in various directions; contusive pain in lumbar region.

22. Upper Limbs.—Pains in shoulders (s); sensation of paralysis in l. articulation.—In the arms: drawing pains, commencing chiefly in elbow-joint, or else with starting; wandering, tearing pains, as if on the bone, in shoulder-joint and r. elbow; afterwards, sometimes in wrist, sometimes in other parts; sharp lancinations below r. arm.—Great fatigue of r. arm.—In upper part of arm, drawing pain and sensation of weakness; cramp-like pain in lower extremity; pain, as of dislocation, in l. deltoid muscle, but only when forearm is bent.—Dull dragging pain at point of elbow.—In r. forearm, tearing pain, followed by a sensation of paralysis in little finger.—In hands: painful jerking; drawing pain in l. hand, sometimes of a spasmodic character in the joint; trembling of hands; which are moist (s).—In fingers: sensation of heat, followed by continued weakness of the parts; tearings in metacarpal bones of both hands.—Tingling itching of the fingers of l. hand.

23. Lower Limbs.—In the legs: great fatigue, trembling, and lassitude; heaviness, sometimes < when walking, with tension in the hams; the legs frequently go to sleep, sometimes when patient is seated.—In thighs: contusive pain, with tension in hams, on rising from a seat; starting in l. thigh.—In the legs: feeling of stagnation of the blood, sometimes on being seated with heaviness, or else in r. leg only, during repose, and with drawing pains drawing pain in r. leg, with sensation of stiffness, sometimes ascending to hip trembling in l. leg, in afternoon; cramp in l. calf when walking.—In the feet: pain in sole of l. foot, during repose, as if patient had jumped on a stone, disappearing on standing upon the foot; coldness of feet.—Numbness of soles and pains in lower back.—In the toes: crawling itching (on l. foot); pain in l. great toe, as if it were being distorted and turned back, on putting down the foot; pain, as of subcutaneous ulceration, below nail (of fourth toe).

24. Generalities.—Patient never feels rested, enfeeblement is general.—Dragging pains in limbs and back, or else periodical in different parts of body (s); tearing pains which pass first between r. shoulder-joint and elbow, afterwards in wrist, knees, thigh, joint of foot, nape of neck, temples, &c.; painful ebullition in

extremities, afternoon, while seated tranquilly; starting pains, acute, cramp-like, near articulations (at nape of neck, the hypochondria, elbows, hips), most frequently in evening, and while at rest, sometimes, also, < in morning, esp. in the side of the extensors; cramp-like pains which shortly reappear in other parts, and impede the use of them (esp. elbows, hands, fingers, and legs); contusive pain in all the limbs, which obliges the patient to remain in bed during the day.—Faltering gait, tendency to stumble when walking (s); dangerous convulsions in women (s).—General feeling of depression, sometimes with lassitude and immobility; great fatigue; great lassitude (also s); sometimes with sleepiness, or else in morning, after rising, with inaptitude for labour; the least labour produces irritation and lassitude, as after great fatigue.—Indescribable sensation of tightness in the body (s); sensation of vivifying power in hysterical persons (s); necessity, when seated, to keep the body straight.—In the open air the patient feels altogether better, the chest esp. is >; unusual lightness in the body (s); > of symptoms, esp. by exercise in open air; desire to be out of doors.—Feeling as if the body were swimming, in bed.—Slight shivering.

25. Skin.—Subcutaneous lancinating, pinching, and smarting in various parts, or else with shootings.—Inflammation and eruption (from external applications on delicate parts of the skin).—Śdematous swellings of whole body, with asthmatic affections, head confused, lying on back is distressing, shuddering, want of appetite, short cough, and pulse small and full.

26. Sleep.—Frequent yawning; yawning and stretching of limbs (s).—Great drowsiness during day (s also); with fatigue and lassitude; with frequent yawning (s also), early in evening, obliging patient to lie down quickly; unconquerable sleep (s); falling asleep while at labour; coma, sometimes with loathing (s); inclination to sleep without power to sleep, profound sleep, lasting several hours, sometimes with the pulse rather quick.—Nocturnal sleep: tranquil, refreshing (s also); profound, with many dreams, or else dreamless; sound, with involuntary emission of semen (s); stupefying, with difficult awakening in morning; agitated, unrefreshing (s also); sleep protracted, troubled (s); frequent awakening, almost every quarter of an hour.—Inability to rest on back (in consequence of asthmatic symptoms) and tension at pit of stomach patient prefers to lie with head elevated, and on r. side.—At night, in bed great oppression of chest, which breaks the slumbers, and compels the patient quickly to raise himself into a sitting posture, with anxiety, sensation of great fatigue in morning (s); difficulty of respiration, with pressive and grasping pains in chest, which allow but little sleep; difficulty of respiration which hinders sleep, with throbbing in head, and, at same time, palpitation of heart, followed by tearing pains in the head, with heaviness and stupidity; pains in head; spasmodic cough and febrile heat, with unconscious dreaming and disturbed sleep.—Dreams: fantastic, during a troubled sleep; lively and sometimes anxious (of suicide by firearms), during a profound sleep; towards morning, sometimes of a strange character, and as if patient were whirling round upon the foot; sleep the whole night with many dreams.—In morning, on awaking,

sensation as though the head were empty; difficulty in dispelling sleep; great lassitude after troubled sleep, with oppression.

27. Fever.—Coldness often pervading back and head (s also), sometimes with heat of face (s), or else with shivering in a warm room, and coldness of feet and hands; easily provoked shivering during day, even in a warm room; shuddering, which seems at times to creep along under the hair.—Fever, with violent pains in head, painful sensitiveness of scalp to touch, tearing pains in joints of limbs (same as in nape of neck and face), great heaviness of head in evening, which causes it to fall forwards; distressing and parching pains in head and upper part of body, with icy coldness of feet, and at same time burning heat and lachrymation in eyes, dry cough, suffocating and spasmodic, with violent shaking of chest and head, and spasmodic and painful contraction of lumbar vertebrć, and hypochondriac region.—In morning, from 3 to 6 a.m., sensation of heat, of an insupportable dryness, esp. in legs, which are painful as after running a great way.—Pulse: slow (s also); slow and wiry; infrequent, even to the limit of ten or twelve pulsations (s).—Copious sweats; violent sweating (s); nocturnal sweat, general and gentle (s).

Lamium.

Lamium album. L. lævigatum. L. maculatum. Dead Nettle. White Nettle. N. O. Labiatæ. Tincture of entire fresh plant whilst in flower and seed.

Clinical.—Hæmorrhoids. Headache. Hernia. Leucorrhœa. Menstruation, too early.

Characteristics.—*Lamium* was proved by Hahnemann and others, including Stapf. It produced headaches of several kinds, one a "deep-in" headache like that of *Bacil.*; tightness of scalp; and a backward and forward motion of the head. Much uneasiness of mind and body; trembling of limbs; weakness during the chill. Tearing and drawing in the limbs. The menses appeared too early and were scanty. Much leucorrhœa, with biting sensation or without sensation, white mucus. Farrington says *Lamium* has been recommended for external piles. "Hard stool with blood" is the nearest symptom bearing on this. A characteristic symptom seenms to be "backward and forward motion of head." Symptoms were < in morning on waking (headache); < while lying down in bed in morning, > on rising (headache); > on sitting (headache); < in open air (headache); < by drinking (burning in chest) < by eating (pressure beneath pit of stomach; burning in chest) < rising from stooping (indescribable headache).

Relations.—*Compare:* Other members of the Mint tribe (Hedeoma, Ocimum canum, Origanum, Mentha piperita); "deep-in" headache, Bacil.; head moves backwards and forwards, Arn., Cham., Lyc.

SYMPTOMS.

1. Mind.—Whining mood, inclination to weep, feels as if abandoned.—Great sadness, with lachrymose humour.—Great agitation and anxiety, which permit no rest.

2. Head.—Aching in centre of brain, < on rising from a stooping posture.—Headache, < by rising from a seat, > when seated.—Cephalalgia, as if brain were compressed on all sides, with very violent pains in centre of brain.—Excessive tightness of scalp, esp. near coronal suture.—Great mobility of head, esp. from before backward.—Sight and hearing are diminished.

8. Mouth.—Hawking up of thick mucus of an acid taste, which is detached from bottom of gullet.

11. Stomach.—Burning pain in middle of chest, or in œsophagus, after eating or drinking anything whatever.—Nausea and vomiting of food, with heat, great lassitude, excessive dejection, and cloudiness of sight.

12. Abdomen.—Excessive distension of the abdomen.—Pinching in the abdomen, as from incarcerated flatus, which is not > by expulsion of the wind.—A dragging in l. side of abdomen down into pubic region as if a hernia would protrude there.—Great agitation in the abdomen, as if catamenia were about to come on violently.

13. Stool.—Evacuations of the consistence of pap, hard, with emission of blood.

14. Urinary Organs.—Urgent want to urinate, with very scanty emission.—Discharge of serum from the urethra.

16. Female Sexual Organs.—Catamenia too early and too scanty; eleven days too early at the new moon.—Leucorrhœa, sometimes with a biting sensation in genitals.—Leucorrhœa profuse, painless, white mucus.

17. Respiratory Organs.—Voice weak and faltering, as from mental agitation.—Want of breath when speaking, with weakness of the chest.—Anxious pressure on chest, with nausea.

20. Back.—Bruised pain in small of back.

22. Upper Limbs.—Torpor and crawling numbness of back of hand, and of the fleshy part of thumb, < by touch, with painful sensation of rawness in the parts on moving the hand.—Tearing and drawing in fingers.

23. Lower Limbs.—Intermitting drawing, pressive tearing on lower posterior muscles of r. thigh (while sitting).—Blister on heel from slight rubbing, afterwards bursting and changing to an ulcer with smarting and biting.

24. Generalities.—Tearing and drawing in limbs.—Great restlessness of body and mind, with trembling of limbs.

25. Skin.—Smarting and stinging in the ulcer (< in evening when lying) with redness and swelling around it, and smarting early in morning in bed.—Ulcers, with pain as from excoriation, and shootings.

27. Fever.—Shivering, with general weakness, or with anxiety.—Burning heat in both cheeks, without redness, and without thirst.—Constant thirst, except during shivering fit.

Lapathum.

Lapathum Sylvestre fol. minus acutum (Gerarde). Rumex obtusifolius. Common Dock. N. O. Polygonaceæ. Tincture of fresh root.

Clinical.—Epistaxis. Headache. Kidneys, pain in. Leucorrhœa. Uterus, atony of.

Characteristics.—*Lapathum* is the old name of the Docks now generally named *Rumex*. The word is of Greek origin and signifies, according to Gerarde, "to soften, ease, or purge the belly," and the name was given to "herbs used in pottage and medicine, very well known to have the power of cleansing." *Lapath*. was proved by Widenhorn. It produced some rather severe headaches and nosebleed. (Hansen says it is indicated in epistaxis following headache.) Weight in stomach. Pain in kidneys with pressure from without inwards. Weak feeling in genital parts; leucorrhœa with uterine bearing down and pain in kidneys.

Relations.—Rumex c. and Rheum (botan.—Phytolacca is a near ally); Sep., Lil. t.; kidney ache, Santal.

SYMPTOMS.

1. Mind.—Sadness and moroseness alternating with gaiety.

2. Head.—Headache at vertex; as after intoxication.—Pressive headache, in morning; it seems as though the head were swollen.

5. Nose.—Epistaxis.—Blowing of blood from nose.

11. Stomach.—Pain in pit of stomach, with loss of appetite and weight in stomach.

12. Abdomen.—Feeling of distension in l. hypochondrium.—Extension and pressure, esp. in morning, with prostration and emission of flatulence.—Drawings in l. hypochondrium.—Pain in kidneys for five hours, with pressure from without inwards.

16. Female Sexual Organs.—Weak feeling in internal genital parts.—(Leucorrhœal flow for five or six days very copious, thick, whitish, with constriction and expulsive efforts from top to bottom of the womb, and pains in the kidneys.—This symptom is put in brackets and at the same time italicised by Allen.)

21. Limbs in General.—Bruised pain in all the limbs.

24. Generalities.—Weariness.

27. Fever.—Excessive coldness in feet, as well inside as outside, so that it was almost impossible to warm them.

Lapis Albus.

Silico-fluoride of calcium. Calcarea silico-fluorata. (A species of gneiss found by Grauvogl in the mineral springs of Gastein, and named by him Lapis albus, "White Stone." These waters flow over gneiss formations into the valley of the Achen, where goître and cretinism abound.) Trituration.

Clinical.—Carcinoma. Cretinism. Dysmenorrhœa. Epithelioma. Fibroma. Glands, enlarged. Goître. Leucorrhœa. Pruritus. Scirrhus. Scrofula. Tuberculosis. Tumours.

Characteristics.—Grauvogl, who introduced this remedy, cured with it a case of carcinoma; and he and others have cured cases of goître and scrofulous glands. The leading indications are: Burning, shooting, stinging pains: in cardia; in pylorus; in breasts and uterus. It has shown great power over new growths of many kinds. In two cases of cervical glands cured by *L. alb*. 6, Dewey relates that a ravenous appetite developed while the remedy was being taken. In two cases cured by Dewey the swelling of the glands was elastic rather than of stony hardness. In one of the patients the swelling was as large as a goose-egg in the right sterno-clavicular region. This patient, a young lady, was a blonde; as also was a lady of thirty-five whom he cured of goître with the remedy. Whiting (*Med. Adv*., xxvi. 41) records a fragmentary proving of *Lap. a*. Mrs. X., 40, fair, stout, no children, had a large bronchocele. Averse to all animal food. Craves sweets. Has craved and drunk much ice-water in all seasons since a child. Feet and legs cold to knees. *Lap. a*. 6x 2 gr. powders, one four times a day. Reported in a month that the tumour was

rapidly diminishing in size, but she was having much pain in it. No further medicine was given. Two months later the tumour had diminished one-half, and the patient then stated that since taking the powders she had had no pain at her menstrual period, no dyspepsia, and no sick-headaches. (She had had severe dysmenorrhœa since the menses first appeared.) Since leaving off the medicine the pain in the tumour ceased and also the decrease in size. *Lap. a*. 6x was again given, and again the pain in the tumour came on; and, in addition, itching of the external genitals. The 30th and 200th caused such intense pruritis that the patient refused to take any more medicine of any kind. Since then Whiting has cured many cases of pruritus and also of dysmenorrhœa with *Lap. a*. The pains come on before the flow and cause swooning. One patient, 19, had had dysmenorrhœa from the first. Pain so severe she would fall unconscious wherever she might happen to be, the swoon lasting half an hour at times. > When flow established. *Lap. a*. 200 cured. Miss X., 34, normal till she had measles æt. 20; since then pain at commencement of menstruation, so severe as to cause fainting. "This severe pain would continue less for a day, or until the flow was established." *Lap. a*. 200 cured in six months. W. P. Wesselhœft, discussing Whiting's paper, narrated the cure of a case of epithelioma of the lip in a man of seventy with *Lap. a*. 12x in water. Dr. Gregory cured a young man of a tumour of the lip with *Lap. a*. 30. It recurred two years later with "burning, stinging pain, which made him jump off his feet". More *Lap. a*. 30 was given, and cured in a year. There was no further recurrence.

Relations.—*Compare:* Gastein (effect on scar tissues); Ars., Ars. iod., Bad., Calc., Calc. iod., Con., Cund., Iod., K. carb., K. iod., Sil., Spo.

SYMPTOMS.

2. Head.—Sick-headache.

6. Face.—Opening in cheek as large as a silver dollar (carcinoma).—Epithelioma of lip, crusts coming off leave raw surface.—Tumour of lower lip; with burning, stinging pains that make him jump off his feet.

11. Stomach.—Ravenous appetite (caused in case of cervical glands).

16. Female Sexual Organs.—Burning, shooting, stinging pains in breasts and uterus.—Uterine carcinoma (five cases).—Painful menses: suddenly taken with pain so severe that she swoons.—Faints with pain at menses.—Severe pain preceding the flow.—Pruritus vulvæ.

20. Neck and Back.—Goître, cretinism, and scrofulous diseases.

24. Generalities.—Affections of glands and lymphatics.—Enlarged glands where there is a degree of elasticity rather than stony hardness (Dewey).—Scrofulous affections, abscesses, and sores; enlargement and induration of glands, esp.

cervical; glandular tumours where no glands are usually found; goître, cretinism.—Lipoma; sarcoma; glandular and fibrous tumours; carcinoma as long as ulceration has not set in, based on scrofulosis.—Scirrhus.—Tuberculosis scrofulosa.

Arctium Lappa.

Lappa officinalis. Lappa major. Arcion (Greek). Great Clote Burre. Burdock. N. O. Compositć. Tincture of fresh root.

Clinical.—Acne. Bunion. Dupuytren's contraction. Eczema serpiginosa. Eruptions. Glands, affections of. Gonorrhśa. Gout. Impotence. Leucorrhśa. Phosphaturia. Rheumatism. Ringworm. Scrofula. Sterility. Ulcers. Uterus, prolapse of.

Characteristics.—*Arctium lappa* has been extensively proved, notably by Dr. Jeanes and Dr. S. A. Jones (*H. R.*, 1893). The provings in the main confirm the teachings of antiquity in regard to this remedy. It has been given from the earliest times for prolapsus uteri, sterility, milky urine, and sores about the joints. A large number of the symptoms were observed in the skin (acne; eczema, especially scalp) and mucous membrane, eruptions and discharges. It is one of the remedies which have been successful in curing uterine prolapse. In skin affections it has been use externally as a glycerole, as well as internally. A writer in *Amer. Homśop*. recommended the local use of the seedling roots in acne. The roots are softened by soaking in water for two hours; then the blunt end is rubbed on each individual pimple. It is not to be repeated oftener than once a week. It was one of Culpepper's remedies for fetid sweat of axillć.

Relations.—*Compare:* The Compositć, Arn., Calend., Cina, &c.; Bry. (rheumatism); Fraxinus Amer., Lil. t., and Sep. (in uterine prolapse); Calc. ph. (phosphaturia); Vinca minor, Viol. tric. (skin).

SYMPTOMS.

2. Head.—Pain in head in region of veneration.—Eczema of scalp.

3. Eyes.—Feeling as if the eye was small and constricted.—Styes.

6. Face.—Inveterate acne.—Spreading vesicular eruption, great tearing and itching.—Herpetic eruption on r. ala nasi.

11. Stomach.—Flatulent dyspepsia, belching inodorous gas.

13. Stools.—Frequent yellow stools in forenoon, with nausea.—Diarrhśa alternating with rheumatic symptoms.

14. Urinary Organs.—Milky phosphatic urine.

15. Male Sexual Organs.—Loss of sexual desire.—Cutting, squeezed pain in whole length of urethra; scalding on micturition.—Ringworm-like patch of eruption on thigh beside testicles; groins raw.

16. Female Sexual Organs.—Prolapse of uterus with much bearing down (*Arct. l.* has been called the "uterine magnet").—Leucorrhśa.

17. Respiratory Organs.—Tickling in rima glottidis with loose-sounding cough, but no expectoration.—Acute tingling, cutting pain under middle of sternum, extending across breast.—Short breath on exertion.

19. Heart.—Pain in heart with indescribable movement under sternum; exceedingly rapid pulse with frequent intermissions.

20. Back.—Pains in back about eighth dorsal vertebra.

21. Limbs.—Rheumatic and gouty pains.—Soreness of muscles.—Dull pains, all < by motion; with high-coloured urine; weary and sleepy.—Rheumatic pains entirely relieved by onset of diarrhśa.—Pains in joints.—Sharp, darting, fugitive pains in tendons (Dupuytren's contraction).—Bunion.

24. Generalities.—Axillary glands suppurate.—Śdema and dropsical swellings.

25. Skin.—Boils.—Moist, offensive eruptions, greyish white crusts; esp. when glands are swollen.—Old sores, esp. about joints.

Lapsana Communis.

Lapsana communis. Nipplewort. N. O. Compositæ. (Genus Cichoraceæ.)
Tincture or infusion of whole fresh plant.

Clinical.—Hæmorrhoids. Nipples, sore.

Characteristics.—As the common name of *Lapsana* would imply, it is a popular remedy for sore nipples, a decoction of it being used as a lotion for that purpose. Cooper (*H. W.*, xxxiii. 202) has published documents in proof of its efficiency in piles. The method of preparation is as follows: Three ounces of the green plant (or four of the dry) are boiled in three pints of thin water gruel till it is reduced to a pint and a half. The decoction to be strained. Half a pint to be drunk on three mornings following, *fasting*—immediately on getting out of bed. One patient who was cured in this way said he had not swallowed the draught more than a few

minutes before he felt his stomach as warm as if he had drunk hot brandy and water. Only three doses are ordered, and the patient is told, in case of not being cured, to wait a fortnight before repeating the treatment. Cooper has confirmed the power of *Lapsana* over piles, using single doses of the Ø tincture.

Lathyrus.

Lathyrus sativus, Chick-pea, "Jesse," "Jarosse," and Lathyrus cicera, Lesser Chick-pea. "Jarosse pois-cassés." N. O. Leguminosæ. Trituration of seeds. Tincture of the flower. Tincture of the green pods.

Clinical.—*Athetosis*. Beri-beri. Impotence. Locomotor ataxy. Lumbago. *Paralysis, spinal* (spinal sclerosis); rheumatic. Paralysis agitans. Paraplegia. Rheumatism. Rheumatic paralysis. Roaring (in horses). Urine, incontinence of.

Characteristics.—A paralytic affection named Lathyrism has been recognised from ancient times, and has been commonly attributed, as its name implies, to poisoning with *Lathyrus*, a species of pea. Our own Sweet Pea is *Lathyrus odoratus*. The two varieties of *Lathyrus* which have occasioned the poisonings are *Lath. sativus* and *Lath. cicera*. The peas are very much alike in appearance. That of *Lath. cicera* is rather smaller than the other, more square, and a lighter brown. Except for this brownish colour they could easily be mistaken for ordinary peas. *Lath. cicera* has red flowers, *Lath. sativus* bluish. Both are cultivated for food, and are sometimes cut green for fodder. Accidents have most commonly happened in famine seasons, and the best account of such a poisoning is communicated by C. Bojanus to *Journ. of B. H. S*., July, 1897. But it is not only in such cases that poisoning has occurred. Two cases are recorded (*H. W*., xix. 319) as having been admitted to the University clinic of Parma. The patients were two brothers aged seventeen and twelve, of excellent personal and family history, and in good bodily health. They were admitted as suffering from locomotor ataxy and chronic myelitis. For a year past they had eaten bread made with the flour of *Lath. sat*. and *Lath. cic*. The elder had at times eaten the vetches green. This caused nausea, vomiting, giddiness, singing in the ears, stupidity. These symptoms gradually increased, then tremor of upper extremities appeared, < when taking up or putting down anything. Legs heavy with vague pains, formication and sense of cold. He was unable to stand without the help of a stick. There was no weakness, but the abductors and flexors of the lower limbs felt hard and contracted. Gait uncertain and staggering; right leg being rather the stronger. He lifted his feet with difficulty, often dragged them and put them down suddenly and forcibly, as if they were heavy weights. The floor, he said, felt irregular, and he was obliged to keep his eyes fixed on the ground to guide his feet. He rested all his weight on a stick. Movement < when eyes shut; he "felt as if standing between two abysses." He walked worse without his shoes. In bed he could not sit up without helping himself

up with his arms. He could not move his toes or flex or extend the foot on the leg, or the leg on the thigh; could not extend or close legs when sitting; voluntary movement of abductor and adductors, and rotation of feet impossible. Knee-jerk exaggerated. Sensibility to touch, heat, pain, and electricity perfect. Temperature normal. The *Brit. J. of H*. (xlii. 81) quoted from *L'Art Médical* of August, 1882, an article on Lathyrism as observed in Algiers from the effects of eating bread made with wheat and barley flour mixed with flour of the seeds of *Lath. cic*. When the wheat harvest is bad *Lath. cic*. is used by the poorer inhabitants in as high a proportion as three parts to one of the other two. The resulting disease is perfectly well known to the Algerians, who call it, from the Arabic name of the plant, *jilben*. These are the symptoms: (*1*) Lumbago; incontinence of urine; complete loss of sexual power; pains in lower and sometimes upper limbs; tremors. The invasion of the disease is sudden, often coming on *after a damp, cold night*. (*2*) The lower limbs are affected with anæsthesia and motor paralysis. After the lapse of some days or weeks the patients can rise up, and they show a characteristic gait; the heel in the air, foot in extension and abduction, with contraction of muscles of lower limbs and exaggerated reflexes. At this period few show any disturbances of sensibility, and there are no longer any affections of bladder and genitals. In the cases related by Bojanus the general symptoms were the same. In these it was the *Lath. sat*. which was the cause of the trouble, which arose during the great Russian famine. A few symptoms may be mentioned. Case i., man, 21, after eating *Lath. sat*. for three months had the usual paralytic symptoms, and "strong pressure on bladder with frequent desire to micturate." "When sitting had great swelling of legs." "Predominating coldness in legs, which at night changes to a hot, burning sensation, with desire to uncover." Respiration, heart, and digestion normal. Case iii., man, 25, felt (*1*) heaviness and pains in region of stomach, heartburn, nausea, sometimes vomiting (once of blood), colics, sometimes diarrhœa, followed by general weakness, tremor, difficulty in moving, coldness of feet, and cramps in calves. (*2*) About a week later, pressure on bladder so violent that he had to urinate immediately or the urine rushed out of its own accord with great force. The diarrhœa increased, and was accompanied by pressure on the intestines similar to that on the bladder. Sexual excitability lost; pains in back. In hospital the bladder and intestinal symptoms passed off, but the paralysis remained. Cramps in calves; legs blue and cold, morning and night hot and burning. This recurs regularly every day and lasts a few hours. Pains in back excited by touch and efforts to rise. Case iv., man, 32, had (*1*) heartburn, sickness, vomiting, vomiting of blood, dysentery. (*2*) Cramps in calves, pains in back so violent that he could hardly move; depressed, hypochondriacal. Hardly any movement possible in coxo-femoral joint. From time to time erections and pollutions.─Horses fed with *Lath*. along with oats manifested symptoms of paralysis of the limbs, and also of the throat and windpipe, setting up the condition called "Roaring." Some have died of suffocation. The < from cold, damp wind appears to be the leading Condition of *Lath*. so far as at present known. In the case of horses as well as of human beings, the symptoms often remain in abeyance until

cold, damp weather sets in. Burning heat with > by uncovering is another noteworthy condition. Provings, especially provings with potencies, are required to bring out the fine indications. When these are available *Lath*. will doubtless prove a notable remedy in spinal complaints. As it is the likeness to many forms of spastic paralysis, to Beri-beri, and to cases of locomotor ataxy, is sufficiently close to warrant its use. I have relieved with it several cases of spastic paralysis. Miss R., 25, had been ill four years with the usual symptoms of spastic paralysis, with excessive constipation and violent urging to pass water; if she attempted to retain it, it passed of itself. The muscles were hard and unyielding. She had had very heavy drugging under allopathic treatment before coming under my care. *Hypericum* was first given with considerable benefit. As the improvement went no further, *Lath. sat*. 1 and 30 were given, and then the improvement was much more marked. The patient is still under treatment. In one of the cases of lathyrism the back pain was induced by touch. < By touch may prove a keynote; as < in damp, cold weather certainly ought to. > Uncovering was prominent in several cases. < By movement. > Lying down (lower limbs move more freely. I have not seen any observation recorded in female sufferers; and men are more sensitive to it than women. It should be like *Nux*, a man's medicine. It affects chiefly the parts below the waist. Lumbago with bladder affections should be curable by it. W. A. Dewey (*Med. Cent*., viii. 17) has recorded a brilliant cure with *Lath. sat*. 3x of a case of spastic paralysis in a man of twenty-eight. The attack had been coming on six months. The patient was a hunchback, having been deformed since the age of five, but this had given no more than the usual inconvenience. On admission to hospital (December 1, 1898) he was unable to make the slightest movement of the lower extremities, even of the toes. The adductors were in a constant state of irritable contraction, so that the thighs were constantly crossed. Reflexes greatly exaggerated. No pain. Spine not tender. General health normal. The only other symptom was a girdle sensation, as if he had a cloth wrung out of cold water round his waist. Three weeks after commencing *Lath.* sat. there was slight lessening of rigidity. On April 5, 1899, he could raise his limbs and move his toes. On July 2nd he walked out of the hospital without difficulty, the abnormal irritability of the muscles having disappeared. In 1877 (I think) I published cases relieved by *Lath. sat*., two of paralysis, one of multiple sclerosis, one of rheumatic paralysis with stiff knees.

Relations.—*Compare:* Sec. (paralysis; blueness; > uncovering); Phaseol., Gels., Nux, Curar.; Pic. ac. (paralysis; erections); Dulc. (< damp weather); Lyc. (> uncovering); Nux (suited to men); Rhus (paraplegia from effect of wetting). Mang. and Con. (paralysis from below upward).

Causation.—Cold and damp weather.

SYMPTOMS.

1. Mind.—Depressed; hypochondriacal.

11. Stomach.—Weight in stomach and indigestion.—Heartburn.—Nausea.—Vomiting.—Vomiting of blood.

12. Abdomen.—Colic.

13. Stool and Anus.—Diarrhœa with urgent pressure on intestines.—Dysentery.—(Constipation.)

14. Urinary Organs.—Incontinence of urine.—Pressure on bladder, if not immediately satisfied, urine rushes out with great force.

15. Male Sexual Organs.—Impotence.—From time to time erections and pollutions.

20. Back.—Lumbago.—Pain in back so severe as to prevent movement.—Pains in back < or excited by touch.

22. Upper Limbs.—Trembling of arms, < on attempting to do anything.

23. Lower Limbs.—Sudden paraplegia, esp. of younger persons, young men more than young women.—Gluteal muscles and those of lower limbs emaciated; upper limbs retaining natural appearance.—While lying in bed they move lower limbs with considerable facility, extending and abducting them, but flexion was difficult; esp. difficult to lift up limbs.—L. limbs considerably weaker than r.—When walking they threw the chest well forward, the haunches projecting behind; they seemed to fall from one foot to the other.—They misplaced the feet, bringing them too close to median line, and sometimes crossing it, causing legs to tangle up.—The worst affected walked very bow-legged.—The whole weight of the body rested on the metatarso-phalangeal joints, the heels never touching the ground.—Walking backward was similarly effected, but was more difficult.—Trying to stand steady they swayed widely forward and sideways, and seemed in constant danger of falling; instinctively sought to keep balance by pressing both hands on hips; not at all modified by shutting eyes.—Hardness of muscles, esp. of abductors and flexors.—Legs blue and cyanotic; cold or burning; swollen if they hang down.—Paralysis of legs and knees.—Knees stiff and flexed, with weakness of feet and lameness, without pain.—Stiffness of ankles with lameness.

Latrodectus Katipo.

Latrodectus katipo. N. O. Arachnida. Tincture of living spider.

Clinical.—Chorea. Faintness. Heart, slow. Nettle-rash. Œdema.

Characteristics.—*Katipo* is a venomous spider found in New Zealand and some parts of California. The symptoms recorded are the effects of bites. The seat of a bite becomes immediately painful and swelling occurs. In some cases the swelling does not come on until some days after the bite. In one case, five days after the bite, a scarlet papulous rash appeared on both extremities, burning like fire. Lassitude, faintness, twitchings, and in one case trismus were noted. The symptoms were somewhat slow in evolution, and in a fatal case, that of a girl bitten on the abdomen, death did not occur until six weeks after the bite.

Relations.—*Compare:* Lat. mact., Tarent., Mygale., Aranea, Apis, Vespa, and serpent poisons.

SYMPTOMS.

1. Mind.—Delirium, half smothered by imperfect intoxication.—Nervous depression.

6. Face.—Anxious expression.—Extreme pallor changing to blue tint, of face and body.—Jaws stiff very soon, could not open mouth to eat, and could scarcely articulate.

11. Stomach.—Lost all desire for food (after a fortnight); lingered six weeks and then died.

12. Abdomen.—Very severe drawing or cramping sensation in abdomen.

17. Respiratory Organs.—Respirations almost ceased.

19. Heart.—Almost pulseless.—Pulse slow, scarcely more than twelve or fourteen beats to the minute.

23. Lower Limbs.—Severe shaking, burning pains ran from the bite on the foot up the limbs to back, accompanied by nervous twitching all over body soon; pain felt almost equally in both limbs, and seemed to centre about heel.—Feet felt as if rudely lacerated by dull instrument, waking him from sleep (immediately).

24. Generalities.—Suffered long, wasting and losing all energy, some having appearance of one going into a decline; it was three months before he rallied and six before he recovered.—Nervous twitching all over body.—Suddenly became faint and pallid.—Large quantities of whisky produced little impression, except a feeling as though affected side was drunk.

25. Skin.—Small, red spot like flea-bite.—Bitten surface raised, as large round as teacup, the raised part white with red halo; with pain; swelling and pain > by spirits of *Ammonia*.—Swelling size and shape of hen's egg; pain > by ammonia, but not the swelling.—The bite remained a small purple point for nine days, on the tenth

began to swell and turn white like a bee-sting; pain and swelling rapidly increased, dorsum of foot and ankle like a puff-ball, red streak running up leg.—A bright scarlet, papular eruption on both lower limbs, which stung and burned like fire.

27. Fever.—Extremities cold and flaccid.—A cold, clammy sweat covered l. lower extremity; in morning sweat covered both limbs.

Latrodectus Mactans.

Latrodectus mactans. N. O. Arachnida. Tincture of living spider.

Clinical.—Angina pectoris. Hæmorrhages, watery.

Characteristics.—To the ready pen and luminous insight of S. A. Jones, and to the labours of A. J. Tafel, who furnished data and materials, we owe the introduction of this remedy into the materia medica. In a most interesting article communicated to the *Homœopathic Recorder* of July, 1889, and reproduced by Anschutz: in *New, Old, and Forgotten Remedies*, Jones relates the facts concerning this spider and the effects of its bite, recorded by E. W. Semple, M. D., in the *Virginia Med. Monthly* of 1875.—Case 1. A man bitten on the prepuce. At first there was itching; in less than half an hour nausea followed by severe abdominal pains. Soon after, violent precordial pains, extending to axilla and down left arm and forearm to fingers with numbness of the extremities and apnœa. Dry cupping was resorted to and the blood that flowed was *thin and florid* and uncoagulable. This was before Semple arrived. He then found most violent precordial pains, the left arm almost paralysed; pulse 130, very feeble. Skin cold as marble, countenance expressive of deep anxiety. At eight next morning, in spite of stimulants and pediluvia, the symptoms were worse and continued to increase until 2-30 p.m. Pulse uncountable and scarcely to be felt. Vomited black vomit, a quart or more. Soon after, reaction set in and the man gradually recovered. He had two copious stools like the black matter vomited, and after that felt quite well. In thirty-six hours from the time he was bitten he took 3 1/2 quart bottles of the best rectified whisky without, showing the least symptom of intoxication. Jones considers the order of the occurrence of these symptoms of great importance, and notes that the precordial region was the chief *locus* of attack. Linnell (*N. A. J. H.*, Dec., 1890) records a case of angina pectoris, pain in precordial region and left arm, brought on by slightest exertion, cured with *Lat. Mac*. 3.

Relations.—*Compare:* Lat. k. and other Arachnida. Helod. (coldness). Lach., Spig., Act. r., Cact., Kalm., Lycopus, &c. (angina pectoris). Sanguisug. (non-coagulating hæmorrhages).

SYMPTOMS.

1. Mind.—Extreme anxiety.—Screams fearfully, exclaiming that she would lose her breath and die.

6. Face.—Expression of deep anxiety.

11, 12. Stomach and Abdomen.—Nausea followed by severe abdominal pains (1/2 h.).—Vomited black vomit copiously; which > (26h.).—Severe abdominal pain with nausea, and a sinking sensation at epigastrium.

13. Stools.—Two copious evacuations similar to the black vomit.

15. Male Sexual Organs.—Itching of prepuce (seat of the bite), with a little redness of the part.

17. Respiratory Organs.—Extreme apnœa.—Respiration only occasional, gasping.

19. Heart.—Violent precordial pains extending to axilla and down l. arm and forearm to fingers with numbness of the extremity and apnœa.—Later, most violent precordial pains and pain in l. arm, which was almost paralysed.—Pulse 130.—Pulse so frequent it could not be counted and so feeble it could scarcely be felt (26h.).—Pulse quick and thready (in few minutes).—Pain extends from bitten r. hand to back of head; more violent pain in precordia, extending thence to l. shoulder and axilla, down arm to finger-ends, l. arm partially paralysed; l. pulse extinct, r. pulse doubtful.—Pain in precordia with apnœa; screaming fearfully, exclaiming that she would lose her breath and die.

22. Upper Limbs.—Violent pain extending from bite on r. wrist, up forearm and arm to shoulder, thence up neck to r. back of head and precordia; thence down l. axilla and arm to finger-tips, l. arm partially paralysed.—Stinging in r. wrist, with itching and redness of bitten spot; in 1/2 h., painful sensations extended up arm to shoulder; in 1h. along neck to back of head; later, pain in precordia and apnœa; screaming fearfully.

24. Generalities.—When cupped the blood flowed like water and would not coagulate; not even when tannin was added next day.—In 36h. from the time he was, bitten he took 3 1/2 quart bottles of the best rectified whisky without the least sign of intoxication.—Itching, and redness of part bitten, at first without pain, but violent pain soon commenced there (back of l. hand) and extended in a short time up forearm and arm to shoulder and thence to precordial region.—Apparently moribund.

27. Fever.—Skin cold as marble.—Skin very cold (few m.).

Laurocerasus.

Cerasus laurocerasus. Common Laurel. Prunus laurocerasus. Cherry Laurel. N. O. Rosaceæ. Tincture of young leaves. Dilutions of Aqua Laurocerasi.

Clinical.—Apoplexy, threatened. Asphyxia, neonatorum. Asthma. Cholera. Cholera infantum. Chorea. Climacteric sufferings. Convulsions. Cough. Cramps. Cyanosis. Diarrhœa. Dysmenorrhœa. Epilepsy. Heart, affections of. Liver, affections of. Metrorrhagia. Palpitation. Pneumonia, typhoid. Tetanus. Tumours. Whooping-cough.

Characteristics.—*Laurocerasus*, the so-called "Laurel" of our gardens, is not a member of the Lauraceæ, though the Bay Laurel, *Laurus nobilis*, is. The *Aqua Laurocerasi*, prepared by distilling the fresh leaves, contains Hydrocyanic acid and is supposed to owe all its medicinal virtue to this fact. Milne says it is "used in spasmodic cough, and in phthisis; but it is better to employ the prussic acid itself." In the poisoning cases that have occurred the symptoms have been practically identical with those of persons poisoned with prussic acid; but the provings bring out more delicate shades of action and fully entitle the remedy to an individual place of its own. Coldness, blueness, epileptiform convulsions are common to both. Both have a dry, tickling cough; but *Lauro*. has also a cough with jelly-like expectoration dotted with bloody points. *Lauro*. has cyanosis both of the new-born infant and of heart disease. A peculiar "gasping" is indicative here—gasping without really breathing. In addition to the blueness there is twitching of the muscles of the face (which is also an indication for *Lauro*. in chorea). Clubbing of fingers, which is a common feature in cyanosis and phthisis, is a characteristic of *Lauro*. "Lack of reactive power," low vitality, is another keynote of *Lauro*. This is particularly so when occurring in chest affections. Long-lasting faints (*Camph*. has *sudden* fainting); seems to have no reactive power; face pale, blue; surface cold. Prostrate before getting up in morning and difficulty in opening eyes; attacks of indigestion and pains across lower abdomen, which come suddenly in the morning and generally disappear on getting up. Gnawing pain in lower abdomen going on for years in old men with occasional looseness of stool. If fluids are forced down the throat they roll audibly into stomach. When indicated in eruptive fevers the eruption is livid, after pressure with the finger the skin is long in regaining its colour. There are suffocative spells about the heart < by sitting up; the patient is compelled to lie down (as with *Psor*.); though some heart symptoms have the opposite condition and compel the patient to sit up. Guernsey gives these leading symptoms: "Gasping for breath; the patient puts his hand to the heart as if there was some trouble there; this may result from running a short distance, which puts him completely out of breath; going upstairs, walking, or any exercise may bring the gasping on." Coldness is a common sensation, internal coldness and external heat. Cold tongue. Heat of single parts. Warmth on centre of forehead, then a coldness as from a draught of air lasting a long time. The left chest is most

affected. There is < before eating. Constricted sensations—in gullet; in rectum. There are some very noteworthy uterine symptoms, of menorrhagia and dysmenorrhœa, in the provings, and the value of them has been emphasised by cases related by Cooper in his work on *Cancer and Cancer Symptoms* (2nd ed., p. 60). The leading indications according to Cooper are: "A sense of fatigue pervades the whole system, with a very painful condition of the hard and indurated tissue of the parts affected; pain much > by sleep; tendency to oozing of blood, which is generally bright and mixed with gelatinous clots. This applies to chest as well as to uterine and rectal symptoms; only, the blood comes *painlessly* into the mouth, but with great pain *Per vaginam*. In most cases it will be found that the pains it relieves are such as start from the lower part of the spine and extend either round the pelvis or up to the head, and are accompanied with a sense of suffocation and a sick feeling, with drowsiness and a great desire to sleep that *generally* brings relief. In cases that are sleepless the desire for sleep is very great. Digestion is weak; bowels confined patient, low-spirited with flatulence and burning in chest after food constant tired, sick feeling; entire frame enfeebled; inclined to loss of flesh and hæmorrhages that are small in quantity and bright in colour. The flatus is audible and gurgling and rolls about the upper abdomen (p. 64)." In nervous affections "constant jerks; cannot keep still" and the characteristic "gasping" are leading indications. *Peculiar sensations* are: Coolness of forehead as from draught of air. Weight on top of head. As if brain loose and falling into forehead when stooping. As if a heavy lump falling from abdomen to small of back, as if a veil before eyes. As if nose stopped. As if flies and spiders crawling over skin. As if tongue, mouth, and throat were burnt. As if abscess in region of liver would burst. As if lungs could not be sufficiently expanded. As if lungs pressed against spine. As if mucous membranes were dry. Stitches are very prominent; also stiffness and pressure, especially pressure outward. Allen's indications are: An extremely nervous, excitable condition accompanying ailments. Diarrhœa as of green mucus, with suffocative spells about heart. Dry, harassing cough of phthisis. Spasmodic cough of later stages of whooping-cough when patient is much prostrated and has nervous spasmodic symptoms. Cough with valvular heart disease; cough incessant, especially on lying down; fluttering in heart and gasping, with cough. Alternation of chill, fever, and sweat in phthisis. E. Wigg (*H. P.*, xii. 30) relates the case of May S., 7, who had been troubled some time with an almost incessant cough, for which many remedies were given without benefit. At last Wigg came to the conclusion that *Lauro*. was the remedy, and put ten drops of the 200th into five tablespoonfuls of water, ordering a teaspoonful of this to be taken every two hours when the child was awake. This was at 4 p.m. After the third dose she fell asleep. At 3 a.m. she awoke in a very excited condition. Her mother asked her if she had not been dreaming, but her tongue was so stiff she could not answer. Suddenly she began to tremble all over as if in a chill. After ten minutes she began to twitch and jerk. Wigg was sent for and found her in this convulsed state. She could not articulate for the thickness and heaviness of the tongue. The mind was clear. Recognising the action of *Lauro*. Wigg antidoted it with *Camphor* and later a cup

of coffee, and she came all right in a few hours. She had no more of the cough. Many symptoms are > sitting up. Coughs continuously when lying down. Bending head forward > pressure in nape. Compelled to bend forward by contractive pain in groins. On the other hand suffocating spells about heart compel him to lie down. When she attempts to rise from recumbent posture, sensation of heavy lump falling from pit of stomach to back. Stooping <. Sitting < gasping; = feet to go to sleep. Crossing legs = feet to go to sleep. Motion < cough; = gasping. After dinner: Hunger; irresistible drowsiness. < Evening and night. Coldness in forehead and vertex is > in open air; vertigo, and pressure in nape are <. External warmth does not > coldness. Approaching stove = nausea; cold. Being touched by water = burning between fingers.

Relations.—*Antidoted by:* Camph., Coff., Ip., Op. *Compatible:* Bell., Phos., Pul., Ver, *Compare:* Camph. (coldness; cramps; lack of reaction; fainting—Camph. sudden; Lauro. long-lasting. *Camph*. is a product of a *true* Laurel); Caps. (lack of reaction in persons of lax fibre); Op. (lack of reaction in patients where there is no pain; stupid, drowsy); Pso. (lack of reaction in chilly, psoric persons, despair of recovery; chest affection > lying down); Sul. (lack of reaction in hot, perspiring, psoric subjects; chest affections; liver wasted after congestion); Val. and Ambra (lack of reaction in nervous persons); Carb. v. (cold knees, breath, tongue; collapse; indifference); Lach., Chi., Dig., Ver.; Ant. t. (asphyxia neonatorum; Ant. t. has rattling of mucus, head thrown back; Lauro. blue face, twitching, gasping); Bar. c., Bell., Bry.; K. ca. (stitches); Calc., Ip., Nux v.; Op. and Nux in. (drowsiness); Pho., Pul., Rhus, Sep. *Compare also:* Hydrocy. ac., and Amyg., Pru. spi., Pru. Virg., and other Rosaceæ. In hunger after meals with feeling of emptiness, Calc., Chi., Cascar., Cin., Grat. (after meals and after stool, Petr.); in semilateral swelling of tongue, Calc., Sil., Thuj. (Lauro. has loss of speech with it).

Causation.—Fright.

SYMPTOMS.

1. Mind.—Mental dejection.—Great anxiety, apprehension, and agitation, which do not allow a moment's rest, nor yet sleep in evening, but which disappear in open air.—Repugnance to intellectual labour.—Mental promptitude and precipitation.—Inability to collect one's ideas.—Weakness of memory.—Fear and anxiety about imaginary evils.—Intellectual incapacity.—Mental dulness (insensibility) and loss of consciousness, with loss of speech and motion.—She becomes irritable, talks too much; and then pains in shoulders and arms to tips of fingers come on, and she loses the power to hold things in her hands.—Intoxication.

2. Head.—Stupefaction, with falling down, and loss of consciousness.—Feeling of intoxication and vertigo, with drowsiness.—Vertigo, on rising from a stooping posture, or on getting up from a seat, with what appears to be a veil before the sight, or with a sensation as if all objects were turning round.—Vertigo < in the

open air.—Stupefying pain in the whole head.—Stupefying headache, with a feeling of weight, and sensation, on stooping, as if the brain fell forwards and struck against the cranium.—Brain feels contracted and painful.—Stitches in head.—Itching of hairy scalp.—Very violent pressive headache in a room.—Constant feeling of coldness in head.—Sensation of coldness in forehead and vertex, as if a cold wind were blowing on it, descending through neck to back; < in room, > in open air.—Feeling as if ice lay on vertex.—Congestion in the head, with heat and throbbing.—Pulsation in head, with heat or with coldness.—The headache disappears, with a sensation of coldness in vertex, forehead, in nape of neck, extending to loins.—Headache in r. temple.

3. Eyes.—Burning pain in eyes.—Dryness of eyes.—Eyes widely open, or half-closed, convulsed, prominent, and fixed.—Pupils dilated, and immovable.—Darkness before the eyes; obscuration of sight.—Eyes distorted.—All objects appear larger than they really are.

4. Ears.—Hardness of hearing.—Tingling in ears.—Itching in ears.

5. Nose.—Nose feels stopped up; no air passes through.—(Coryza with sore throat.)

6. Face.—(Sunken face with) countenance pale, sallow, and grey.—Face wan, or bloated and swollen.—Distortion of the features.—Cramps in the jaws.—Twitching in muscles of face.—Eruption round mouth.—Titillation in the face, as if flies and spiders were crawling over the skin.—Lock-jaw.—Painful sensations in the under jaw and lower teeth.

8. Mouth.—Mouth dry and clammy.—Froth at the mouth.—Sensation of coldness on tongue.—Loss of speech.—Dry and rough tongue.—White and dry tongue.—Tongue feels cold, or burnt and numb.—Swelling and stiffness of l. side of tongue.

9. Throat.—Sore throat with painful sensation, as if it were drawn downwards, during deglutition and at other times.—Cramps in pharynx and œsophagus.—Audible gulping when drinking.—Deglutition is hindered or obstructed.—Contraction of œsophagus when drinking.—The drink he takes rolls audibly through œsophagus and intestines.—Dull sticking pain as from a lump in throat, which extends to l. side of back.—Sensation of swelling in pharynx.—Sensation of coldness, or heat and burning pain in throat, and in bottom of palate.

10. Appetite.—Sweetish, or acrid and irritating taste.—Ardent thirst, with dryness of mouth.—Entire loss of appetite, with clean tongue.—Want of appetite, with repugnance to all food.—Excessive craving.—Sinking between meals, husky voice, brings up phlegm streaked with blood.

11. Stomach.—Violent risings, either empty, or having taste of food.—Excessive disgust, nausea, and vomiting, even of food.—Hiccough.—Bitter eructations.—Violent pain in stomach, with loss of speech.—Burning in stomach and abdomen, or coldness.—Contractive pain in region of stomach, and cutting pain in abdomen.—Vomiting of black matter.—Aching of stomach.—Pains in stomach, sufficiently violent to cause fainting.—Great anguish in precordial region.—Sensation of coldness, or burning in stomach, and in epigastrium.—(Inflammation of stomach.).—Weak digestion with confined bowels.

12. Abdomen.—Sticking pains in liver with pressure.—Distension of region of liver, with pains, as from subcutaneous ulceration.—Induration of liver.—Atrophic nutmeg liver.—Colic below navel, with incisive pain in intestines.—Sensation of swelling, of size of a walnut, in l. side of abdomen.—Cuttings, cramps, and contractions in abdomen.—Sensation of coldness, or heat and burning in abdomen.—(Inflammation of intestines.).—Pains in l. intestine.—Flatulent colic.—Borborygmi, rumbling, and grumbling in abdomen and in stomach.—Pinching in umbilical region.—Flatulence pressure outward at perinæum; pressing on bladder.—Pressure and tension beneath both Poupart's ligaments as if a part would press through.—Contractive pains in groins; compelled to bend up for two hours (4 p.m.).—Sharp stitches in groins.

13. Stool and Anus.—Constipation.—Hard and tenacious evacuations, with straining.—Ineffectual urging to stool, with emission of wind only.—Diarrhœa, with tenesmus, incisive and burning pains in anus.—Diarrhœa of green, slimy matter, with contraction in groins.—Involuntary stools.—Paralysis of sphincter ani.—Cramp in rectum extends upwards from anus.—Fine sticking in rectum after urging to stool.—A stitch as with an awl in rectum during stool, which shoots from above downwards, and is followed by discharge of some pasty fæces.—Three tearings in succession in rectum.—Constriction of the rectum.—Itching or crawling in rectum as from worms.—No stool or urine is discharged.

14. Urinary Organs.—Retention of urine.—Pale yellow, watery urine.—Frothy, acrid urine.—Thick, reddish sediment in urine.—Involuntary emission of urine.—Paralysis of bladder.—Pain in region of stomach during emission of urine.

15. Male Sexual Organs.—Increased sexual desire.—Gangrene of genital parts.—Sticking pain above r. pubis, extending along spermatic cord, while lying and on moving about; > when sitting up.—Voluptuous itching beneath prepuce with desire for coition.

16. Female Sexual Organs.—Catamenia too early and too abundant blood thin; with nightly tearing in vertex.—Menorrhagia, blood dark, in large clots, during climaxis.—(Metrorrhagia in tumour case.).—Tearing in head, odontalgia, and cuttings, during catamenia.—Severe pain in sacral region extending to pubis with dizziness and dimness of vision; cold extremities; cold tongue; great melancholy

(dysmenorrhœa).—Dysmenorrhœa; colic first day, headache second day all over head, with or without sick feeling.—(Relieves the pain of uterine and rectal cancer.).—Attacks of suffocation, with palpitation and a sort of gasping for breath; must lie down sometimes to find relief (pregnancy).—Burning and stinging in and below mammæ.—Needle-like stitches in and beneath l. breast.—Creeping or moving stitches in female breast, whereby the skin becomes sensitive to touch lasting a long time.

17. Respiratory Organs.—Hoarseness, roughness, and scraping in throat and pharynx.—Deep bass voice.—Spasmodic constriction of the trachea.—Little short cough, excited by a tickling and scraping in throat.—Abundant gelatinous expectoration, with small specks of blood.—(Persistent cough in phthisis trachealis.)

18. Chest.—Slow, weak, anxious respiration.—Rattling, stertorous respiration.—Obstruction to respiration in region of stomach.—Asthmatic respiration as if lungs were incapable of being sufficiently dilated, or as if they were paralysed.—Pressure on chest.—Constriction of chest, with oppression.—Burning and stitches in chest.—In pulmonic affections, where the patient coughs and spits a great amount of phlegm, which is sprinkled over and through with distinct dots of blood; the dots may be close together, or considerably scattered (frequently seen following typhoid pneumonia).—Affections of l. chest.—(The breast-scirrhus swells up suddenly, looks dark and angry, with shooting pains.—R. T. C.)

19. Heart.—Pains in region of heart.—Slow and irregular beating of heart.—The patient puts his hand to his heart, as if there was some trouble there; this may result from running a short distance, which puts him completely out of breath; going upstairs, walking, any exercise may bring, this on.

20. Neck and Back.—Painful stiffness in l. side of neck and nape.—Compressed feeling in shoulders and nape, as well as in arms and back, with sudden palpitation which wakes her up at night.—Pressure in nape esp. in open air, compelling him to bend head forward.—Spinal irritation; pain down back every four hours, darting up to head and chest and causing a feeling of suffocation, with constant sick feeling and drowsiness; > from sleep.—Sensation of a heavy lump falling from just above umbilicus to small of back.—Painful stiffness in small of back, when writing; > immediately on becoming erect, but it soon returns.—Stitches in r. side of small of back.—Severe pain in sacral region extending to pubis.—Burning in coccyx, 4 p.m.

22. Upper Limbs.—Acute drawings and shootings in shoulders and in arms.—Pressure on r. shoulder or in the joint.—In r. shoulder, pains as from lameness and stitches.—Stitch in both elbows.—Pain, as if sprained, in r. wrist-joint.—Burning sensation in hands, with swelling of the veins.—Trembling of

hands.—Skin dry and rough between the fingers, with burning when touched with water.

23. Lower Limbs.—Acute drawings and shootings in knees.—Pain, as if sprained in l. hip-joint.—Sticking in l. knee.—The feet go to sleep (when crossing legs or sitting).—Ulcerated pains in lower part of heels.—Stiffness of feet after rising from a seat.—Numbness of feet.

24. Generalities.—Weak, anæmic, emaciated girls.—Weak, apathetic, lies in bed in morning.—Suffocation, sickness, drowsiness.—Convulsive and spasmodic jerks, by fits.—Internal inflammation.—Trembling, esp. of hands and feet, during exercise in open air.—Sudden weakness, with excessive nervous dejection.—(Apoplexy, and paralysis of limbs.).—Painless paralysis of the limbs.—Fainting fits.—Drawing and tearing pains in limbs.—Pinching with sensation of tearing.—Coldness of inner parts; heat of single part; internal chilliness and external heat.—Want of vital energy, and of reaction.—Sense of fatigue in whole body.—Epileptic convulsions, with foaming at mouth, which is tightly closed.—Tetanus.—Painlessness of the ailments.—Pulse small.—Skin turns blue; toe- and finger-nails become knobby.—Symptoms < in evening; > at night, and in open air.—In general > from sleep.

26. Sleep.—Frequent yawning, often accompanied by shuddering, with cutis anserina.—Insurmountable inclination to sleep during day (esp. after dinner) and early in evening.—Deep snoring sleep.—Soporous condition.—Somnolence, sometimes like coma vigil.—Sleeplessness from over-excitement, and sudden heat.—Troublesome and agitated dreams.

27. Fever.—Chilliness and febrile shivering, which are removed neither by heat of fire, nor by that of bed.—Shuddering, with cutis anserina, followed by burning heat.—Chilliness and heat in alternation.—Heat running down the back.—Perspiration during the heat and continuing all night.—Perspiration after eating.—Coldness over whole body, but esp. in feet, principally in open air.—Want of natural heat.—Pulse feeble, slow, and irregular, often imperceptible, again more rapid, seldom full and hard.

Ledum.

Ledum palustre. Wild Rosemary. Marsh Cistus. Marsh Tea. Labrador Tea. N. O. Ericaceæ. Tincture of dried small twigs and leaves collected after flowering begins. Tincture of whole fresh plant.

Clinical.—Ascites. Asthma. Bites. Black-eye. Boils. Bruises. Deafness. Ear, inflammation of. Eczema. Erythema nodosum. *Face, pimples on. Feet, pains in*; tender. *Gout*. Hæmoptysis. *Hands, pains in*. Intoxication. *Joints, affections of*, cracking in. Ménière's disease. Pediculosis. Priapism. Prickly heat. Punctured

wounds. *Rheumatism*. Skin, eruptions on. *Stings*. Tetanus. Tinnitus. Tuberculosis. Varicella. Whitlow. *Wounds*.

Characteristics.—In the preface to his proving of *Ledum* Hahnemann says it "is suitable for the most part only for chronic maladies in which there is a predominance of coldness and deficiency of animal heat." Teste, who is one of the chief clinical authorities on *Ledum*, mentions that it is native to damp regions of the North of Europe, and that no animal except the goat eats it, on account of the strong resinous smell of its leaves, which "keeps off lice and prevents flour from getting mouldy." In Sweden a decoction of *Ledum* is used for freeing, oxen and pigs from lice. Linnæus says that this same decoction, if taken internally, has cured "violent headaches and a species of angina." The leaves of *Ledum* are also used in Sweden in beer to increase its intoxicating power; and also in tanning. *Led*. is an example of a common article of diet being at the same time a very powerful medicine. Mérat and de Lens say Led. cures itch and scald-head, which Teste explains by its parasiticide action. This anti-parasitic action led Teste to think of *Led*. as a remedy for bites and punctured wounds, especially as certain symptoms of the proving seemed to agree with it. The success which has attended this use of *Led*. in mosquito-bites, stings of bees and wasps, rat-bites, needle-pricks resulting in whitlows, confirms the observation. "Redness, swelling and throbbing in point of index finger, from prick of a needle:" *Led*. aborted a felon in a few days (W. P. Wesselhœft). Teste relates a case of punctured wound: A young lady fell with an embroidery needle in her hand, and the hand was pierced through and through. The wound was serious. There was no hæmorrhage, but Teste noticed the *intense cold which accompanies and characterises Ledum* fever. Within a week *Led*. cured the patient. Yingling records (*H. P*., x. 400) a parallel case: A. J. M., 38, drove a rusty spike through his left foot near the arch of the instep, glancing to the inside of the foot without passing through the bone. This was at 5 p.m. At 8 p.m. this report was brought to Yingling: A few moments after accident the patient felt stiffening pains in the foot, running up the leg, and rapidly increasing in severity. Great chilliness with chattering of teeth followed. Lower jaw became somewhat stiff; general shivering; neck felt stiff; "can't endure it much longer." *Led*. 3x was sent, and rapid improvement took place from the first dose. A compress of *Calend*. 3x was also applied, an attack of tetanus being evidently aborted. *Led*. occupies the second place in Teste's *Arn*. group, in which are also *Crot. t., Fer. magn., Rhus, Spig*. The sphere of *Led*. is frequently identical with that of *Arn*., according to Teste; but *Led*. has a special action on the capillary system in parts where cellular tissue is wanting, and where a dry, resisting texture is present, as in the fingers and toes. "It is, perhaps for this reason that it acts better on the small than on the large joints;" hence its appropriateness in gout. The characteristic skin affection of *Led*. is thus described by Teste: Not so much a boil, as with *Arn*., as a sort of bluish or violet-coloured tuberosities, especially on the forehead, and an eczematous eruption, with a tingling itching, that spreads over the whole body, penetrating into the mouth, probably also into the air-passages, and occasions a spasmodic cough, which is sometimes very violent and might be

mistaken for *whooping-cough*. The same phenomenon takes place with *Rhus* and *Croton*. "In a gouty subject I have seen cough precede by two days the breaking out of vesicles on the skin, which could not fail to suggest the use of *Ledum*. These vesicles, which had probably existed on the bronchial membrane, before showing themselves in the face, on the shoulders, &c., became quite apparent on the tongue, where they might be traced to its root." The *Led*. eczema is frequently concentrated on one leg, less frequently on both at once. [Ingalls (*Amer. Hom*., xxv. 210) commends a light paste of *Ledum* (equal parts of *Led* Ø., alcohol, and water) as an application for carbuncles, giving *Led*. 1x internally at the same time.] Dr. R. Hilbert, a German physician, has obtained very satisfactory results from the use of an infusion of the leaves of *Ledum palustre* as an expectorant in bronchitis. He states that the feeling of pain along the trachea, which is characteristic of the early stages of acute bronchitis, disappears after a few doses of the remedy. The fever rapidly subsides, especially in the case of children. In chronic bronchitis the infusion facilitates expectoration and lessens cough. It is particularly useful in bronchitis with emphysema of the aged, because of its action in rendering the bronchial secretion less viscid; in these cases, moreover, it lessens dyspnœa, stimulates the circulation, and lessens cyanosis (Cooper). Guernsey points out that *Led*. is appropriate to the remote no less than the immediate effects of punctured wounds: *e.g*., as when a patient says: "Ten years ago I stepped on a nail, and ever since then have had a pain running up to the thigh." The pains of *Led*. shoot upward (of *Kalm*. downward). A, very notable condition of *Led*. is < from warmth. This is at times so great that the patient can only get relief to his rheumatism by sitting with his feet and legs in cold water. Warmth of the bed is intolerable; he must get up and walk about. An octogenarian had rheumatism of left arm, chiefly elbow and wrist, coming on in the night or early morning. There was no more sleep for him unless he rose and *took a cold bath*, after which he could sleep. I cured him with *Led*. 30. As with *Merc*. the symptoms are < at night; but with *Merc*. there is "sweat without >," and the characteristic tongue and offensive mouth. The eye-symptoms of *Led*. are marked, and Nash says *Led*. 200 is unequalled as a remedy for "black-eye" from a blow; if there is pain in the eyeball itself *Symphyt*. will be necessary. Ecchymoses of conjunctiva. Slight injuries cause ecchymoses. Inflammation of ear, with deafness from getting cold (as having hair cut). The hæmorrhages of *Led*. are bright red and gushing; uterine; respiratory. Hæmoptysis alternating with attacks of rheumatism. (Raue puts it "coxalgia alternating with hæmoptysis." Stens cured a young man who had violent stitch pain in right hip, followed by hæmoptysis, this in turn followed by rheumatism of hands, with *Led*. 200 when the case was apparently on the point of sinking into rapid phthisis.) Suffering parts waste. Discolouration remains long in contused parts. Many cases of whooping-cough have been cured with *Led*. Lembke (quoted by Hoyne, *H. W*., xiv. 66) gives these indications: *Before* the paroxysms: Arrest of breathing. *During*: Epistaxis, shattered feeling in head and chest, rapid respiration. *After*: Staggering; spasmodic contraction of diaphragm; sobbing respiration. < Evening. The pains are sticking, tearing, throbbing. Pricking, biting

sensations. Sensation of torpor of integuments, especially after suppressed discharge from ears, eyes, and nose. Sensation as if something was gnawing in temples, occiput, and ears. As if eyeball would be forced out. As if sand in eyes. Noises in ear as from ringing of bell, or from a wind-storm; as if ear was obstructed by cotton. Itching as from lice on chest; as of lump in throat. As of boiling in hip-joint. As if muscles of thigh in wrong position. As if knee beaten. Pain in ankle as from sprain; limbs as if beaten and bruised. Hot, tense, hard swellings. "*Ledum* has often been given to horses when they go lame and draw up their legs. The pains move upward" (Hering). E. Carleton (*Med. Adv*., xxv. 293) completed the cure of a case of primary syphilis, in which *Aur*. had done good, where these symptoms appeared: Feet held to the earth as by a magnet when attempting to move; when moving felt as if pricked with needles, the pain rising gradually from feet to head; every joint and muscle of body and limbs stiff and sore; sour night-sweats; great emaciation with loss of appetite. *Led*. 200, in water, cured completely and speedily. *Suited to:* Pale delicate persons. Complaints of persons who always feel cold and chilly. Rheumatic, gouty diathesis; constitutions abused by alcohol. Sanguine temperament (Teste). There is < from moving, especially moving joints; while walking; when stepping, > from rest. Symptoms are < evening and night, and before midnight. < From taking wine. < By covering; > by application of ice-water. < By warmth; ("the limb is cold, can't get warm; and gets < when it does become warm in bed").

Relations.—*Antidoted by:* Camph. (according to Teste Rhus is the best antidote). *It antidotes:* Effects of alcohol; Apis, Chi. ("Cinchona bark given for the debility produced by Led. is very injurious."—Hahn.) *Compatible:* Aco., Arn., Bell., Bry., Nux v., Puls., Rhus, Sul. *Compare:* Kalm. (bot.; Kalm. pains shoot down; Led. pains shoot up); Arn. (trauma. Led. follows Arn. when it fails to relieve soreness; punctured wounds); Crot. t. (skin cold); Hamam. (traumatic ecchymosis; black-eye), Ruta (bruises: Ruta, especially of periosteum Symph. of bone; Hyperic. of nerve) Apis (nightly itching of feet) Am. m., Nat. c. (blistered heels) Zn., Rhus, Glo., Nux, Sel., Fl. ac., Ant. c., Pul., Bovis., and Sil. (< from wine); Sil. (chronic rheumatism, extending from feet upwards; Sil. > covering up, Led, > uncovering); Lyc. > uncovering); Bry. (rheumatism < motion; Led. more gout of great toe, scanty effusion, tends to harden into nodosities; Bry., copious effusion. Led. hot swelling of hip- and shoulder-joints); Aco. (hæmoptysis of bright red foamy blood) Rhus [gout and rheumatism affecting small joints (Rhod. also) Led. pains travel up; < warmth of bed (Rhus >); motion < (Rhus. >)]; Sul. (itch); Staph. (pediculosis); Merc. (bloody semen).

Causation.—Alcohol, abuse of. Hair-cutting. Suppressed discharges. Wounds: Bruises; Bites; Punctured wounds; Stings.

SYMPTOMS.

1. Mind.—Anxiety.—Timidity.—Tendency to anger and rage.—Vehement angry mood; vehemence.—Dissatisfied; hates his fellow-beings.—Desire for solitude.—Imperturbable gravity.—Morose and peevish humour.—Misanthropy.—Dementia.

2. Head.—Intoxication.—Stupefying dizziness, sufficient to occasion falling backwards or forwards, < by stooping or being in open air.—Vertigo, head inclines backward.—Raging, pulsating headache.—Pressing headache when head is covered.—A misstep causes the sensation of concussion of the brain.—Head bewildered, with painful shaking of brain, on making a false step.—Stupefying headache.—Pressive headache, as if whole brain were weighed down.—Tearing in head and eyes, which are inflamed, with fever in evening.—Violent throbbing pains in head.—Inability to bear any covering on head.—Itching, as if lice were crawling over scalp, and forehead.—Integuments of head easily affected by cold.—Pimples and boils on the forehead (as in drunkards).—Blood-boils on the forehead.

3. Eyes.—Itching in the internal canthi of the eyes.—Aching in eyes, esp. in evening, sometimes with burning.—Inflammation of eyes, with agglutination and tearing pains.—Violent suppuration of eyes, with discharge of fetid pus.—The tears are acrid, and make the lower lids and cheeks sore.—Burning lachrymation of eyes.—Pupils dilated.—Confusion of sight, with sparkling before eyes.

4. Ears.—Noise in ears.—Tinkling in ears.—Roaring in ears as from wind.—Ringing and whizzing in ears.—Hardness of hearing (r. ear) as from obstruction of the ears.

Nose.—The nose is painful when touched.—Violent burning in nose.—Bleeding in nose.—The blood is pale.

6. Face.—Paleness of face.—Face bloated, at one time red, at another pale.—Redness and tuberous eruptions on face and forehead, like those of drunkards, with shooting pain when touched.—Dry and furfuraceous tetters on face, with burning in open air.—Pimples and furunculi on forehead.—Violent and tearing pains in face at night, alternating with shootings in one of the teeth, and terminating in shuddering, followed by deep sleep.—Engorgement of the gland below the chin.

8. Mouth.—Stinging in forepart of tongue.—Exhalation of a fetid smell from mouth.—Mouldy or bitter taste in the mouth.—Buccal hæmorrhage.

9. Throat.—Sore throat, with shooting pain during and after deglutition.—Sensation as if there were a plug in the throat, with shootings on swallowing.

10. Appetite.—Violent thirst for cold water.—Want of appetite and speedy satiety.—Contractive pain in sternum when eating quickly.—Nausea, with inclination to vomit, on expectorating.—Water-brash, with cramp-like pains in abdomen.

11. Stomach.—Pressure on stomach after a light meal.

12. Abdomen.—Pain in abdomen as if intestines were bruised.—Sensation of fulness in upper part of the abdomen.—Colic as if diarrhœa would set in, from umbilicus to anus (with cold feet).—Ascites.—Drawing pain in abdomen.—Gripings in abdomen, in evening. Dysenteric belly-ache.—Frequent discharge of flatus.

13. Stool and Anus.—Constipation.—Diarrhœa, during which the fæces are mixed with mucus and blood.—Blind smarting piles.

14. Urinary Organs.—Burning in urethra after urinating.—Stream of urine frequently stops during its flow.—Frequent want to urinate, with scanty emission.—Diminished secretion of urine.—Frequent and copious emission of urine.—Swelling of urethra.

15. Male Sexual Organs.—Violent and prolonged erections.—Pollutions of sanguineous or serous semen.—Inflammation of the glans.—Inflammatory swelling of penis; the urethra is almost closed.—Increased sexual desire.

16. Female Sexual Organs.—Catamenia too early and too copious; the blood is bright red.

17. Respiratory Organs.—Tickling in larynx.—Cough, preceded by suffocating suspension of respiration (and opisthotonos).—Fatiguing spasmodic cough, which resembles whooping-cough.—Tiresome cough, chiefly in morning, with yellowish expectoration and irritation in chest, and palpitation of heart.—Cough, with purulent expectoration, esp. in morning or at night.—Greenish expectoration of a fetid smell, during fit of coughing.—Hollow shaking cough, with expectoration of bright red blood.—Hæmoptysis, bright blood.—Phthisis, preceded by history of neuralgia and rheumatism in head and limbs, with inflammatory tendency (Van den Berghe).—Tingling of trachea (bronchitis).

18. Chest.—Obstructed and painful respiration.—Spasmodic and sobbing respiration (double inspiration) as after weeping bitterly.—Respiration obstructed when going up stairs.—Constrictive oppression of chest, < by movement, and walking.—Burning in chest.—Pain in chest on breathing, as if there were something alive in it.—Shootings in chest, esp. on raising or moving arms.—Eruption on the chest, resembling sheep-rot.—Gnawing itching in chest, with red spots and miliary eruption.—Pain, as from excoriation under sternum.

19. Heart.—Pushing or pressing inward at l. edge of sternum; palpitation; also in hæmorrhage.

20. Neck and Back.—Painful stiffness in back and loins after sitting.—Tearing from loins to occiput, esp. in evening.—Violent cramp-like pain above hips, with suspended respiration in evening.

21. Limbs.—Affections of, in general; knee-joint; hip-joints; toe-joints; gouty pain in; when striking the toes there is a coldness in the parts, and a gouty pain shoots all through the foot and limb; cracking of the joints, *i.e.*, on moving them.—Heat in hands and feet in evening.—Long-continued warm sweat on hands and feet.

22. Upper Limbs.—Tearing and pressive pulling in arms.—Lancinating pains in shoulder, on raising or moving arms.—Aching pain in joints of shoulder, and of elbow, < by movement.—Rheumatism in r. elbow-joint due to urate deposit, on periosteum apparently.—Rheumatic pain in the joints of the arm.—Eruption, like sheep-rot, on arms.—Tearing pains in hands and fingers.—Fine stinging in hands.—Boring pain in first joint of thumb.—Arthritic nodosities in joints of hands and fingers.—Perspiration on palms.—Itching, miliary eruption on wrist.—Trembling of hands on moving them, or on grasping anything.—Panaritium.

23. Lower Limbs.—Rheumatic, paralytic pain in the coxo-femoral joint.—Pressure in the region of r. hip-joint, < during motion.—Rheumatic pains in hip, knee, and foot-joints.—Contusive pain, and pain as from excoriation in periosteum of femur, and in knees.—Pressure on l. thigh, posteriorly; as if the muscles were not in their right places, like pains of dislocation, in every position, but esp. violent when walking or when touched.—Tensive stiffness of the knee, which cracks and yields in walking.—Cramp-like tension in the knees, calves, and heels.—Weakness and trembling of knees (and hands) when seated or walking.—Hard and tight swelling of knee, with shootings and nocturnal aching and tearing pains, and hardness of whole leg.—Swelling of leg, above and below knee, with heat and drawing shooting pain.—Legs red and swollen with shooting pains in instep and ankles, and prickly pains up leg.—Pressure above l. inner ankle, < by movement.—Very severe gnawing itching on dorsum of both feet; always < after scratching; only allayed after he had scratched the feet quite raw; much < by heat of bed.—Obstinate swelling of feet; with intolerable pain in ankle-joint on treading.—Pressure on inner border of l. foot.—Stiffness of feet.—Pain in soles, when walking, as if they were galled; as if filled with blood.—Inflammatory or else œdematous swelling of legs and feet.—Incisive pains in toes, while asleep at night.—Swelling of fleshy part of great toe, with pain when treading with it.—Fine tearing in (l.) toes; podagra.

24. Generalities.—Arthritic, pressive, and acute pulling pains, or pains merely pressive in limbs, < by heat of bed in evening (till midnight).—Numbness and sensation of torpor in several of the extremities.—Tearing or shooting, pulsative and paralytic pains in joints, < by movement.—The pains in the joints are the only

ones which are < by movement.—Gouty nodosities in joints.—Hard, hot, tense swellings, with tearing pains.—Dropsical swellings of some parts, or of skin of whole body.—Emaciation of affected parts.—Pains change location suddenly.—Coldness and want of vital heat.—Heat of the bed is insupportable, and occasions heat and burning in limbs; wants to uncover.—Sufferings are <, or come on, after getting warm in bed, compelling the patient to get out of bed, which affords them relief.—Leucorrhœa.—For complaints of people who are cold all the time, in bed, in the house, &c.; they always feel cold and chilly.—Pale delicate persons.—Affections of external forehead; heel; under part of heel; ball under the toes.

25. Skin.—Œdematous swellings, also of skin of whole body.—Hot, tensive, hard swellings, with tearing pains.—Dryness of the skin and want of perspiration.—Large, rough exanthema on the face.—Dry exanthema.—Whitlows or felons on fingers of a seamstress are often caused by needle pricks.—Itching < by scratching.—Itching and gnawing in skin, with burning after having scratched.—Gnawing itching, as if caused by lice.—Miliary eruptions.—Eruption, like rot in sheep, with desquamation.—Bluish spots over body, like petechiæ.—Ecchymosis remaining a long time in bruised parts after pain and inflammation subside.—Dry, furfuraceous tetters, itching excessively (burning in open air).—Furunculi.

26. Sleep.—Great inclination to sleep during day, as when intoxicated; a kind of drowsiness with great wish to lie down.—Nocturnal sleeplessness, with restless tossing, jerking, fantastic visions and images on closing eyes.—Agitated anxious dreams.—Uneasy dreams, in which he changes from place to place, and from one subject to another.—Lascivious dreams, with emission of semen.

27. Fever.—Violent shivering and shuddering, with coldness in limbs.—Chilliness with thirst and sensation as if cold water were poured over the parts.—Morning and forenoon predominating chilliness with thirst.—General coldness, with heat and redness of face.—Heat without thirst more towards evening.—Perspiration all night, with inclination to uncover oneself.—Night-sweat, of putrid or sour smell.—Perspiration causes itching.—Intermittent fever.—Chilliness without subsequent heat, accompanied by thirst, esp. desire for cold water.—Heat all over without thirst; on waking up, body covered with perspiration, accompanied by itching of whole body.—Intermittent fevers with malignant rheumatic pains.—Heat in hands and feet in evening.—Fever in evening, with pain in head and eyes.—Sensation of great heat, alternating with sweats.—Perspiration easily excited by walking, esp. on forehead, and sometimes of a sour smell.

Lemna Minor.

Duckweed. N. O. Lemnaceæ or Pistiaceæ. Tincture of the whole fresh plant.

Clinical.—Asthma. Nose, affections of. Ozæna. Polypus. Rhinitis atrophica.

Characteristics.—We owe this remedy, the common duckweed, with its brilliant green leaf and bladder-like float, to Dr. Cooper. Some tentative clinical experiments proved to him that *Lemna* had a very definite affinity for the nose, acting beneficially in cases of nasal obstruction and catarrh with or without polypus. Foul smell from the nose and foul taste in the morning on waking are indications; also < in damp weather, and especially in heavy rains. Burnett has recorded several cases of polypus in which immense relief was given by *Lemna* by shrinkage of the swelling, but not actual cure. On this Cooper remarks: "In bad cases of nasal polypi the tendency is to the growths filling up the cavities formed by removal, and, consequently, relief often appears temporary, when the case only requires repetition of the Unit Dose." Asthma from nasal obstruction < in wet weather has been cured by it. I removed with *Lemna* 3x four times a day a very chronic catarrh in a lady, and at the same time made her tolerant of the smell of strong-scented flowers, which she could not bear before. In a man I cured with *Lemna* 3x, given three times a day, an aggravated nasal catarrh. In the morning he filled two pocket-handkerchiefs with yellow defluxion before he could get his nose clear. Cooper gave in all his cases single doses of the Ø tincture, allowing them to expend their action before repeating. In three of his cases diarrhœa was set up. Shearer (*Hom. Eye, Ear, and Throat Jour.*, 1895) found *Lemna* the best remedy in atrophic rhinitis, when crusts and muco-purulent discharge were very abundant. The Schema is made up of cured symptoms, and symptoms produced in patients.

Relations.—*Compare:* Cepa, Agraph. nut., Chlorum, &c., in nasal catarrh; Teucr., Calc. c. and Thuja in nasal polypus; Pso. (which it follows well), Cadm. s., Aur., K. bi., and Syph. in ozæna; Anac. in bad smell in nose. *Follows well:* Calc., Merc., Pso.

SYMPTOMS.

1. Mind.—Spirits braced up.

2. Head.—Flitting pains about head and legs, with pains in eyes during heavy rain, drowsy by day, restless at night.

4. Ears.—Improvement in hearing.

5. Nose.—Foul smell in nose, or loss of smell.—Smell of strong-scented flowers before intolerable can now be borne.—Feeling of cold in nose better, sense of

obstruction nearly gone.—Nose blocked with polypi became almost cleared with Lemna Ø after *Calc*. 2000, followed by *Merc*. 3 (given for faceache);—previously Lemna Ø had been given without effect.—Nasal polypi in man, 60; markedly < in wet weather; after taking *Lemna* 3x gtt. v three times a day for a month said, "That is the best tonic I have ever taken"; and he could breathe quite comfortably.—Polypi which swell in wet weather.—Nostrils plugged by swollen turbinates.—Ozæna since childhood in girl of sixteen; odour most offensive; bad taste; takes cold easily in night air or damp; bowels and catamenia irregular, greatly relieved by *Lemna*.—Post-nasal ulceration high up, dry feeling at top of throat with flatulence, much catarrhal pharyngitis; two weeks after dose of Lemna Ø nose less blocked and better in every respect; colic and diarrhœa followed.—Stuffiness of nose relieved; simultaneously an attack of diarrhœa.—Turbinate bones swollen.—Crusts form in r. nostril, pain like a string extends from r. nostril to r. ear, which is deaf (greatly relieved).—Excessive catarrh with frequent sneezing attacks.—Profuse yellow defluxion.—Atrophic rhinitis; crusts and muco-purulent discharge very abundant, with fetor.

6. Face.—Pallid, dullish, sickly look changed to a healthy complexion.

8. Mouth.—Foulness of mouth, putrid teeth.

9. Throat.—Sensation of intense dryness in pharynx and larynx (if given too low in atrophic rhinitis).—Dropping of foul secretion from posterior nares.

12. Abdomen.—Twisting pains in bowels, followed by diarrhœa.—Rumbling and disturbance in bowels.—Diarrhœa with pains across bowels as from flatus < after eating; with very putrid teeth.

13. Stool.—Diarrhœa.—Bowels acted freely with much heat in anus.—Disposition to morning diarrhœa.

17. Respiratory Organs.—Asthma, attacks coming on in rainy weather.

24. Generalities.—Diminishes sensitiveness to wet weather.

26. Sleep.—Snoring cured after an aggravation in the shape of diarrhœa.

Leonurus Cardiaca.

Leonurus cardiaca. Motherwort. N. O. Labiatæ. Tincture or infusion of fresh plant.

Clinical.—Dysentery. Hæmorrhages.

Characteristics.—The popular name of this plant sufficiently indicates its traditional virtues. The only experience with it is an involuntary proving recorded by Clarence Bartlett (*Med. Adv.*, xx. 280). A married woman, 40, took an infusion to produce miscarriage. Twenty-four hours later Bartlett saw her, and found her vomiting and retching, passing bloody stools, suffering severe abdominal pains, which were provoked by drinking anything more than a small quantity of water, which she did to allay her great thirst. Dry conjunctivæ, dry, cracked tongue were noted. The bowel symptoms were < midnight to 3 a.m. *Ars*. 3x relieved all symptoms. She did not miscarry.

Relations.—*Antidoted by:* Ars. *Compare:* Mentha pulegium, Hedeoma puleg.

SYMPTOMS.

3. Eyes.—Conjunctivæ had a very dry appearance; looked as if wiped dry.

8. Mouth.—Tongue dry, coated or brownish white; covered with cracks in arborescent arrangement, main crack down centre.

11. Stomach.—Intense thirst, yet drinking more than a very slight quantity of water, warm or cold, provoked epigastric pains.—Shortly after taking the drug seized with vomiting and retching, more retching.

12. Abdomen.—Very severe abdominal pains, with soreness to touch; when lying on side > drawing up legs; when on back > with legs out straight.

13. Stool and Anus.—During the (first) night frequent calls to stool; stools dark brown at first, afterwards bloody.—Later stools contained larger quantities of blood, never any mucus.

Lepidium Bonariense.

Lepidium mastruco. N. O. Cruciferæ or Brassicaceæ. Tincture and trituration of fresh leaves.

Clinical.—Breasts, affections of. Cough. Head, pains in. Heart, affections of. Indigestion. Rheumatism.

Characteristics.—*Lep. bon*. is a Brazilian cress, "very common in the neighbourhood of Rio, where it is found along the roads and in stony regions" (Mure). It is a great remedy in domestic practice in Brazil, and is used for purposes similar to those for which *Arnica* is used. All the *Lepidiums* are anti-scorbutic, and *L. oleraceum*, the New Zealand variety, was eagerly sought after as a remedy for scurvy by the early voyagers. *L. sativum* is our common garden cress. "Watercress," *Nasturtium officinale*, belongs to the same family; but the garden "Nasturtium," or "Indian Cress," belongs to a quite different family, and it receives its name of "cress" from the "acrid taste, similar to that which exists among the *Cruciferæ*," which it possesses. Mure's proving brought out some distinctive symptoms on the left side of the head, in the limbs, and especially in the heart. Along with the latter was numbness and pain in the left arm, which should indicate usefulness in that sphere. There was the sinking feeling in the pit of the stomach, indicating an action on the solar plexus. Many of the pains dart from one part to another. Lancinating pains and throbbing pains are frequent. There is < from stooping; and < from turning head to the right. < When covered. It needs clinical elucidation.

Relations.—*Compare:* Brass. nap., Cheiranthus cheiri., Thlaspi. burs. past., Arm. sat., Raphan., Sinap. (botan,); Spigel., Kalm., Lycopus, &c. (heart).

SYMPTOMS.

1. Mind.—Imagined the floor sinking under her.—Inability to think.—Imagines herself pursued by a phantom in a churchyard, cries, with loss of voice next morning.—Sad and quarrelsome.

2. Head.—Vertigo with desire to vomit.—Painful pressure on head.—Constrictive pain in head.—Beating headache as if brain were bounding.—Pains in l. brain, spreading to occiput and nape.—Throbbing in head causing one to bend it forward.—Pulling at forehead and root of nose.—Lancinations in l. side of head.—Heaviness of the head, with indescribable malaise in brain, < l.—Heat in head with cold sweat and fever.—Sensitiveness of hairy scalp.

3. Eyes.—Pricking and burning in eyes; redness; dartings in r.; pain in r. as from a round weight resting on it.—Lids weary at night.—Sight dim, as through white gauze.

4. Ears.—Itching in r. ear, < stooping.—Pricking pain round r. ear.—Pains in teeth with deafness.—Noise in ears; on swallowing.

5. Nose.—Nose swollen and painful l. side.—Coryza.—Heat in nose with sensation of current of cold air in l. nasal fossa.

6. Face.—Pain in r. cheek > pressing on bone.—Cutting across face from temple to chin.—Heat in l. side of face.—Itching under chin from ear to ear.

7. Teeth.—Sticking, beating lancinations in jaws.—Pain in lower teeth with deafness.—Toothache as if teeth soft and on edge.

8. Mouth.—Pricking itching at tongue.—Drawing pain from tongue to arm, tongue feels swollen.—Smarting at tip of tongue.

9. Throat.—Heat in throat with desire to vomit and noise in ears on swallowing.

10. Appetite.—Aversion to meat.—Desire: for tea; for fruit with loathing of (other) food; for cress with loathing on seeing it; for chocolate, salad, vinegar; for coffee.—Prostration with loathing of food.

11. Stomach.—Eructations: sour; foul.—A piece of cake descends into stomach suddenly, with a sticking sensation.—Oppression after eating.—Faint feeling in stomach.—Distress in pit of stomach, with desire to vomit.—Stitching pain in pit of stomach after eating.—Pain in pit of stomach as if cut through.—Trembling at epigastrium.

12. Abdomen.—Lancinations in abdomen and sides.—Worm colic with tenesmus.—Compression as by a band round the waist.

13. Stool.—Diarrhœa.

14. Urinary Organs.—Weight and pressure at bladder when urinating.—Dark urine.

17. Respiratory Organs.—Cough: with hoarseness; hacking, with salt saliva; with slight spitting of blood.—Sputa, salt, thick.

18. Chest.—Pain in r. side, arresting breathing.—Twitching in muscles under r. breast.—Coldness in chest from stomach to throat.—Sensation as of a string at r. breast.—Itching at nipples, swelling and hardness of breasts.—Pricklings between the breasts.

19. Heart.—Palpitation, with pain hindering breathing.—Convulsive trembling of heart.—Sensation as of knife slowly penetrating heart.—Constrictive pain extending to l. axilla.—Sharp stitching in heart region with lancinations under false ribs.

20. Neck and Back.—Acute pain in muscles of neck and shoulder-blade.—Sensation as if a string were pulled from shoulder to ear.—Cramping pain r. side of neck extending to arm.—Darting from ear to shoulder.—Pain from shoulder round the neck like a band, with a stitch in pit of stomach and nape of neck.—Pain in side of neck < turning head to r.—Throbbing in back.—Passing heat in back

followed by shuddering all over.—Darting in spine of shoulder-blade, shifting to the other shoulder.—Pain from shoulder to back, with lancinations hindering breathing.—Sticking pain at scapula.—Shock across back.—Pain in back as from a nail.

22. Upper Limbs.—Cutting pain under l. axilla.—Violent pain in l. arm, < when covered; she cannot stretch it.—Pain as from a blow in r. arm, with numbness.—Numbness of l. arm, with pain in shoulder as if beaten.—Darting from elbow to scapula.—Pain in l. arm, she can scarcely raise it.—Laming pain in l. arm while holding it still.—Cramping pain in l. hand.—Itching on back of hand.—Cramping pain in r. hand followed by shuddering all over.—Lancinating pains in muscles of r. hand and shoulder-blades.—Prickling at tip of index finger, which draws it up.

23. Lower Limbs.—Bruised pain in r. hip.—Pulling along l. sartorius muscle.—Pain in l. gluteus maximus as if contracted.—Contraction of leg with stiffness of bend of knee.—Acute pain inner side of r. tibia.—Pain from l. hip to knee, with weakness of the leg.

26. Sleep.—Desire to yawn.—No sleep after midnight, with pains all over when stirring.—Heavy sleep with numbness and sensation as if bruised on waking.—Drowsy, and shuddering in legs.—Suffocative fit at night.—Dreams she is talking with dead persons.—Sad dreams with fear on waking.

27. Fever.—Internal heat with restlessness, she has to rise.—Heat after the cold, esp. in renal region.—Shuddering and cold in the air.

Leptandra.

Leptandra Virginica. Veronica Virginica. Black Root. Culver's Physic. Tall Speedwell (U.S.A.). N. O. Scrophulariaceæ. Tincture of resinoid Leptandrin. Tincture of fresh root of second year. Trituration of dried root. (A fresh plant tincture should also be made and tested.)

Clinical.—Ascites. *Bilious attack*. Bilious fever. Constipation. Diarrhœa. *Dysentery. Dyspepsia. Headache*. Jaundice. *Liver, affections of*. Remittent fever, infantile. Yellow fever.

Characteristics.—*Leptandra* in the form of the resinoid *Leptandrin* has been the subject of an heroic proving by Burt. As one of the grand characteristics of its relative *Digitalis* is *white* stools, so the grand characteristic of *Lept*. is *black* stools. The following experience of Dr. Burt fairly epitomises the drug's action: "For the last two hours" (*i.e*., six hours after the second dose on the fourth day of proving)

"have been in awful pain and distress in umbilical and hypogastric region; drinking cold water < the pain very much; dull, aching, burning distress in region of gall bladder, with frequent chilliness along spine; great distress in hypogastrium with *great desire* for stool. A very profuse black stool, about the consistence of cream, with undigested potatoes in it, gave >, but was followed by great distress in region of liver extending to spine; for the last four hours there has been constant distress, with pains in whole abdomen, but for the last half-hour the pains in umbilicus and hypogastrium have *been awful* to endure, with rumbling and great desire for stool; *a very profuse black, fetid stool, that ran a stream from my bowels*, and could not be retained for a moment, gave great > but did not stop the pain altogether." There were great varieties of this stool, and in the later stages of the proving it became dysenteric and mixed with shreds. There was also constipation with hard black stool, followed by softer. And with the liver symptoms there was dull, heavy, frontal headache. These symptoms confirm the use of the drug by eclectics as a kind of "vegetable calomel." But though black stools are the chief characteristic, they are not the only kind that *Lept*. causes. Hale gives the following as the order in which the different kinds of stools occur in the time of the proving. (*1*) Black, thick, tar-like, fetid. (*2*) Thinner, brownish, often fetid. (*3*) Stool of mixed mucus, flocculent and watery matter, with yellow bile or blood. (*4*) Mucous bloody stool mixed with shred-like substances, often pure blood. Hale says it is only in cases of dysentery which have developed in this way that *Lept*. is curative; not in cases primarily dysenteric. Cases due to sudden climatic changes have been cured by it. Farrington further characterises the liver action of *Lept*.: Dull aching in right hypochondrium, gall-bladder, and *back of liver*, accompanied by soreness. Burning distress in and about liver after spreading to stomach and bowels. With this there is drowsiness and despondency. Bilious and typhoid fevers with the black, tarry stools. Neidhard observed a periodicity in cases cured by him: Periodical, occurring every two or three months; yellow-coated tongue; constant nausea with vomiting of bile shooting or aching pains in region of liver; loss of appetite; urine brownish, or, at any rate, very dark; often pain in transverse colon giddiness. But the most characteristic symptom is very dark, almost black stools. In cases of disease of any kind when these characteristic black stools are present *Lept*. must be thought of. Like *Euphras., Lept*. has a number of eye symptoms. *Lept*. is a right-side medicine; has chilly sensation along spine and down right arm; pains in right shoulder and arm. The symptoms are < by motion: rising = nausea and faintness. Weakness is so great he is hardly able to stand. < From exposure to wet weather. < Drinking cold water. A peculiar sensation is, "Feeling as if something was passing out of rectum." Like *Dig*. and *Tabac*. it has sinking at the pit of the stomach.

Relations.—Dig. (liver; weakness; slow pulse; < by drinking), Scrof., Euphras., Gratiol. (botan.); Merc. (with Merc. tenesmus continues after stool; with Lept. there is > after stool, and only colic continues, and that in moderate degree); Nit. ac. (hæmorrhage in typhoid Nit. ac. bright red; Lept. tarry); Bapt. (pain in gall-bladder typhoid and remittent fevers); Gels. (infantile remittent); Bry. (< by

motion; sitting up = nausea); Bacil. (deep-in headache); Canth. and Arsen. (membranous diarrhœa); Chi., Iris v., Pod. and Veron. off. (liver);—Veron. off., following Aur. n. m., cured tarry stools alternating with ashy stools in Nash's case.

SYMPTOMS.

1. Mind.—Gloomy, desponding, drowsy.—Gloomy and irritable all day.

2. Head.—Very dizzy while walking.—Very severe frontal headache; walking <, making it almost intolerable.—Dull frontal headache, with sensation as if the hair were pulled out.—Dull frontal headache very deep in brain.—Constant dull frontal headache; < in temples, with aching in umbilicus.—Sick-headache with furred tongue.—Bilious headache; constipation, bitter taste, indigestion.

3. Eyes.—Smarting and aching in eyes, with dull pain in eyeballs.—Profuse lachrymation.—Lids agglutinated.

8. Mouth.—Tongue yellow or black down centre.—Flat taste.

11. Stomach.—Canine hunger.—Awoke, 5 a.m., feeling very hungry, with great pain in epigastrium, > after breakfast.—Food rises very sour 10 a.m.—Nausea and deathly faintness on rising.—Vomiting of bile, yellow tongue; shooting pains about liver, black stools.—Weak, sinking sensation at pit of stomach.—Great distress in stomach and small intestines, with immediate desire for stool.—Burning aching in stomach and liver < drinking water.—Dyspepsia from disordered liver and stomach.

12. Abdomen.—Dull aching in liver, < near gall-bladder.—Burning distress in back part of liver and spine.—Periodical liver derangement, every two or three months.—(Malignant disease of liver with black, tarry stools.).—Deliriousness; complete prostration; heat and dryness of skin; cold extremities; fetid, tarry stools; tongue thickly coated with black streak down centre.—Jaundice with clay-coloured stools.—Constant dull aching distress in umbilical region.—Sharp, distressing pains between navel and epigastrium.—Rumbling and distress in whole bowels, esp. in hypogastrium, with black stools.—Bilious colic or tendency to it.—Rumbling and distress in hypogastrium, profuse, black, fetid stools, pains in bowels.

13. Stool and Anus.—Stools: black, tarry, bilious, undigested, followed by great distress in liver; mushy, with weak feeling in bowels; greenish, muddy, spouting out like water; profuse, black, fetid, running a stream; profuse, black, consistence of cream; black, papescent, tar-like, fetid, in afternoon and evening; first hard, black, lumpy, afterwards soft and mushy; watery with large quantities of mucus; yellowish green; clay coloured; < morning as soon as he moves; < from meat or vegetables.—Profuse watery stools, followed by severe cutting pains in small intestines; after exposure to wet, damp weather.—Before stool: rumbling.—After

stool: sharp cutting pains and distress in umbilical region; faint, weak, hungry; griping but no straining.—Profuse dark brown, almost black, mushy and highly offensive stools; difficulty in retaining stool, must go immediately.—Sharp pains preceding stool, > afterwards, but increasing weakness; usually went to sleep soon after stool.—For nearly three months camp diarrhœa, hardly able to stand; emaciated, features haggard and jaundiced; stools previously mixed with undigested food, now muco-purulent and bloody, quite frequent, with tenesmus and cutting pains low down in bowels; sense of weight at stomach after cold water, cutting in bowels and disposition to stool.—The mucus discharge resembles false membrane.—Dysentery or typhoid with black, tar-like passages.—Constipation; hard, black stools followed by mushy portion; piles, from hepatic derangement.—Frequently bleeding piles; constipation and distressing pain beneath sacrum.

14. Urinary Organs.—Red or orange-coloured urine with aching in lumbar region.

16. Female Sexual Organs.—Menses suppressed or retarded; liver affected; prickly heat.—Leucorrhœa, with ulceration of os; sometimes fetid with mucous shreds; irritation of bladder and rectum; frequent pain at bottom of bowels; languor; skin hot and dry.

19. Heart.—Soreness in cardiac region.—Pulse slow and full.

20. Neck and Back.—Chilly sensation in shoulders and down back.—Sore, lame feeling in small of back.—Constant distress with very sharp pains by spells in lumbar region.

22. Upper Limbs.—Pain in r. shoulder and arm.—Both wrists very lame and ache quite severely (< l.) in morning; lasting till noon.

24. Generalities.—Weary, can hardly walk.

25. Skin.—Jaundice.—Dry, hot skin.

26. Sleep.—Sleep sound.—Sleep restless after midnight; felt very ill next day.

27. Fever.—Chilly along spine and down r. arm.—Shivering, or dry, hot skin; limbs cold and numb; tongue black down centre.—Bilious typhoid fever.

Levico.

An arsenical mineral water of the South Tyrol, containing also Iron and Copper with other elements. Dilutions.

Clinical.—Debility. Skin, diseases of.

Characteristics.—*Levico* has a high reputation among health resorts for nervous and skin cases, favouring assimilation and increasing nutrition. Burnett is the only homœopathic authority. He says "*Levico* in 5 to 10 drop doses is a valuable intercurrent help in grave cases where there is much debility, notably after the searching remedies such as *Bacillinum*." *Levico* is supplied in two strengths, the strong and the weak. Either may be used in the doses indicated by Dr. Burnett, which is much smaller than that usually prescribed.

Liatris Spicata.

Liatris spicata. Dense button-snakeroot. Gay feather. Devil's bit. Colic root. N. O. Compositć (tribe Cichoraceć). Tincture of powdered fresh root.

Clinical.—Diarrhśa. Dropsy. Renal dropsy. Ulcers.

Characteristics.—*Liatris* is an old botanic remedy for indigestion and colic. As T. C. Duncan explains (*H. R.*, xiii. 110), it is called "Devil's bit,"—a piece is missing from each tuber, just as if it had been bitten out. It has the reputation of being aromatic, stimulant, diaphoretic, diuretic, anodyne, and carminative; particularly useful in colic, headache, and flatulency. It was introduced to homśopathic medicine (*H. R.*, xiii. 35) because of its action in two cases of dropsy under eclectic treatment: (*1*) Dropsy from material enlargement of liver and spleen. (*2*) Dropsy with almost total suppression of urine. After other remedies had failed *Liatris* was given, and on the second day the patient passed a gallon and a half of urine. A. E. White wrote in *Minneap. Hom. Mag*. (date not noted) of another use of *Liatris*. It has a popular repute as specific in chronic diarrhśa following exposure in camp life; and also as an application to non-granulating ulcers. For this purpose the root is to be chewed and then applied. White was invited to chew a piece, which he did. The result was, in six or eight hours he had three successive calls to stool, very urgent, a little griping in lower back, and some straining at stool. He has confirmed its use in camp diarrhśa, but says it acts better if *Sul*. or *Merc. cor*. is given first. He gives this case. Mr. X, 56, had chronic diarrhśa since the war. Had tried treatment of all kinds, homśopathic included. Had twelve to sixteen stools a day. Had fallen from 18o to 120 pounds in weight. Was all run down and had made up his mind he had only a short time to live. He was given *Sul*. 30x two doses, one each night;

then *Merc. cor*. 3x, a dose each night for five nights; then *Liatris* 1x, four pellets each night for five weeks, by which time he was completely cured.

Lilium Tigrinum.

Tiger Lily. N. O. Liliaceæ. Tincture of fresh stalk, leaves, and flowers. (Some of the provings were made with tincture of the pollen alone.)

Clinical.—*Angina pectoris*. Asthenopia. Astigmatism. Dementia. Diarrhœa. *Dysentery. Eyes, affections of*. Fibroma. *Heart, affections of; Palpitation of*. Hysteria. *Ovaries, affections of*; dropsy of. Pruritus vulvæ. Spinal irritation. *Urination, too frequent. Uterus, affections of; displacements of; subinvolution of*.

Characteristics.—The Tiger Lily, which was introduced into the West from China and Japan, was first suggested as a remedy by W. E. Payne. Carroll Dunham urged Payne to have it well proved. This Payne did, and Dunham himself assisted by having it proved on a woman under his own supervision. The account of this case of *Lilium tigrinum* disease, with others, is given in Dunham's lucid style in his *Science of Therapeutics. Lil. t*. was given in the 30th and 3rd attenuations, which were taken during ten days. The symptoms began early but were somewhat slow in developing, and, after recovery, recurred with other symptoms. The third series recurred in the ninth week after taking the drug, and this was the most severe of all. So intense were the sufferings mental and bodily that Dunham felt bound to antidote them with *Plat*. 200, which was speedily effective. The symptoms developed in this order: (*1*) Increased activity; things went more easily. (*2*) Increased sexual instinct. (*3*) Sweetish nausea without inclination to vomit. Abnormal fulness < after eating ever so little. (*4*) Ill-humour; drowsiness; sleep but with unpleasant dreams. (*5*) Bloating more pronounced and chiefly across hips in uterine region; darting pains in head and lower abdomen from ovaries down thighs; pressure in vagina; pain at top of sacrum extending to hips. (*6*) Crazy feeling with thoughts of suicide; head grows wild after being quiet for a short time; increased depressing weight over parting; < evening. Knees ache. From this point, ten days after the first dose, no more medicine was taken, but the *Lil. tig*. disease continued to develop and increase in intensity for eight weeks longer, when it was so bad that it had to be put an end to by an antidote. Of these symptoms the most prominent were a "downward dragging" from shoulders, from thorax, from left breast, from epigastrium down to pelvis, and out at the vagina as if everything would be forced through. (In some other provers who were examined actual displacement was found, especially anteversion.) Late in the proving a thin brown leucorrhœa appeared, leaving a brown stain. This was intermittent. The downward pressure involved the rectum and bladder, and loins. There was consciousness of the ovaries as distinct painful and burning spots with pains radiating from them down the

thighs. Menses came at regular times but flowed only as long as she kept moving. *Much hurried and driven*, she knows not why. Heart symptoms came on at this time, about a month after commencing the proving: Sudden fluttering sensation, less felt *if she can busy herself very much*. Faintness accompanied the fluttering, as though she could make no exertion but must sit still. Sharp pain in apex of heart. After a cessation of symptoms for about a week there was a recurrence of the same, including leucorrhœa, burning pain from groin to groin, with new mental symptoms, including obscene thoughts and disposition to strike and swear. Menses recurred after only two weeks' interval, leucorrhœa having ceased two days before. After another brief interval the second recurrence occurred, which was put an end to by *Platinum*. In male provers there was a good deal of pelvic distress, affecting bladder, rectum, and back, and a very decided increase in sexual instinct, but nothing approaching the intensity of the action on the female organs. The heart, in the males, appears to have borne the chief impact of the drug's action. The *outward forcing* in which the down-dragging symptoms of the female provers culminated was manifested in other symptoms. One man had this: The heart's action was intermittent, every intermission followed by a violent throb, causing an involuntary catching of the breath; at the same time the blood rushed up through the carotids to the head, producing great heat and a *crowded feeling of head and face*. Another prover, woman, 53, who had ceased to menstruate, took a drop of 30th. She had: A feeling of *exhaustion as if the blood were pushed outward*; and later a blinding headache "as if all the blood were pressing outward through every aperture." S Lilienthal had among his symptoms: "A sensation as if a rubber band were stretched tightly from temple to temple"; "as if a skullcap were crushing the head"; "as if the brain was being pushed through eyes and ears." "Outward forcing" is plainly a keynote of this remedy; and the contractive pains at the heart as if grasped with a hand are all of a piece with this. The characteristic feature in the heart-grip is an intermittent pressure—there is alternate spasm and relaxation as if a hand squeezed the heart and then let go and squeezed again. Another leading indication is when there is pain and numbness in the *right* arm along with the heart pain; and again when there is alternation between heart pains and uterine or ovarian pains. The pains of *Lil. tig*. are wandering, flying, shooting, squeezing and relaxing, opening and shutting, burning and radiating. They radiate from ovary to heart to left breast, down legs (especially left), across to opposite ovary; through left breast to back; from ilium to ilium; across sacrum. In contradistinction to the down-dragging is a "pulling-up" sensation from the tip of the coccyx. A patient to whom I gave *Lil. tig*. 30 said it caused a sensation in the abdomen as if the contents were "tied up in knots." C. Sigmund Rage has observed (*H. R*., xi. 482) excellent results from *Lil. t*. 3x and 30 in cases of uterine fibroid presenting the characteristic symptoms of the remedy. The 2x and 3x caused severe aggravations—backache; fever and sweat during the night; fear of dying. Among other *peculiar sensations* are: With nausea, a lump in centre of chest which could be moved down by empty swallowing. As if an electric current in fingers and hands. As if cool wind blowing on lower extremities. The

eyes were the seat of many marked symptoms, and one prover who was astigmatic, after much suffering in the eyes during the proving, found her astigmatism gone when the proving was over.─The left side was most markedly affected. Intense restlessness, nervous system irritable, weak, trembling; aimless hurry; walks to and fro. Convulsive contractions of almost all muscles of body, and feeling as if she would be crazy if she did not hold tightly upon herself. Feeling as if she must scream. "Cannot walk on uneven ground" (H. C. Allen). Burning palms and soles accompany other complaints. The symptoms are > lying on left side, when lying down at all is tolerated. Rest in general <. (Berridge cured a lady, 50, of heart pain, as if grasped with hand, with cold feeling from apex of heart to under left scapula; excited by worry; < lying on right side; > lying on left side and when busy at work.) Hasty, busy movement >. Pressure and support >: Must cross legs to relieve bearing down; must put hands to vulva to prevent contents escaping. Movement < uterine symptoms: unable to move for fear her womb would drop from her. Stooping < heart pain. Standing < downward dragging. < Afternoon and night from 5 p.m. to 8 a.m. Diarrhœa < early morning. > In open air. < In warm room; is faint. Touch < (on epigastrium = desire to vomit); < hæmorrhoids. Pressure of bedclothes is intolerable on abdomen and uterine region. Rubbing and pressure > heart spasm. Jarring <.─I never obtained good results from Lil. tig. until I gave it in the 30th attenuation. I have tried higher, but the aggravations from these were so severe that I have kept to the 30th.

Relations.─*Antidoted by:* Platina; Helon. (anteversion); Nux (colic); Puls. *Compare:* Sep. (very like in most respects, but Lil. > by diverting mind and busying about; Sep. > by violent exertion; leucorrhœa of Lil. is more excoriating); Lil. < afternoon; Sep. > afternoon; Lil. pressure in anus, Sep. weight like a heavy ball); Puls. (< in warm room; venous stasis with taste of blood in mouth─also Ham.; weeping mood─Puls. *quiet* weeping, Lil. spasmodic, flashing; Puls. has not the tendency to prolapse; is not > by support); Nat. m. (heart; uterus; coldness about heart); Helon. (profound melancholy with consciousness of womb; Lil. hurry with incapacity and distress based on apprehension of serious malady); Alo. (fulness in rectum; like a plug wedged between pubes and coccyx); Cact. (heart constricted by iron band; constriction continuous, Lil. intermittent; uterine and ovarian pains); Anac. and Ver. (profanity); Bell. (< by jar; bearing down; Bell. < by motion, Lil. >); Sul. (early morning diarrhœa, burning palms and soles); Zinc. (heart symptoms > by lying on left side;─Pho., Pul., Arn. < lying on left side); Murex, Vib. tin., Vib. o., Nux m., Gossyp. (bearing-down pains); Lach., Sul., Act. r. and Ustil. (left ovary and left inframammary pain); Calc. (ovarian pain extending down thigh; Calc., right; Lil., left; Pallad. and Plat. (irritability, "things don't go right"; Pall. over-sensitive, Plat., hauteur); Aur. (prolapse; Aur. from weight of organ, Lil. from relaxation of ligaments); Latr. mact. and Spig. (heart), Act. r. (heart and uterus); Pod. (early morning diarrhœa); Cact., Nat. ph., Tarent., Rhus (pain and numbness of left arm with heart disease; Lil. more characteristic, right); K. bi. (radiating pains; alternating conditions).

SYMPTOMS.

1. Mind.—Depression of spirits; inclination to weep, timidity, apprehensiveness; of some terrible internal disease.—Tormented about tier salvation (with uterine complaints).—Constant hurried feeling, as of imperative duties and utter inability to perform them (during sexual excitement).—Disposed to curse, to strike, to think of obscene things; as these mental states came, uterine irritation abated.—Does not wish to be alone, prefers society; very low-spirited; weeping with feeling of dread.—Crazy, wild feeling on top of head; thoughts of suicide.—Mistakes in speaking; uses wrong words; forgetful.—Desire for fine things; dissatisfied with tier own, envious of others.

2. Head.—Headache, esp. if depending on uterine disorders.—Dull pain in forehead (and fulness) over the eyes.—Hot pain; blinding pain, in forehead and temples.—Pressure outward.—Headache: on waking; < in open air, > at sunset, with heaviness as if too full of blood, blowing blood from nose, desire to support head with hands.—Neuralgia over l. eye to vertex.—Neuralgia in temples, alternately l. and r.—Pressure and crazy feeling in vertex.—Pain in occiput and over eyes.

3. Eyes.—Wild look.—Hypermetropia; presbyopia.—Vision dim; and confused, with disposition to cover eyes and press upon them.—Pains extending back into head.—Burning after reading and writing, with weak feeling.—Cured astigmatism in a prover.—Blurred vision with heat in eyes and lids.—Muscæ volitantes.

4. Ears.—Neuralgia in r. ear.—Rushing sounds in ears after going to bed.

5. Nose.—Rubbed her nose violently.—Discharge: thin, clear; yellow mucus.—Nose stopped.

6. Face.—Face (l.) flushed, with heat.—Pain in r. cheek-bone, with stoppage of r. nostril.—Pain in l. cheek extending into ear and temple.—Pain in r. jaw with feeling of elongation in teeth.

8. Mouth.—Darting pain from (l.) teeth to ear.—Tongue coated yellowish white in patches.—Mouth and throat feel coated on waking in the night.—Saliva abundant.—Taste: bloody, afternoon; peculiar; foul > eating.

9. Throat.—Enlargement cif r. tonsil, with exudation.—Soreness and dryness.—Feeling of lump, with pulsations when lying.

10. Appetite.—Appetite: great, esp. for meat; great as if in back, extending to occiput and over vertex.—Desire for sour or sweet dainties, alternating with disgust for food.—Appetite lost.—Aversion to coffee; to bread.—Thirst; then stupidity, then the severe symptoms.

11. Stomach.—Eructations.—Hiccough.—Nausea: < from tobacco; with inability to vomit; with pain in back; with fulness in abdomen.—Nausea, with hawking of mucus.—Sensation of a lump in centre of chest; moved up and down by empty swallowing.—Sensation of a hard body rolling around in stomach, > at night.—Vomiting of chyme and thin yellow mucus; finally bloody.—Hollow, empty sensation in stomach and bowels.—Faintness at epigastrium with tasteless eructations.

12. Abdomen.—Distension of abdomen.—Rumbling; emission of flatus.—Dragging down of whole abdominal contents, extending even to organs of chest; must support the abdomen.—Bubbling in r. hypochondrium.—Lancinations from l. hypochondrium to crest of ilium.—Dragging downward and backward.—Sensation as if diarrhœa would come on; also passing off by urinating.—Trembling sensation in pelvis, extending down thighs.—Feeling as if menses coming on.—Grasping pains across hypogastrium > gentle rubbing with warm hand.

13. Stool and Anus.—Pressure on rectum (and bladder) with almost constant desire to go to stool (immediately).—Morning diarrhœa in cases with prolapsus of uterus.—Morning diarrhœa; stools loose, bilious; dark, offensive, very urgent, can't wait a moment; stool preceded by griping pains or great urging, with pressure in the rectum; followed by smarting, burning of anus and rectum.—Pressure on perinæum.—Constipation: hard and dark stools, then heat in rectum and anus and pain in abdomen.

14. Urinary Organs.—Frequent urination during day, with smarting in urethra.—Continuous pressure in bladder.—Constant desire to urinate, with scanty discharge; burning (tenesmus) and smarting in urethra after.—Urine: milky in morning; clear and white; like boiling oil; strong-smelling; phosphatic; copious; sediment white or red.

15. Male Sexual Organs.—Testes: swollen and tender to touch; sore in morning, and heavy; neuralgia in l.—Desire increased.—Prostration from coitus, with irritability from suppression of desire.—Emission towards morning.

16. Female Sexual Organs.—Bearing down, with sensation of heavy weight and pressure in uterine region, as if whole contents would press out through vagina; > by pressure of hand against the vulva.—Sharp pains in ovarian region.—Grasping pain in l. ovarian region and groin, with pain in right hip, extending into thigh.—Pains in ovaries extending into inside of thighs.—Pains in r. ovary and back.—Ovaries sore on pressure, < r. side.—Aching and burning pain in ovaries; feeling like live coals; afterwards pain in r. increased till it seemed as if a knife inserted in ovary and ripped down groin and front of thigh; extending over loins to r. hypochondrium, > by pressure on ovary.—Gnawing dragging in r. ovary < walking.—Severe neuralgic pain in uterus; could not bear touch; not even the weight of bedclothes or slightest jar; anteversion; retroversion;

prolapsus.—Fundus of uterus low down, tilted against bladder, the os pressing upon rectum.—Bearing down in uterus, with pains in l. ovary and mamma.—Voluptuous itching in vagina, with feeling of fulness of parts; stinging in l. ovarian region.—Sexual desire increased; ending in orgasm; with hurried feeling; > during physical effort; disposition to use obscene language.—Leucorrhœa; bright yellow, acrid, excoriating; leaving a brown stain; after menses.—Menses continue only when moving about, and cease when sitting or lying down.—Amenorrhœa: accompanied with cardiac distress, or with ovarian pains of a burning or stinging character; if complicated with prolapsed or anteverted uterus; partial, the menses returning occasionally, or again remain absent for some time.—Menses freer than usual, relieving headache.—Sensation of dragging down from the shoulders and chest, feeling as if she wants to be held up; abdomen feels as if it must be supported; as if it must be held up with both hands.

17. Respiratory Organs.—Voice could not be controlled.—Dry, hacking cough, evening, > in open air.—Oppression.—Desire to take a long breath; frequent sighing; seems to come from lower part of abdomen.—Inhales forcibly in order to pull up thorax and clear the pelvis.

18. Chest.—Tightness of chest.—Hot, congested feeling.—Ebullition, must go into open air.—Constriction: a hand-breadth below l. breast; extending to r. side, > change of position, with sharp pain running to throat, clavicle, and axilla.—Sharp pains through r. lung < in open air.—Fine pains in r. chest, sometimes gnawing, with lameness and soreness of muscles and desire to stretch the parts; the lameness extending through to r. scapula.—Pain under sternum towards middle lobe of r. lung.—Feeling of congestion of chest if desire to urinate is not attended to.—Pains sharp, sticking, cramping in or below l. breast, extending to scapula and side, < lying down and on l. side.

19. Heart.—Dull, pressive pain in region of heart.—Pain in heart < when lying down at night.—Constant feeling of a load or weight in l. chest.—Sharp and quick pain in l. side of chest, with fluttering of heart.—Heart feels as if squeezed in a vice; or alternately grasped and relaxed.—Fluttering or palpitation of heart; > rubbing and pressure.—Intermittent; after every intermission, violent throbbing, causing involuntary catching of breath and a rush of blood to head and crowded feeling in face.—Pain in heart is < by exercise; stooping; lying down at night; > in morning.—Sharp pain at apex of heart > by rest.—Pulse: rapid; small and weak; irregular, < by slight motion; compressible.

20. Neck and Back.—Pain in nape with constriction.—Soreness in cervical and occipital muscles, < by thirst.—Pain: between scapulæ; sore in region of scapula; in lower dorsal vertebræ as if back would break.—Spine sore, with stiffness < in loins.—Shooting across loins.—Pain in sacrum, < standing, with pressure downward in hypogastrium; between hips, not much > lying, with pressure downward at anus.—Dull pain in sacrum.—Sensation of pulling upward from tip of coccyx.

21. Limbs.—Limbs cold, clammy; more when excited or nervous.—Burning in palms and soles all night, constant desire to find a cool place for them.—Out-pressing sensation in hands, arms, feet, and legs in early part of night.

22. Upper Limbs.—Tearing from l. shoulder to hand.—Cramping pain in l. shoulder and mamma.—Trembling of l. arm with weakness.—Pain in r. arm and wrist (with heart complaints).—Hand and arms, stiff, hot; painful.—Trembling of hands.—Paralytic pricking in fingers and hands.—Cramp in fingers.—Stiffness of fingers almost like paralysis; difficult to guide pencil; pricking in (tips of) fingers and hands; sensation of electric current, first in fingers of l. hand then of r.; running up arms.—Cold hands; cold perspiration on back of hands.

23. Lower Limbs.—Staggering gait; extreme difficulty in walking straight.—Stitching pains from ilium to ilium or from pubes to sacrum.—Pain in r. hip extending down thigh.—Sensation as though cool wind blowing on lower limbs.—Trembling of knees, abdomen, back, and hands.—Legs ache, cannot keep them still.—Joints seem to lack synovial fluid.—Cramps in both legs and feet after stool in morning.—Cramp in toes.—Burning beginning in soles and palms, thence over body; < in bed, constant desire to find a cool place.—Pains severe, fleeting, quick, sharp, or circumscribed; coldness or cold perspiration; l. leg more affected.

24. Generalities.—Weak, trembling, nervous.—Faintness, < in a warm room, or after being on feet a long time.—< Walking, yet pains so much worse after ceasing to walk that he must walk again.—Pains in small spots; shifting pains.—Throbbing pulsations, as though the blood would burst through the veins.—Restlessness.—Hysteria.

25. Skin.—Irritation of upper chest and arms and a fine rash about forehead and around borders of the hair, with much itching.—Skin of abdomen feels stiff and stretched.—Tingling, formication, burning itching of various parts.

26. Sleep.—Yawning, stretching, drowsy.—Slept soundly, but suddenly waked by desire to evacuate bladder.—Inability to sleep, < before midnight.—Restless sleep; wild feeling in head; everything seems too hot; dull headache, palpitation, mammary pain.—Dreams: frightful and laboured; unpleasant; voluptuous; half-awaking; intervals seem very long (of dead people).

27. Fever.—Chills run downwards; violent beating of heart; congestion to chest and burning heat all over; constriction about heart.—Chills from face downwards; chilly when in cool open air, yet otherwise >.—Great heat and lassitude in afternoon.—Throbbing all over.

Limulus.

Limulus cyclops. L. polyphemus. Polyphemus occidentalis. King-crab. Horse-foot. Sauce-pan. (Coast of North America). N. O. Merostomata, or Pœcilopoda of the Crustacea. Triturations of the dried blood.

Clinical.—Apoplexy. Cholera. Constipation. Diarrhœa. Fever. Hæmorrhoids. Sea-bathing, effects of. Skin, affection of.

Characteristics.—*Limulus* was proved in the lower triturations by Hering, Lippe, and others. Among the symptoms recorded the most notable was a rush of blood to the face, with heat of face and over whole body, recalling a similar symptom of *Ast. r.*, another sea-animal. The remedy does not appear to have been much used, and Hering has omitted it from his *Guiding Symptoms*. The only italicised symptoms in Allen are these: "Frequent rush of blood to the face, and *painful fulness of the whole right half of the body*, especially here and there, and in the lower extremities" (a symptom of Hering's from the first centesimal trituration); and "heat, burning, and constriction in abdomen" (Blumenthal, a grain of 1st trit). There was much gastro-intestinal disturbance, and in one prover a choleraic condition. Headache caused by straining at stool. The flushing of the face was < in afternoon. There was dyspnœa < by drinking. Coryza < drinking cold water. Heat in face alternated with confusion in head.

Relations.—*Compare:* Homarus, Ast. r.; Fer. (flushing); Indium. (pains in head from straining at stool); Ars. (ill-effects of sea-bathing).

SYMPTOMS.

1. Mind.—Very indifferent mind with constant confusion of head.—The great disinclination to wash and inability to accomplish much, which he had experienced since the sea-bath, disappeared completely during the day and gave place to mental quiet, steadiness, with constancy and perseverance in performing very irksome duties.—(Very difficult to recollect names.)

2. Head.—Confusion of whole head attended with dulness and heat of face; together with dull feeling over whole body, esp. in abdomen, where it increases to a kind of burning in evening.—Stool followed by headache.—Pressure in head > after running from nose.—Feeling of warmth r. side of forehead.—Pressure on r. side of head, deep internally, extending back and forth several times during the day.

3. Eyes.—Feeling of warmth above eyes.—Pressure about eyes deep in bones.—Violent pains drawing back and forth behind l. eyeball.—Lachrymation; of r. eye.

4. Ears.—Stopped sensation; bubbling deep in r. ear; evening.

5. Nose.—Sneezing and fluent coryza all day.—Running from nose renewed after a glass of cold water; feeling of heat in face and over whole body as in fever; after a while prickling as in perspiration with only moist skin.—Snuff has a greater effect than usual in evening.

6. Face.—Lines in face as in dying person (in a kind of cholera).—Rush of blood to face.—Jerking pain in l. side upper jaw, evening.

8. Mouth.—Frequent gnawing pain in last upper back teeth, now r., now l.—Mouth slimy, with small pasty, insufficient stools, morning.—Taste: metallic, of the drug, and general sensation as if he had taken medicine; sweetish, coming from both sides as if from the teeth; earthy, extending back into palate.

9. Throat.—Much hawking.

11. Stomach.—Pressure in pit of stomach, and decided heat of face.—Eructations of water tasting like bad eggs.—Nausea with general sweat.—Deathly nausea; became as white and cold as marble; constant vomiting and diarrhœa; lines of face as in a dying person.

12. Abdomen.—Profuse emission of loud (very offensive) flatus.—Pain here and there in all places in abdomen.—Warmth and painful sensation in abdomen.—Heat, burning, and constriction in abdomen.—Cramp-like pain.—Cutting colic, with feeling of heat.—Sensation as though he had a dissolving acid in intestines, and all the pains seemed to be caused thereby; as though a gangrene in stomach, and then burning in intestines.

13. Stool and Anus.—A painful swelling, thick as a finger, and very hard nodes, like peas, l. side of anus; he was obliged to lie with limbs spread apart.—Piles l. of anus, following a hard, nodular, lumpy stool, evacuated with pressure, < riding in carriage, very painful at night on going out.—Burning and constriction in anus.—A cooling-burning in small spots in anus.—Two diarrhœa-like stools, greenish grey, without pain (first morning).—Stool very watery towards the end.—Desire for stool after dinner; only wind, and after much pressing a few lumps; headache caused by the straining.—Constipation; he feels the stool in the bowels long before the evacuation, as if he were unable to evacuate it.—Hard stool.

15. Male Sexual Organs.—Burning l. side of scrotum.—Increased sexual desire and power; but more difficult emission of semen.—Emission wanting during coition.

17. Respiratory Organs.—Voice husky; must constantly hawk, though the voice remains weak and hoarse, with difficult respiration, evening.—Cough during the

afternoon sleep repeatedly waking him.—Sudden violent cough.—Respiratory troubles after drinking water, in afternoon and repeatedly afterwards.—Dyspnœa after drinking water.—Peculiar difficulty of breathing in lower chest as if an impediment below diaphragm, cannot take deep breath even when outstretched, as if it were too full there, in afternoon, < evening.

18. Chest.—Oppression of chest, weakness and yawning.—Suffocative swelling up in middle of chest behind sternum, taking away breath, and, when violent, becoming painful, as from beating of waves in aorta.—Violent pains below sternum, like transient cutting from above down, and from r. to l., < on stretching out r. arm; in forenoon; then at noon; then at 2 p.m.

20. Back.—Pain in back; in small of back and loins, bruised feeling on bending back.

21. Limbs.—Weakness in limbs.—Cramp-like sensation in limbs.

22. Upper Limbs.—Violent pain in l. metacarpal bone; then shivering and coldness with headache above eyes; again in hands.

23. Lower Limbs.—Painful sensation of fulness in lower limbs.—Pain in r. hip-joint, posteriorly, as if dislocated, < by certain motions.—Violent bruised pain in both hip-joints, < l.—Right heel feels benumbed on standing on it.—Remarkably sore pain in both heels, when walking and stepping.

24. Generalities.—Relaxation of mind and body.—Sudden great weakness.—Heat of day at noon intolerable.—Inclination to stretch.—Peculiar feeling as if poisoned.—Frequent rush of blood to face, and painful fulness of whole r. half of body, esp. here and there and in lower limbs.

25. Skin.—Burning itching points here and there immediately.—Small burning itching spots on face.—Small brownish spots on backs of both hands as if warts would form.—Itching and eruptions like small weals on l. shoulder and in hollow of both knees, lasting more than a week, < r. side.—Eruptions on hands, small itching vesicles, esp. on backs of fingers.

26. Sleep.—Much yawning with weakness evening.—Sleep and sleepiness all day.—Sleep at night bad.

27. Fever.—Chilliness with constant trickling from nose.—Cold and white like marble, in cholera.—Feeling of heat in face and over whole body.—Reflexion causes heat of face in evening.—Burning in palms.—General sweat with nausea.

Linaria.

Linaria vulgaris. Toad-flax. N. O. Scrophulariaceæ. Tincture of fresh plant.

Clinical.—Diarrhœa. Enuresis. Fainting. Hæmorrhoids. Ophthalmia. Tongue, roughness of; prickling on.

Characteristics.—*Linaria* has been proved by Müller, Raidl, and others. It produced confusion in the head; thirst, with rough tongue; constriction of the throat; nausea, vomiting, and diarrhœa; profuse urination; oppression of the breathing and stitches in the chest. Farrington commends it for cardiac fainting: "faints dead away without apparent cause"; and also in enuresis: "enuresis with frequent painful urging to urinate causing patient to rise at night." Carleton (*H. P.*, xii. 526) has seen it produce,: "fainting feeling three or four times a day; fainted away completely once." Coldness was a prominent feature, and the symptoms were much < by walking in open air; > by taking tea with milk. In domestic practice *Linar*. has long been used as a lotion for inflamed eyes, and as an application for painful piles. It is said to be purgative and diuretic.

Relations.—*Antidoted by:* tea in milk. *Compare:* Digit. (fainting), and other Scrophulariæ. Caust., Eu. purp., Equiset. (enuresis).

SYMPTOMS.

1. Mind.—Peevish mind.—Indifference.—Stupid feeling of indifference, ill-humour, with dull pain in forehead, with heat after the sleep, lasting till midnight.

2. Head.—Confusion of the head with irresistible sleepiness.—Pressure in forehead.

8. Mouth.—Dryness of tongue, morning on waking, with thirst for water before rising, water tasted badly, seemed rough, glided unpleasantly over tongue, papillæ elevated.—Burning prickling on tongue, extending down into throat, smoking = tickling irritation to cough, could scarcely continue to smoke.—Saliva increased, frequent spitting.—Taste of blood in mouth.

9. Throat.—Sensation of constriction in throat; as if a ball lodged in it which should be swallowed.

11. Stomach.—Appetite: diminished; lost.—Thirst.—Eructations: frequent, preceding and following usual stool; of odourless air, afterwards also of water; sweetish; bitter.—General sick feeling with sleepiness and sleep for two hours (10 a.m. to 12).—Vomiting of thin, mucous substances followed by disappearance of all gastric symptoms.—Very acute pressure in stomach < by touch.

12. Abdomen.—Griping about umbilicus, increasing in intensity from time to time.—Rumbling, and in the course of two hours five watery stools with very little pigment.—Griping, half an hour afterwards a watery stool.

13. Stool and Anus.—Burning in anus.—Diarrhœa; stools thin; ten watery, bileless stools with much flatus.—Very dark-coloured fæces.

14. Urinary Organs.—Great desire; frequent inclination; quantity increased and frothy.—Urine very high-coloured, like dark beer, passed more frequently.—(Enuresis.)

16. Female Sexual Organs.—Menses a few days early.—Menses which had just ceased returned the same day she took a new dose.

17. Respiratory Organs.—Violent paroxysm of cough, obliged to stand quite still to cough it out and regain breath.

18. Chest.—Oppression, making respiration difficult and causing cough.—Transient stitches here and there, deep in chest and abdomen.

24. Generalities.—General prostration.—Symptoms > for short time after drinking tea with milk; severely and persistently < on walking in open air.

25. Skin.—Itching in throat, chest, and upper back.

26. Sleep.—Frequent yawning and stretching with feeling of weakness and prostration.—Irresistible sleepiness.—Sleep forepart of night, quiet and refreshing as if he had slept all night; rest of night sleepless with confused dreams towards morning.

27. Fever.—Coldness.—Alternations of chills and heat.

Linum Catharticum.

Linum catharticum. Purging-flax. N. O. Linaceæ. Tincture of whole plant.

Clinical.—Amenorrhœa. Bronchitis. Cough. Diarrhœa. Hæmorrhoids. Laryngitis. Rheumatism.

Characteristics.—The proving of *L. cath*. (by Stokes and Galston) shows that it deserves its name. Colic and diarrhœa of loose, bright yellow stools, and also of slender, feculent stools were most marked. The sexual functions were depressed; in men absence of desire; in women menses were omitted or delayed. There was

much nasal and respiratory catarrh, stuffed-up condition of nose and chest, troublesome cough and difficult expectoration of frothy, yellow mucus. The cough was < walking in open air. Headache > in open air, and > by eating.

Relations.—*Antidoted by:* Sul. (headache). *Compare:* Lin. usitatiss.

SYMPTOMS.

1. Mind.—Dulness and depression.—Irritable.

2. Head.—After sleep, confusion of head; malaise as from cold.—Congestion and vertigo on throwing head back.—Headache: > open air; > after eating.—Severe frontal headache, obliging to lie down after dinner (> by Sul. Ø).—Dull headache, as of weight on brow, < holding head back and after reading.

4. Ears.—Singing in l. ear for some hours in evening.

5. Nose.—Sneezing; at night.—Mucus from nose, occasionally rose colour.—Fluent coryza.—Nose stopped, and running a clear, profuse mucus from first one nostril for several days, then the other.

8. Mouth.—Tongue: deeply furred; foul.—Mouth dry without thirst.—Taste: insipid; foul; bilious.

9. Throat.—Much hawking of yellow mucus, sometimes tinged with blood.—Rawness in throat when out in open air after breakfast.

11. Stomach.—Eructations tasting of bile.—Rising of food, evening.—Repletion.

12. Abdomen.—Rumbling and slight uneasiness.—Colicky pains.—Occasional griping and distension, < after food.—Tormina and tenesmus.—Abdomen tender on pressure.

13. Stool and Anus.—At night pressing in rectum as if swollen.—Smarting at anus after stool.—Smarting stinging in anus as if piles were coming, in evening.—Tenesmus.—Several motions of small, slender-formed fæces.—Stools free; urging compelling to obey instantly; rectum seemed to have little grasp of the fæces, which pass as if pushed out from the colon.—Uneasiness in abdomen, followed by a very loose, bright yellow, mucous stool, with some urging, forenoon.—Full, soft, formed stool.—Feculent stool of slender coils, sinking to bottom of utensil.—Difficult stool with pressing down in rectum; fæces covered with epithelial-like shreds resembling worms; gelatinous mucus in form of rolls; evening.—Bowels continued costive several days, then relaxed with pressive force of rectum, then alternately costive and relaxed.—Costive stool with much pressure.—No stool for several days.

14. Urinary Organs.—Itching at orifice of urethra.—Frequent desire to urinate.—Urine straw-coloured, strong-smelling.

15. Male Sexual Organs.—Feeble erections; diminished desire.

16. Female Sexual Organs.—Menses: delayed; missed.

17. Respiratory Organs.—Voice hoarse.—Cough: dry, hard; tickling teasing with frothy mucous sputa; < in, or returning from, open air.—Expectoration, with much difficulty, of frothy, and some yellow, mucus.

18. Chest.—Great pain in chest, < by any movement, on deep inspiration.—Chest: much stuffed sore.

19. Heart.—Pulse full and quickened.

22. Upper Limbs.—Slight shooting down muscles of arms in evening.—Slight shooting pains in l. and r. shoulder-joints.

24. Generalities.—Languor towards night; on waking.

26. Sleep.—Sleepy after dinner.—Sleep profound.—Insomnia.—Dreams: lascivious; of travelling; of cholera.

27. Fever.—A cold feeling in streets as from a blast of cold air.—Much heat of body and moderate sweat.—Sweats freely.

Linum Usitatissimum.

Linum usitatissimum. Flax. (Source of Linseed or Flax-seed.) N. O. Linaceć. Trituration and tincture of seed, or meal. Trituration and tincture of the oil. Tincture of freshly-made poultice.

Clinical.—Asthma. Convulsions. Hay fever. Tongue, paralysis of. Trismus. Urticaria.

Characteristics.—Linseed-tea and Linseed poultices are among the most innocent of domestic remedies; but occasionally *Lin. us*. has produced effects of the most violent kind. In *H. W*., xx. 316 I quoted the case of a woman in whom the application of a linseed poultice to an ulcer over the right shin-bone produced an attack of asthma which nearly proved fatal. It was not the first time this had happened to her, and she protested, but in vain, against the doctor's order. If a linseed poultice even came near her she felt constriction of the chest. The doctor

who ordered the poultice, and reported the case, was speedily summoned to witness the worse attack of asthma he had ever seen. The patient was livid and struggling for breath. When the poultice was removed the symptoms gradually subsided. A crop of herpes appeared where the poultice had been, and an eruption of urticaria over back, chest, and arms. The *dust* had no effect in this case; but Dr. A. G. Towner related his own experience with it in the *Era* (quoted *H. W.*, xxvii. 513). When in New York State he could handle Linseed in all forms freely, but after removing to Illinois it affected him most powerfully. Once he rubbed his eye whilst preparing a poultice: intense conjunctivitis came on at once, chemosis, and in an hour the eye was closed, and did not come right again for three days. The irritation passed along the lachrymal duct, and the same burning and irritation took place in the nose, nearly driving him wild. The swelling closed the nostrils, and he had to breathe through his mouth. The irritation still spread, affecting the throat, which was covered with large white blisters, and a desperate attack of bronchial asthma supervened, slightly relieved by large doses of *Ipec*. In two hours the skin became affected with an attack of "hives" (urticaria): "I was one complete blotch from the crown of my head to the end of my toes, a complete bodily eruption, smart, sting, burn." He had five of these attacks. The steam of a poultice would cause coryza; the dust would occasion a complete attack. One was caused by inadvertently eating a lozenge containing linseed. An entirely different set of symptoms is recorded by Allen (*Appendix*), in which a girl, aet. 19, drank a cupful of milk into which she had poured by mistake some spoonfuls of linseed oil. Immediately she felt a fulness of stomach, and precordial uneasiness. She vomited, as she thought, all she had drunk, and had copious stools. She soon went to bed, where she was seized with spasms which were most peculiar. Head shaking spasmodically in measured time; the eyes and prominent temporal muscles jerking rapidly. Jaws clenched. Tongue paralysed and drawn down into throat. All the time the brain was quite clear. A clyster of *Asafśtida* gave temporary relief, but the symptoms recurred for a time with renewed violence. On the third day she was quite recovered; but her health was not good for some time. From these remarkable cases it will be seen that *intense irritation* is the rule of *Lin. us*. Skin and air passages with their offshoots are involved (asthma and skin eruptions are often found associated in natural disease) in certain cases; the nerve centres mothers. It is plain from these experiences that the "soothing" effects of Linseed-tea and Linseed poultices are really of a specific and homśopathic nature. A teaspoonful of unground Linseed, steeped in warm water for half an hour and then taken, acts as a laxative.

Relations.—*Antidoted by:* Ipec. (?), Asafśt. (?). *Compare:* Lin. cath.; in asthma and skin affections, Ars., Chloral., Apis, &c.

SYMPTOMS.

1. Mind.—Perfectly conscious, but only able to express herself by signs.

2. Head.—Heavy frontal headache.—Violent pain in cheeks and temples.—Rigid and prominent temporal muscles, jerk rapidly.—Head shakes spasmodically in measured time.

3. Eyes.—Unpleasant heat, burning, dryness, and intense conjunctivitis, chemosis, swelling of lids completely closes eye in one hour; śdema persisted three days.

5. Nose.—Irritation rapidly extended through lachrymal duct to nose, heat, burning dryness with indescribably scraping, itching sensation, nearly driving him wild.—Nasal passage completely closed, was compelled to breathe through mouth.

6. Face.—Face red and slightly moist.—Violent, dull pain in cheeks and temples.—Jaws immovably clenched.

8. Mouth.—Complained that her tongue was drawn down into her throat.—Complete paralysis of tongue.—Could not articulate a syllable.—Tip of the tongue turned upwards and backwards so as to touch the velum palati.

9. Throat.—Irritation continued (from eyes and nose) down into throat.—Throat filled with large white blisters.

11. Stomach.—Great weight in stomach and severe colic.—Fulness in stomach and precordial uneasiness (almost immediately after swallowing the oil), followed by convulsions.—Vomiting with copious stools.

13. Stools.—Vomiting and copious stools.

17. Respiratory Organs.—A picture of an aggravated case of bronchial asthma; it was with the most extreme effort that I could breathe.—Livid, and struggles for breath; her friends thought she was dying.

22. Upper Limbs.—Upper limbs shaken by spasms, but pliable and uncontracted.

24. Generalities.—Almost immediately (after swallowing the oil) felt a fulness at the stomach and a precordial uneasiness, went to bed, where she was seized by spasms.—She lay on her back, head moved rhythmically; jaws completely clenched, had to be prized open.—Did not recover speech till evening.—Bruised feeling in elbows and knees remained with prostration, and she was left with impaired health.—Livid and struggling for breath.

25. Skin.—A crop of herpes (where the poultice was applied).—Urticaria.—One complete blotch from crown to toes, smarting, stinging, burning.

Lippia Mexicana.

Lippia Mexicana. N. O. Verbenaceæ. Tincture of whole fresh plant.

Clinical.—Cough.

Characteristics.—The *Chicago Med. Times* (*H. W.*, xxxii. 185) gives this indication for *Lippia*: Hoarse ringing or barking chest cough, without expectoration, occurring every winter, especially in women. The dose recommended is ten to thirty drops every two to four hours.

Lippspringe.

The waters of the mineral spring in Lippspringe, Westphalia, containing Sulphates of Sodium and Calcium, Chloride of Magnesium, and other salts in smaller proportion, with carbonic acid, nitrogen, and oxygen gases, which are freely evolved. Dilution.

Clinical.—Diarrhśa. Hćmoptysis. Hćmorrhoids. Jaundice. Leucorrhśa. Menorrhagia. Urinary calculi. Urticaria. Worms.

Characteristics.—*Lippspringe* is a cold, sulphurated, saline spring, and very gaseous, of saline and piquante taste. "It is used in drink and bath as a refreshing and laxative medication. It is vaunted above all against commencing phthisis complicated with hćmoptysis, when the subjects are plethoric, irritable, and liable to pulmonary congestion" (Constantin James). The homśopathic data are derived partly from provings and partly from observations on patients. The purging effect was very marked, as also the diuretic. The urine was increased in quantity and the urging great; in one case many calculi were found. There was > after micturition in one case—"a peculiar feeling of comfort." "Itching of nose and anus" suggests *Lipp*. as a worm remedy. Alternation of bloody stools with hćmoptysis occurred in one case. Jerking of the limbs; uneasiness; cramp in calves. Perspiration and diarrhśa were < at night. Sneezing, palpitation, cramp and restlessness were < evening. Heaviness of chest was < after coitus; and < by smoking. < By walking. > After micturition.

Relations.—*Compare:* Calc. sul., Nat. sul., Mag. mur. Restlessness, Rhus, Zn., Caust. > By micturition, Eug. j., Lith. c. < After coitus, K. ca.

SYMPTOMS.

1. Mind.—Depressed; sad; apprehensive.—Apprehension < riding in carriage; a kind of anxiety in the heart of impending misfortune with home sickness.—Irritable.—Great desire to write.—Weak memory.

2. Head.—Vertigo: while walking, compelling to stop; whirling; with heaviness of head and sleepiness; after eating obliged to sleep.—Sudden headache, with drawing in nape.—Drawing-sticking r. side of vertex.

3. Eyes.—Redness of white of eye, slight pressure in ball, lachrymation.—Flickering before eyes like a bright flaming star, preventing distinct vision, < when reading in recumbent position.

4. Ears.—Violent itching in ears and nose.—Roaring in both ears.

5. Nose.—Itching: of nose and anus; of nose so that it seems she would rub it off.

6. Face.—Suffering expression; face yellowish-white; sickly-looking.

8. Mouth.—Teeth sensitive to cold water.—Bitter taste, morning.

9. Throat.—Dryness of throat in evening, obliged to drink, which did not >; afterwards > by holding sugar in mouth.—Sore throat so she could scarcely speak or swallow.

11. Stomach.—Increased appetite.—Eructations: as soon as she goes into the bath; tastes of the gas of the spring.—Retching and vomiting of mucus, morning.—Vomiting of sour water, with paroxysmal colic.—Stomach feels as if disordered by sour grapes; sour vomiting with much mucus, chilliness, loss of appetite.—Pressive cramp in stomach < lying on back, after dinner; > lying on side.

12. Abdomen.—Sticking pains in liver.—Prickling in l. hypochondrium.—Distension.—Loud rumbling and emission of much offensive flatus.—Feels "shrunk together," as if abdomen constricted to one-third.—Griping as before stool.—Periodic pressive pain in hypogastrium.

13. Stool and Anus.—Protrusion of rectum after lying down.—Piles with burning, sticking pains during the hard stools; lost much blood daily for fourteen days.—Very violent itching in anus, obliging rubbing.—Four pasty stools.—Stools continued to be followed by mucus and often blood, sometimes thin, sometimes clotted, for a long time.—Stool in morning like sheep-dung, with some blood.—Very yellow stools as in little children.—Stools bloody (in patient with hćmoptysis, which disappeared after occurrence of the bloody stools).—Constipation, stool hard, difficult.

14. Urinary Organs.—Slight mucous discharge from orifice.—Burning cutting while urinating.—Great urging (immediately on rising), unless call instantly obeyed urine passed involuntarily.—Frequent urination at night; must make great exertion before urine is pressed out; urine smells of violets.—Two or three ounces of small calculi passed in eight days.—Increased secretion; urine clear watery.

15. Male Sexual Organs.—Smegma preputii increased, thin.—Emissions two nights in succession (in one who had never had them before).

16. Female Sexual Organs.—Increased mucous discharge from vagina; two days later some bloody streaks in the mucus.—Leucorrhśa: with itching in rectum; acrid, with soreness on margins of labia majora, < from walking, painful on rubbing.—Menses three days early and more profuse.

17. Respiratory Organs.—Tickling in larynx woke him from afternoon nap and lasted till he raised some mucus.—Trachea feels raw and dry.—Hoarseness, roughness in throat, while trachea feels as if covered with glutinous, dry substances, afternoon, > riding in carriage.—Dry cough, morning, with tickling in throat, < talking.—Violent catarrhal cough with easy expectoration of enormous quantity of watery, glassy, tenacious mucus.—Hćmoptysis; blood thin, bright red, occurring nearly every morning after rising (after drinking the water and inhaling the gases the previous evening).

18. Chest.—Violent anxiety in chest (in the back).—Fulness in chest immediately after taking the water and breathing the gases.—Heaviness and pressure on chest while walking.—Fine suddenly piercing, transient Stitches in both sides of chest about a handsbreadth externally and above the nipples.—Stitches in the mamma.

19. Heart.—Violent palpitation every evening (in a healthy woman), obliged to stop drinking the water.—Increased rapidity of pulse.

20. Back.—Bruised sensation between shoulders.—Pain in loins, with pressure and tension, waking him several times in night, < lying l. side.—Pain in small of back with griping in abdomen.

21. Limbs.—Jerking in limbs, continued long after the pains.

22. Upper Limbs.—Paralytic pain in whole r. arm.—Great distension of veins in backs of hands after inhaling the gas.—Trembling of hands (< r.) while sitting, with anxious palpitation and orgasm of blood in chest.

23. Lower Limbs.—Suddenly, transient pain shooting from knee to ankles.—Acute, paralytic-like pain in front of upper end of tibia, when putting foot forward in walking.—Weariness of feet after a short walk.—Burning pains in corns.

24. Generalities.—Sudden weakness; dizzy; restless; jerkings through whole body.—Peculiar feeling of comfort after micturition.

25. Skin.—Jaundice.—Fine, red, or pale red, discrete eruption size of linseed, smooth, itching violently, while in bath, and in evening in bed; larger pemphigus-like vesicles developed later on continuing the baths.—Eruptions on arms, hands, and face like bee-stings with swellings an inch and a half in diameter, like nettle-rash; itched so violently could scarcely Sleep.

26. Sleep.—Much yawning while inhaling the gas.—Sleepy: falls asleep at unusual time; after dinner.—Unremembered, anxious dreams with frequent waking.—Many dreams of dead people and coffins.

27. Fever.—Chilliness.—Shivering with thirst.—Flushes of heat with flickering before eyes.—Orgasm of blood, flushes of heat with anxiety; obliged to loosen everything about throat and wrists.—Glowing heat of face.—Sweats easily.—Profuse sweat in morning, obliged to change his shirt.

Lithium Benzoicum.

Benzoate of Lithium. $LiC_7H_5O_2$.

Clinical.—Uric acid, deposit of.

Characteristics.—Hale quotes T. O. Summers (*Nashville J. of Med. and Surg.*) as saying that *Li. ben.* had great effect in diminishing uric acid deposits and increasing the free hippuric acid of the urine. "It acts upon the urine before it leaves the blood." Bearing in mind the powerful action which each of its elements possesses over the urinary functions, homœopaths can understand this action, and future experience will probably extend it.

Lithium Bromatum.

Bromide of Lithium. Li. br. Trituration. Tincture.

Clinical.—Apoplexy. Epilepsy. Speech, thick. Vertigo.

Characteristics.—Weir Mitchell, quoted by Hale, is the authority for this medicament. He gave thirty grains to a gentleman (who had had one previous attack of apoplexy and was hemiplegic) for these symptoms: Numbness, vertigo, headache, and thickness of speech. The one dose removed them in half an hour.

Mitchell gave it in epilepsy when other bromides were not borne. Hale mentions that it removed these symptoms in a case: After any prolonged mental exertion, flushed face, insomnia, and intense pain between the shoulders.

Lithium Carbonicum.

Carbonate of Lithia. Lithic Carbonate. $Li_2 CO_3$. Trituration.

Clinical.—Albuminuria. Aneurism. *Angina Pectoris*. Barber's itch. Bubo. Dyspepsia. Eyes, affections of. Gall-stones. Gastralgia. Glands, swelling of. Gout. Headaches. *Heart, affections of Hemiopia*. Hernia. *Menstruation, disorders of*. Nose, affections of. Obesity. Ossification of arteries. Prostatitis. Retina, anæmia of. Rheumatism. Spleen, affections of. Syphilis. Urethritis. Urinary disorders.

Characteristics.—Hering introduced and made the first provings of *Li. c*. It affects the entire organism, but notably head and eyes, urinary organs, heart, and joints. In arthritic complaints accompanied with heart or eye symptoms it is very likely to be needed. Recurring attacks of acute inflammation of the small joints. The skin of the *Lith*. patient is dry and harsh like a nutmeg-grater. According to Allen, the *Lactate of Lithia* has been found valuable for subacute rheumatism of the shoulder-joint. "Soreness" is a note of *Li. c*.: Bruised spots from falls or blows. Bones, joints, muscles, whole body sore as if beaten. Rheumatic soreness in heart region. Eyes pain as if sore. "Pressing from within outward" is another common symptom: in head; abdominal ring; perineum; chest. There are two grand characteristics about the heart symptoms: < bending forward; and > after urinating, though < on rising to urinate. This > after urinating may be compared with < on cessation of menses: "Menses cease suddenly and headache comes on." A pain in heart occurs before and at time of menses. The heaviness is > whilst eating, and < after. A good deal of confusion in the head. The nose is red and inflamed; there is dropping of solid lumps down the back of the nose. Acidity of the stomach. *Sensations* are: Temples as if bound. Head too large. Eyes dry. As if veil before eyes. Lancination as from red-hot needles in bubo. Arm as if paralysed. Border of foot and soles as if gouty; itching. Prostration of whole body, especially knee-joints and sacrum. Paralytic stiffness of whole body. Most symptoms are < at night or early morning. Hot water < itching. Open air = dropping from nose and constriction of chest. Inspired air feels cold even into lungs. Going out > headache. In general, rest > and motion <; but lying down < headache and cough. Many symptoms of *Lith. c*. have Concomitants in other parts.

Relations.—*Compare:* Alumina (asthenopia, dry eyes, eyes pain when reading); Eug. j., Lipp. (> after urinating); Bism. (gastralgia); K. bi., Coral. (inspired air feels cold); K. bi., Sep., Teuc. (catarrh with discharge of solid chunks from posterior nares); Led., Kalm. and Benz. ac. (valvular deposits.—Benz. ac. offensive urine);

Zn., Con., and Aur. (sudden jerks or shocks about heart); Kalm. and Calc. (gout and rheumatism); Calc., Benz. ac., Lyc. and Am. ph. (nodular swellings); Dig., Cyc., Sel., Berb., Caust., Lyc., Cop. and Apis (prostatitis and urethritis); Gettys. (scrofulous joints).

Causation.—Bruises. Falls.

SYMPTOMS.

1. Mind.—Difficulty in remembering names.—Disposed to weep about his lonesome condition.—Anxiety, hopeless all night.

2. Head.—Confusion of head: with pain in sacrum; with out-pressing pain in l. abdominal ring.—Pain and heaviness over eyes < towards evening.—Pain in l. temple, extending into orbit, with gnawing in stomach; began an hour before dinner; > while eating, but returning soon after; and remaining as a pressure in temples until night, and only goes away after falling asleep.—Pains in small spot in r. temple.—Pressure in temples from without inwards, with a pressing pain in middle of chest.—Tension as if bound in temples, with half-vision.—Early on awaking violent headache in vertex and temples (after sudden cessation of menses), with nausea.—Heavy weight on vertex with pressure on l. temple.—Headache like a stitch, superiorly in vertex, on r. side sensitive when touched.—Headache < when lying down; it pains everywhere; > when sitting up; > by going out.—Confusion of head.—Looking at anything < headache; can hardly keep eyes open; they pain as if sore from morning till noon.—Trembling and throbbing in head, pains in heart extend to head.—Head seems too large.—Head externally sensitive.—(Milk-crust.)

3. Eyes.—Stitches in r. eye.—Eyes pain as if sore.—Sensation of dryness and pain in eyes after reading.—Sensation as if sand in eyes.—Pain over eyes with half-vision.—Sunlight blinds him.—Black motes before eyes, eyes sensitive after using them by candle-light; asthenopia.—Uncertainty of vision and an entire invisibility of r. half of whatever she looked at (during second day of menstruation); if two short words occur in succession, that on r. hand is invisible.—Scrofulous inflammation of eyes with hardening of meibomian glands.—Ophthalmia, red sclerotica, muco-purulent discharge; sticking pains in eyes, photophobia, sensation as of a veil before them.

4. Ears.—Earache, l. side, from throat, with prosopalgia.—Pain behind l. ear, in bone, extending towards neck.

5. Nose.—Nose obstructed above, < morning and forenoon.—Blows nose very much, evening, much mucus remains behind in choanæ.—Coryza; dropping from nose in open air.—Nose swollen, red, esp. r. side, sore internally, shining crusts

form in it; dry as if inflamed (at same time frequent urinating at night, disturbing sleep).

6. Face.—Pain in r. side of face (afternoon) from root of the tooth that has been sawn off, extending to temple, followed next day by same pain in l. side, passing from throat to l. ear, causing earache and moderate, brief pain in l. temple.—Glandular swellings l. side of face, some hard, some suppurating.

7. Teeth.—Teeth feel numb, dull and loose, cannot bite on them.—Toothache r. side.

9. Throat.—Sore throat extending into ear.—Expectoration of mucus from choanæ and out of fauces in solid lumps, esp. morning and forenoon.

11. Stomach.—Gnawing in stomach < before a meal, > while eating.—Nausea and gnawing in stomach.—Nausea, with fulness in temples; with headache.—Acidity in stomach.—Fulness in pit of stomach, cannot endure pressure of clothes.—Sticking burning extending upwards in epigastrium.

12. Abdomen.—Pressure in hepatic region.—Violent pain in hepatic region, between ilium and ribs.—Sticking pain in l. hypochondrium (spleen).—Feels swollen as if distended with wind.—Violent pain across upper abdomen.—Out-pressing in left abdominal ring.—Violent pain horizontally in hypogastrium, in upper region of bladder.—Buboes; l. groin.

13. Stool and Anus.—Diarrhœa after fruit (or chocolate).—Very offensive stools (during night).—Diarrhœa; stools light yellow.—Very stinking discharge of flatus.—Itching in anus, sharp, sudden, short.—Violent, painful, dull stitch in perineum near anus, from above downward, and from within outward, when walking.

14. Urinary Organs.—Sensitive pain, sharp pressure, in region of bladder, < r. side after urinating.—Tenesmus vesicæ and micturition (evening while walking).—Soreness of bladder and sharp, sticking pains in neck of bladder, on r. side, with soreness; frequent urination; pains in r. kidney.—Pain in r. ureter, and through spermatic cord into testicle.—Fugitive, sensitive pains in lower region of bladder, somewhat towards r. before urinating; pains extending into spermatic cord, more towards l., after urinating.—Tenesmus of bladder for a while, then discharge of clear, frothy urine, thirteen ounces, more than he could retain in health.—Quick, strong tenesmus.—Frequent and copious micturition (disturbing sleep).—Turbid urine with mucous deposit.—Less urine though he drinks as much as usual.—Burning in urethra.—Urine scanty and dark, very acrid.—Dark, reddish-brown deposit.—On rising to urinate a pressing in region of heart, which did not cease till after urination (morning).

15. Male Sexual Organs.—Erection after urination at night.—Greenish-yellow discharge from urethra, thick, profuse, alternating with hæmaturia.—Pain: in ureter, spermatic cord, and testicle; in testes when sitting, stitches in penis.—Burning in urethra.

16. Female Sexual Organs.—Menses: late, scanty; cease suddenly and headache comes on.

17. Respiratory Organs.—On inspiration air feels cold even into lungs.—Violent cough in evening, while lying down, compelling to rise, without expectoration; the irritation to cough is in a little spot, posteriorly and inferiorly in throat.

18. Chest.—Pressure in middle of chest.—Constriction of chest when walking (after breakfast), followed by expectoration of much mucus, seemingly from middle of sternum.

19. Heart and Pulse.—Rheumatic soreness in region of heart.—Violent pain in region of heart as she bent over bed, morning on rising.—Sudden shock in heart.—Throbbing; like a dull stitch in region of heart.—Pains in heart after pains in bladder.—Pains in heart before and at time of commencement of menses.—Trembling and fluttering of heart (after mental agitation of a vexatious character).—Pains in heart before and at time of urinating.—Pressure in region of heart on rising to urinate, > after urination.

20. Back.—Sore feeling r. side near spine, below loins, on small spot; < from pressure; morning on rising.—Stitch in sacrum.—Pain in sacrum, when standing, with confusion of head.—Feeling of prostration in sacrum at night.—Pressure as with a dull point, here and there, internally, as if near sacral bone, in evening; most on l. side.

21. Limbs.—Occasional rheumatic pains in limbs.

22. Upper Limbs.—Pain in r. shoulder-joint near insertion of pectoralis major, at margin of muscle.—Itching-throbbing very sensitive in all the fingers, as if it were in and upon the bones, extending from hands to ends of fingers, only during repose; > by pressure, when grasping, and during motion.—Soreness at margin of nail, with pain and redness.—Burning stitch in ball of l. thumb.

23. Lower Limbs.—Pain in r. hip, later in l.—Rheumatic pains in lower extremities.—Pain in and above knees, esp. when going upstairs.—Prostrated feelings in knee-joints, on going upstairs.—Rheumatic pains in r. foot on awaking at night, > on rising.—Painfulness of feet, ankles, metatarsus, all the toes, esp. of border of foot and sole, as if gouty.—Pain and weakness of feet.—Burning in great toe, esp. around the corns.—Great soreness of corns.—Itching of sole of (l.) foot on inner margin.—Pain in little toes.

24. Generalities.—Paralytic stiffness in all limbs as if beaten; stiff and sore over whole body, in all the bones, joints., and muscles.—Swelling, tenderness, sometimes redness of last joint of fingers, with general puffiness of body and limbs; increase of bulk and weight; clumsiness in walking at night, and weariness in standing; sometimes intense itching of sides of feet and hands at night from no apparent cause, > by very hot water.—Pressing, as if with a dull point, here and there, internally, as if it were near the bone, most in l. side.—Burning stitch which goes from within outwards, and ends in an itching.—Before menses, symptoms < l. side; after menses < r. side.—All symptoms < r. side.

25. Skin.—Itching: at anus; in middle finger around margin of nail; in side of thigh; in sole; in palm.

26. Sleep.—Sleepiness early in evening; late in morning.—Sleep at night disturbed by urination.—Voluptuous dreams, tenesmus vesicæ, and erections, which subside after urination.

27. Fever.—Shudder starting from thorax.—Very copious sweat.—General feeling of heat; sweat on back of hands.

Lithium Lacticum.

Lactate of Lithia.

Clinical.—Rheumatism.

Characteristics.—A chemist, while preparing a combination of *Lactic acid* and *Lithium carbonate*, experienced decided rheumatic pains in the small joints. Berghaus (*B. J. H.*, xli. 380, quoting *N. A. J. H.*) on this hint used *Lith. lact.* in local subacute rheumatism with good effect. Allen says it especially affects the shoulder.

Lithium Muriaticum.

"Dilute Muriatic Acid was saturated with the caustic and Carbonate of Lithium and evaporated." Solution.

Clinical.—Heartburn. Heart, pains in. Nose, sore. Tongue, numb.

Characteristics.—Hering, who proved *Li. c.*, proved also this salt. He put one drop on his tongue. It had a salt taste, but different from common salt; a fatty-salt taste. The tongue became numb as if fat were on it. Pains in the head, back teeth, and heart. Gohrwisch, who took the 3rd dilution, had pains in heart region and notably: Hot, burning uprising in the throat and pit of stomach like heartburn. He also had pains in teeth. The tip of the nose was red, sore, and somewhat swollen.

Relations.—*Compare:* Li. carb.

SYMPTOMS.

2. Head.—Painful dulness r. side of head; also l.; with heat of face.—Pain in middle of vertex.—Pain in forehead above r. eye.—Dull pain through whole head.

3. Eyes.—Spasmodic twitching of r. upper lid.

5. Nose.—Difficult breathing through nose as in catarrh.—Tip of nose red, sore, and somewhat swollen, with a rather sensitive pain, disappeared without suppurating.

6. Face.—Frequent heat in face.

8. Mouth.—Painful dulness in l. lower back teeth.—Pains in hollow teeth l. side.—Salty taste but not like common salt.—Upper surface of tongue numb, as if fat were on it.

9. Throat.—Uprising of something acid and stringy in throat, frequently.

11. Stomach.—Increased appetite.—Uprising of food and sour water.—Warmth in stomach, more l. side.—Frequent eructations.—Hot, burning uprising in throat and pit of stomach like heartburn.—Feeling of heat and weakness of stomach, as after a purge, as though diarrhœa would ensue.

13. Stool and Anus.—Prickling in anus.

18. Chest.—Sharp but not violent pain in lower l. chest, transient, frequently recurring.

19. Heart.—Pain in upper and inner part of heart.

20. Neck and Back.—Dull pressure from between shoulders and lower down on each side of spine between shoulders and small of back.—Constant pain in back; < after remaining seated long in one position.—Aching between shoulders extending through to chest.

22. Upper Limbs.—Trembling pain in l. humerus, extending upward from middle, at different intervals, as if something were dropping or slipping outward.

23. Lower Limbs.—Throbbing in r. ankle.

Lobelia Cardinalis.

Lobelia cardinalis. Cardinal Flower. N. O. Lobeliaceæ. Tincture of fresh plant.

Clinical.—Anorexia. Debility. Headache. Sore throat.

Characteristics.—There is a proving of *Lob. card*. by S. D. R. Dubs, who took ten drops of the tincture in one dose. Dubs' symptoms have been confirmed by a second proving by Kopp (*H. W*., xxxi. 26). The acrid properties of the plant were immediately felt by Dubs, in burning in mouth and throat, which lasted a long time. Sticking and pricking sensation in various parts, especially left chest and left hypochondrium. Oppression of breathing. Headache at base of occiput < by motion and shaking head; stiffness in nape. Throbbing and weakness in lower limbs. Most of the effects lasted two weeks, and it was three weeks before the appetite returned. There was thirst for cold water, which > burning in tongue and fauces. Many symptoms occurred at 8 a.m. Sleepy but difficulty in sleeping. A lady to whom Cooper gave one dose of *Lob. cd*. had "flashes of light before eyes every day for a week." It seems, he says, to have an action distinct from that of other *Lobelias*, since a dose of it brought back pains which had been relieved by *Lob. dort*.

Relations.—*Compare:* Lob. i., Lob. s.; Caps. (burning in mouth and throat; but Caps is < by cold water, Lob. cd. >).

SYMPTOMS.

1. Mind.—Disposition to sing.

2. Head.—Head feels light, with dull pain in forehead and occiput, 6 a.m.—Headache, dull, distressing, with fulness in forehead and esp. base of occiput; < motion, or shaking head; remained longest in occiput.—Slight shooting pain in forehead with eruption of small sore vesicles.

3. Eyes.—Eyes burning, sore, smarting, and watery, dread of light, sore on closing them 8 a.m.—Flashes of light before eyes every day for a week.

5. Nose.—Dryness of nose, with fulness, followed by sneezing.

6. Face.—Dull pains in both maxillary bones, with aching in molar teeth.

8. Mouth.—Burning and stinging in tongue and fauces (lasting fourteen hours); > by copious draughts of cold water.—Tongue raw, sore, very red, esp. at tip, where is a blister.—Mouth and fauces dry, with raw, distressed feeling extending down to epigastrium 8 a.m.—Unpleasant taste, morning and through the day.

9. Throat.—Throat sore, dry, with disposition to swallow and hawk.—Soreness of fauces, extending down into upper œsophagus; when it leaves fauces burning and pricking remain there.

11. Stomach.—Appetite indifferent.—Thirst for cold water, which >.—Nausea 8 a.m.—Dull, heavy pain in epigastrium, with sensation of weight or load.—Sticking pains with sensation of load at epigastrium.

12. Abdomen.—Sticking pain at l. hypochondrium, which came suddenly and so violently as to cause him to cry out, > placing ends of fingers over spot.

13. Stool.—Stool at first thin, then more consistent.

17. Respiratory Organs.—Breathing oppressed; through day, with sticking pains on taking a deep breath; with dull, distressing pain in lower part of sternum, with same feeling on each side, forming a circle, > by beating the part gently with the hand.

18. Chest.—Pricking pain in l. lung.—Severe stitch l. side of chest nearly taking away breath; > pressing with hand.

20. Neck and Back.—Stiffness of nape.—Weakness as from spine across kidneys.

23. Lower Limbs.—Throbbing and weakness in lower limbs, with headache compelling him to lie down.—Sticking like pricking with needles: inner r. thigh; l. calf and heel; l. sole, shooting up.

24. Generalities.—Debility all day.—Symptoms continued two weeks, and it was three weeks before the appetite came back.

25. Skin.—Eruption of small, sore, vesicular pimples in centre of forehead.

26. Sleep.—Whilst lying down great sleepiness with difficulty of falling asleep.—Starting in sleep, with jerking of hands.

27. Fever.—Hot sweat on forehead, with throbbing there and at base of occiput.

Lobelia Dortmanna.

Lobelia dortmanna. (The principal indigenous British species. Habitat, shallow lakes.) N. O. Lobeliaceæ. Tincture of fresh plant.

Clinical.—Ears, noises in. Headache. Indigestion. Pylorus, affections of.

Characteristics.—I am indebted to Cooper for the whole of the information about this remedy. The symptoms of the Schema were observed on patients after single doses of the Ø tincture allowed to exhaust their action. According to Cooper, *Lob. d*. has much in common with *Lob. er*. and *Lob. i*. The letters and figures appended to the symptoms denote the sex and age of the patients "m" means "man," "w" "woman."

SYMPTOMS.

2. Head.—Violent headache lasting all day goes on for a fortnight, ending in severe colic and diarrhœa; and then an old cough goes away (w. 56).

4. Ears.—All through same night (after dose), and several times after, had roaring noises in ears; < on lying down; when going to sleep; and in early morning; also an itching on skin behind angle of r. jaw and below ear (M. 24; deaf with nasal blockage high up).

5. Nose.—Violent sneezing and catarrh (w. 47).

11. Stomach.—Pains of cancer of pylorus with distended stomach go away for a whole afternoon, great depression, mental and physical, follow at once on the dose, and next day she has neuralgic pains down r. arm to fingers followed on third day by great pain in r. knee lasting two days (W. 33; healthy otherwise).—Habitual indigestion; no power to digest (cured).

13. Stool and Anus.—Great discharge of flatus (M. 23).—Burning as of a red-hot poker and shootings in rectum, generally < at night, lessen at once (m. 47).

17. Respiratory Organs.—Breathing distinctly improved (w. 65).

Lobelia Erinus.

Lobelia erinus. N. O. Lobeliaceæ. Tincture of fresh plant.

Clinical.—Breast, cancer of. Cancer. Deafness. Earache. Fever, hectic. Indigestion. Keratitis, interstitial.

Characteristics.—Cooper, who is the sole authority for *Lob. er*., says. "This common and insignificant-looking plant possesses beyond question remarkable curative powers." He has only used it in single doses of Ø. In the Schema the sex of the patients on whom the observations were made is indicated in brackets after the symptom produced or cured. Its chief power is manifested in malignant diseases. For example: (*1*) Woman, 36, had for three weeks noticed a painfully

inflamed spot, size of a shilling, scabbed over and resting on a scirrhous base close to l. nipple, which was retracted below the surface. This had led to the breast being condemned to operation. Axillary tenderness and a large soft swelling existed for eight years immediately below the breast. The disease yielded completely to single doses of *Lob. er*. given at long intervals during nine months of treatment, the lower swelling having in this time gone down to one-quarter of its former size, and the suspicious painful swelling having entirely disappeared. (*2*) An elderly lady had both breasts affected, left indurated and discharging, with scattered nodules of induration over adjacent tissues, pains burning and stinging, left arm œdematous with axillary involvement. *Lob. er*. Ø was given on July 26th at a time when the pain was excessive and had resisted other remedies, and till the end of life on September 21st perfect freedom from pain was secured. Cooper also mentions interstitial keratitis in hereditary syphilis as having been influenced by *Lob. er*.

SYMPTOMS.

1. Mind.—Low spirits, dyspnœa, and flatulence (m. 64; full-blooded healthy except for cataract; 1st day).—Great depression following heat and perspiration.

2. Head.—Tightness across occiput, head felt heavy as if brain rolling over, and could hardly stand for fear of moving, breathing continued short (2nd day; 3rd day felt altogether better.—m. 64).

3. Eyes.—Interstitial keratitis in hereditary syphilis.

4. Ears.—Fearful earache, said to be from cancer of the nose and throat, goes away after the dose, but returns after a few days.—Deafness with history of otorrhœa, also anæmia.—Deafness of both ears, dating from excision of tonsils at seven years old, and rapidly getting worse (improved rapidly after the dose.—w. 21).

16. Female Sexual Organs.—Menses come on too often, with much bearing down last time; this bearing down kept on for a month, being < at the period (w. 35).

17. Respiratory Organs.—Laryngeal phthisis; weight increases rapidly (m. 46).

18. Chest.—Pain r. chest same evening (of dose), and again three days later, causing aching in back; and then pain came on each evening for three days and then disappeared (w. 30).—Right breast eaten away by cancer, "heavenly relief to local pain and distress" (w. 78).

27. Fever.—Felt hot and perspired freely, followed by great depression (w. 35).—Persistent high temperature in tuberculous children with diarrhœa.

Lobelia Inflata.

Lobelia inflata. Indian Tobacco. (Fields and roadsides from Canada to Southern U.S.A.) N. O. Lobeliaceć. Tincture of fresh plant when in flower and seed. Trituration of dried leaves. Acetum.

Clinical.—Alcoholism. Alopecia. Amenorrhśa. Angina pectoris. *Asthma*. Cardialgia. *Cough*. Croup. Deafness. Debility. Diarrhśa. Dysmenorrhśa. Dyspepsia. *Emphysema*. Faintness. Gall-stones. Gastralgia. Hćmorrhoidal discharge. Hay-asthma. Heart, affections of. Hysteria. Meningeal headaches. Millar's asthma. Morning sickness (of drunkards; of pregnancy). Morphia habit. Palpitation. Pleurisy. Psoriasis. Rigid os. Seborrhśa. Shoulders, pain in. Tea, effects of. Urethra, stricture of. Vagina, serous discharge from. Vomiting, of pregnancy. Wens. Whooping-cough.

Characteristics.—Matthew Lobel, whose name is given to this family of plants, was a physician and botanist attached to the court of James I. There are two British species, *L. Dortmanna*, found in shallow lakes, and *L. urens*, which grows in heathy places. *L. inflata*, the North American variety, is the most important of all, medically. According to Hale, this plant was used by the Indians as an emetic detergent, in the same way as *Verat. alb*. was used by the ancients to produce "Helleborism." But the chief modern exponent of *Lobelia* is Samuel Thompson, of New Hampshire, who founded the modern Botanic School. His chief remedies were, besides *Lobelia*, cayenne pepper and the vapour bath. There can be little doubt that he accomplished much with these, but his unbounded faith in *Lobelia* led, in some instances, to fatal poisoning. Such a result is not altogether unknown in qualified practice; but as Thompson had no medical degree these cases brought him into trouble.—The records of them have furnished some of the symptoms of the pathogenesis. *Lob. i*. probably obtained the name of "Indian Tobacco" from the similarity of its action to that of *Tabacum* in producing intense nausea, vomiting, profound depression at the epigastrium, and collapse. It was a true instinct On the part of Teste that led him to class *Lob. i*. with *Sul*.; and though the provings and clinical experience do not fully bear out what he says about its skin action, the results of botanic practice, confirmed by Cooper, show that it has an antipsoric action, and relieves morbid states due to the suppression of discharges. In a paper read before the *Brit. Hom. Society*, November 1, 1888 (*M. H. Rev*., xxxii. 717) Cooper explains that he got no good out of *Lob. i*. until under the advice of a herbalist he used a solution of *Lobelia* made with common vinegar. Here is one of his cases. A young woman, 23, of consumptive family history on both sides, had, when 14 to 15 years old, severe pain in left, and sometimes right, side, and round lower abdomen, with faint feeling. This lasted till the monthly period came on regularly and then she was well till 20, when diarrhśa came on, which nothing was able to check and which kept her in bed for months at a time. The symptoms were: Pains all round abdomen and up the back, much < after

undressing, feeling of exhaustion or failing to pieces inside and out, cannot bear anything to touch her. Four or five motions daily when taking medicine; if she leaves it off continual motions all day; it literally runs from her: watery, sometimes light-coloured, sometimes dark, never bloody. Menses very irregular, sometimes five to six weeks between; all symptoms, especially diarrhśa, < then; much tenderness all over abdomen, especially in ovarian regions, legs ache fearfully, pains all over body; faints continually. Since the illness began subject to neuralgia of face, one or other side or both, extending to chest, coming and going suddenly at any time. In spite of treatment of all kinds, including that of a skilful repertorian, she grew worse. She went into a hospital, and there a small pile was removed with but temporary benefit; and after this the vagina as well as the rectum began to discharge copiously an excoriating fluid. *Lob. i. ac*. Ř, eight drops three times a day, was now given. She began to improve at once, and in a few weeks was quite well. In this case the difficulty first showed itself when the menstrual era was commencing; was relieved when the flow was regularly established; reappeared simultaneously with menstrual irregularity. In the next case there was an analogous history. A lady of 52, when 37, was exposed to a severe chill which checked the catamenial flow. After this she had threatened phthisis with bronchorrhśa, which after two years gradually went off, leaving her subject to severe constantly recurring seizures of vertigo. Nine months before coming under Dr. Cooper's care she felt as if something was forming in the utero-vaginal region, causing much bearing down. She was obliged to go to bed, and then there occurred a profuse pouring away of apparently serous fluid from utero-vaginal and vesical mucous membranes, with paroxysms of agonising, burning, and scalding, < in evening. Vagina swollen, extremely tender, bathed in moisture; urination always very painful and followed by paroxysm of general scalding. She was unable to sit up and decubitus could only be maintained with the knees drawn up, or on the left side. At night she would be awoke by finding her back resting in a pool of water, and the sense of uterine bearing down was almost intolerable. The bowels were unaffected; urine free from all but a trace of albumen. A hardness and dulness to percussion existed all down right side of abdomen. *Lob. infl. acet*. Ř, 1/3 drop every four hours. From that time the patient had not to keep her bed for a single day, and all her symptoms cleared up. The *Lob. i*. was in this case assisted by *Nat. chlor*. (Liq. Sodć chlor. of B. P.), 1/3 drop doses occasionally, which relieved the bearing down more than anything else. All that remained of the illness was a slight weakness in lower abdomen felt every autumn. Cooper recalls in connection with these cases a symptom recorded by Jahr: "Violent pain in the sacrum with fever supervening upon suppression of the menses during their flow." Alongside this action of *Lob. i*. may be placed another, also vouched for by Cooper, the power of eliminating foreign substances like that possessed by *Silica*. A woman got a piece of mutton-bone down her windpipe and into one of the bronchia. She was taken to the London Hospital, but the idea of operation was abandoned as hopeless and she was sent out. *Lob. i. ac*. Ř was given, five drops three times a day. Soon a most violent cough was set up, in the course of which the patient coughed up a large

quantity of fetid, pus and finally the bone. B the action of *Lob. i*. in determining to the periphery it meets a large number of conditions due to suppression, including cases of phthisis. Cooper adds the following note to the above: "The interest of knowing that *Lob. i*. meets very serious symptoms connected with a profuse flow of serous discharge from the utero-vaginal mucous surfaces is to some extent marred by my having employed the acetous preparation, and subsequent trials of it would certainly have been made with the fresh plant tincture had I been able to obtain the living plant. As it is, my inferences, *re* the action of *Lob. i*., are all derived from the acetous tincture. The indications for *Lob. i*. are difficult to discover, being broad and general rather than precise and localised. Its power over serous discharges from mucous surfaces accounts probably for its influence on certain very obstinate forms of chronic diarrhśa, these being more serous than watery, and it is probably owing to a similar influence over sebaceous secretions that it removes in time the most obstinate wens on the scalp, causing them sometimes to gradually disappear and at others to point and discharge their contents, and that it causes the hair to grow when used locally in seborrhśa capitis. It is particularly called for in ailments that never finish up, whether beginning from acutely inflammatory causes or not; it also fights with symptoms occasioned by mechanical irritants in a way that I have never found any remedy do, *e.g*., where a spicula of bone presses on the brain (compression) or where a bone is lodged in bronchus. The late Dr. Coffin (*Botan. Jour*., Aug., 1849, p. 271), in a boastful way, professed to cure children and adults whose lives were despaired of from poisoning by various substances by (decoctions? of) *Lobelia*, but whether by directly evacuant action or not it is not stated. But in my own hands a few drops mixed in water cured a baby of severe convulsions that I afterwards found were caused by a diabolical nurse giving the little one Chlorodyne. In symptoms existing along with hereditary syphilis and in the tuberculosis of childhood it acts with full power; in tabes mesenterica, in persistent earaches and headaches due to suppressed discharges, where the lips are dry and hot and continual feverish colds are prominent, it is specific. Here it stands side by side with *Ars. iod*. and our foremost antipsorics. In severe inflammatory conditions existing along with anthrax, or with malignant deposits in different regions, *Lobelia* in repeated as well as in single doses will often arrest urgent mischief. A few drops of *Lob. i. ac*. in boiling water takes away the pain and tension of inflamed piles; the patient sits on a utensil thus filled. In the broncho-pneumonia of childhood and in imperfect recoveries from chest affections, especially where tubercle threatens, *Lobelia* is indispensable. Treatment with *Lobelia* should always be begun with a single dose, if the symptoms permit, as in some cases it produces violent depression. In veterinary practice it is said to have proved curative in the tetanus of horses; a disease it is also said to produce. It must be kept in mind when studying *Lob. i*. that the herbalists used it in two forms: the *decoction* to produce emesis, and through which they seem to have obtained its antidotal action, or by virtue of which they aborted acute gout; and the *acetous tincture*, which they gave in chronic diseases, and in moderate doses."—*Lob. i*. may cause a rash which exfoliates, and it has

cured many cases of psoriasis. It meets a condition in which the secondary digestion is at fault. The patient is thin, poor, and has no appetite. It cures the condition which favours pediculi corporis. Referring to the skin action of *Lob. i*., Hale quotes P. H. Hale as saying that, with the intense nausea it causes, there is sometimes a *prickling itching* of the skin, and acting on this hint P. H. Hale thinks he has seen benefit from its use in suppressed *urticaria, with nausea and vomiting*. The symptom Teste gives is this: "Eruption between the fingers, on the dorsa of the hands and on the forearms, consisting of small vesicles accompanied by a tingling itching, and resembling the itch pustules exactly." As with *Sulph*. "faintness at the stomach" is a grand characteristic which will be found in a large proportion of the cases calling for the remedy. Jeanes, who proved *Lob. i*., gives these as the chief symptoms: "Constant dyspnśa, < by slightest exertion and increased to an asthmatic paroxysm by even the shortest exposure to cold; sensation of weakness and pressure in the epigastrium, and *rising thence to the heart* with a constant heartburn; feeling as of a lump or quantity of mucus, and also a sense of pressure in larynx; pain in forehead from one temple to the other; pain in neck; in left side; high-coloured urine; weakness and oppression in epigastrium, with simultaneous oppression of the heart." I have italicised "rising thence to the heart" because I think this a particularly characteristic feature. There is something like it in the śsophagus; a kind of globus hystericus. Hale quotes Dr. Cutler's (allopath) account of his own case. He had been asthmatic ten years, liable to very severe and prolonged attacks, and during the intervals scarcely ever passed a night without more or less of it, and as often as not was unable to lie in bed. In the middle of an attack he had a tablespoonful of afresh plant tincture. In three or four minutes his breathing was quite free; but there was no nausea, and thinking that necessary he took another spoonful ten minutes after the first, and this occasioned sickness. Ten minutes later he took a third, and this produced a sensible effect on the stomach coats, and a very little vomiting and "a kind of prickling sensation through the Whole system even to the extremities of the fingers and toes. The urinary passage was perceptibly affected, by producing a smarting sensation in passing urine, which was provoked by stimulus on the bladder." But all these symptoms very soon subsided, and vigour seemed to be restored to the constitution which he had not experienced for years. The necessity of taking *Lobel*. in doses sufficient to cause pathogenetic symptoms was insisted on by Thompson, and though it led to some disasters seems to have been the means of saving some lives. Thompson tells how as a boy he chewed this herb and so learned practically its effects. He used to give it to other boys out of sport. One day whilst mowing he gave a sprig of it to a companion. By the time they had got six rods the man said he thought the sprig would kill him: he never felt so ill in his life before. He was in a profuse perspiration, trembled all over, and was as pallid as a corpse. Unable to walk, he lay down and vomited "two quarts." He was helped to his house; ate a good dinner, and returned to work in the afternoon. After this he "felt better than he had for a long time." This gave Thompson his first notion of the medicinal virtues of *Lobel*. In Walter Besant's Life of *Edward Henry Palmer*, the great Orientalist, Palmer's

own account of his cure by *Lobel*. is given. In 1859 he was seized with pulmonary disease, which rapidly increased until he was told he had probably only a few months to live. On the advice of a herbalist named Sherringham he took a single large dose of *Lobel. i*., and this is what he experienced: (*1*) Violent attack of vomiting; (*2*) cold chill mounting up from feet to hands, which he could no longer move; to heart, which ceased to beat; to throat, which ceased to breathe. A doctor was sent for. "I felt myself dying," he said afterwards, describing the experience I was being killed by this dreadful cold spreading all over me. I was quite certain that my last moments had come. By the bedside stood my aunt, poor soul, crying. I saw the doctor feeling my pulseless wrist, watch in hand; the cold dews of death were on my forehead; the cold hand of death was on my limbs. Up to my lips, but no higher, I thought I was actually dead. I could see and hear but not speak, not even when the doctor let my hand fall on the pillow and said solemnly, "He is gone!" There was no pain, he said, and he was in no concern except about a book he wanted to finish. He recovered suddenly. New strength came to him. The consumption was arrested and was no more trouble to him for the rest of his life (*H. W*., xviii. 405).─The prickling sensation experienced by Cutler is characteristic, as also is *tenderness* of the sacrum. Carleton Smith (*H. P*., viii. 272) thus describes these: Extreme tenderness over sacrum; cannot bear even pressure of soft pillow; cries out if any attempt is made to touch the part; she sits up in bed, leaning forward to avoid contact. After each vomiting spell breaks out all over with sweat, followed by sensation as if *thousands of needles* were piercing her skin from within out. *Lob. i*. is indicated in whooping-cough with dyspnśa threatening suffocation. Must keep mouth open to breathe. The headaches of *Lob. i*. are remarkable. Teste describes them as follows: Pressive headache, at occiput, less frequently at the forehead, sometimes one-sided (left), < by motion; in evening and especially at night. Continual periodic headache, in afternoon and increasing till midnight, every third attack being alternately more or less violent. The brain is racked by the cough, which causes an intolerable pain. Heat and sweat about head and face, Cooper has recorded this case (*M. H. R*., xxxiv. 289): Girl, ćt. 9, seized with very bad headache affecting whole head and continuing night and day for two days, *Merc*. and *Verat. v*. being given in vain, *Lob. i. acet*. Ř, two or three drops in a little water given in the morning after a bad night, gave immediate relief and restored the appetite. Cooper considered it a meningitic headache, and he finds *Lob. i. ac*. and *Kali iod*. 30 especially useful in these (excessive sensitiveness being a leading indication for the latter). A headache that has been frequently verified is: "Dull, heavy pain passing round the forehead from one temple to the other, immediately above eyebrows." Headache following intoxication; < afternoon till midnight; < from tobacco. A peculiar symptom of *Lob. i*. is semilateral coating of tongue.─Sudden pallor with profuse sweat. Gastric derangements, extreme nausea and vomiting. The nausea of *Lob. i*. is continuous and accompanied by constant flow of saliva. This is the indication for it in morning sickness and in effects of suppressed or missed menstrual period. Vomiting; face bathed in cold sweat. The nausea of *Lobel*. has been used in the

same way as that of *Tabac*. and other emetics to produce relaxation of muscles, as, for example, rigid os. Sometimes this is effected by direct physiological action, but it may be homśopathic as in this cured case: "With every uterine contraction violent dyspnśa, which seems to neutralise labour pains; rigid os, and perineum." But it is also of service locally, as in an enema; also in cases of difficult catheterism. G. W. Boskowitz (*H. R*., xv. 357) relates the case of a man, 40, who had twice had gonorrhśa, the second attack, three years before, having left him with a gleety discharge. For a year the stream had been diminishing until at last it took him half an hour to empty the bladder. Many surgeons had tried to pass an instrument and had failed. Boskowitz also failed several times, until one day he dropped fifteen drops of *Lob. i*. Ř into the urethra and held the meatus, to retain it, for five minutes. It produced a smarting which soon passed away; and then No. 10 sound passed with ease. This sound was passed twice a week until No. 24 entered easily, and after this there was no further trouble. Boskowitz has used *Lob. i*. in many similar cases with like success. Guernsey gives this as a leading indication when found prominent: "Urine has a deep red colour and deposits a copious red sediment." Dyspnśa (as well as nausea) occurring in connection with imperfect menstrual evolution may indicate *Lobel*. H. M. Broderick (*Med. Adv*., xviii. 568) has recorded this case: Young lady, 18, ill two years under allopathic treatment. Symptoms: Laboured breathing, sense of tightness across chest compelling her to take deep inspirations, which caused pain in heart region. Pulse full, very rapid; cough after each deep breath. Unable to lie down from oppression and pain. Twitching of muscles of face. Menses never regularly established; would go several weeks over time and then would last only a day. *Lob. i*. 3x was given in water. After the second dose she went to bed and slept. The remedy was repeated just before next menstrual period. She had no more attacks and menstruation became normal. Among the *peculiar sensations of Lobel. i*. are: As of lump in pit of throat. As of foreign body in throat. As if śsophagus contracted from below upward. As of a lump or heavy load in stomach. As if a lump rose up to meet food and obstruct. its descent. Fulness in trachea as if from chest. As of a lump in larynx. As if the heart would stand still. As of a band about chest. As if blood stagnated in chest (> moving about). As if thousands of needles were pricking her skin from within outward. *Lobel. i*. is *suited* to persons with light hair, blue eyes, and fair complexion; inclined to be fleshy. Symptoms are < by touch (right deltoid sore. Sits up in bed, leaning forward to avoid contact with bedclothes on sacrum. Cannot bear even a soft pillow over sacrum. Pressure at epigastrium = oppression). Motion; slightest exertion <. Bending forward < pain under right shoulder-blade. Effort to move = fainting. Every rapid movement = dyspnśa and suffocation. Going up or down stairs < dyspnśa. Symptoms generally > afternoon, < evening and night. Rapid walking > sensation of congestion, weight or pressure in chest as if blood from extremities was filling it. Sickness (of pregnancy) < morning. Coldness > by warmth. Cold < dyspnśa; < from current of air. Warm food = vomiting. Headache is < by tobacco or tobacco smoke.

Relations.—*Antidoted by:* Ipec. *Compare:* The other Lobelias; Digit. and Tabac. (heart affections; vomiting; < by motion sudden pallor with profuse sweat); Ars. (hay fever; gastric troubles) Verat. alb. (gastric troubles); Ipec. (asthma—but Lob. i. has, with the asthma, weak sensation at epigastrium spreading up into chest, nausea, salivation, feeling of lump in stomach); Ipec. and Ant. t. (morning sickness). Nux (morning sickness of drunkards; Lob. in fair people, Nux in dark); Bry. (< by movement; cough = headache); Asaf. (reversed peristalsis); Sul. (occipital headache; cough = headache); Ab. n. and Thuj. (effects of tea); Lact. ac. (vomiting with profuse salivation—Merc. at night); Lil. t. (pain at heart—Lob. i. at base, Lil. t., apex); Daph. i. and Rhus (semilateral coating on tongue; with Rhus the coating is white); Kali i. (meningitic headaches).

Causation.—Alcohol. Tea. Tobacco. Wetting feet. Suppressions. Foreign bodies.

SYMPTOMS.

1. Mind.—Mental inquietude; great depression and exhaustion; presentiment of death, and dyspnśa.—Sobbing-like a child.—Violent raving with flushing of face and palpitation, every evening, after an hour's sleep.—Lost his reason and became convulsed; it required several men to hold him; this continued till death.—Felt he was dying, with distress at chest.—Felt he was dying, but was unconcerned.

2. Head.—Cerebral suffering; giddiness; vertigo.—Vertigo with nausea.—Headache with slight giddiness.—Vertigo as if starting from l. eye.—Feeling of disorder: at first in occiput; afterwards in forehead; in head, after a meal, increasing to a violent aching pain, with heat in face.—Headache < by coughing; brain racked by cough which causes intolerable pain.—Heaviness in head, with lassitude in back.—Cephalalgia, esp. during movement, and when ascending a staircase, chiefly in vertex; with vertigo and lancinations in temples; dull pain and heat in occiput, in evening; violent, in forehead, from time to time (during the fever).—Outward pressing in both temples.—Tension in head, in evening, esp. in occiput, or else with heat in face.—Aching in occiput, sometimes chiefly in open air, or else diminished on covering the head.—Pressive pain on l. side of occiput; < at night and from motion.—Wens.—Seborrhśa.—Seborrhśa of scalp smelling offensively (produced in an infant every time one drop of *Lob. i. ac*. Ř was taken.—Cooper.).

3. Eyes.—Burning in eyes; (hemiopia).—Pain and soreness in r. eye.—Burning in eyes.—Itching in angles of (l.) lids.—Pressing pain in eyeballs, most in upper part.—Pupils dilated.—Vision dim.

4. Ears.—Aching in l. ear.—Shooting pain extending into l. ear from painful spot in throat to l. of larynx.—Sudden shutting up of r. ear, as if stopped by a plug, at 2 p.m., > boring finger in ear.—(Profuse-discharge from the ear.—Constantly recurring earache and deafness following suppressed otorrhśa.)

6. Face.—Heat of face; sweat on face, with nausea.—Chilly feeling in l. cheek extending to ear.

8. Mouth.—Flow of clammy saliva in mouth (with nausea).—Sharp, disagreeable taste in mouth, esp. at tip of tongue and back of throat.—Accumulation of saliva; frequent expectoration of a very watery saliva; copious salivation.—Tongue white, charged with a thick coating, on r. side only.—Acrid, burning taste in mouth; bitter, with foul tongue and thirst.

9. Throat.—Scraping in throat; changing into aching and nausea, which in turn is succeeded by retching, with squeezing and convulsive heaving in larynx; with risings and burning, arising from stomach; with sensation of rawness in throat, and constriction in śsophagus; with great dryness, which is not removed by drinking, after a meal.—Burning in throat, which becomes a scraping sensation; increased secretion of viscid saliva, with scraping, nausea, and risings; burning scraping from velum palati to larynx; < on swallowing, and with frequent hawking, by reason of an increased secretion of mucus in throat, burning followed by dryness, during the forenoon.—Viscid mucus in throat.—Tough mucus on fauces, causing frequent hawking.—Aching in śsophagus: with nausea, griping in abdomen, and emission of fetid wind; along śsophagus, as far as stomach, worse in certain parts, and esp. below the larynx.—Sensation in śsophagus as if it contracted itself from below upwards.—Deglutition impeded as by a foreign body; in swallowing, sensation as if something rose in larynx, and prevented the food from descending.

11. Stomach.—Anorexia.—Frequent risings, with accumulation of water in mouth; frequent regurgitation of an acid and burning liquid; acidity in stomach, with sensation of constriction in pit of stomach.—Frequent and violent hiccough, with abundant accumulation of water.—Pyrosis, sometimes constant, or else with accumulation of saliva.—Heartburn and running of water from mouth.—Faintness, weakness, and an indescribable feeling at epigastrium, from excessive use of tea or tobacco.—Violent and constant loathing, with shuddering and shivering; relaxation of the stomach, sometimes with loathing, or with a very marked sensation of anti-peristaltic movements (but without nausea).—Nausea and vomiting during pregnancy, with profuse running of water from mouth.—Burning in stomach.—Feeling of weight in stomach.—Nausea: in morning, disappearing after taking a draught of water; with cold sweat on face; great disposition to vomit, without vomiting.—Vomiting: of all kinds, even the most violent; with sighing, and continual nausea; vomiting of food after a meal, esp. hot food.—Vomiting, with cold perspiration of face.—Dyspepsia.—Pain in stomach; sensation of weakness in stomach; or else in pit of stomach, with oppression, which thence extends itself throughout chest.

12. Abdomen.—Aching in stomach: sometimes after eating but very little; after the meal, with fulness and gurgling in abdomen; ascending towards chest, which becomes oppressed; with nausea; accumulation of water in mouth, and

retching.—Pressure in pit of stomach; across body into spinal marrow, as by a plug, by intermitting action, becoming each time stronger; as from a weight, when fasting, and after a meal, < chiefly in evening, also with vomiting of bile, and oppression and anguish in chest, and pains in loins.—Violent and painful constriction in epigastrium.—Cramps in stomach of various kinds.—Pains in abdomen; < after eating, with cephalalgia, on returning from a walk, after a meal; cutting and drawing pains in abdomen; griping and twisting, with nausea, violent risings, and emission of fetid wind.—Inflation of abdomen, with dyspnśa; flatulency and abundant emission of wind, with borborygmi in abdomen, which are sometimes painful.

13. Stool and Anus.—Soft, whitish stool.—Discharge of black blood after stool.—Copious hćmorrhages from hćmorrhoidal vessels.—Stools, like pap, soft, green; diarrhśa, sometimes with frequent evacuations and confusion of head.

14. Urinary Organs.—Increased secretion of urine, sometimes with want to urinate.—Frequent emission of urine, even during night, and following morning (secretion of urine diminished).—Urine cloudy: with loose deposit; deep red, with sediment of a dull red, soon becoming turbid, with sediment of a rose colour, having small blue crystals.

15. Male Sexual Organs.—Fatiguing heaviness in genital parts.—Smarting of the prepuce.

16. Female Sexual Organs.—During menstruation violent pain in sacrum.—Violent pain in the sacrum, with fever, &c., supervening on suppression of the menses during their flow.

17. Respiratory Organs.—Tickling in larynx, with frequent fits of short coughing; dryness in throat, with sensation as though a solid body were there impeding both respiration and deglutition.—Irritation which provokes coughing and expectoration.

18. Chest.—Respiration anxious, difficult, sobbing, with sensation of obstruction in chest; short, imperfect, with sensation of fulness in chest; during inspiration, tickling in inferior region of sternum; on breathing deeply, mitigation of the pressive pain at pit of stomach, and a feeling of improved health.—Pain in chest, with breathing, while sitting after dinner, > moving about.—Congestive pressure and weight in chest as if blood from extremities was filling it, > by rapid walking.—Want of breath, sometimes with respiration impeded, hurried, with frequent want to breathe deeply; great difficulty in retaining the breath.—Oppression of chest, causing laboured respiration; asthma, chiefly with gastric symptoms, and sensation of weakness in pit of stomach; dyspnśa, sometimes with a sort of presentiment of death; difficulty of respiration, after the least fatigue, after washing in cold water, likewise from a current of air, and from heavy food.—Asthmatic symptoms, hysterical asthma.—Violent pains in chest; < on

breathing deeply; on returning from a walk, after a meal.—Dyspnśa and asthma, with sensation of a lump in the throat, immediately above sternum.—Burning feeling in the chest, passing upwards.—Tension in chest on turning body; burning pain as of excoriation at one spot below r. breast, with sensation on breathing deeply, on sneezing, and on moving body quickly, as though something there were dislodged, which in the midst of the suffering returns to its place; with a like sensation at pit of stomach and l. side; perforating pain at one spot in chest, extending sometimes to back and shoulder-blade, < by movement, and with sensation of paralysis in the part affected.—Pain in the breast.—Burning feeling in breast passing upward.—A tightness of the breast with heat in forehead.—Drawing in l. breast from nipple to axilla.

19. Heart.—Precordial anxiety.—Deep-seated pain in region of heart.—Sensation of weakness and pressure in epigastrium rising to heart.—Sensation as if heart would stand still, a pain deep in above heart.—Sensation of weakness in precordium extending upwards and downwards.—Dyspnśa and suffocation from every rapid movement, with vertigo, and threatened loss of consciousness and a peculiar confusion of head.—Pulse small; and weak.

20. Neck and Back.—Swelling and pain l. side of neck.—Rheumatic pain between the scapulć.—Pain under r. scapula < bending forward.—In back: lassitude, with heaviness of head; burning and incisive pains at lower part of spine; pains in loins; violent cramp-like squeezing in posterior part of iliac region, which renders contact with anything, or motion, almost insupportable.

22. Upper Limbs.—Rheumatic feeling in r. shoulder-joint; goes to l. upper arm and around elbow-joint.—Fine crawling stitches inside of r. deltoid.—Pain in shoulders of an elderly lady who had not menstruated for two years; Lob. i. relieved the pain and brought on menstruation.—Rheumatic pain in r. elbow-joint.—Sweat of palms, backs of hands dry and cool; tips of fingers cold.

23. Lower Limbs.—In the legs, lassitude; acute tearing in tibia, extending to knee-joint; cramps in calf in morning, on waking from a troubled sleep.—Inflammatory rheumatism in r. knee; with tearing pains in fibula.

24. Generalities.—Lancinating pains throughout body, extending to ends of fingers and toes; trembling of limbs, likewise of whole body feeling of depression; unusual lassitude; prolonged weakness; exhaustion state of stupefaction; convulsions, sometimes such as to require two men to hold the patient, followed by death; violent convulsive jerkings, followed by death.—Other symptoms coming on when a discharge ceases.

25. Skin.—Prickling itching of skin all over body.—Eruption between fingers, on dorsa of hands and on forearms, vesicular itch-like pustules with tingling itching (Teste).—Vesicular eruption on skin.

26. Sleep.—Gaping; < followed by crawling in nose and sneezing; then gaping and belching of wind.—Wakened early by very impressive dreams: arm amputated; wounded by a shot, &c.—Disturbed sleep with many dreams, sometimes anxious; painful dreams; numerous, without intermediate awakening; cold sweat.

27. Fever.—Pulse: accelerated; frequent and softer than usual; slow, in evening (after a stronger dose).—Intermittent fever: commencing at noon, with great paleness and anorexia; quotidian, sometimes every morning at ten o'clock; at first violent shivering, alternating with moderate heat until noon, afterwards a predominance of heat, with slight shuddering, until evening; also, copious nocturnal sweat, great thirst by fits (esp. during the shivering), respiration short, anxious, impeded and fainting, with a feeling of constriction in chest, sensation of weakness and of oppression in pit of stomach, and in chest generally; tickling in larynx, with frequent fits of short coughing; violent frontal cephalalgia; anorexia during and after the attack, white tongue, covered with a thick coating on r. side, and great weakness.—Coldness of whole body; heat, with tendency to perspire, esp. on face; tendency to perspire excessively.—Thirst before the chill and through the whole fever; often only before the chill, not during the chill, but again during the heat.—Drinking < the violence of the shaking chill and the coldness.—At the end of the heat, perspiration with heat.

Lobelia Purpurascens.

Lobelia purpurascens. N. O. Lobeliaceæ. Tincture of whole fresh plant.

Clinical.—Heart, paralysis of. Influenza; headache of. Lichen tropicus. Lungs, paralysis of. Snake-bites. Tongue, paralysis of. Typhoid fever. Vertigo.

Characteristics.—The first mention of this plant was made by Erskine C. White (*H. W.*, xxxii. 502) under the name *Lobelia rubra*, corrected later by F. Kopp (*H. W.*, xxxiii. 328) and E. C. White himself (*H. W.*, xxxiii. 510) to *Lob. purpurascens*. Kopp describes the plant thus: "Stems angular, procumbent. Leaves ovate, green on surface, and either purple or purple and green underneath, somewhat serrulated, rather firm, usually from half to one inch long; pedicles axillary, much shorter than the leaves, reflexed after flowering. Flowers white above, purpled beneath, delicately scented, most diœcious, corolla four or five lines long, the lower lobes oblong, obtuse, the two upper ones shorter and narrower, more acute and incurved. Capsule narrower, ovoid, fully three lines long; seeds rather large, often flattened." It grows profusely in the Australian bush, preferably in moist places, and most profusely, says Kopp, where snakes most abound. White adds that it prefers loose sandy soils. This is interesting since James S. Bray, quoted by White and Kopp, observed that the iguana after a fight with a snake, whenever it happened to be bitten, ate this *Lobelia*. On the other hand, Bray once found a number of sheep

dead, and from their appearance he at first thought they had been bitten by snakes; but on examining their stomachs he found the leaves and stalks of *Lob. Purp*., and he came to the conclusion that this was the cause of their death. White gives a short pathogenesis in which symptoms like the effects of snake-poison are prominent. His symptoms, together with those of Kopp, who crushed with his teeth and swallowed a leaf (*H. W*., xxxiv. 306), will be found arranged in the Schema. They bear a strong family resemblance to those of *Lob. inflata*. White gives a clinical experience of his own which is important: "This plant, if only touched carelessly with the teeth, produces overwhelming giddiness. I had noticed that the sickening stupor and headache it produces exactly resembled those of La Grippe, before I knew the name of the plant. My headache disappeared like magic under *Lob. purp*. Ø, and I used to notice that all chest symptoms were avoided under its sway. La Grippe breaks out in *wet weather*. This plant, with its tiny gem-like white blossoms, always carpets the earth *after each rain* throughout the year." Other general characteristics of *Lob. purp*. White gives as follows: Intense prostration, vital and nervous. Deadly chill without shivering, but overpowering the system. Paralysis of lungs and resultant poisoning with carbonic acid gas; vomiting and coma. Acts very like *Bapt*. in low typhoid conditions, and seems to neutralise the poison of influenza. Growing on sandy soil it contains much flint, and like *Secal., Staph*., and the common carrot, agrees especially well with patients who are deficient in silica, and who are nervous, liable to boils, of a hasty disposition, perspire profusely, and whose teeth are always decaying. Symptoms are < by movement; < in damp weather.

Relations.—*Compare:* Lob. inf., Tabac., Lach. and other snake-poisons. Bapt. (influenza, typhoid); Secal., Staph. (teeth).

Causation.—Snake-bites. Blood poisoning.

SYMPTOMS.

1. Mind.—Hasty disposition.—Dejection.

2. Head.—Vertigo accompanied with nausea and stupor.—Overwhelming drowsiness (exactly as produced by snake-venom), sickening, dizzy headache, esp. just between eyebrows.—Dull and distressing pain in head, with fulness in base of occiput and forehead; pain < by shaking head and any motion.—Confused feeling in head.

3. Eyes.—Eyes weak; on closing them an apparent soreness.—Impossible to keep eyes open, almost spasmodic closing of (upper) lids.

5. Nose.—Dryness and fulness of nose.

7. Teeth.—(Suited to persons whose teeth decay early from lack of Silica.)

8. Mouth.—Mercurial taste in mouth.—Thick saliva in mouth.—Tongue white and paralysed.

9. Throat.—Dryness in throat, of burning character.

10. Appetite.—Great thirst.—Loss of appetite.

11. Stomach.—Sinking feeling in stomach.—Nausea accompanying vertigo.

14. Urinary Organs.—Increased secretion of urine.

18. Chest.—Tightness of chest with great oppression and labouring breathing.—Sensation as if lungs paralysed; superficial breathing.—Breathing slow, almost ceases.

19. Heart.—Distressed feeling in region of heart.—Heart paralysed; beat almost imperceptible.

20. Back.—Weakness in lumbar region accompanied with great languor.

21. Limbs in General.—Weariness and extreme weakness of the limbs.

23. Lower Limbs.—Great weakness of lower extremities; knees appear to collapse under weight of body.

24. Generalities.—Exhaustion and dejection.—General debility with loss of appetite and great languor.—The symptoms come on with great rapidity, within five minutes of taking the drug.—Low typhoid condition.

25. Skin.—A prickling itching all over body like prickly heat (lichen tropicus).

26. Sleep.—Overwhelming drowsiness.—Restless sleep.

27. Fever.—Deadly chill without shivering, but overpowering the system.—General feeling of feverishness.—Profuse perspiration.—(Typhoid fever.—Influenza.)

Lobelia Syphilitica.

Lobelia syphilitica. L. cœrulia. Great Blue Lobelia. (Grows in low grounds in U.S.) N. O. Lobeliaceæ. Tincture of fresh plant. Acetum.

Clinical.—Acidity. Adenoids. Asthma. Back, pains in. Borborygmi. Cartilages, pains in. Catarrh. Coryza. Cough. Dyspepsia. Eustachian catarrh. Flatulence. Hay-fever. Influenza. Kidneys, pains in. Lumbago. Melancholia. Post-nasal catarrh.

Pylorus, pain in. Sciatica. Spine, pains in. Spleen, affections of. Stomach cough. Throat, sore.

Characteristics.—The symptoms of the *Lob. syph*. proving, whilst in many points analogous to those of the other *Lobelias*, do not bring out the emetic properties of *Lob. inflata*. There is, however, epigastric sinking, flatulence, dyspepsia, and diarrhœa. *Lob. card., Lob. inf*., and *Lob. syph*. all have a milky juice. Hale quotes Rafinesque as saying that the analysis of *Lob. syph*. shows it to contain Silex, Iron, and Muriate and Phosphate of Lime. The marked action of *Lob. syph*. on the posterior nares led Cooper to use it with success in cases of deafness arising from an "unhealthy, soft, swollen, easily bleeding catarrhal" condition of the naso-pharynx. This is emphasised by another symptom: "Dull aching pain in centre of forehead, over root of nose." Cooper (who uses an acetic preparation) considers that with this, as well as with the *Inflata*, a history of suppression is a leading indication. There are many notable symptoms in the back, back of chest, and about the lower ribs. Some of these led Jeanes (the first prover) to make a very fine cure of melancholia in an educated, intelligent man, of which these were the characteristics: "Great depression of spirits; unhappy state of mind, always associated with pain about and under short ribs in back on left side, extending outward nearly to left side posterior aspect of region of spleen." In the proving there was this: Pain on inside of right scapula. Farrington adds this: "Pain under (not below) inner border of left scapula, < after weeping." The pains of *Lob. syph*. travel about, from right to left; from left tonsil to right; from back down legs; from eighth rib downward; aching from back of head down nape. Then there are frequent *synalgias*: Pain in right maxillary joint, with pain in middle of right lung; pain in breast and larynx; pain in left side of chest near axilla, with aching in left shoulder and arm. Touch < (soreness of ischium). Motion <. Deep inspiration <. Drinking cold water > (temporarily) gastric symptoms. Mental exertion < (mental state). Reading and writing < pain in forehead. Internal nose painfully sensitive to cool air. Inhaling moderately cool air <. Flushing after dinner > somewhat in open air. Symptoms < after dinner. < At night. Secretion of thick mucus > throat soreness.

Relations.—*Compare:* Other Lobelias; Puls. (mental depression and weeping); Chel. and Ranunc. (scapular pains); Hydrast. (postnasal catarrh); Cean. (spleen). Lob. i. has one-sided coating of tongue. Lob. s. has left half of palate dry. Pod. relieved the diarrhœa of Lob. s., but not the acute abdominal pains.

Causation.—Grief. Suppressions.

SYMPTOMS.

1. Mind.—Frequent mistakes in spelling and writing (with confused feeling and slight aching in head (after 15 min.).—Depressed, temper unhappy; with pain in

posterior aspect of spleen.—Brain weakness, exertion of mind intolerable; seemed as if he would go wild.

2. Head.—Dizziness < moving about.—Headache continuing till daylight.—Headache, after dinner.—Dull pain in forehead over eyes (and esp. over root of nose), < reading and writing.—Pain in both mastoid processes; first and < in r.—Acute pain along r. fronto-temporal suture.—Stitching pain in l. temple.—Pain in l. parietal protuberance.

3. Eyes.—Heaviness over eyes, like a weight, but no pain; with drowsiness.—Burning in r. eye with a tear.—Itching of l. internal canthus; in external canthus.—Boring pain in r. orbit.—Drawing sensation under r. eye, afternoon.—Feeling of foreign body under r. upper lid with smarting and burning.—Soreness of r. tarsi.—Soreness of eyeballs from turning them.

4. Ear.—In l. ear: pain; continued itching about posterior edge of meatus.

5. Nose.—Frequent sneezing with severe and painful jarring in breast and larynx; larynx feels stretched almost to bursting, with copious discharge of thick mucus from both nostrils, at sunset.—Painful irritation of both sides of cartilaginous septum; < immediately behind the columna nasi; sensitive to cool air.—Itching and tingling in l. nostril as if about to sneeze.—(Postnasal catarrh.)

6. Face.—Flushed face, with heat, when lying down.—Face flushed and headache after dinner, with drowsiness and lassitude, but inability to sleep when lying down; > open air.—Sensation of dropping under l. cheekbone, afternoon.—Drawing pain in r. cheekbone.—Perfect dryness of lips, and a feeling of dryness and sensitiveness of nostrils so that inhalation of air of moderate temperature (60°) = a painful feeling.—Pain in r. jaw-joint and in middle of r. lung, afternoon.

8. Mouth.—Frequent shooting pains through r. teeth.—Bleeding of gums with putrid taste.—A renewed secretion of thick mucus, apparently on inferior surface of palate, renewed by snuffing and hawking, with still further diminution of throat soreness.—Dryness of l. half of palate.—Constrictive feeling of skin of mouth and tongue, esp. at l. commissure of jaws; ten minutes later towards root of tongue.—Great soreness, rawness, pricking, dryness of lower surface of palate; extending forward through mouth; > by secretion of mucus and at noon, but still continued.

9. Throat.—Increased secretion of mucus.—Thick mucous secretion in throat with > of constricting rawness, dryness, and soreness.—Dryness of throat with sensation as if pharynx was open like a funnel.—Pain in region of l. tonsil (immediately); of r. tonsil (after 16 minutes).—Sensation of a lump in upper part of œsophagus.

11. Stomach.—(Acid eructations 5 to 6 a.m.).—Water-brash 8 a.m.—Dyspepsia uniformly > by drinking cold water.—Sinking in stomach followed by borborygmi below epigastrium.—Slight pain in region of pylorus.—Awoke 6 a.m. with violent pain in stomach and pain and borborygmus in bowels, followed by copious watery stools with tenesmus and soreness of anus; four attacks one day increasing in violence, colic and diarrhœa > by *Podoph*., but the pain in stomach with sense of distension increased, with hunger.—Jolting of an easy carriage = pain in stomach and both hypochondria.

12. Abdomen.—Borborygmi: below epigastrium < after dinner; in lower abdomen towards r. side.—Woke 3 a.m. with flatulence but inability to pass it.—Pains in abdomen, most below umbilicus, followed by diarrhœa, afternoon and evening.

13. Stool and Anus.—Copious watery stools with tenesmus and soreness of anus.—Loose stools.—Ineffectual effort at stool, but free evacuation of tasteless wind on rising from bed.

14. Urinary Organs.—Itching and smarting in fore part of urethra.—Increased quantity of urine with free discharge.—A small quantity of water, which he is obliged to retain for some time, = pain in bladder; when evacuated, of deep amber colour.

17. Respiratory Organs.—Larynx feels stretched almost to bursting.—Much tickling about top of larynx with disposition to hacking cough, evening.—Morning hoarseness from state of stomach.—Dyspeptic stomach cough.—Slight mucous expectoration, evening.—Dry, hacking cough of four weeks' duration, day and night, with pain r. side about junction of sixth rib with its cartilage, of a year's duration; dryness of back of throat.

18. Chest.—Pain middle r. lung and r. jaw-joint.—Pain just anterior to cartilaginous margin of short ribs.—Pain between shoulders and neck both sides.—Aching pain in cartilage of sixth l. rib.—Rheumatic pain along r. clavicle.—Pain along juncture of sixth r. rib with its cartilage.—Pain in l. chest near axilla with aching in l. shoulder and arm.—Oppression in lower chest as if breath did not reach there; distress in region of heart and audible "knocking" respiration (like sound of chopping wood); pain under short ribs and dry cough.—Pain under l. breast.—Severe and painful jarring in breast and larynx; larynx feels stretched to bursting, frequent sneezing; at sunset.

19. Heart.—Severe pain in region of heart about sunset.

20. Neck and Back.—Stiffness of nape (< l. side) from looking up.—Slight aching pain from back of head down nape.—Pain, heavy, aching, in back under false ribs, < night after lying down in bed, increased to cutting pain by deep inspiration, and < turning in bed; less during the day.—Cutting under false ribs forward and

upward (not noticed after going to bed).—Stitching pain in r. back passing from eighth rib downward.—Pain on inside edge r. scapula.—Pain, acute, sticking, in eighth dorsal vertebra; < by least movement and deep inspiration.—Pain and aching in posterior aspect of region of spleen.—Pain in region of l. kidney; stitch in r.—Pain commencing r. side small of back, then going down to os ischium, very sore to touch.—Great rigidity of spine, least motion exceedingly painful; pain goes from r. to l. side of back and shoots down leg.

22. Upper Limbs.—Severe aching of shoulder and fingers, whilst writing.—Heavy pain in radial muscles of l. arm; later in same of r.—Stiff, numb feeling in r. palm.—Sticking pain in l. thumb, fleshy part of last phalanx.

23. Lower Limbs.—Pain in both hips, occasionally.—Sensation of coldness, as if from the weather, with aching, in both knees through the day.—Stitching pain in l. tibia.—Rheumatic pain over r. inner ankle.—Pain in upper part of l. heel.—Pricking stinging sensation as if asleep, in both soles.—Pain in fleshy part of last phalanx of l. great toe; sore pain in its joints.

24. Generalities.—Lassitude, after dinner.—Transient pain over l. kidney, and soon after in l. hypochondrium.

25. Skin.—(Itching here and there on skin, worse than usual.)

26. Sleep.—Drowsy but unable to sleep, when lying down after dinner.—Slight drowsiness and oppression over eyelids.—Restless sleep with frequent wakings through the night.

27. Fever.—Cold sensation as if alcohol had been spilled on outer l. thigh.—Cold hands, hot forehead.—Feeling of heat in back, shoulders, face, with burning of ears.

Oxytropis Lamberti.

Oxytropis Lamberti (Pursh). (Including O. Campestris, Hook.) "Loco" Weed. Rattle-weed. N. O. Leguminosæ. Tincture of fresh plant (without root).

Clinical.—Amblyopia. Bladder, irritability of. Cough. Fever. Impotence. Locomotor ataxy. Ovary, pain in. Paralysis. Rheumatism. Spermatic cord, pain in. Sphincters, relaxation of. Testicles, pain in. Vertigo.

Characteristics.—The "Loco-weed" or "Crazy-weed" ("loco" is of Spanish origin, and means "crazy") has been variously identified by Gray as *Astragalus legum*, by others as *Astragalus mollissimus*, and by W. S. Gee, who made the proving, as *Oxytropis Lamberti* (*M. A.*, xvii. 441). Probably the writer of the botanical

articles in the *Century Dictionary* is nearest the mark in saying that Loco-weed is "any one of several leguminous plants producing the loco-disease in animals. Among them are *Astragalus mollissimus* and *A. Hornii*, with several other species of the genus, and *Oxytropis Lamberti*." Henfry's Botany remarks that the foliage of "*O. Lamberti* is said to be injurious to cattle"; so Dr. Gee was quite justified in taking this plant for the proving. (The Astragali are very closely related to the Oxytropi. *A. gummifera* is the source of *Gum tragacanth*. A few observations with *A. Menziesii* will be found in Vol. I. of this work.) Gee's specimens were obtained by Dr. Hawkes, of Chicago, and a tincture was made from these by Boericke & Tafel. Gee quotes from Coulter's *Manual of the Botany of the Rocky Mountain Region* a description of *Oxytropis Lamberti*. W. D. Gentry in June, 1895, sent Boericke & Tafel specimens of Loco-weed, and as this firm are extremely careful about the botany of the plants they make their tinctures from, I conclude these plants must have been *Oxyt. Lamberti* or they would have mentioned the fact. Gentry makes these remarks concerning the plants he sent (*H. R.*, x. 364): "My attention was first called to this plant last winter during January, soon after my arrival on the territory, as it was almost the only green thing showing itself above the snow, which covered the ground at that time for two or three days. Some cattle had been eating the weed, and as I approached them they tried to move away; but in spite of their efforts they backed towards me, and in their efforts to escape made some ludicrous manœuvres. I observed them closely for more than an hour, and was reminded most forcibly by their actions of the symptoms of locomotor ataxy." Gentry made provings of the Ø tincture of the whole plant and seeds on three persons. He gives the "leading symptoms," which will be found with his authority (Gent.) appended to each in the Schema. Gentry's observation of loco-disease in *winter* bears out what is said by other writers, namely, that it is only in winter, when food is scanty, that animals can be induced to commence eating the weed; and then they cannot leave off. An account of loco-disease appeared in *Brit. Med. Jour*. of March, 23, 1889 (*H. W.*, xxiv. 177), which contains some observations bearing on the *season* at which the disease occurs, and at which the plant is poisonous. I quote from the article: "The animal affected loses flesh; has a feeble, staggering, uncertain gait; a rough coat, and general appearance which is said to be characteristic; it loses all sense of distance or direction, and is liable to fits of rearing, plunging, and wild excitement; pregnant animals drop their offspring prematurely." The account goes on to say that the plant is generally identified as *Astragalus mollissimus*. H. C. Wood and Mr. Kennedy, of Texas, failed to produce poisoning in animals experimented on. Later, Dr. Mary Gage Day made experiments with a decoction of roots, leaves, and stems *gathered in September*. She is convinced from experiments made with materials gathered in different months that the greatest amount of poison is present in autumn and winter after the seeds have ripened—the seasons at which the disease is most rife. The account does not give the botany of the plants she used, but cats, kittens, and a jack-rabbit were decidedly "locoed," and died, the jack-rabbit in ten days after commencing to eat the plant, for which he speedily acquired a liking. In Gee's proving the Ø tincture

and potencies from 1x to 30x were used. A number of mind and brain symptoms were produced; despondency, forgetfulness; a feeling as if consciousness would be lost; fulness in the head and instability standing. Two provers had "symptoms < when thinking of them." Gentry's provers had "pleasant, intoxicated feelings." Both Gentry's and Gee's provers had well-marked pains in the eyes and disturbance of vision; and Gentry's had "numb, pithy, or woody feeling about and on the spine"; and "loss of power to control movements of limbs." In Gee's provings there were pains both in testes and ovaries, and one male prover, naturally passionate, became impotent. The symptoms are < on thinking of them (urging to urinate if he thinks of it); > on side lain on; < immediately after eating, > an hour after. Sick, exhausted feeling at 10 a.m.; chill 11.40 a.m. Pain (also bladder irritation) > when moving about; > in cool air. Any little exercise = dry cough. > After stool. > After sleep. Pains go from r. to l. Dyspnœa with chill.

Relations.—*Compare:* Lath., Astrag. menz., Physostig., Laburn., and other Leguminosæ. In symptoms < when thinking of them, Ox. ac. (>, Camph.). Pain in cord and testes, Ox. ac. Pains r. to l., Lyc. > moving about, Rhus.

SYMPTOMS.

1. Mind.—Great mental depression.—Stimulation of mind; pleasant, intoxicated feeling (Gent.).—Satisfied indifference to all influences and interests (Gent.).—Cannot think or concentrate his thoughts.—Very forgetful of familiar words and names.—Disinclination to talk or study.—Wants to be alone.—A feeling as if I would lose consciousness.—All symptoms < when thinking of them.

2. Head.—A feeling as if I would lose consciousness, or as if I would fall when standing.—Sense of fulness of head, and of instability, when standing or sitting.—Head has a feeling of great pressure, esp. on moving eyeballs.—Head, hot.—Was unable to move around on account of this strange, uncertain feeling of numbness, with prickling sensation in l. arm and hand.—Full, uncomfortable feeling in head.—Slight headache in vertex and occiput in forenoon, over eyeballs about noon.—Pain in helix of ear for two or three minutes, then pain commenced between the eyes and went in a straight line up over head and down to base of brain.—Pain across base of brain ("gone in a minute or two").—Pain in occipital region; heavy ache, as if a weight were attached to lower edge, pulling it back, but pain does not extend down back; 1 p.m. to 3 p.m.—Head very sensitive, < on side on which he lies.—Pressure on head > after sleep.—Dull, heavy feeling in head, with uncertain gait and walk, so that she was obliged to lie down, when she fell into a deep sleep and woke up with the metallic taste.—Full, warm feeling about head (Gent.).

3. Eyes.—Feel dull and heavy, blurred, pupils dilated.—When reading, it seems as if a light were reflected from a bright copper plate seen at l. side, as if the light were at the end of the room.—Pain in eyeball.—Pain over r. eye.—Strange feeling of

fulness about eyes with sight obscured, so that it appears that one is looking through clear water which produces the seven prismatic colours (Gent.).—Amblyopia from paralysis of nerves and muscles of eyes (Gent.).—Pupils contracted, do not respond to light (Gent.).—Sight lost, with feeling as if from long exposure to strong electric arc-lights. (Gent.).

4. Ears.—Roaring sound in ears.

5. Nose.—Nose very dry; scabs form in it.—Frequent violent sneezing, with fluent coryza in evening.—Nose feels as if sunburnt; red and shining, esp. on alæ.—Feeling of pressure over bridge of nose.—Fluent coryza, somewhat bloody.

8. Mouth.—Mouth very dry, esp. in morning.—Metallic taste in mouth strongly marked.—Gumboil on l. lower jaw; profuse saliva.—Pain in l. lower jaw.

9. Throat.—Slight inflammation of pharynx, a "husky" feeling.—Throat dry and sore.

10. Appetite.—Appetite gradually increasing.—Appetite good; symptoms < after eating, > after an hour.—Loss of appetite (unusual).

11. Stomach.—Eructations, as after taking soda-water (after each powder), with colicky pains, and looseness of bowels (constipated before taking remedy).—Tenderness in epigastric region.—Cold during the chill.

12. Abdomen.—Sharp, lancinating pains all through abdomen, early in evening (observed but once).—Sharp pain, running from r. to l. across bowels, for several minutes, followed by a very strong desire to go to stool; entire relief after stool.—Slight griping pain in region of umbilicus, working down at 8 p.m., followed at 10. p.m. by discharge of flatus.—Full feeling in abdomen, causing short breathing after lying down in bed.

13. Stool and Rectum.—Fæces of consistency of mush, which slips through sphincters in little lumps, very similar to lumps of jelly.—Stools dark brown, or like jelly.—Urgent desire for stool, sometimes removed by passing wind; quantity normal.—Sore feeling in rectum.—Crawling sensation in rectum as if little worms were there.—Stool inclined to be hard; unsatisfied feeling, as though not done.—Stool solid at first, then diarrhœa.—Movement of bowels at an unusual time (6.30 p.m., had moved morning of same day).—Sharp pain from r. to l. across bowels, followed by very strong desire for stool.—Stool, first hard, then loose.—Entire > from pain after stool.

14. Urinary Organs.—Characterised from first by a very profuse flow of clear, or almost colourless urine, nearly colour of water.—Three or four times normal quantity.—When thinking of urinating I had to go at once.—No sediment

whatever.—Pain in kidneys, hardest in r., with some tenderness.—At expiration of every two or three hours after stopping the remedy there was an enormous flow of pale, straw-coloured urine, and with this would gradually disappear the metallic taste which was so well marked.—Free urination, dark in colour, no distress.—Urine scanty, and looked that of a child troubled with worms, light red-coloured stain on bottom of vessel.—Awoke with a heavy pain in kidneys.—Urine clear on passing, but becomes turbid on standing (third day).—During day urine scanty, with considerable irritation as if muscles of bladder were contracting, > moving about.

15. Male Sexual Organs.—From being naturally of a passionate nature, the desire and ability diminished to impotence.—No sexual desire or ability.—Bruised feeling in testicles, beginning in r. and extending to l. (after going to bed).—Occasional pain of short duration, in glans.—The pain in testicles becomes worse, with extension along spermatic cord and down thighs.

16. Female Sexual Organs.—At l.30 p.m. pain in l. ovary, like something grasping or holding tightly for about an hour, then disappeared.

17. Respiratory Organs.—Slight accumulation of mucus in larynx, hard to cough it up.—Short and quick breathing from the full feeling in abdomen.—Hard breathing, as though lungs and bronchi were closing as the chill passes off.—A dry cough, from any little exercise.—A short cough, with tightness across chest.

18. Chest.—Oppression in lungs at 9 p.m.—A warm tingling sensation over l. chest, just under skin.

19. Heart and Pulse.—Palpitation after lying down at night, for 15 to 20 minutes.—On going to bed, pain, like a wave over heart, < lying down.—Pulse 84, intermittent.

20. Neck.—Pain and stiffness of muscles of back of neck.—Numb, pithy or woody feeling about and in the spine (Gent.).

21. Limbs.—Flesh on under side of limbs sore.—Sore feeling of all the muscles of r. side of body.—All 'the pains come and go quickly, but the muscles remain sore and stiff.—Frequent fine pains all over body until 3 p.m., when all disappeared and felt as well as usual.—Loss of power to control movements of body or limbs (Gent.).

22. Upper Limbs.—Stitching pain in r. wrist for half an hour, leaving a tired feeling in joint.—At 12.30, a sharp, cutting pain running from point of shoulder down front of chest to point of hip-bone, going suddenly.—Flesh feels as though she had taken a heavy cold.—Sharp pain, with coldness, from l. shoulder-joint extending down arm < in shoulder-joint, > sleep; goes away gradually.—Prickling sensation in l. arm and hand.

23. Lower Limbs.—Swaying, staggering gait (Gent.).—Patellar-reflex lost (Gent.).—Stitching pain in r. leg and knee-joint for half an hour, leaving a tired feeling in the joint.—Hard pain in l. big toe-joint.—Pain inside of l. leg from groin to knee.

24. Generalities.—At 10 a.m. a very sick, exhausted feeling.—Weakness and insecurity of all power of locomotion (Gent.).—Feeling of intoxication with almost entire loss of vision (Gent.).—Sense of touch greatly impaired (Gent.).—Animals eating it become slaves to it and can never be kept from it; they droop, lose flesh, stand with head hanging down, eyes half closed; suddenly will commence to kick violently at imaginary enemies; they are devoid of malice, but cannot be worked as they don't know when to stop or when to start, or which way to turn, or how to change gait or meet changes in level of road.

26. Sleep.—Dreams of a pleasant or lascivious character.—Wakes often.—On rising feels sad, weary, despondent.—Twitching of muscles on falling asleep roused him (once, for three or four nights).—Dreamed of spiders, bugs (first night), of swimming in water (second night), (not in the habit of dreaming).

27. Fever.—Chill at 11.40 a.m., beginning in back and between shoulders, down over body to feet; stomach feels cold; pains all over body during chill; a peculiar sensation of crawling or contraction of abdominal muscles, hardest about navel, lasted about half an hour.—As chill passes off a smarting in throat and a feeling as though lungs and bronchi would close up, making breathing very difficult; chill lasted until 2 p.m., when all disappeared.—No thirst in either stage.—For four weeks on every seventh day had a chill with all the above symptoms; coldness of spine was continuous for eight weeks, and was then removed by Gels.

Lolium Temulentum.

Lolium temulentum. Darnel. N. O. Gramineæ. Trituration of seeds. Tincture of ripe spikelets. Tincture of ripe seeds.

Clinical.—Delirium tremens. Paralysis. Paralysis agitans. Tremor. Writer's cramp.

Characteristics.—The name *Darnel* means stupefied, and the plant's evil reputation is of very ancient date. The symptoms are the result of observations made on persons poisoned by eating meal containing an admixture of *Lol. tem*. Allen mentions an assertion that *Lolium* is much infested with *ergot*, and that it is to this that the poisoning symptoms are due, the unaffected grain being inert; and Allen notes in support of this that the poisonings have been most frequently observed in low, wet districts, and during wet seasons. Provings are needed to decide this. The chief symptoms are: Confusion of mind, at times delirium; very

great depression. Nausea and vomiting of the bread containing it and mucus with it. Paralysis, tremors, and convulsions. Cold rigors, internal chilliness; cold sweat. A very characteristic symptom is: Tightness in the calves; violent pain in the calves as if bound with cords. This tightness affects the rest of the legs in less degree. Bonino has cured a carpenter, 29, who had had trembling of the hands eleven years, < morning. Latterly the legs also began to tremble. His father and brother were similarly affected. *Merc. v*. and *Agar*. only relieved temporarily. *Lot. tem*. cured.

Relations.—*Compare:* Ananth., Secale; Lath. (paralysis; < wet seasons). Op. (sleep).

SYMPTOMS.

1. Mind.—Mania.—Slight delirium.—Depressed spirits.—Anxiety and general uneasiness.—Comprehension slow and difficult; distraction; confusion and stupefaction.

2. Head.—Vertigo; > closing eyes; with shaking in head.—Dizziness, nausea, loss of speech.—Intoxication.—Violent sticking in head, esp. forehead and temples.

3. Eyes.—Pupils widely dilated.—Vision: dim; blindness in some cases; scintillation before eyes.

4. Ears.—Deafness.—Roaring and tingling in ears.—Noise like drums and cymbals.

5. Nose.—Epistaxis.

6. Face.—Face: red, hot, puffy; or pale.

8. Mouth.—Tongue: first white; then black; tremulous.—Burning in mouth and throat.—Speech: difficult; very imperfect; or lost.

9. Throat.—Deglutition: difficult; impossible, cannot pronounce a whole word.

11. Stomach.—Nausea.—Vomiting.—Inflammation of gullet, stomach, bowels, with fever.—Vomiting every half-hour, all night, portions of bread and colourless mucus, leaving disagreeable taste.—Uneasiness in epigastrium, with eructations of peculiar taste.—Pains in stomach, esp. a pressure in stomach-pit and abdomen.

12. Abdomen.—Distension.—Severe colicky pains.

13. Stool.—Severe purging.—Diarrhœa; with great colic; obstinate constipation.

14. Urinary Organs.—Copious micturition.

17. Respiratory Organs.—Difficult breathing.

18. Chest.—Sticking pains in sides.

19. Heart.—Small irregular pulse.

21. Limbs.—Gait unsteady; trembling in all limbs; unable to hold a glass of water.—Spasms of arms and legs.

22. Upper Limbs.—While attempting to write, hand refused its service and he became stupid.

23. Lower Limbs.—Attempting to rise from a seat he began to stagger, was obliged to steady himself on walking along the room.—Great pain and tightness in legs, esp. calves, extending to ankles, with redness, swelling, and itching of skin.—Legs excessively tight and painful, swollen, inflamed, itching much for nine days, followed by a small collection of gelatinous fluid inside foot, terminating in gangrene, followed by sphacelus.—Violent pain in calves as if bound with cords.

24. Generalities.—General tremors.—Paralysis.—Restlessness.—General malaise for several days.—The action of *Lolium* is apt to be manifested in very wet seasons.

26. Sleep.—Drowsiness.—Sleep unusually heavy.—Sopor.

27. Fever.—Great internal chilliness.—Cold rigors all over, esp. in limbs.—Fever.—Cold sweat.

Lonicera Periclymenum.

Lonicera periclymenum. Woodbine. Honeysuckle. N. O. Caprifoliaceæ.
Tincture of fresh plant.

Clinical.—Irritability.

Characteristics.—Cooper has cured with *Lon. peri.* irritability of temper with violent outbursts; and has seen it produce the same.

Relations.—*Compare:* Lon. x., Vib. tin., Vib. op., Sambucus, Symphoricarpus (botan.); Staph., Hyo., Croc. (outbursts of temper).

Lonicera Xylosteum.

Lonicera xylosteum. Fly Woodbine. N. O. Caprifoliaceæ. Trituration or tincture of berries.

Clinical.—Coma vigil. Convulsions.

Characteristics.—*Lon. xylost*. is known from the effect of poisoning by its berries. Vomiting and purging; trembling and jerking of the limbs, convulsions and coma were the chief symptoms. *Peculiar symptoms* were: Contraction of one pupil and dilatation of the other. Abdomen retracted especially in umbilical region. Slow pulse.

Relations.—*Compare:* Dig. (slow pulse). Cad. s. and Rhod. (one pupil contracted, the other dilated). For botan. relations see Lon. peri.

SYMPTOMS.

1. Mind.—Stupefaction.—Coma.

2. Head.—Great congestion of head and chest.

3. Eyes.—Conjunctiva red.—Pupils dilated.—Contraction of one pupil, dilatation of the other.—Everything foggy and indistinct to vision for half an hour.—Photophobia.

6. Face.—Face red.—Pallor.—Lips dry.

8. Mouth.—Tongue moist; coated with mucus.

11. Stomach.—Excessive thirst.—Profuse vomiting; and purging.

12. Abdomen.—Abdomen retracted, esp. in umbilical region; soft.—Violent colic.

13. Stool.—Bloody stools.

17. Respiratory Organs.—Respiration rapid and deep.

19. Heart.—Violent impulse of heart.—Pulse: slow; small, soft, irregular.

24. Generalities.—Frequent jerking of limbs.—Trembling and jerking of whole body.—Violent convulsions.—Seemed neither to hear nor see; unable to make answer.—When raised from bed, limbs and head fall over as if paralysed.

26. Sleep.—Sleepy.—Constant deep sleep with half-open eyes; red face.

27. Fever.—Extremities cold.—Fever.—Profuse cold sweat.

Luesinum. Lueticum.

Luesinum. Lueticum. Syphilitic virus. A nosode. Attenuations.

Clinical.—Abscess; succession of abscesses. Alcoholism; hereditary craving for alcohol. Anus, fissure of. Aphasia. Asthma. Breasts sensitive. Bubo. Constipation. Crying of infants. Deafness. Deltoid rheumatism. Dentition. Diplopia. Dysmenorrhśa. Epilepsy. Headache; syphilitic. Hoarseness; before menses. Iritis. Leucorrhśa; infantile. Mouth, ulcerated. Myopia. Neuralgia. Night-sweats. Ophthalmia. Otorrhśa. Ovaries, affections of. *Ozśna*. Pemphigus. Psoas abscess. Ptosis. Rectum, stricture of. Rheumatism. Sciatica. Sleeplessness. Spine, caries of. Strabismus. Stricture. Sunstroke. Syphilis. Teeth, carious. Throat, ulcerated. Tibia, pains in. Tongue, cracked, ulcerated. Ulcers. Whitlow.

Characteristics.—I learnt the value of this nosode from Skinner, who has made with it some very brilliant cures. It has been proved by Swan in the potencies, and Hering's Schema, from which mine is taken, comprises also disease symptoms—marked "(n)"—and cured symptoms, which have generally the name and the disease appended. Cured cases of secondary syphilis I have marked "(s.s.)." The widespread distribution of syphilis, acquired and hereditary, and the virulence and persistence of the virus, give this nosode a high degree of importance in homśopathic practice. It has been mainly, almost exclusively, employed by those who are familiar with the use of high attenuations. I have used no potency lower than 200, and rarely repeat the dose oftener than once a week. The leading features of the disease are the keynotes for the use of the remedy, and (*1*) first in importance is the "Night <": "*Pains from darkness to daylight*; begin with twilight and end with daylight." "All symptoms < at night." "Terrible dread of night, on account of mental and physical exhaustion on awaking." This night aggravation will be found in a large proportion of the cases needing *Syph*.; in ophthalmia, the pains are < at night, and during the night the lids grow together. Neuralgia, and headache, asthma, coughs < from sunset to sunrise, whether syphilitic or not, will be benefited by *Syph*. Sleeplessness is itself a leading indication for *Syph*., which vies with *Sul*. as a sleep restorer. (*2*) Next to the Night <, is Ulceration: this may affect mouth, nose, genitals, or skin, and the ulcers have greyish bases; in the nose they produce the most offensive form of ozćna with discharge of fetid clinkers. In such cases I have found *Syph*. of the greatest service. Fetid discharges from the ear come in the same category. (*3*) Abscesses with foul secretions. (All pus-formations of *Syph*. are fetid.) *Succession of abscesses* is one of the grand keynotes of the materia medica. Eyes, teeth, and skin give other leading indications. In ophthalmia neonatorum the lids adhere during sleep; pains < 2 to 5 a.m.; pus profuse; > cold bathing. Iritis, syphilitic or rheumatic, has been cured with *Syph*. Ptosis; sleepy
